INSTITUTE OF RADIO PHYSICS AND ELECTRONICS
LIBRARY
2 JUN 1959

INDEX

ABBOT, Dr. P. : Human and Animal Ecology (Mycetoma), 1648

Abbott, Dr. W. N.: Seasonal Illumination of a Circumpolar Earth Satellite at its Extreme-Latitude Orbit Point, 651

Abd-El-Malek, Prof. Y., and Rizk, S. G. : Counting of Sulphate-reducing Bacteria in Mixed Bacterial Populations, 538

Abeilles, La Gelée Royale des (B. de Belvefer), *review* by Dr. H. Kalmus, 142

Abeles, F. : Spectroscopy of Solids (Optical Properties of Metals), 160

Abercrombie, Dr. M. : Invasiveness and Surface Properties of Cancer Cells (Conditions for the Invasion of Normal Cell Explants by Tumour Cells in Culture), 1419

Aberrations (Chromosome), in Calcium-deficient *Tradescantia* produced by Irradiation (Dale Steffensen), 1750

Ability : Age and, *review* by Prof. L. S. Hearnshaw, 826

Ability (Competitive Saprophytic), of Soil Fungi : A Technique for the Investigation of the, by the Use of Easily Decomposed Substrates (S. T. Matturi and Dr. H. Stenton), 1248

Ability (Recombination), of *Escherichia coli* K-12 Protoplasts (Dr. Atsuyoshi Hagiwara), 456

Abnormal Haemoglobin in a Chinese—Haemoglobin *G* (F. Vella, J. A. M. Ager and Dr. H. Lehmann), 460

Abnormally High Fatigue Strengths in Aluminium Alloy Extruded Bar (J. M. Finney and J. Y. Mann), 1366

Abnormally Low Ultimate p*H* in Pig Muscle (R. A. Lawrie, D. P. Gatherum and H. P. Hale), 807

Abrams, Dr. John W. : Loaned to Supreme Headquarters Allied Powers Europe (SHAPE) to undertake important duties in connexion with the scientific analysis and planning of Western European air defences, 916

Abrasion (Metal) : Removal of Gases in High Vacuum Systems by (M. E. Haine, E. W. R. Francis and R. N. Bloomer), 931, *erratum*, 1348

Absence of Pectolytic Enzymes in a Pathogenic Strain of *Fusarium oxysporum* f. *lycopersici* (Dr. K. McDonnell), 1025

Absorbents for Aldehydes and Olefins (J. A. Kerr and A. F. Trotman-Dickenson), 466

Absorption of Supplementary Free Amino-Acids during Digestion : Rate of (Dr. J. B. Longenecker and N. L. Hause), 1739

Absorption (Direct), of Dissolved Strontium-90 and Yttrium-90 by Tadpoles of *Rana temporaria* (J. W. Lucas and D. C. Pickering), 1242

Absorption (Subcutaneous), of Drugs : Self-depression of the, due to Release of Histamine (Jens Schou), 324

Absorption (Ultrasonic), in Liquids : A Method of Studying the Variation with Temperature of (Dr. B. Ramachandra Rao and Dr. H. S. Rama Rao), 1794

Absorption Peaks in Thin Metal Films : Calculation of (Robert M. Hill), 1150

Absorption Spectra : Emission and, of NCO and NCS (R. Holland, Prof. D. W. G. Style, R. N. Dixon and D. A. Ramsay), 336

Absorption Spectrum of Water Vapour, 361

Absorption Spectra (Ultra-Violet), of Deoxyribonucleic Acid : Changes in, by Treatment with Bromine (Hiroshi Ishihara, Naohiko Suzuki and Hanako Yokoi), 1302

Abu-Mustafa, Miss Effat A., and others : Isolation of Marmesin from the Fruits of *Ammi majus* Linn., 54

Abundance of Pogonophora (Dr. A. J. Southward), 272

Abundance (Boron-10), in Nature (P. G. Bentley and A. N. Hamer), 1156

Academic Administration, 430

Academic Institutions (American) : Support and Direction of Support of Research at (Dr. Lloyd V. Berkner), 848

Academic Record (Undergraduate), of Fellows of the Royal Society (C. Gross and L. Hudson), 787, 1178 ; (Prof. Robert Platt), 1178 ; (L. Hudson), 1326

Academic Success : Predicting (Sigvard Rubenowitz), 1421

Academic and Professional Mobility, 413, *erratum*, 1133

Academics : Technology and the (Sir Eric Ashby), *review*, 1256

Academy of Sciences of the Estonian Soviet Socialist Republic : *Eesti Loodus* (Estonian Nature), 769

Academy of Sciences of the U.S.S.R. : Sixth General Meeting of the Commission for X-ray Diffraction, 157
  Election of Foreign Members, 359
  Plasma Physics and the Problems of Controlled Thermonuclear Reactions (edited by Leontovitch), 1053

Academy of Sciences of the U.S.S.R. (Division of Chemical Science) : Symposium on Radiation Chemistry, Moscow, 1955 (edited by Prof. N. A. Bakh), translated from the Russian, *review* by Prof. G. Porter, 1588

Accelerators (Linear Electron) : Anomalous Attenuation in (Dr. V. L. Vanhuyse), 1081

Accident at Windscale : Deposition of Radioactivity in North-west England from the (A. C. Chamberlain and H. J. Dunster), 629
  Long-range Travel of the Radioactive Cloud from the (N. G. Stewart and R. N. Crooks), 627
  on October 10, 1957, 635

Accident (Windscale Reactor) : Iodine-131 in Human Thyroids following the (G. Maycock and J. Vennart), 1545

Acclimatization Status of Temperate-zone Man (R. K. Macpherson), 1240

Acculturation Study from the Tuamotu Group, French Oceania : Work and Life on Raroia, an (Dr. Bengt Danielsson), *review* by Prof. Raymond Firth, 280

Accumulation of Nickel in Atlantic Equatorial Deep-Sea Sediments : Rate of, and its Bearing on Possible Extra-Terrestrial Sources (Karl K. Turekian), 1728

Accumulation of Strontium-90 in Dental Tissues (W. Holgate, R. H. Mole and Janet Vaughan), 1294

Accumulation (Nitrite), in the North-East Tropical Pacific (Wilhelm Brandhorst), 679

Accurate Measurement of the Viscosity of Liquids (Institute of Petroleum and the British Society of Rheology Symposium on), 438

Acetate (4-Chlorotestosterone) : Action of Testosterone Propionate and, on Protein Synthesis *in vitro* (A. Bernelli-Zazzera, M. Bassi, R. Comolli and P. Lucchelli), 663

Acetic Acid : Oxidation of Ethyl Alcohol to, by Proliferating Yeasts (Juan Santa María), 937

Acetic Acid (Indole) : Determination of, by the Salkowsky Reaction (Dr. A. M. Mayer), 1670

Acetobacter aceti : A Strain of, giving a Positive Cellulose Reaction (Dr. J. G. Carr), 265

Acetocholinesterase : New Potent Reactivators of, inhibited by Tetraethyl Pyrophosphate (Dr. F. Hobbiger, Dr. D. G. O'Sullivan and Dr. P. W. Sadler), 1498

Acetyl Coenzyme *A* Deacylase and Citridesmolase : Separation of the Condensing Enzyme of *Aspergillus niger* from, and the Effect of Magnesium Ion on the Purified Fraction (Prof. C. V. Ramakrishnan), 1601

Acetylacetonate (Thorium IV) : Co-ordination in (Prof. D. Grdenič and B. Matkovič), 465

2-Acetylaminofluorene and N-2-Fluorenyl-diacetamide : Effect of Diphosphopyridine Nucleotide on the Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by (Prof. E. Quagliariello, S. Auricchio, E. Rinaldi and A. Rubino), 1744

Acetylase (Choline) : Distribution of, in Insect Conductive Tissue (E. H. Colhoun), 1378

Acetylcholine : The Morphinized-Eserinized Leech Muscle for the Assay of (Prof. Maurice F. Murnaghan), 317

Acetylcholine in Mammalian Neuromuscular Transmission (K. Krnjević and R. Miledi), 805

Acetylcholine Synthesis : Myasthenic-like Features of Neuromuscular Transmission after Administration of an Inhibitor of (Dr. J. E. Desmedt), 1673

Acetylcholinesterase and Non-specific Cholinesterase in the Adrenal Medulla of the Rat : Differential Demonstration of (Prof. O. Eränkö), 183

Acetylene : Density of (G. A. Bottomley, C. G. Reeves and G. H. F. Seiflow), 596

Acetylhomoserine (O-), in *Pisum*, (New Hydroxyamino-Acids in Plants and their Identification), (Dr. N. Grobbelaar and Prof. F. C. Steward), 1358

N-Acetylneuraminic Acid : Configuration of (Dr. J. Brug and G. B. Paerels), 1159

δ-Acetylornithine, a Constituent of some Common Grasses (Dr. L. Fowden), 406

Acid : A New Species of *Azotobacter* producing Heavy Slime and (A. B. Roy), 120
  Protection of Living Cells against, by certain Non-Ionic and Amphoteric Soaps (Dr. P. D'Arcy Hart and Dr. J. E. Lovelock), 304

Acid-Base Reactions of the Tropylium Ion : Polarographic Study of (P. Zuman, J. Chodkowski, H. Potešilová and F. Santavy), 1535

Acid Boundary (Moving) (p*H* Gradient) Paper Ionophoresis of Bile Salts (Thomas Briggs, Dr. Michael W. Whitehouse and Dr. Ezra Staple), 394

Acid Components (Unsaturated), in Toxicity towards certain Plant Pathogens : 'Karathane'—the Relative Importance of the Phenolic and (Dr. A. H. M. Kirby and E. L. Frick), 1445

Acid Phosphatase inhibited by (+)– Tartrate : Phylogenetic Distribution of (Dr. Grace S. Kilsheimer and Prof. B. Axelrod), 1733

Acid Phosphatase Activity of Rat Pituitaries : Influence of a Crude Hypothalamic Extract on the (Prof. J. Charvát, V. Schreiber and V. Kmentová), 62

Acid Phosphatase (Seminal) : Stable Test-Papers for (S. S. Kind), 1372

Acid-producing Bacteria in Soil : A Plate Method for Estimating the Numbers of Phosphate-dissolving and (H. A. Louw and Dr. D. M. Webley), 1317

Acid-Soluble Nucleotides from the Blood of Metamorphosing Salmon (Per Olov Svärd), 1448

Acidic Polymers : Inhibition of Pancreatic Deoxyribonuclease by (Dr. Hans Heymann, Z. R. Gulick and R. L. Mayer), 1234

INDEX

Acidity (Volume and), of Urine of Sheep fed Hay Rich in Silica and Effect of Dietary Salt Additions (S. A. Forman, F. Sauer, D. H. Laughland and W. M. Davidson), 1385
Acoustics : Applied, *review* by T. Somerville, 1258
Acoustics (Biological), Committee for : Demonstration Meeting, 769
Acoustics, Noise and Buildings (P. H. Parkin and H. R. Humphreys), *review* by T. Somerville, 1258
Acridine Orange and Polynucleotides : Inhibition and Activation of Polynucleotide Phosphorylase through the Formation of Complexes between (Dr. Roland F. Beers, jun., and Dr. Daniel D. Hendley, and Dr. Robert F. Steiner), 242
Actinomycin Biosynthesis : Influence of Amino-Acids on (Edward Katz and William A. Goss), 1668
Action : Enzymes and their (Agricultural University of Wageningen International Conference on), 1710
Action of the Antidiuretic Hormone : Role of Hyaluronidase in the Re-Absorption of Water in Renal Tubules—the Mechanism of (A. G. Ginetzinsky), 1218
Action of Beta Radiation on the *Proteus P*18 Bacillus (Prof. P. Mandel, M. Sensenbrenner and G. Vincendon), 674
Action of DDT on *Anopheles* Larvae : Anaesthesia and the (Prof. Jack Colvard Jones), 722
Action of 5:6-Dimethylbenzimidazole and certain Keto-Acids as Inhibitors of Haem Biosynthesis : Mode of (Dr. E. G. Brown), 1091
Action of Hydrocortisone on Respiration of Human Cancer Cells in Tissue Culture (Henry Grossfeld), 35
Action of Interferon : Mode of (Dr. Alick Isaacs and Dr. Derek C. Burke), 1073
Action of Micrococcal Phosphodiesterase on Tobacco Mosaic Virus Nucleic Acid (K. K. Reddi), 1308
Action of Plasmin on Cartilage (Dr. C. H. Lack and Dr. H. J. Rogers), 948
Action of Sodium on Isolated Rabbit Auricles ; Influence of Hydrocortisone on the (Dr. T. H. Rindani), 1521
Action of Testosterone Propionate and 4-Chlorotestosterone Acetate on Protein Synthesis *in vitro* (A. Bernelli-Zazzera, M. Bassi, R. Comolli and P. Lucchelli), 663
Action (Analeptic), of Anibine (N. Botafogo Goncalves, Joao Canali Correa F⁰ and Otto Richard Gottlieb), 938
Action (A Biological), of Injected Deoxyribonucleic Acid (Dr. Rudolf K. Zahn, A. Docter, B. Heicke, H. Kuhlemann, G. Ochs, E. Torz, R. Torz, W. Ziegler and G. Zahn), 1679
Action (Chlorophyll), in Photosynthesis : Mechanism of (Wolf Vishniac and Irwin A. Rose), 1089
Action (Enzyme) : The Chemical Kinetics of (Prof. Keith J. Laidler), *review* by Dr. B. R. Hammond, 1578
Action (Esterase) : Mechanism of—Nature of the Reactive Serine Residue in Enzymes inhibited by Organo-Phosphorus Compounds (G. R. Porter, Prof. H. N. Rydon and J. A. Schofield), 927 ; A Possible Mechanism of Action by Esterases inhibitable by Organo-Phosphorus Compounds (Prof. H. N. Rydon), 928
Action (Fungitoxic), of 8-Hydroxyquinoline, Pyridine-N-oxide-2-thiol and Sodium Dialkyldithiocarbamates, and their Copper Complexes (A. Kaars Sijpesteijn and M. J. Janssen), 1313
Action (An Indirect), of Angiotensin I on Smooth Muscle (P. A. Robertson and Dana Rubin), 867
Action (Inhibitory), of Ethyl Mercaptan on Intracellular Tubercle Bacilli (G. E. Davies and G. W. Driver), 664
Action (Insecticidal) : Role of Cholinesterase in (H. S. Hopf and R. T. Taylor), 1381
Action (Lethal), of X-Rays : Inability of Epinephrine to protect Rhode Island Chicks against the (Dr. M.-L. Beaumariage), 803
Action (A Possible Mechanism of), of Esterases inhibitable by Organo-Phosphorus Compounds (Mechanism of Esterase Action), (Prof. H. N. Rydon), 928
Action (Protective), of Venoms containing Phosphatidase-*A* against certain Bacterial Exotoxins (Dr. E. A. North and Hazel M. Doery), 1374
Action (Radioprotective), of 5-Hydroxytryptamine (H. A. S. van den Brenk and Kathleen Elliott), 1506
Action (Teratogenic), of X-Radiation : Influence of Cysteamine on the (Dr. D. H. M. Woollam and Dr. J. W. Millen), 1801
Action (Tumour-inhibiting), of 1:6-Dimethanesulphonyl-D-mannitol (Prof. A. Haddow, G. M. Timmis and S. S. Brown), 1164
Action Potential : Purkinje and Ventricular Membrane Resistances during the Rising Phase of the (Dr. Edward A. Johnson, P. A. Robertson and J. J. Tille), 1161
Action Potentials (Resting and), of the Giant Axon of the Cockroach : Effects of Potassium and Sodium Ions on the (T. Yamasaki and T. Narahashi), 1805
Activated Amino-Acids : Formation of, by Intact Cells of *Azotobacter vinelandii* (R. W. Bernlohr and Dr. G. C. Webster), 531
Activation : Inhibition and, of Polynucleotide Phosphorylase through the Formation of Complexes between Acridine Orange and Polynucleotides (Dr. Roland F. Beers, jun., and Dr. Daniel D. Hendley, and Dr. Robert F. Steiner), 242
Activation of an Ascorbic Acid Concentrating Mechanism by some Corticosteroids *in vitro* (Leon S. Vann and Robert Hill), 458
Activation of Hormonal Secretions—Precorticotropin (P. R. Dasgupta and Prof. F. G. Young), 32 ; A Crustacean Chromactivator (Dr. D. B. Carlisle), 33
Activation Analysis (Neutron), using an Internal Standard (G. Leliaert, J. Hoste and Z. Eeckhaut), 600
'Active' Ceramic Oxide Powders : Effect of Heat Treatment on the Sintering of (D. T. Livey and Dr. P. Murray), 1362
Active (Polarographically) Sulphydryl Groups in Rat Liver during Carcinogenesis : Intracellular Changes in Levels of (Dr. Silvio Fiala), 257
Active Mitochondria : Isolation of, from Apples (Dr. J. M. Tager), 1521
Activities (Ribonuclease and Deoxyribonuclease), during Normal and Neoplastic Growth (Dr. Sam Brody and Dr. M. Earl Balis), 940
Activities (Scientific), in Six State Governments (United States National Science Foundation), 1347
Activities (Synthetic), in a Wheat Chromosome : Correlated Failure of (H. K. Jain), 1458
Activity : Gene Control of Specificity and—Loss by Mutation and Restoration by Complementation (Prof. D. Lewis), 1620
  Hydrogen Ion Concentration and, *review* by Prof. H. T. S. Britton, 1258
Activity of Antibiotics : Effect of Bile Salts upon the (Dr. S. Stanley Schneierson and Daniel Amsterdam), 56
Activity (Acid Phosphatase), of Rat Pituitaries : Influence of a Crude Hypothalamic Extract on the (Prof. J. Charvát, V. Schreiber and V. Kmentová), 62.
Activity (Adrenal), in Subjects with Complete Transverse Lesions of the Spinal Cord (Dr. R. Robinson and Dr. A. F. Munro), 805
Activity (Anticholesterol), of α-Lipoic Acid (David Kritchevsky and A. W. Moyer), 396 ; (Dr. L. Angelucci and E. Mascitelli-Coriandoli), 396
Activity (Carbon-14), during the past 5,000 Years (Dr. C. Crowe), 470 ; (Dr. K. O. Münnich, H. G. Östlund and Hl. de Vries), 1432 ; (H. Barker), 1433
Activity (Carcinogenic), and O-Alkylation (Dr. R. Schoental), 719
Activity (Catalytic), and Surface Structure after Ion Bombardment (H. M. C. Sosnovsky, G. J. Ogilvie and E. Gilham), 523
Activity (Cellulolytic), of Phytopathogenic Bacteria (Masao Goto and Norio Okabe), 1516
Activity (Deoxyribonuclease), and Deoxyribonucleic Acid Synthesis in Normal, Regenerating, Precancerous and Cancerous Rat Liver (Dr. Sam Brody), 1386
Activity (Diuretic), of Chlorothiazide Derivatives (W. Logemann, Dr. P. N. Giraldi and M. A. Parenti), 1510
Activity (Electrical), of the Cerebral Cortex : Effect of γ-Aminobutyryl-Choline on the (Hidehiko Takahashi, Akira Nagashima and Chikao Koshino), 1443
Activity (Fat Transport) : Isolation from Human Blood of a New Substance associated with (Dr. W. S. Reith and M. J. Thomas), 604
Activity (Growth-promoting), of Potato Tuber Extracts in the Coleoptile Straight-Growth Test—Quantitative Aspects of Indoleacetic Acid Detection (A. Booth and Dr. P. F. Wareing), 406
Activity (Hexokinase), in Cell-free Extracts of *Leishmania donovani* (A. N. Chatterjee, J. C. Ray and Dr. J. J. Ghosh), 109
Activity (Invertase), in Clay Mineral—Soil Mixtures (István Kiss), 203
Activity (Lecithinase) : Control of, by the Electrophoretic Charge on its Substrate Surface (Dr. A. D. Bangham and Dr. R. M. C. Dawson), 1292
Activity (Melanocyte-stimulating) : A New Synthesis of the Pentapeptide L-Histidyl-L-Phenylalanyl-L-Arginyl-L-Tryptophyl-Glycine and its (Dr. R. Schwyzer and Prof. Choh Hao Li), 1669
Activity (*pKa* and Uricosuric) : Relationship between, in Phenylbutazone Analogues (J. J. Burns, T. F. Yü, Peter Dayton, Lawrence Berger, Alexander B. Gutman and Bernard B. Brodie), 1162
Activity (Peroxidase) : Detection of Haemoglobin, Haemoglobin–Haptoglobin Complexes and other Substances with, after Zone Electrophoresis (Dr. J. A. Owen, H. J. Silberman and C. Got), 1373
Activity (Phagocytic), of the Reticulo-Endothelial System : Effect of various Natural Steroids on the (Dr. D. L. J. Bilbey and Prof. T. Nicol), 674
  Effect of Splenectomy on the (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 534
  Substances depressing the (Prof. T. Nicol and Dr. D. L. J. Bilbey), 606
Activity (Selective Herbicidal) : New Plant Growth-Substances with (Dr. Mary B. Pybus, Prof. R. L. Wain and Dr. F. Wightman), 1094
Activity (Spontaneous Electrical), in the Denervated Muscles of the Cockroach *Periplaneta americana* (Dr. R. Beránek and Dr. I. Novotny), 957
Activity (Sulphydryl), in Rat Liver : Vanadium Inhibition of Phospholipid Synthesis and (Fred Snyder and Prof. W. E. Cornatzer), 462
Activity (Summer), and Hibernation : Adrenaline/Noradrenaline Activity in the Adrenal Glands of the Hedgehog during (Prof. Paavo Suomalainen and Dr. Veikko J. Uuspää), 1500
Activity (Surface) : Proceedings of the Second International Congress of (edited by J. H. Schulman), Vol. 1, Gas/Liquid and Liquid/Liquid Interface ; Vol. 2, Solid/Gas Interface ; Vol. 3, Electrical Phenomena and Solid/Liquid Interface ; Vol. 4, Solid/Liquid Interface (Washings, etc.), Cell/Water Interface, *review*, 972
Activity (Teratogenic), of Hypervitaminosis A : Effect of Vitamin B Complex on the (Dr. J. W. Millen and Dr. D. H. M. Woollam), 940
Activity (Vitamin B_{12}), in the Serum of the Rat (Dr. G. H. Spray and Dr. K. B. Taylor), 1309
Activity (Water), of Mammalian Tissues (Dr. LeRoy H. Maffly and Dr. Alexander Leaf), 60
Acton Society Trust : Redundancy, a Survey of Problems and Practices, 895
Adam, Prof. N. K., and Livingston, Dr. H. K. : Contact Angles and Work of Adhesion, 128
Adams, E. Q. (Waitzman, Dr. M. B., and) : A Sensitive Micro-Spectrophotometric Method for Succinate Analysis, 129
Adams, K. F. (Hyde, H. A., and) : An Atlas of Airborne Pollen Grains, *review* by Dr. J. Hutchinson, 1117
Adams, Dr. R. D. : Chemical Pathology of the Nervous System (Demyelination), 1646
Adams, Dr. W. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (The Establishment of New Universities), 1285
Adams Prize Essay of the University of Cambridge (Dr. H. G. Eggleston), *review* by Prof. T. A. A. Broadbent, 1472
Adamson, Prof. R. W. : The Cape as an Ancient African Flora (Presidential Address to Section K (Botany) of the British Association for the Advancement of Science), 585
Adaptation (Light and Dark) : Corneo-Fundal Potential Variations during (Christine Kris), 1027
Adaptive Muscular 'Allomorphism' (Einar Helander), 1035
Addition Compounds (Solid) : Halogen-Molecule Bridges in (Prof. O. Hassel and Knut O. Strømme), 1155
Adenine Dinucleotide (Flavin) : Effects of Flavin Monosulphate and, on the Electroencephalogram (Tsuneo Muramatsu, Moriaki Ando, Toshiharu Nagatsu and Kunio Yagi), 457
Adenosine Triphosphate : Colorimetric Determination of Inorganic Phosphorus in the Presence of Glucose-1-phosphate and (Michinori Nakamura and Kenji Mori), 1441
Adhesion : Contact Angles and Work of (Prof. N. K. Adam and Dr. H. K. Livingston), 128
Adinolfi, M., and Chieffi, G. : Larval and Adult Haemoglobins of the Cyclostome *Petromyzon planeri*, 730
Adipose Tissue : Heparin Content of (H. G. Hind and S. M. McGinn), 117
Adjuvants : Prevention of Allergic Encephalomyelitis by Prior Injection of (Dr. Marian W. Kies and Dr. Ellsworth C. Alvord, jun.), 1166
Administration : Academic, 430
Administration (United States International Co-operation) : Visit to Africa, 1276

INDEX

Administration of an Inhibitor of Acetylcholine Synthesis : Myasthenic-like Features of Neuromuscular Transmission after (Dr. J. E. Desmedt), 1673
Administration of Science in Britain and the United States, 819
Administration (Chronic), of Reserpine : Catechol Amine Depletion in the Rat's Denervated Adrenal Gland following (Dr. Bernard L. Mirkin), 113
Administration and Defence in a Technical Age, 89
Admirable Discourses of Bernard Palissy (translated by Aurèle La Rocque), *review* by Dr. F. J. North, 754
Admiralty Material Departments : Reorganization of the, 988
Adrenal : Influence of the Thymus on the Reaction of the, to Adrenocorticotropic Hormone in the Rat (Dr. J. Comsa), 57
Adrenal Activity in Subjects with Complete Transverse Lesions of the Spinal Cord (Dr. R. Robinson and Dr. A. F. Munro), 805
Adrenal Cortex of the Mouse : Secretion of Androgens by the (Dr. Ruth Deanesly), 262
Adrenal Cortex of the White Rat : Deoxyribonucleic Acid Content of the Nuclei in the (H. Roels), 873
Adrenal Cortex (Human) : Microvilli of the Cells of the (I. A. Carr), 607
Adrenal Gland (Innervated and Denervated), of the Rat : Replacement of Adrenaline and Noradrenaline in the, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 1020
Adrenal Gland (Rat's Denervated) : Catechol Amine Depletion in the, following Chronic Administration of Reserpine (Dr. Bernard L. Mirkin), 113
Adrenal Glands of the Hedgehog during Summer Activity and Hibernation : Adrenaline/Noradrenaline Ratio in the (Prof. Paavo Suomalainen and Dr. Veikko J. Usupää), 1500
Adrenal Medulla : Effects of Reserpine on Secretion from the (Dr. L. Stjärne and Dr. S. Schapiro), 1450
Adrenal Medulla of the Rat : Differential Demonstration of Acetylcholinesterase and Non-specific Cholinesterase in the (Prof. O. Eränkö), 183
Adrenalectomized Rat : Influence of Circulating Adrenocorticotrophin on the Pituitary Adrenocorticotrophic Response to Stress in the (Dr. J. R. Hughes and Joan Vernikos), 725
Adrenalectomy and Tissue Amines (R. Hicks and Dr. G. B. West), 401
Adrenaline : Effect of, on Neurofibril Formation in Adult Mammalian Cortical Neurones in Tissue Culture (R. S. Geiger), 1674
Adrenaline and Noradrenaline : Replacement of, in the Innervated and Denervated Adrenal Gland of the Rat, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 1020
Adrenaline/Noradrenaline Ratio in the Adrenal Glands of the Hedgehog during Summer Activity and Hibernation (Prof. Paavo Suomalainen and Dr. Veikko J. Uuspää), 1500
Adrenaline, Noradrenaline and 5-Hydroxytryptamine subjected to various Simple Treatments : Relative Stability of (Daphne Joyce), 463
Adrenals of Rats made Hypertensive by the Goldblatt Method : Histochemical Changes in Kidneys and (Dr. Antonio Pasqualino and Prof. Geoffrey H. Bourne), 1426
Adrenochrome : Reduction of, with Ascorbic Acid (Dr. R. A. Heacock and Miss B. D. Laidlaw), 526, *erratum*, 700
Adrenocorticotropic Hormone in the Rat : Influence of the Thymus on the Reaction of the Adrenal to (Dr. J. Comsa), 57
Adrenocorticotrophic Response (Pituitary), to Stress in the Adrenalectomized Rat : Influence of Circulating Adrenocorticotrophin on the (Dr. J. R. Hodges and Joan Vernikos), 725
Adrenocorticotrophin (Circulating) : Influence of, on the Pituitary Adrenocorticotrophic Response to Stress in the Adrenalectomized Rat (Dr. J. R. Hodges and Joan Vernikos), 725
Adrian, Lord : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Medical Education and its Place in the University), 1284
Adsorbed Molecules : Diffusion of (Dr. J. D. Babbitt), 201 ; (Dr. P. C. Carman), 201
Adsorbed Water : Fluorescence of (Prof. K. Przibram), 520
Adsoption Chromatography : Identification of Meprobamate by, on Chromatoplates (Dr. Angelo Fiori and Dr. Mario Marigo), 943
Adult Education (Prof. Robert Peers), *review* by T. H. Hawkins, 1041
Adult Education : Report on the Regional European Seminar on the Universities and (Bangor, 1956), (Ministry of Education), 1627
Adult Education in Wales, 924
Adult Education, Universities Council for : Report on the Year 1956-1957, 924
Adult Haemoglobins (Larval and), of the Cyclostome *Petromyzon planeri* (M. Adinolfi and G. Chieffi), 730
Adult Mammalian Cortical Neurones in Tissue Culture : Effect of Adrenaline on Neurofibril Formation in (R. S. Geiger), 1674
Adult Mosquitoes : The Finer Structure of the Galeal Lamella in (G. Surtees), 812
Adult Peripheral Blood (Human) : Establishment of Permanent Cell Strains from (Dr. John Paul), 808
Adults : The Education of, *review* by T. H. Hawkins, 1041
Advance of Chemical Technology, *review* by Sir Alfred Egerton, 549
Advanced Theory of Statistics (Prof. Maurice G. Kendall and Alan Stuart), Vol. 1, Distribution Theory, *review* by Dr. D. J. Finney, 1470
Advances in Biological and Medical Physics (edited by John H. Lawrence and Cornelius A. Tobias), Vol. 5, *review* by Prof. J. A. V. Butler, 827
Advances in Chemical Engineering (edited by Thomas B. Drew and John W. Hoopes, Jr.), Vol. 2, *review*, 822
Advances in Enzymology and related Subjects of Biochemistry (edited by F. F. Nord), Vols. 18 and 19, *review* by Dr. Edwin C. Webb, 897
Advances in Nuclear Engineering—Proceedings of the Second Nuclear Engineering and Science Conference held at Philadelphia (edited by John R. Dunning and Brice R. Prentice), *review* by Dr. T. E. Allibone, 210
Advances in the Use of Radioisotopes—Medical Uses (F. Ellis), 1407 ; General Uses (W. S. Eastwood), 1408
Advances in Virus Research (edited by Dr. Kenneth M. Smith and Max A. Lauffer), Vol. 4, *review* by Dr. M. R. J. Salton, 1576
Advani, Dr. T. M. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (The Establishment of New Universities) 1285
Adventures in Science at the Smithsonian (E. John Long and George Weiner), 561
Advertising (Lord Heyworth), 227
  Operational Research in (J. Maitland), 846
Advisory Council on Scientific Policy : Annual Report (1957-58), 1759
Advisory Council (Northern), for Further Education : Eleventh Annual Report, 1708
Aedes aegypti : Presence of a Factor Inhibiting Biting in (M. M. J. Lavoipierre), 1567
Aerial Geophysical Survey of Cornwall, 359
Aerobacter aerogenes : Effect of some Lytic Agents on (J. M. Gebicki and Dr. A. M. James), 725
  Glucuronate Metabolism by (Robert A. McRorie and G. David Novelli), 1504
Aerobic Gram-Negative Bacteria : Occurrence of Poly-β-Hydroxybutyric Acid in (Dr. W. G. C. Forsyth, Dr. A. C. Hayward and J. B. Roberts), 800
Aerobic Transformation of Cysteine to Sulphate in Soil (J. R. Freney), 1318
Aerodynamic Components of Aircraft at High Speeds (edited by A. F. Donovan and H. R. Lawrence), *review* by Dr. W. P. Jones, 1582
Aerodynamics : High-Speed (Compressible Flow), (Prof. Elie Carafoli), *review* by Dr. W. P. Jones, 755
  Natural (Dr. R. S. Scorer), *review* by Sir Graham Sutton, 1182
Aerodynamics (High-Speed) : Compressible Flow in, *review* by Dr. W. P. Jones, 755
Aeroelasticity—Retrospect and Prospect (Prof. A. R. Collar), 1643
Aeronautical Sciences : First International Congress of (International Council of the Aeronautical Sciences), 89, 1562
Aeronautical Sciences, International Council of the : First International Congress of Aeronautical Sciences, 89, 1562
Aeronautical Society, Royal : Second Lanchester Memorial Lecture (Prof. A. R. Collar), 1643
Aeronautical Society (Royal), and the Society of Licensed Aircraft Engineers : Members to repair and maintain the Nash Collection of historic aircraft, 1131
Aeronomy, *review* by Prof. D. R. Bates, 1629
Affairs (Public) : Science and Technology in, 1
Affinity (Electron), of Atomic Oxygen (Dr. L. M. Branscomb), 248 ; (Dr. D. F. C. Morris and H. N. Schmeising,), 249
Africa : Science in, *review* by Dr. Kenneth Mellanby, 1043
  Science in the Development of—a Review of the Contribution of Physical and Biological Knowledge South of the Sahara (Dr. E. B. Worthington), *review* by Dr. Kenneth Mellanby, 1043
Africa (East) : Nematoses of Pyrethrum in (A. G. Whitehead), 542
  Scientific Research and Development in, 703
Africa (East) High Commission : Annual Report for 1956-57 of the East African Industrial Research Board, 499
  Annual Report for 1957, 703
  Report for 1957 of the East African Agriculture and Forestry Research Organization, 1783
Africa (South) : Science Education in, 87
  A Stegolophodon from (Dr. Ronald Singer and Dick A. Hooijer), 101
Africa (South), National Parks of the Union of (Board of Trustees of the) : *Koedoe*, No. 1, 227
Africa (South-East) : Marine Biology in, *review* by Dr. W. J. Rees, 1761
Africa (Southern and East) : A List of Zoological and Botanical Types preserved in Collections in (South African Museums Association), Vol. 1, Zoology, Part 1, 431
African Flora (Ancient) : The Cape as an (Prof. R. S. Adamson), 585
African Pygmies (Prof. R. Ruggles Gates), 88
African Zoological Types, 431
African (East) Agriculture and Forestry Research Organization : Report for 1957, 1783
African (East) Industrial Research Board : Annual Report for 1956-57, 499
African (South) Journal of Agricultural Science, Vol 1, No. 1, 431
African (South) Museums Association : A List of Zoological and Botanical Types preserved in Collections in Southern and East Africa, Vol. 1, Zoology, Part 1, 431
African (West) Oil Palm, *Elaesis guineensis* (Jacq.) : Factors controlling Seed Germination in the (G. Hussey), 699
After-Effect of Movement produced by a Rotating Spiral (Miss M. J. Pickersgill and M. A. Jeeves), 1820
Agar Culture : Autoradiography of Fungi through a Layer of Soil and in (Dr. Erna Grossbard), 854
Agar Electrophoretic Patterns of Red Blood Cell Proteins (Prof. K. V. Giri, G. J. Sathyanarayana Rao and S. Natarajan), 184
Agar Gel (Wedge-shaped) : Diffusion of Proteins through a (Dr. Ch. Wunderly), 1087
Agar Plates : Autoradiographic Analysis on, of Labelled Antigens from Rat Liver (P. Perlmann and T. Hultin), 1530
AGARD Combustion Colloquium (Liège, 1955) : Selected Combustion Problems, 2, Transport Phenomena, Ignition, Altitude Behaviour and Scaling of Aeroengines (M. W. Thring, senior editor), *review* by Dr. J. H. Burgoyne, 622
Age : Decay of Immediate Memory with (D. C. Fraser), 1163
  Dependence on, of the Diameter of the Pupil in the Dark (V. Kadlecová, M. Peleška and A. Vaško), 1520
Age (Technical) : Administration and Defence in a, 89
Age Determination for Individual *Mansonioides* Mosquitoes (Prof. D. S. Bertram and W. A. Samarawickrema), 444
Age Effect on Seta Elongation in *Pellia epiphylla* (W. Mary Crombie and Jean A. Paton), 541
Age Structure in the Engineering Industry (K. F. H. Murrell and S. Grew), 430
Age and Ability, *review* by Prof. L. S. Hearnshaw, 826
Ageing : Research in (Ciba Foundation Awards for 1958), 19 ; (Ciba Foundation Awards in 1959), 89
Ageing, Nuffield Unit for Research into Problems of : Ageing and Human Skill—a Report centred on work by the (A. T. Welford), *review* by Prof. L. S. Hearnshaw, 826
Ageing and Human Skill—a Report centred on work by the Nuffield Unit for Research into Problems of Ageing (A. T. Welford), *review* by Prof. L. S. Hearnshaw, 826
Agent producing High Frequency of Mutations and Unstable Genes in *Escherichia coli* : Heat as an (Prof. Stephen Zamenhof and Dr. Sheldon Greer), 611
Ager, J. A. M., and others : An Abnormal Haemoglobin in a Chinese—Haemoglobin *G*, 460

Agglutinins in Milk : Specificity of (J. McPhillips), 869
Agglutinins (Lysins and), in Normal and Lymphomatous Mouse Tissue (Dr. Eric Ponder and Ruth V. Ponder), 1737
Aggression (Dr. John Paul Scott), *review* by Prof. J. Cohen, 1763
Agnathes et Poissons (Traité de Zoologie, publié sous la direction de Prof. Pierre-P. Grassé, Tome 13), *review* by Prof. C. H. O'Donoghue, 1574
Agricultural Aviation Centre : European (Set up under the auspices of the European Productivity Agency of the Organization for European Economic Co-operation), 226
Agricultural Botany (Dr. N. T. Gill and K. C. Vear), *review* by Prof. A. H. Bunting, 1257
Agricultural Botany, National Institute of : Conference on Herbage Seed Production, 501
  Thirty-eighth Report (1957), 1717
Agricultural Bureaux, Commonwealth : Appointment of Dr. J. G. Malloch as chairman of the Executive Council, 990
Agricultural History in Holland (G. E. Fussell), 845
Agricultural Meteorology in India, 360
Agricultural Research, 86
Agricultural Research in India—Institutes and Organizations (Dr. M. S. Randhawa), *review* by F. C. Bawden, 1628
Agricultural Research, Indian Council of : Scientific Monograph No. 22, The Grassland and Fodder Resources of India (R. O. Whyte), *review* by Dr. J. P. Cooper, 71
Agricultural Research Council : Office of chairman now taken by the Duke of Northumberland, 89
  Report Series No. 14, Investigation of Virus Diseases of Brassica Crops (Dr. L. Broadbent), *review* by Dr. J. H. Hitchborn, 752
  Resignation of Dr. B. Cinader as principal scientific officer in the Department of Experimental Pathology of the Institute of Animal Physiology, 842
  Underwood Fellowship awarded to Dr. Lewis E. Lloyd, 990
  Special Promotions, 992
  Report for 1956-57, 1255
  Appointment of Sir Walter Drummond as chairman of the Farm Buildings Research Committee, 1416
  Gift of £1,000 to the Department of Veterinary Medicine, University of Bristol, for research on the nutrition of the baby pig, 1487
Agricultural Science, South African Journal of, Vol. 1, No. 1, 431
Agricultural Service : The Indian, *review* by F. C. Bawden, 1628
Agricultural Society of England, Royal : Medal and Award for research work of benefit to Agriculture, 1488
Agricultural University of Wageningen : International Conference on Enzymes and their Action, 1710
Agriculture at Nottingham, 155
Agriculture : Atomic Energy in (William E. Dick), *review*, 144
  Medal and Award for research work of benefit to (Royal Agricultural Society of England), 1488
  Nuclear Radiation in Food and (edited by Prof. W. Ralph Singleton), *review* by Dr. Lorna L. Lilly, 758
Agriculture, Association of : Conference on Food and Farming, a Survey of Problems and Remedies, 700
Agriculture, Association of (Department of Extra-Mural Studies of the University of London and the) : Course of lectures on Britain's Food Supplies, 1644
Agriculture for Northern Ireland, Ministry of : Forestry in Northern Ireland, 989
Agriculture, Fisheries and Food, Ministry of : First meeting of the Committee on the Composition of Milk, 87
  Fishery Investigations, Series 2, Vol. 19, On the Dynamics of Exploited Fish Populations (R. J. H. Beverton and S. J. Holt), *review* by Dr. E. B. Worthington and J. G. Skellam, 686
Agronomy Station (National), Portugal : Grant of £4,170 from the Gulbenkian Foundation, Lisbon, for books for the Library, 1493
Agrostis spp. Tolerant of Heavy Metals : Populations of (D. Jowett), 816
Ahmedabad Experiment, Technical Innovation, Work Organization and Management : Productivity and Social Organization—the (A. K. Rice), *review* by S. David M. King, 682
Ahrens, Prof. L. H., and Cherry, R. D. : Evidence for He 'Clusters' in Nuclei, 1434
Aids (Radio), to Navigation (British Association for the Advancement of Science, Section G (Engineering), Discussion on), 978
Aikawa, Jerry K., and others : Concentration in the Human Ovarian Follicular Fluid of Radioactive Tracers and Drugs circulating in the Blood, 1238
Ainsworth, Dr. G. C. : *Obituary* of Dr. G. R. Bisby, 987
  Human and Animal Ecology (The Mouth as a Reservoir of Pathogenic Fungi), 1648
Air : Irregularities of Satellite Drag and Diurnal Variations in Density of the (G. V. Groves), 1533
Air and other Gases : Mode of Growth of Ice Crystals in (K. Isono), 1221
Air (Clean), National Society for : Twenty-fifth Annual Conference, 771
Air Drag : Effect of, on the Orbit of an Earth Satellite (D. G. Parkyn), 787 ; (D. G. King-Hele and Dr. D. C. M. Leslie), 788
Air Flow over Mountains—Notes for Forecasters and Pilots (G. A. Corby), 94
Air Force Lunar Probe : American, 1060
Air Ministry (Meteorological Office) : Meteorological Report No. 18, Air Flow over Mountains, Notes for Forecasters and Pilots (G. A. Corby), 94
  Tables of Temperature, Relative Humidity and Precipitation for the World, 361
  Annual Report on the Meteorological Office (1957-1958), 1711
Air Pollution : Aquatic and (R. W. Edwards), 1208
  Atmospheric Diffusion and (International Union of Theoretical and Applied Mechanics and the International Union of Geodesy and Geophysics International Symposium on), 22, 1134
Air Showers of Size Greater than 10^5 Particles, (1) Core Location and Shower Size Determination (M. H. Brennan, Dr. D. D. Millar and C. S. Wallace), 905 ; 2, Cerenkov Radiation accompanying the Showers (M. H. Brennan, J. Malos, Dr. D. D. Millar and C. S. Wallace), 973 ; 3, Comparison between the Response of Geiger Counters and Scintillation Counters (M. H. Brennan, Dr. D. D. Millar, M. H. Rathgeber and C. S. Wallace), 1053 ; 4, The Distribution of Nuclear-active Particles and of Mu-Mesons (J. A. Lehane, Dr. D. D. Millar and M. H. Rathgeber), 1699
Air Showers (Cosmic Ray) : Dependence of the Nucleonic Component of, on Radius (C. S. Wallace, Dr. M. M. Winn and Dr. K. W. Ogilvie), 1653
Airborne Pollen Grains : An Atlas of (H. A. Hyde and K. F. Adams), *review* by Dr. J. Hutchinson, 1117
Aircraft at High Speeds : Aerodynamic Components of (edited by A. F. Donovan and H. R. Lawrence), *review* by Dr. W. P. Jones, 1582
Aircraft (Historic), Nash Collection of : To be repaired and maintained by members of the Royal Aeronautical Society and the Society of Licensed Aircraft Engineers, 1131
Aircraft Engineers (Licensed), Society of (Royal Aeronautical Society and the) : Members to repair and maintain the Nash Collection of historic aircraft, 1131
Aircraft Establishment (Royal), Farnborough (Metallurgy Department) : Study of Metals and Alloys above 1,200°C. (Crystal Structure—Structures of Graphites deposited from Hydrocarbon Gases at various Temperatures and Pressures), 1419
Aircraft Industry : Persons employed in the, 86
  Research in the, 226
Aitken, L. B. : Water Resources and Water Needs in Scotland (Industry in relation to Water Supply), 1193
Aitken, P. L. : Water Resources and Water Needs in Scotland (Hydro-electric Development in Scotland), 1193
Aitutaki : Social Change in the South Pacific—Rarotonga and (Prof. Ernest Beaglehole), *review* by Prof. Raymond Firth, 280
Åkerberg, E. : Fodder Plants (Development of the Seed-production Industry in Sweden), 703
Aku-Aku, the Secret of Easter Island (Thor Heyerdahl), *review* by Prof. Raymond Firth, 487
Alary Polymorphism in the Gerroidea (Hemiptera Heteroptera), (Dr. R. O. Brinkhurst), 1461 ; *erratum*, 1644
Albert, Prof. Adrien : Chemical Aspects of Selective Toxicity, 421
Albert, Prof. A., and others (edited by) : Current Trends in Heterocyclic Chemistry—Proceedings of a Symposium held at the John Curtin School of Medical Research, Australian National University, Canberra, 1957, under the auspices of the Chemical Society, *review* by Dr. F. G. Mann, 1762
Alberta : Research in, 847
Albertan Plains of Western Canada : Measurement of the Thickness of the Earth's Crust in the (Dr. T. C. Richards), 384
Albertsson, Dr. Per-Åke : Partition of Proteins in Liquid Polymer–Polymer Two-Phase Systems, 709, *erratum*, 918
Albinism in the Common or Hottentot Mole-Rat, *Cryptomys hottentotus* Lesson 1826 (Peter St.J. Turnbull-Kemp), 63
Albinism in the Migratory Grasshopper, *Melanoplus bilituratus* (Wlk.), (L. G. Putnam), 1529
Albino Rats treated during the Embryonic Stage with Rous Virus : Sarcoma in (G. J. Svet-Moldavsky), 1452
Albumin (Human) : Immuno-chemical Observations on the Intimate Structure of (Peggy B. Houghton and Prof. N. H. Martin), 329
Alcohol (Ethyl) : Oxidation of, to Acetic Acid by Proliferating Yeasts (Juan Santa Maria), 937
Alcoholic Samples (Aqueous and) : A Direct-Plating Method for the Assay of Radioactive Isotopes in (H. Campbell, H. A. Glastonbury and Margaret D. Stevenson), 1100
Alcorn, J. W. S., and others : Effect of Gibberellic Acid on the Nodulation of White Clover (*Trifolium repens* L.), 1319
Aldehydes and Olefins : Absorbents for (J. A. Kerr and A. F. Trotman-Dickenson), 466
Alderdice, D. F. (Brett, J. R., and) : Research on Guiding Young Salmon at Two British Columbia Field Stations, 162
Alderman, A. R., and Skinner, H. C. W. : Formation of Dolomite in Saline Lakes near Kingston, South Australia, 21
Alderson, Dr. Thomas : Conditional Anti-Mutagenesis in *Drosophila melanogaster*, 508
Aldosterone : An International Symposium on (edited by Alex F. Muller and Cecilia M. O'Connor), *review* by Prof. D. G. Harrison, 902
Aldosterone and Experimental Hepatic Necrosis (Dr. K. Aterman), 1324
Alexander, Miss A. J. : Awarded an Overseas Scholarship by the Royal Commission for the Exhibition of 1851, for research in zoology, 156
Alexander, Dr. P. (Koller, Prof. P. C., and) : Contribution of Radiobiology to General Biology, *review*, 74
Alfvén, Prof. H. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Algae : Composition of the Nucleic Acids of some (Dr. Eva M. Low), 1096
  The Control of Aquatic Weeds and (Aylwin P. Chancellor), 361
  Selected Bibliography on, No. 4 (Nova Scotia Research Foundation), 1131
Algae (Unicellular) : Auxins and their Effect on the Growth of—Effect of Ethanol and Auxins on the Growth of Unicellular Algae (Dr. M. K. Bach and J. Fellig), 1359 ; Ethanol as a Carbon Source for the Growth of *Chlorella vulgaris* (Prof. H. E. Street, D. J. Griffiths, C. L. Thresher and M. Owens), 1360
Algebra : Commutative (Prof. Oscar Zariski and Prof. Pierre Samuel, with the co-operation of I. S. Cohen), Vol. I, *review* by Dr. L. S. Goddard, 759
Alimentary Tract of the Ruminant (David Benzie and Dr. A. T. Phillipson), *review* by Prof. A. Graham, 622
Alimentary Tract (Calf) : Substances in the, interfering in the Determination of Polyethylene Glycol (R. H. Smith), 260
Alkali, etc., Works in England and Wales : Ninety-fourth Annual Report on, 499
Alkali Halides : Dispersion of the Stress Optical Coefficient of the (Dr. R. Srinivasan), 1660
Alkali Ions : Radiochromatography of (Dr. H. J. Arnikar), 1230
Alkaline Solution : Spectrophotometric Determination of Protein in (B. R. Hewitt), 246
  The Spontaneous Change of Ferriprotoporphyrin in (Dr. Mary-Louise Rothschild and Lawrence S. Myers, jun.), 1671
Alkaloids (Tobacco) : Separation of some, by Gas Chromatography (Dr. Louis D. Quin), 865
Alkoxide Polymers (Metal) : A Structural Theory for (Dr. D. C. Bradley), 1211
Alkylation(O–) : Carcinogenic Activity and (Dr. R. Schoental), 719
All the Enzymes, *review* by Prof. Britton Chance, 969
All About Rheology, *review* by Dr. G. W. Scott Blair, 685

All-India Congress of Zoology : First (Zoological Society of India), 88
All-Union Conference on the Application of Radioactive and Stable Isotopes and Radiation in the National Economy and Science : Abstracts of Papers given in the Session on Radiation Chemistry, Moscow 1957 (translated from the Russian), *review* by Prof. G. Porter, 1588
Allan, Dr. D. A. : Bristol City Museum, 1138
Allan, Dr. D. W. : Reversals of the Earth's Magnetic Field, 469
Allbrook, D. B. (Cave, Prof. A. J. E., and) : Epidermal Structures in a Rhinoceros (*Ceratotherium simum*), 196
Allcroft, Dr. R. : Effects of Pollution on Living Material (Fluorosis in Farm Animals), 1209
Alleged Susceptibility of Sulphydryl Enzymes to Ionizing Radiation (Dr. A. Pihl, R. Lange and L. Eldjarn), 1732
Allen, Prof. D. N. de G. : Numerical Methods in Function-Space, *review*, 1695
Allen, J. W., and Cunnell, F. A. : Diffusion of Zinc in Gallium Arsenide, 1158
Allen, K. R., and Phillips, K. : Observations on Overvolted Uniform Field Spark Gaps, 1083
Allen, Dr. M. B. : At the Third International Seaweed Symposium (Nitrogen Fixation by Marine Organisms), 1780
Allen, Dr. M. J. : Charge Transfer Processes (Electrochemical Reductions other than those involving Hydrogen or Metal Deposition—Problems in the Study of Organic Electrochemical Reductions), 1354
Allen, Dr. N. P. : Promoted to Chief Scientific Officer in the Scientific Civil Service, 991 ; work of, 991
Allen, Dr. P. E. M., and others : Preparation of Block and Graft Copolymers in Systems where the Life-time of the Kinetic Chain is Long, 245
Allergic Encephalomyelitis : Experimental—Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and Killed Tubercle Bacilli (Dr. Marian W. Kies, Dr. Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104 ; Experimental Allergic Encephalomyelitis induced with Combined 'Purified' Spinal Cord and Bacillary Fractions (Dr. J. Colover), 105
  Prevention of, by Prior Injection of Adjuvants (Dr. Marian W. Kies and Dr. Ellsworth C. Alvord, jun.), 1106
Allergology : Third International Congress of (International Association of Allergology), 363
Allergology, International Association of : Third International Congress of Allergology, 363
Allibone, Dr. T. E. : Advances in Nuclear Engineering, *review*, 210
  Some Aspects of Thermonuclear Research (Presidential Address to Section A (Mathematics and Physics) of the British Association for the Advancement of Science), 579
Allocation of Funds for Research in Britain, 1757
Allogromia ovoidea : Confusion between *Gromia oviformis* and (Dr. R. H. Hedley), 1391
'Allomorphism' : Adapative Muscular (Einar Helander), 1035
Alloy (Aluminium) Extruded Bar : Abnormally High Fatigue Strengths in (J. M. Finney and J. Y. Mann), 1366
Alloy Steel (Complex) : A New Phase in a (G. T. Brown, R. T. Allsop and D. Wilkinson), 1437
Alloy Steels (Nickel) : Transformation Characteristics of Direct Hardening (Mond Nickel Co., Ltd.), 1643
Alloy and Special Steels : Production, Properties and Application of (Publication of the papers contributed to the National Metallurgical Research Laboratory Symposium on), 1777
Alloys : Precipitation in (X-Ray Analysis and Electron Microscopy Groups of the Institute of Physics Joint Conference on), 771
Alloys above 1,200°C. : Study of Metals and (Symposium at the University of Oxford), 1418
Alloys (Liquid Mercury–Thallium), containing 25-35 Atomic per cent Thallium : Ordering in (R. G. Ward and J. R. Wilson), 334
Allsop, R. T., and others : A New Phase in a Complex Alloy Steel, 1437
Alper, Dr. Tikvah (Gray, Dr. L. H., and) : Association for Radiation Research, 92
α_2-Globulin Pattern on Starch Gel : Isolation of the (S. Baar), 259
α-Iron : Aluminium Nitride Precipitates in (G. R. Booker and J. Norbury), 255
α-Lipoic Acid : Anticholesterol Activity of (David Kritchevsky and A. W. Moyer), 396 ; (Dr. L. Angelucci and E. Mascitelli-Coriandoli), 396
α-(*p*-Nitrophenyl) Maltoside as a Substrate for the Assay of Amylase (A. P. Jansen and P. G. A. B. Wydeveld), 525
α-Picoline : Occurrence of, in Plants (R. E. R. Grimmett and Dr. F. B. Shorland), 1734
α- and β-Forms of Calcium Sulphate Hemihydrate : Transformation of the, to Insoluble Anhydrite (D. A. Powell), 792
Alpine Studies (Geographical Association Summer School in), 1777
Alt, Franz L. : Electronic Digital Computers, *review* by Dr. A. D. Booth, 1583
Alteration (Chemical), of its Ribonucleic Acid *in vitro* : Production of Mutants of Tobacco Mosaic Virus by (Dr. Alfred Gierer and Dr. Karl-Wolfgang Mundry), 1457
Alteration (Metabolic), in Leukaemia induced by a Virus (Hilton B. Levy and Isadore Brodsky), 1379
Altman, Kurt I. (Gerber, Georg B., and) : Ribosyl Transfer between Ribose Nucleotides in the Rat, 1513
Altschule, Dr. M. D. : Chemical Pathology of the Nervous System (Problem of Glucose Utilization by Schizophrenics), 1647
Alty, Dr. T. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy ?), 1284
Alumina (Scaly) : A New Method for preparing (Dr. Persio de Souza Santos), 525
Aluminium Alloy Extruded Bar : Abnormally High Fatigue Strengths in (J. M. Finney and J. Y. Mann), 1366
Aluminium Interlayers in Soil Clay Minerals, Montmorillonite and Vermiculite (B. L. Sawhney), 1595
Aluminium Nitride Precipitates in α-Iron (G. R. Booker and J. Norbury), 255
Alvord, jun., Dr. Ellsworth C., and others : Experimental Allergic Encephalomyelitis—Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and Killed Tubercle Bacilli, 104
Alvord, jun., Dr. Ellsworth C. (Kies, Dr. Marian W., and) : Prevention of Allergic Encephalomyelitis by Prior Injection of Adjuvants, 1106
Amaldi, Prof. E. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Amazon : Archaeological Investigations at the Mouth of the (Betty J. Meggers and Clifford Evans), *review* by Dr. G. H. S. Bushnell, 1044
Ambartsumyan, V. A. (edited by) : Theoretical Astrophysics (translated from the Russian by J. B. Sykes), *review* by Prof. R. O. Redman, 548
Amber Spiders in European Collections (Alexander Petrunkevitch), *review* by T. H. Savory, 1588
Ambrose, Dr. E. J. : Invasiveness and Surface Properties of Cancer Cells, 1419
America (North) : The Chemical Industry during the Nineteenth Century. a Study of the Economic Aspect of Applied Chemistry in Europe and (Dr. L. F. Hsber), *review* by J. L. S. Steel, 347
  The Faunal Connections between Europe and (Dr. Carl H. Lindroth), *review* by Charles S. Elton, 140
American Academic Institutions : Support and Direction of Research at (Dr. Lloyd V. Berkner), 848
American Air Force Lunar Probe, 1060
American Association for the Advancement of Science : 125th Meeting to be held in Washington, D.C., 1416
  Presidential Address : Fifty Years of Medical Genetics (Dr. Laurence H. Snyder), 1416
American Astronomical Society : Warner Lecture (Dr. Allan Sandage), 1132
American Business School (O. S. Hiner), 841
American Chemical Society : Monograph Series No. 135, Emulsions (Paul Becher), *review* by Sir Eric Rideal, 550
American Cockroach : Glucose Catabolism in the (Gabriel M. Silva, W. P. Doyle and Dr. C. H. Wang), 102
American Cockroach, *Periplaneta america* (L.) : A White-eyed Mutant Form of the (G. T. Jefferson), 892
American Committee for International Wild Life Protection : Special Publication No. 13, Extinct and Vanishing Birds of the World (James C. Greenway, Jr.), *review* by Dr. A. J. Marshall, 758
American Institute of Electrical Engineers, and others : Annual Conference on Electrical Techniques in Medicine and Biology, 433, 771
American Institute of Physics : *Physical Review Letters*, Vol. 1, No. 1, 227
American Permian Microsaurs : Revision of the Gymnarthridae (Joseph T. Gregory, Frank E. Peabody and Llewellyn I. Price), *review* by Dr. W. E. Swinton, 1115
American Philosophical Society : Proceedings, Vol. 101, No. 6, Dealing with Historical Documents, 20
  Transactions, New Series, Vol. 48, Part 1, The Mycenae Tablets II (edited by Emmett L. Bennett, Jr. ; translations and commentary by John Chadwick), 153
  Memoirs, Vol. 45, Population Redistribution and Economic Growth, United States, 1870-1950, 1, Methodological Considerations and Reference Tables (Everett S. Lee, Ann Ratner Miller, Carol P. Brainerd and Richard A. Easterlin ; prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), *review*, 420
  Transactions, New Series, Vol 48, Part 2, The Neolithic Age in Eastern Siberia (Henry N. Michael), 1061
  Transactions, New Series, Vol. 47, Part 3, Cultivation and Weaving of Cotton in the Prehistoric South-western United States (Kate Kent), 1775
American Society of Lubrication Engineers : Transactions, Vol. 1, No. 1, Lubrication Science and Technology (edited by John Boyd), *review* by Dr. D. Tabor, 1763
American States : Science in Six, 1347
Amine Boranes : Vibrational Frequency associated with the Boron–Nitrogen Dative Bond in (R. C. Taylor and C. L. Cluff), 390
Amine (Catechol) Depletion in the Rat's Denervated Adrenal Gland following Chronic Administration of Reserpine (Dr. Bernard L. Mirkin), 113
Amines (Aromatic) : Kinetic Isotope Effect in the Iodination of (E. Shilov and F. Weinstein), 1300
Amines (Tissue) : Adrenalectomy and (R. Hicks and Dr. G. B. West), 401
Amino-Acids : Incorporation of, by Disrupted Staphylococcal Cells (Dr. E. F. Gale, Dr. C. J. Shepherd and Joan P. Folkes), 592
  Influence of, on Actinomycin Biosynthesis (Edward Katz and William A. Goss), 1668
  A New Method for resolving, by Metabolism of Bacteria on Benzoyl Derivatives of DL-Amino-acids (Prof. Yukio Kameda, Etsuko Toyoura, Katsuhiko Matsui, Yukio Kimura and Shizue Kitagawa), 453
  Photosynthesis of (A. R. Deschreider), 528
DL-Amino-acids : A New Method for Resolving Amino-acids by Metabolism of Bacteria on Benzoyl Derivatives of (Prof. Yukio Kameda, Etsuko Toyoura, Katsuhiko Matsui, Yukio Kimura and Shizue Kitagawa), 453
Amino-Acids of the Cerebrospinal Fluid : The Free (Dr. H. G. Knauff), 937
Amino-Acids essential for an Insect : Use of Glucose labelled with Carbon-14 to determine the (R. Kasting and A. J. McGinnis), 1380
Amino-Acids from Paraformaldehyde : Photosynthesis of, involving the Fixation of Nitrogen in the Presence of Colloidal Molybdenum Oxide as Catalyst (K. Bahadur, S. Ranganayaki and Prof. L. Santamaria), 1668
Amino-Acids in a Protein of Hair Follicles : Content of Citrulline and other (G. E. Rogers and D. H. Simmonds), 186
Amino-Acids of Silk : Utilization of the Carboxyl Group of Glycine for the Synthesis of the, by *Bombyx mori* (Dr. S. Bricteux-Grégoire, W. G. Verly and Prof. M. Florkin), 1515
Amino-Acids (Activated) : Formation of, by Intact Cells of *Azotobacter vinelandii* (R. W. Bernlohr and Dr. G. C. Webster), 531
Amino-Acids (Free) : Rate of Absorption of Supplementary, during Digestion (Dr. J. B. Longenecker and N. L. Hause), 1739
γ-Aminobutyric Acid in the Central Nervous System : Inhibition and Excitation due to (Prof. Takashi Hayashi), 1076
γ-Amino-*n*-Butyric Acid and Spinal Synaptic Transmission (Dr. D. R. Curtis and J. W. Phillis), 323
γ-Aminobutyryl-Choline : Effect of, upon the Electrical Activity of the Cerebral Cortex (Hidehiko Takahashi, Akira Nagashima and Chikao Koshino), 1443
δ-Aminolaevulic Acid : Evidence for the Involvement of Ferrous Iron in the Biosynthesis of, by Chicken Erythrocyte Preparations (E. G. Brown), 313
Ammi majus Linn. : Isolation of Marmesin from the Fruits of (Effat A. Abu-Mustafa, Nasry Badran, M. B. E. Fayez and N. A. Starkowsky), 54
Ammonia : Release of, by Plant Tissues treated with Indole-3-Acetic Acid (Leonora Reinhold), 1022

Ammonia Maser : Comparison of an, with a Caesium Atomic Frequency Standard (J.-P. Blaser and J. Bonanomi), 859
Ammonium Carbonate Intoxication in the Rat : Electroencephalograph Correlates of (Dr. Robert Cohn and Comdr. Thomas R. Ulshafer), 1735
Ammonium Reineckate : Quantitative Separation of Nitrogenous Organic Bases using (Dr. Lee Kum-Tatt), 655
Amoebae : Longevity of *Proteus* Group of (Sister Monica Taylor), 1245
Amoeboid Motility of Fresh Ascites Tumour Cells (Dr. Iwao Hirono), 809
Amounts (Millimicrogram), of Cobalt : Separation and Determination of, and Microgram Amounts of Copper in Biological Material (Aleksandra Smoczkiewiczowa and Witold Mizgalski), 53
Amounts (Small), of Vasopressins and Oxytocins : Paper Chromatography of (Prof. H. Heller and K. Lederis), 1231
Amphoteric Soaps (Non-Ionic and) : Protection of Living Cells against Acid by certain (Dr. P. D'Arcy Hart and Dr. J. E. Lovelock), 304
Amsterdam, Daniel (Schneierson, Dr. S. Stanley, and) : Effect of Bile Salts upon the Activity of Antibiotics, 56
Amylase : α-(*p*-Nitrophenyl) Maltoside as a Substrate for the Assay of (A. P. Jansen and P. G. A. B. Wydeveld), 525
Anacardate (Sodium), isolated from Cashew Nut Shell Oil : Surface-active Characteristics of (Arun K. Biswas and Anil Bandhu Roy), 1299
Anaemia and Liver Damage in X-Irradiated Animals (Dr. M. Skalka), 1602
Anaesthesia and the Action of DDT on *Anopheles* Larvae (Prof. Jack Colvard Jones), 722
Analeptic Action of Anibine (N. Botafogo Goncalves, Joao Canali Correa F° and Otto Richard Gottlieb), 938
Analog–Digital Conversion Techniques : Notes on (edited by Alfred K. Susskind), *review* by Dr. A. D. Booth, 1583
Analogies between the Compensatory Responses of Fish and Crustacea to Horizontal Displacement of the Body (D. H. A. Marr), 1621
Analogue Computations : Second International Conference for, 22
Analogues : Localization of Interaction Sites in Multi-Component Transfer Systems—Theorems derived from (Prof. Britton Chance, William Holmes and Joseph Higgins, and Dr. C. M. Connelly), 1190
Analogues of Glutathione : Effect of, on the Feeding Reaction of Hydra (E. E. Cliffe and Dr. S. G. Waley), 804
Analogues (Coumarin) : Occurrence of, in LemonJuice (Prof. Richard A. Bernhard), 1171
Analogues (Phenylbutazone) : Relationship between *pKa* and Uricosuric Activity in (J. J. Burns, T. F. Yü, Peter Dayton, Lawrence Berger, Alexander B. Gutman and Bernard B. Brodie), 1162
Analogues (Tryptophan) : Effect of, on Reversion of a Tryptophan-requiring Strain of *Escherichia coli* (N. M. Schwartz and B. S. Strauss), 888
Analyser *HS* 100 : The Marshall Pulse Height, 989
Analyses (Preliminary) : Orbital Data and, of Satellites 1957α and 1957β (compiled by F. L. Whipple, L. G. Boyd, J. A. Hynek and G. F. Schilling), 1062
Analysis : Applied (Prof. Cornelius Lanczos), *review* by Prof. T. A. A. Broadbent, 1401
  Colorimetric, *review* by C. O. Harvey, 1331
  Complexometric, *review* by C. O. Harvey, 1471
  Diophantine, *review* by Prof. T. A. A. Broadbent, 1629
  Multivariate, *review* by Dr. N. L. Johnson, 1183
  Numerical (Kaiser S. Kunz), *review* by Dr. L. S. Goddard, 972
  Quantitative Organic (James S. Fritz and George S. Hammond), *review* by Dr. A. D. Mitchell, 1187
  Swift Combustion of Organic Compounds for (Dr. Irmgard K. H. Otter), 393
Analysis of Mixtures of Glucosamine and Galactosamine with Bakers' Yeast (Dr. Burton M. Pogell and Dr. Donald F. Koenig), 127
Analysis of Molluscan Development : Morphogenesis, the (Prof. Chr. P. Raven), *review* by Prof. C. M. Yonge, 484
Analysis of Multiple Time-Series (M. H. Quenouille), *review* by Dr. N. L. Johnson, 1183
Analysis (Autoradiographic) on Agar Plates of Labelled Antigens from Rat Liver (P. Perlmann and T. Hultin), 1530
Analysis (Economic) : Linear Programming and (Prof. Robert Dorfman, Prof. A. Samuelson and Prof. Robert M. Solow), *review* by Dr. L. S. Goddard, 1046
Analysis (Fourier), and Generalised Functions : Introduction to (Prof. M. J. Lighthill), *review* by Prof. T. A. A. Broadbent, 1584
Analysis (Geographical), of British Weather, *review* by Prof. Gordon Manley, 1696
Analysis (Inorganic) : Spot Tests in (Prof. Fritz Feigl), fifth English edition (translated by Prof. Ralph E. Oesper), *review* by C. O. Harvey, 1588
Analysis (Job) : Time-Span of Discretion in (J. M. M. Hill), 998
Analysis (Multivariate) : Some Aspects of (Prof. S. N. Roy), *review* by Dr. N. L. Johnson, 1183
Analysis (Multivariate Statistical) : An Introduction to (Prof. T. W. Anderson), *review* by Dr. N. L. Johnson, 1183
Analysis (Neutron Activation), using an Internal Standard (G. Leliaert, J. Hoste and Z. Eeckhaut), 600
Analysis (A Scientific), of Fixation and Dyeing, *review* by Prof. J. Brachet, 1579
Analysis (Succinate) : A Sensitive Micro-Spectrophotometric Method for (Dr. M. B. Waitzman and E. Q. Adams), 129
Analysis (Tetrad) : Use of Loosely Linked Genes to estimate Chromatid Interference by (Dr. H. L. K. Whitehouse), 1173
Analysis (X-Ray), and Electron Microscopy of Metals, 771
Analysis and Measurement of Programme Levels, Part 1, Investigation of Extreme Values of Sound Pressure (D. E. L. Shorter and W. I. Manson) ; Part 2, A Description of an Optical Instrument for Monitoring Sound Signals (E. R. Wigan), 1490
Analyst : The (Re-publication in facsimile form of the earliest ten volumes, 1876-85), 1414
Analyst : The Parexic, *review* by Prof. T. A. A. Broadbent, 1401
Analytical Chemistry : *Talanta*, a Journal of, Vol. 1, Nos. 1 and 2, 1346
Analytical Chemistry in Nuclear Reactor Technology : Second Conference on, 22
Analytical Chemistry, Society of : Re-publication in facsimile form of the earliest ten volumes (1876-85) of *The Analyst*, 1414
Analytical Chemistry, Society for (Midlands Section and the Microchemistry Group) : Symposium on Microchemistry, 22
Analytical Chemistry, Society for (North of England Section) : Discussion on Laboratory Balances, 771
Analytical Chemistry (Modern), in the Service of Pharmacy and Medicin (Dr. G. E. Foster), 995
Analytical Uses of Ethylenediamine Tetraacetic Acid (Prof. Frank J. Welcher), *review* by C. O. Harvey, 1471
Anaphylaxis (Rat) : Mast Cell and Histamine in—the Effect of *Haemophilu pertussis* (I. Mota), 1021
Anatomie und Histologie von *Thermosbaena mirabilis* (Dr. Rolf Siewing *review* by Dr. Isabella Gordon, 1186
Anatomy, Descriptive and Applied (Gray's), thirty-second (centenar edition, edited by Prof. T. B. Johnston, Prof. D. V. Davies and Pr F. Davies, *review* by Prof. Ruth E. M. Bowden, 1760
Anatomy of Mathematics, *review* by Prof. T. A. A. Broadbent, 211
Anatomy of the Rat (Eunice Chace Greene), *review* by Prof. H. A. Harris, 41
Anatomy (Wood): International Glossary of Terms used in (Internation Association of Wood Anatomists), 1709
Ancestors : Embryos and (Sir Gavin de Beer), third edition, *review* by Dr. G. S. Carter, 1112
Ancient African Flora : The Cape as an (Prof. R. S. Adamson), 585
Ancient Vortex of Asia (V. T. Mordovsky), 563
Anderson, E. S. : Bacteriophage Research, 1769
Anderson, Prof. Laurens, and others : Rennin Coagulation of Enzymatically Dephosphorylated Casein, 798
Anderson, R. L., and Tove, Prof. S. B. : Effect of Copper Deficiency on Synthesis of Haem, 315
Anderson, Prof. T. W. : An Introduction to Multivariate Statistical Analysis, *review* by Dr. N. L. Johnson, 1183
Anderson, W., and others : Radioactivity due to Fission Products in Biological Material, 1473
Andersson, Bengt, and others : The High-Energy Proton Beam as a Neurosurgical Tool, 1222
Ando, Moriaki, and others : Effects of Flavin Monosulphate and Flavin Adenine Dinucleotide on the Electroencephalogram, 457
Andrade, Prof. E. N. da C. : Awarded the Hughes Medal for 1958 of the Royal Society, 1344, 1633 ; work of, 1633
André, Patricia A., and others : Interface Couples in Crystals, 652
Andresen, Dr. Richard H., and others : Conditions which eliminate Inflammation to Homografts in Rabbits, 1452
Andrew, Prof. E. R., and others : Nuclear Magnetic Resonance Spectra from a Crystal rotated at High Speed, 1659
Andrewes, Dr. C. H. : Bakteriophage 1917 bis 1956, *review*, 350
Andrewes, Dr. C. H., and Sneath, Dr. P. H. A. : The Species Concept among Viruses, 12
Andrews, E. D., and others : Vitamin B_{12} and Cobalt Concentrations in Livers from Healthy and Cobalt-deficient Lambs, 869
Andrews, Dr. F. W., and Painter, A. C. (compiled by) : Abstracts and Index to the Annual Research Reports of the Kent Incorporated Society for Promoting Experiments in Horticulture, 1913-1953 (East Malling Research Station), 499
Andreyev, N. S. (Porai-Koshits, E. A., and) : Low-Angle X-Ray Scattering by Glasses, 335
Andriashev, Dr. A. P. : Antarctic Research (Oceanography), 288
Andrillat, Henri : Les températures électroniques des nébuleuses planétaires, 431
Androgens : Secretion of, by the Adrenal Cortex of the Mouse (Dr. Ruth Deanesly), 262
Angelucci, Dr. L., and Mascitelli-Coriandoli, E. : Anticholesterol Activity of α-Lipoic Acid, 396.
Angiotensin I on Smooth Muscle : An Indirect Action of (P. A. Robertson and Dana Rubin), 867
Angler Fish : Egg Rafts of (Miss P. Rasquin), 21
Angles (Contact), and Work of Adhesion (Prof. N. K. Adam and Dr. H. K. Livingston), 128
Angular Distribution Coefficients for Light-Scattering by Spheres : Tables of (Chiao-Min Chu, George C. Clark and Stuart W. Churchill), *review* by Dr. B. J. Mason, 1117
Anharmonicity (Negative) : The Problem of, and the Nature of the Hydrogen Bond in Potassium Hydrogen Fluoride (R. Blinc), 1016
Anhydrite (Insoluble): Transformation of the α- and β-Forms of Calcium Sulphate Hemihydrate to (D. A. Powell), 792
Anhydrous Sodium Sulphate : Polymorphic Transitions in (R. J. Bird), 1797
Anibine : Analeptic Action of (N. Botafogo Goncalves, Joao Canali Correa F° and Otto Richard Gottlieb), 938
Animal Behaviour, Vol. 6, Nos. 1 and 2, 841
Animal Cells : Radiobiochemical Lesion in (Studies in Synthesis of Deoxyribonucleic Acid), (Margery G. Ord and Dr. L. A. Stocken), 1787
Animal Cells in Continuous Suspended Culture : Critical Effect of Oxygen Tension on Rate of Growth of (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Animal Diseases : A Farmer's Guide to, *review* by Dr. J. O. L. King, 551
Animal Ecology (Human and), International Society for : Meeting in Lisbon, 1648
Animal Health, Commonwealth Bureau of : Review Series No. 5, Salmonellosis in Animals (Dr. A. Buxton), *review* by Dr. Joan Taylor, 1046
Animal Health Trust : Wellcome Fellowship for 1958-59 awarded to Mrs. H. E. Rose, 432
  Research Training Scholarships for 1958-59 awarded to B. A. Baldwin, Dr. A. D. Care, A. R. Gray and R. F. Sturrock, 432
  New Vaccine for Fowl Typhoid, 1062
Animal House : Variance Control in the (Dr. J. D. Biggers, Dr. Ar McLaren and Dr. Donald Michie), 77
Animal Life on Wave-beaten Rocks (Dr. H. Gorvett), 1652
Animal Welfare, Universities Federation for : Summer School, 158
Animals : Effect of Drugs on Conditioning and Habituation to Arous Stimuli in (Dr. B. J. Key and Dr. P. B. Bradley), 1517
  Geographical Distribution of, *review* by Charles S. Elton, 140
  Mineral Requirements of Plants and, *review* by Dr. E. C. Humphries, 6
  Nomenclature of Fungi Pathogenic to Man and—Names recommende for use in Great Britain (Medical Research Council, Memorandu No. 23), second edition, 500
  Salmonellosis in (Dr. A. Buxton), *review* by Dr. Joan Taylor, 1046
  Salt and Water Balance in (British Association for the Advancement o Science, Sections D (Zoology) and I (Physiology and Biochemistry), Symposium on), 1207
Animals sacrificed on the 'Burial of Romulus' below the *Niger lapis* in the Roman Forum : Bones of a Vulture among the Remains of (G. A. Blanc and Prof. A. C. Blanc), 66

Animals (Laboratory) : A Comprehensive Handbook on the Care of, *review* by Dr. J. O. L. King, 281
  The UFAW Handbook on the Care and Management of (edited by Alastair N. Worden and W. Lane-Petter), second edition, *review* by Dr. J. O. L. King, 281
Animals (Panting and Sweating) : Heat, Salt and Hormones in (Prof. W. V. Macfarlane, Kathleen Robinson, Beth Howard and Rosemary Kinne), 672
Animals (X-irradiated) : Anaemia and Liver Damage in (Dr. M. Skalka), 1602
Animals and Man: Tuberculosis in (Prof. John Francis), *review* by Prof. Harold Burrow, 281
Animals and Plants : The Ecology of Invasion by (Charles S. Elton), *review* by Prof. Ronald Good, 1576
Annealing (Thermal), of Chemical Radiation Damage (Dr. A. G. Maddock and S. R. Mohanty), 1797
Annual Epidemiological and Vital Statistics, 1954, Bilingual edition (French and English), (United Nations World Health Organization), *review* by S. J. Kilpatrick, 9
Annual Pole Tide (Prof. Walter Munk and Richard Haubrich), 42
Annual Review of Microbiology (edited by Charles E. Clifton, in association with Sidney Raffel and Roger Y. Stanier), Vol. 11, *review* by Dr. H. K. King, 823
Annual Review of Nuclear Science (edited by James G. Beckerley, in association with Robert Hofstadter and Leonard I. Schiff), Vol. 7, *review* by Dr. F. Mandl, 489
Annual Review of Physiology (edited by Victor E. Hall, in association with Frederick A. Fuhrman and Arthur C. Giese), Vol. 20, *review* by Prof. J. H. Gaddum, 901
Anodal Threshold Phenomenon in the Squid Giant Axon (John R. Segal), 1370
Anodic Reactions of Mercury with Halide Ions in Dimethylformamide (Dr. P. H. Given and M. E. Peover), 1226
Anomalous Attenuation in Linear Electron Accelerators (Dr. V. J. Vanhuyse), 1081
Anomalous Dissociation of Molecular Hydrogen by Electron Impact (L. A. Edelstein), 932
Anomaly (Diffraction), in Polarizing Microscopes (Shinya Inoué and Prof. Hiroshi Kubota), 1725
Anopheles gambiae, Giles (Susceptible, Hybrid and Resistant Strains of) : Effect of Simulated Field Deposits of Gamma-BHC and Dieldrin on (G. Davidson and D. G. Pollard), 739
Anopheles Larvae : Anaesthesia and the Action of DDT on (Prof. Jack Colvard Jones), 722
Ansell, Dr. G. B. : Chemical Pathology of the Nervous System, 1646
Antagonism by Folic Acid : Toxic Effects produced by Pyrimethamine in Chickens and their (J. M. S. Lucas), 1449
Antagonism (Microbial), of *Fusarium culmorum* (E. Griffiths and M. A. Siddiqi), 956
Antarctic: Arctic and—a Prospect of the Polar Regions (Dr. Colin Bertram), new edition, *review* by L. M. Forbes, 620
  Meteorology of the (edited by M. P. van Rooy), *review* by Dr. G. E. R. Deacon, 900
Antarctic Fauna : Protection of, 430
Antarctic Meteorology, *review* by Dr. G. E. R. Deacon, 900
Antarctic Research (Dr. T. Hatherton), 285
Antarctica : Chemistry and Clay Mineralogy of a Soil Sample from (L. C. Blakemore and L. D. Swindale), 47
  The Future of (Prof. David L. Linton), 1781
  Nomenclature of Rock Units in the Ross Sea Region (Dr. H. J. Herrington), 290
Antarctica during 1954-57 : Australian Discoveries of Emperor Penguin Rookeries in (Dr. Richard L. Willing), 1393
Antarctica Today and Tomorrow (Prof. G. C. L. Bertram), 1782
Antedon bifida (Pennant) : Pigments present in Arms and Pinnules of the Crinoid (Miss E. J. Dimelow), 812
Anterior Pituitary Growth Hormone : Influence of the Thymus upon the Reaction of the Rat to (Dr. J. Comsa), 728
Anterior Retractor Muscle of the Byssus of *Mytilus edulis* : Responses of the (J. A. Holgate and Dr. G. W. Cambridge), 34 ; (Dr. G. W. Cambridge), 35
Anthocyanin and Leuco-anthocyanin in Flowers of *Camellia japonica* : Separation of (Toru Endo), 801
Anthocyanin Pigment (A Minor), of Sweet Cherry (Dr. Kuang C. Li and Dr. A. C. Wagenknecht), 657
Anthocyanins of Blood Oranges (Dr. B. V. Chandler), 933
Anthocyanins (Leuco-), as the Possible Precursors of Tannins (W. E. Hillis and Mrs. Gerda Urbach), 657
Anthony, J. (Millot, J., and) : At the fifteenth International Congress of Zoology (Résultats actuels de l'étude du Coelacanthe *Latimeria chalumnae* Smith, dernier des Crossoptérygiens), 435
Anthracite : Infra-Red Spectra of a Coalification Series from Cellulose and Lignin to (Prof. C. R. Kinney and E. I. Doucette), 785
Antibacterial and Cytostatic Action : Desertomycin, a New Crystalline Antibiotic with (Dr. J. Úri, R. Bognár, I. Békési and B. Varga), 401
Antibiotic with Antibacterial and Cytostatic Action : Desertomycin, a New Crystalline (Dr. J. Úri, R. Bognár, I. Békési and B. Varga), 401
Antibiotic (Crystalline), with Antibacterial and Cytostatic Action : Desertomycin, a New (Dr. J. Úri, R. Bognár, I. Békési and B. Varga), 401
Antibiotic Substances from Yeast (Werner Motzel and Dr. Elton S. Cook), 455
Antibiotics : Effect of Bile Salts upon the Activity of (Dr. S. Stanley Schneierson and Daniel Amsterdam), 56
  International Symposium on, 1279
  A Paper Chromatography Method for the Determination of Suitable *p*H Values for the Extraction of (Vladimír Betina), 796
  Thermal Decomposition of (Prof. Wesley W. Wendlandt and Morris Zief), 665
Antibiotics (Antifungal) : Formation of, by a New *Streptomyces* Species (Dr. P. L. Narasimha Rao and Miss B. N. Uma), 115
Antibodies, their Production and Mechanism of Action (Biology Division of Oak Ridge National Laboratory Symposium on, Gatlinburg, 1957), *review* by Prof. P. C. Koller and Dr. P. Alexander, 74
Antibody (Fluorescent) : Electrophoresis of (Dr. C. C. Curtain), 1305
Antibody and Antigenic Combining Sites : Separation and Isolation of Fractions of Rabbit Gamma-Globulin containing the (Dr. R. R. Porter), 670
Antibody Molecular Weight : Relationship of Serological Reactivity to (Harry S. Goodman), 1100
Antibody Production by Single Cells (Dr. R. G. White), 1383
Antibody Synthesis *in vitro* : Effect of 8-Azaguanine on (Dr. R. W. Dutton, Anne H. Dutton and Mariam George), 1377
Antibonding Morse Potential (Robert W. Keyes), 1071
Anti-brucella Phage (Prof. Józef Parnas, A. Feltynowski and W. Bulikowski), 1610
Anticholesterol Activity of α-Lipoic Acid (David Kritchevsky and A. W. Moyer), 396 ; (Dr. L. Angelucci and E. Mascitelli-Coriandoli), 396
Anticlumping Factor for Mitochondria in the Supernatant Fraction of Rat-Liver Homogenates (Dr. J. St. L. Philpot and Dr. J. E. Stanier), 1167
Anticoagulating System (Physiological) : Existence and Significance of a (Prof. B. A. Kudrjashov and P. D. Ulytina), 397
Antidiuretic Hormone : Role of Hyaluronidase in the Re-absoprtion of Water in Renal Tubules—the Mechanism of Action of the (A. G. Ginetzinsky), 1218
Antifreeze Agent : Survival of Intact Insects immersed in Liquid Oxygen without any (Eizo Asahina and Kiyoshi Aoki), 327
Antifungal Antibiotics : Formation of, by a New *Streptomyces* Species (Dr. P. L. Narasimha Rao and Miss B. N. Uma), 115
Antigen (Forssman's), in Ehrlich Mouse Carcinoma (Prof. H. W. Julius and P. J. de Vries), 1165
Antigenic Combining Sites (Antibody and) : Separation and Isolation of Fractions of Rabbit Gamma-Globulin containing the (Dr. R. R. Porter), 670
Antigenic Structure of Bacteria : Phagocytosis and the (Prof. S. Slopek, A. Skurski, E. Michalska and L. Dabrowski), 1243
Antigenicity and Survival of Cartilage Homografts (M. B. L. Craigmyle), 1248
Antigens (Labelled), from Rat Liver : Autoradiographic Analysis on Agar Plates of (P. Perlmann and T. Hultin), 1530
Antigens (Tissue-Specific) : Distribution of, in Centrifugal Fractions of Rat Liver (Dr. Peter Vogt), 1807
Anti-Mutagenesis in *Drosophila melanogaster* : Conditional (Dr. Thomas Alderson), 508
Antiquarian Horological Society : Meeting in Birmingham, 771
Antiquity to the Beginning of the Nineteenth Century : A History of Mathematics from (Dr. J. F. Scott), *review* by Prof. T. A. A. Broadbent, 211
Antisera (Cytotoxic) : Selection of Cell Lines in Tissue Culture by the Use of (Dr. V. Defendi, A. A. Kamrin and Dr. J. S. Colter), 1246
Antisera (Virus) : Preparation of, from Strawberry (R. M. Lister), 1814
Antistreptolysins in Protein Fractions : Distribution of (Dr. L. Goreczky), 305
Antituberculosis Factors of Milk (Zdenek Franc, Ivo M. Hais and Oldřich Horešovsky), 884
Anti-Tumour and Biochemical Effects of Purified Bovine Xanthine Oxidase in *C3H* and C Mice (Prof. A. Haddow, Dr. G. de Lamirande, Prof. F. Bergel, Dr. R. C. Bray and D. A. Gilbert), 1144
Antlers (Deer's) : Fall-out Radioactivity in a (Dr. J. Hawthorn and R. B. Duckworth), 1294
Antoniu, A., and Wetmore, Prof. F. E. W. : Charge Transfer Processes (Mechanism of Cathodic Electrochemical Reactions—Hydrogen Evolution Reaction at Silver), 1354
Aoki, Kiyoshi (Asahina, Eizo, and) : Survival of Intact Insects immersed in Liquid Oxygen without any Antifreeze Agent, 327
Apatitic Phosphates (Precipitated) : Structure of (Dr. Claudine Fabry), 523
Apertures : Two- and Three-Dimensional Flow of Grains through (R. L. Brown and J. C. Richards), 600
Aphid-transmitted Tobacco Ring-Spot-like Virus isolated from *Begonia tuberhybrida* (J. Semal), 1688
Apical Dominance and Flowering in Fruit Trees : Effects of Gravity on Growth, (Gravimorphism in Trees), (Dr. P. F. Wareing and T. Nasr), 379
Apices (Shoot) : Application of Autoradiographic Techniques to Studies of (Carl R. Partanen and Ernest M. Gifford, jun.), 1747
Apikian, G. : At the Third International Seaweed Symposium (Occurrence and Utilization of Algae in Morocco), 1780
Apospory (Induced), in Polypodiaceous Ferns (P. R. Bell and B. M. Richards), 1748
Apparatus for Microelectrophoresis of Small Particles (Dr. A. D. Bangham, R. Flemans, Dr. Dorothy H. Heard and G. V. F. Seaman), 642
Apparatus (Scientific), in the Royal Institution (Sir Lawrence Bragg), 1541
Apparatus and Instruments (Scientific) : Import Duty on, 1708
Apparently Simple Case of Population Control (M. H. Williamson), 1108
Appearance (Ringed), of Lipid Spheres under the Phase-Contrast Microscope (Brij L. Gupta), 537
Apple-fruit Tissue : Cultivation of, *in vitro* (Dr. D. S. Letham), 473
Apple Fruits : Effect of Storage Conditions on the Incidence of *Gloeosporium* Rots of (H. B. S. Montgomery), 737
Appleby, C. A., and Bergersen, F. J. : Cytochromes of *Rhizobium*, 1174
Apples : Isolation of Active Mitochondria from (Dr. J. M. Tager), 1521
  Nitrogenous Components of the Tracheal Sap in (E. G. Bollard), 21
Application of Alloy and Special Steels : Production, Properties and (Publication of the papers contributed to the National Metallurgical Research Laboratory Symposium on), 1777
Application of Autoradiographic Techniques to Studies of Shoot Apices (Carl R. Partanen and Ernest M. Gifford, jun.), 1747
Application of Direct Photographic Photometry to Preparative Electrophoresis (Dr. N. Ressler), 463
Application of the Hanging Mercury Drop Electrode to an Investigation of Intermetallic Compounds in Mercury (Prof. Wiktor Kemula, Zbigniew Galus and Zenon Kublik), 1228
Application of Integral Equations : Theory and, *review* by Prof. T. A. A. Broadbent, 1259
Application of Radioactive and Stable Isotopes and Radiation in the National Economy and Science : Abstracts of Papers given in the Session on Radiation Chemistry at the All-Union Conference on the (Moscow, 1957), (translated from the Russian), *review* by Prof. G. Porter, 1588
Applications of Crystallography to Chemistry (British Association for the Advancement of Science, Section B (Chemistry), Discussion on), 914
Applications of Erythrocyte Stromata Powder (Dr. Felix Milgrom and Dr. Miguel Layrisse), 189

Applications of Magnetic Resonance to Solid State Physics (Radio Frequency Spectroscopy Group Conference on), 634
Applications to certain Problems in Mechanics, Mathematical Physics and Technology : Integral Equations and their (S. G. Mikhlin), translated from the Russian by A. H. Armstrong, *review* by Prof. T. A. A. Broadbent, 1259
Applications to Structures and Machinery : Engineering Vibrations with (Prof. Lydik S. Jacobsen and Prof. Robert S. Ayre), *review* by Prof. R. E. D. Bishop, 1581
Applications (Industrial) : Electronic Digital Computers and their (Conference at Birmingham College of Technology), 1205
Applications (*p*H) : A Dictionary of (R. S. Evans), *review* by Prof. H. T. S. Britton, 1258
Applied Acoustics, *review* by T. Somerville, 1258
Applied Analysis (Prof. Cornelius Lanczos), *review* by Prof. T. A. A. Broadbent, 1401
Applied Bacteriology, Society for : Election of Officers, 362
Applied Bacteriology, Society for, and the Istituto di Sanita : Symposium on Cultural and Metabolic Aspects of Moulds, 1279
Applied Chemistry in Europe and North America : The Chemical Industry during the Nineteenth Century, a Study of the Economic Aspect of (Dr. L. F. Haber), *review* by J. L. S. Steel, 347
Applied Chemistry (Pure and), International Union of : Symposium on Protein Structure, Paris 1957 (edited by Prof. Albert Neuberger), *review* by Dr. Kenneth Bailey, 1587
Applied Chemistry (Pure and), International Union of (sponsored by) : International Conference on Co-ordination Chemistry (Chemical Society), 1710
Applied Chemistry (Pure and), International Union of (Section of Organic Chemistry), (organized by the Chemical Society, under the auspices of the) : Symposium on Theoretical Organic Chemistry, 22, 1340
Applied Electron Physics at the Imperial College of Science and Technology, 496
Applied Mathematics at Aberystwyth, 359
Applied Mechanics : Theoretical and (Indian Society of Theoretical and Applied Mechanics fourth Congress on), 1133
Applied Mechanics (Theoretical and), Indian Society of : Fourth Congress on Theoretical and Applied Mechanics, 1133
Applied Mechanics (Theoretical and), International Union of, and the International Union of Geodesy and Geophysics : International Symposium on Atmospheric Diffusion and Air Pollution, 22, 1134
Applied Physics (Pure and), International Union of : Annual International Conference on High-Energy Nuclear Physics, 356
Apprentices (Student), in Electrical Engineering : The Education and Training of (Institution of Electrical Engineers), 1649
Apprenticeship (Student), in Electrical Engineering (Prof. J. Greig), 1649
Approach to Life : The Experimental (Prof. David Lewis), 497
Approach (A Modern), to Organic Chemistry (Prof. J. Packer and J. Vaughan), *review* by Dr. W. A. Waters, 1114
Approach (A New), to the Chemotherapy of Cancer (Dr. M. B. Sahasrabudhe), 163
Approach (A New), to the Investigation of the Cause of Moisture Expansion of Ceramic Bodies (Thaisa Demediuk and W. F. Cole), 1223
Approaches (Experimental), to the Problems of Growth and Form in Plants (Experimental Plant Morphology Group of the Linnean Society Symposium on), 1416
Approximation (Diophantine) : An Introduction to (Dr. J. W. S. Cassels), *review* by Prof. T. A. A. Broadbent, 1629
Aquatic Insects in Lake Victoria : Lunar Periodicity of (Dr. Philip S. Corbet), 330
Aquatic Weeds and Algae : The Control of (Aylwin P. Chancellor), 361
Aquatic and Air Pollution (R. W. Edwards), 1208
Aqueous Carbon Dioxide : Dissociation of Serological Complexes of Ovalbumin and Haemoglobin using (Dr. B. T. Tozer, K. A. Cammack and Dr. H. Smith), 668, *erratum*, 842
Aqueous Solution : Formation of a Transition Metal–Hydrogen Bond in (W. P. Griffith, L. Pratt and Prof. G. Wilkinson), 466
  Oxidation of Ferrous Ion in, by Atomic Hydrogen (Gideon Czapski and Prof. Gabriel Stein), 598
  Structure of Pyruvate in (William P. Jencks and Joan Carriuolo), 598
Aqueous Solutions : Radioassay of Carbon-14 in, using a Liquid Scintillation Spectrometer (Dr. Daniel Steinberg), 740
Aqueous and Alcoholic Samples : A Direct-Plating Method for the Assay of Radioactive Isotopes in (H. Campbell, H. A. Glastonbury and Margaret D. Stevenson), 1100
Arachnids : Spiders, Scorpions, Centipedes and Mites—the Ecology and Natural History of Woodlice, 'Myriapods' and (Dr. J. L. Cloudsley-Thompson), *review* by Theodore Savory, 825
Arambarri, P. : Awarded a Spanish fellowship in chemistry (renewal) at Rothamsted Experimental Station by the Ramsay Memorial Fellowships Trustees, 432
Araucanian Child Life and its Cultural Background (Sister M. Inez Hilger), *review* by Dr. G. H. S. Bushnell, 76
Araucaria klinkii Lauterbach : Extractives from Klinki Pine (W. E. Hillis and Ann Carle), 1593
Arber, Agnes : The Manifold and the One, *review* by the Very Rev. W. R. Matthews, 681
Arc Lines at various Pressures in Magnetic Fields : Shifts of (Rev. R. A. Miller), 1295
Archaeological Investigations at the Mouth of the Amazon (Betty J. Meggers and Clifford Evans), *review* by Dr. G. H. S. Bushnell, 1044
Archaeology : Tropical Forest, *review* by Dr. G. H. S. Bushnell, 1044
Archaeology of South-East England (Dr. Gordon J. Copley), *review* by M. C. Burkitt, 971
Archaeology and Geology: Equipment for (P. J. Dutt and Co., Ltd.), 1486
Archard, Dr. J. F., and Hirst, W. : Modern Problems in Friction and Lubrication (The Wear of Metals), 981
Archer, A. A. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1136
Archer, G. T. : Release of Histamine from Mast Cells by Tissue Extracts, 726
Architects (Naval), Institution of : Denny Scholarships in Naval Architecture and Naval Engineering, 1554
  Parsons Scholarship in Marine Engineering, 1554
  Yarrow Scholarship in Marine Engineering, 1554
Architecture : Museum (Museums Association Discussion on), 503
Architecture of a Protein Molecule (Dr. J. C. Kendrew), 764
Architecture (Naval) : Denny Scholarship in (Institution of Naval Architects), 1554
Arcs (Vacuum), on Tungsten Cathodes (H. Wroe), 338
Arctic and Antarctic, a Prospect of the Polar Regions (Dr. Colin Bertram), new edition, *review* by L. M. Forbes, 620
Arctic Archipelago (Canadian) : Illustrated Flora of the (A. E. Porsild), 294
Arden, Dr. G. B. : Awarded an Alexander Pigott Wernher Memorial Travelling Fellowship in Medicine for 1958-59, 634
'Area of Outstanding Natural Beauty' : New, 917
Arend-Roland (1956*h*) and Mrkos (1957*d*) : Polarization of Light of the Comets (M. Blaha, A. Hruška, Z. Svestka and V. Vanysek), 331
Arenicola claparedii (Polychaeta) : Giant Nerve Cells and Fibres in (Prof. G. P. Wells), 1609
Argument : The Uses of (Prof. Stephen Edelston Toulmin), *review* by Prof. J. O. Urmson, 212
Arid Lands : Unesco Programme for (Unesco Information Manual 3), 1414
Arid Zones : Salinity Problems in the (Unesco Symposium on), 158
Ariègeoises : Préhistoire Spéléologie, 768
Arient, M., and others : Deoxycytidine in Urine as an Indicator of Changes after Irradiation, 721
Arkenbout, G. J., and others : Synthesis and Structure of 2,6-Dihalo-Benzenone-Indophenylacetate and Benzenone-Indo-3',5'-Dihalo-Phenylacetate, 1017
Armament Research and Development Establishment : Appointment of Dr. D. H. Black as director, 225
Armitage, Dr. A. : Development of Science, *review*, 142
Armour Research Foundation of the Illinois Institute of Technology : 1958 Computer Applications Symposium, 918
Armourers and Brasiers' Company (Royal Society and the) : Appointment of Dr. T. E. Faber as Armourers and Brasiers' Company Research Fellow at the Cavendish Laboratory, Cambridge, 18
Arms and Pinnules of the Crinoid, *Antedon bifida* (Pennant) : Pigments present in (Miss E. J. Dimelow), 812
Armstrong, Henry Edward, 1848-1937—the Doyen of British Chemists and Pioneer of Technical Education (Dr. J. Vargas Eyre), *review* by Prof. G. R. Clemo, 1399
Armstrong, W. A., and Grant, Dr. D. W. : A Highly Sensitive Chemical Dosimeter for Ionizing Radiation, 747
Armstrong, Dr. W. McD.: Reversal by Magnesium Ions of the Inhibition of Yeast Metabolism by a Cationic Detergent, 326
Armytage, Prof. W. H. G. : The Utopist Tradition in English Education (Sixth Vaughan Memorial Lecture), 985
  Origins and Philosophy of Technology, 1349
  Morley College, *review*, 1585
Arnhem Land : Yulengor—Nomads of (Wilbur S. Chaseling), *review* by Prof. Raymond Firth, 280
Arnikar, Dr. H. J. : Radiochromatography of Alkali Ions, 1230
Arnold, P. W. : Potassium Uptake by Cation-Exchange Resins from Soils and Minerals, 1594
Arnon, Prof. Daniel I., and others : Separation of Light and Dark Phases in the Photosynthesis of Isolated Chloroplasts, 351
Aromatic Amines : Kinetic Isotope Effect in the Iodination of (E. Shilov and F. Weinstein), 1300
Aromatic Ketones : Half-wave Potentials of (Jayanti Nag Chaudhuri and Dr. Sadhan Basu), 179
Aromatic Substances : Electron Resonance Study of the Radicals produced by Controlled Potential Electrolysis of (D. E. G. Austen, Dr. P. H. Given, Dr. D. J. E. Ingram and M. E. Peover), 1784
Aromatic System : Thio-Thiophthen, an Unusual New Type of (Prof. S. Bezzi, M. Mammi and C. Garbuglio), 247
Arousal Stimuli in Animals : Effect of Drugs on Conditioning and Habituation to (Dr. B. J. Key and Dr. P. B. Bradley), 1517
Arpai, Dr. Ján : Itaconicoxidase, an Enzyme from an Ultra-Violet-induced Mutant of *Aspergillus terreus*, 661
Arpiarian, N. : Transfer of Light Energy and Photosensitization, 231
Arrangement (Follicle), in Skin from Wild Sheep, Primitive Domestic Sheep and in Parchment (Dr. M. L. Ryder), 781
Arrhythmias : The, *review* by Dr. J. P. D. Mounsey, 1574
Arsenide (Gallium) : Diffusion of Zinc in (J. W. Allen and F. A. Cunnell), 1158
Art Galleries as Cultural Centres : Museums and, 681
Art Gallery Service (Museum and) : Memorandum on the, with special reference to the National Gallery and the Hampton Site Question (Bow Group), 681
Artemis Press, Ltd. : Prize of £150 for an academic work in Mathematics, Astronomy or Physics, 501
Arthritis and Heart Disease (Gairdner Foundation Awards in), 1710
Arthropods (Terrestrial) : The Water Relations of (Prof. E. B. Edney), *review* by Dr. Kenneth Mellanby, 72
Artificial Aurora : An (P. H. Fowler and C. J. Waddington), 1728
  A Man-made or (A. L. Cullington), 1364
Artificial Diet for the Laboratory Rearing of Locusts (Dr. G. F. Howden and P. Hunter-Jones), 1527
Artificial Earth Satellites : A New Method of Tracking (A. P. Willmore), 1008
  Rotation of (Prof. R. N. Bracewell and O. K. Garriott), 760
Artificial Light and Sexual Maturity in the Fowl (T. R. Morris and S. Fox), 1522
Artificial Mutagenesis in Plant Breeding (D. Roy Davies and E. T. Wall), 955
Artificial Satellites : Use of, to Explore the Earth's Gravitational Field—Results from *Sputnik* 2 (1957β), (R. H. Merson and D. G. King-Hele), 640
Artificially Liberated Larvae : Use of, in Experiments on the Setting Behaviour of *Spirorbis* (P. H. D. H. de Silva), 1751
Artsimovitch, Academician : Controlled Nuclear Fusion Reactions, 1051
Arylaminopyrimidines as Growth-Inhibitors of *Streptococcus faecalis* and *Lactobacillus arabinosus* (Dr. Sudhamoy Ghosh, Dolly Roy and Prof. B. C. Guha), 187
Asahina, Eizo, and Aoki, Kiyoshi : Survival of Intact Insects immersed in Liquid Oxygen without any Antifreeze Agent, 327
Ascites Tumour (Mouse Ehrlich) : Effect of Nitrous Oxide on the Radiosensitivity of (Dr. Michael Ebert and Mrs. Shirley Hornsey), 1240
Ascites Tumour Cells : Amoeboid Motility of Fresh (Dr. Iwao Hirono), 809
Ascites Tumour Cells (Ehrlich), of Mice *in vitro* : Calcium Exchanges of (Doreen Thomason and Raymond Schofield), 809

Ascorbic Acid : Reduction of Adrenochrome with (Dr. R. A. Heacock and Miss B. D. Laidlaw), 526, *erratum*, 700
  Species Difference in regard to the Biosynthesis of (R. N. Roy and Prof. B. C. Guha), 319
Ascorbic Acid Concentrating Mechanism : Activation of an, by some Corticosteroids *in vitro* (Leon S. Vann and Robert Hill), 458
Ashby, Sir Eric : University Development in Britain, 1199
  Technology and the Academics, *review*, 1256
Ashida, J. (Yoda, S., and) : Effect of Gibberellin on the Extensibility of the Pea Stem, 879
Ashkenazi, Israel (Zohary, Dr. Daniel, and) : Different Frequencies of Supernumerary Chromosomes in Diploid Populations of *Dactylis glomerata* in Israel, 477
Ashmolean Museum and Egypt Exploration Society, Oxford : Grant of £350 a year for three years from the Gulbenkian Foundation, Lisbon, for a technician to be trained in the technique of piecing together fragments of ancient papyri by matching the fibres instead of the text, 1493
Ashton, Dr. G. C. : A Genetic Mechanism for 'Thread Protein' Polymorphism in Cattle, 65
  Lack of 'Slow-Alpha' Proteins in some Guernsey Cattle, 193
  Genetics of β-Globulin Polymorphism in British Cattle, 370
  Serum Protein Variations in Horses, 1029
  Further β-Globulin Phenotypes in Sheep, 1101
Ashton, Dr. G. C., and McDougall, E. I. : Beta-Globulin Polymorphism in Cattle, Sheep and Goats, 945
Asia : Ancient Vortex of (V. T. Mordovsky), 563
Asia (South and South-East), Colombo Plan for Co-operative Economic Development in : Sixth Annual Report of the Consultative Committee (1957), 1718
Askew, -. : Modern Educational Treatment of Deafness, 920
Aslib : Annual Conference, 158
  Report for 1957, 498
Aslib (Northern Branch) : Symposium on Practical Aspects of Special Library Work, 1063
Aso, Prof. K., and others : Preparation of Kojibiose, 1303
Aspect (Economic), of Applied Chemistry in Europe and North America : The Chemical Industry during the Nineteenth Century, a Study of the (Dr. L. F. Haber), *review* by J. L. S. Steel, 347
Aspects of Biophysical Chemistry : Some, *review* by Prof. J. A. V. Butler, 5
Aspects of Cellular Differentiation : Some (Dr. E. N. Willmer), 583
Aspects of the Evolution of Form and Function in Molluscs (British Association for the Advancement of Science, Section D (Zoology), Discussion on), 996
Aspects of Magnetism : Some (Institute of Physics Conference on), 1710
Aspects of Multivariate Analysis : Some (Prof. S. N. Roy), *review* by Dr. N. L. Johnson, 1183
Aspects of the Physiology of Vision : Some (Photobiology Group Meeting on), 634
Aspects of Thermonuclear Research : Some (Dr. T. E. Allibone), 579
Aspects (Chemical), of Selective Toxicity (Prof. Adrien Albert), 421
Aspects (Cultural and Metabolic), of Moulds (Society for Applied Bacteriology and the Istituto di Sanita Symposium on), 1279
Aspects (Dynamic), of Biochemistry (Prof. Ernest Baldwin), third edition, *review* by Prof. D. C. Harrison, 684
Aspects (Further), of Humus Decomposition (H. F. Birch), 1172
Aspects (Metabolic), of Transport across Cell Membranes (edited by Q. R. Murphy), *review*, 1575
Aspects (Practical), of Special Library Work (Northern Branch of Aslib Symposium on), 1063
Aspects (Quantitative), of Indoleacetic Acid Detection : Growth-promoting Activity of Potato Tuber Extracts in the Coleoptile Straight-Growth Test—(A Booth and Dr. P. F. Wareing), 406
Aspergillus niger : Separation of the Condensing Enzyme of, from Acetyl Coenzyme A Deacylase and Citridesmolase and the Effect of Magnesium Ion on the Purified Fraction (Prof. C. V. Ramakrishnan), 1601
Aspergillus terreus : Itaconicoxidase, an Enzyme from an Ultra-Violet-induced Mutant of (Dr. Ján Arpai), 661
Assay of Acetylcholine : The Morphinized–Eserinized Leech Muscle for the (Prof. Maurice F. Murnaghan), 317
Assay of Amylase : α-(p-Nitrophenyl) Maltoside as a Substrate for the (A. P. Jansen and P. G. A. B. Wydeveld), 525
Assay of Radioactive Isotopes in Aqueous and Alcoholic Samples : A Direct-Plating Method for the (H. Campbell, H. A. Glastonbury and Margaret D. Stevenson), 1100
Assay (Biological), of Glucocorticoids : A Simple and Rapid Method for the (B. P. Block and P. F. D'Arcy), 181
Assay (Dwarf Pea) : A Colorimetric Test for Gibberellic Acid and Evidence from a, for the Occurrence of a Gibberellin-like Substance in Wheat Seedlings (G. M. Simpson), 528
Assays (Duplicate), of Human Urinary Gonadotrophins : Differences between (F. J. Cunningham and P. S. Brown), 1238
Assistance (Mutual), between Commonwealth Countries, 1693
Assistant Masters, Incorporated Association of, and the Science Masters' Association (compiled by a Joint Committee of the) : The Teaching of Science in Secondary Schools, second edition, *review* by Dr. W. L. Sumner, 897
Associated Populations : Automatic Subdivision of (Prof. W. T. Williams and Dr. G. N. Lance), 1755
Astbury, Prof. W. T. : Submicroscopic Morphology, *review*, 213
  Fibre Microscopy, *review*, 350
  Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy (Structural Changes during Contraction of Striated Muscle), 763
Astronautics : Ninth International Congress on (British Interplanetary Society), 501
Astronomical Observatory, United States National : Allocation of 4,000,000 dollars by the National Science Foundation to the Association of Universities for Research in Astronomy, Inc., for the construction of a solar telescope for the, 1552
Astronomical Society (American) : Warner Lecture (Dr. Allan Sandage), 1132
Astronomical Time Measurements : Comparison of, with Atomic Frequency Standards (J.-P. Blaser and J. De Prins), 859
Astronomy or Physics : Prize of £150 for an academic work in Mathematics, (Artemis Press, Ltd.), 501
Astrophysics : Russian, *review* by Prof. R. O. Redman, 548
  Theoretical (edited by V. A. Ambartsumyan), translated from the Russian by J. B. Sykes, *review* by Prof. R. O. Redman, 548
Aterman, Dr. K. : Aldosterone and Experimental Hepatic Necrosis, 1324
  Selenium and Liver Necrosis in the Hyperthyroid Rat, 1514
Atherogenesis : Surface Tension of the Blood and (P. De Somer, J. Van den Bosch and J. V. Joossens), 59
Atkins, Sir John : Admitted as the first Fellow of Queen Elizabeth College, in recognition of his unique service, 1487
Atkinsonia ligustrina (A. Cunn. ex F. Muell.) F. Muell. : Embryology of (Miss Sudha Garg), 1615
Atlantic Deep-Sea Core (Equatorial) : Secondary Oscillations in an (Dr. J. D. H. Wiseman), 1534
Atlantic Ends of Europe (Prof. E. E. Evans), 581
Atlantic Equatorial Deep-Sea Sediments : Rate of Accumulation of Nickel in, and its Bearing on Possible Extra-Terrestrial Sources (Karl K. Turekian), 1728
Atlantic Ocean (South) : Distribution of Pelagic Polychaetes in the (Norman Tebble), 166
Atlas of Airborne Pollen Grains (H. A. Hyde and K. F. Adams), *review* by Dr. J. Hutchinson, 1117
Atmosphere : Scale Height of the Upper (C. H. Bosanquet), 1010
  The Upper (Prof. H. S. W. Massey and Dr. R. L. F. Boyd), *review* by Prof. D. R. Bates, 1629
Atmosphere Research : Upper (United States Naval Research Laboratory, Report No. 32), 431
Atmospheres in Respiratory Physiology : Standard (Dr. R. H. Kay), 1032
Atmospheric Chemistry : Sulphur Dioxide in (Chr. E. Junge and T. G. Ryan), 21
Atmospheric Contaminants : Effect of, on Paper Chromatography of Urinary Indole and Phenol Acids (K. N. F. Shaw and J. Trevarthen), 664
Atmospheric Diffusion and Air Pollution (International Union of Theoretical and Applied Mechanics and the International Union of Geodesy and Geophysics International Symposium on), 22, 1134
Atmospheric Drag Effects on *Sputniks* 2 and 3 (Satellites 1957β, 1958δ, and $1958\delta_2$) : An Irregularity in the (D. G. King-Hele and Mrs. D. M. C. Walker), 860
Atmospheric Sciences Programme (United States National Science Foundation), 360
Atoll (Jaluit), in the Marshall Islands : Typhoon Effects at (Dr. David I. Blumenstock), 1267
Atom 1958 (United Kingdom Atomic Energy Authority), 633
Atom Bombs : Nuclear Physics and, *review* by Sir John Cockcroft, 547
Atom School for Business Men, 700
Atomic Age : Ethical and Political Problems of the (Dr. C. F. von Weizsäcker), 156
Atomic Energy : Exchange of Information on, 635
  Geneva Series on the Peaceful Uses of—Nuclear Radiation in Food and Agriculture (edited by Prof. W. Ralph Singleton), *review* by Dr. Lorna J. Lilly, 758
  Guide to Literature on (United Kingdom Atomic Energy Authority), 88
  Moral Implications of, 156
  Peaceful Uses of—Symposium in Australia, 1958 (Prof. J. P. Baxter and C. N. Watson-Munro), 217
  Peaceful Uses of—United Nations Conference at Geneva (Sir John Cockcroft), 903 ; (Dr. R. S. Pease), 1051
  Peaceful Uses of (Publication of volumes dealing with the American participation at the second International Conference on), 1133
  Peaceful Uses of (Extension of the pre-publication period for the Proceedings of the second International Conference on the), (United Nations), 1416
  Second International Conference on the Peaceful Uses of—Sessions on Isotopes and Biology (United Nations), 1118
  Second International Conference on the Peaceful Uses of—Session on Health and Safety in the Field of Nuclear Energy (United Nations), 1262
  Scientific Resources and, 615
  Sourcebook on (Dr. Samuel Glasstone), second edition, *review* by Dr. E. Bretscher, 1589
Atomic Energy in Agriculture (William E. Dick), *review*, 144
Atomic Energy for Mutual Defence Purposes : Agreement between the Government of the United Kingdom of Great Britain and Northern Ireland and the Government of the United States of America for Co-operation on the Uses of (Washington, 1958), 635
Atomic Energy Agency, International : Appointment of members of the Scientific Advisory Committee, 1413
  First Annual Report of the Board of Governors (1957-58), 1489
  Programme and Budget for 1959, 1489
Atomic Energy Authority (United Kingdom) : Guide to U.K.A.E.A. Documents (edited by J. Roland Smith), 88
  Reports on Radiation Chemistry (compiled by R. W. Clarke), 88
  Appointment of Dr. Nyman Levin as a deputy director of the Atomic Weapons Research Establishment, 155
  Windscale Pile No. 1 not to be repaired, 156
  Fourth Annual Report (1957-1958), 615
  Atom 1958, 633
  Transfer of the Controlled Thermonuclear Project from the Atomic Energy Research Establishment, Harwell, to Winfrith Heath, Dorset, 697
  Special Promotion, 993
  Staff Changes at the Atomic Energy Research Establishment, Harwell, 1129
  Not to restart Windscale Pile No. 2, 1203
  Appointment of J. A. Gay as patents exploitation officer, 1276
Atomic Energy of Canada, Ltd. : The Canadian Study for a Full-Scale Nuclear Power Plant (J. E. Woolston), 847
Atomic Energy Commission (Australian), and others : Symposium on the Peaceful Uses of Atomic Energy, 217
Atomic Energy Commission (Danish) : Risö, the Research Establishment of the, 840
Atomic Energy Commission (United States) : New Research Reactor (ORR) at Oak Ridge National Laboratory, 19
  Appointment of Dr. Frank K. Pittman as director of the Division of Reactor Development, 1550

Atomic Energy Office : Final Report of the Committee appointed to make a Technical Evaluation on Information relating to the Design and Operation of the Windscale Piles, and to review the Factors involved in the Controlled Release of Wigner Energy, 635
Atomic Energy Patents, 1276
Atomic Energy Research Establishment : *C/R* 1575, Parts 1-6, Supp. 1, Reports on Radiation Chemistry (compiled by R. W. Clarke), 88
  Course on the Control and Instrumentation of Reactors at the Harwell Reactor School, 295
  Course at the Harwell Reactor School, 363
  Transfer of the Controlled Thermonuclear Project from Harwell to Winfrith Heath, Dorset, 697
  Course on Radioisotopes in Industry, 700
  Appointment of D. W. Fry to be responsible to the director of the Research Group at Winfrith Heath for its development and the initiation of the programme, 1129
  Appointment of Dr. J. V. Dunworth as assistant director (reactor research policy), 1129
  Appointment of T. M. Fry as head of the Reactor Division, 1129
  Study leave granted to Dr. Peter Thonemann, to go to the Institute of Advanced Studies in the University of Princeton, 1129
Atomic Frequency Standard (Caesium) : Comparison of an Ammonia Maser with a (J.-P. Blaser and J. Bonanomi), 859
Atomic Frequency Standards : Comparison of Astronomical Time Measurements with (J.-P. Blaser and J. De Prins), 859
Atomic Hydrogen : Oxidation of Ferrous Ion in Aqueous Solution by (Gideon Czapski and Prof. Gabriel Stein), 598
Atomic Mechanisms of Fracture (United States National Academy of Sciences–National Research Council Seminar on), 1348
Atomic Nuclei : Structure of, *review* by Dr. E. Bretscher, 1333
Atomic Oxygen : The Electron Affinity of (Dr. L. M. Branscomb), 248 ; (Dr. D. F. C. Morris and H. N. Schmeising), 249
Atomic Power in Canada, 846
Atomic Radiation : Effects of (Report of the United Nations Scientific Committee on the), 1543 ; (Dr. C. Auerbach), 1543
Atomic Scientists : Brighter than a Thousand Suns, the Moral and Political History of the (Dr. Robert Jungk), translated into English by James Cleugh, *review* by Sir John Cockcroft, 547
Atomic Weapons Research Establishment, Aldermaston : Two Nuclear Reactors at the, 19
  Appointment of Dr. Nyman Levin as a deputy director, 155
Atomkerne: Bau der (Handbuch der Physik, herausgegeben von S. Flügge, Band 39), *review* by Dr. E. Bretscher, 1333
Atoms for Peace Award made to Prof. G. C. de Hevesy, 1550
Atoms for Peace Conference : American publication, 1133
Atoms (Hydrogen) : Production of High Concentrations of (K. R. Jennings and Dr. J. W. Linnett), 597
Atoxoplasma : Some Observations on the Life-Cycle of, with particular reference to the Parasite's Schizogony and its Transmission by the Mite *Dermanyssus gallinae* (Dr. R. Lainson), 1250
Atractylate (Potassium), a New Inhibitor of the Tricarboxylic Acid Cycle (Prof. R. Santi), 257
Attenuation (Anomalous), in Linear Electron Accelerators (Dr. V. L. Vanhuyse), 1081
Attfield, the late Prof. John : Portrait of, presented by his grandson, C. A. Brooks, to the Pharmaceutical Society of Great Britain, 1130
Attygalle, Sir Nicholas : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Medical Education and its Place in the University), 1284
Atwood, John : Pupil Unrest, an Example of Noise in a Biological Servo-mechanism, 857
Atypical Segregation of Haptoglobin Types in Man (Dr. H. Harris, Miss E. B. Robson and Dr. M. Siniscalco), 1324
Auditory Threshold : Lowering of an, produced by a Light Signal occurring after the Threshold Stimulus (C. I. Howarth and M. Treisman), 1093
Audy, J. R. (edited by) : Malaysian Parasites, 16-34, *review* by P. J. Mattingly, 9
Auer, Dr. Joseph : Appointed assistant director of the Division of Medical Research, National Research Council of Canada, 700
Auerbach, Dr. C. : Chemicals and Cancer, *review*, 750
  Effects of Atomic Radiation, 1543
Auerbach, Victor H., and others : Phenylketonuria in the Rat associated with Decreased Temporal Discrimination Learning, 871
Ault, W. S., and Cunliffe, H. : Fuel and Power in British Industry (Uses of Oil), 1714
Aural and Visual Observation (Direct) : Correlation of Whistlers and Lightning Flashes by (Prof. M. G. Morgan), 332
Auricchio, S., and others : Effect of Diphosphopyridine Nucleotide on the Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by 2-Acetylaminofluorene and N-2-Fluorenyldiacetamide, 1744
Auricles (Rabbit) : Influence of Hydrocortisone on the Action of Sodium on Isolated (Dr. T. H. Rindani), 1521
  Movements of Potassium in (D. A. Persoff), 605
Aurora : An Artificial (P. H. Fowler and C. J. Waddington), 1728
  A Man-made or Artificial (A. L. Cullington), 1364
Aurora Australis and Aurora Borealis : A Comparison of Radio Echoes from the (D. P. Harrison and C. D. Watkins), 43
Aurora Borealis (Aurora Australis and) : A Comparison of Radio Echoes from the (D. P. Harrison and C. D. Watkins), 43
Aurorae : Electric Field Theory of (Dr. G. C. Reid), 1791
Austen, D. E. G., and Ingram, Dr. D. J. E. : Science in the Use of Coal (Physics and Chemistry of Coal), 25
Austen, D. E. G., and others : Electron Resonance Study of the Radicals produced by Controlled Potential Electrolysis of Aromatic Substances, 1784
Australasian Conference on Radiation Biology : Second (Cancer Institute, Melbourne), 22
Australia : The Land of, *review* by Prof. L. Dudley Stamp, 1400
  Land Utilization in (Samuel Wadham and the late Gordon L. Wood), third edition by Sir Samuel Wadham, R. Kent Wilson and Joyce Wood, *review* by Prof. L. Dudley Stamp, 1400
Australian Atomic Energy Commission, and others : Symposium on the Peaceful Uses of Atomic Energy, 217
Australian Biochemical Society : Third Annual General Meeting, 1348
  Second Annual Lecture (Hedley Marston), 1348
Australian Chafers (Coleoptera:Scarabaeidae:Melolonthinae) : A Revision of the (E. B. Britton), Vol 1, *review* by Dr. W. E. Hinton, 350
Australian Chemical Institute, Royal : Rennie Memorial Medal for 1957 awarded to Dr. J. H. Bradbury, 89
  H. G. Smith Memorial Medal awarded to Dr. K. L. Sutherland, 89
  Election of Officers for 1958-59, 1487
Australian Chemical Institute, Royal (Western Australian Branch), and the University of Western Australia : Symposium on Plant Products, 299
Australian Commonwealth Department of Supply : Weapons Research Establishment (communicated by W. A. S. Butement), 145
Australian Commonwealth Scientific and Industrial Research Organization : Appointment of N. A. Esserman as the first director of the National Standards Laboratory, Sydney, 291
  Retirement of Dr. G. H. Briggs as chief of the Physics Division of the National Standards Laboratory, 291
  Appointment of Dr. R. G. Giovanelli as chief of the Physics Division of the National Standards Laboratory, 292
  Annual Report for 1956-57 of the Division of Metrology of the National Standards Laboratory, 1137
  Work of the Divisions and Sections, 1555
  The Wool Textile Research Laboratories at Melbourne, Sydney and Geelong made Divisions of the Organization, and in future to be called the C.S.I.R.O.Wool Research Laboratories, 1777
Australian Discoveries of Emperor Penguin Rookeries in Antarctica during 1954-57 (Dr. Richard L. Willing), 1393
Australian Medical Congress : Sir Henry Simpson Newland Oration (Rt. Hon. R. G. Menzies), 1557
Australian Museum, Sydney : Handbook to the, 633
  Report of the Trustees (1956-57), 633
Australian National Standards Laboratory : Annual Report for 1956-57 of the Division of Metrology, 1137
Australian National University : Annual Report for 1957 of Mount Stromlo Observatory, 95
  The John Curtin School of Medical Research, 355
Australian Society of Plant Physiology : Inaugural Meeting, 1204
  Election of Officers, 1204
Australian University Grants Committee : Appointment of Sir Leslie Martin as first chairman, 1202
Australian (Western) Wildflowers (with annotations by C. A. Gardner), *review* by Dr. R. Melville, 1587
Authorship : Technical (City and Guilds of London Institute), 699
Autobiography of Charles Darwin, 1809-1882 (edited by Nora Barlow), *review* by Sir Ronald Fisher, 71
Autoclaving : Permanent Moisture Expansion of Clay Products on (Dr. J. S. Hosking and Dr. H. V. Hueber), 1142
Automatic Digital Calculator : Programming for an (Dr. Kathleen H. V. Booth), *review* by R. A. Brooker, 618
Automatic Subdivision of Associated Populations (Prof. W. T. Williams and Dr. G. N. Lance), 1755
Autonomic Functions of the Hippocampus (B. G. Cragg), 675
Autoradiographic Analysis on Agar Plates of Labelled Antigens from Rat Liver (P. Perlmann and T. Hultin), 1530
Autoradiographic Method (A Simple), for Distinguishing Insects labelled with Phosphorus-32 and Sulphur-35 (Dr. M. T. Gillies), 1683
Autoradiographic Techniques : Application of, to Studies of Shoot Apices (Carl R. Partanen and Ernest M. Gifford, jun.), 1747
Autoradiography of Fungi through a Layer of Soil and in Agar Culture (Dr. Erna Grossbard), 854
Autosomal Linkage in Man : Possible (Dr. A. M. O. Veale), 409
Auxins : Effect of Ethanol and, on the Growth of Unicellular Algae (Auxins and their Effect on the Growth of Unicellular Algae), (Dr. M. K. Bach and J. Fellig), 1359
Auxins in the Development of Bean Embryos (M. Furuya and K. Soma), 563
Auxins and their Effect on the Growth of Unicellular Algae—Effect of Ethanol and Auxins on the Growth of Unicellular Algae (Dr. M. K. Bach and J. Fellig), 1359 ; Ethanol as a Carbon Source for the Growth of *Chlorella vulgaris* (Prof. H. E. Street, D. J. Griffiths, C. L. Thresher and M. Owens), 1360
Auzins, P., and others : Ions of the Transition Elements (Application of Paramagnetic Resonance Spectroscopy to Transition Metal Ions—Single Crystals of Magnesium Oxide which contain Iron Group Impurities), 1350
Avco Manufacturing Corporation, Lawrence, Mass. : A Kerr Cell Electro-Optical Shutter, 362
Avena fatua L. : Light and Dormancy in Wild Oats (Bruce G. Cumming and James R. Hay), 609
Aviation Centre : European Agricultural (Set up under the auspices of the European Productivity Agency of the Organization for European Economic Co-operation), 226
Award : A New Higher Technological (National Council for Technological Awards), 1345
Awards for 1958 : International (Gairdner Charitable Foundation, Ontario), 21
  Research (Royal Commission for the Exhibition of 1851), 155
Awards for 1958 for Research in Ageing (Ciba Foundation), 19
Awards in 1959 for Research in Ageing (Ciba Foundation), 89
Awards for Study in Statistics (University of Chicago), 771
Axelrod, Prof. B. (Kilsheimer, Dr. Grace S., and) : Phylogenetic Distribution of Acid Phosphatase inhibited by (+)-Tartrate, 1733
Axelrod, Dr. J. : Chemical Pathology of the Nervous System (Epinephrine Metabolism), 1647
Axon (Giant), of the Cockroach : Effects of Potassium and Sodium Ions on the Resting and Action Potentials of the (T. Yamasaki and T. Narahashi), 1805
Axon (Squid Giant) : An Anodal Threshold Phenomenon in the (John R. Segal), 1370
Ayre, Prof. Robert S. (Jacobsen, Prof. Lydik S., and) : Engineering Vibrations with Applications to Structures and Machinery, *review* by Prof. R. E. D. Bishop, 1581
Ayscough, Dr. P. B. : Appointed lecturer in the Department of Physical Chemistry, University of Leeds, 1279
8-Azaguanine : Effect of, on Antibody Synthesis *in vitro* (Dr. R. W. Dutton, Anne H. Dutton and Mariam George), 1377
Azotobacter producing Heavy Slime and Acid : A New Species of (A. B. Roy), 120

Azotobacter vinelandii : Formation of Activated Amino-Acids by Intact Cells of (R. W. Bernlohr and Dr. G. C. Webster), 531
Azulene Structure : A Revision of the (Prof. J. Monteath Robertson, H. M. M. Shearer, G. A. Sim and D. G. Watson), 177

BAADE, Dr. Walter : Retirement from the staff of the Mount Wilson and Palomar Observatories, 225 ; work of, 225
Baar, S. : Isolation of the α_2-Globulin Pattern on Starch Gel, 259
Baardseth, Dr. E. : At the Third International Seaweed Symposium (Method of Physode Estimation), 1781
Baas-Becking, L. G. M., and others : Perchlorate, an Important Constituent of Sea Water, 645
Babbitt, Dr. J. D. : Diffusion of Adsorbed Molecules, 201
Babicky, Arnošt, and others : Degradation of DL-Methionine by Radiation, 1074
Babister, Dr. A. W. : High-Speed Flight, 695
Babylonian Myth to Modern Science : Theories of the Universe from (edited by Milton K. Munitz), *review* by Dr. A. R. Hall, 277
Bach, Dr. M. K., and Fellig, J. : Auxins and their Effect on the Growth of Unicellular Algae—Effect of Ethanol and Auxins on the Growth of Unicellular Algae, 1359
Bacillary Fractions : Experimental Allergic Encephalomyelitis induced with combined 'Purified' Spinal Cord and (Dr. J. Colover), 105
Bacilli (Intracellular Tubercle) : Inhibitory Action of Ethyl Mercaptan on (G. E. Davies and G. W. Driver), 664
Bacilli (Killed Tubercle) : Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and (Dr. Marian W. Kies, Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104
Bacillus (*Proteus P*18) : Action of Beta Radiation on the (Prof. P. Mandel, M. Sensenbrenner and G. Vincendon), 674
Background to Specialist Technological Education (Dr. M. L. R. Pettersson), 503
Bacon, E. Elizabeth, and others : Liberation of Invertase from Disintegrated Yeast Cells, 1508
Bacon, Dr. J. S. D., and others : Liberation of Invertase from Disintegrated Yeast Cells, 1508
Bacon, R. : Mechanical Properties of Whiskers and Thin Films (Graphite Whiskers grown by a High-pressure Arc Process), 297
Bacon Pigs : Effect of Maize on Fat Hardness and Growth-Rate in (D. W. Duthie, A. F. Dent and H. P. Ledger), 953
Bacq, Prof. Z. M. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Bacq, Prof. Z. M., and others: Sodium Fluoroacetate as a Protecting Agent against Irradiation, 175
Bacsich, Dr. P. (Carr, I. A., and) : Removal of Osmic Acid Stains, 1108
Bacteria : Electronic Counting and Sizing of (Herbert E. Kubitschek), 234
  A New Method for Resolving Amino-acids by Metabolism of, on Benzoyl Derivatives of DL-Amino-acids (Prof. Yukio Kameda, Etsuko Toyoura, Katsuhiko Matsui, Yukio Kimura and Shizue Kitagawa), 453
  Phagocytosis and the Antigenic Structure of (Prof. S. Slopek, A. Skurski, E. Michalska and L. Dabrowski), 1243
Bacteria with Impaired Respiration : Biochemical Mutants in (Prof. G. F. Gause), 97
Bacteria in Soil : A Plate Method for Estimating the Numbers of Phosphate-dissolving and Acid-producing (H. A. Louw and Dr. D. M. Webley), 1317
Bacteria (Aerobic Gram-Negative) : Occurrence of Poly-β-Hydroxybutyric Acid in (Dr. W. G. C. Forsyth, Dr. A. C. Hayward and J. B. Roberts), 800
Bacteria (Gram-Negative) : Nitrogen Fixation by (Michael H. Proctor and P. W. Wilson), 891
Bacteria (Marine) : A National Type Culture Collection of (Dr. J. M. Shewan, G. D. Floodgate and P. R. Hayes), 1423
Bacteria (Nitrogen-fixing) : Natural Relationships of the (Dr. K. A. Bisset), 405
Bacteria (Pathogenic) : A Simple Technique for Inoculating, on Susceptible Plant Leaves (M. A. Nour and J. J. Nour), 96
Bacteria (Phytopathogenic) : Cellulolytic Activity of (Masao Goto and Norio Okabe), 1516
Bacteria (Sulphate-reducing) : Counting of, in Mixed Bacterial Populations (Prof. Y. Abd-El-Malek and S. G. Rizk), 538
Bacteria and Viruses : International Code of Nomenclature of (edited by the Editorial Board of the International Committee on Bacteriological Nomenclature), *review* by Dr. K. A. Bisset, 1760
Bacterial Exotoxins : Protective Action of Venoms containing Phosphatidase-A against certain (Dr. E. A. North and Hazel M. Doery), 1374
Bacterial Fermentations (H. A. Barker), *review* by Dr. Kenneth McQuillen, 1587
Bacterial Membrane : Lutein in a (Dr. A. R. Gilby and the late Dr. A. V. Few), 55
Bacterial Populations (Mixed) : Counting of Sulphate-reducing Bacteria in (Prof. Y. Abd-El-Malek and S. G. Rizk), 538
Bacterial Preparation of Orotidine-5'-phosphate and Uridine-5'-phosphate (R. E. Handschumacher), 1090
Bacterial Spores (Dried) : An Observed 'Oxygen Effect' during Gamma-Irradiation of (Alan Tallentire), 1024
Bacteriological Nomenclature, International Committee on (edited by the Editorial Board of the) : International Code of Nomenclature of Bacteria and Viruses, *review* by Dr. K. A. Bisset, 1760
Bacteriology (Applied), Society for : Election of Officers, 362
Bacteriology (Applied), Society for, and the Istituto di Sanita : Symposium on Cultural and Metabolic Aspects of Moulds, 1279
Bacteriology (Determinative) : Bergey's Manual of (Prof. Robert S. Breed, Prof. E. G. D. Murray and Nathan R. Smith), seventh edition, *review* by Dr. S. T. Cowan, 553
Bacteriophage Research—Second Royaumont Colloquium (Prof. Gunther S. Stent), 1769
Bacteriophage Synthesis in *Salmonella typhimurium* : An Effect of Glucose on (Nathan Entner and Ellis Engelsberg), 1808
Bacterium *Rhodospirillum rubrum* (Photosynthetic) : Origin of the Methoxyl Groups in Spirilloxanthin—a Carotenoid Synthesized by the (G. D. Braithwaite and Dr. T. W. Goodwin), 1304
Badawi, H. M., and others : Influence of Temperature and Light on Thyroid Function, 57
Baddeley, Dr. G. : Naphalene, *review*, 751
Badger, Prof. G. M. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 88
Badger, Prof. G. M., and others (edited by) : Current Trends in Heterocyclic Chemistry—Proceedings of a Symposium held at the John Curtin School of Medical Research, Australian National University, Canberra, 1957, under the auspices of the Chemical Society, *review* by Dr. F. G. Mann, 1762
Badran, Nasry, and others : Isolation of Marmesin from the Fruits of *Ammi majus* Linn., 54
Baer, Prof. J. G. : Elected president of the Permanent Committee of International Congresses of Zoology, 435
Baffled Shake Flasks : Production of High-Titre Diphtheria Toxin in (Dr. D. C. Edwards), 190
Bagenal, T. B., and Howell, H. T. : Glasgow University Expedition to North Rona and Sula Sgeir, 775
Baggerman, Miss B. : Comparative Endocrinology (Endocrine Factors in Ecological Adaptation), 774
Baghdad Pact Nuclear Training Centre, 430
Bahadur, K., and others : Photosynthesis of Amino-Acids from Paraformaldehyde involving the Fixation of Nitrogen in the Presence of Colloidal Molybdenum Oxide as Catalyst, 1668
Bailey, Dr. Kenneth : Symposium on Protein Structure, *review*, 1587
Bailey, Norman T. J. : The Mathematical Theory of Epidemics, *review* by S. J. Kilpatrick, 9
Bailey, Dr. R. W., and Oxford, Dr. A. E.: Pre-requisites for Dextran Production by *Streptococcus bovis*, 185
Bailey, Prof. W. N. : Title of professor emeritus of mathematics in the University of London at Bedford College conferred on, 363
Bain, Prof. W. A. : Appointed director of the Smith Kline and French Research Institute, 1550 ; work of, 1550
Baines, Dr. H. : The Science of Photography, *review* by C. O. Harvey, 1599
Baird, J. D., and others : Transmission Electron Microscopy of Beryllium, 1660
Bak, Thor A. (Kauman, W. G., and) : Shape of Spot and Rate of Sorption in Paper Chromatography, 743
Baker, A. W. (Shulgin, A. T., and) : Determination of Hammett Sigma Constants by Intramolecular Hydrogen Bonding, 1299
Baker, Dr. F. : Comparative Endocrinology (Renal Thyroid of Fishes), 775
Baker, Prof. J. F.: At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Engineering Education, and its Place in the University), 1284
Baker, Dr. John R. : Principles of Biological Microtechnique, a Study of Fixation and Dyeing, *review* by Prof. J. Brachet, 1579
Baker, P. F. : Population Studies of the Common Earwig, 162
Bakers' Yeast : Analysis of Mixtures of Glucosamine and Galactosamine with (Dr. Burton M. Pogell and Dr. Donald F. Koenig), 127
Bąkh, Prof. N. A. (edited by) : Symposium on Radiation Chemistry (Academy of Sciences of the USSR, Division of Chemical Science, Moscow, 1955), translated from the Russian, *review* by Prof. G. Porter, 1588
Bakteriophage 1917 bis 1956 (Dr. Hansjürgen Raettig), *review* by Dr. C. H. Andrewes, 350
Balance of Life : Mineral Nutrition and the (Dr. Frank A. Gilbert), *review* by Dr. E. C. Humphries, 621
Balance (Salt and Water), in Animals (British Association for the Advancement of Science, Sections D (Zoology) and I (Physiology and Biochemistry), Symposium on), 1207
Balanced Partnership : Science and Business—a (Sir Alexander Fleck), 573
Balances : Laboratory (North of England Section of the Society for Analytical Chemistry Discussion on), 771
Balch, H. E. : *Obituary* by Dr. F. S. Wallis, 224
Baldwin, B. A. : Awarded a Research Training Scholarship for 1958-59 by the Animal Health Trust, 432
Baldwin, Prof. Ernest : Dynamic Aspects of Biochemistry, third edition, *review* by Prof. D. C. Harrison, 684
Baldwin, J. A. : Awarded the first Mental Health Research Fund Travelling Fellowship in Psychiatry, 157
Baldwin, R. L., and others : Rennin Coagulation of Enzymatically Dephosphorylated Casein, 798
Balis, Dr. M. Earl (Brody, Dr. Sam, and) : Ribonuclease and Deoxyribonuclease Activities during Normal and Neoplastic Growth, 940
Ballistic Missile (British 'Black Knight'), fired from Woomera, 698
Ballistics of Rockets : Exterior (Prof. Leverett Davis, Jr., James W. Follin, Jr., and Prof. Leon Blitzer), *review* by D. G. King-Hele, 821
Balmforth, Dennis : Awarded the Perkin Centenary Fellowship, 295
Balogh, Dr. J. : Research Methods in Soil Zoology (Systematics and the Ecologist), 705
Bamford, Dr. C. H. : Colloids, Old and New, *review*, 751
  Free Radical Stabilization, 1497
Bandinelli, Prof. B. R. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Bangerter, E. B., and Lousley, J. E. (compiled by Kent, D. H., with the assistance of) : British Herbaria, *review* by Dr. W. B. Turrill, 759
Bangham, Dr. A. D. : Micro-electrophoresis, 1315
Bangham, Dr. A. D., and Dawson, Dr. R. M. C. : Control of Lecithinase Activity by the Electrophoretic Charge on its Substrate Surface, 1292
Bangham, Dr. A. D., and others : An Apparatus for Microelectrophoresis of Small Particles, 642
Bannerman, Dr. David Armitage : The Birds of the British Isles, Vol. 7, Anatidae (conclusion), *review* by Sir Landsborough Thomson, 490
Barber, Prof. H. N., and others : Gibberellic Acid and the Physiological Genetics of Flowering in Peas, 1321
Barber, Dr. Mary : Nature and Genetical Control of Resistance in Living Organisms (Three Types of Drug Resistance found in Bacteria), 921
Barber, R., and others : Isolation of $\Delta^{5,7,9}$-Œstratrienol-3-one-17 from the Urine of Pregnant Mares, 1308
Barclay-Smith, Miss I. Phyllis : Awarded the Silver Medal of the V. von Heidenstams Foundation in Sweden, 229
Barer, Dr. R. : The Interference Microscope in Biological Research, *review*, 1630
Barium-140—Lanthanum-140 (Radioactive Isotope) : Tracing the Movement of Pebbles marked with the (C. Kidson, A. P. Carr and D. B. Smith), 1347

Barker, Dr. C. C. : Steric Effects in Conjugated Systems (Steric Effects in Basic Di- and Tri-phenylmethane Dyes), 569
Barker, H. : Carbon-14 Activity during the Past 5,000 Years, 1433
Barker, H. A.: Bacterial Fermentations, *review* by Dr. Kenneth McQuillen, 1587
Barkhan, Dr. P., and others : Phosphatidyl Serine and Blood Coagulation, 1031
Barley and Oats : Translocation of ^{14}C-labelled 2,4-Dichlorophenoxyacetic Acid in (H. Ingv. Petersen), 1685
Barlow, Lady (edited by) : The Autobiography of Charles Darwin, 1809-1882, *review* by Sir Ronald Fisher, 71
Barlow, G. B., and Patrick, Dr. A. D. : Uptake and Utilization of DL-[2-^{14}C] Mevalonic Acid by *Hevea brasiliensis*, 662
Barlow, H. S. : The Diploma in Technology, 160
Barnacles *Lepas hillii* and *Lepas anatifera* : Growth and Maturity of the (Dr. Frank Evans), 1245
Barnard, A. C. L., and others : Measurement of the Energy Spectrum of Protons emitted from the Fusion Reaction in SCEPTRE III, 216
Barnard, Dr. A. J., and Mouton, W. L. : Condensation produced by Ultra-Violet Light, 1001
Barnes, Dr. D. W. H. : Life at Low Temperatures, 913
Barnes, Dr. H. : Promoted to Senior Principal Scientific Officer by the Development Commission, 993 ; work of, 993
Barnes, Dr. H. F. : Promoted to Senior Principal Scientific Officer by the Agricultural Research Council, 993 ; work of, 993
Barnett, Mrs. L., and others : Distribution of Proflavin-induced Mutations in the Genetic Fine Structure, 983
Barr, William : Nominated as president of the Iron and Steel Institute for 1959-60, 1777
Barradas, R. G. : Charge Transfer Processes (Studies on the Direct Determination of Adsorption of Organic Ions at Solid Metals), 1355
Barrett, F. L. : Made an honorary member of the Textile Institute, 229
Barnett, S. A. (edited by) : A Century of Darwin, *review* by Dr. G. S. Carter, 1112
Barrington, Prof. E. J. W. : Comparative Endocrinology (Bio- and Histochemical Studies on Iodine Binding in the Endostyle of Protochordates), 775
Barth, jun., Edwin F. (Buch, Robert L., and) : Serological Detection of Fermentation Wastes, 1680
Bartlett, D. J. : Biochemical Characteristics of Dog Semen, 1605
Bartlett, Sir Frederic : *Obituary* of Prof. K. S. Lashley, 1343
Barton, Prof. D. H. R. : Theoretical Organic Chemistry (Recent Progress in Conformational Analysis), 1342
Barton, Dr. R. : Ecology of Soil Fungi, 1559
  Establishment of *Pythium* in Soils, 1776
Baruah, Prof. B. D. : Plasma Cells and Tumour Growth, 1455
Barwell, Dr. F. T. : Modern Problems in Friction and Lubrication (Newer Aspects of Hydrodynamic Lubrication), 981
Basis for Chloramphenicol-Resistance in *Staphylococcus aureus* : Protein Synthesis as a (H. H. Ramsey), 602
Basis (Biochemical), of Disturbances caused by Thermal Stress in the Central Nervous System of Man (M. Krause), 1376
Bassett, G. A. : Mechanical Properties of Whiskers and Thin Films (New Technique for Revealing Surface Steps down to Atomic Dimensions), 297
Bassi, M., and others : Action of Testosterone Propionate and 4-Chlorotestosterone Acetate on Protein Synthesis *in vitro*, 663
Bassindale, R. : Effects of Pollution on Living Material (Reduction of Fauna in the Middle Reaches of an Estuary), 1209
Basu, Dr. Sadhan (Chauduri, Jayanti Nag, and) : Half-wave Potentials of Aromatic Ketones, 179
Bat Erosion as a Factor in Cave Formation (J. H. D. Hooper), 1464
Batchelor, Dr. G. K. (edited by) : The Scientific Papers of Sir Geoffrey Ingram Taylor, Vol. I, Mechanics of Solids, *review* by Prof. A. H. Cottrell, 546
Bates, Prof. D. R. : Aeronomy, *review*, 1629
Bathyscaphoid Squid (E. J. Denton, T. I. Shaw and J. B. Gilpin-Brown), 1810
Batista, Dr. A. C. : Human and Animal Ecology (Fungi such as *Candida* and *Torulopsis* may be a primary cause of Cholecystitis), 1648
Batteries (Signals Research and Development Establishment Symposium on), 842
Batty, C. J. : Awarded a Research Fellowship in nuclear physics for 1958-59 by the Department of Scientific and Industrial Research, 1062
Bau der Atomkerne (Handbuch der Physik, herausgegeben von S. Flügge, Band 39), *review* by Dr. E. Bretscher, 1333
Bauer, Dr. Siegfried J. (Daniels, Dr. Fred B., and) : Faraday Fading of Earth Satellite Signals, 599
Bauld, Dr. W. S. : *Obituary* by Prof. G. F. Marrian, 427
Baussart, M. : Physics of Ice Movement (Glacier Flow), 1562
Bauxite Deposits in Jamaica : A Phosphatic Band underlying (Dr. V. A. Eyles), 1367
Bawden, F. C. : The Indian Agricultural Service, *review*, 1628
Bawn, Prof. C. E. H. : High Polymers, 772
  Free Radical Stabilization, 1497
Baxter, Prof. J. P., and Watson-Munro, C. N. : Peaceful Uses of Atomic Energy—Symposium in Australia (1958), 217
Bay (Halley) : Ionospheric Measurements made at (W. H. Bellchambers and W. R. Piggott), 1596
B.B.C. : B.B.C. Television, a British Engineering Achievement, 988
  Engineering Monograph No. 15, New Equipment and Methods for the Evaluation of the Performances of Lenses for Television (W. N. Sproson), 1490
  Engineering Monograph No. 16, Analysis and Measurement of Programme Levels, Part I, Investigation of Extreme Values of Sound Pressure (D. E. L. Shorter and W. I. Manson) ; Part 2, A Description of an Optical Instrument for Monitoring Sound Signals (E. R. Wigan), 1490
  Engineering Monograph No. 17, The Design of a Linear Phase-Shift Low-Pass Filter (L. E. Weaver), 1490
  Engineering Monograph No. 18, The B.B.C. Colour Television Tests—an Appraisal of Results (W. N. Sproson, S. N. Watson and M. Campbell), 1490
  Engineering Monograph No. 19, A V.H.F. Television Link for Outside Broadcasts (K. C. Quinton), 1490
  Research and Development in the, 1490
  B.B.C. Naturalist (edited by Desmond Hawkins), *review* by R. W. Hayman, 8
BCG : Induced Resistance of Mice to Infection with *Brucella abortus* 2308 through Vaccination with (Dr. A. Bekierkunst and D. Sulitzeanu), 883
Beadle, Prof. G. W., and Tatum, Dr. E. L. (Lederberg, Prof. J., and jointly to) : Nobel Prize for Medicine and Physiology for 1958 awarded to, 1344 ; work of, 1344
Beadle, Prof. L. C. : Classification of Brackish and Inland Saline Waters, 27
Beaglehole, Prof. Ernest : Social Change in the South Pacific—Rarotonga and Aitutaki, *review* by Prof. Raymond Firth, 280
Beam (Ultrasonic), in Fused Quartz : Visualization of Mode Conversion of an (V. J. Hammond and R. Carter), 790
Beaman, Mrs. : Modern Educational Treatment of Deafness, 920
Bean Embryos : Auxins in the Development of (M. Furuya and K. Soma), 563
Bean (Broad), *Vicia faba* : Metabolism of Phenolic Compounds by the (Dr. J. B. Pridham), 795
  Occurrence and Metabolism of Oligosaccharides in the (Dr. J. B. Pridham), 1687
Bean Roots (Broad) : Respiration and Radiosensitivy of (B. A. Kihlman), 730
Bearcroft, Dr. W. G. C., and Jamieson, Dr. Margaret F. : An Outbreak of Subcutaneous Tumours in Rhesus Monkeys, 195
Beatty (Chester) Research Institute : Symposium on the Invasiveness and Surface Properties of Cancer Cells, 1419
Beaumariage, Dr. M.-L. : Inability of Epinephrine to protect Rhode Island Chicks against the Lethal Action of X-Rays, 803
Beauty' : New 'Area of Outstanding Natural, 917
Beaven, Dr. G. H. : Steric Effects in Conjugated Systems (Steric Effects in Diphenyl), 568
Becher, Paul : Emulsions, *review* by Sir Eric Rideal, 550
Becker, Dr. Elery R. : Elected president of the Society of Protozoologists, 1205
Becker, P. R. : Appointed lecturer in the Electronic Computation Laboratory at the University of Sheffield, 1279
Beckerley, James G. (edited by, in association with Hofstadter, Robert, and Schiff, Leonard I.) : Annual Review of Nuclear Science, Vol. 7, *review* by Dr. F. Mandl, 489
Beckett, P. J., and others : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Beckman and Whitley : Continuous-writing Streak Camera, 564
Bedford College, London : Title of reader in social institutions in the University of London conferred on O. R. McGregor, 363
  Title of professor emeritus of mathematics in the University of London conferred on Prof. W. N. Bailey, 363
Beds (Vascular) : Resistance to Flow in (Prof. Alan C. Burton), 1456
Bedson Club : Lectures during 1958-59, 1063
Beedham, Dr. G. E. : Aspects of the Evolution of Form and Function in Molluscs, 997
Beef Pancreas : Pancrinogen, a New Zymogen of Proteolytic Enzyme from (Masami Soejima and Kensuke Shimura), 49
Beers, jun., Dr. Roland F., and others : Inihbition and Activation of Polynucleotide Phosphorylase through the Formation of Complexes between Acridine Orange and Polynucleotides, 242
Beet (Red) : Nature of Betanin, the Pigment of (R. G. Peterson and Prof. M. A. Joslyn), 45 ; (Sir Robert Robinson), 46
Begg, G. A. J. : Fuel and Power in British Industry (The Chemical Industry), 1715
Begonia tuberhybrida : An Aphid-transmitted Tobacco Ring-Spot-like Virus isolated from (J. Semal), 1688
Behaviour of the Present Sunspot Cycle (Prof. S. W. Visser), 253, 1600 ; (C. M. Minnis), 1599
Behaviour of 19-nor-Progesterone and 19-nor-Ethinyltestosterone in the Liver of the Guinea Pig (Silvia Girardi, Dusan Jadrijevič, Rigoberto Iglesias and Prof. Alexander Lipschutz), 1450
Behaviour (Comparative Kinetic), of Thrombin, Plasmin and Trypsin toward Synthetic Substrates (Dr. H. A Scheraga, S. Ehrenpreis and E. Sullivan), 461
Behaviour (Cytologically Diploid), of Hexaploid Wheat : Genetic Control of the (Dr. Ralph Riley and Victor Chapman), 713
Behaviour (Emotional), in Rats : Effect of Drugs on (R. W. Ryall), 1606
Behaviour (Plant) : Effects of Weather on (Prof. J. P. Hudson), 1337
Behaviour (Sedimentation), in Flocculated Cane Sugar Juice : Zeta Potential and (Dr. M. C. Bennett), 1439
Behaviour (Setting), of *Spirorbis* : Use of Artificially Liberated Larvae in Experiments on the (P. H. D. H. de Silva), 1751
Békési, L., and others : Desertomycin, a New Crystalline Antibiotic with Antibacterial and Cytostatic Action, 401
Bekierkunst, Dr. A., and Sulitzeanu, D. : Induced Resistance of Mice to Infection with *Brucella abortus* 2308 through Vaccination with *BCG*, 883
Belk, J. A. : Study of Metals and Alloys above 1,200°C. (High-temperature Techniques), 1418
Bell, J. S. : Theories of Nuclear Moments, *review*, 8
Bell, Dr. L. G. E. : Sulphydryl Groups and Ribonucleic Acid, 1088
Bell, P. R., and Richards, B. M. : Induced Apospory in Polypodiaceous Ferns, 1748
Bell Telephone Laboratories : Appointment of Dr. W. D. Lewis and A. H. White as directors of research, 1550
Bellchambers, W. H., and Piggott, W. R. : Ionospheric Measurements made at Halley Bay, 1596
Beller, Dr. F. K. : The Flow of Blood in relation to the Vessel Wall, 91
Bellis, David M. : Metabolism of Coumarin and related Compounds in Cultures of *Penicillium* Species, 806
Bellman, Richard : Dynamic Programming, *review* by Dr. L. S. Goddard, 1187
Belov, N. V. : Space-Group Theory (translated by V. Balashov), 432
Belozersky, Prof. A. N., and Spirin, A. S. : A Correlation between the Compositions of Deoxyribonucleic and Ribonucleic Acids, 111
Belshaw, Prof. Cyril S. : The Great Village, the Economic and Social Welfare of Hanuabada, an Urban Community in Papua, *review* by G. K. Roth, 6
Beneath the Earth's Crust (Prof. L. R. Wager), 580
Benedict, Prof. Manson, and Pigford, Prof. Thomas H. : Nuclear Chemical Engineering, *review* by Prof. W. Murgatroyd, 489
Bengal (West) : Some New Vertebrate Fossils from the Panchet Series of (Dr. Pamela Lamplugh Robinson), 1722
Benjamin, P. (Weaver, C., and) : Errors in the Measurement of Film Thickness by Multiple-Beam Interferometry, 1149

Bennett, Jr., Emmett J. (edited by) : The Mycenae Tablets II (translations and commentary by John Chadwick), (Transactions of the American Philosophical Society, New Series, Vol. 48, Part I), 153
Bennett, H. : Antarctic Research (Special Investigations in Glaciology), 286
Bennett, Dr. J. E., and Morgan, E. J. H. : Effect of Oxygen on the Electron Spin Resonance Spectrum of α,α′-Diphenyl-β-picrylhydrazyl, 199
Bennett, Margery, and others : Fire-blight of Pear in England, 1530
Bennett, Dr. M. C. : Zeta Potential and Sedimentation Behaviour in Flocculated Cane Sugar Juice, 1439
Bennington, T. W. : The Ionosphere, *review*, 1116
Benson, Prof. Lyman : Plant Classification, *review* by Prof. T. G. Tutin, 824
Bent, R. : Science in the Use of Coal (Physics and Chemistry of Coal), 24
Bentley, P. G., and Hamer, A. N. : Boron-10 Abundance in Nature, 1156
Bentley, P. J. : Loss of Sodium from the Skin of the Dehydrated Toad, *Bufo marinus*, 1810
Bentley, R. E., and others : Radioactivity due to Fission Products in Biological Material, 1473
Benzene : Effect of, on Rat Thyroid (Dr. Angelo Iannaccone and Dr. Giuseppe Cicchella), 669
γ-Benzene Hexachloride and Dieldrin : Effect of Simulated Field Deposits of, on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles (G. Davidson and D. G. Pollard), 739
Benzenone-Indo-3′,5′-Dihalo-Phenylacetate : Synthesis and Structure of 2,6-Dihalo-Benzenone-Indophenylacetate and (C. de Borst, F. N. Hooge and G. J. Arkenbout), 1017
Benzer, Prof. S. : Bacteriophage Research, 1770
Benzer, Prof. S., and others : Three Varieties of Human Haemoglobin *D*, 852
  Distribution of Proflavin-induced Mutations in the Genetic Fine Structure, 983
Benzie, David, and Phillipson, Dr. A. T. : The Alimentary Tract of the Ruminant, *review* by Prof. A. Graham, 622
Benzoyl Derivatives of DL-Amino-acids : A New Method for Resolving Amino-acids by Metabolism of Bacteria on (Prof. Yukio Kameda, Etsuko Toyoura, Katsuhiko Matsui, Yukio Kimura and Shizue Kitagawa), 453
Beránek, Dr. R., and Novotny, Dr. I. : Spontaneous Electrical Activity in the Denervated Muscles of the Cockroach *Periplaneta americana*, 957
Berckhemer, Dr. H. : At the fourth General Assembly of the European Seismological Commission (The Influence of the Movement at the Focus of an Earthquake on the Seismic Wave Spectrum), 27
Berenblum, I. : Progress in Cancer Research (Metabolism of Carcinogens), 364
Bergel, Prof. F., and others : Anti-Tumour and Biochemical Effects of Purified Bovine Xanthine Oxidase in *C3H* and *C* Mice, 1144
Berger, Lawrence, and others: Relationship between *pKa* and Uricosuric Activity in Phenylbutazone Analogues, 1162
Bergersen, F. J. (Appleby, C. A., and) : Cytochromes of *Rhizobium*, 1174
Bergey's Manual of Determinative Bacteriology (Prof. Robert S. Breed, Prof. E. G. D. Murray and Nathan R. Smith), seventh edition, *review* by Dr. S. T. Cowan, 553
Berghezan, A. : Mechanical Properties of Whiskers and Thin Films (Graphite Whiskers grown by a High-pressure Arc Process), 297
Bergmann, Dr. Ernst D., and Levinson, Zwi H. : Fate of Beta-Sitosterol in Housefly Larvae, 723
Berkner, Dr. Lloyd V. : Support and Direction of Research at American Academic Institutions, 848
Berland, Björn : The Hood of the Hooded Seal, *Cystophora cristata* Erxl., 408
Berman, Dr. R. : Measurements of Conduction at Low Temperatures (Scattering by Impurities), 85
Berman, Dr. R., and Mate, C. F. : Thermal Contact at Low Temperatures, 1661
Bernal, Prof. J. D. : *Obituary* of Dr. Rosalind E. Franklin, 154
  New Ideas about Muscles, *review*, 345
  Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Bernard, Claude : Life at Low Temperatures, 913
Bernard, J., and others : Different Heterogeneities of Mouse Haemoglobin according to Strains, 947
Bernelli-Zazzera, A., and others : Action of Testosterone Propionate and 4-Chlorotestosterone Acetate on Protein Synthesis *in vitro*, 663
Bernhard, Prof. Richard A. : Occurrence of Coumarin Analogues in Lemon Juice, 1171
Bernlohr, R. W., and Webster, Dr. G. C. : Formation of Activated Amino-Acids by Intact Cells of *Azotobacter vinelandii*, 531
Berrill, Dr. N. J. : Man's Emerging Mind, *review* by Prof. H. J. Fleure, 1572
Berry, R., and others : Studies in Synthesis of Deoxyribonucleic Acid—Mechanism of Radiation Effect on the Process of Synthesis of Deoxyribonucleic Acid, 1788
Bertram, Dr. Colin : Arctic and Antarctic, a Prospect of the Polar Regions, new edition, *review* by L. M. Forbes, 620
  West Indian Immigration into Britain, 1060
  Antarctica Today and Tomorrow, 1782
Bertram, Prof. D. S., and Samarawickrema, W. A. : Age Determination for Individual *Mansonioides* Mosquitoes, 444
Beryllium : Transmission Electron Microscopy of (J. D. Baird, O. P. Hartree and R. Phillips), 1660
β-Brass : Nuclear Magnetic Resonance in (G. W. West), 1436
β-Forms (α- and) of Calcium Sulphate Hemihydrate: Transformation of the, to Insoluble Anhydrite (D. A. Powell), 792
β-Globulin Phenotypes in Sheep : Further (Dr. G. C. Ashton), 1101
β-Globulin Polymorphism in British Cattle : Genetics of (Dr. G. C. Ashton), 370
β-Globulin Polymorphism in Cattle, Sheep and Goats (Dr. G. C. Ashton and E. I. McDougall), 945
β-Globulin Variants in Man (Dr. H. Harris, Miss E. B. Robson and Dr. M. Siniscalco), 452
β Haemolytic (Group *A*) Streptococci : Protoplasts of (H. Gooder and W. R. Maxted), 808
β-Radiation : Action of, on the *Proteus* P18 Bacillus (Prof. P. Mandel, M. Sensenbrenner and G. Vincendon), 674
β-Propiolactone as a Toxoiding Agent (E. S. Orlans and V. E. Jones), 1216
β-Sitosterol : Fate of, in Housefly Larvae (Dr. Ernst D. Bergmann and Zwi H. Levinson), 723
β-Wollastonite : Crystal Structure of (Miss Joan Tolliday), 1012
Betanin, the Pigment of Red Beet : Nature of (R. G. Peterson and Prof. M. A. Joslyn), 45 ; (Sir Robert Robinson), 46
Betina, Vladimír : A Paper Chromatography Method for the Determination of Suitable *p*H Values for the Extraction of Antibiotics, 796
Bett, K. E. : Physical Chemistry at High Pressures, *review*, 75
Bettelheim, Prof. Frederick A. : Crystalline Sodium Hyaluronate, 1301
Betts, Dr. A. O. (Lamont, P. H., and) : Enteroviruses in the Pig, 608
Beveridge, Dr. E., and others : A New Series of Leishmanicides, 316
Beverton, R. J. H., and Holt, S. J. : On the Dynamics of Exploited Fish Populations, *review* by Dr. E. B. Worthington and J. G. Skellam, 686
Beynon, Dr. W. J. G. : Appointed to the chair of physics in the University College of Wales, Aberystwyth, 632 ; work of, 632
Bezymyannyi (Volcano) : Eruptions of the (G. S. Gorshkov), 500
Bezzi, Prof. S., and others : Thio-Thiophthen, an Unusual New Type of Aromatic System, 247
Bhabha, Prof. H. J. : Appointed to serve on the Scientific Advisory Committee of the International Atomic Energy Agency, 1413
Bhattacharya, Miss Rama : Awarded the Corday-Morgan Commonwealth Fellowship for 1958-59, 700
γ-BHC and Dieldrin : Effect of Simulated Field Deposits of, on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles (G. Davidson and D. G. Pollard), 739
Bibliography on Algae : Selected, No. 4 (Nova Scotia Research Foundation), 1131
Bicentenary of Boscovich's 'Theoria Philosophiae Naturalis', 230
Bick, Dr. I. R. C. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1641
Bickerdike, R. L., and Hughes, G. : Study of Metals and Alloys above 1,200°C. (Vacuum-quenching Furnace to examine the Titanium-rich End of the Titanium—Carbon System between 1,558°C. and 1,763°C.), 1418
Bielschowsky, J. : Progress in Cancer Research (Hormones), 364
Biesele, Dr. John J. : Mitotic Poisons and the Cancer Problem, *review* by Dr. C. Auerbach, 750
Big Problems : Small Firms with—a Short Account of an Experimental Technical Liaison Service run by the Scottish Council (Development and Industry), (Department of Scientific and Industrial Research), 1139
Bigelow, Dr. W. G. : Awarded 5,000 dollars by the Gairdner Foundation, 1710
Biggers, Dr. J. D., and others : Variance Control in the Animal House, 77
Biggers, Dr. J. D. (Heyner, Susan, and) : Cultivation of Isolated Embryonic Rat Tibiae on a Chemically Defined Medium, 810
Biggers, Dr. J. D. (McLaren, Dr. Anne, and) : Successful Development and Birth of Mice cultivated *in vitro* as Early Embryos, 877
Biggs, J. : Awarded a Research Fellowship in Chemistry for 1958-59 by the Department of Scientific and Industrial Research, 1062
Bilbey, Dr. D. L. J., and Nicol, Prof. T. : Effect of various Natural Steroids on the Phagocytic Activity of the Reticulo-Endothelial System, 674
Bilbey, Dr. D. L. J., and others : Effect of Splenectomy on the Phagocytic Activity of the Reticulo-Endothelial System, 534
Bilbey, Dr. D. L. J. (Nicol, Prof. T., and) : Elimination of Macrophage Cells of the Reticulo-Endothelial System by Way of the Bronchial Tree, 192
  Substances depressing the Phagocytic Activity of the Reticulo-Endothelial System, 606
Bilby, B. A. : Mechanical Properties of Whiskers and Thin Films (Nucleation of Slip in Thin Plates), 298
Bile Salts : Effect of, upon the Activity of Antibiotics (Dr. S. Stanley Schneierson and Daniel Amsterdam), 56
  Moving Acid Boundary (*p*H Gradient) Paper Ionophoresis of (Thomas Briggs, Dr. Michael W. Whitehouse and Dr. Ezra Staple), 394
Bile Solid : The, *review* by Prof. G. A. D. Haslewood, 1332
Billingham, Flight-Lieut. J. : Space Medicine, 1645
Billington, N. S. : Appointed director of the Heating and Ventilating Research Council, 700
Billson, Andrew : Awarded a special prize in the 1958 *Endeavour* Essay Competition, 632
Binding of Chromium-51 to Erythrocytes *in vitro* : Effect of Calcium Ions on the (G. von Ehrenstein and B. Zacharias), 1384
Biochemical Basis of Disturbances caused by Thermal Stress in the Central Nervous System of Man (M. Krause), 1376
Biochemical Changes in Virus-infected and Regenerating Mouse Liver (David S. Nelson and Prof. P. M. de Burgh), 1617
Biochemical Characteristics of Dog Semen (D. J. Bartlett), 1635
Biochemical Contributions to Endocrinology—Experiments in Hormonal Research (Sir Charles Dodds), *review* by Dr. A. E. Kellie, 484
Biochemical Effects (Anti-Tumour and), of Purified Bovine Xanthine Oxidase in *C3H* and *C* Mice (Prof. A. Haddow, Dr. G. de Lamirande, Prof. F. Bergel, Dr. R. C. Bray and D. A. Gilbert), 1144
Biochemical Function of Cobalt (Hedley Marston), 1348
Biochemical Mutants in Bacteria with Impaired Respiration (Prof. G. F. Gause), 97
Biochemical Pharmacology, Vol. 1, No. 1, 1278
Biochemical Response to Physical Injury (Council for the Organization of Medical Sciences, with the assistance of the Wellcome Trust and the International Union of Biochemistry Symposium on), 1493
Biochemical Society, Australian : Third Annual General Meeting, 1348
  Second Annual Lecture (Hedley Marston), 1348
Biochemist : Microbes and the, *review* by Dr. H. K. King, 823
Biochemistry : Advances in Enzymology and related Subjects of (edited by F. F. Nord), Vols. 18 and 19, *review* by Dr. Edwin C. Webb, 897
  Dynamic, *review* by Prof. D. C. Harrison, 684
  Dynamic Aspects of (Prof. Ernest Baldwin), third edition, *review* by Prof. D. C. Harrison, 684
  International Congress of (Publication of the Transactions of the fourth), 1644
Biochemistry, International Union of (Council for the Organization of Medical Sciences, with the assistance of the Wellcome Trust and the): Symposium on Biochemical Response to Physical Injury, 1493
Biochemistry of Cellulose and related Polysaccharides (Dr. B. A. Stone), 687
Biochemistry (Industrial), at Manchester, 1202
Biochemists (Clinical), Association of : Election of Officers for 1958-59, 1063
Bioenergetics (Prof. Albert Szent-Györgyi), *review* by Prof. J. D. Bernal, 345
Biological Acoustics, Committee for : Demonstration Meeting, 769
Biological Action of Injected Deoxyribonucleic Acid (Dr. Rudolf K. Zahn, A. Docter, B. Heicke, H. Kuhlemann, G. Ochs, E. Torz, R. Torz, W. Ziegler and G. Zahn), 1679

Biological Assay of Glucocorticoids : A Simple and Rapid Method for the (B. P. Block and P. F. D'Arcy), 181
Biological Constants and Trophic Condition in Mosquito Populations : Relationship between certain (Dr. Donald H. Colless), 951
Biological D-Days, *review* by Prof. Ronald Good, 1576
Biological Deamidation of Nicotinamide in Vertebrates (K. V. Rajagopalan, T. K. Sundaram and Prof. P. S. Sarma), 51
Biological Effects of Low Temperatures : Some (Dr. A. S. Parkes), 581
Biological Effects of Radiation (Dr. L. F. Loutit), 1118
Biological Investigations : Importance of Taxonomy in (Irvine J. Hunter), 1818
Biological Material : Radioactivity due to Fission Products in (Prof. W. V. Mayneord, W. Anderson, R. E. Bentley, J. K. Burton, J. O. Crookall and N. G. Trott), 1473
  Separation and Determination of Millimicrogram Amounts of Cobalt and Microgram Amounts of Copper in (Aleksandra Smoczkiewczowa and Witold Mizgalski), 53
Biological Materials : Estimation of Strontium in, by means of a Flame Spectrophotometer (Dr. G. E. Harrison), 792
Biological Microtechnique : Principles of—a Study of Fixation and Dyeing (Dr. John R. Baker), *review* by Prof. J. Brachet, 1579
Biological Organisms : Detection of Polarization by (Arthur N. Fankuchen and Prof. I. Fankuchen), 1372
Biological Potency of Eta-Tocopherol (J. Bunyan), 1237
Biological Research : The Interference Microscope in (Dr. Arthur J. Hale), *review* by Dr. R. Barer, 1630
  The Tools of (Symposium on, in the Physiology Theatre, Guy's Hospital, London), 918
Biological Sciences : Awards for 1959 for Research in the (Lalor Foundation), 1063
Biological Sciences, International Union of (International Association of Limnology and the) : Conference on the Classification of Brackish and Inland Saline Waters, 27
Biological Servomechanism : Pupil Unrest, an Example of Noise in a (Lawrence Stark, Fergus W. Campbell and John Atwood), 857
Biological Testing of Insecticides in the Laboratory, *review* by Dr. A. H. McIntosh, 486
Biological and Medical Physics : Advances in (edited by John H. Lawrence and Cornelius A. Tobias), Vol. 5, *review* by Prof. J. A. V. Butler, 827
Biology in the Far East, 501
Biology : Cellular, *review* by Prof. W. S. Bullough, 551
  Electrical Techniques in Medicine and (Institute of Radio Engineers, the American Institute of Electrical Engineers and the Instrument Society of America Annual Conference on), 433, 771
  Electron Microscopy in (Prof. R. D. Preston), 1402
Biology, Institute of : Annual Conversazione (Dr. C. B. Cox), 300
  Autumn Meeting of the Parasitology Group, 1063, 1488
  Symposium on the Effects of Pollution on Living Material, 1208
Biology of Weeds (British Ecological Society Symposium on), 1710
Biology of Yeasts : The Chemistry and (edited by A. H. Cook), *review* by R. B. Gilliland, 488
Biology (Experimental), Society for: Thirteenth Symposium (Utilization of Nitrogen and its Compounds by Plants), 229
Biology (General) : Contribution of Radiobiology to, *review* by Prof. P. C. Koller and Dr. P. Alexander, 74
Biology (Marine), in South-East Africa, *review* by Dr. W. J. Rees, 1761
Biology (Molecular), in the University of Oregon, 1708
Biology (Radiation) : Second Australasian Conference on (Cancer Institute, Melbourne), 22
Biology and Medicine (Nuclear), Italian Society of : Third Congress of the (Medical Clinic of the University of Florence), 229
Biophysical Chemistry (John T. Edsall and Jeffries Wyman), Vol. 1, Thermodynamics, Electrostatics and the Biological Significance of the Properties of Matter, *review* by Prof. J. A. V. Butler, 5
  Progress in Biophysics and (edited by Prof. J. A. V. Butler and Prof. B. Katz), Vol. 8, *review* by Dr. P. A. Merton, 489
  Some Aspects of, *review* by Prof. J. A. V. Butler, 5
Biophysics and Biophysical Chemistry : Progress in (edited by Prof. J. A. V. Butler and Prof. B. Katz), Vol. 8, *review* by Dr. P. A. Merton, 489
Biosynthesis of δ-Aminolaevulic Acid by Chicken Erythrocyte Preparations : Evidence for the Involvement of Ferrous Iron in the (E. G. Brown), 313
Biosynthesis of Ascorbic Acid : Species Difference in regard to the (R. N. Roy and Prof. B. C. Guha), 319
Biosynthesis of Glycine Carbon-1 and -2 in *Bombyx mori* : Utilization of Formate for the (Dr. S. Bricteux-Grégoire and W. G. Verly), 1515
Biosynthesis of Phenolic Compounds in Plants (Plant Phenolics Group Meeting on), 229
Biosynthesis of Plant Glycosides from Uridine Diphosphate Glucose (Dr. C. E. Cardini and Dr. Tsutomu Yamaha), 1446
Biosynthesis (Actinomycin) : Influence of Amino-Acids on (Edward Katz and William A. Goss), 1668
Biosynthesis (Haem) : Mode of Action of 5:6-Dimethylbenzimidazole and certain Keto-Acids as Inhibitors of (Dr. E. G. Brown), 1091
Birch, Prof. A. J. : Awarded a Perkin Exchange Lectureship, 295
Birch, H. F. : Further Aspects of Humus Decomposition, 1172
Birch, N. : Awarded a James Clayton Grant by the Institution of Mechanical Engineers, 433
Bird, R. J. : Polymorphic Transitions in Anhydrous Sodium Sulphate, 1797
Bird (Mutton-), *Puffinus tenuirostris* : The Tasmanian (D. L. Serventy), 1070
Bird Embryos : Transplantation of the Forebrain Region in, before the Establishment of a Circulation—Homoplastic Transplants (Dr. Petar N. Martinovitch and Miroslava R. Pavlović), 571 ; Heteroplastic Transplants (Dr. Petar N. Martinovitch), 572
Bird Species : Production of Experimental Scurvy in a (R. N. Roy and Prof. B. C. Guha), 1689
Birds : Georgia (Thomas D. Burleigh), *review* by Sir Landsborough Thomson, 759
  Migrational Drift of, Plotted by Radar (Dr. David Lack), 221
Birds of the British Isles (Dr. David Armitage Bannerman), Vol. 7, Anatidae (conclusion), *review* by Sir Landsborough Thomson, 490
Birds of Poland (Ptaki Ziem Polskich), (Jan Sokolowski), Tom I, *review* by B. Nowosielski-Slepowron, 972
Birds of Southeastern Brazil : Observations on (Margaret H. Mitchell), *review*, 215
Birds in Spain, *review* by Dr. W. Rydzewski, 1044
Birds of the World : Extinct and Vanishing (James C. Greenway, Jr.), *review* by Dr. A. J. Marshall, 758
Birds (Gallinaceous) : Immunology and Chromatography in Taxonomic Studies on (Danilo Mainardi), 1388
Birds (Marine) : Salt Excretion in (Dr. F. S. Russell), 1755
Birds and Mammals of Canada, 1347
Birkbeck College, London : Appointment of Dr. Karl Wilson as reader in botany, 990
  Appointment of Dr. R. W. Tiffen to the University of London readership in applied mathemetics, 1554
Birkinshaw, Prof. J. H. : Neomycin, *review*, 1185
Birks, Dr. J. : Geology and Oil (Logs commonly used in the course of Drilling Oil Wells), 833
Birmingham College of Technology : Conference on Electronic Digital Computers and their Industrial Applications, 1205
Birth of Mice cultivated *in vitro* as Early Embryos : Successful Development and (Dr. Anne McLaren and Dr. J. D. Biggers), 877
Bisby, Dr. G. R. : *Obituary* by Dr. G. C. Ainsworth, 987
Bishop, A. S. : The United States Programme in Controlled Fusion (Project Sherwood), 1053
Bishop, Dr. David W. : Motility of the Sperm Flagellum, 1638
Bishop, Dr. P. M. F., and others : Colour Vision Studies and the *X*-Chromosome Constitution of Patients with Klinefelter's Syndrome, 1092
Bishop, Prof. P. O., and others : Synapse Discharge by Single Fibre in Mammalian Visual System, 728
Bishop, Prof. R. E. D. : Mechanical Vibration, *review*, 1581
Bishop, Dr. W. W. : Miocene Mammalia from the Napak Volcanics, Karamoja, Uganda, 1480
Bishop Museum, Bernice P. : Annual Report for 1957 (Concept of the Pacific), 1642
Bismuth–Tellurium Photo-voltaic *p–n* 'Sandwich' Layer (Tomasz Piwkowski), 1793
Bisset, Dr. K. A. : Natural Relationships of the Nitrogen-fixing Bacteria, 405
  Nomina Rejicienda, *review*, 1760
Biswas, Arun K., and Roy, Anil Bandhu : Surface-active Characteristics of Sodium Anacardate insolated from Cashew Nut Shell Oil, 1299
Biswas, Dr. K. : Common Medicinal Plants of Darjeeling and the Sikkim Himalayas, *review* by N. L. Bor, 76
Biting in *Aedes aegypti* : Presence of a Factor Inhibiting (M. M. J. Lavoipierre), 1567
Bjurstedt, Dr. H. : Space Medicine (Results of subjecting anaesthetized dogs to prolonged *g* forces in the head-to-tail direction), 1645
Black, Dr. D. H. : Appointed director of the Armament Research and Development Establishment of the Ministry of Supply, 225 ; work of, 225
Black, J. N. (Donald, C. M., and) : Significance of Leaf Area in Pasture Growth, 707
Black-Currant : Photoperiodic Induction of Flowering in (T. Nasr and Dr. P. F. Wareing), 269
'Black Knight', a Test Vehicle for High-Altitude Research, 1414
'Black Knight' Ballistic Missile (British), fired from Woomera, 698
Black Sea : Circulation in the (V. A. Vodyanitzky), 563
Black Wattle Catechin (Dr. D. G. Roux and A. E. Maihs), 1798
Blackith, Dr. R. E. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
Blackman (V. H.) Postgraduate Research Studentship awarded to M. G. Morris, 1063
Blackwood, Dr. J. D. : Production of Methane from Carbon, 1014
Blackwood, William : Appointed to the University of London chair of neuropathology at the Institute of Neurology, 22
Bladder (Swim-) : The Teleostean (Prof. C. Adrian M. Hogben), 1622
Bladder Campions (*Silene maritima* and *S. vulgaris*), (E. M. Marsden-Jones and Dr. W. B. Turrill), *review* by Prof. T. G. Tutin, 970
Blaha, M., and others : Polarization of Light of the Comets Arend-Roland (1956*h*) and Mrkos (1957*d*), 331
Blair, Dr. G. W. Scott : The Flow of Blood in relation to the Vessel Wall, 90
  All About Rheology, *review*, 685
Blake, R. : Soldiers and Government, 89
Blakemore, L. C., and Swindale, L. D. : Chemistry and Clay Mineralogy of a Soil Sample from Antarctica, 47
Blakley, Dr. R. L. : Interaction of Formaldehyde and Tetrahydrofolic Acid and its relation to the Enzymic Synthesis of Serine, 1719
Blalock, Dr. Alfred, and Taussig, Dr. Helen B. : Awarded jointly the Gairdner Foundation Award of Merit of 25,000 dollars, 1710
Blanc, Prof. A. C. (Blanc, G. A., and) : Bones of a Vulture among the Remains of Animals sacrificed on the 'Burial of Romulus' below the *Niger lapis* in the Roman Forum, 66
Blanc, G. A., and Blanc, Prof. A. C. : Bones of a Vulture among the Remains of Animals sacrificed on the 'Burial of Romulus' below the *Niger lapis* in the Roman Forum, 66
Blanchard, L. P. : Free Radical Stabilization, 1498
Blandau, Prof. R. J. : Comparative Endocrinology (Colour Film of the Rat's Ovary during the process of Ovulation), 775
Blaney, Prof. J. H. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Blattminen von Europa : Bestimmungstabellen der (Prof. Erich M. Hering), Band 1, Pflanzengattungen A-L ; Band 2, Pflanzengattungen M-Z ; Band 3, Neubeschreibungen von Minen-Erzeugern Systematische Übersicht der Wirtspflanzen und der Minen-Erzeuger, *review* by Dr. Kenneth Mellanby, 213
Blaser, J.-P., and Bonanomi, J. : Comparison of an Ammonia Maser with a Caesium Atomic Frequency Standard, 859
Blaser, J.-P., and De Prins, J. : Comparison of Astronomical Time Measurements with Atomic Frequency Standards, 859
Blaxter, Dr. K. L. : Promoted to Senior Principal Scientific Officer by the Agricultural Research Council, 993 ; work of, 993
Blayden, H. E. : Science in the Use of Coal (Reactivity of Cokes and Chars), 26
Bleasdale, Dr. J. K. A. : Effects of Pollution on Living Material (Deleterious Effects of Air Pollution on Plant Growth), 1209
Bledisloe of Lydney, Viscount : *Obituary* by Sir John Russell, 153
Bletchly, J. D. : *Obituary* of Dr. R. C. Fisher, 1549
Blin-Stoyle, R. J. : Theories of Nuclear Moments, *review* by J. S. Bell, 8
Blinc, R.: The Problem of Negative Anharmonicity and the Nature of the Hydrogen Bond in Potassium Hydrogen Fluoride, 1016
Blind (Colour) : Visual Pigments in the (Dr. W. A. H. Rushton), 690

Blindness (Colour) : Some Problems of Colour Vision and (Prof. R. W. Pickford), 584
Blitzer, Prof. Leon, and others : Exterior Ballistics of Rockets, *review* by D. G. King-Hele, 821
Block, B. P., and D'Arcy, P. F. : A Simple and Rapid Method for the Biological Assay of Glucocorticoids, 181
Block and Graft Polymers : Preparation of, in Systems where the Life-time of the Kinetic Chain is Long (Dr. P. E. M. Allen, G. M. Burnett, J. M. Downer, R. Hardy and Sir Harry Melville), 245
Blocking Agents : Some New Neuromuscular (Dr. H. O. J. Collier, J. M. Z. Gladych, Barbara Macauley and Dr. E. P. Taylor), 1424
Blois, M. S. : Free Radical Stabilization, 1497
Blomgren, Dr. E., and Bockris, Dr. J. O'M. : Charge Transfer Processes (Adsorption of Hydrochloric Acid and Aromatic Aminium Salts at Mercury), 1355
Blondal, Dr. Harold : Initial Irradiation Reaction in Mice, 1026
Blood : The Circulation of the—Two Anatomical Essays by William Harvey, together with nine letters written by him (translated from the Latin and slightly annotated by Prof. Kenneth J. Franklin), *review* by Dr. Douglas Guthrie, 1571
  Concentration in the Human Ovarian Follicular Fluid of Radioactive Tracers and Drugs circulating in the (Prof. Kurt N. von Kaulla, Jerry K. Aikawa and John D. Pettigrew), 1238
  The Flow of, in relation to the Vessel Wall (Discussion at Charing Cross Hospital Medical School), 90
  Hormones in, *review* by Prof. F. G. Young, 901
  Separation of Human Leucocytes from (Dr. Peter Wildy and Dr. Mark Ridley), 1801
Blood of the Laying Hen : Progesterone in the (I. M. Lytle and Prof. F. W. Lorenz), 1681
Blood of Metamorphosing Salmon : Acid-Soluble Nucleotides from the (Per Olov Svärd), 1448
Blood (Human) : Isolation from, of a New Substance associated with Fat Transport Activity (Dr. W. S. Reith and M. J. Thomas), 604
Blood (Human Adult Peripheral) : Establishment of Permanent Cell Strains from (Dr. John Paul), 808
Blood and Atherogenesis : Surface Tension of the (P. De Somer, J. Van den Bosch and J. V. Joossens), 59
Blood Cell Proteins (Red) : Agar Electrophoretic Patterns of (Prof. K. V. Giri, G. J. Sathyanaranyana Rao and S. Natarajan), 184
Blood Cells (Red), of the Lamb : Changes in the Potassium Concentration and Metabolism of (Prof. R. D. Wright, T. R. Bradley, J. F. Nelson and J. P. Coghlan), 1742
Blood Coagulation : Phosphatidyl Serine and (Dr. P. Barkhan, Dr. M. J. Silver, Dr. P. B. da Costa and Dr. L. M. Tocantins), 1031
  Serum Lipoproteins and (R. B. Goldrick and H. M. Whyte), 1743
Blood-Group Serology : Use of Lyophilized Formol-treated Red Cells in (E. R. Gold, W. J. Lockyer and Dr. Geoffrey H. Tovey), 951
Blood Group-Specific Mucopolysaccharides : Degradation of, by Ficin and Papain (A. Pusztai and Prof. W. T. J. Morgan), 648
Blood Oranges : Anthocyanins of (Dr. B. V. Chandler), 933
Blood Protein : Synthesis of, by the Fat Body in the Silkworm, *Bombyx mori* L. (Hajime Shigematsu), 880
Blood Serum (Human) : Calcium and Magnesium Content of Normal (Dr. G. Hunter), 263
Blood Supply of Bone : Sodium-24 as an Indicator of the (Dr. P. G. Laing and Dr. Albert B. Ferguson, jun.), 1442
Blood Types (Haemoglobin and Potassium), in some Non-British Breeds of Sheep and in certain Rare British Breeds (J. V. Evans, Dr. H. Harris and Prof. F. L. Warren), 320
Bloomer, R. N., and others : Removal of Gases in High Vacuum Systems by Metal Abrasion, 931, *erratum*, 1348
Blow, Dr. David M. (Rich, Dr. Alexander, and) : Formation of a Helical Steroid Complex, 423
Blumenstock, Dr. David I. : Typhoon Effects at Jaluit Atoll in the Marshall Islands, 1267
Bluteiweisskörper des Menschen (Prof. Ferdinand Wuhrmann und Dr. Charlie Wunderly), dritte Auflage, *review* by Dr. R. Consden, 623
Boalch, Dr. G. T. : At the Third International Seaweed Symposium (Variation in Pure Cultures of *Ectocarpus confervoides* grown under different Physiological Conditions), 1780
Boardman, J. F. C., and others : Mosaic Structure of Photographic Emulsion Crystals, 1726
Bock, K. R., and others : Zinc Deficiency induced by Mercury in *Coffea arabica*, 1607
Bockris, Dr. J. O'M. (Blomgren, Dr. E., and) : Charge Transfer Processes (Adsorption of Hydrochloric Acid and Aromatic Aminium Salts at Mercury), 1355
Bockris, Dr. J. O'M. (Mehl, Dr. W., and) : Charge Transfer Processes (Mechanism of Cathodic Electrochemical Reactions—Mechanism of Electrolytic Silver Deposition), 1354
Boddington, M. M., and others : Heinz Bodies in Extravasated Erythrocytes, 455
Body : Analogies between the Compensatory Responses of Fish and Crustacea to Horizontal Displacement of the (D. H. A. Marr), 1621
Body Irradiation (Total) : Effect of, on Capillary Permeability (Prof. G. Szabó, S. Magyar, P. Kertai and E. Zádory), 885
Bognár, R., and others : Desertomycin, a New Crystalline Antibiotic with Antibacterial and Cytostatic Action, 401
Bogoch, Dr. Samuel : Structure of Brain Ganglioside, 229
Bogue, Dr. J. Yule : Physiology as an Education and as a Career (Physiologists in Industry), 1066
Bohr (Niels) Gold Medal presented to Sir John Cockcroft, 990
Bok, J. : Solid State Physics, 567
Boley, Forrest I. : Scattering of Microwave Radiation by a Plasma Column, 790
Boll, R. H., and others : Tables of Light-Scattering Functions, *review* by Dr. B. J. Mason, 1117
Bollard, E. G. : Nitrogenous Components of the Tracheal Sap in Apples, 21
Boltz, David F. (edited by) : Colorimetric Determination of Nonmetals, *review* by C. O. Harvey, 1331
Bombardment (Electron) : Effects of, upon Sodium Tetraborate and Boric Acid in an Electron Microscope (Helena Lopes de Souza Santos), 1297
Bombs : Plutonium for, 19
Bombs (Atom) : Nuclear Physics and, *review* by Sir John Cockcroft, 547
Bombyx mori : Substances in Mulberry Leaves which attract Silkworm Larvae (Tadao Watanabe), 325
  Utilization of the Carboxyl Group of Glycine for the Synthesis of the Amino-Acids of Silk by (Dr. S. Bricteux-Grégoire, W. G. Verly and Prof. M. Florkin), 1515
  Utilization of Formate for Biosynthesis of Glycine Carbon-1 and -2 in (Dr. S. Bricteux-Grégoire and W. G. Verly), 1515
Bombyx mori L. : Synthesis of Blood Protein by the Fat Body in the Silkworm (Hajime Shigematsu), 880
Bonanomi, J. (Blaser, J.-P., and) : Comparison of an Ammonia Maser with a Caesium Atomic Frequency Standard, 859
Bond, Dr. G. : Root Nodules of *Coriaria*, 474
  Utilization of Inorganic Nitrogen Sources by Plants, 1197
Bond, R. L., and Pinchin, F. J. : Formation of Carbon by Decomposition of Carbon Suboxide at 750-780°C., 129
Bond (Hydrogen), in Potassium Hydrogen Fluoride : The Problem of Negative Anharmonicity and the Nature of the (R. Blinc), 1016
Bonding (Intramolecular Hydrogen) : Determination of Hammett Sigma Constants by (A. T. Shulgin and A. W. Baker), 1299
Bone : Sodium-24 as an Indicator of the Blood Supply of (Dr. P. G. Laing and Dr. Albert B. Ferguson, jun.), 1442
Bone Marrow Cells : Dependence of, on the Liver for Purine Supply (Dr. L. G. Lajtha and J. R. Vane), 191
Bones of a Vulture among the Remains of Animals sacrificed on the 'Burial of Romulus' below the *Niger lapis* in the Roman Forum (G. A. Blanc and Prof. A. C. Blanc), 66
Bonilla, Prof. Charles F. (edited by) : Nuclear Engineering, *review* by Prof. W. Murgatroyd, 350
Bonser, G. M. : Progress in Cancer Research (Metabolism of Carcinogens), 364
Book Exports, 430
Book of *p*H (R. B. Webber), *review* by Prof. H. T. S. Britton, 1258
Booker, G. R., and Norbury, J. : Aluminium Nitride Precipitates in α-Iron, 255
Books : Scientific and Technical, Supp. iv, July 26 ; Supp. xxx, August 30 ; Supp. viii, September 27 ; Supp. vi, October 25 ; Supp. vi, November 29 ; Supp. iv, December 27
Books on Evolution, *review* by Dr. G. S. Carter, 1112
Booth, A., and Wareing, Dr. P. F. : Growth-promoting Activity of Potato Tuber Extracts in the Coleoptile Straight-Growth Test—Quantitative Aspects of Indoleacetic Acid Detection, 406
Booth, Dr. A. D. : Computers Galore, *review*, 1583
Booth, Dr. A. D., and others : Mechanical Resolution of Linguistic Problems, *review* by R. A. Brooker, 618
Booth, C. C. : Awarded the Bronze Medal of the Worshipful Company of Founders, 1777
Booth, E. : At the Third International Seaweed Symposium (Attitude of Industry towards the Research Institute, with particular reference to Seaweed), 1780
Booth, Dr. Kathleen H. V. : Programming for an Automatic Digital Calculator, *review* by R. A. Brooker, 618
Bor, N. L. : Common Medicinal Plants of Darjeeling and the Sikkim Himalayas, *review*, 76
Boranes (Amine) : Vibrational Frequency associated with the Boron–Nitrogen Dative Bond in (R. C. Taylor and C. L. Cluff), 390
Borate Ion in Buffers : Effect of the, on the Electrophoresis of Rat Serum (C. F. Garbers and F. J. Joubert), 530
Borates : The Chemistry of (Peter H. Kemp), Part I, *review* by Dr. A. D. Mitchell, 1588
Border : The (edited by Prof. John Walton), (National Forest Park Guides), 1131
Bordley, Prof. : Modern Educational Treatment of Deafness, 920
Borehole to the Earth's Mantle ? (Dr. T. F. Gaskell), 692
Borg, Donald C., and Cotzias, Dr. George C. : Incorporation of Manganese into Erythrocytes as Evidence for a Manganese Porphyrin in Man, 1677
Boric Acid : Effects of Electron Bombardment upon Sodium Tetraborate and, in an Electron Microscope (Helena Lopes de Souza Santos), 1297
Born : The Twice-, a Study of a Community of High-Caste Hindus (Dr. G. Morris Carstairs), *review* by Prof. K. de B. Codrington, 76
Borneo : Pigmy Sperm Whale (*Kogia breviceps*) in (Tom Harrisson and George Jamuh), 543
Boron upon Solidification : Macroscopic Surface Structures formed on (Claude P. Talley), 1593
Boron-10 Abundance in Nature (P. G. Bentley and A. N. Hamer), 1156
Boron–Nitrogen Dative Bond in Amine Boranes : Vibrational Frequency associated with the (R. C. Taylor and C. L. Cluff), 390
Borrill, Dr. M. : At the eighth Plant Breeders' Conference (Restricted Geographical Distribution of Diploid Subspecies), 843
Borsook, Henry : A Rate-Governing Reaction of Protein Synthesis, 1006
Bosanquet, C. H. : Scale Height of the Upper Atmosphere, 1010
  Change of Inclination of a Satellite Orbit, 1533
Boscovich's 'Theoria Philosophiae Naturalis' (Meeting in the Yugoslav Embassy in London to celebrate the bicentenary of the publication of), 230
Bošković (Rudjer) Institute, Zagreb (Prof. Ivan Supek), 558
Böszörményi, Z., and Cseh, Edith : Relationships between the Chloride and Iodide Uptake of Wheat Seedlings, 1811
Botanical Society of the British Isles : British Herbaria (compiled by D. H. Kent, with the assistance of E. B. Bangerter and J. E. Lousley), *review* by Dr. W. B. Turrill, 759
Botanical Types preserved in Collections in Southern and East Africa : A List of Zoological and (South African Museums Association), Vol. I, Zoology, Part I, 431
Botany at Aberystwyth, 428
Botany at Edinburgh, 1130
Botany at the Imperial College of Science and Technology, 916
Botany : Agricultural (Dr. N. T. Gill and K. C. Vear), *review* by Prof. A. H. Bunting, 1257
Botany (Agricultural), National Institute of : Conference on Herbage Seed Production, 501
  Thirty-eighth Report (1957), 1717
Bottlenose Whale : Microscopic Structure of the Lungs of the (J. R. Goudappel and Prof. E. J. Slijper), 479
Bottomley, G. A., and others : Density of Acetylene, 596

Boucek, Dr. R. J. : Awarded a Ciba Foundation Award for 1958 for Research in Ageing, 19
Boult, E. H. (Tonge, C. H., and) : Collagen in Human Cementum as shown by Electron Microscopy, 459
Boulter, Dr. D. : Ecology of Soil Fungi, 1559
Bourdeau, Prof. Philippe F. : Interaction of Gibberellic Acid and Photoperiod on the Vegetative Growth of *Pinus elliottii*, 118
Bourgault, P. L. (Conway, Dr. B. E., and) : Charge Transfer Processes (Anodic Processes—Kinetics of Self-discharge of Nickel–Nickel Oxide Electrodes), 1354
Bourke Lectures of the Faraday Society (Prof. R. H. Stokes), 1205
Bourne, Prof. G. H., and Danielli, Prof. J. F. (edited by) : International Review of Cytology, Vol. 6, *review* by Prof. J. Brontë Gatenby, 1114
Bourne, Prof. G. H. (Pasqualino, Dr. Antonio, and) : Histochemical Changes in Kidneys and Adrenals of Rats made Hypertensive by the Goldblatt Method, 1426
Bovine Spinal Cord and Killed Tubercle Bacilli : Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from (Dr. Marian W. Kies, Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104
Bovine Xanthine Oxidase (Purified), in *C3H* and *C* Mice : Anti-Tumour and Biochemical Effects of (Prof. A. Haddow, Dr. G. de Lamirande, Prof. F. Bergel, Dr. R. C. Bray and D. A. Gilbert), 1144
Bow Group : Memorandum on the Museum and Art Gallery Service, with special reference to the National Gallery and the Hampton Site Question, 681
Bowden, Dr. B. V. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Engineering Education, and its Place in the University), 1284
Bowden, Dr. F. P. : Modern Problems in Friction and Lubrication (Problems involved in Travelling at Speeds of the order of 2,000 m.p.h.), 980
Bowden, J., and Ingram, W. R. : A Revised Interpretation of the Causes of Loss of Crops of Cotton in the Drier Regions of Uganda, 1750
Bowden, Prof. Ruth E. M. : Centenary of Gray's Anatomy, *review*, 1760
Bowen, Dr. H. J. M. : Effects of Pollution on Living Material (Uptake of Fission Products by Plants), 1210
Bowie, S. H. U. : Helium in Natural Gas in the Witwatersrand, 1082
Bowman, Robert L., and Karmen, Dr. Arthur : A Micro Sample Introduction System for Gas Chromatography, 1233
Boyd, John (edited by) : Lubrication Science and Technology, Vol. 1, No. 1, *review* by Dr. D. Tabor, 1763
Boyd, L. G., and others (compiled by) : Orbital Data and Preliminary Analyses of Satellites 1957α and 1957β, 1062
Boyd, Dr. R. L. F. (Massey, Prof. H. S. W., and) : The Upper Atmosphere, *review* by Prof. D. R. Bates, 1629
Boyd-Orr, Lord : The Cultural Value of Local Societies (Presidential Address to Section X (Assembly of Corresponding Societies) of the British Association for the Advancement of Science), 586
Boyland, Prof. E. : Progress in Cancer Research (Metabolism of Carcinogens), 364
Boyland, Prof. E. (edited by) : Causation of Cancer, 87
Braams, Dr. Reinier, and others : Changes in the Sensitivity of Enzymes in the Dry State to Radiation, 1506
Braams, Dr. W. G. (Seuntjens, Dr. H., and) : An Electron-Microscopic Study of the Ciliature of the Trochophore Larva, 1611
Bracewell, Prof. R. N., and Garriott, O. K. : Rotation of Artificial Earth Satellites, 760
Bracey, R. J. : Retirement of head of the Optical Department of the British Scientific Instrument Research Association, 225 ; work of, 225
Brachet, Prof. J. : A Scientific Analysis of Fixation and Dyeing, *review*, 1579
Brackish and Inland Saline Waters : Classification of (International Association of Limnology and the International Union of Biological Sciences Conference on), 27
Bradbeer, Dr. Clive : Incorporation of Carbon-14 Dioxide into Sugars by Darkened Cotyledons from Etiolated Sunflower Seedlings, 1429
Bradbeer, J. M. : Awarded a research studentship in botany by the Nature Conservancy, 771
Bradbury, A., and others : Nuclear Magnetic Resonance Spectra from a Crystal rotated at High Speed, 1659
Bradbury, Dr. J. H. : Awarded the Rennie Memorial Medal for 1957 of the Royal Australian Chemical Institute, 89
Bradford, Dr. E. W. : Nutrition and Teeth (More Teeth lost by the Periodontal Diseases than by Dental Caries), 1705
Bradley, Dr. D. C. : A Structural Theory for Metal Alkoxide Polymers, 1211
Bradley, Dr. P. B. (Key, Dr. B. J., and) : Effect of Drugs on Conditioning and Habituation to Arousal Stimuli in Animals, 1517
Bradley, T. R., and others : Changes in the Potassium Concentration and Metabolism of Red Blood Cells of the Lamb, 1742
Bradshaw, L. : Progress in Cancer Research (Metabolism of Carcinogens), 364
Braekkan, Olaf R. : Vitamin B_{12} in Marine Fish, 1386
Bragg, Sir Lawrence : Elected to Honorary Fellowship of the Institute of Physics, 88, 777
  Scientific Apparatus in the Royal Institution, 1541
Brain : Drugs and the, *review* by Prof. H. J. Eysenck, 823
Brain (Larval) : Effect of, on the Imaginal Differentiation in the Silkworm (Masatoshi Kobayashi), 110
Brain Cortex Mitochondria : Physical Reactivity of Liver and (Prof. J. Gayet), 941
Brain Cortex Slices : Endogenous Metabolism in (Dr. R. Vrba and Jaroslava Folberger), 237
Brain Ganglioside : Structure of (Dr. Samuel Bogoch), 229
Brainerd, Carol P., and others : Population Redistribution and Economic Growth, United States, 1870-1950, 1, Methodology Considerations and Reference Tables (prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), (Memoirs of the American Philosophical Society, Vol. 45), *review*, 420
Brains (Rat) : Tubule Formation in, by Monkey Kidney Cells previously grown *in vitro* (Prof. M. Michael Sigel, Thomas M. Scotti, Martha A. Wyk and Mantley Dorsey, jun.), 1034
Braithwaite, G. D., and Goodwin, Dr. T. W. : Origin of the Methoxyl Groups in Spirilloxanthin—a Carotenoid synthesized by the Photosynthetic Bacterium *Rhodospirillum rubrum*, 1304
Braithwaite, Dr. J. L., and Macmillan, Dr. E. W. : Appointed senior lecturers in anatomy in the University of Liverpool, 22
Branched Cells in the Leaves of *Nardus stricta* L. : Silicification of (D. Wynn Parry and Frank Smithson), 1460
Branchiura sowerbyi Beddard, 1892, in the River Thames : Occurrence of an Exotic Oligochaete (Dr. K. H. Mann), 732
Brandhorst, Wilhelm : Nitrite Accumulation in the North-East Tropical Pacific, 679
Brandon, D. G. (Nutting, J. and) : Mechanical Properties of Whiskers and Thin Films (Iron Foils in Tensile Deformation), 298
Brandwood, L., and others : Mechanical Resolution of Linguistic Problems, *review* by R. A. Brooker, 618
Branscomb, Dr. L. M. : The Electron Affinity of Atomic Oxygen, 249
β-Brass : Nuclear Magnetic Resonance in (G. W. West), 1436
Brassica : Male Sterility in (Dr. A. G. Johnson), 1523
Brassica Crops : Investigation of Virus Diseases of (Dr. L. Broadbent), *review* by Dr. J. H. Hitchborn, 752
Brattgard, S.-O., and others : Incorporation of Orotic Acid-^{14}C and Lysine-^{14}C in Regenerating Single Nerve Cells, 801
Braun, H., and others : Study of Metals and Alloys above 1,200°C. (Sintered High-melting Tungsten Alloys), 1418
Braun, T., and others : Radiometric Titrations with Complexons, 936
Bray, Dr. R. C., and others : Anti-Tumour and Biochemical Effects of Purified Bovine Xanthine Oxidase in *C3H* and *C* Mice, 1144
Brazil (Southeastern) : Observations on Birds of (Margaret H. Mitchell), *review*, 215
Breakage (Chromatid), by Irradiation and the Oxygen Effect (Dr. G. J. Neary and Dr. H. J. Evans), 890
Breakage (Chromosome), at High Radiation Dose-Rates (J. S. Kirby-Smith and G. W. Dolphin), 270
Breakaway Corrosion of Uranium : Surface Oxide Films and the (J. S. Llewelyn Leach), 1085
Breed, Prof. Robert S., and others : Bergey's Manual of Determinative Bacteriology, seventh edition, *review* by Dr. S. T. Cowan, 553
Breeding (Plant) : Artificial Mutagenesis in (D. Roy Davies and E. T. Wall), 955
Breeds (Non-British), of Sheep and in certain Rare British Breeds : Haemoglobin and Potassium Blood Types in some (J. V. Evans, Dr. H. Harris and Prof. F. L. Warren), 320
Breeds (Rare British) : Haemoglobin and Potassium Blood Types in some Non-British Breeds of Sheep and in certain (J. V. Evans, Dr. H. Harris and Prof. F. L. Warren), 320
Breiter, Dr. M., and Delahay, Dr. P. : Charge Transfer Processes (The Double-Layer and Adsorption at Electrodes—Correlation between Double-Layer Capacity and Kinetics of Electrode Processes), 1355
Brennan, M. H., and others : Air Showers of Size Greater than 10^5 Particles, 1, Core Location and Shower Size Determination, 905 ; 2, Cerenkov Radiation accompanying the Showers, 973 ; 3, Comparison between the Response of Geiger Counters and Scintillation Counters, 1053
Brenner, Dr. S. : Bacteriophage Research, 1769
Brenner, Dr. S., and others : Distribution of Proflavin-induced Mutations in the Genetic Fine Structure, 983
Brenner, S. S. : Mechanical Properties of Whiskers and Thin Films (Plastic Deformation of Metal Whiskers), 296
Bresch, C. : Bacteriophage Research, 1769
Bretscher, Dr. E. : Encyclopaedia of Physics, *review*, 968
  Structure of Atomic Nuclei, *review*, 1333
  Sourcebook on Atomic Energy, *review*, 1589
Brett, D. W. : *Obituary* of Dr. Marie C. Stopes, 1201
Brett, J. R., and Alderdice, D. F. : Research on Guiding Young Salmon at Two British Columbia Field Stations, 162
Breuer, Dr. H., and Knuppen, R. : Metabolism of 16-Oxooestrone by Human Liver Slices *in vitro*, 1512
Brewer, Dr. F. M. : Soddy Memorial Plaque in the new Soddy Senior Chemistry Laboratory at Eastbourne College unveiled by, 1203
  Second Soddy Memorial Lecture, 1203
Brewers' Yeast : Nucleotide Pool of, during Growth and Fermentation (G. Harris, J. W. Davies and R. Parsons), 1565
Brewing : A Textbook of (Prof. Jean De Clerck), Vol. 2 (translated by Kathleen Barton-Wright), *review* by Dr. A. H. Cook, 1116
Brewing Industry Research Foundation : Appointment of Dr. W. P. K. Findlay as assistant director, 86
Brian, Dr. P. W. : Ecology of Soil Fungi, 1559
Bricteux-Grégoire, Dr. S., and others : Utilization of the Carboxyl Group of Glycine for the Synthesis of the Amino-Acids of Silk by *Bombyx mori*, 1515
Bricteux-Grégoire, Dr. S., and Verly, W. G. : Utilization of Formate for the Biosynthesis of Glycine Carbon-1 and -2 in *Bombyx mori*, 1515
Bridge, Dr. K., and Porter, Prof. G. : Wavelength Effect in Flash Photolysis, 130
Bridges (Halogen-Molecule), in Solid Addition Compounds (Prof. O. Hassel and Knut O. Strømme), 1155
Briggs, D. : Awarded a research studentship in botany by the Nature Conservancy, 771
Briggs, Dr. G. H. : Retirement as chief of the Division of Physics of the National Standards Laboratory (Commonwealth Scientific and Industrial Research Organization), Sydney, 291 ; work of, 291
Briggs, Thomas, and others : Moving Acid Boundary (*p*H Gradient) Paper Ionophoresis of Bile Salts, 394
Brighter than a Thousand Suns, the Moral and Political History of the Atomic Scientists (Dr. Robert Jungk), translated into English by James Cleugh, *review* by Sir John Cockcroft, 547
Brightman, R. : A Guide to the Literature of Chemistry, *review*, 8
  W. H. Perkin and the Young Chair of Technical Chemistry in the Royal College of Science and Technology, Glasgow, 613
  National Libraries of the World, *review*, 758
  Guide to Unpublished Research Materials, *review*, 902
  Classics of Librarianship, *review*, 1117
  Five Years' Work in Librarianship, 1951-1955, *review*, 1590
  Libraries for Research, *review*, 1698
Briner, G. P. : Determination of Strychnine in Nux Vomica by Paper Chromatography, 742
Brinkhurst, Dr. R. O. : Alary Polymorphism in the Gerroidea (Hemiptera Heteroptera), 1461 ; *erratum*, 1644
Bristol City Museum : Report for 1957, 1138

Butler, R., and Fagg, S. V. : Error at a Rectangular Corner in Relaxation Methods, 600
Butoxide (Pyrethrins–Piperonyl) : Resistance to Pyrethrins and to, in a Wild Strain of *Musca domestica* L. in Sweden (Dr. M. Davies, Dr. J. Keiding and Dr. C. G. von Hofsten), 1816
Butt, W. D., and Lees, Dr. H. : Cytochromes of *Nitrobacter*, 732
Butterfield, Dr. W. J. H. : Appointed to the University of London chair of experimental medicine at Guy's Hospital Medical School, 363
Butterworth, K. R., and others : Lenticular Effect in Mice of some Morphine-like Drugs, 1519
Butterworth, Stephen : *Obituary* by Dr. H. F. Willis, 1706
Buttery, S. H. (Plackett, P., and) : A Galactan from *Mycoplasma mycoides*, 1236
Buu-Hoï, N. P. : Presence of 3:4-8:9-Dibenzpyrene in Coal-Tar, 1158
Buxton, Dr. A. : Salmonellosis in Animals, *review* by Dr. Joan Taylor, 1046
Byrd, Prof. Oliver E. (compiled by) : Health Yearbook (1956), *review* by Dr. K. M. Hawkins, 553
Byssus of *Mytilus edulis* : Responses of the Anterior Retractor Muscle of the (J. A. Holgate and Dr. G. W. Cambridge), 34 ; (Dr. G. W. Cambridge), 35
Bywater, Dr. J. : Ecology of Soil Fungi, 1559

CABRAL (Bento da Rocha) Institute for Scientific Research : Grant of £14,375 from the Gulbenkian Foundation, Lisbon, for equipment and three years research expenses, 1493
Cabrera, N., and others : Mechanical Properties of Whiskers and Thin Films (Creep of Vapour-grown Zinc and Cadmium Whiskers), 296
Cacao : Response of, to Fertilizers (D. B. Murray), 1613
  Yield Variations in Tree Crop Experiments with specific reference to (T. A. Jones and G. K. Maliphant), 1613
Cadmium Bromide—Growth Spirals and Possible Polytypism (Richard S. Mitchell), 337
Cadmium Sulphide : Photoconductivity and Crystal Size in Evaporated Layers of (J. M. Gilles and J. Van Cakenberghe), 862
Caesium Atomic Frequency Standard : Comparison of an Ammonia Maser with a (J.-P. Blaser and J. Bonanomi), 859
Caesium Frequency Standards of Different Construction : Comparison of (Dr. L. Essen, J. V. L. Parry, J. H. Holloway, W. A. Mainberger, F. H. Reder and G. M. R. Winkler), 41
Caesium Plumbohalides: Crystal Structure and Photoconductivity of (Chr. Kn. Møller), 1436
Cain, D. F., and others : Carnosine Phosphate as Phosphate Donor in Muscular Contraction, 720
Calandra granaria L. : Lethal and Sterilizing Effects of Single and Fractionated Doses of Gamma Radiation on (D. J. Jefferies and P. B. Cornwell), 402
Calcium : Inward Movement of, as a Link between Electrical and Mechanical Events in Contraction (Prof. George B. Frank), 1800
  Rhizobium needs Magnesium, not (D. Norris), 734
Calcium-deficient *Tradescantia* : Chromosome Aberrations in, produced by Irradiation (Dale Steffensen), 1750
Calcium Exchanges of Ehrlich Ascites Tumour Cells of Mice *in vitro* (Doreen Thomason and Raymond Schofield), 809
Calcium Ions : Effect of, on the Binding of Chromium-51 to Erythrocytes *in vitro* (G. von Ehrenstein and B. Zacharias), 1384
Calcium Sulphate Hemihydrate : Transformation of the α- and β-Forms of, to Insoluble Anhydrite (D. A. Powell), 792
Calcium and Magnesium Content of Normal Human Blood Serum (Dr. G. Hunter), 263
Calcium and Phosphorus Deficiency in Oil Palm Seedlings : Symptoms of (R. A. Bull), 1749
Calcium and Phosphorus Metabolism after Surgery (K. W. Starr, K. N. Wynne and S. H. Chorlton), 1505
Calculation of Absorption Peaks in Thin Metal Films (Robert M. Hill), 1150
Calculator (Automatic Digital) : Programming for an (Dr. Kathleen H. V. Booth), *review* by R. A. Brooker, 618
Calculus : Differential (P. J. Hilton), *review* by Prof. T. A. A. Broadbent, 827
Calder, Ritchie : Ten Steps Forward—World Health 1948-49, 1132
Calder Hall Completed, 1708
Calf Alimentary Tract : Substances in the, interfering in the Determination of Polyethylene Glycol (R. H. Smith), 260
Calibration of a Calorimeter—a Minor Peaceful Use for Plutonium (Lord Rothschild), 789
Calibration of the Wave-length Scale of Spectrophotometers : A Simple Technique for the (N. V. Parthasarathy and Dr. Indra Sanghi), 44
California Institute of Technology : Resignation of Prof. Linus Pauling as chairman of the Division of Chemistry and Chemical Engineering, 428
  Appointment of Prof. Ernest H. Swift as chairman of the Division of Chemistry and Chemical Engineering, 428
Callaby, D. R. (Lee, Dr. E. W., and) : Direct Measurement of the Velocity of Propagation of a Ferromagnetic Domain Boundary in 'Perminvar', 254
Callcott, T. G. : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Callingham, B. A., and Mann, Dr. Monica : Replacement of Adrenaline and Noradrenaline in the Innervated and Denervated Adrenal Gland of the Rat, following Depletion with Reserpine, 1020

Caloi, Prof. P. : Elected president of the European Seismological Commission, 27
Calorimeter : Calibration of a—a Minor Peaceful Use for Plutonium (Lord Rothschild), 789
Calorimeter for Determination of Heats of Wetting (A. J. Groszek), 1152
Calving Time of Grey Seals (Dr. L. Harrison Matthews), 1325
Cama, H. R. (Morton, Prof. R. A., and) : *Obituary* of Prof. K. V. Giri, 1201
Cambrian (Middle) Trilobite *Centropleura* in Queensland (Dr. A. A. Öpik), 204
Cambridge, Dr. G. W. : Responses of the Anterior Retractor Muscle of the Byssus of *Mytilus edulis*, 35
Cambridge, Dr. G. W. (Holgate, J. A., and) : Responses of the Anterior Retractor Muscle of the Byssus of *Mytilus edulis*, 34
Cambridge Philosophical Society : Hopkins Prize awarded to Prof. A. Salam, 1644
Camellia japonica : Separation of Anthocyanin and Leuco-anthocyanin in Flowers of (Toru Endo), 801
Camera : Continuous-writing Streak (Beckman and Whitley), 564
Cameron, A. W. : Canadian Mammals, 1347
Cameron, D. W. : Awarded an Overseas Scholarship by the Royal Commission for the Exhibition of 1851, for research in organic chemistry, 156
Cameron, R. : Antarctic Research (Special Investigations in Glaciology), 286
Cameron, Prof. Thomas W. M. : The Evolution of Evolution (Presidential Address to the Royal Society of Canada), 701
Cammack, K. A., and others : Dissociation of Serological Complexes of Ovalbumin and Haemoglobin using Aqueous Carbon Dioxide, 668, *erratum*, 842
Campbell, Sir David : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Medical Education and its Place in the University), 1284
Campbell, D. H. (Scaife, J. F., and) : Toxicity of a Cholinesterase Inhibitor to the Hibernating Hamster, 1739
Campbell, Fergus W., and others : Pupil Unrest, an Example of Noise in a Biological Servomechanism, 857
Campbell, H., and others : A Direct-Plating Method for the Assay of Radioactive Isotopes in Aqueous and Alcoholic Samples, 1100
Campbell, I. G., and others : Radiometric Estimation of Unsaturated Fatty Acids on Chromatograms, 178
Campbell, Dr. J. : Chemistry of Fluorine Compounds (Fluorine and Dental Decay—Fifty Years of Research), 1271
Campbell, Dr. J. A. : Host—Parasite Relationships, 1352
Campbell, M., and others : The B.B.C. Colour Television Tests—an Appraisal of Results, 1490
Campions : The Bladder (*Silene maritima* and *S. vulgaris*), (E. M. Marsden-Jones and Dr. W. B. Turrill), *review* by Prof. T. G. Tutin, 970
Canada : Atomic Power in, 846
  Birds and Mammals of, 1347
  Industry and Government in (Rt. Hon. C. D. Howe), 1422
  Quelques Oiseaux du (W. E. Godfrey), 1347
Canada (Western) : Measurement of the Thickness of the Earth's Crust in the Albertan Plains of (Dr. T. C. Richards), 384
Canadian Arctic Archipelago : Illustrated Flora of the (A. E. Porsild), 294
Canadian Mammals (A. W. Cameron), 1347
Canadian Study for a Full-Scale Nuclear Power Plant (J. E. Woolston), 847
Canal : A Bucco-hypophysical, in *Elops saurus* (R. Olsson), 1745
Cancer : Causation of (edited by Prof. E. Boyland), 87
  Chemicals and, *review* by Dr. C. Auerbach, 750
  Further Observations on Tumour-enhancing Factors—their Bearing on the Immunological Theory of (Prof. H. N. Green and R. Wilson), 1054
  Hydrogen Peroxide and (Dr. Grace M. Jeffree), 892
  A New Approach to the Chemotherapy of (Dr. M. B. Sahasrabudhe), 163
Cancer, International Union against : Seventh International Cancer Congress, 364
Cancer and Mental Health in 1952-53 (Registrar General), 1061
Cancer and Smoking (Sir Ronald Fisher), 596 ; (Prof. L. S. Penrose), 1178
Cancer Campaign, British Empire : Thirty-fifth Annual Report (1957), 1547
Cancer (Lung), and Cigarettes ? (Sir Ronald Fisher), 108
Cancer Cells : Invasiveness and Surface Properties of (Symposium at the Chester Beatty Research Institute), 1419
Cancer Cells (Human), in Tissue Culture : Action of Hydrocortisone on Respiration of (Henry Grossfeld), 35
Cancer Congress : Seventh International (International Union against Cancer), 364
Cancer Institute, Melbourne : Second Australasian Conference on Radiation Biology, 22
Cancer Problem : Mitotic Poisons and the (Dr. John J. Biesele), *review* by Dr. C. Auerbach, 750
Cancer Research : Progress in (Prof. H. N. Green), 364
  Progress of, 1547
Cancer Research Fund, Imperial : Fifty-fifth Annual Report (1956-57), 157
  Resignation of Dr. J. Craigie as director of the Mill Hill Laboratories, 697
  Appointment of Dr. R. J. C. Harris as head of the Division of Experimental Biology and Virology, 697
  Appointment of A. R. Currie as head of the Division of Pathology, 697
Cancerous Rat Liver (Normal, Regenerating, Precancerous and) : Deoxyribonuclease Activity and Deoxyribonucleic Acid Synthesis in (Dr. Sam Brody), 1386
Candy, M. P., and others : Planetary Co-ordinates for the Years 1960-1980, *review* by Dr. R. H. Garstang, 1763
Cane Sugar Juice (Flocculated) : Zeta Potential and Sedimentation Behaviour in (Dr. M. C. Bennett), 1439
Canet, Mme. Mousseron : Awarded a French fellowship in chemistry at the Imperial College of Science and Technology by the Ramsay Memorial Fellowships Trustees, 432
Cannon, Prof. H. Graham : Natural Selection and Heredity, *review*, 490
Cape as an Ancient African Flora (Prof. R. S. Adamson), 585
Cape of Good Hope : The Lyot *H*α Heliograph at the (Dr. M. A. Ellison), 624
Capillaries of the Frog's Web : Comparison of the Effect of Ultra-violet and X-Rays on the (Horst Bücker and Wilfried Hanke), 1375
Capillary Permeability : Effect of Total Body Irradiation on (Prof. G. Szabó, S. Magyar, P. Keetai and E. Zádory), 885
Capillary Permeability, Lymph Flow and Passage of Dye-labelled Protein from Plasma to Lymph : Effect of Hyaluronidase on (Prof. G. Szabó and S. Magyar), 377
Capillary Permeability (Increased), in Thermal Burns in Rats : Experimental Suppression of (Dr. W. G. Spector and Dr. D. A. Willoughby), 949
Capillary Tube Columns in Gas Chromatography : A Detector for use with (Dr. J. E. Lovelock), 1663
Capillary-tube Viscometry with Negligible Kinetic Energy Effects (W. A. Caw and R. G. Wylie), 1153
Capital Investment in the Coal, Gas and Electricity Industries (White Paper on), 343
Capraro, Prof. V., and others : Permeabilizing Effects of Heparin and Heparin-like Substances, 603
Carafoli, Prof. Elie : High-Speed Aerodynamics (Compressible Flow), *review* by Dr. W. P. Jones, 755
Carasso, J. I., and Pittman, R. W. : Thermoelectric Observations on Grey Selenium, 1011
Carbohydrate : Spectrophotometric Determination of Total (B. R. Hewitt), 246
Carbohydrate Metabolism of Cock Spermatozoa (Prof. F. W. Lorenz), 397
Carbohydrate Metabolism of Wheat Seedings : Effects of Rust Infection on the (A. C. Jain and Prof. R. -L. Pelletier), 882
Carbohydrate Series : Reactivity of Sulphonyloxyl Groups with Halides in the (Dr. N. F. Taylor), 660
Carbon, the Key to Metallurgy (Sir Charles Goodeve), 990
Carbon : Formation of, by Decomposition of Carbon Suboxide at 750-780°C. (R. L. Bond and F. J. Pinchin), 129
  Fourth Biennial Conference on (University of Buffalo), 1488
  Production of Methane from (Dr. J. D. Blackwood), 1014
Carbon-1 and -2 (Glycine), in *Bombyx mori* : Utilization of Formate for the Biosynthesis of (Dr. S. Bricteux-Grégoire and W. G. Verly), 1515
Carbon-14 : *In vitro* Incorporation of Serine labelled with, into Mitochondrial Phospholipids (Dr. G. Hübscher, Dr. R. R. Dils and Dr. W. F. R. Pover), 1806
  Production of Compounds Labelled with, from Carbon-14 Dioxide accelerated in an Electric Field (M. Guillaume), 1592
  Use of Glucose labelled with, to determine the Amino-Acids essential for an Insect (R. Kasting and A. J. McGinnis), 1380
Carbon-14 Activity during the past 5,000 Years (Dr. C. Crowe), 470 ; (Dr. K. O. Münnich, H. G. Östlund and Hl. de Vries), 1432 ; (H. Barker), 1433
Carbon-14 in Aqueous Solutions : Radio-assay of, using a Liquid Scintillation Spectrometer (Dr. Daniel Steinberg), 740
Carbon-14 Determination, International Agency for, 1413
Carbon-14 Dioxide accelerated in an Electric Field : Production of Compounds labelled with Carbon-14 from (M. Guillaume), 1592
^{14}C-Labelled 2,4-Dichlorophenoxyacetic Acid in Barley and Oats : Translocation of (H. Ingv. Petersen), 1685
Carbon Dioxide (Aqueous) : Dissociation of Serological Complexes of Ovalbumin and Haemoglobin using (Dr. B. T. Tozer, K. A. Cammack and Dr. H. Smith), 668, *erratum*, 842
Carbon Dioxide Catalysis of the Formation of Pyroglutamic Acid (A. Hubert, R. Buljle and Dr. B. Hargitay), 259
Carbon Dioxide Concentration Γ in Wheat Leaves : Effects of Water-Strain on the Minimum Intercellular Space (Prof. O. V. S. Heath and Dr. H. Meidner), 1524
Carbon Dioxide Fixation in Germinating Pine Pollen (*Pinus ponderosa*), (R. G. Stanley, L. C. T. Young and J. S. D. Graham), 1462
Carbon-14 Dioxide : Conversion of, to Starch Glucose during Photosynthesis by Spinach Chloroplasts (Prof. Martin Gibbs and Morris A. Cynkin), 1241
  Incorporation of, by Duck Erythrocytes and Reticulocytes *in vitro* (G. Giustina and E. Lazzarini), 1311
  Incorporation of, into Sugars by Darkened Cotyledons from Etiolated Sunflower Seedlings (Dr. Clive Bradbeer), 1429
^{14}C-Proline and Hydroxyproline in the Protein Metabolism of Plants—an Episode in the relation of Metabolism to Cell Growth and Morphogenesis (Prof. F. C. Steward and Dr. J. K. Pollard), 828
Carbon Source for the Growth of *Chlorella vulgaris* : Ethanol as a (Auxins and their Effect on the Growth of Unicellular Algae), (Prof. H. E. Street, D. J. Griffiths, C. L. Thresher and M. Owens), 1360
Carbon Suboxide : Formation of Carbon by Decomposition of, at 750-780°C. (R. L. Bond and F. J. Pinchin), 129
Carbon Surfaces : Physics and Chemistry of (Fourth Biennial Conference on Carbon, at the University of Buffalo), 1488
Carbonate (Ammonium) Intoxication in the Rat : Electroencephalograph Correlates of (Dr. Robert Cohn and Comdr. Thomas R. Ulshafer), 1735
Carbons : Electron Spin Resonance in—a New Oxygen Effect (C. Jackson, Dr. H. Harker and Prof. W. F. K. Wynne-Jones), 1154
Carboxyl Group of Glycine : Utilization of the, for the Synthesis of the Amino-Acids of Silk by *Bombyx mori* (Dr. S. Bricteux-Grégoire, W. G. Verly and Prof. M. Florkin), 1515
Carcinogenesis : Intracellular Changes in Levels of Polarographically Active Sulphydryl Groups in Rat Liver during (Dr. Silvio Fiala), 257
Carcinogenic Activity and O-Alkylation (Dr. R. Schoental), 719
Carcinogenic Substance in Egg-Yolks : Nature of the (Jan Hradec), 52
Carcinoma (Ehrlich Mouse) : Forssman's Antigen in (Prof. H. W. Julius and P. J. de Vries), 1165
Carcinoma Cells : Fine Structure of the Nuclear Envelope of (M. De Groodt, Prof. F. Derom, A. Lagasse, Prof. M. Sebruyns and Dr. M. Thiery), 1030
Cardew, Dr. M. H. : Appointed a lecturer in chemical engineering at the University of Birmingham, 1487
Cardiac Glycosides and Thyroidal Iodide Transport (Dr. J. Wolff and J. R. Maurey), 957
Cardini, Dr. C. E., and Yamaha, Dr. Tsutomu : Biosynthesis of Plant Glycosides from Uridine Diphosphate Glucose, 1446
Cardiolipin : Structure of (Marjorie G. Macfarlane), 946
Care, Dr. A. D. : Awarded a Research Training Scholarship for 1958-59 by the Animal Health Trust, 432
Care of Laboratory Animals : A Comprehensive Handbook on the, *review* by Dr. J. O. L. King, 281
Care and Management of Laboratory Animals : The UFAW Handbook on the (edited by Alastair N. Worden and W. Lane-Petter), second edition, *review* by Dr. J. O. L. King, 281

Career : Physiology as an Education and as a (British Association for the Advancement of Science, Sections I (Physiology and Biochemistry) and L (Education), Joint Discussion on), 1065
Careers in Plastics (Plastics Institute Pamphlet on), 989
Careers (Technical), in the Medical Research Council, 698
Caries (Dental) : Water Fluoridation and (Dr. G. Lapage), 1351
Carle, Ann (Hillis, W. E., and) : Extractives from Klinki Pine (*Araucaria klinkii* Lauterbach), 1593
Carlisle, Dr. D. B. : Activation of Hormonal Secretions—a Crustacean Chromactivator, 33
Carlisle, Dr. D. B. (Brunet, P. C. J., and) : Chitin in Pogonophora, 1689
Carlsberg–Wellcome Travelling Research Fellowships for 1958-59 awarded to Dr. S. E. Jensen and Dr. D. A.T Dick, 228
Carman, Dr. P. C. : Diffusion of Adsorbed Molecules, 201
Carnegie Trust for the Universities of Scotland : Fifty-sixth Annual Report (1956-57), 28
Carnosine Phosphate as Phosphate Donor in Muscular Contraction (D. F. Cain, Dr. A. M. Delluva and Prof. R. E. Davies), 720
Caron, Aimery, and others : Crystal Structure of Rhombohedral Sulphur, 518
Carotenoid synthesized by the Photosynthetic Bacterium *Rhodospirillum rubrum* : Origin of the Methoxyl Groups in Spirilloxanthin—a (G. D. Braithwaite and Dr. T. W. Goodwin), 1304
Carotenoid-deficient Mutant of *Chlamydomonas* : Pigments and Photosynthesis in a (Dr. Ruth Sagar and Dr. Marko Zalokar), 98
Carpenter, E. W., and others : Observations on the Explosion at Ripple Rock, 1597
Carr, A. P., and others : Tracing the Movement of Pebbles marked with the Radioactive Isotope Barium-140—Lanthanum-140, 1347
Carr, I. A. : Microvilli of the Cells of the Human Adrenal Cortex, 607
Carr, I. A., and Bacsich, Dr. P. : Removal of Osmic Acid Stains, 1108
Carr, Dr. J. G. : A Strain of *Acetobacter aceti* giving a Positive Cellulose Reaction, 265
Carr-Saunders, Sir Alexander : Natural Science and Social Science (Eleanor Rathbone Memorial Lecture), 561
Carr-Saunders, Sir Alexander, and others : A Survey of Social Conditions in England and Wales as illustrated by Statistics, third edition, *review* by Prof. E. Grebenik, 1330
Carrier of Chromium Sesquioxide : Paper as a (J. L. Corbett, J. F. D. Greenhalgh and A. P. MacDonald), 1014
Carrier (The Heterozygous), in Galactosaemia (David Yi-Yung Hsia, Irene Huang and Shirley G. Driscoll), 1389
Carrier Gas : Effect of the, on the Sensitivity of a Thermal Conductivity Detector in Gas Chromatography (Dr. N. H. Ray), 1663
Carriuolo, Joan (Jencks, William P., and) : Structure of Pyruvate in Aqueous Solution, 598
Carruthers, Dr. J. A. : Conduction Measurements at Low Temperatures, 83
Carstairs, Dr. G. Morris : The Twice-Born, a Study of a Community of High-Caste Hindus, *review* by Prof. K. de B. Codrington, 76
Carter, G. A. : At the Library Association Conference at Brighton (Capital Expenditure on Building), 1716
Carter, Dr. G. S. : Books on Evolution, *review*, 1112
  The Centenary of 'Darwinism', 1351
Carter, Dr. P. T. : Some Recent Trends in Metallurgy (Development of the Modern Highly Mechanized Iron Blast Furnace), 1123
Carter, R. (Hammond, V. J., and) : Visualization of Mode Conversion of an Ultrasonic Beam in Fused Quartz, 790
Carter, Dr. T. C. : Effects of Pollution on Living Material (Genetic Hazards of Radioactive Pollution), 1210
Carter, Dr. T. C., and others : Genetic Hazard of Ionizing Radiations, 409
Cartilage : Action of Plasmin on (Dr. C. H. Lack and Dr. H. J. Rogers), 948
Cartilage Homografts : Antigenicity and Survival of (M. B. L. Craigmyle), 1248
Cartwright, Sheila F., and Thorne, H. V. : Use of Two Properties of the Virus of Foot-and-Mouth Disease in Studies of its Multiplication, 717
Case Histories in Experimental Science : Harvard (edited by James Bryant Conant and Leonard K. Nash), 2 vols., *review* by J. A. Ratcliffe, 348
Casein (Enzymatically Dephosphorylated) : Rennin Coagulation of (Robert Y. H. Hsu, Prof. Laurens Anderson, R. L. Baldwin, C. A. Ernstrom and A. M. Swanson), 798
Casey, Dr. E. J., and others : Charge Transfer Processes (Homogeneous Processes—Equivalent Redox Potential of Aqueous Solutions under γ-Irradiation), 1354
Cashew Nut Shell Oil : Surface-active Characteristics of Sodium Anacardate isolated from (Arun K. Biswas and Anil Bandhu Roy), 1299
Cassels, Dr. J. W. S. : An Introduction to Diophantine Analysis, *review* by Prof. T. A. A. Broadbent, 1629
Cassie, R. M. : Antarctic Research (Oceanography), 288
Cassirer, Ernst : The Philosophy of Symbolic Forms (translated by Ralph Manheim), Vol. 1, Language ; Vol. 2, Mythical Thought ; Vol. 3, The Phenomenology of Knowledge, *review* by F. I. G. Rawlins, 1586
Castiaux, P., and others : Ultra-structure of the Coxal Glands of the Scorpion, 328
Caswell, G. H., and Clifford, Dr. H. T. : Effect of Fumigation and Moisture Content on the Seedling Growth of Cowpea (*Vigna unguiculata*), 540
Catabolism (Glucose), in the American Cockroach (Gabriel M. Silva, W. P. Doyle and Dr. C. H. Wang), 102
Catalase Levels of *Corcyra cephalonica* St. in Zinc Toxicity : Effect of Copper on Growth and (K. Sivarama Sastry and Prof. P. S. Sarma), 533
Catalysis (Carbon Dioxide), of the Formation of Pyroglutamic Acid (A. Hubert, R. Buijle and Dr. B. Hargitay), 259
Catalyst : Photosynthesis of Amino-Acids from Paraformaldehyde involving the Fixation of Nitrogen in the Presence of Colloidal Molybdenum Oxide as (K. Bahadur, S. Ranganayaki and Prof. L. Santamaria), 1668
Catalytic Activity and Surface Structure after Ion Bombardment (H. M. C. Sosnovsky, G. J. Ogilvie and E. Gilham), 523
Catechin : Black Wattle (Dr. D. G. Roux and A. E. Maihs), 1798
Catechol Amine Depletion in the Rat's Denervated Adrenal Gland following Chronic Administration of Reserpine (Dr. Bernard L. Mirkin), 113
Catfish with Mammalian Hormones : Spawning (Dr. L. S. Ramaswami and A. B. Lakshman), 122
Cathodes (Tungsten) : Vacuum Arcs on (H. Wroe), 338
Cation Exchange Material : Melanin, a Naturally Occurring (Dr. Laurens P. White), 1427
Cation-Exchange Resins : Potassium Uptake by, from Soils and Minerals (P. W. Arnold), 1594
Cationic Detergent : Reversal by Magnesium Ions of the Inhibition of Yeast Metabolism by a (Dr. W. McD. Armstrong), 326
Cations (Monovalent) : Effect of, on Type Specificity Transformation in Pneumococci (M. Kohoutová), 188
Cattle : A Genetic Mechanism for 'Thread Protein' Polymorphism in (Dr. G. C. Ashton), 65
  Serological Test for Determination of Parentage in (Dr. J. Rapacz and Dr. S. Dubiski), 1176
Cattle in Uganda : *Stomoxys* sp. on (T. H. Coaker and R. G. Passmore), 606
Cattle (British) : Genetics of β-Globulin Polymorphism in (Dr. G. C. Ashton), 370
Cattle (Guernsey) : Lack of 'Slow-Alpha' Proteins in some (Dr. G. C. Ashton), 193
Cattle, Sheep and Goats : Beta-Globulin Polymorphism in (Dr. G. C. Ashton and E. I. McDougall), 945
Caullery, Prof. Maurice : *Obituary* by Dr. André Lwoff, 1059
Causation of Cancer (edited by Prof. E. Boyland), 87
Cause of Moisutre Expansion of Ceramic Bodies : A New Approach to the Investigation of the (Thalsa Demediuk and W. F. Cole), 1223
Causes of Death : Manual of the International Statistical Classification of Diseases, Injuries and (World Health Organization), *review*, 417
Causes of Loss of Crops of Cotton in the Drier Regions of Uganda : A Revised Interpretation of the (J. Bowden and W. R. Ingram), 1750
Causes (Possible), of Geomagnetic Fluctuations having a Six-Second Period (Dr. Fred B. Daniels), 1439
Cavanagh, Dr. P. E. : Promoted to Senior Principal Scientific Officer by the United Kingdom Atomic Energy Authority, 993 ; work of, 993
Cave, Prof. A. J. E., and Allbrook, D. B. : Epidermal Structures in a Rhinoceros (*Ceratotherium simum*), 196
Cave Formation : Bat Erosion as a Factor in (J. H. D. Hooper), 1464
Cavendish Laboratory, Cambridge : Appointment of Dr. T. E. Faber as Armourers and Brasiers' Company Research Fellow, 18
  X-Ray Microscopy and Microradiography—Proceedings of a Symposium held in 1956, *review* by Prof. R. D. Preston, 1113
Caw, W. A., and Wylie, R. G. : Capillary-tube Viscometry with Negligible Kinetic Energy Effects, 1153
Ceh, M. : At the International Starch Conference (Ion-exchange Properties of Freshly Prepared and Aged Starch with Heavy Water), 232
Cell (Mast), and Histamine in Rat Anaphylaxis—the Effect of *Haemophilus pertussis* (I. Mota), 1021
Cell Lines in Tissue Culture : Selection of, by the Use of Cytotoxic Antisera (Dr. V. Defendi, A. A. Kamrin and Dr. J. S. Colter), 1246
Cell Membranes : Determination of the Mass Thickness of, from their Electron Micrographs (M. L. De and P. Sadhukhan), 1008
  Metabolic Aspects of Transport across (edited by Q. R. Murphy), *review*, 1575
Cell Nuclei (Tumour) : Possible Use of Synthetic Surface-active Agents for the Preparation of (Prof. M. E. Hodes, Dr. C. G. Palmer and D. S. Williams), 529
Cell Proteins (Red Blood) : Agar Electrophoretic Patterns of (Prof. K. V. Giri, G. J. Sathyanarayana Rao and S. Natarajan), 184
Cell Physiology (Prof. Arthur C. Giese), *review* by Prof. W. Stiles, 1577
Cell Reaction (Fluorescent Mast-), in Precancerous Skin of the Lizard, *Lacerta agilis* (Prof. A. Stolk), 1177
Cell Strains (Permanent) : Establishment of, from Human Adult Peripheral Blood (Dr. John Paul), 808
Cell Structure : Macromolecules in (Prof. A. Frey-Wyssling), *review* by Prof. W. T. Astbury, 213
Cell Suspensions in an Electromagnetic Force Field : Fractionation of (Prof. Alexander Kolin and Raymond T. Kado), 510
Cell Wall of *Staphylococcus aureus* 209P : Composition of the (Nobutoshi Ishimoto, Masahiro Saito and Eiji Ito), 959
Cell-free Extracts of *Leishmania donovani* : Hexokinase Activity in (A. N. Chatterjee, J. C. Ray and Dr. J. J. Ghosh), 109
Cells in *Chara* spp. : Light Microscopic and Electron Microscopic Observations on the Dividing Walls of (Dr. Lóránd Fridvalszky and Dr. Béla Lovas), 736
Cells of the Human Adrenal Cortex : Microvilli of the (I. A. Carr), 607
Cells in Thoracic Duct Lymph of the Guinea Pig : Labelling of, after Tritiated Thymidine (Prof. J. M. Yoffey, Prof. N. B. Everett and Prof. W. O. Reinhardt), 1608
Cells (Animal) : Radiobiochemical Lesion in (Studies in Synthesis of Deoxyribonucleic Acid), (Margery G. Ord and Dr. L. A. Stocken), 1787
Cells (Animal), in Continuous Suspended Culture : Critical Effect of Oxygen Tension on Rate of Growth of (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Cells (Ascites Tumour): Amoeboid Motility of Fresh (Dr. Iwao Hirono), 809
Cells (Bone Marrow) : Dependence of, on the Liver for Purine Supply (Dr. L. G. Lajtha and J. R. Vane), 191
Cells (Branched), in the Leaves of *Nardus stricta* L. : Silicification of (D. Wynn Parry and Frank Smithson), 1460
Cells (Cancer) : Invasiveness and Surface Properties of (Symposium at the Chester Beatty Research Institute), 1419
Cells (Carcinoma) : Fine Structure of the Nuclear Envelope of (M. De Groodt, Prof. F. Derom, A. Lagasse, Prof. M. Sebruyns and Dr. M. Thiery), 1030
Cells (Disintegrated Yeast) : Liberation of Invertase from (M. Burger, E. Elizabeth Bacon and Dr. J. S. D. Bacon), 1508
Cells (Ehrlich Ascites Tumour), of Mice *in vitro* : Calcium Exchanges of (Doreen Thomason and Raymond Schofield), 809
Cells (Human Cancer), in Tissue Culture : Action of Hydrocortisone on Respiration of (Henry Grossfeld), 35
Cells (Intact), of *Azotobacter vinelandii* : Formation of Activated Amino-Acids by (R. W. Bernlohr and Dr. G. C. Webster), 531
Cells (Kidney), of the Pig : Effect of Temperature on the Multiplication of Foot-and-Mouth Disease Virus in Suspensions of (Dr. H. Subak Sharpe), 1803
Cells (Living) : Protection of, against Acid by certain Non-Ionic and Amphoteric Soaps (Dr. P. D'Arcy Hart and Dr. J. E. Lovelock), 304
Cells (Living), of Conifers : Sol-Gel Transitions in the, and their relation to Resistance to Cold (Johnson Parker), 1815
Cells (Lyophilized Formol-treated Red) : Use of, in Blood-Group Serology (E. R. Gold, W. J. Lockyer and Dr. Geoffrey H. Tovey), 951
Cells (Macrophage), of the Reticulo-Endothelial System : Elimination of the, by Way of the Bronchial Tree (Prof. T. Nicol and Dr. D. L. J. Bilbey), 192

Cells (Mammalian) : Synthesis of Deoxyribonucleic Acid in Extracts of (Prof. J. N. Davidson, Dr. R. M. S. Smellie, Dr. H. M. Kair and A. Hope McArdle), 589
Cells (Mast) : Release of Histamine from, by Tissue Extracts (G. T. Archer), 726
Cells (Monkey Kidney), previously grown *in vitro* : Tubule Formation in Rat Brains by (Prof. M. Michael Sigel, Thomas M. Scotti, Martha A. Wryk and Mantley Dorsey, jun.), 1034
Cells (Plasma), and Tumour Growth (Prof. B. D. Baruah), 1455
Cells (Red Blood), of the Lamb : Changes in the Potassium Concentration and Metabolism of (Prof. R. D. Wright, T. R. Bradley, J. F. Nelson and J. P. Coghlan), 1742
Cells (Regenerating Single Nerve) : Incorporation of Orotic Acid-^{14}C and Lysine-^{14}C in (S.-O. Brattgard, H. Hydén and J. Sjöstrand), 801
Cells (Single) : Antibody Production by (Dr. R. G. White), 1383
Cells (Spleen) : Migration of, from Subcutaneous Implantation Sites (Dr. V. Hašková and Dr. N. A. Mitchison), 410
Cells (Staphylococcal) : Incorporation of Amino-Acids by Disrupted (Dr. E. F. Gale, Dr. C. J. Shepherd and Joan P. Folkes), 592
Cells (Tumour) : Effect of Nitric Oxide on the Radiosensitivity of (Dr. L. H. Gray, F. O. Green and C. A. Hawes), 952
Cells (Tumour), infected with Encephalomyocarditis Virus : An Ineffective 'Ribonucleic Acid' Component from (J. Huppert and F. K. Sanders), 515
Cells (Yeast) : Effect of Ethylenediamine Tetraacetic Acid on the Enzyme System of (J. P. Shukla and K. A. Prabhu), 1316
Cells and Fibres (Giant Nerve), in *Arenicola claparedii* (Polychaeta), (Prof. G. P. Wells), 1609
Cellulaire (Croissance) : Les Facteurs de la (publiés sous la direction de Prof. J. André Thomas), *review* by Prof. W. S. Bullough, 551
Cellular Biology, *review* by Prof. W. S. Bullough, 551
Cellular Differentiation : Some Aspects of (Dr. E. N. Willmer), 583
Cellulase : Complex Forms of (Dr. P. Reinouts van Haga), 1232
Cellulolytic Activity of Phytopathogenic Bacteria (Masao Goto and Norio Okabe), 1516
Cellulose and Lignin to Anthracite : Infra-Red Spectra of a Coalification Series from (Prof. C. R. Kinney and E. I. Doucette), 785
Cellulose and related Polysaccharides : Biochemistry of (Dr. B. A. Stone), 687
Cellulose Reaction : A Strain of *Acetobacter aceti* giving a Positive (Dr. J. G. Carr), 265
Celts : Wessex Before the (Dr. J. F. S. Stone), *review* by M. C. Burkitt, 1628
Cement and Concrete Association : Gift of £1,000 to the Department of Civil Engineering of the University of Leeds, towards the post-graduate course in concrete technology, 1279
Cementum (Human) : Collagen in, as shown by Electron Microscopy (C. H. Tonge and E. H. Boult), 459
Censorship : Soviet International Press, 1774
Centenary of 'Darwinism' (Dr. G. S. Carter), 1351
Centenary of Gray's Anatomy, *review* by Prof. Ruth E. M. Bowden, 1760
Centimetre Wave Scatter Propagation beyond the Horizon : Influence of the Semi-Permanent Low-Level Ocean Duct on (F. A. Kitchen, W. R. R. Joy and E. G. Richards), 385
Centipedes and Mites : Spiders, Scorpions,—the Ecology and Natural History of Woodlice, 'Myriapods' and Arachnids (Dr. J. L. Cloudsley-Thompson), *review* by Theodore Savory, 825
Central Advisory Water Committee: First Report of the Trade Effluents Sub-Committee, 497
Central Food Technological Research Institute, Mysore : Fruit and Vegetable Preservation Industry in India (Proceedings of the Symposium on, 1954), *review* by Dr. R. G. Tomkins, 420
Central Nervous System : Inhibition and Excitation due to Gamma-Aminobutyric Acid in the (Prof. Takashi Hayashi), 1076
  A Simple Microelectrode for Recording from the (J. D. Green), 962
Central Nervous System of Man : Biochemical Basis of Disturbances caused by Thermal Stress in the (M. Krause), 1376
Central Nutrient Mass in *Lumbricus* Spermatogenesis : Origin and Connexions of the (Prof. J. Brontë Gatenby and Dr. A. J. Dalton), 886
Centre National de la Recherche Scientifique : Colloques Internationaux du, 64 (Lyon, 1955), Les Heterocycles Oxygenes, *review* by Dr. F. G. Mann, 1762
Centrifugal Fractions of Rat Liver : Distribution of Tissue-Specific Antigens in (Dr. Peter Vogt), 1807
Centropleura in Queensland : The Middle Cambrian Trilobite in (Dr. A. A. Öpik), 204
Century : Darwin's—Evolution and the Men who Discovered it (Prof. Loren Eiseley), *review* by Dr. G. S. Carter, 1112
Century of Darwin : A (edited by S. A. Barnett), *review* by Dr. G. S. Carter, 1112
Ceramic Bodies : A New Approach to the Investigation of the Cause of Moisture Expansion of (Thaisa Demediuk and W. F. Cole), 1223
Ceramic Oxide Powders ('Active') : Effect of Heat Treatment on the Sintering of (D. T. Livey and Dr. P. Murray), 1362
Ceramics : Soviet Research in Glass and—Basic Science I ; Basic Science II ; Glass, Glazes and Enamels ; Cements, Limes and Plasters ; Refractories ; Miscellaneous, *review* by Prof. R. W. Douglas, 827
Ceratotherium simum : Epidermal Structures in a Rhinoceros (Prof. A. J. E. Cave and D. B. Allbrook), 196
Cercaria : *Sagitta* as a Host of Larval Nematodes, including a New and Unique Type of (Dr. Ben Dawes), 960
Cerebral Cortex : Effect of γ-Aminobutyryl-Choline on the Electrical Activity of the (Hidehiko Takahashi, Akira Nagashima and Chikao Koshino), 1443
  Evidence for a Relation between Creatine Phosphate Level and Polarity of the (J. Křivánek, Dr. J. Bureš and O. Burešová), 1799
Cerebrospinal Fluid : The Free Amino-Acids of the (Dr. H. G. Knauff), 937
Cerenkov, Dr. P. A., Frank, Dr. I. M., and Tamm, Dr. I. : Awarded the Nobel Prize for Physics for 1958, 1275 ; work of, 1275
Certification (International), of Herbage Seed (Organization for European Economic Co-operation), 157
Cestode (Cyclophyllidean) : A New Type of Early Cysticercoid Stage in a (Joyce E. Rigby and Mrs. Dilys Rawson), 121
Chadwick, John : The Decipherment of Linear B, *review* by M. I. Finley, 1627
Chafers (Australian), (Coleoptera:Scarabaeidae:Melolonthinae) : A Revision of the (E. B. Britton), Vol. I, *review* by Dr. W. E. Hinton, 350
Chaffinch (*Fringilla coelebs gengleri*) : Further Studies on the Process of Song Learning in the (Dr. W. H. Thorpe), 554
Chakravarti, Prof. S. C. : Gibberellic Acid and Vernalization, 1612
Chalcones, Flavanones and Flavonols : Separation of, by Chromatography with Polyamide (Dr. Richard Neu), 660
Challenger Society and the Marine Laboratories (Development Commissioners' Scheme) : Joint Meeting at the Dove Marine Laboratory, 501
Chaloner, W. G. : Megaspore Tetrads in a Coenopterid Fern, 771
Chamberlain, A. C., and Dunster, H. J. : Deposition of Radioactivity in North-west England from the Accident at Windscale, 629
Chamberlain, G. T., and others : Zinc Deficiency induced by Mercury in *Coffea arabica*, 1607
Champion, Dr. F. C., and Prior, J. R. : Effects of Pressure on some Optical and Electrical Properties of Diamonds, 1079
Chance, Prof. Britton : All the Enzymes, *review*, 969
Chance, Prof. Britton, and others : Localization of Interaction Sites in Multi-Component Transfer Systems—Theorems derived from Analogues, 1190
Chancellor, Aylwin P. : The Control of Aquatic Weeds and Algae, 361
Chandler, Dr. B. V. : Anthocyanins of Blood Oranges, 933
Chandrasekharan, Dr. V., and others : The Four Elastic Constants of Diamond, 518
Ch'ang, T. S. : Reproductive Disturbances of Romney Ewe Lambs grazed on Red Clover (*Trifolium pratense*) Pastures, 1175
Chang, Dr. C. Y. : Comparative Endocrinology (Neuro-endocrine Reflex and Co-ordinating Mechanisms), 775
Change of Inclination of a Satellite Orbit (C. H. Bosanquet), 1533
Change in Mean Viability at a Multiallelic Locus in a Population under Random Mating (S. P. H. Mandel and I. M. Hughes), 63
Change in Oxygen Consumption of the New-Born Pig with a Fall in Environmental Temperature (Dr. L. E. Mount), 536
Change (Social) : Technical Education and, 481 ; (Dr. Stephen F. Cotgrove), 481
Change (Social), in Simpler Societies, *review* by Prof. Raymond Firth, 280
Change (Social), in the South Pacific—Rarotonga and Aitutaki (Prof. Ernest Beaglehole), *review* by Prof. Raymond Firth, 280
Change (The Spontaneous), of Ferriprotoporphyrin in Alkaline Solution (Dr. Mary-Louise Rothschild and Lawrence S. Myers, jun.), 1671
Changes after Irradiation : Deoxycytidine in Urine as an Indicator of (Dr. J. Pařízek, M. Arient, Z. Dienstbier and J. Skoda), 721
Changes in the Potassium Concentration and Metabolism of Red Blood Cells of the Lamb (Prof. R. D. Wright, T. R. Bradley, J. F. Nelson and J. P. Coghlan), 1742
Changes in the Sensitivity of Enzymes in the Dry State to Radiation (Dr. Reinier Braams, Franklin Hutchinson and Dilip Ray), 1506
Changes of State, a Mathematical-Physical Assessment (H. N. V. Temperley), *review* by Prof. E. C. Stoner, 547
Changes in the Tiller Population of Grass Swards (Dr. R. H. M. Langer), 1817
Changes in Ultra-Violet Absorption Spectra of Deoxyribonucleic Acid by Treatment with Bromine (Hiroshi Ishihara, Naohiko Suzuki and Hanako Yokoi), 1302
Changes (Biochemical), in Virus-infected and Regenerating Mouse Liver (David S. Nelson and Prof. P. M. de Burgh), 1617
Changes (Colour), in Teleosts (Priscilla Rasquin), 564
Changes (Histochemical), in Kidneys and Adrenals of Rats made Hypertensive by the Goldblatt Method (Dr. Antonio Pasqualino and Prof. Geoffrey H. Bourne), 1426
Changes (Intracellular), in Levels of Polarographically Active Sulphydryl Groups in Rat Liver during Carcinogenesis (Dr. Silvio Fiala), 257
Changes (Molecular), in Exchange Labelling with Tritium (P. H. Jellinck and D. G. Smyth), 46
Chapman, Prof. N. B. : Steric Effects in Conjugated Systems (Steric Effects in Nucleophilic Aromatic Substitution), 570
Chapman, Prof. Sydney : Soviet International Press Censorship, 1774
Chapman, Victor (Riley, Dr. Ralph, and) : Genetic Control of the Cytologically Diploid Behaviour of Hexaploid Wheat, 713
Chapman, W. R. : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Chappell, J. B., and Greville, G. D. : Dependence of Mitochondrial Swelling on Oxidizable Substrates, 813
Chara spp. : Light Microscopic and Electron Microscopic Observations on the Dividing Walls of Cells in (Dr. Lóránd Fridvalszky and Dr. Béla Lovas), 736
Characteristics (Biochemical), of Dog Semen (D. J. Bartlett), 1605
Characteristics (Some Structural), of Myelinated Nerve Fibres (Dr. C. P. Wendell-Smith and Dr. P. L. Williams), 1608
Characteristics (Surface-active), of Sodium Anacardate isolated from Cashew Nut Shell Oil (Arun K. Biswas and Anil Bandhu Roy), 1299
Characteristics (Transformation), of Direct Hardening Nickel Alloy Steels (Mond Nickel Co., Ltd.), 1643
Characterization of Two Coeruloplasmins from Human Serum : Separation and (Dr. Lars Broman), 1655
Characterization of Ficin (William Cohen), 659
Characters (Inherent), of Plant Species of Wetter and Drier Habitats : Further (Dr. M. L. R. Pettersson and G. E. J. Gray), 450
Charge (Electrophoretic), on its Substrate Surface : Control of Lecithinase Activity by the (Dr. A. D. Bangham and Dr. R. M. C. Dawson), 1292
Charge Transfer Processes (Chemical Institute of Canada Symposium on), 1353
Charing Cross Hospital Medical School, London : Discussion on the Flow of Blood in relation to the Vessel Wall, 90
Charnock, H. : Appointed reader in physical oceanography at the Imperial College of Science and Technology, 990
Charnock, J. S., and others : Differences between the Early Metabolic Effects of Thyrotropic Hormone and Triiodothyronine, 1166
Charsley, P. E. : Mechanical Properties of Whiskers and Thin Films (Structure of Whiskers of Sodium and Potassium Chlorides by Electron Microscopy and Diffraction), 297
Charsley, P. E. (Geach, G. A., and) : Mechanical Properties of Whiskers and Thin Films (Optical and Electron Microscope Replica Studies of Copper Whiskers), 296
Charvát, Prof. J., and others : Influence of a Crude Hypothalamic Extract on the Acid Phosphatase Activity of Rat Pituitaries, 62
Chaseling, Wilbur S. : Yulengor—Nomads of Arnhem Land, *review* by Prof. Raymond Firth, 280

Chatt, Dr. J. : Ions of the Transition Elements (Measurements using Infra-red Spectra of the N—H Vibration Frequencies in various Amine Complexes), 1350
Chatterjee, A. N., and others : Hexokinase Activity in Cell-free Extracts of *Leishmania donovani*, 109
Chaudhuri, Jayanti Nag, and Basu, Dr. Sadhan : Half-wave Potentials of Aromatic Ketones, 179
Chelation or Complex-formation by Indoleacetic Acid *in vitro* (D. A. Recaldin and Prof. O. V. S. Heath), 539
Chelidonine and Protopine : Separation and Determination of the Dissociation Constants of, by Paper Chromatography (Dr. Wanda Debska), 666
Chemical : Conversion of, into Mechanical Energy : Size and Shape Changes of Polyelectrolytes—(Seminar at University College, London, on), 762
Chemical Alteration of its Ribonucleic Acid *in vitro* : Production of Mutants of Tobacco Mosaic Virus by (Dr. Alfred Gierer and Dr. Karl-Wolfgang Mundry), 1457
Chemical Aspects of Selective Toxicity (Prof. Adrien Albert), 421
Chemical Dosimeter : A Highly Sensitive, for Ionizing Radiation (W. A. Armstrong and Dr. D. W. Grant), 747
Chemical Elements in the Earth's Crust during Geological Times : Migration of the (A. A. Saukov), 362
Chemical Engineering : Advances in (edited by Thomas B. Drew and John W. Hoopes, Jr.), Vol. 2, *review*, 822
  Graduate Training in, 1061
  Nuclear (Prof. Manson Benedict and Prof. Thomas H. Pigford), *review* by Prof. W. Murgatroyd, 489
  Progress in, *review*, 822
Chemical Engineering Practice (edited by Herbert. W. Cremer and Trefor Davies), Vol. 4, Fluid State, *review* by Prof. J. M. Coulson, 822
Chemical Engineers in Britain : Supply and Distribution of (Prof. H. E. Watson), 1712
Chemical Engineers, Institution of : Advisory Note on Graduate Training in Chemical Engineering, 1061
Chemical Industry : A Hundred Years of, *review* by J. L. S. Steel, 347
Chemical Industry during the Nineteenth Century, a Study of the Economic Aspect of Applied Chemistry in Europe and North America (Dr. L. F. Haber), *review* by J. L. S. Steel, 347
Chemical Industry, Society of : Messel Lecture (Rt. Hon. C. D. Howe), 1422
Chemical Industry, Society of (Education Panel of the Corrosion Group) : Prize for an Essay on Corrosion Science, 1063
Chemical Industry, Society of, and the British Weed Control Council : 1958 Conference to be held at Brighton, 501
Chemical Institute, Royal Australian : Rennie Memorial Medal for 1957 awarded to Dr. J. H. Bradbury, 89
  H. G. Smith Memorial Medal awarded to Dr. K. L. Sutherland, 89
  Election of Officers for 1958-59, 1487
Chemical Institute, Royal Australian (Western Australian Branch), and the University of Western Australia : Symposium on Plant Products, 299
Chemical Institute of Canada : Symposium on Charge Transfer Processes, 1353
Chemical Kinetics of Enzyme Action (Prof. Keith J. Laidler), *review* by Dr. B. R. Hammond, 1578
Chemical Laboratory, National : New name of the Chemical Research Laboratory, Teddington, 156
  Open Days, 295, 1778
  Steering Committee, 429
Chemical Pathology of the Nervous System (Third International Neurochemical Symposium), 229, 1646
Chemical Radiation Damage : Thermal Annealing of (Dr. A. G. Maddock and S. R. Mohanty), 1797
Chemical Reactions initiated by Ultrasonic Waves (Dr. Satish Chandra Srivastava), 47
Chemical Reactivity in Keratin Cuticle : Electron Microscope Studies of the (Dr. J. Sikorski and W. S. Simpson), 1235
Chemistry Research 1957—the Report of the Chemistry Research Board with the Report of the Director of the Chemical Research Laboratory, 1206
Chemistry Research Board : Chemistry Research 1957—the Report of the, with the Report of the Director of the Chemical Research Laboratory (Department of Scientific and Industrial Research), 1206
Chemical Research Laboratory, Teddington : Changes in the functions of the, and name changed to National Chemical Laboratory, 156
  Chemistry Research 1957—the Report of the Chemistry Research Board with the Report of the Director of the, 1206
Chemical Society : Grants from the Research Fund, 363
  Symposium on Steric Effects in Conjugated Systems, 568
  International Conference on Co-ordination Chemistry (sponsored by the International Union of Pure and Applied Chemistry), 1710
Chemical Society (organized by the, under the auspices of the Organic Chemistry Section of the International Union of Pure and Applied Chemistry) : Symposium on Theoretical Organic Chemistry, 22, 1340
Chemical Society (American) : Monograph Series No. 135, Emulsions (Paul Becher), *review* by Sir Eric Rideal, 550
Chemical Technology : Advance of, *review* by Sir Alfred Egerton, 549
  Encyclopedia of (edited by Raymond E. Kirk and Donald F. Othmer), First Supplement Volume, *review* by Sir Alfred Egerton, 549
Chemically Defined Medium : Cultivation of Isolated Embryonic Rat Libiae on a (Susan Heyner and Dr. J. D. Biggers), 810
Chemicals and Cancer, *review* by Dr. C. Auerbach, 750
Chemistry at Khartoum, 85
Chemistry : Applications of Crystallography to (British Association for the Advancement of Science, Section B (Chemistry), Discussion on), 914
  Biophysical (John T. Edsall and Jeffries Wyman), Vol. I, Thermodynamics, Electrostatics and the Biological Significance of the Properties of Matter, *review* by Prof. J. A. V. Butler, 5
  Co-ordination (Chemical Society International Conference on, sponsored by the International Union of Pure and Applied Chemistry), 1710
  Fellowships in (Ramsay Memorial Fellowships Trustees Awards for 1958-59), 432
  Grants for Research in (Chemical Society), 363
  A Guide to the Literature of (E. J. Crane, Austin M. Patterson and Prof. Eleanor B. Marr), second edition, *review* by B. Brightman, 8
  Heterocyclic, *review* by Dr. F. G. Mann, 1762
  Theoretical Organic (organized by the Chemical Society, under the auspices of the Organic Chemistry Section of the International Union of Pure and Applied Chemistry, Symposium on), 22, 1340
Chemistry, Royal Institute of : Meldola Medal of the Society of Maccabaeans, 990
Chemistry of Borates (Peter H. Kemp), Part I, *review* by Dr. A. D. Mitchell, 1588
Chemistry of Carbon Surfaces : Physics and (Fourth Biennial Conference on Carbon, at the University of Buffalo), 1488
Chemistry of Condensed Tannins (Plant Phenolics Group Discussion on), 1488
Chemistry of Co-ordination Compounds (National Academy of Sciences of India Symposium on), 1279
Chemistry of Fluorine Compounds (British Association for the Advancement of Science, Section B (Chemistry), Discussion on), 1269
Chemistry of Plants (Prof. Erston V. Miller), *review* by Dr. G. Leaf, 550
Chemistry of the Rhodopsin Cycle (Tôru Yoshizawa and Yûji Kitô), 1604
Chemistry of the Transuranic Elements (Prof. H. J. Emeléus), 579
Chemistry (Analytical) : *Talanta*, a Journal of, Vol. I, Nos. I and 2, 1346
Chemistry (Analytical), in Nuclear Reactor Technology : Second Conference on, 22
Chemistry (Analytical), Society of : Re-publication in facsimile form of the earliest ten volumes (1876-85) of *The Analyst*, 1414
Chemistry (Analytical), Society for (Midlands Section and the Microchemistry Group) : Symposium on Microchemistry, 22
Chemistry (Analytical), Society for (North of England Section) : Discussion on Laboratory Balances, 771
Chemistry (Applied), in Europe and North America : The Chemical Industry during the Nineteenth Century, a Study of the Economic Aspect of (Dr. L. F. Haber), *review* by J. L. S. Steel, 347
Chemistry (Atmospheric) : Sulphur Dioxide in (Chr. E. Junge and T. G. Ryan), 21
Chemistry (Biophysical) : Progress in Biophysics and (edited by Prof. J. A. V. Butler and Prof. B. Katz), Vol. 8, *review* by Dr. P. A. Merton, 489
  Some Aspects of, *review* by Prof. J. A. V. Butler, 5
Chemistry (Heterocyclic) : Current Trends in—Proceedings of a Symposium held at the John Curtin School of Medical Research, Australian National University, Canberra, 1957, under the auspices of the Chemical Society (edited by A. Albert, Dr. G. M. Badger, and Dr. C. W. Shoppee), *review* by Dr. F. G. Mann, 1762
Chemistry (Modern Analytical), in the Service of Pharmacy and Medicine (Dr. G. E. Foster), 995
Chemistry (Organic) : A Modern Approach to (Prof. J. Packer and J. Vaughan), *review* by Dr. W. A. Waters, 1114
  Physical Methods in (Royal Society of Canada Symposium on), 701
  Structure and Reactions in—the Kekulé Symposium (Prof. D. H. Hey and Dr. G. H. Williams), 1340
Chemistry (Physical), at High Pressures, *review* by K. E. Bett, 75
Chemistry (Protein) : Introduction to (Prof. Sidney W. Fox and Prof. Joseph F. Foster), *review* by Dr. E. Stedman, 144
Chemistry (Pure and Applied), International Union of : Symposium on Protein Structure, Paris 1957 (edited by Prof. Albert Neuberger), *review* by Dr. Kenneth Bailey, 1587
Chemistry (Pure and Applied), International Union of (sponsored by) : International Conference on Co-ordination Chemistry (Chemical Society), 1710
Chemistry (Pure and Applied), International Union of (organized by the Chemical Society, under the auspices of the Organic Chemistry Section of the) : Symposium on Theoretical Organic Chemistry, 22, 1340
Chemistry (Radiation) : Reports on (compiled by R. W. Clarke), 88
  Symposium on (Academy of Sciences of the USSR, Division of Chemical Science, Moscow, 1955), (edited by Prof. N. A. Bakh), translated from the Russian, *review* by Prof. G. Porter, 1588
Chemistry (Technical), in the Royal College of Science and Technology, Glasgow : W. H. Perkin and the Young Chair of (R. Brightman), 613
Chemistry and Biology of Yeasts (edited by A. H. Cook), *review* by R. B. Gilliland, 488
Chemistry and Clay Mineralogy of a Soil Sample from Antarctica (L. C. Blakemore and L. D. Swindale), 47
Chemistry and Technology of Naphthalene Compounds (Norman Donaldson), *review* by Dr. G. Baddeley, 751
Chemists, British Association of : Hinchley Medal for 1957 awarded to J. Wilson, 1133
  Hinchley Memorial Address (J. Wilson), 1133
Chemotherapy of Cancer : A New Approach to the (Dr. M. B. Sahasrabudhe), 163
Chemotherapy (Experimental), of Tumours with Hydrogen Peroxide (Dr. M. Chorazy, A. Gettlich, L. Góral, B. Koloczek, E. Molawka, B. Penar and Z. Szweda), 395
Cherry, Dr. E. C. : Title of Henry Mark Pease (Standard) professor of telecommunications in the University of London conferred on, 990
Cherry, R. D. (Ahrens, Prof. L. H., and) : Evidence for $^{4}_{2}$He 'Clusters' in Nuclei, 1434
Cherry (Sweet) : A Minor Anthocyanin Pigment of (Dr. Kuang C. Li and Dr. A. C. Wagenknecht), 657
Chesbro, William R., and Hedrick, Prof. Leslie R. : Comparison of the Tendency to cling to Glass and Haemagglutination produced in Erythrocyte Suspensions by Ferric Chloride and by Influenza Virus, 1164
Chester, Dr. G. V. : Appointed lecturer in mathematical physics at the University of Birmingham, 1487
Chesters, Prof. C. G. C. : Ecology of Soil Fungi, 1559
Chicago Field Museum of Natural History : Fieldiana, Zoology, Vol. 40, A Monograph on the Termitophilous Staphylinidae (Coleoptera), (Prof. Charles H. Seevers), *review* by E. B. Britton, 144
  Fieldiana, Botany, Vol. 30, No. I, Orchids of Peru (Charles Schweinfurth), 500
Chick, D. R., and others : Measurement of the Energy Spectrum of Protons emitted from the Fusion Reaction in SCEPTRE III, 216
Chicken Erythrocyte Preparations : Evidence for the Involvement of Ferrous Iron in the Biosynthesis of δ-Aminolaevulic Acid by (E. G. Brown), 313

Chickens : Toxic Effects produced by Pyrimethamine in, and their Antagonism by Folic Acid (J. M. S. Lucas), 1449
Chicks : Influence of Linoleic and Linolenic Acids on Symptoms of Vitamin E Deficiency in (Prof. H. Dam, G. Kofoed Nielsen, I. Prange and E. Søndergaard), 802
Chicks (Rhode Island) : Inability of Epinephrine to protect, against the Lethal Action of X-Rays (Dr. M.-L. Beaumariage), 803
Chieffi, G. (Adinolfi, M., and) : Larval and Adult Haemoglobins of the Cyclostome *Petromyzon planeri*, 730
Child Life (Araucanian), and its Cultural Background (Sister M. Inez Hilger), *review* by Dr. G. H. S. Bushnell, 76
Childs (Jane Coffin) Memorial Fund for Medical Research : Grants for the Year 1957-58, 1492
Chilton, H. T. J. : Free Radical Stabilization, 1497
Chimaera (Dichlamydius) : Transformation of a Monochlamydius into a, by X-Ray Treatment (Dr. H. W. Howard), 1620
Chimie : Physique et (ouvrage édité a l'occasion du 75^{e} Anniversaire de l'École Supérieure de Physique et Chimie Industrielle de Paris), 840
Chimie Biologique, Société de : Charles Leopold Meyer Award for 1958 awarded jointly to Dr. Francois Gros and to Prof. Jean Turchini, 1643
Chinese : An Abnormal Haemoglobin in a—Haemoglobin *G* (F. Vella, J. A. M. Ager and Dr. H. Lehmann), 460
Chinook Salmon : Effect of Diet in Imidazole Compounds and Creatine in (Dr. A. Lukton), 1019
Chirality (L. L. Whyte), 198
Chitin in Pogonophora (P. C. J. Brunet and Dr. D. B. Carlisle), 1689
Chlamydomonas : Pigments and Photosynthesis in a Carotenoid-deficient Mutant of (Dr. Ruth Sager and Dr. Marko Zalokar), 98
Chloramphenicol : Effect of, on a Fungus (A. Broadbent and D. A. Terry), 1107
Chloramphenicol-Resistance in *Staphylococcus aureus* : Protein Synthesis as a Basis for (H. H. Ramsey), 602
Chlorella vulgaris : Ethanol as a Carbon Source for the Growth of (Auxins and their Effect on the Growth of Unicellular Algae), (Prof. H. E. Street, D. J. Griffiths, C. L. Thresher and M. Owens), 1360
  Fermentation of Glucose by (P. J. Syrett), 1734
Chloride Baths (Molten) : Ductility of Chromium deposited from (Dr. R. S. Dean and F. X. McCawley), 746
Chloride (Ferric), and by Influenza Virus : Comparison of the Tendency to cling to Glass and Haemagglutination produced in Erythrocyte Suspensions by (William R. Chesbro and Prof. Leslie R. Hedrick), 1164
Chlorine Deficiency in Soils (Peter G. Ozanne), 1172
Chloride and Iodide Uptake of Wheat Seedlings : Relationships between the (Z. Böszörményi and Edith Cseh), 1811
Chlorophyll Action in Photosynthesis : Mechanism of (Wolf Vishniac and Irwin A. Rose), 1089
Chloroplasts : Cytochromes in (Prof. W. O. James and Rachel M. Leech), 1684
  Separation of Light and Dark Phases in the Photosynthesis of Isolated (Dr. Achim V. Trebst, Harry Y. Tsujimoto and Prof. Daniel I. Arnon), 351
Chloroplasts (Spinach) : Conversion of Carbon-14 Dioxide to Starch Glucose during Photosynthesis by (Prof. Martin Gibbs and Morris A. Cynkin), 1241
4-Chlorotestosterone Acetate : Action of Testosterone Propionate and, on Protein Synthesis *in vitro* (A. Bernelli-Zazzera, M. Bassi, R. Comolli and P. Lucchelli), 663
Chlorothiazide Derivatives : Diuretic Activity of (W. Logemann, Dr. P. N. Giraldi and M. A. Parenti), 1510
Chodkowski, J., and others: Polarographic Study of Acid-Base Reactions of the Tropylium Ion, 1535
Cholesterol (edited by Dr. R. P. Cook), *review* by Prof. G. A. D. Haslewood, 1332
Cholesterol (Serum), in Obese Mice : Levels of (Claire Zomzely and Jean Mayer), 1738
Cholesterol Contents of Rat Livers : Effect of Nicotinic Acid on the (Dr. Harald Schön), 534
Choline Acetylase : Distribution of, in Insect Conductive Tissue (E. H. Colhoun), 1378
Cholinesterase : Role of, in Insecticidal Action (H. S. Hopf and R. T. Taylor), 1381
Cholinesterase (Non-specific), in the Adrenal Medulla of the Rat : Differential Demonstration of the Acetylcholinesterase and (Prof. O. Eränkö), 183
Cholinesterase Hydrolysis of Dihydromurexine : Inhibition of, by Lysergic Acid Diethylamide and its 2-Bromo Derivative—a Selective Relationship (Dr. I. I. A. Tabachnick and M. E. Grelis), 935
Cholinesterase Inhibitor : Toxicity of a, to the Hibernating Hamster (J. F. Scaife and D. H. Campbell), 1739
Chorazy, Dr. M., and others : Experimental Chemotherapy of Tumours with Hydrogen Peroxide, 395
Chorlton, S. H., and others : Calcium and Phosphorus Metabolism after Surgery, 1505
Christian, Dr. J. J. : Comparative Endocrinology (Mammalian Adaptive Mechanisms), 774
Christmas Lecture of the Institution of Electrical Engineers (Dr. E. R. Laithwaite), 1554
Christmas Lectures (Royal Institution), 1416
Christmas Lectures of the Royal Photographic Society (Picture Making in Photography), 1554
Christmas Lectures at the Science Museum, 1710
Christofilos, Dr. N. : Controlled Nuclear Fusion Reactions, 1053
Chromactivator : A Crustacean (Activation of Hormonal Secretions). (Dr. D. B. Carlisle), 33
Chromatid Breakage by Irradiation and the Oxygen Effect (Dr. G. J. Neary and Dr. H. J. Evans), 890
Chromatid Interference : Use of Loosely Linked Genes to estimate, by Tetrad Analysis (Dr. H. L. K. Whitehouse), 1173
Chromatograms : Radiometric Estimation of Unsaturated Fatty Acids on (A. Z. Budzyński, Z. J. Zubrzycki and I. G. Campbell), 178
Chromatograph (Gas), as a Methanometer in the Coal Industry (P. Whatmough), 863
Chromatographic Detection of Minute Quantities of Thyroxine in Serum (Dr. Viktor Stolc), 52
Chromatographic Procedure (A Rapid Paper), for the Quantitative Determination of Hydroxyproline (Henry R. Roberts, Michael G. Kolor and Wesley Bucek), 1602
Chromatographic Techniques (Dr. Ivor Smith), *review* by Dr. R. Consden, 215
Chromatographic (Gas) Terms and Definitions (Marcel J. E. Golay), 1146
Chromatography : Gas—a Symposium held under the auspices of the Analysis Instrumentation Division of the Instrument Society of America (edited by Vincent J. Coates, Henry J. Noebels and Irving S. Fagerson), *review* by N. H. Ray, 1630
  Preparative-Scale Gas (Dr. D. E. M. Evans, W. E. Massingham, Prof. M. Stacey and Dr. J. C. Tatlow), 591
  Separation of Chalcones, Flavanones and Flavonols by, with Polyamide (Dr. Richard Neu), 660
Chromatography in Taxonomic Studies on Gallinaceous Birds : Immunology and (Danilo Mainardi), 1388
Chromatography of Thiol Compounds (Dr. S. P. Spragg), 1314
Chromatography (Adsorption) : Identification of Meprobamate by, on Chromatoplates (Dr. Angelo Fiori and Dr. Mario Marigo), 943
Chromatography (Circular Paper) : A Simple, Rapid Method for (Dr. A. J. Philippu), 1159
Chromatography (Gas) : A Detector for use with Capillary Tube Columns in (Dr. J. E. Lovelock), 1663
  Effect of the Carrier Gas on the Sensitivity of a Thermal Conductivity Detector in (Dr. N. H. Ray), 1663
  A Methane-Conversion Detector for (Prof. Albert Zlatkis and J. A. Ridgway), 130
  A Micro Sample Introduction System for (Robert L. Bowman and Dr. Arthur Karmen), 1233
  Separation of some Tobacco Alkaloids by (Dr. Louis D. Quin), 865
  Use of Molecular Sieves in, for the Determination of the Normal Paraffins in Petroleum Fractions (B. T. Whitham), 391
Chromatography (Gas) Discussion Group : Inaugural General Meeting and Informal Symposium, 158
Chromatography (Gas Liquid) : Detection of certain Brominated Long-Chain Fatty Acid Esters by (R. A. Landowne and Prof. S. R. Lipsky), 1731
Chromatography (Gradient Elution) : Separation of Mixtures of Œstrogens in Urinrary Extracts using (Dr. Stanley Kushinsky, James A. Demetriou, Wilmonte Nasutavicus and Jane Wu), 874
Chromatography (Paper) : Determination of Strychnine in Nux Vomica by (G. P. Briner), 742
  Separation of Glucose-1-Phosphate and Glucose-6-Phosphate by (F. E. G. Harrap), 876
  Separation and Determination of the Dissociation Constants of Chelidonine and Protopine by (Dr. Wanda Debska), 666
  Shape of Spot and Rate of Sorption in (W. G. Kauman and Thor A. Bak), 743
  Tritium and (Dr. A. T. Wilson), 524
Chromatography (Paper), of Small Amounts of Vasopressins and Oxytocins (Prof. H. Heller and K. Lederis), 1231
Chromatography (Paper), of Urinary Indole and Phenol Acids : Effect of Atmospheric Contaminants on (K. N. F. Shaw and J. Trevarthen), 664
Chromatography (Paper) Method for the Determination of Suitable *p*H Values for the Extraction of Antibiotics (Vladimír Betina), 796
Chromatoplates : Identification of Meprobamate by Adsorption Chromatography on (Dr. Angelo Fiori and Dr. Mario Marigo), 943
Chromium deposited from Molten Chloride Baths : Ductility of (Dr. R. S. Dean and F. X. McCawley), 746
Chromium-51 : Effect of Calcium Ions on the Binding of, to Erythrocytes *in vitro* (G. von Ehrenstein and B. Zacharias), 1384
Chromium Sesquioxide : Paper as a Carrier of (J. L. Corbett, J. F. D. Greenhalgh and A. P. MacDonald), 1014
Chromosomal Reproduction : Effect of Colchicine on the Utilization of Labelled Thymidine during (L. F. La Cour and Dr. S. R. Felc), 506
Chromosome (First), of *Drosophila melanogaster* : Genotypic Control of Crossing-over on the (M. J. Lawrence), 889
Chromosome (Phage) : A Genetic Test for Side-chains in a (Myron Levine and Roy Curtiss, III), 126
Chromosome (Wheat) : Correlated Failure of Synthetic Activities in a (H. K. Jain), 1458
X Chromosome : Representation of the, in Intermitotic Nuclei in Man (D. M. Serr, M. A. Ferguson-Smith, Dr. B. Lennox and J. Paul), 124
X-Chromosome Constitution of Patients with Klinefelter's Syndrome : Colour Vision Studies and the (Dr. P. E. Polani, Dr. P. M. F. Bishop, Dr. B. Lennox, Dr. M. A. Ferguson-Smith, Dr. J. S. S. Stewart and Dr. A. Prader), 1092
Chromosome Aberrations in Calcium-deficient *Tradescantia* produced by Irradiation (Dale Steffensen), 1750
Chromosome Breakage at High Radiation Dose-Rates (J. S. Kirby-Smith and G. W. Dolphin), 270
Chromosome Constitution in Sympatric Species of Sawflies : Geographical Colour Polymorphism and (Dr. F. L. Waterhouse and Dr. Ann R. Sanderson), 477
Chromosomes, *review* by Prof. D. Lewis, 1401
  Looking at (John McLeish and Brian Snoad), *review* by Prof. D. Lewis, 1401
Chromosomes (Somatic), of *Leptaspis* and *Streptogyna* (Poaceae), (Dr. T. Tateoka), 1619
Chromosomes (Supernumerary), in Diploid Populations of *Dactylis glomerata* in Israel : Different Frequencies of (Dr. Daniel Zohary and Israel Ashkenazi), 477
Chronic Administration of Reserpine : Catechol Amine Depletion in the Rat's Denervated Adrenal Gland following (Dr. Bernard L. Mirkin), 113
Chu, Chiao-Min, and others : Tables of Angular Distribution Coefficients for Light-Scattering by Spheres, *review* by Dr. B. J. Mason, 1117
Churchill, Stuart W., and others : Tables of Angular Distribution Coefficients for Light-Scattering by Spheres, *review* by Dr. B. J. Mason, 1117
  Tables of Light-Scattering Functions, *review* by Dr. B. J. Mason, 1117
Churchill College, Cambridge : Grant of £50,000 from the Gulbenkian Foundation, Lisbon, to endow three Gulbenkian studentships for graduates of universities outside the United Kingdom, 1493
Chvojková, E. (Dr. E. Woyk) : Investigation of the Ionosphere using Signals from Earth Satellites, 1362

Ciba Fellowship Trust : Foundation of the, 1776
Ciba Foundation : Awards for 1958 for Research in Ageing, 19
  Awards in 1959 for Research in Ageing, 89
  Symposium on Drug Resistance in Micro-organisms—Mechanisms of Development (edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by I. M. Rollo, 416
  Colloquia in Endocrinology, Vol. 11, Hormones in Blood (edited by G. E. W. Wolstenholme and Elaine C. P. Millar), *review* by Prof. F. G. Young, 901
Cicchella, Dr. Giuseppe (Iannaccone, Dr. Angelo, and) : Effect of Benzene on Rat Thyroid, 669
Cigarette Smoke : Presence of 1,2,3,4-Dibenzopyrene in (M. J. Lyons), 178, *erratum*, 363
Cigarettes ? : Lung Cancer and (Sir Ronald Fisher), 108
Ciliature of the Trochophore Larva : An Electron-Microscopic Study of the (Dr. H. Seuntjens and Dr. W. G. Braams), 1611
Cinader, Dr. B. : Appointed head of the Sub-division of Immunochemistry in the Ontario Cancer Institute and associate professor in the Department of Medical Biophysics of the University of Toronto, 842
Circuit (Transistor) Engineering (edited by Richard F. Shea), *review* by D. D. Jones, 756
Circuits (Transistor) : An Introduction to (E. H. Cooke-Yarborough), *review* by D. D. Jones, 756
Circular Paper Chromatography : A Simple, Rapid Method for (Dr. A. J. Philippu), 1159
Circulating Adrenocorticotrophin : Influence of, on the Pituitary Adrenocorticotrophic Response to Stress in the Adrenalectomized Rat (Dr. J. R. Hodges and Joan Vernikos), 725
Circulation : Transplantation of the Forebrain Region in Bird Embryos before the Establishment of a—Homoplastic Transplants (Dr. Petar N. Martinovitch and Miroslava R. Pavlović), 571 ; Heteroplastic Transplants (Dr. Petar N. Martinovitch), 572
Circulation in the Black Sea (V. A. Vodyanitzky), 563
Circulation of the Blood—Two Anatomical Essays by William Harvey, together with nine letters written by him (translated from the Latin and slightly annotated by Prof. Kenneth J. Franklin), *review* by Dr. Douglas Guthrie, 1571
Circumpolar Earth Satellite : Seasonal Illumination of a, at its Extreme-Latitude Orbit Point (Dr. W. N. Abbott), 651
Citridesmolase : Separation of the Condensing Enzyme of *Aspergillus niger* from Acetyl Coenzyme A Deacylase and, and the Effect of Magnesium Ion on the Purified Fraction (Prof. C. V. Ramakrishnan), 1601
Citrulline and other Amino-Acids in a Protein of Hair Follicles : Content of (G. E. Rogers and D. H. Simmonds), 186
City and Guilds of London Institute : Pamphlet on Technical Authorship, 699
  Seventy-eighth Annual Report (1956-57), 1132
Civil Engineers, Institution of : Election of Officers, 158
Civil Nuclear Power Stations : Plutonium from (House of Commons Debate on), 292
Civil Servant (Professional) : The Role of the (Sir Graham Sutton), 841
Civil Servants (Professional), Institution of : Chairman's Address to the thirteenth Annual Delegate Conference (E. Hewlett), 86
Civil Service : Science in the, 86
Civil Service, Scientific : Special Promotions, 991
Civil Service Commissioners : Ninety-second Annual Report (1957-58), 1346
Civilization : Modern Science and (Rt. Hon. R. G. Menzies), 1557
  Science and, 1557
  The Study of Folk Life and its part in the Defence of (Dr. Iorwerth C. Peate), 583
Civilization (Stone-Age), of the Pacific : Easter Island, a (Dr. Alfred Metraux), translated from the French by Michael Bullock, *review* by Prof. Raymond Firth, 280
Clark, Grenville, and Sohn, Prof. Louis B. : World Peace through World Law, 966
Clark, George C., and others : Tables of Angular Distribution Coefficients for Light-Scattering by Spheres, *review* by Dr. B. J. Mason, 1117
  Tables of Light-Scattering Functions, *review* by Dr. B. J. Mason, 1117
Clark, N. : Fodder Plants (Co-operative Research on Forage Production), 703
Clarke, J. R. : *Obituary* of Prof. S. R. Milner, 839
Clarke, R. W. : Reports on Radiation Chemistry, 88
Clarke, S. H. : Appointed director of the Warren Spring Laboratory of the Department of Scientific and Industrial Research, 225
Clarke, Dr. Suzanne K. R. : Appointed to a lectureship in bacteriology at the University of Bristol, 158
Clarricoats, Dr. P. J. B. : Appointed to a lectureship in light electrical engineering at the University of Belfast, 1554
Classics of Librarianship (John L. Thornton), *review* by R. Brightman, 1117
Classification : Plant (Prof. Lyman Benson), *review* by Prof. T. G. Tutin, 824
Classification of Brackish and Inland Saline Waters (International Association of Limnology and the International Union of Biological Sciences Conferences on), 27
Classification and Indexing in Science (B. C. Vickery), *review* by R. Brightman, 1698
Classification (Library), and the Field of Knowledge (D. J. Foskett), 1277
Classification (International Statistical), of Diseases, Injuries and Causes of Death : Manual of the (World Health Organization), *review*, 417
Clay Mineral–Soil Mixtures : Invertase Activity in (István Kiss), 203
Clay Mineralogy of a Soil Sample from Antarctica : Chemistry and (L. C. Blakemore and L. D. Swindale), 47
Clay Minerals (Soil), Montmorillonite and Vermiculite : Aluminium Interlayers in (B. L. Sawhney), 1595
Clay Products on Autoclaving : Permanent Moisture Expansion of (Dr. J. S. Hosking and Dr. H. V. Hueber), 1142
Clays : Landslides in (Alexandre Collin, 1846), translated by W. R. Schriever, *review* by K. L. Nash, 552
Clayson, D. B. : Progress in Cancer Research (Metabolism of Carcinogens), 364
Clayton (James) Fellowships and Grants (Institution of Mechanical Engineers Awards), 433
Clean Air, National Society for : Twenty-fifth Annual Conference, 771
Clean Air Act 1956, 226
Cleave, Dr. J. P., and others : Mechanical Resolution of Linguistic Problems, *review* by R. A. Brooker, 618
Clegg, John : *Obituary* of E. W. Swanton, 1412
Clegg, Dr. L. F. L. : Micro-organisms in Milk and Milk Products, *review*, 141
Clemedson, Dr. C. J. : Space Medicine (Relationship between Blast Injury in Animals and the Problem of Explosive Decompression in a Space Vehicle), 1645
Clemo, Prof. G. R. : Life of Henry Armstrong, *review*, 1399
Cliffe, E. E., and Waley, Dr. S. G. : Effect of Analogues of Glutathione on the Feeding Reaction of Hydra, 804
Clifford, Alan F. (Turner, jun., Dr. Almon G., and): Electronic Configuration d^4 in a Complex Ion, 1359
Clifford, Dr. H. T. (Caswell, G. H., and) : Effect of Fumigation and Moisture Content on the Seedling Growth of Cowpea (*Vigna unguiculata*), 540
Clifton, Charles E. (edited by, in association with Raffel, Sidney, and Stanier, Roger Y.) : Annual Review of Microbiology, Vol. 11, *review* by Dr. H. K. King, 823
Climatic Tables, 361
Climatology : Synoptic, 505
Clinical Biochemists, Association of : Election of Officers for 1958-59, 1063
Clinton, A. Cadman : The Human Operator and High-Speed Flight, 1562
Closure (Midday), of Stomata in the Oil Palm, *Elaeis guineensis* Jacq. : Field Observations of (A. R. Rees), 735
Cloud (Radioactive) from the Accident at Windscale : Long-range Travel of the (N. G. Stewart and R. N. Crooks), 627
Clouds : Particulate—Dusts, Smokes and Mists, their Physics and Physical Chemistry and Industrial and Environmental Aspects (H. L. Green and W. R. Lane), *review* by R. L. Brown, 682
Cloudsley-Thompson, Dr. J. L. : Spiders, Scorpions, Centipedes and Mites—the Ecology and Natural History of Woodlice, 'Myriapods' and Arachnids, *review* by Theodore Savory, 825
Clover (Red), *Trifolium pratense* Pastures : Reproductive Disturbances of Romney Ewe Lambs grazed on (T. S. Ch'ang), 1175
Clover (White), *Trifolium repens* L. : Effect of Gibberellic Acid on the Nodulation of (Dr. Wm. W. Fletcher, J. W. S. Alcorn and J. C. Raymond), 1319
Cluff, C. L. (Taylor, R. C., and) : Vibrational Frequency associated with the Boron–Nitrogen Dative Bond in Amine Boranes, 390
'Clusters' ($^4_2$He), in Nuclei : Evidence for (Prof. L. H. Ahrens and R. D. Cherry), 1434
Clyde (Firth of) : Hydromedusae New to the British List from the (C. Edwards), 1564
Coagulating Gland (Guinea Pig) : Vascular Permeability Factors in the Secretion of the (Jules Freund, and Prof. A. A. Miles, P. J. Mill and D. L. Wilhelm), 174
Coagulation (Blood) : Phosphatidyl Serine and (Dr. P. Barkham, Dr. M. J. Silver, Dr. P. B. da Costa and Dr. L. M. Tocantins), 1031
  Serum Lipoproteins and (R. B. Goldrick and H. M. Whyte), 1743
Coagulation (Rennin), of Enzymatically Dephosphorylated Casein (Robert Y. H. Hsu, Prof. Laurens Anderson, R. L. Baldwin, C. A. Ernstrom and A. M. Swanson), 798
Coaker, T. H., and Passmore, R. G. : *Stomoxys* sp. on Cattle in Uganda, 606
Coal : The Nature of (Indian Central Fuel Research Institute Symposium on), 295
  Science in the Use of (Institute of Fuel Conference on), 24
Coal, Gas and Electricity Industries : Capital Investment in the (White Paper on), 343
Coal Bill (Opencast) : Second reading in the House of Lords, 505
Coal Board, National : Gift of £1,100 to the Department of Physical and Inorganic Chemistry, University of Bristol, for a continuation of the study of reactivity of carbon surfaces with oxygen, 1487
Coal Industry : Gas Chromatograph as a Methanometer in the (P. Whatmough), 863
Coal Science Lecture (Seventh) of the British Coal Utilization Research Association (Sir Charles Goodeve), 990
Coal-Tar : Presence of 3:4-8:9-Dibenzpyrene in (N. P. Buu-Hoï), 1158
Coal Utilization Research Association, British : Annual Report for 1957, 705
  Seventh Coal Science Lecture (Sir Charles Goodeve), 990
Coalification Series from Cellulose and Lignin to Anthracite : Infra-Red Spectra of a (Prof. C. R. Kinney and E. I. Doucette), 785
Coastal Erosion, 1347
Coat-Colour and Longevity in Thoroughbred Mares (Dr. Alex Comfort), 1531
Coates, R. J. : Observation of a Solar Flare at 4·3-mm. Wave-Length, 861
Coates, Vincent J., and others (edited by) : Gas Chromatography—a Symposium held under the auspices of the Analysis Instrumentation Division of the Instrument Society of America, *review* by N. H. Ray, 1630
Cobalt : The Biochemical Function of (Hedley Marston), 1348
Cobalt (Millimicrogram Amounts of), and Microgram Amounts of Copper in Biological Material : Separation and Determination of (Aleksandra Smoczkiewiczowa and Witold Mizgalski), 53
Cobalt and Nickel : Induction of Respiratory Deficiency in Yeast by Manganese, Copper, (Prof. Carl C. Lindegren, Susumu Nagai and Hideko Nagai), 446
Cobalt Concentrations (Vitamin B_{12} and), in Livers from Healthy and Cobalt-deficient Lambs (E. D. Andrews, L. I. Hart and B. J. Stephenson), 869
Cobalt-deficient Lambs (Healthy and) : Vitamin B_{12} and Cobalt Concentrations in Livers from (E. D. Andrews, L. I. Hart and B. J. Stephenson), 869
Cobb, Dr. W. : Physiology as an Education and as a Career (Physiology in Medical Research), 1066
Cobbett, W. G., and Kenchington, Dr. A. W. : At the fifteenth meeting of the Research Panel of the British Gelatine and Glue Research Association (Tyrosine Estimation by Ultra-violet Absorption and by a Modified Colorimetric Method), 440
Cochran, Dr. J. F. (Carruthers, Dr. J. A., and) : Measurements of Conduction at Low Temperatures (Electrical and Thermal Conduction in Semi-conductors), 83
Cochran, Dr. W. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Cock Spermatozoa : Carbohydrate Metabolism of (Prof. F. W. Lorenz), 397
Cockcroft, Sir John : Nuclear Physics and Atom Bombs, review, 547
  Peaceful Uses of Atomic Energy—United Nations Conference at Geneva, 903
  Presented with the Niels Bohr Gold Medal, 990
  Recent Developments in Nuclear Engineering, 1334
  Appointed to serve on the Scientific Advisory Committee of the International Atomic Energy Agency, 1413

Cockroach : Effects of Potassium and Sodium Ions on the Resting and Action Potentials of the Giant Axon of the (T. Yamasaki and T. Narahashi), 1805
  Synaptic Transmission in the (T. Yamasaki and T. Narahashi), 1805
Cockroach *Periplaneta americana* : Spontaneous Electrical Activity in the Denervated Muscles of the (Dr. R. Beránek and Dr. I. Novotny), 957
Cockroach (American) : Glucose Catabolism in the (Gabriel M. Silva, W. P. Doyle and Dr. C. H. Wang), 102
Cockroach (American), *Periplaneta americana* (L.) : A White-eyed Mutant Form of the (G. T. Jefferson), 892
Cocoa Conference 1957 : Report on the (Cocoa, Chocolate and Confectionery Alliance), 1776
Cocoa Shade and Manurial Experiment in Ghana (R. K. Cunningham and J. Lamb), 119
Cocoa, Chocolate and Confectionery Alliance : Report on the Cocoa Conference (London, 1957), 1776
Coconut : Occurrence of Gibberellin-like Substances in the (Margaret Radley and Enid Dear), 1098
Coconut Research Institute of Ceylon : Appointment of Dr. M. L. M. Salgado as permanent director, 1348
Code (International), of Nomenclature of Bacteria and Viruses (edited by the Editorial Board of the International Committee on Bacteriological Nomenclature), *review* by Dr. K. A. Bisset, 1760
Codrington, Prof. K. de B. : The Twice-Born, *review*, 76
Coefficient (Stress Optical), of the Alkali Halides : Dispersion of the (Dr. R. Srinivasan), 1660
Coefficients (Angular Distribution), for Light-Scattering by Spheres : Tables of (Chiao-Min Chu, George C. Clark and Stuart W. Churchill), *review* by Dr. B. J. Mason, 1117
Coelacanth, *Latimeria chalumnae* : Specimen of an Existing, on view in the Fish Gallery of the British Museum (Natural History), 227
Coenopterid Fern : Megaspore Tetrads in a (W. G. Chaloner), 771
Coenzyme A Deacylase (Acetyl), and Citridesmolase : Separation of the Condensing Enzyme of *Aspergillus niger* from, and the Effect of Magnesium Ion on the Purified Fraction (Prof. C. V. Ramakrishnan), 1601
Coeruloplasmins from Human Serum : Separation and Characterization of Two (Dr. Lars Broman), 1655
Coffea arabica : Zinc Deficiency induced by Mercury in (K. R. Bock, J. B. D. Robinson and G. T. Chamberlain), 1607
Coghlan, J. P., and others : Changes in the Potassium Concentration and Metabolism of Red Blood Cells of the Lamb, 1742
Cohen, Dr. H. : Principles of Engineering Heat Transfer, *review*, 623
Cohen, Prof. J. : Aggression, *review*, 1763
Cohen, Dr. M. : Charge Transfer Processes (Anodic Processes—Formation and Properties of Passive Films formed on Iron), 1354
Cohen, M. H. : Spectroscopy of Solids (Optical Properties of Metals), 160
Cohen, William : Characterization of Ficin, 659
Coherent Scattering of 1·33 MeV. γ-Rays by Lead (Dr. K. G. Standing and J. V. Jovanovich), 521
Cohn, P. M. : Linear Equations, *review* by Prof. T. A. A. Broadbent, 827
Cohn, Dr. Robert, and Ulshafer, Comdr. Thomas R. : Electroencephalograph Correlates of Ammonium Carbonate Intoxication in the Rat, 1735
Cohn, Victor : Soviet International Press Censorship, 1774
Colchicine : Effect of, on the Utilization of Labelled Thymidine during Chromosomal Reproduction (L. F. La Cour and Dr. S. R. Pelc), 506
Colclough, Dr. T. P. : Fuel and Power in British Industry (The Metallurgical Industries), 1715
Cold : Sol-Gel Transitions in the Living Cells of Conifers and their relation to Resistance to (Johnson Parker), 1815
Cold-stored Fish : Measurement of Toughness in (Dr. R. M. Love), 108
Cole, A. R. H., and others : Chemistry of Plant Products (Triterpenoid Constituents of the Myrtaceae), 300
Cole, W. F. (Demediuk, Thaisa, and) : A New Approach to the Investigation of the Cause of Moisture Expansion of Ceramic Bodies, 1223
Coleman, G. S. : Maintenance of Oligotrich Protozoa from the Sheep Rumen *in vitro*, 1104
Coleman, R. V. : Mechanical Properties of Whiskers and Thin Films (Dislocation Structure in Iron Whiskers), 297
Coleoptile Straight-Growth Test : Growth-promoting Activity of Potato Tuber Extracts in the—Quantitative Aspects of Indoleacetic Acid Detection (A. Booth and Dr. P. F. Wareing), 406
Coles, Dr. B. R. : Measurements of Conduction at Low Temperatures (Galvanomagnetic Effects in Metals), 84
Colgate, Dr. S. A. : Controlled Nuclear Fusion Reactions, 1052
Colhoun, E. H. : Distribution of Choline Acetylase in Insect Conductive Tissue, 1378
Collagen in Human Cementum as shown by Electron Microscopy (C. H. Tonge and E. H. Boult), 459
Collar, Prof. A. R. : Aeroelasticity—Retrospect and Prospect (Second Lanchester Memorial Lecture of the Royal Aeronautical Society), 1643
Collecting, Preserving and Studying Insects (Harold Oldroyd), *review* by B. D. Moreton, 420
Collective Motion : Problems of (Physical Society Conference on), 1554
Collège de France (Laboratory of Physiological Acoustics), and others : International Colloquium on Communication and Language, 1644
Colleges of Technology in Britain, 157
Colless, Dr. Donald H. : Relationship between certain Biological Constants and Trophic Condition in Mosquito Populations, 951
Collier, Dr. H. O. J., and others : Some New Neuromuscular Blocking Agents, 1424
Collin, Alexandre : Landslides in Clays (1846), translated by W. R. Schriever, *review* by R. L. Nash, 552
Collins, F. D. : Complex Phospholipids, 865
Colloidal Molybdenum Oxide as Catalyst : Photosynthesis of Amino-Acids from Paraformaldehyde involving the Fixation of Nitrogen in the Presence of (K. Bahadur, S. Ranganayaki and Prof. L. Santamaria), 1668
Colloids, Old and New, *review* by Dr. C. H. Bamford, 751
Colloids : Organic (Prof. Bruno Jirgensons), *review* by Dr. C. H. Bamford, 751
Colombia : The Bromeliaceae of (L. B. Smith), 295
Colombo Plan for Co-operative Economic Development in South and South-East Asia : Sixth Annual Report of the Consultative Committee (1957), 1718
Colonial Development, 636
Colonial Development Corporation : Report and Accounts for 1957, 430
Colonial Development and Welfare Acts : Return of Schemes made in the period April 1957-March 1958, 636
Colonial Office : The Colonial Territories 1957-1958, 566
Colonial Territories, 1957-1958 (Colonial Office), 566
Colorimetric Analysis, *review* by C. O. Harvey, 1331
Colorimetric Determination of Inorganic Phosphorus in the Presence of Glucose-1-phosphate and Adenosine Triphosphate (Michinori Nakamura and Kenji Mori), 1441
Colorimetric Determination of Nonmetals (edited by David F. Boltz), *review* by C. O. Harvey, 1331
Colorimetric Test for Gibberellic Acid and Evidence from a Dwarf Pea Assay for the Occurrence of a Gibberellin-like Substance in Wheat Seedlings (G. M. Simpson), 528
Colour Blind : Visual Pigments in the (Dr. W. A. H. Rushton), 690
Colour Blindness : Some Problems of Colour Vision and (Prof. R. W. Pickford), 584
Colour Changes in Teleosts (Priscilla Rasquin), 564
Colour Polymorphism (Geographical), and Chromosome Constitution in Sympatric Species of Sawflies (Dr. F. L. Waterhouse and Dr. Ann R. Sanderson), 477
Colour Television Tests : The B.B.C—an Appraisal of Results (W. N. Sproson, S. N. Watson and M. Campbell), 1490
Colour Vision and Colour Blindness : Some Problems of (Prof. R. W. Pickford), 584
Colour Vision Studies and the X-Chromosome Constitution of Patients with Klinefelter's Syndrome (Dr. P. E. Polani, Dr. P. M. F. Bishop, Dr. B. Lennox, Dr. M. A. Ferguson-Smith, Dr. J. S. S. Stewart and Dr. A. Prader), 1092
Colover, Dr. J. : Experimental Allergic Encephalomyelitis—Experimental Allergic Encephalomyelitis induced with Combined 'Purified' Spinal Cord and Bacillary Fractions, 105
Colter, Dr. J. S., and others : Selection of Cell Lines in Tissue Culture by the Use of Cytotoxic Antisera, 1246
Colton, Dr. R., and others : Some Complex Cyanides of Rhenium, 393
Columns (Capillary Tube), in Gas Chromatography : A Detector for use with (Dr. J. E. Lovelock), 1663
Combinatory Logic (Prof. Haskell B. Curry, Prof. Robert Feys and Prof. William Craig), Vol. I, *review* by F. I. G. Rawlins, 1590
Combustion : Sixth Symposium (International) on (Yale University, 1956), *review* by Dr. J. H. Burgoyne, 490
  Seventh International Symposium on (British Section of the Combustion Institute and the Institute of Fuel), 363
  Eighth International Symposium on (Combustion Institute, Pittsburgh), 771
Combustion (Swift), of Organic Compounds for Analysis (Dr. Irmgard K. H. Otter), 393
Combustion Institute, Pittsburgh : Bernard Lewis Medal awarded to Dr. Bernard Lewis, 771
  Alfred C. Egerton Medal awarded to Sir Alfred Egerton, 771
  Silver Medal awarded to Prof. Seiichiro Kumagai and Hiroshi Isoda, 771
  Eighth International Symposium on Combustion, 771
Combustion Institute (British Section), and the Institute of Fuel: Seventh International Symposium on Combustion, 363
Combustion Problems : Selected, 2, Transport Phenomena, Ignition, Altitude Behaviour and Scaling of Aeroengines (M. W. Thring, senior editor), (AGARD Combustion Colloquium, Liège, 1955), *review* by Dr. J. H. Burgoyne, 622
Cometary Spectra, 564
Comets Arend-Roland (1956*h*) and Mrkos (1957*d*) : Polarization of Light of the (M. Blaha, A. Hruška, Z. Svestka and V. Vanysek), 331
Comfort, Dr. Alex : Awarded a Ciba Foundation Award for 1958 for Research in Ageing, 19
  Coat-Colour and Longevity in Thoroughbred Mares, 1531
Commerce : Special Courses in Higher Technology, including Management Studies and (1958-59), Part I, Autumn Term (London and Home Counties Regional Advisory Council for Higher Technological Education Bulletin of), 842
Common Grasses : δ-Acetylornithine, a Constituent of some (Dr. L. Fowden), 406
Common or Hottentot Mole-Rat, *Cryptomys hottentotus* Lesson, 1826 : Albinism in the (Peter St. J. Turnbull-Kemp), 63
Commons, House of : Debate on Plutonium from Civil Nuclear Power Stations, 292
  Debate on the Grey Seal, 561
  Second reading of the Development of Inventions Bill, 1484
Commonwealth : Universities of the (Eighth Quinquennial Congress), 433, 1283
Commonwealth Advisory Committee on Defence Science—Meeting in Australia, 697
Commonwealth Agricultural Bureaux : Appointment of Dr. J. G. Malloch as chairman of the Executive Council, 990
Commonwealth Bureau of Animal Health : Review Series No. 5, Salmonellosis in Animals (Dr. A. Buxton), *review* by Dr. Joan Taylor, 1046
Commonwealth Bursaries (Royal Society and Nuffield Foundation) : Awards, 1641
Commonwealth Co-operation in Scientific Research, 1551
Commonwealth Countries : Mutual Assistance between, 1693
Commonwealth Department of Supply (Australian) : Weapons Research Establishment (communicated by W. A. S. Butement), 145
Commonwealth Fellowship (Corday-Morgan), for 1958-59 awarded to Miss Rama Bhattacharya, 700
Commonwealth Fellowships, 1276, 1487
Commonwealth Fund : Harkness Fellowships, 699
Commonwealth Overseas Research Council : Establishment of a, 1413
Commonwealth Scientific and Industrial Research Organization (Australia) : Appointment of N. A. Esserman as the first director of the National Standards Laboratory, Sydney, 291
  Retirement of Dr. G. H. Briggs as chief of the Physics Division of the National Standards Laboratory, 291
  Appointment of Dr. R. G. Giovanelli as chief of the Physics Division of the National Standards Laboratory, 292
  Annual Report for 1956-57 of the Division of Metrology of the National Standards Laboratory, 1137
  Work of the Divisions and Sections, 1555

The Wool Textile Research Laboratories at Melbourne, Sydney and Geelong made Divisions of the Organization, and in future to be called the C.S.I.R.O. Wool Research Laboratories, 1777
Commonwealth Trade and Economic Conference : Report of the, 1693
Commonwealth Universities Yearbook, 1958 (Association of Universities of the British Commonwealth), *review*, 553
Commonwealth (British), Association of Universities of the : Commonwealth Universities Yearbook (1958), *review*, 553
Commonwealth (British), Association of Universities of the (British Council and the) : Higher Education in the United Kingdom, revised edition, 1277
Commonwealth (British) Collections of Micro-organisms (United Kingdom National Committee of the) : Preparation of a new edition of the Directory of Collections and List of Species maintained in the United Kingdom and Crown Colonies, 1277
Commonwealth and Overseas : Museums in the, with special reference to the Training of Curators (Museums Association Discussion on), 503
Communication : Perception and (D. E. Broadbent), *review* by J. A. Deutsch, 1572
Communication and Language : International Colloquium on (Faculty of Medicine of the Université de Paris, the Société Française de Phoniatrie and the Laboratory of Physiological Acoustics of the Collège de France), 1644
Community : A Melanesian Urban, *review* by G. K. Roth, 6
Commutative Algebra (Prof. Oscar Zariski and Prof. Pierre Samuel, with the co-operation of I. S. Cohen), Vol. I, *review* by Dr. L. S. Goddard, 759
Comolli, R., and others : Action of Testosterone Propionate and 4-Chlorotestosterone Acetate on Protein Synthesis *in vitro*, 663
Company : Earth's (Leslie Reid), *review* by Prof. Alan R. Gemmell, 683
Jolly Good, *review* by Prof. Alan R. Gemmell, 683
Comparative Endocrinology (Columbia University Symposium on), 774
Comparative Kinetic Behaviour of Thrombin, Plasmin and Trypsin toward Synthetic Substrates (Dr. H. A. Scheraga, S. Ehrenpreis and E. Sullivan), 461
Comparative Physiology of the Nervous Control of Muscular Contraction (Dr. Graham Hoyle), *review* by Dr. J. W. S. Pringle, 416
Comparison of an Ammonia Maser with a Caesium Atomic Frequency Standard (J.-P. Blaser and J. Bonanomi), 859
Comparison of Astronomical Time Measurements with Atomic Frequency Standards (J.-P. Blaser and J. De Prins), 859
Comparison of Caesium Frequency Standards of Different Construction (Dr. L. Essen, J. V. L. Parry, J. H. Holloway, W. A. Mainberger, F. H. Reder and G. M. R. Winkler), 41
Comparison of the Effect of Ultra-violet and X-Rays on the Capillaries of the Frog's Web (Horst Bücker and Wilfried Hanke), 1375
Comparison of Measured and Computed Values of the Rapid Fading-Rate of Ultra High-Frequency Signals reflected from the Moon (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
Comparison of Radio Echoes from the Aurora Australis and Aurora Borealis (D. P. Harrison and C. D. Watkins), 43
Comparison of the Salivary Secretion of both Parotid Glands in a Sheep (M. Somers), 400
Comparison of the Tendency to cling to Glass and Haemagglutination produced in Erythrocyte Suspensions by Ferric Chloride and by Influenza Virus (William R. Chesbro and Prof. Leslie R. Hedrick), 1164
Compensatory Responses of Fish and Crustacea to Horizontal Displacement of the Body : Analogies between the (D. H. A. Marr), 1621
Competition between Genotypes in *Drosophila melanogaster* (P. A. Parsons), 271
Competitive Saprophytic Ability of Soil Fungi : A Technique for the Investigation of the, by the Use of Easily Decomposed Substrates (S. T. Matturi and Dr. H. Stenton), 1248
Complementation : Gene Control of Specificity and Activity—Loss by Mutation and Restoration by (Prof. D. Lewis), 1620
Complete Transverse Lesions of the Spinal Cord : Adrenal Activity in Subjects with (Dr. R. Robinson and Dr. A. F. Munro), 805
Complex (Helical Steroid) : Formation of a (Dr. Alexander Rich and Dr. David M. Blow), 423
Complex (Vitamin B) : Effect of, on the Teratogenic Activity of Hypervitaminosis A (Dr. J. W. Millen and Dr. D. H. M. Woollam), 940
Complex Alloy Steel : A New Phase in a (G. T. Brown, R. T. Allsop and D. Wilkinson), 1437
Complex Cyanides of Rhenium : Some (Dr. R. Colton, Prof. R. D. Peacock and Prof. G. Wilkinson), 393
Complex Forms of Cellulase (Dr. P. Reinouts van Haga), 1232
Complex Halides of the Transition Metals : Stereochemistry of (Dr. Naida S. Gill, Prof. Ronald S. Nyholm and Peter Pauling), 168
Complex Ion : Electronic Configuration d^4 in a (Dr. Almon G. Turner, jun., and Alan F. Clifford), 1369
Complex Phospholipids (F. D. Collins), 865
Complex-formation by Indoleacetic Acid *in vitro* : Chelation or (D. A. Recaldin and Prof. O. V. S. Heath), 539
Complexes between Acridine Orange and Polynucleotides : Inhibition and Activation of Polynucleotide Phosphorylase through the Formation of (Dr. Roland F. Beers, jun., and Dr. Daniel D. Hendley, and Dr. Robert F. Steiner), 242
Complexes (Copper) : Fungitoxic Action of 8-Hydroxyquinoline, Pyridine-N-oxide-2-thiol and Sodium Dialkyldithiocarbamates and their (A. Kaars Sijpesteijn and M. J. Janssen), 1313
Complexes (Ferrous) : Uptake of Molecular Oxygen by (J. F. Drake and Dr. R. J. P. Williams), 1084
Complexes (Haemoglobin–Haptoglobin), and other Substances with Peroxidase Activity : Detection of Haemoglobin, after Zone Electrophoresis (Dr. J. A. Owen, H. J. Silberman and C. Got), 1373
Complexes (Higher Bromo-), of Tervalent Gold : Formation of, in Non-Aqueous Solution (C. M. Harris and I. H. Reece), 1665
Complexes (Metal) : Stability of, with Salicylic Acid and related Substances (D. D. Perrin), 741
Complexes (Serological), of Ovalbumin and Haemoglobin : Dissociation of, using Aqueous Carbon Dioxide (Dr. B. T. Tozer, K. A. Cammack and Dr. H. Smith), 668, *erratum*, 842
Complexes (Spin-Free Transition Series) : Magnetic Properties of (Dr. B. N. Figgis), 1568
Complexometric Analysis, *review* by C. O. Harvey, 1471
Complexons : Radiometric Titrations with (T. Braun, I. Maxim and I. Galateanu), 936
Component (Nucleonic), of Cosmic Ray Air Showers : Dependence of, on Radius (C. S. Wallace, Dr. M. M. Winn and Dr. K. W. Ogilvie), 1653
Components (Aerodynamic), of Aircraft at High Speeds (edited by A. F. Donovan and H. R. Lawrence), *review* by Dr. W. P. Jones, 1582
Components (Human Plasma) : High Resolution of, by Starch Gel Electrophoresis (Dr. J. M. Fine, J. Loeb and E. Waszczenko-z), 452
Components (Nitrogenous), of the Tracheal Sap in Apples (E. G. Bollard), 21
Composition of the Cell Wall of *Staphylococcus aureus* 209P (Nobutoshi Ishimoto, Masahiro Saito and Eiji Ito), 959
Composition of Milk, Committee on the : First meeting, 87
Composition of the Nucleic Acids of some Algae (Dr. Eva M. Low), 1096
Compositions of Deoxyribonucleic and Ribonucleic Acids : A Correlation between the (Prof. A. N. Belozersky and A. S. Spirin), 111
Compound (Leuco-) : Presence in Root Tips of a Thermolabile Factor causing the Conversion of Protochlorophyll to a (Z. Hejnowicz), 1023
Compounds : Metabolism of Coumarin and related, in Cultures of *Penicillium* Species (David M. Bellis), 806
Utilization of Nitrogen and its, by Plants (Society for Experimental Biology Symposium on), 229
Compounds labelled with Carbon-14 from Carbon-14 Dioxide accelerated in an Electric Field : Production of (M. Guillaume), 1592
Compounds (Co-ordination) : Chemistry of (National Academy of Sciences of India Symposium on), 1279
Compounds (Fluorine) : Chemistry of (British Association for the Advancement of Science, Section B (Chemistry), Discussion on), 1269
Compounds (Haematin), in Plants : Day-length and (C. Sironval), 1170
Compounds (Imidazole), and Creatine : Effect of Diet on, in Chinook Salmon (Dr. A. Lukton), 1019
Compounds (Intermetallic), in Mercury : Application of the Hanging Mercury Drop Electrode to an Investigation of (Prof. Wiktor Kemula, Zbigniew Galus and Zenon Kublik), 1228
Compounds (Metal-Protein) : A Novel Type of (Prof. K. H. Gustavson), 1125
Compounds (Naphthalene) : The Chemistry and Technology of (Norman Donaldson), *review* by Dr. G. Baddeley, 751
Compounds (Nucleotide–Amino-Acid), of Yeast : Soluble Nucleotides and (Dr. D. A. Gilbert and Prof. E. W. Yemm), 1745
Compounds (Organic) : Swift Combustion of, for Analysis (Dr. Irmgard K. H. Otter), 393
Compounds (Organo-Phosphorus) : Nature of the Reactive Serine Residue in Enzymes inhibited by, (Mechanism of Esterase Action), (G. R. Porter, Prof. H. N. Rydon and J. A. Schofield), 927
A Possible Mechanism of Action of Esterases inhibitable by, (Mechanism of Esterase Action), (Prof. H. N. Rydon), 928
Compounds (Phenolic) : Metabolism of, by the Broad Bean *Vicia faba* (Dr. J. B. Pridham), 795
Compounds (Phenolic), in Plants : Biosynthesis of (Plant Phenolics Group Meeting on), 229
Compounds (Solid Addition) : Halogen-Molecule Bridges in (Prof. O. Hassel and Knut O. Strømme), 1155
Compounds (Thiol) : Chromatography of (Dr. S. P. Spragg), 1314
Comprehensive School : Inside the—a Symposium contributed by Heads of Comprehensive Schools in England and Wales (collected and edited by the National Union of Teachers), *review* by Robert W. Fenn, 1590
Compressible Flow in High-Speed Aerodynamics, *review* by Dr. W. P. Jones, 755
Compulsion : Control and, *review* by Norman Cuthbert, 418
Computability and Unsolvability (Prof. Martin Davis), *review* by Dr. A. D. Booth, 1583
Computations (Analogue) : Second International Conference for, 22
Computed Values of the Rapid Fading-Rate of Ultra High-Frequency Signals reflected from the Moon : Comparison of Measured and (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
Computer Exhibition : Electronic (To be held at Olympia), 565
Computer (Business) Symposium and Electronic Computer Exhibition (Electronic Engineering Association and the Office Appliance and Business Equipment Trades Association), 918
Computer (Electronic) Exhibition and Business Computer Symposium (Electronic Engineering Association and the Office Appliance and Business Equipment Trades Association), 918
Computer Applications Symposium (Armour Research Foundation of the Illinois Institute of Technology), 918
Computer Training Centre, Hollerith : Bradenham Manor leased by the National Trust to the British Tabulating Machine Co., Ltd., for use as a, 563
Computers : Electronic Digital (Franz L. Alt), *review* by Dr. A. D. Booth, 1583
Computers (Electronic Digital), and their Industrial Applications (Conference at Birmingham College of Technology), 1205
Computers Galore, *review* by Dr. A. D. Booth, 1583
Comsa, Dr. J. : Influence of the Thymus on the Reaction of the Adrenal to Adrenocorticotropic Hormone in the Rat, 57
Influence of the Thymus upon the Reaction of the Rat to Anterior Pituitary Growth Hormone, 728
Conant, James Bryant, and Nash, Leonard K. (edited by) : Harvard Case Histories in Experimental Science, 2 vols., *review* by J. A. Ratcliffe, 348
Concentrating Mechanism (Ascorbic Acid) : Activation of an, by some Corticosteroids *in vitro* (Leon S. Vann and Robert Hill), 458
Concentration in the Human Ovarian Follicular Fluid of Radioactive Tracers and Drugs circulating in the Blood (Prof. Kurt N. von Kaulla, Jerry K. Aikawa and John D. Pettigrew), 1238
Concentration (Carbon Dioxide), in Wheat Leaves : Effects of Water-Strain on the Minimum Intercellular Space (Prof. O. V. S. Heath and Dr. H. Meidner), 1524
Concentration and Activity : Hydrogen Ion, *review* by Prof. H. T. S. Britton, 1258
Concentration (High), of Hydrogen Atoms : Production of (K. R. Jennings and Dr. J. W. Linnett), 597
Concentrations (Surface), of Manganese Nodules (Prof. H. W. Menard and C. J. Shipek), 1156
Concept of the Pacific (Annual Report for 1957 of the Bernice P. Bishop Museum), 1642
Concept (The Species), among Viruses (Dr. C. H. Andrewes and Dr. P. H. A. Sneath), 12

Concessions (Tax), on Subscriptions to Learned Societies, 294
Conde, H. : At the Ninth General Physics Conference of the Swedish National Committee for Physics (Generation and Measurement of High Thermal Radiation Intensities), 698
Condensation produced by Ultra-Violet Light (Dr. A. J. Barnard and W. L. Moulton), 1001
Condensed Tannins : Chemistry of (Plant Phenolics Group Discussion on), 1488
Condensed Tannins in Plants : Formation of (W. E. Hillis), 1371
Condensing Enzyme of *Aspergillus niger* : Separation of the, from Acetyl Coenzyme *A* Deacylase and Citridesmolase and the Effect of Magnesium Ion on the Purified Fraction (Prof. C. V. Ramakrishnan), 1601
Condition (Trophic), in Mosquito Populations : Relationship between certain Biological Constants and (Dr. Donald H. Colless), 951
Conditional Anti-Mutagenesis in *Drosophila melanogaster* (Dr. Thomas Alderson), 508
Conditioning and Habituation to Arousal Stimuli in Animals : Effect of Drugs on (Dr. B. J. Key and Dr. P. B. Bradley), 1517
Conditions which eliminate Inflammation to Homografts in Rabbits (Dr. Richard H. Andresen, Dr. Clarence W. Monroe, Dr. George M. Hass and Dr. Dorothy A. Madden), 1452
Conditions (Neutral) : Isolation of Oxo-Steroids under (Dr. W. Taylor), 1735
Conditions (Social), in England and Wales as illustrated by Statistics : A Survey of (Sir Alexander Carr-Saunders, D. Caradog Jones and C. A. Moser), third edition, *review* by Prof. E. Grebenik, 1330
Conduction at Low Temperatures : Measurements of (Low Temperature Group of the Physical Society Symposium on), 83
Conductive Tissue (Insect) : Distribution of Choline Acetylase in (E. H. Colhoun), 1378
Conductivity of Electrolyte Solutions : Temperature Dependence of the (N. van Meurs), 1532
Conductivity Detector (Thermal), in Gas Chromatography : Effect of the Carrier Gas on the Sensitivity of a (Dr. N. H. Ray), 1663
Conductivity Water from Ion-Exchange Resins : Contamination of Surfaces by (J. H. Schenkel and Dr. J. A. Kitchener), 131
Cones (Male), of *Encephalartos* : Temperature Variations in (Amy Jacot-Guillarmod), 474
Configuration of N-Acetylneuraminic Acid (Dr. J. Brug and G. B. Paerels), 1159
Configuration d^4 (Electronic), in a Complex Ion (Dr. Almon G. Turner, jun., and Alan F. Clifford), 1369
Configuration (A New), of Deoxyribonucleic Acid (D. A. Marvin, M. Spencer, Dr. M. H. F. Wilkins and L. D. Hamilton), 387
Confinia Psychiatrica, Vol. 1, No. 2, 227
Conformal Transformations in Electrical Engineering (Dr. W. J. Gibbs), *review* by Dr. L. S. Goddard, 1630
Confusion between *Gromia oviformis* and *Allogromia ovoidea* (Dr. R. H. Hedley), 1391
Conifers : Sol-Gel Transitions in the Living Cells of, and their relation to Resistance to Cold (Johnson Parker), 1815
Conjugated Systems : Steric Effects in (Chemical Society Symposium on), 568
Connecticut Academy of Arts and Sciences : Transactions, Vol. 41, Amber Spiders in European Collections (Alexander Petrunkevitch), *review* by T. H. Savory, 1588
Connelly, Dr. C. M., and others : Localization of Interaction Sites in Multi-Component Transfer Systems—Theorems derived from Analogues, 1190
Connexions of the Central Nutrient Mass in *Lumbricus* Spermatogenesis : Origin and (Prof. J. Brontë Gatenby and Dr. A. J. Dalton), 886
Consden, Dr. R. : Chromatographic Techniques, *review*, 215
  Die Bluteiweisskörper des Menschen, *review*, 623
Consequence of Enzyme-catalysed Group-Transfer : Group-Translocation—a (Dr. Peter Mitchell and Dr. Jennifer Moyle), 372
Conservation of Museum Objects, International Institute for the : Grant from the Gulbenkian Foundation, Lisbon, of up to £6,000 over three years, 1493
  Work of the, 1709
Conservation of Natural Resources (Prof. W. H. Pearsall), 1405
Conservation of Nature and Natural Resources, International Union for : Sixth General Assembly to be held jointly with the Seventh Technical Meeting of the Hellenic Society for the Protection of Nature, 89, 1405
Constants (Biological), and Trophic Condition in Mosquito Populations : Relationship between certain (Dr. Donald H. Colless), 951
Constants (Dissociation), of Chelidonine and Protopine : Separation and Determination of the, by Paper Chromatography (Dr. Wanda Debska), 666
Constants (Elastic) : Number of, required in Crystal Elasticity (N. Joel and Dr. W. A. Wooster), 1078
Constants (Elastic), of Diamond (Dr. W. A. Wooster and N. Joel), 1149
  The Four (Prof. R. S. Krishnan, Dr. V. Chandrasekharan and E. S. Rajagopal), 518
Constants (Verdet), of Rare-Earth Glasses measured with a New Polarimeter (Niels O. Young), 333
σ-Constants (Hammett) : Determination of, by Intramolecular Hydrogen Bonding (A. T. Shulgin and A. W. Baker), 1299
Constituent of some Common Grasses : δ-Acetylornithine a (Dr. L. Fowden), 406
Constituent (Important), of Sea Water : Perchlorate, an (L. G. M. Baas Becking, A. D. Haldane and David Izard), 645
Constitution (Chromosome), in Sympatric Species of Sawflies : Geographical Colour Polymorphism and (Dr. F. L. Waterhouse and Dr. Ann R. Sanderson), 477
Constitution (X-Chromosome), of Patients with Klinefelter's Syndrome : Colour Vision Studies and the (Dr. P. E. Polani, Dr. P. M. F. Bishop, Dr. B. Lennox, Dr. M. A. Ferguson-Smith, Dr. J. S. S. Stewart and Dr. A. Prader), 1092
Consultants Bureau, Inc. : To undertake the translation of all non-English articles appearing in each issue of the *Czechoslovak Journal of Physics*, beginnning with the January 1959 issue, 1279
Contact (Thermal), at Low Temperatures (Dr. R. Berman and C. F. Mate), 1661
Contact Angles and Work of Adhesion (Prof. N. K. Adam and Dr. H. K. Livingston), 128
Contaminants (Atmospheric) : Effect of, on Paper Chromatography of Urinary Indole and Phenol Acids (K. N. F. Shaw and J. Trevarthen), 664
Contamination of Surfaces by Conductivity Water from Ion-exchange Resins (J. H. Schenkel and Dr. J. A. Kitchener), 131
Contamination (Radioactive), of Foods : Nutritional Hazards caused by (Scottish Group of the Nutrition Society Symposium on), 700
Contemporary Problems in Mathematical Teaching and Staffing (British Association for the Advancement of Science, Sections A (Mathematics and Physics) and L (Education), Joint Discussion on), 1064
Conti, S. F., and others : Nuclear Changes occurring during Bud-formation in *Saccharomyces cerevisiae* as revealed by Ultra-thin Sectioning, 454
Continuous Creation : From Divine to, *review* by Dr. A. R. Hall, 277
Continuous-Flow Method for the Study of Microbiological Processes in Soil Samples (Dr. J. Macura and Dr. I. Málek), 1796
Continuous Suspended Culture : Critical Effect of Oxygen Tension on Rate of Growth of Animal Cells in (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Continuous Time Treatment of a Storage Problem (J. Gani and N. U. Prabhu), 39
Continuous-writing Streak Camera (Beckman and Whitley), 564
Contraction : Inward Movement of Calcium as a Link between Electrical and Mechanical Events in (Prof. George B. Frank), 1800
Contraction (Muscular) : Carnosine Phosphate as Phosphate Donor in (D. F. Cain, Dr. A. M. Delluva and Prof. R. E. Davies), 720
  Comparative Physiology of the Nervous Control of (Dr. Graham Hoyle), *review* by Dr. J. W. S. Pringle, 416
  The Fundamental Molecular Event in (Dr. F. G. E. Pautard), 788
  Kinetics of, in Heavy Water (M. C. Goodall), 677
Contribution of High-Energy Particles to Thermonuclear Reaction Rates (Dr. G. Eder and Dr. H. Motz), 1140
Control in Great Britain : Economic Planning by Programme and (Prof. Gilbert Walker), *review* by Norman Cuthbert, 418
Control of Aquatic Weeds and Algae (Aylwin P. Chancellor), 361
Control of Dollar Spot Disease (*Sclerontinia homoeocarpa*), (Sports Turf Research Institute), 564
Control of Evolution in Man (Prof. C. D. Darlington), 14
Control of Lecithinase Activity by the Electrophoretic Charge on its Substrate Surface (Dr. A. D. Bangham and Dr. R. M. C. Dawson), 1292
Control of Research Programmes in the Department of Scientific and Industrial Research, 429
Control *Habrobracon* Females (Irradiated and) : Ingestion of Ethylenediaminetetraacetic Acid and the Effect on Life Span of (Leo E. LaChance), 870
Control (Gene), of Specificity and Activity—Loss by Mutation and Restoration by Complementation (Prof. D. Lewis), 1620
Control (Genetic), of the Cytologically Diploid Behaviour of Hexaploid Wheat (Dr. Ralph Riley and Victor Chapman), 713
Control (Genetical), of Resistance in Living Organisms : Nature and (British Association for the Advancement of Science, Sections D (Zoology) and K (Botany), Joint Discussion on), 921
Control (Genotypic), of Crossing-over on the First Chromosome of *Drosophila melanogaster* (M. J. Lawrence), 889
Control (Nervous), of Muscular Contraction : Comparative Physiology of the (Dr. Graham Hoyle), *review* by Dr. J. W. S. Pringle, 416
Control (Population) : An Apparently Simple Case of (M. H. Williamson), 1108
Control (Treasury), and Expenditure (Sixth Report from the Select Committee on Estimates, Session 1957-58), 1467
Control (Treasury), and Scientific Research, 1467
Control (Variance), in the Animal House (Dr. J. D. Biggers, Dr. Anne McLaren and Dr. Donald Michie), 77
Control and Compulsion, *review* by Norman Cuthbert, 418
Control and Instrumentation of Reactors : Course on, at the Harwell Reactor School (Atomic Energy Research Establishment), 295
Controlled Fusion : The United States Programme in (Project Sherwood), (A. S. Bishop), 1053
Controlled Nuclear Fusion : Exhibition on (Science Museum, London), 1710
Controlled Nuclear Fusion Reactions (Dr. R. S. Pease), 1051
Controlled Potential Electrolysis of Aromatic Substances : Electron Resonance Study of the Radicals produced by (D. E. G. Austen, Dr. P. H. Given, Dr. D. J. E. Ingram and M. E. Peover), 1784
Controlled Thermonuclear Project : Transfer from Harwell to Winfrith Heath, Dorset, 697
Controlled Thermonuclear Reactions : Plasma Physics and the Problems of (edited by Leontovitch), 1053
Conversion of Carbon-14 Dioxide to Starch Glucose during Photosynthesis by Spinach Chloroplasts (Prof. Martin Gibbs and Morris A. Cynkin), 1241
Conversion of Chemical into Mechanical Energy : Size and Shape Changes of Polyelectrolytes—(Seminar at University College, London, on), 762
Conversion of Protochlorophyll to a Leuco-Compound : Presence in Root Tips of a Thermolabile Factor causing the (Z. Hejnowicz), 1023
Conversion Techniques : Notes on Analog–Digital (edited by Alfred K. Susskind), *review* by Dr. A. D. Booth, 1583
Conversions (Inch–Metric), in British Standards (F. A. Gould), 1767
Convex Geometry, *review* by Prof. T. A. A. Broadbent, 1472
Convexity (Dr. H. G. Eggleston), *review* by Prof. T. A. A. Broadbent, 1472
Conway, Dr. B. E. : Charge Transfer Processes, 1353
Conway, Dr. B. E., and Bourgault, P. L. : Charge-Transfer Processes (Anodic Processes—Kinetics of Self-discharge of Nickel–Nickel Oxide Electrodes), 1354
Cook, Dr. A. H. : Brewing, *review*, 1116
Cook, Dr. A. H. (edited by) : The Chemistry and Biology of Yeasts, *review* by R. B. Gilliland, 488
Cook, Dr. A. M. : Appointed to the University of London readership in pharmaceutics at the School of Pharmacy, 700
Cook, Dr. Elton S. (Motzel, Werner, and) : Antibiotic Substances from Yeast, 455
Cook, Dr. J. C. : Antarctic Research (The Topography of the Sub-Glacial Continent), 287
Cook, J. M. : Appointed to a chair of ancient history and classical archaeology in the University of Bristol, 158
Cook, Dr. J. W. : Commonwealth Universities' Congress (1958), 1283
Cook, R. M. : Early Writing in Greece, 152

Cook, Dr. R. P. (edited by) : Cholesterol, *review* by Prof. G. A. D. Haslewood, 1332
Cook, W. F., and Pickering, Sir George : A Rapid Method for Separating Glomeruli from Rabbit Kidney, 1103
Cooke, Dr. R. G. : Set Theory, *review*, 1046
  Vector Spaces and Matrices, *review*, 1117
Cooke-Yarborough, E. H. : An Introduction to Transistor Circuits, *review* by D. D. Jones, 756
Cooling (Nuclear) : Nuclear Orientation and (Dr. N. Kurti), 92
Cooling (Thermoelectric) : Semiconductor Thermoelements and (Prof. A. F. Ioffe), translated from the Russian, *review* by Prof. G. F. J. Garlick, 72
Coombe, J. B., and Tribe, Dr. D. E. : Toxicity of Urea to Sheep, 116
Coope, G. R. : Appointed lecturer in geology at the University of Birmingham, 158
Cooper, Dr. Bernard A. : Failure of Sorbitol to Replace Intrinsic Factor in the Gastrectomized Rat, 647
Cooper, Miss Dorothy J. : Appointed lecturer in education at the University of Bristol, 1487
Cooper, Dr. J. P. : Food and Population, *review*, 71
  At the eighth Plant Breeders' Conference (Genetics of Production Characters in Rye-Grass), 843
Cooper, Dr. L. H. N. (Shaw, T. I., and) : Oxidized Iodine in Sea Water, 251
Cooper, Dr. P. D., and others : Critical Effect of Oxygen Tension on Rate of Growth of Animal Cells in Continuous Suspended Culture, 1508
Cooper, R. E. : Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy (Polymerization of Polyelectrolytes by Magnesium Ions), 763
Co-operation on the Uses of Atomic Energy for Mutual Defence Purposes : Agreement between the Government of the United Kingdom of Great Britain and Northern Ireland and the Government of the United States of America for (Washington, 1958), 635
Co-operation (Commonwealth), in Scientific Research, 1551
Co-operation (International), and Geophysical Research, 428
Co-operation (International), in Science and Technology, 1329
Co-operation (International), in Scientific Research, 1397
Co-operation Administration (United States International) : Visit to Africa, 1276
Co-operative Economic Development in South and South-East Asia, Colombo Plan for : Sixth Annual Report of the Consultative Committee (1957), 1718
Co-operative Graduate Fellowships (National Science Foundation, Washington), 1486
Co-operative Phenomena, *review* by Prof. E. C. Stoner, 547
Co-ordinates (Planetary), for the Years 1960-1980 (prepared by H. M. Nautical Almanac Office), *review* by Dr. R. H. Garstang, 1763
Co-ordination in Thorium-IV Acetylacetonate (Prof. D. Grdenič and B. Matkovič), 465
Co-ordination (Tetrahedral), in Ni (II), (Dr. Leonard I. Katzin), 1013
Co-ordination (Tetrahedral), of Nickel (II), (Prof. E. C. Lingafelter), 1730
Co-ordination Chemistry (Chemical Society International Conference on, sponsored by the International Union of Pure and Allied Chemistry), 1710
Co-ordination Compounds : Chemistry of (National Academy of Sciences of India Symposium on), 1279
Copepod *Lernaeenicus* : Heavy Infestation by the Parasitic, of Sprats in the River Crouch (Dr. J. P. Harding and A. C. Wheeler), 542
Copley, Dr. A. L. : The Flow of Blood in relation to the Vessel Wall, 90
Copley, Dr. Gordon J. : Archaeology of South-East England, *review* by M. C. Burkitt, 971
Copley Medal for 1958 of the Royal Society awarded to Prof. J. E. Littlewood, 1344, 1631
Copper : Effect of, on Growth and Catalase Levels of *Corcyra cephalonica* St. in Zinc Toxicity (K. Sivarama Sastry and Prof. P. S. Sarma), 533
Copper (Microgram Amounts of), in Biological Material : Separation and Determination of Millimicrogram Amounts of Cobalt and (Aleksandra Smoczkiewiczowa and Witold Mizgalski), 53
Copper Complexes : Fungitoxic Action of 8-Hydroxyquinoline, Pyridine-N-oxide-2-thiol and Sodium Dialkyldithiocarbamates, and their (A. Kaars Sijpesteijn and M. J. Janssen), 1313
Copper Deficiency : Effect of, on Synthesis of Haem (R. L. Anderson and Prof. S. B. Tove), 315
Copper, Cobalt and Nickel : Induction of Respiratory Deficiency in Yeast by Manganese, (Prof. Carl C. Lindegren, Susumu Nagai and Hideko Nagai), 446
Copplestone, Father L. J. : At the Meeting in the Yugoslav Embassy in London to celebrate the bicentenary of the publication of Boscovich's 'Theoria Philosophiae Naturalis' (Boscovich's Atomism), 230
Corbet, Dr. Philip S. : Lunar Periodicity of Aquatic Insects in Lake Victoria, 330
Corbet, Dr. Philip S., and Corbet, Sarah A. : Emergence of a Summer Species of Dragonfly, 194
Corbet, Sarah A. (Corbet, Dr. Philip S., and) : Emergence of a Summer Species of Dragonfly, 194
Corbett, J. L., and others : Paper as a Carrier of Chromium Sesquioxide, 1014
Corby, G. A. : Air Flow over Mountains—Notes for Forecasters and Pilots, 94
Corby Young Naturalists' Club, 917
Corcyra cephalonica St. in Zinc Toxicity : Effect of Copper on Growth and Catalase Level of (K. Sivarama Sastry and Prof. P. S. Sarma), 533
Corday-Morgan Commonwealth Fellowship for 1958-59 awarded to Miss Rama Bhattacharya, 700
Core (Equatorial Atlantic Deep-Sea) : Secondary Oscillations in an (Dr. J. D. H. Wiseman), 1534
Coriaria : Root Nodules of (Dr. G. Bond), 474 ; (Dr. Pedro Montserrat), 475
Coriaria arborea : Nitrogen Fixation by Non-nodulated Plants, and by Nodulated (Greta Stevenson), 1523
Coriaria arborea Lindsay : Fixation of Nitrogen-15 by Excised Nodules of (Dr. G. P. Harris and T. M. Morrison), 1812
Cornatzer, Prof. W. E. (Snyder, Fred, and) : Vanadium Inhibition of Phospholipid Synthesis and Sulphydryl Activity in Rat Liver, 462
Corneo-Fundal Potential Variations during Light and Dark Adaptation (Christine Kris), 1027
Corner (Rectangular) : Error at a, in Relaxation Methods (R. Butler and S. V. Fagg), 600
Cornford, E. C. : High-Speed Flight (General Aspects of Travel at Very High Speeds with special reference to Rockets and Satellites), 696
Cornwall : Aerial Geophysical Survey of, 359
Cornwell, P. B. (Jefferies, D. J., and) : Lethal and Sterilizing Effects of Single and Fractionated Doses of Gamma Radiation on *Calandra granaria* L., 402
Corolla Size : Effect of Gibberellic Acid on (Mrs. Audrey Plack), 610
Correa F°, Joao Canali, and others : Analeptic Action of Anibine, 938
Correlated Failure of Synthetic Activities in a Wheat Chromosome (H. K. Jain), 1458
Correlates (Electroencephalograph), of Ammonium Carbonate Intoxication in the Rat (Dr. Robert Cohn and Comdr. Thomas R. Ulshafer), 1735
Correlation between the Compositions of Deoxyribonucleic and Ribonucleic Acids (Prof. A. N. Belozersky and A. S. Spirin), 111
Correlation between the Fat and the Protein Content of Human Milk (Dr. O. A. Roels), 673
Correlation between Sulphur Content and Net Dietary-protein Value (D. S. Miller and D. J. Naismith), 1786
Correlation of Whistlers and Lightning Flashes by Direct Aural and Visual Observation (Prof. M. G. Morgan), 332
Corrosion (Breakaway), of Uranium : Surface Oxide Films and the (J. S. Llewelyn Leach), 1085
Corrosion Product : An Unusual Form of (G. Butler and H. C. K. Ison), 1229
Corrosion Science : Essay on (Education Panel of the Corrosion Group of the Society of Chemical Industry Prize for an), 1063
Cortex (Adrenal), of the Mouse : Secretion of Androgens by the (Dr. Ruth Deanesly), 262
Cortex (Adrenal), of the White Rat : Deoxyribonucleic Acid Content of the Nuclei in the (H. Roels), 873
Cortex (Cerebral) : Effect of γ-Aminobutyryl-Choline on the Electrical Activity of the (Hidehiko Takahashi, Akira Nagashima and Chikao Koshino), 1443
  Evidence for a Relation between Creatine Phosphate Level and Polarity of the (J. Křivánek, Dr. J. Bureš and O. Burešová), 1799
Cortex (Human Adrenal) : Microvilli of the Cells of the (I. A. Carr), 607
Cortex Mitochondria : Physical Reactivity of Liver and Brain (Prof. J. Gayet), 941
Cortex Slices (Brain) : Endogenous Metabolism in (Dr. R. Vrba and Jaroslava Folberger), 237
Cortical Neurones (Adult Mammalian), in Tissue Culture : Effect of Adrenaline on Neurofibril Formation in (R. S. Geiger), 1674
Cortisone : Effect of Viral Infection and, upon Tumour Growth in Homologous and Heterologous Hosts (Dr. T. Kuwata, Y. Yasumura and M. Kanisawa), 1678
Corticosteroids *in vitro* : Activation of an Ascorbic Acid Concentrating Mechanism by (Leon S. Vann and Robert Hill), 458
Coryndon Memorial Museum, Nairobi : Annual Report for 1957, 989
Cosi, Laura, and others : Effect of Gamma-Radiation on Ferriprotoporphyrin, 316
Cosmic Distance Scale (Dr. Allan Sandage), 1132
Cosmic Ray Air Showers : Dependence of the Nucleonic Component of, on Radius (C. S. Wallace, Dr. M. M. Winn and Dr. K. W. Ogilvie), 1653
Cosmic Rays (Physical Society Conference on), 433, 1281
Cosslett, Dr. V. E. : Grant of £11,000 from the Paul Instrument Fund, for the further development and improvement of the X-ray microscope, 432
Costs of Education (John Vaizey), 1040
Cotchin, Dr. E. : Appointed to the University of London readership in veterinary pathology at the Royal Veterinary College, 158
Cotgrove, Dr. Stephen F. : Technical Education and Social Change, 481
Coto Doñana Expeditions : Portrait of a Wilderness—the Story of the (Guy Mountfort), *review* by Dr. W. Rydzewski, 1044
Cotton, J. B. (Inglis, Dr. N. P., and) : Some Recent Trends in Metallurgy (Corrosion Behaviour of Tantalum, Niobium, Titanium, Zirconium and Beryllium), 1125
Cotton in the Drier Regions of Uganda : a Revised Interpretation of the Causes of Loss of Crops of (J. Bowden and W. R. Ingram), 1750
Cotton in the Prehistoric Southwestern United States : Cultivation and Weaving of (Kate Kent), 1775
Cotton Industry Research Association, British : Progressive Development, 20
Cotton Plant in the Sudan Gezira : Effect of the, on certain Leaf-feeding Insect Pests (R. J. V. Joyce), 1463
Cottonseed and its By-products (Symposium at the Regional Research Laboratory, Hyderabad), 433
Cottrell, Prof. A. H. : Sir Geoffrey Taylor's Work on the Mechanics of Solids, *review*, 546
Cotyledons (Darkened), from Etiolated Sunflower Seedlings : Incorporation of Carbon-14 Dioxide into Sugars by (Dr. Clive Bradbeer), 1429
Cotzias, Dr. George C. (Borg, Donald C., and) : Incorporation of Manganese into Erythrocytes as Evidence for a Manganese Porphyrin in Man, 1677
Coulson, Prof. C. A. : Steric Effects in Conjugated Systems (Blue Wavelength Shifts in the Ultra-Violet Spectra of Diphenyls), 569
  Theoretical Organic Chemistry (Influence of Steric Deformation and Consequent Departures from Exact Planarity on the π-Electron Structure of Conjugated and Aromatic Molecules), 1341
Coulson, Prof. J. M. : Thermodynamics and Fluids, *review*, 822
Coulson, W. F. (Robertson, Dr. Hamish, and) : Pregnanediol in the Urine of the Ewe, 1512
Coumarin and related Compounds in Cultures of *Penicillium* Species : Metabolism of (David M. Bellis), 806
Coumarin Analogues in Lemon Juice : Occurrence of (Prof. Richard A. Bernhard), 1171
Council for Nature : Inaugural Meeting, 701
  Presidential Address (Lord Hurcombe), 701
Counting of Sulphate-reducing Bacteria in Mixed Bacterial Populations (Prof. Y. Abd-El-Malek and S. G. Rizk), 538
Counting Error due to Overlapping Particles in Thermal Precipitator Samples (S. A. Roach), 134
Counting and Sizing of Bacteria : Electronic (Herbert E. Kubitschek), 234
Countries (Commonwealth) : Mutual Assistance between, 1693
Couples (Interface), in Crystals (Prof. Frank A. McClintock, Patricia A. André, Kurt R. Schwerdt and Robert E. Stoeckly), 652

Course on the Control and Instrumentation of Reactors, at the Harwell Reactor School (Atomic Energy Research Establishment, Harwell), 295
Course on Radio-isotopes in Industry (Isotope School, Atomic Energy Research Establishment, Harwell), 700
Course at the Harwell Reactor School, 363
Course of Lectures on Britain's Food Supplies (Department of Extra-Mural Studies of the University of London and the Association of Agriculture), 1644
Courses on Nuclear Energy in O.E.E.C. Countries (1958-59) : Catalogue of (European Nuclear Energy Agency of the Organization for European Economic Co-operation), new edition, 918
Courses (Full-time and Part-time), in Polarography (British Polarographic Research Institute), 1063
Courses (Special), in Higher Technology, including Management Studies and Commerce (1958-59), Part I, Autumn Term (London and Home Counties Regional Advisory Council for Higher Technological Education Bulletin of), 842
Courses and Seminars (National Institute of Industrial Psychology), 918
Courts, Dr. A. : At the fifteenth meeting of the Research Panel of the British Gelatine and Glue Research Association (Form of Soluble Collagen from Collagenous Tissues), 440
Cowan, Dr. N. R. : Occupational Psychology (Results of an Inquiry into the Life-histories and Opinions of 443 Retired Men, aged 65 to 93 years, who attended a Scottish Consultative Health Centre for Older People), 994
Cowan, Dr. S. T. : Bergey's Manual of Determinative Bacteriology, *review*, 553
Cowen, Prof. D. V. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy?), 1284
Cowley, Dr. E. G. : The Diploma in Technology, 160
Cowpea (*Vigna unguiculata*) : Effect of Fumigation and Moisture Content on the Seedling Growth of (G. H. Caswell and Dr. H. T. Clifford), 540
Cox, Dr. C. B. : The Institute of Biology—Annual Conversazione, 300
Coxal Glands of the Scorpion : Ultrastructure of the (Dr. R. Rasmont, G. Vandermeersche and P. Castiaux), 328
Cragg, B. G. : Autonomic Functions of the Hippocampus, 675
Craig, Prof. D. P. : Theoretical Organic Chemistry (Theory of Aromatic Character), 1341
Craig, Prof. D. P., and Magnusson, E. A. : Ions of the Transition Elements (Decrease in Repulsion between Electrons in the *d*-shell of a Complex Ion compared with that in a Free Ion), 1350
Craig, Sir John : Isaac Newton—Crime Investigator, 149
Craig, Prof. William, and others : Combinatory Logic, Vol. I, *review* by F. I. G. Rawlins, 1590
Craigie, Dr. J. : Resignation as director of the Mill Hill Laboratories of the Imperial Cancer Research Fund, 697
Craigmyle, M. B. L. : Antigenicity and Survival of Cartilage Homografts, 1248
Craik, Dr. J. : Chemistry of Fluorine Compounds, 1269
Crane, E. J., and others : A Guide to the Literature of Chemistry, second edition, *review* by R. Brightman, 8
Crane Fly (*Tipula oleracea*, L.) : Desiccation of Eggs of the (Roger Laughlin), 613
Crayfish : Sodium Uptake by the (J. Shaw), 1105
Creatine : Effect of Diet on Imidazole Compounds and, in Chinook Salmon (Dr. A. Lukton), 1019
Creatine Phosphate Level and Polarity of the Cerebral Cortex : Evidence for a Relation between (J. Křivánek, Dr. J. Bureš and O. Burešová), 1799
Creation : From Divine to Continuous, *review* by Dr. A. R. Hall, 277
Creep of Metals : Void Nucleation Sites in (P. W. Davies and Dr. J. P Dennison), 131
Cremer, Herbert W., and Davies, Trefor (edited by) : Chemical Engineering Practice, Vol. 4, Fluid State, *review* by Prof. J. M. Coulson, 822
Cremer, Miss J. E. : Awarded a French Exchange Scholarship in Medical Science for 1958-59, 634
Cribb, A. B. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Crick, F. H. C. : Bacteriophage Research, 1770
Cricket Bat Willow : Cultivation of the (Forestry Commission, Bulletin No. 17), 361
Crime of Galileo (Prof. Giorgio de Santillana), *review* by Dr. E. J. Dijksterhuis, 7
Crime Investigator : Isaac Newton—(Sir John Craig), 149
Crinoid, *Antedon bifida* (Pennant) : Pigments present in Arms and Pinnules of the (Miss E. J. Dimelow), 812
Crisinel, P. (Schmitz, G., et) : La Lutte contre *Stephanoderes hampei* Ferr., *review* by W. V. Harris, 215
Critchfield, William B., and Zimmermann, Martin H. (edited by Thimann, Prof. Kenneth V., with the assistance of) : The Physiology of Forest Trees—a Symposium held at the Harvard Forest, 1957, *review* by Dr. L. Leyton, 1698
Critical Effect of Oxygen Tension on Rate of Growth of Animal Cells in Continuous Suspended Culture (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Critical Review of the Techniques for Testing Insecticides (Dr. J. R. Busvine), *review* by Dr. A. H. McIntosh, 486
Croissance cellulaire : Les Facteurs de la (publiés sous la direction de Prof. J. André Thomas), *review* by Prof. W. S. Bullough, 551
Crombie, W. Mary, and Paton, Jean A. : An Age Effect on Seta Elongation in *Pellia epiphylla*, 541
Crookall, J. O., and others : Radioactivity due to Fission Products in Biological Material, 1473
Crooks, R. N. (Stewart, N. G., and): Long-range Travel of the Radioactive Cloud from the Accident at Windscale, 627
Crops (Brassica) : Investigation of Virus Diseases of (Dr. L. Broadbent), *review* by Dr. J. H. Hitchborn, 752
Crops (Different), exposed to the Same Weather : Evapo-transpiration from (Dr. G. Stanhill), 125
Crops of Cotton in the Drier Regions of Uganda : A Revised Interpretation of the Causes of Loss of (J. Bowden and W. R. Ingram), 1750
Cross, Dr. K. W. : Awarded a United States Public Health Services (National Institutes of Health, Bethesda) Travelling Fellowship in Medical Science, 634
Crosse, J. E., and others : Fire-blight of Pear in England, 1530
'Crossing' Paper Electrophoresis for the Detection of Immune Reactions (Prof. S. Nakamura and T. Ueta), 875 ; *erratum*, 1063
Crossing-over on the First Chromosome of *Drosophila melanogaster* : Genotypic Control of (M. J. Lawrence), 889
Crouch (River) : Heavy Infestation by the Parasitic Copepod *Lernaeenicus* of Sprats in the (Dr. J. P. Harding and A. C. Wheeler), 542
Crowe, Dr. C. : Carbon-14 Activity during the past 5,000 Years, 470
Crowley, N. C. : Seed Transmission of Plant Virus Diseases, 634
Crude Hypothalamic Extract : Influence of a, on the Acid Phosphatase Activity of Rat Pituitaries (Prof. J. Charvát, V. Schreiber and V. Kmentová), 62
Crude Oil (Natural) : An Overhauser Effect in (Dr. Edward Poindexter), 1087
Cruickshank, Prof. E. W. H. : Resignation from the regius chair of physiology in the University of Aberdeen, 1773 ; work of, 1773
Crumley, P. H., and McCamley, W. : Science in the Use of Coal (Combustion and Gasification), 26
Crustacea : Analogies between the Compensatory Responses of Fish and, to Horizontal Displacement of the Body (D. H. A. Marr), 1621
Crustacean Chromactivator (Activation of Hormonal Secretions), (Dr. D. B. Carlisle), 33
Crustaceans (Wood-boring) : Effect of Low Temperature on the Vertical Distribution of Two (Dr. N. Balakrishnan Nair and H. Leivestad), 814
Cryptomys hottentotus Lesson, 1826 : Albinism in the Common or Hottentot Mole-Rat (Peter St. J. Turnbull-Kemp), 63
Crystal Rotated at High Speed : Nuclear Magnetic Resonance Spectra from a (Prof. E. R. Andrew, A. Bradbury and Dr. R. G. Eades), 1659
Crystal Elasticity : Number of Elastic Constants required in (N. Joel and Dr. W. A. Wooster), 1078
Crystal Inclusions : Sucrose (H. E. C. Powers), 715
Crystal Size in Evaporated Layers of Cadmium Sulphide : Photoconductivity and (J. M. Gilles and J. Van Cakenberghe), 862
Crystal Structure of Rhombohedral Sulphur (Prof. Jerry Donohue, Aimery Caron and Elihu Goldish), 518
Crystal Structure of *β*-Wollastonite (Miss Joan Tolliday), 1012
Crystal Structure and Photoconductivity of Caesium Plumbohalides (Chr. Kn. Møller), 1436
Crystal Structures, *review* by Dr. H. J. Grenville-Wells, 282
Crystalline Antibiotic with Antibacterial and Cytostatic Action : Desertomycin, a New (Dr. J. Uri, R. Bognár, I. Békési and B. Varga), 401
Crystalline *Pseudomonas* Cytochrome$_{551}$ from *Pseudomonas aeruginosa* : Preparation of (Takekazu Horio, Taneaki Higashi, Masashi Nakai, Kiyoshi Kusai and Prof. Kazuo Okunuki), 1307
Crystalline Sodium Hyaluronate (Prof. Frederick A. Bettelheim), 1301
Crystallographic Meeting : Soviet, 157
Crystallography : Applications of, to Chemistry (British Association for the Advancement of Science, Section B (Chemistry), Discussion on), 914
Crystals : Interface Couples in (Prof. Frank A. McClintock, Patricia A. André, Kurt R. Schwerdt and Robert E. Stoeckly), 652
Crystals (Ice) : Mode of Growth of, in Air and other Gases (K. Isono), 1221
Crystals (Photographic Emulsion) : Mosaic Structure of (J. F. C. Boardman, Dr. R. H. Herz and G. C. Terry), 1726
Crystals (Vanadium Single) : Extra Streaks in the X-Ray Diffraction Pattern of (E. Sándor and Dr. W. A. Wooster), 1435
Cseh, Edith (Böszörményi, Z., and) : Relationships between the Chloride and Iodide Uptake of Wheat Seedlings, 1811
Cucumber Mosaic Virus : Purification and Serology of (Dr. J. A. Tomlinson, Dr. R. J. Shepherd and Prof. J. C. Walker), 1616
Culbertson, Dr. James T. : Mathematics and Logic for Digital Devices, *review* by Dr. A. D. Booth, 1583
Culex sp. : Respiration of *Tubifex* and (A. M. Roberts), 563
Cullen, Prof. A. L. : Awarded a grant of £3,835 from the Paul Instrument Fund, for the construction of a detector in which radiation pressure is used to convert a microwave signal to an audio or intermediate frequency, 1643
Culligan, G. : Awarded a Research Fellowship in nuclear physics for 1958-59 by the Department of Scientific and Industrial Research, 1063
Cullington, A. L. : A Man-made or Artificial Aurora, 1364
Cullwick, Prof. E. G. : Electromagnetism and Relativity with particular reference to Moving Media and Electromagnetic Induction, *review* by Prof. V. C. A. Ferraro, 1045
Cultivated Plants : International Code of Nomenclature for, 500
Cultivation of Apple-fruit Tissue *in vitro* (Dr. D. S. Letham), 473
Cultivation of the Cricket Bat Willow (Forestry Commission, Bulletin No. 17), 361
Cultivation of Isolated Embryonic Rat Tibiae on a Chemically Defined Medium (Susan Heyner and Dr. J. D. Biggers), 810
Cultivation and Weaving of Cotton in the Prehistoric Southwestern United States (Kate Kent), 1775
Cultural Background : Araucanian Child Life and its (Sister M. Inez Hilger), *review* by Dr. G. H. S. Bushnell, 76
Cultural Centres : Museums and Art Galleries as, 681
Cultural Value of Local Societies (Lord Boyd-Orr), 586
Cultural and Metabolic Aspects of Moulds (Society for Applied Bacteriology and the Istituto di Sanita Symposium on), 1279
Culture : Easter Island, *review* by Prof. Raymond Firth, 487
Culture (Agar) : Autoradiography of Fungi through a Layer of Soil and in (Dr. Erna Grossbard), 854
Culture (Continuous Suspended) : Critical Effect of Oxygen Tension on Rate of Growth of Animal Cells in (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Culture (Pure), of *Monoblepharis* : Isolation and (Dr. Elizabeth Perrott), 1322
Culture (Surface-), of *Mycobacterium tuberculosis* var. *bovis* : Importance of Zinc for the Growth of, and Large-scale Production of Tuberculin Purified Protein Derivative (T. Dekker and H. Huitema), 1387
Cultures of *Penicillium* Species : Metabolism of Coumarin and related Compounds in (David M. Bellis), 806
Culvenor, Dr. C. C. J. : Chemistry of Plant Products (Chemistry of Stock Poison-Plants), 299
Cumings, Dr. J. N. : Appointed to the University of London chair of chemical pathology at the Institute of Neurology, 22
  Chemical Pathology of the Nervous System (Chemical Pathology of Copper), 1646

Cumming, Bruce G., and Hay, James R. : Light and Dormancy in Wild Oats (*Avena fatua* L.), 609
Cumming, J. D. : Appointed a lecturer in physiology at the University of Birmingham, 990
Cummings, A. D., and others : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Cunliffe, H. (Ault, W. S., and) : Fuel and Power in British Industry (Uses of Oil), 1714
Cunnell, F. A. (Allen, J. W., and) : Diffusion of Zinc in Gallium Arsenide, 1158
Cunningham, C. : Space Medicine (Effects of Sensory Impoverishment, Confinement and Deprivation of Sleep), 1646
Cunningham, F. J., and Brown, P. S. : Differences between Duplicate Assays of Human Urinary Gonadotrophins, 1238
Cunningham, G. P. : Progress in Cancer Research (Immunology and Immunogenetics), 365
Cunningham, R. K., and Lamb, J. : Cocoa Shade and Manurial Experiment in Ghana, 119
Cupric Mono-, Di- and Tri-bromoacetates : Structure of (Ryutaro Tsuchida and Shoichiro Yamada), 1230
Curators : Museums in the Commonwealth and Overseas with special reference to the Training of (Museums Association Discussion on), 503
Curie, D. : Transfer of Light Energy and Photosensitization, 231
Curran, Dr. R. C. : Appointed to the University of London chair of pathology at St. Thomas's Hospital Medical School, 700
  Obituary of Prof. F. O. Lawrence, 1058
Currant (Black-) : Photoperiodic Induction of Flowering in (T. Nasr and Dr. P. F. Wareing), 269
Current (Space-Charge Limited), in Insulating Materials (Dr. G. T. Wright), 1296
Current Trends in Heterocyclic Chemistry—Proceedings of a Symposium held at the John Curtin School of Medical Research, Australian National University, Canberra, 1957, under the auspices of the Chemical Society (edited by A. Albert, Dr. G. M. Badger and Dr. C. W. Shoppee), *review* by Dr. F. G. Mann, 1762
Currents (Water) : Reactions of *Gammarus* sp. to (P. R. M. Pattisson), 563
Currie, A. R. : Appointed head of the Division of Pathology of the Imperial Cancer Research Fund, 697
Curry, Prof. Haskell B., and others : Combinatory Logic, Vol. I, *review* by F. I. G. Rawlins, 1590
Curtain, Dr. C. C. : Electrophoresis of Fluorescent Antibody, 1305
Curtin (John) School of Medical Research, Australian National University, 355
  Proceedings of a Symposium on Current Trends in Heterocyclic Chemistry, held under the auspices of the Chemical Society, 1957 (edited by A. Albert, Dr. G. M. Badger and Dr. C. W. Shoppee), *review* by Dr. F. G. Mann, 1762
Curtis, Dr. D. R., and Phillis, J. W. : Gamma-Amino-*n*-Butyric Acid and Spinal Synaptic Transmission, 323
Curtiss, III, Roy (Levine, Myron, and) : A Genetic Test for Side-chains in a Phage Chromosome, 126
Cuthbert, Norman : Control and Compulsion, *review*, 418
Cuthbertson, Dr. D. P. : Digestion in the Ruminant (Presidential Address to Section M (Agriculture) of the British Association for the Advancement of Science), 586
  Physiology as an Education and as a Career (Careers for the Physiologist in Agricultural Research), 1066
  Biochemical Response to Physical Injury, 1493
Cuticle (Keratin) : Electron Microscope Studies of the Chemical Reactivity in (Dr. J. Sikorski and W. S. Simpson), 1235
Cuttlefish : Visual Pigments of the Octopus and (Paul K. Brown and Mrs. Patricia S. Brown), 1288
Cutts, B., and Geoghegan, G. R. H. : Nuclear Engineering, *review*, 4
Cyanides of Rhenium : Some Complex (Dr. R. Colton, Prof. R. D. Peacock and Prof. G. Wilkinson), 393
Cyclic Voltammetry : Observation of Transient Intermediates in Redox Processes by variable Voltage Oscillopolarography and (Prof. W. Kemula and Z. Kublik), 793
cyclo-Octatetraene : Molecular Structure of (I. J. Lawrenson and Dr. F. A. Rushworth), 391
Cyclophyllidean Cestode : A New Type of Early Cysticeroid Stage in a (Joyce E. Rigby and Mrs. Dilys Rawson), 121
Cyclostome *Petromyzon planeri* : Larval and Adult Haemoglobins of the (M. Adinolfi and G. Chieffi), 730
Cynkin, Morris A. (Gibbs, Prof. Martin, and) : Conversion of Carbon-14 Dioxide to Starch Glucose during Photosynthesis by Spinach Chloroplasts, 1241
Cysteamine : Influence of, on the Teratogenic Action of X-Radiation (Dr. D. H. M. Woollam and Dr. J. W. Millen), 1801
Cysteine : Aerobic Transformation of, to Sulphate in Soil (J. R. Freney), 1318
  Reactions of Thiosulphate with (Tadeusz W. Szczepkowski), 934
Cysticeroid Stage in a Cyclophyllidean Cestode : A New Type of Early (Joyce E. Rigby and Mrs. Dilys Rawson), 121
Cystophora cristata Erxl. : The Hood of the Hooded Seal (Björn Berland), 408
Cytochrome *b* Component from *Micrococcus lysodeikticus* : 'Solubilization' of a (F. L. Jackson and Valerie D. Lawton), 799, *erratum*, 1279
Cytochromes$_{551}$ (Crystalline *Pseudomonas*) : Preparation of, from *Pseudomonas aeroginosa* (Takekazu Horio, Taneaki Higashi, Masashi Nakai, Kiyoshi Kusai and Prof. Kazuo Okunuki), 1307
Cytochrome Oxidase : Reconstruction of the Reaction Mechanism of (Shigeki Takemori, Ichiro Sekuzu, Takashi Yonetani and Prof. Kazuo Okunuki), 1306
Cytochromes in Chloroplasts (Prof. W. O. James and Rachel M. Leech), 1684
Cytochromes of *Nitrobacter* (W. D. Butt and Dr. H. Lees), 732
Cytochromes of *Rhizobium* (C. A. Appleby and F. J. Bergersen), 1174
Cytological Effects of Griseofulvin : Some (Dr. G. E. Paget and Dr. A. L. Walpole), 1320
Cytologically Diploid Behaviour of Hexaploid Wheat : Genetic Control of the (Dr. Ralph Riley and Victor Chapman), 713
Cytology : International Review of (edited by Dr. G. H. Bourne and Prof. J. F. Danielli), Vol. 6, *review* by Prof. J. Brontë Gatenby, 1114
  Modern, *review* by Prof. J. Brontë Gatenby, 1114
Cytoplasm in Sexual Reproduction (Prof. Kenneth Mather and Dr. John L. Jinks), 1188
Cytoplasm (Liver) : Ribonucleic Acids in (Dr. E. Reid and Barbara M. Stevens), 441
Cytostatic Action : Desertomycin, a New Crystalline Antibiotic with Antibacterial and (Dr. J. Úri, R. Bognár, I. Békési and B. Varga), 401
Cytotoxic Antisera : Selection of Cell Lines in Tissue Culture by the Use of (Dr. V. Defendi, A. A. Kamrin and Dr. J. S. Colter), 1246
Cytotoxicity of Heterologous Sera to Normal and Leukaemic Human Lymphocytes (Robert Schrek), 724
Czapski, Gideon, and Stein, Prof. Gabriel : Oxidation of Ferrous Ion in Aqueous Solution by Atomic Hydrogen, 598
Czechoslovak Journal of Physics : Translation of all non-English articles appearing in each issue, beginning with the January 1959 issue, to be undertaken by Consultants Bureau, Inc., 1279
Czechoslovak–Hungarian Polarographic Conference, 633

D'AGUILAR, J. : Research Methods in Soil Zoology (Laboratory Techniques), 705
D'Arcy, P. F. (Block, B. P., and) : A Simple and Rapid Method for the Biological Assay of Glucocorticoids, 181
D-Days : Biological, *review* by Prof. Ronald Good, 1576
d'Eschambault, Abbé Antoine : At the seventy-sixth Annual Meeting of the Royal Society of Canada (Potentialities of the North-West—The Historic Background), 701
da Costa, Dr. P. B., and others : Phosphatidyl Serine and Blood Coagulation, 1031
da Silva Lacaz, Dr. C. S. : Human and Animal Ecology (Clinical and Epidemiological Aspects of the serious Mycoses in South America), 1648
Dabrowski, L., and others : Phagocytosis and the Antigenic Structure of Bacteria, 1243
Dactylis glomerata in Israel : Different Frequencies of Supernumerary Chromosomes in Diploid Populations of (Dr. Daniel Zohary and Israel Ashkenazi), 477
Dainton, A. D., and Phillips, J. W. : Science in the Use of Coal (Carbonization of Coal), 25
Dainton, Prof. F. S. : *Obituary* of Dr. N. Miller, 1201
Dairy Microbiology (Prof. Edwin M. Foster, Prof. F. Eugene Nelson, Prof. Marvin L. Speck, Prof. Raymond N. Doetsch and Prof. Joseph C. Olson, Jr.), *review* by Dr. L. F. L. Clegg, 141
Dairying, National Institute for Research in : Annual Report for 1957, 989
Dale, H. C. A. : Occupational Psychology (Experimental Programme on Method of Approach in Fault-finding), 994
Dallinga, Dr. G. : Steric Effects in Conjugated Systems (Steric Effects in Monomethyl 1:2-benzanthracenes), 569
Dalton, Dr. A. J. (Gatenby, Prof. J. Brontë, and) : Origin and Connexions of the Central Nutrient Mass in *Lumbricus* Spermatogenesis, 886
Daly, Prof. M. de Burgh : Appointed to the University of London chair of physiology at St. Bartholomew's Hospital Medical College, 700, 1130 ; work of, 1130
Dalziel, K.. : Appointed Sorby Research Fellow in the Biochemistry Department of the University of Sheffield, 18
Dam, Prof. H., and others : Influence of Linoleic and Linolenic Acids on Symptoms of Vitamin E Deficiency in Chicks, 802
Damage (Chemical Radiation) : Thermal Annealing of (Dr. A. G. Maddock and S. R. Mohanty), 1797
Damage (Liver), in X-Irradiated Animals : Anaemia and (Dr. M. Skalka), 1602
Damage (Radiation), in Lithium Fluoride : Etching of (Dr. D. A. Young), 375
Dandy, J. E. (revised and edited by) : The Sloane Herbarium—an Annotated List of the *Horti Sicci* composing it, with Biographical Accounts of the Principal Contributors, based on Records compiled by the late James Britten, *review* by Dr. W. B. Turrill, 752
Daniel, T. E. : Fuel and Power in British Industry (Electricity), 1715
Danielli, Prof. J. F. (edited by Bourne, Dr. G. H., and) : International Review of Cytology, Vol. 6, *review* by Prof. J. Brontë Gatenby, 1114
Daniels, Dr. Fred B. : Possible Causes of Geomagnetic Fluctuations having a Six-Second Period, 1439
Daniels, Dr. Fred B., and Bauer, Dr. Siegfried J. : Faraday Fading of Earth Satellite Signals, 599
Danielsson, Dr. Bengt : Work and Life on Raroia, an Acculturation Study from the Tuamotu Group, French Oceania, *review* by Prof. Raymond Firth, 280
Danish Atomic Energy Commission : Risö, the Research Establishment of the, 840
Darby, Prof. H. C. : Appointed a member of the National Parks Commission, 700
Darjeeling and the Sikkim Himalayas : Common Medicinal Plants of (Dr. K. Biswas), *review* by N. L. Bor, 76
Dark : Dependence on Age of the Diameter of the Pupil in the (V. Kadlecová, M. Peleška and A. Vaško), 1520
Dark Adaptation (Light and) : Corneo-Fundal Potential Variations during (Christine Kris), 1027
Dark Phases (Light and) : Separation of, in the Photosynthesis of Isolated Chloroplasts (Dr. Achim V. Trebst, Harry Y. Tsujimoto and Prof. Daniel I. Arnon), 351
Dark Reflecting Surfaces : Responses of Insects to Polarized Light in the Presence of (Dr. H. Kalmus), 1526
Darkened Cotyledons from Etiolated Sunflower Seedlings : Incorporation of Carbon-14 Dioxide into Sugars by (Dr. Clive Bradbeer), 1429
Darling, Prof. A. I. : Nutrition and Teeth (The Structure of Teeth), 1704
Darlington, Prof. C. D. : Control of Evolution in Man, 14
Darlington, Jr., Dr. Philip J.: Zoogeography, the Geographical Distribution of Animals, *review* by Charles S. Elton, 140
Darwin : A Century of (edited by S. A. Barnett), *review* by Dr. G. S. Carter, 1112
  The Life of, *review* by Sir Ronald Fisher, 71
Darwin, Charles (Sir Gavin de Beer), 497
  The Autobiography of, 1809-1882 (edited by Nora Barlow), *review* by Sir Ronald Fisher, 71
Darwin's Century—Evolution and the Men who Discovered It (Prof. Loren Eiseley), *review* by Dr. G. S. Carter, 1112

Darwin, Charles, and Wallace, Alfred Russel : Evolution by Natural Selection, *review* by Dr. G. S. Carter, 1112
Darwin–Wallace Centenary, 19, 86
Darwin–Wallace Memorial Lecture (Sir Julian Huxley), 86
Darwin, Demography and Development of Life, 497
Darwin, Sir Charles : The Problems of World Population (Rede Lecture, 1958), 497
Darwin Medal for 1958 of the Royal Society awarded to Sir Gavin de Beer, 1344, 1633
'Darwinism' : The Centenary of (Dr. G. S. Carter), 1351
  The Emergence of (Sir Julian Huxley), 434
Darwinism and the Study of Society (Social Sciences Research Centre of the University of Edinburgh Conference on, to mark the centenary of 'The Origin of Species'), 362
Dasgupta, P. R., and Young, Prof. F. G. : Activation of Hormonal Secretions—Precorticotropin, 32
Data (Orbital), and Preliminary Analyses of Satellites 1957α and 1957β (compiled by F. L. Whipple, L. G. Boyd, J. A. Hynek and G. F. Schilling), 1062
Data Centre (World), for Rockets and Satellites, Slough, 988
Dative Bond (Boron–Nitrogen), in Amine Boranes : Vibrational Frequency associated with the (R. C. Taylor and C. L. Cluff), 390
Daumas, Maurice (publié sous la direction de) : Histoire de la Science, *review* by Dr. A. Armitage, 142
Daviault, Pierre : Elected president for 1958-59 of the Royal Society of Canada, 702
Davidson, G. (Wilson-Jones, K., and) : Dosage–Mortality Curves for Houseflies Susceptible and Resistant to DDT, 403
Davidson, G., and Pollard, D. G. : Effect of Simulated Field Deposits of Gamma-BHC and Dieldrin on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles, 739
Davidson, Prof. J. Norman : Elected president of the Royal Society of Edinburgh, 1345
Davidson, Prof. J. Norman, and others : Synthesis of Deoxyribonucleic Acid in Extracts of Mammalian Cells, 589
Davidson, W. M., and others : Volume and Acidity of Urine of Sheep fed Hay Rich in Silica and Effect of Dietary Salt Additions, 1385
Davies, A. W. : At the International Starch Conference (Production of Vital Gluten and its application in Great Britain), 232
Davies, Dr. D. D. (Hanford, J., and) : Formation of Phosphoserine from 3-Phosphoglycerate in Higher Plants, 532
Davies, D. Roy, and Wall, E. T. : Artificial Mutagenesis in Plant Breeding, 955
Davies, Prof. D. V., and others (edited by) : Gray's Anatomy, Descriptive and Applied, thirty-second (centenary) edition, *review* by Prof. Ruth E. M. Bowden, 1760
Davies, Prof. F., and others (edited by) : Gray's Anatomy, Descriptive and Applied, thirty-second (centenary) edition, *review* by Prof. Ruth E. M. Bowden, 1760
Davies, G. E., and Driver, G. W. : Inhibitory Action of Ethyl Mercaptan on Intracellular Tubercle Bacilli, 664
Davies, J. D. : Appointed lecturer in the Department of Engineering, University College of Swansea, 363
Davies, J. W., and others : Nucleotide Pool of Brewers' Yeast during Growth and Fermentation, 1565
Davies, Dr. M., and others : Resistance to Pyrethrins and to Pyrethrins–Piperomyl Butoxide in a Wild Strain of *Musca domestica* L. in Sweden, 1816
Davies, P. B. : Awarded a Manville Fellowship by the Institution of Mechanical Engineers, 433
Davies, P. W., and Dennison, Dr. J. P. : Void Nucleation Sites in Creep of Metals, 131
Davies, Prof. R. E., and others : Carnosine Phosphate as Phosphate Donor in Muscular Contraction, 720
Davies, Trefor (edited by Cremer, Herbert W., and) : Chemical Engineering Practice, Vol. 4, Fluid State, *review* by Prof. J. M. Coulson, 822
Davies, Prof. T. V. : Appointed to the chair of applied mathematics at University College, Aberystwyth, 359 ; work of, 359
Davies, Dr. William, and others : Preservation of Grass for Winter-feeding by Radiation Sterilization, 331
Davies, W. Ellis : At the eighth Plant Breeders' Conference (Number of Plants required as the basis of a Strain of Red Clover), 843
Davis, E. H. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1641
Davis, Dr. Hallowell : Modern Educational Treatment of Deafness, 919
Davis, J. E. : Science in the Use of Coal (Carbonization of Coal), 25
Davis, Jr., Prof. Leverett, and others : Exterior Ballistics of Rockets, *review* by D. G. King-Hele, 821
Davis, Prof. Martin : Computability and Unsolvability, *review* by Dr. A. D. Booth, 1583
Davis, Dr. P. R. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1642
Davis, Dr. R., and others : Synapse Discharge by Single Fibre in Mammalian Visual System, 728
Davison, B., with the collaboration of Sykes, J. B. : Neutron Transport Theory, *review* by Dr. R. Englman, 620
Davison, J. P., and others : Productivity and Economic Incentives, *review* by T. H. Hawkins, 1697
Davy Medal for 1958 of the Royal Society awarded to Prof. R. G. W. Norrish, 1344, 1632
Dawes, Dr. Ben : *Sagitta* as a Host of Larval Trematodes, including a New and Unique Type of Cercaria, 960
Dawes, Dr. Ben, and Griffiths, Dr. Ivor : The Enigmatical Trematode '*Dictyocotyle coeliaca*', 1033
Dawkins, M. J. R., and others : Mechanism of Oxidative Phosphorylation, 875
Daws, Dr. P. P. (McComisky, J. G., and) : Occupational Psychology (Introduction and Development of an Apprentice Selection Scheme in a Glasgow Shipyard), 993
Dawson, Dr. R. M. C. (Bangham, Dr. A. D., and) : Control of Lecithinase Activity by the Electrophoretic Charge on its Substrate Surface, 1292
Day, Dr. P. R. : Nature and Genetical Control of Resistance in Living Organisms, 921
Day-length and Haematin Compounds in Plants (C. Sironval), 1170
Dayton, Peter, and others: Relationship between *pKa* and Uricosuric Activity in Phenylbutazone Analogues, 1162
DDT : Anaesthesia and the Action of, on Anopheles Larvae (Prof. Jack Colvard Jones), 722
  Dosage–Mortality Curves for Houseflies Susceptible and Resistant to (K. Wilson-Jones and G. Davidson), 403 ; (Dr. P. S. Hewlett), 404
  Effect of, on Egg-laying by *Oscinella frit* L. (T. J. Legowski and H. J. Gould), 1682
De, M. L., and Sadhukhan, P. : Determination of the Mass Thickness of Cell Membranes from their Electron Micrographs, 1008
de Beer, Sir Gavin : Inaugural Address at the Fifteenth International Congress of Zoology, 434
  Charles Darwin, 497
  Embryos and Ancestors, third edition, *review* by Dr. G. S. Carter, 1112
  Awarded the Darwin Medal for 1958 of the Royal Society, 1344, 1633 ; work of, 1633
de Belvefer, B. : La Gelée Royale des Abeilles, *review* by Dr. H. Kalmus, 142
de Borst, C., and others : Synthesis and Structure of 2,6-Dihalo-Benzenone-Indophenylacetate and Benzenone-Indo-3',5'-Dihalo-Phenylacetate, 1017
de Broglie, Prof. Louis : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
de Bruin, H. J., and Smythe, L. E.: Determination of Traces of Oxygen in Sodium Metal by Infra-red Spectrophotometry, 387
de Burgh, Prof. P. M. (Nelson, David S., and) : Biochemical Changes in Virus-infected and Regenerating Mouse Liver, 1617
De Clerck, Prof. Jean : A Textbook of Brewing, Vol. 2 (translated by Kathleen Barton-Wright), *review* by Dr. A. H. Cook, 1116
De Groodt, M., and others : Fine Structure of the Nuclear Envelope of Carcinoma Cells, 1030
de Grouchy, J., and others : Different Heterogeneities of Mouse Haemoglobin according to Strains, 947
de Havilland Aircraft Co., Ltd.: Appointment of R. G. McCoy as general manager, 1416
  Appointment of D. R. Newman as chief aerodynamicist, 1416
de Hevesy, Prof. G. C. : Atoms for Peace Award made to, 1550
de Lamirande, Dr. G., and others : Anti-Tumour and Biochemical Effects of Purified Bovine Xanthine Oxidase in *C3H* and *C* Mice, 1144
de Malherbe, Dr. M. C. : Awarded a James Clayton Grant by the Institution of Mechanical Engineers, 433
De Prins, J. (Blaser, J.-P., and) : Comparison of Astronomical Time Measurements with Atomic Frequency Standards, 859
de Santillana, Prof. Giorgio : The Crime of Galileo, *review* by Dr. E. J. Dijksterhuis, 7
de Serres, F. J., and Kølmark, H. G. : A Direct Method for Determination of Forward-Mutation Rates in *Neurospora crassa*, 1249
de Silva, P. H. D. H. : Use of Artificially Liberated Larvae in Experiments on the Setting Behaviour of *Spirorbis*, 1751
De Somer, P., and others : Surface Tension of the Blood and Atherogenesis, 59
de Valera, Eamon : Tablet on Broome Bridge at Cabra, Dublin, to commemorate the invention of quaternions unveiled by, 1552
de Vaucouleurs, G. : Tilt Criteria and Direction of Rotation of Spiral Galaxies, 1287
  The Local Supercluster of Galaxies, 1478
de Vries, Hl., and others : Carbon-14 Activity during the Past 5,000 Years, 1432
de Vries, P. J. (Julius, Prof. H. W., and) : Forssman's Antigen in Ehrlich Mouse Carcinoma, 1165
de la Mare, Dr. P. B. D. : Theoretical Organic Chemistry (Reactivity and Orientation in Aromatic Halogen Substitution Reactions), 1342
Deacon, Dr. G. E. R. : Antarctic Meteorology, *review*, 900
Deacylase (Acetyl Coenzyme A), and Citridesmolase : Separation of the Condensing Enzyme of *Aspergillus niger* from, and the Effect of Magnesium Ion on the Purified Fraction (Prof. C. V. Ramakrishnan), 1601
Deafness : Modern Educational Treatment of (International Congress on the), 89
  International Congress on Modern Educational Treatment of (Prof. A. W. G. Ewing), 919
Deamidation (Biological), of Nicotinamide in Vertebrates (K. V. Rajagopalan, T. K. Sundaram and Prof. P. S. Sarma), 51
Dean, Dr. R. S., and McCawley, F. X. : Ductility of Chromium deposited from Molten Chloride Baths, 746
Deanesly, Dr. Ruth : Secretion of Androgens by the Adrenal Cortex of the Mouse, 262
Dear, Enid (Radley, Margaret, and) : Occurrence of Gibberellin-like Substances in the Coconut, 1098
Dearnaley, Dr. G. : Mass Spectroscopy, *review*, 1579
Death : Manual of the International Statistical Classification of Diseases, Injuries and Causes of (World Health Organization), *review*, 417
Debauche, Prof. H. R. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
Debska, Dr. Wanda : Separation and Determination of the Dissociation Constants of Chelidonine and Protopine by Paper Chromatography, 666
Decay of Immediate Memory with Age (D. C. Fraser), 1163
Decipherment : The History of a, *review* by M. I. Finley, 1627
Decipherment of Linear B (John Chadwick), *review* by M. I. Finley, 1627
Deckers, J., and van Tiggelen, Prof. A. : Identity of Ions in some Flames, 863
Decomposed Substrates (Easily) : A Technique for the Investigation of the Competitive Saprophytic Ability of Soil Fungi by the Use of (S. T. Matturi and Dr. H. Stenton), 1248
Decomposition of Carbon Suboxide at 750-780°C. : Formation of Carbon by (R. L. Bond and F. J. Pinchin), 129
Decomposition (Humus) : Further Aspects of (H. F. Birch), 1172
Decomposition (Photolytic), of Ozone : Influence of Water on the (W. D. McGrath and Prof. R. G. W. Norrish), 235
Decomposition (Thermal), of Antibiotics (Prof. Wesley W. Wendlandt and Morris Zief), 665
Decomposition (Thermal), of Hydrogen Peroxide Vapour (Dr. D. E. Hoare, J. B. Protheroe and Prof. A. D. Walsh), 654
Decomposition Products (Plant) : Effects of, in the Soil (Z. A. Patrick and L. W. Koch), 1717
Decreased Temporal Discrimination Learning : Phenylketonuria in the Rat associated with (Victor H. Auerbach, Prof. Harry A. Waisman and L. Benjamin Wyckoff, jun.), 871

Decroly, P. (Mandel, Dr. M., and) : Standard Potential at 25°C. of the Silver–Silver Chloride Electrode in Formamide, 794
Dee, Prof. P. I. : Physics of Quanta and Parity (Development of the Concept of Quanta), 1119
Deep-Sea Core (Equatorial Atlantic) : Secondary Oscillations in an (Dr. J. D. H. Wiseman), 1534
Deep-Sea Sediments (Atlantic Equatorial) : Rate of Accumulation of Nickel in, and its Bearing on Possible Extra-Terrestrial Sources (Karl K. Turekian), 1728
Deer (British) : Field Guide to (compiled and edited by F. J. Taylor Page), *review* by Richard Morse, 825
Deer's Antlers : Fall-out Radioactivity in a (Dr. J. Hawthorn and R. B. Duckworth), 1294
Defects (Lattice) : Evidence of, preceding Oriented Transformations during the Heat Treatment of Kaolinite (Dr. G. B. Mitra), 1794
Defence of Civilization : The Study of Folk Life and its part in the (Dr. Iorwerth C. Peate), 583
Defence in a Technical Age : Administration and, 89
Defence Purposes (Mutual) : Agreement between the Government of the United Kingdom of Great Britain and Northern Ireland and the Government of the United States of America for Co-operation on the Uses of Atomic Energy for (Washington, 1958), 635
Defence Science, Commonwealth Advisory Committee on : Meeting in Australia, 697
Defendi, Dr. V., and others : Selection of Cell Lines in Tissue Culture by the Use of Cytotoxic Antisera, 1246
Deficiency (Calcium and Phosphorus), in Oil Palm Seedlings : Symptoms of (R. A. Bull), 1749
Deficiency (Chlorine), in Soils (Peter G. Ozanne), 1172
Deficiency (Copper) : Effect of, on Synthesis of Haem (R. L. Anderson and Prof. S. B. Tove), 315
Deficiency (Respiratory), in Yeast : Induction of, by Manganese, Copper, Cobalt and Nickel (Prof. Carl C. Lindegren, Susumu Nagai and Hideko Nagai), 446
Deficiency (Vitamin E), in Chicks : Influence of Linoleic and Linolenic Acids on Symptoms of (Prof. H. Dam, G. Kofoed Neilsen, I. Prange and E. Søndergaard), 802
Deficiency (Zinc), induced by Mercury in *Coffea arabica* (K. R. Bock, J. B. D. Robinson and G. T. Chamberlain), 1607
Definitions : Gas Chromatographic Terms and (Marcel J. E. Golay), 1146
Deformation (Plastic), of Diamond : Graphitization and (Dr. M. Seal), 1264
Deformation (Tectonic), in the Rhinns of Galloway : Different Phases of (Dr. Maurits Lindström), 48
Degradation of Blood Group-Specific Mucopolysaccharides by Ficin and Papain (A. Pusztai and Prof. W. T. J. Morgan), 648
Degradation of DL-Methionine by Radiation (Jiřina Kopoldová, Jaroslav Koloušek, Arnošt Babicky and Jindřich Liebster), 1074
Dehydrated Toad, *Bufo marinus* : Loss of Sodium from the Skin of the (P. J. Bentley), 1810
Dehydration (Thermal), of Kaolinite : Kinetics of the (T. Jacobs), 1086
Dehydrogenase (Sorbitol), in Spermatozoa (Dr. Tsoo E. King and Dr. T. Mann), 868
Dekker, T., and Huitema, H. : Importance of Zinc for the Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* and Large-scale Production of Tuberculin Purified Protein Derivative, 1387
Delahay, Dr. P. (Breiter, Dr. M., and) : Charge Transfer Processes (The Double-Layer and Adsorption at Electrodes—Correlation between Double-Layer Capacity and Kinetics of Electrode Processes), 1355
Delluva, Dr. A. M., and others : Carnosine Phosphate as Phosphate Donor in Muscular Contraction, 720
δ-Acetylornithine, a Constituent of some Common Grasses (Dr. L. Fowden), 406
δ-Aminolaevulic Acid : Evidence for the Involvement of Ferrous Iron in the Biosynthesis of, by Chicken Erythrocyte Preparations (E. G. Brown), 313
Demediuk, Thaisa, and Cole, W. F. : A New Approach to the Investigation of the Cause of Moisture Expansion of Ceramic Bodies, 1223
Demetriou, James A., and others : Separation of Mixtures of Œstrogens in Urinary Extracts using Gradient Elution Chromatography, 874
Demography and Development of Life : Darwin, 497
Demonstration (Differential), of Acetylcholinesterase and Non-specific Cholinesterase in the Adrenal Medulla of the Rat (Prof. O. Eränkö), 183
Dempsey, Prof. E. W. : Chemical Pathology of the Nervous System (Electron Microscopic Studies on Nervous Tissue), 1647
Denervated Adrenal Gland (Rat's) : Catechol Amine Depletion in the, following Chronic Administration of Reserpine (Dr. Bernard L. Mirkin), 113
Denervated Adrenal Gland of the Rat : Replacement of Adrenaline and Noradrenaline in the Innervated and, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 1020
Denervated Muscles of the Cockroach *Periplaneta americana* : Spontaneous Electrical Activity in the (Dr. R. Beránek and Dr. I. Novotny), 957
Dennis, N. : Appointed lecturer in sociology at the University of Birmingham, 158
Dennison, Dr. J. P. (Davies, P. W., and) : Void Nucleation Sites in Creep of Metals, 131
Denny Scholarship in Naval Architecture (Institution of Naval Architects), 1554
Denny Scholarship in Naval Engineering (Institution of Naval Architects), 1554
Density of Acetylene (G. A. Bottomley, C. G. Reeves and G. H. F. Seiflow), 596
Density of the Air : Irregularities of Satellite Drag and Diurnal Variations in (G. V. Groves), 1533
Density Dependence : Perfect and Imperfect, in Population Dynamics (Dr. A. Milne), 1251 ; (M. E. Solomon), 1252
Dent, A. F., and others : Effect of Maize on Fat Hardness and Growth-Rate in Bacon Pigs, 953
Dent, Prof. H. C. : Secondary Modern Schools, *review* by H. Raymond King, 1585
Dental Caries : Water Fluoridation and (Dr. G. Lapage), 1351
Dental Tissues : Accumulation of Strontium-90 in (W. Holgate, R. H. Mole and Janet Vaughan), 1294
Denton, E. J., and others : Bathyscaphoid Squid, 1810
Deoxycytidine in Urine as an Indicator of Changes after Irradiation (Dr. J. Pařízek, M. Arient, Z. Dienstbier and J. Skoda), 721
Deoxyribonuclease (Pancreatic) : Inhibition of, by Acidic Polymers (Dr. Hans Heymann, Z. R. Gulick and R. L. Mayer), 1234
Deoxyribonuclease Activities (Ribonuclease and), during Normal and Neoplastic Growth (Dr. Sam Brody and Dr. M. Earl Balis), 940
Deoxyribonuclease Activity and Deoxyribonucleic Acid Synthesis in Normal, Regenerating, Precancerous and Cancerous Rat Liver (Dr. Sam Brody), 1386
Deoxyribonucleic Acid : A Biological Action of Injected (Dr. Rudolf K. Zahn, A Docter, B. Heicke, H. Kuhlemann, G. Ochs, E. Torz, R. Torz, W. Ziegler and G. Zahn), 1679
  Changes in Ultra-Violet Absorption Spectra of, by Treatment with Bromine (Hiroshi Ishihara, Naohiko Suzuki and Hanako Yokoi), 1302
  Distribution of Newly Synthesized, in Mitotic Division (Prof. W. Plaut), 399 ; (Prof. Henri Firket), 399
  Mechanism of Radiation Effect on the Process of Synthesis of (Studies in Synthesis of Deoxyribonucleic Acid), (L. G. Lajtha, R. Oliver, R. Berry and W. D. Noyes), 1788
  A New Configuration of (D. A. Marvin, M. Spencer, Dr. M. H. F. Wilkins and L. D. Hamilton), 387
  Part played by, in Transplantation Immunity (Vera Hašková and Miroslava Hrubešová), 61 ; (Prof. P. B. Medawar), 62
  A Possible Mechanism for the Initial Transfer of the Genetic Code from, to Ribonucleic Acid (Dr. Geoffrey Zubay), 112
  Studies in Synthesis of—Radiobiochemical Lesion in Animal Cells (Margery G. Ord and Dr. L. A. Stocken), 1787 ; Mechanism of Radiation Effect on the Process of Synthesis of Deoxyribonucleic Acid (L. G. Lajtha, R. Oliver, R. Berry and W. D. Noyes), 1788
  Synthesis of, in Extracts of Mammalian Cells (Prof. J. N. Davidson, Dr. R. M. S. Smellie, Dr. H. M. Keir and A. Hope McArdle), 589
  A Template Model for the Synthesis of Ribonucleic Acid from (Dr. Geoffrey Zubay), 1290
Deoxyribonucleic Acid Content of the Nuclei in the Adrenal Cortex of the White Rat (H. Roels), 873
Deoxyribonucleic Acid Synthesis in Normal, Regenerating, Precancerous and Cancerous Rat Liver : Deoxyribonuclease Activity and (Dr. Sam Brody), 1386
Deoxyribonucleic and Ribonucleic Acids : A Correlation between the Compositions of (Prof. A. N. Belozersky and A. S. Spirin), 111
Dependence on Age of the Diameter of the Pupil in the Dark (V. Kadlecová, M. Peleška and A. Vaško), 1520
Dependence of Bone Marrow Cells on the Liver for Purine Supply (Dr. L. G. Lajtha and J. R. Vane), 191
Dependence of Latent Period in Muscle on Strength of Stimulus (M. C. Goodall), 1736
Dependence of Mitochondrial Swelling on Oxidizable Substrates (J. B. Chappell and G. D. Greville), 813
Dependence of the Nucleonic Component of Cosmic Ray Air Showers on Radius (C. S. Wallace, Dr. M. M. Winn and Dr. K. W. Ogilvie), 1653
Dependence (Temperature), of the Conductivity of Electrolyte Solutions (N. van Meurs), 1532
Dependent on Pressure : An Oxidation Reaction highly (N. J. M. Wilkins and J. N. Wanklyn), 653
Dephosphorylated Casein (Enzymatically) : Rennin Coagulation of (Robert Y. H. Hsu, Prof. Laurens Anderson, R. L. Baldwin, C. A. Ernstrom and A. M. Swanson), 798
Depireux, Joseph (Duchesne, Prof. Jules, and) : Ferromagnetism of Meteorites, 931
Depletion with Reserpine : Replacement of Adrenaline and Noradrenaline in the Innervated and Denervated Adrenal Gland of the Rat, following (B. A. Callingham and Dr. Monica Mann), 1020
Depletion (Catechol Amine), in the Rat's Denervated Adrenal Gland following Chronic Administration of Reserpine (Dr. Bernard L. Mirkin), 113
Depletion (Rubidium), in Feldspars (Dr. S. R. Taylor and Dr. K. S. Heier), 202
Deposition of Radioactivity in North-west England from the Accident at Windscale (A. C. Chamberlain and H. J. Dunster), 629
Deposition of Strontium-90 and its Content in Vegetation and in Human Diet in the United Kingdom (Dr. R. Scott Russell), 834
Deprivation (Water) : Influence of, on Taste Sensitivity in Man (Roy Yensen), 677
Derache, R. (Trémolières, J., and) : Biochemical Response to Physical Injury (Metabolism of Nucleotides and Phosphate in Injured Tissue), 1494
Derivatives (Chlorothiazide) : Diuretic Activity of (W. Logemann, Dr. P. N. Giraldi and M. A. Parenti), 1510
Derivatives (Fluorescent), obtained by the Reaction of Ethylene Diamine with Epinephrine and Norepinephrine (Dr. Guy Nadeau and Louis-P. Joly), 180
Dermanyssus gallinae (Mite) : Some Observations on the Life-Cycle of *Atoxoplasma*, with particular reference to the Parasite's Schizogony and its Transmission by the (Dr. R. Lainson), 1250
Derom, Prof. F., and others : Fine Structure of the Nuclear Envelope of Carcinoma Cells, 1030
Desai, N., and Gregg, S. J. : Science in the Use of Coal (Physics and Chemistry of Coal), 25
Desch, Prof. C. H. : *Obituary* by Prof. F. C. Thompson, 223
Deschreider, A. R. : Photosynthesis of Amino-Acids, 528
Description (Statistical), of Vegetation, *review* by Prof. W. H. Pearsall, 347
Desertomycin, a New Crystalline Antibiotic with Antibacterial and Cytostatic Action (Dr. J. Úri, R. Bognár, I. Békési and B. Varga), 401
Desiccation of Eggs of the Crane Fly (*Tipula oleracea* L.), (Roger Laughlin), 613
Design (*Engineering Materials and*), Vol. 1, No. 1, 1642
Design of a Linear Phase-Shift Low-Pass Filter (L .E. Weaver), 1490
Design and Management of a Nuclear Science Laboratory (Prof. A. J. Woodall, C. G. Wilson, Dr. A. L. Jones and D. K. Thomas), 367
Designers for Industry : The Training of (Federation of British Industries), 360
Desmedt, Dr. J. E. : Myasthenic-like Features of Neuromuscular Transmission after Administration of an Inhibitor of Acetylcholine Synthesis, 1673
Detachment Relinquished, *review* by F. I. G. Rawlins, 757

Detection of certain Brominated Long-Chain Fatty Acid Esters by Gas Liquid Chromatography (R. A. Landowne and Prof. S. R. Lipsky), 1731
Detection of Haemoglobin, Haemoglobin–Haptoglobin Complexes and other Substances with Peroxidase Activity after Zone Electrophoresis (Dr. J. A. Owen, H. J. Silberman and C. Got), 1373
Detection of Immune Reactions : 'Crossing' Paper Electrophoresis for the (Prof. S. Nakamura and T. Ueta), 875, *erratum*, 1063
Detection of Polarization by Biological Organisms (Arthur N. Fankuchen and Prof. I. Fankuchen), 1372
Detection (Chromatographic), of Minute Quantities of Thyroxine in Serum (Dr. Viktor Stolc), 52
Detection (Indoleacetic Acid) : Growth-promoting Activity of Potato Tuber Extracts in the Coleoptile Straight-Growth Test—Quantitative Aspects of (A. Booth and Dr. P. F. Wareing), 406
Detection (Serological), of Fermentation Wastes (Robert L. Bunch and Edwin F. Barth, jun.), 1680
Detector : A Methane-Conversion, for Gas Chromatography (Prof. Albert Zlatkis and J. A. Ridgway), 130
Detector for use with Capillary Tube Columns in Gas Chromatography (Dr. J. E. Lovelock), 1663
Detector (Thermal Conductivity), in Gas Chromatography : Effect of the Carrier Gas on the Sensitivity of a (Dr. N. H. Ray), 1663
Detergent (Cationic) : Reversal by Magnesium Ions of the Inhibition of Yeast Metabolism by a (Dr. W. McD. Armstrong), 326
Determinants and Matrices : Introduction to the Theory of (Edward T. Browne), *review* by Dr. W. L. Ferrar, 1599
Determination : Nuclear Masses and their—Proceedings of the Conference held in the Max-Planck-Institut für Chemie, Mainz, 1956 (edited by Prof. H. Hintenberger), *review* by Dr. G. Dearnaley, 1579
Determination of the Dissociation Constants of Chelidonine and Protopine by Paper Chromatography : Separation and (Dr. Wanda Debska), 666
Determination of Forward-Mutation Rates in *Neurospora crassa* : A Direct Method for (F. J. de Serres and H. G. Kølmark), 1249
Determination of Hammett Sigma Constants by Intramolecular Hydrogen Bonding (A. T. Shulgin and A. W. Baker), 1299
Determination of Heats of Wetting : A Calorimeter for (A. J. Groszek), 1152
Determination of Indole Acetic Acid by the Salkowsky Reaction (Dr. A. M. Mayer), 1670
Determination of the Mass Thickness of Cell Membranes from their Electron Micrographs (M. L. De and P. Sadhukhan), 1008
Determination of Millimicrogram Amounts of Cobalt and Microgram Amounts of Copper in Biological Material : Separation and (Aleksandra Smoczkiewiczowa and Witold Mizgalski), 53
Determination of the Normal Paraffins in Petroleum Fractions : Use of Molecular Sieves in Gas Chromatography for the (B. T. Whitham), 391
Determination of Parentage in Cattle : Serological Test for (Dr. J. Rapacz and Dr. S. Dubiski), 1176
Determination of Particle Penetration Depths in a Filter : A Method for (Jan Sisefsky), 1437
Determination of Polyethylene Glycol : Substances in the Calf Alimentary Tract interfering in the (R. H. Smith), 260
Determination of Strychnine in Nux Vomica by Paper Chromatography (G. P. Briner), 742
Determination of Suitable *p*H Values for the Extraction of Antibiotics : A Paper Chromatography Method for the (Vladimír Betina), 796
Determination of Traces of Oxygen in Sodium Metal by Infra-red Spectrophotometry (H. J. de Bruin and L. E. Smythe), 387
Determination (Age), for Individual *Mansonioides* Mosquitoes (Prof. D. S. Bertram and W. A. Samarawickrema), 444
Determination (Carbon-14), International Agency for, 1413
Determination (Colorimetric), of Inorganic Phosphorus in the Presence of Glucose-1-phosphate and Adenosine Triphosphate (Michinori Nakamura and Kenji Mori), 1441
Determination (Colorimetric), of Nonmetals (edited by David F. Boltz), *review* by C. O. Harvey, 1331
Determination (Quantitative), of Hydroxyproline : A Rapid Paper Chromatographic Procedure for the (Henry R. Roberts, Michael G. Kolor and Wesley Bucek), 1602
Determination (Spectrophotometric), of Protein in Alkaline Solution (B. R. Hewitt), 246
Determination (Spectrophotometric), of Total Carbohydrate (B. R. Hewitt), 246
Determinative Bacteriology : Bergey's Manual of (Prof. Robert S. Breed, Prof. E. G. D. Murray and Nathan R. Smith), seventh edition, *review* by Dr. S. T. Cowan, 553
Deuterium Exchange in Polypeptides (Dr. A. Elliott and W. E. Hanby), 654
Deutsch, J. A. : Perception and Communication, *review*, 1572
Deutsche Gesellschaft für Elektronenmikroskopie : Fourth International Conference on Electron Microscopy, 295
Deutschen Wetterdienstes : Berichte des, Band 6, Nr. 45, Zur Klimatologie der Grosswetterlagen, ein witterungsklimatologischer Beitrag (Dr. Kurt Bürgers), 505
Development : Colonial, 636
  Molluscan, *review* by Prof. C. M. Yonge, 484
  University, 1952-1957 (University Grants Committee), 1625
Development Commission : Special Promotion, 993
Development of Africa : Science in the—a Review of the Contribution of Physical and Biological Knowledge South of the Sahara (Dr. E. B. Worthington), *review* by Dr. Kenneth Mellanby, 1043
Development in the B.B.C. : Research and, 1490
Development of Bean Embryos: Auxins in the (M. Furuya and K. Soma), 563
Development in East Africa : Scientific Research and, 703
Development in Government Establishments : Research and, 1485
Development in India : Research and, 20
Development of Inventions Bill (Second reading in the House of Commons), 1484
Development of Life : Darwin, Demography and, 497
Development of Science, *review* by Dr. A. Armitage, 142
Development of Skeletal Muscle Protein (Dr. Yoshito Ogawa), 1312
Development of Wheat Stem Rust : Effect of Metal Ions on the (D. Wang, Dr. P. K. Isaac and Prof. E. R. Waygood), 268
Development (Economic), in South and South-East Asia, Colombo Plan for Co-operative : Sixth Annual Report of the Consultative Committee (1957), 1718
Development (Nuclear Energy), as a Problem of Man-power, 343
Development (The Reproductive), of the Female with special reference to the Period of Adolescent Sterility (Prof. M. F. Ashley Montagu), *review* by Dr. Kenneth Walker, 1573
Development (Scientific), and the Universities, *review*, 1256
Development (Successful), and Birth of Mice cultivated *in vitro* as Early Embryos (Dr. Anne McLaren and Dr. J. D. Biggers), 877
Development (University), in Britain (Sir Eric Ashby), 1199
Developmental Selection : A Hypothesis of (J. Langridge), 20
Developments in Nuclear Energy, 293
Developments (Recent), in Nuclear Engineering (Sir John Cockcroft), 1334
Device (A Simple), for Observing the Polarization of Light from the Sky (Dr. Ulf Halldén), 333
Devices (Digital) : Mathematics and Logic for (Dr. James T. Culbertson), *review* by Dr. A. D. Booth, 1583
Devonshire, Dr. A. F. : Theory of Dielectrics, *review*, 972
Dewar, Dr. E. T. (Richardson, Dr. W. D., and) : Third International Seaweed Symposium, 1779
Dewar, Prof. M. J. S. : Steric Effects in Conjugated Systems (Light Absorption of Cyanine Dyes), 569
  Theoretical Organic Chemistry (Rearrangements in Aromatic Compounds), 1342
Dextran Production by *Streptococcus bovis* : Pre-requisites for (Dr. R. W. Bailey and Dr. A. E. Oxford), 185
Dextransucrase : Inhibition of, by Excess Substrate (W. Brock Neely), 1007
Dhar, N. R. : Transfer of Light Energy and Photosensitization, 231
Di- and Tri-bromoacetates (Cupric Mono-,) : Structure of (Ryutaro Tsuchida and Shoichiro Yamada), 1230
Diagrams : Logic Machines and (Martin Gardner), *review* by Dr. A. D. Booth, 1583
Dialkyldithiocarbamates (Sodium) : Fungitoxic Action of 8-Hydroxyquinoline, Pyridine-N-oxide-2-thiol and, and their Copper Complexes (A. Kaars Sijpesteijn and M. J. Janssen), 1313
Diameter of the Pupil in the Dark : Dependence on Age of the (V. Kadlecová, M. Peleška and A. Vaško), 1520
Diamine (Ethylene) : Fluorescent Derivatives obtained by the Reaction of, with Epinephrine and Norepinephrine (Dr. Guy Nadeau and Louis-P. Joly), 180
Diamine Tetraacetatocobaltate (III) (Ethylene) : Electron Transfer and Thermal Racemization of (Yong Ae Im and Prof. Daryle H. Busch), 1368
Diamine Tetraacetic Acid (Ethylene) : The Analytical Uses of (Prof. Frank J. Welcher), *review* by C. O. Harvey, 1471
  Effect of, on the Enzyme System of Yeast Cells (J. P. Shukla and K. A. Prabhu), 1316
  Ingestion of, and the Effect on Life Span of Irradiated and Control *Habrobracon* Females (Leo E. LaChance), 870
Diamond : The Four Elastic Constants of (Prof. R. S. Krishnan, Dr. V. Chandrasekharan and E. S. Rajagopal), 518
  Elastic Constants of (Dr. W. A. Wooster and N. Joel), 1149
  Graphitization and Plastic Deformation of (Dr. M. Seal), 1264
Diamonds : Effects of Pressure on some Optical and Electrical Properties of (Dr. F. C. Champion and J. R. Prior), 1079
1,2,3,4-Dibenzopyrene in Cigarette Smoke : Presence of (M. J. Lyons), 178, *erratum*, 363
3:4-8:9-Dibenzpyrene in Coal-Tar : Presence of (N. P. Buu-Hoï), 1158
Dichlamydius Chimaera : Transformation of a Monochlamydius into a, by X-Ray Treatment (Dr. H. W. Howard), 1620
2,4-Dichlorophenoxyacetic Acid (^{14}C-labelled) : Translocation of, in Barley and Oats (H. Ingv. Petersen), 1685
Dick, Dr. D. A. T. : Awarded a Carlsberg–Wellcome Travelling Research Fellowship for 1958-59, 228
Dick, William E. : Atomic Energy in Agriculture, *review*, 144
Dictionary of *p*H Applications (R. S. Evans), *review* by Prof. H. T. S. Britton, 1258
Dictionary (Medical) : Stedman's (edited by Norman Burke Taylor in collaboration with Lieut.-Colonel Allen Ellsworth Taylor), nineteenth edition, *review* by Dr. F. G. J. Hayhoe, 215
'*Dictyocotyle coeliaca*' : The Enigmatical Trematode (Dr. Ben Dawes and Dr. Ivor Griffiths), 1033
3,6-Dideoxy-D-*ribo*-hexose (3,6-Dideoxy-D-glucose) : Synthesis of, and its Identification with Paratose (C. Fouquey, J. Polonsky, Dr. E. Lederer, O. Westphal and O. Lüderitz), 944
Dieldrin (Gamma-BHC and) : Effect of Simulated Field Deposits of, on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles (G. Davidson and D. G. Pollard), 739
Dielectrics : Theory of (Prof. H. Fröhlich), second edition, *review* by Dr. A. F. Devonshire, 972
Dielektrika (Handbuch der Physik, herausgegeben von S. Flügge, Band 17), *review*, 73
Dienstbier, Z., and others : Deoxycytidine in Urine as an Indicator of Changes after Irradiation, 721
Diet on Imidazole Compounds and Creatine : Effect of, in Chinook Salmon (Dr. A. Lukton), 1019
Diet (An Artificial), for the Laboratory Rearing of Locusts (Dr. G. F. Howden and P. Hunter-Jones), 1527
Diet (Human), in the United Kingdom : Deposition of Strontium-90 and its Content in Vegetation and in (Dr. R. Scott Russell), 834
Dietary Salt Additions : Volume and Acidity of Urine of Sheep fed Hay Rich in Silica and Effect of (S. A. Forman, F. Sauer, D. H. Laughland and W. M. Davidson), 1385
Dietary-Protein Value : A Correlation between Sulphur Content and Net (D. S. Miller and D. J. Naismith), 1786
Diethylamide (Lysergic Acid), and its 2-Bromo Derivative : Inhibition of Cholinesterase Hydrolysis of Dihydromurexine by—a Selective Relationship (Dr. I. I. A. Tabachnick and M. E. Grelis), 935
Difference between Lipoprotein Lipase and Post-Heparin Esterase in Human Serum (S. Novák and Dr. J. Skořepa), 117
Difference (Species), in regard to the Biosynthesis of Ascorbic Acid (R. N. Roy and Prof. B. C. Guha), 319
Differences between Duplicate Assays of Human Urinary Gonadotrophins (F. J. Cunningham and P. S. Brown), 1238
Differences between the Early Metabolic Effects of Thyrotropic Hormone and Triiodothyronine (Dr. B. S. Hetzel, J. S. Charnock and B. F. Good), 1166
Different Heterogeneities of Mouse Haemoglobin according to Strains (J. Rosa, G. Schapira, J. C. Dreyfus, J. de Grouchy, G. Mathé and J. Bernard), 947

Different Frequencies of Supernumerary Chromosomes in Diploid Populations of *Dactylis glomerata* in Israel (Dr. Daniel Zohary and Israel Ashkenazi), 477
Different Phases of Tectonic Deformation in the Rhinns of Galloway (Dr. Maurits Lindström), 48
Different Types of Haemoglobin in Two Strains of Mice (W. Welling and Dr. D. W. van Bekkum), 946
Differential Calculus (P. J. Hilton), *review* by Prof. T. A. A. Broadbent, 827
Differential Demonstration of Acetylcholinesterase and Non-specific Cholinesterase in the Adrenal Medulla of the Rat (Prof. O. Eränkö), 183
Differential Equations—Geometric Theory (Solomon Lefschetz), *review* by Prof. T. A. A. Broadbent, 1332
Differential Equations (Partial) : Elements of (Prof. Ian N. Sneddon), *review* by Prof. T. A. A. Broadbent, 902
Differential Equations (Second-Order) : Eigenfunction Expansions associated with (Prof. E. C. Titchmarsh), Part 2, *review* by Prof. G. Temple, 1184
Differential Equations and Operators : Elementary (G. E. H. Reuter), *review* by Prof. T. A. A. Broadbent, 827
Differentiation (Cellular) : Some Aspects of (Dr. E. N. Willmer), 583
Differentiation (Imaginal), in the Silkworm : Effect of Larval Brain on the (Masatoshi Kobayashi), 110
Diffraction of Light by Ultrasonic Waves—Oblique Incidences (Dr. S. Parthasarathy and C. B. Tipnis), 1083
Diffraction of Light by Ultrasonic Waves, Oblique Incidence and Sound Intensity (Dr. S. Parthasarathy and C. B. Tipnis), 1795
Diffraction (X-Ray) : Examination of Metals by (X-Ray Diffraction Group of the Institute of Physics Discussion on), 771
Diffraction Anomaly in Polarizing Microscopes (Shinya Inoué and Prof. Hiroshi Kubota), 1725
Diffraction Pattern (X-Ray), of Vanadium Single Crystals : Extra Streaks in the (E. Sándor and Dr. W. A. Wooster), 1435
Diffusible Pigment : A Water-soluble, produced by a Strain of *Serratia marcescens* (*Chromobacterium prodigiosum*), (Prof. R. P. Williams, W. W. Taylor, D. Hawkins, Jr., and I. L. Roth), 1028
Diffusion of Adsorbed Molecules (Dr. J. D. Babbitt), 201 ; (Dr. P. C. Carman), 201
Diffusion of Proteins through a Wedge-shaped Agar Gel (Dr. Ch. Wunderly), 1087
Diffusion of Zinc in Gallium Arsenide (J. W. Allen and F. A. Cunnell), 1158
Diffusion (Atmospheric), and Air Pollution (International Union of Theoretical and Applied Mechanics and the International Union of Geodesy and Geophysics International Symposium on), 1134
Digestion : Rate of Absorption of Supplementary Free Amino-Acids during (Dr. J. B. Longenecker and N. L. Hause), 1739
Digestion in the Ruminant (Dr. D. P. Cuthbertson), 586
Digital Calculator (Automatic) : Programming for an (Dr. Kathleen H. V. Booth), *review* by R. A. Brooker, 618
Digital Computers : Electronic (Franz L. Alt), *review* by Dr. A. D. Booth, 1583
Digital Computers (Electronic), and their Industrial Applications (Conference at Birmingham College of Technology), 1205
Digital Devices : Mathematics and Logic for (Dr. James T. Culbertson), *review* by Dr. A. D. Booth, 1583
Digital (Analog–) Conversion Techniques : Notes on (edited by Alfred K. Susskind), *review* by Dr. A. D. Booth, 1583
2,6-Dihalo-Benzenone-Indophenylacetate and Benzenone-Indo-3',5'-Dihalo-Phenylacetate : Synthesis and Structure of (C. de Borst, F. N. Hooge and G. J. Arkenbout), 1017
Dihydromurexine : Inhibition of Cholinesterase Hydrolysis of, by Lysergic Acid Diethylamide and its 2-Bromo Derivative—a Selective Relationship (Dr. I. I. A. Tabachnick and M. E. Grelis), 935
Diisopropyl Phosphonofluoridate Poisoning : Protection by Oximes of *bis*-Pyridinium Ions against Lethal (Dr. F. Hobbiger and Dr. P. W. Sadler), 1672
Dijksterhuis, Dr. E. J. : Galileo and the Holy Office, *review*, 7
Dillon, Dr. T. : At the Third International Seaweed Symposium (Biographical Sketch of E. C. C. Stanford and the seventy-fifth anniversary of the discovery of Alginic Acid), 1780
Dils, Dr. R. R., and others : *In vitro* Incorporation of Serine labelled with Carbon-14 into Mitochrondrial Phospholipids, 1806
Dimelow, Miss E. J. : Pigments present in Arms and Pinnules of the Crinoid, *Antedon bifida* (Pennant), 812
1:6-Dimethanesulphonyl-D-mannitol : Tumour-inhibiting Action of (Prof. A. Haddow, G. M. Timmis and S. S. Brown), 1164
5:6-Dimethylbenzimidazole and certain Keto-Acids : Mode of Action of, as Inhibitors of Haem Biosynthesis (Dr. E. G. Brown), 1091
Dimethylformamide : Anodic Reactions of Mercury with Halide Ions in (Dr. P. H. Given and M. E. Peover), 1226
Dines, H. G. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1136
Dingle, Prof. H. : Galileo and the Beginnings of Modern Science, and The Nineteenth Century and the Expansion of the Physical Sciences (The History and Philosophy of Science and Technology), 1349
  Obituary of Prof. F. A. Paneth, 1773
Dingwall, Dr. E. J. : Parapsychology To-day, *review*, 143
Dinucleotide (Flavin Adenine) : Effects of Flavin Monosulphate and, on the Electroencephalogram (Tsuneo Muramatsu, Moriaki Ando, Toshiharu Nagatsu and Kunio Yagi), 457
Diophantine Analysis, *review* by Prof. T. A. A. Broadbent, 1629
Diophantine Approximation: An Introduction to (Dr. J. W. S. Cassels), *review* by Prof. T. A. A. Broadbent, 1629
Dioxide (Carbon) : Dissociation of Serological Complexes of Ovalbumin and Haemoglobin using Aqueous (Dr. B. T. Tozer, K. A, Cammack and Dr. H. Smith), 668, *erratum*, 842
Dioxide (Carbon) Catalysis of the Formation of Pyroglutamic Acid (A. Hubert, R. Buijle and Dr. B. Hargitay), 259
Dioxide (Carbon) Concentration in Wheat Leaves: Effects of Water-Strain on the Minimum Intercellular Space (Prof. O. V. S. Heath and Dr. H. Meidner), 1524
Dioxide (Carbon) Fixation in Germinating Pine Pollen (*Pinus ponderosa*), (R. G. Stanley, L. C. T. Young and J. S. D. Graham), 1462
Dioxide (Carbon-14) : Conversion of, to Starch Glucose during Photosynthesis by Spinach Chloroplasts (Prof. Martin Gibbs and Morris A. Cynkin), 1241
  Incorporation of, by Duck Erythrocytes and Reticulocytes *in vitro* (G. Giustina and E. Lazzarini), 1311
  Incorporation of, into Sugars by Darkened Cotyledons from Etiolated Sunflower Seedlings (Dr. Clive Bradbeer), 1429
Dioxide (Carbon-14), accelerated in an Electric Field : Production of Compounds labelled with Carbon-14 from (M. Guillaume), 1592
Dioxide (Sulphur), in Atmospheric Chemistry (Ch. E. Junge and T. G. Ryan), 21
α,α'-Diphenyl-β-picrylhydrazyl : Effect of Oxygen on the Electron Spin Resonance Spectrum of (Dr. J. E. Bennett and E. J. H. Morgan), 199
Diphosphate Glucose (Uridine) : Biosynthesis of Plant Glycosides from (Dr. C. E. Cardini and Dr. Tsutomu Yamaha), 1446
Diphosphopyridine Nucleotide : Effect of, on the Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by 2-Acetylaminofluorene and N-2-Fluorenyl-diacetamide (Prof. E. Quagliariello, S. Auricchio, E. Rinaldi and A. Rubino), 1744
  Significance of Induced *in vivo* Synthesis of (Dr. Louis Shuster, Thomas A. Langan, jun., Prof. Nathan O. Kaplan and Prof. Abraham Goldin), 512
Diphosphopyridine Nucleotide Oxidase in Lettuce Seeds : A Reduced (Dr. A. M. Mayer), 317
Diphtheria Toxin (High-Titre): Production of, in Baffled Shake Flasks (Dr. D. C. Edwards), 190
Diploid Behaviour (Cytologically), of Hexaploid Wheat : Genetic Control of the (Dr. Ralph Riley and Victor Chapman), 713
Diploid Populations of *Dactylis glomerata* in Israel : Different Frequencies of Supernumerary Chromosomes in (Dr. Daniel Zohary and Israel Ashkenazi), 477
Diploma in Technology (Brunel Staff Association National Conference on the new), 160
Dirac, Prof. P. A. M. : The Principles of Quantum Mechanics, fourth edition, *review* by Prof. N. Kemmer, 755
Direct Absorption of Dissolved Strontium-90 and Yttrium-90 by Tadpoles of *Rana temporaria* (J. W. Lucas and D. C. Pickering), 1242
Direct Aural and Visual Observation : Correlation of Whistlers and Lightning Flashes by (Prof. M. G. Morgan), 332
Direct Hardening Nickel Alloy Steels : Transformation Characteristics of (Mond Nickel Co., Ltd.), 1643
Direct Measurement of the Velocity of Propagation of a Ferromagnetic Domain Boundary in 'Perminvar' (Dr. E. W. Lee and D. R. Callaby), 254
Direct Method for Determination of Forward-Mutation Rates in *Neurospora crassa* (F. J. de Serres and H. G. Kolmark), 1249
Direct Observation of Dislocations in Graphite (Dr. Alexander Grenall), 448
Direct Photographic Photometry : Application of, to Preparative Electrophoresis (Dr. N. Ressler), 463
Direct-Plating Method for the Assay of Radioactive Isotopes in Aqueous and Alcoholic Samples (H. Campbell, H. A. Glastonbury and Margaret D. Stevenson), 1100
Direct Recording of Fluorescence Excitation Spectra (Dr. C. A. Parker), 1002
Directing Young Salmon, 162
Direction of Research at American Academic Institutions : Support and (Dr. Lloyd V. Berkner), 848
Direction of Research Establishments—Proceedings of a Symposium held at the National Physical Laboratory (1956), 275
Direction of Rotation of Spiral Galaxies : Tilt Criteria and (G. de Vaucouleurs), 1287
Discaria toumatou Raoul Choix : Root Nodules in (T. M. Morrison and Dr. G. P. Harris), 1746
Discharge (Synapse), by Single Fibre in Mammalian Visual System (Prof. P. O. Bishop, Dr. W. Burke and Dr. R. Davis), 728
Discharges : Gas (Physical Society Conference on), 433
Discontinuous Respiration in Insects : An Experimental Solution to the Paradox of (Robert I. Levy and Dr. Howard A. Schneiderman), 491
Discourses (The Admirable), of Bernard Palissy (translated by Aurèle La Rocque), *review* by Dr. F. J. North, 754
Discoveries (Australian), of Emperor Penguin Rookeries in Antarctica during 1954-57 (Dr. Richard L. Willing), 1393
Discretion in Job Analysis : Time-Span of (J. M. M. Hill), 998
Discrimination Learning (Temporal) : Phenylketonuria in the Rat associated with Decreased (Victor H. Auerbach, Prof. Harry A. Waisman and L. Benjamin Wyckoff, jun.), 871
Disease (Dollar Spot), *Sclerontinia homoeocarpa* : Control of (Sports Turf Research Institute), 564
Disease (Fatal), in Separated Rat Parabionts : Tolerance of Skin Homografts related to (Dr. B. Nakič and V. Silobrčič), 264
Disease (Foot-and-Mouth) : Infectivity of Ribonucleic Acid from Mice and Tissue Culture infected with the Virus of (F. Brown, R. F. Sellers and Doreen L. Stewart), 535
  Use of Two Properties of the Virus of, in Studies of its Multiplication (Sheila F. Cartwright and H. V. Thorne), 717
  World Reference Laboratory for, 1417
Disease (Heart) : Arthritis and (Gairdner Foundation Awards in), 1710
Disease Virus (Foot-and-Mouth), in Suspensions of Kidney Cells of the Pig : Effect of Temperature on the Multiplication of (Dr. H. Subak Sharpe), 1803
Diseases (Animal) : A Farmer's Guide to, *review* by Dr. J. O. L. King, 551
Diseases (Infectious), Centre for Research in (Portugal) : Grant of £12,850 from the Gulbenkian Foundation, Lisbon, for capital and running costs for three years, 1493
Diseases (Plant Virus) : Seed Transmission of (N. C. Crowley), 634
Diseases (Tick-borne) : Problems of Ticks and (United Nations Food and Agriculture Organization and the Office International des Epizooties Meeting to discuss), 1416
Diseases (Virus), of Brassica Crops : Investigation of (Dr. L. Broadbent), *review* by Dr. J. H. Hitchborn, 752
Diseases, Injuries and Causes of Death : Manual of the International Statistical Classification of (World Health Organization), *review*, 417
Disintegrated Yeast Cells : Liberation of Invertase from (M. Burger, E. Elizabeth Bacon and Dr. J. S. D. Bacon), 1508
Dislocations in Graphite : Direct Observation of (Dr. Alexander Grenall), 448
Dispersion of the Stress Optical Coefficient of the Alkali Halides (Dr. S. Srinivasan), 1660
Displacement (Horizontal), of the Body : Analogies between the Compensatory Responses of Fish and Crustacea to (D. H. Marr), 1621

Disrupted Staphylococcal Cells : Incorporation of Amino-Acids by (Dr. E. F. Gale, Dr. C. J. Shepherd and Joan P. Folkes), 592
Dissociation of Serological Complexes of Ovalbumin and Haemoglobin using Aqueous Carbon Dioxide (Dr. B. T. Tozer, K. A. Cammack and Dr. H. Smith), 668, *erratum*, 842
Dissociation (Anomalous), of Molecular Hydrogen by Electron Impact (L. A. Edelstein), 932
Dissociation Constants of Chelidonine and Protopine : Separation and Determination of the, by Paper Chromatography (Dr. Wanda Debska), 666
Dissolved Strontium-90 and Yttrium-90 : Direct Absorption of, by Tadpoles of *Rana temporaria* (J. W. Lucas and D. C. Pickering), 1242
Distance Scale : The Cosmic (Dr. Allan Sandage), 1132
Distinguishing Insects labelled with Phosphorus-32 and Sulphur-35 : A Simple Autoradiographic Method for (Dr. M. T. Gillies), 1683
Distribution of Animals : Geographical, *review* by Charles S. Elton, 140
Distribution of Antistreptolysins in Protein Fractions (Dr. L. Goreczky), 305
Distribution of Chemical Engineers in Britain : Supply and (Prof. H. E. Watson), 1712
Distribution of Choline Acetylase in Insect Conductive Tissue (E. H. Colhoun), 1378
Distribution of Industry (Industrial Finance) Bill : Second reading in the House of Lords, 293
Distribution of Newly Synthesized Deoxyribonucleic Acid in Mitotic Division (Prof. W. Plaut), 399 ; (Prof. Henri Firket), 399
Distribution of Pelagic Polychaetes in the South Atlantic Ocean (Norman Tebble), 166
Distribution of Proflavin-induced Mutations in the Genetic Fine Structure (Dr. S. Brenner, Prof. S. Benzer and Mrs. L. Barnett), 983
Distribution of Tissue-Specific Antigens in Centrifugal Fractions of Rat Liver (Dr. Peter Vogt), 1807
Distribution (Phylogenetic), of Acid Phosphatase inhibited by (+)-Tartrate (Dr. Grace S. Kilsheimer and Prof. B. Axelrod), 1733
Distribution (Vertical), of Two Woodboring Crustaceans : Effect of Low Temperature on the (Dr. N. Balakrishnan Nair and H. Leivestad), 814
Disturbances caused by Thermal Stress in the Central Nervous System of Man : Biochemical Basis of (M. Krause), 1376
Disturbances (Reproductive), of Romney Ewe Lambs grazed on Red Clover (*Trifolium pratense*) Pastures (T. S. Ch'ang), 1175
Diuretic Activity of Chlorothiazide Derivatives (W. Logemann, Dr. P. N. Giraldi and M. A. Parenti), 1510
Diurnal Variations in Density of the Air : Irregularities of Satellite Drag and (G. V. Groves), 1533
Dividing Walls in Cells of *Chara* spp. : Light Microscopic and Electron Microscopic Observations on the (Dr. Lóránd Fridvalszky and Dr. Béla Lovas), 736
Divine to Continuous Creation : From, *review* by Dr. A. R. Hall, 277
Dixon, Dr. Malcolm, and Webb, Dr. Edwin C. : Enzymes, *review* by Prof. Britton Chance, 969
Dixon, Dr. P. S. : At the Third International Seaweed Symposium (Season and Environment cause considerable Morphological Variation in *Pterocladia pinnata*), 1780
Dixon, R. N., and others : Emission and Absorption Spectra of NCO and NCS, 336
Djurle, E., and Rodney, W. S. : At the Ninth General Physics Conference of the Swedish National Committee for Physics (Instrumentation for Phase Contrast Measurements in the Near Infra-red), 698
Dobbs, Dr. C. G. : Ecology of Soil Fungi, 1559
Docter, A., and others : A Biological Action of Injected Deoxyribonucleic Acid, 1679
Documents : Fraudulent, *review* by Dr. L. C. Nickolls, 1399
  Historical (American Philosophical Society, *Proceedings*, Vol. 101, No. 6), 20
  Suspect—their Scientific Examination (Dr. Wilson R. Harrison), *review* by Dr. L. C. Nickolls, 1399
Dodds, Sir Charles : Biochemical Contributions to Endocrinology—Experiments in Hormonal Research, *review* by Dr. A. E. Kellie, 484
Doering, Prof. W. : Theoretical Organic Chemistry (Synthesis of New Structural Types possessing Aromatic Character), 1341
Doermann, A. H. : Bacteriophage Research, 1770
Doery, Hazel M. (North, Dr. E. A., and) : Protective Action of Venoms containing Phosphatidase-*A* against certain Bacterial Exotoxins, 1374
Doetsch, Prof. Raymond N., and others : Dairy Microbiology, *review* by Dr. L. F. L. Clegg, 141
Dog Semen : Biochemical Characteristics of (D. J. Bartlett), 1605
Doig, Dr. A. : Awarded a United States Public Health Services (National Institutes of Health, Bethesda) Travelling Fellowship in Medical Science, 634
Dolgushin, Dr. L. D. : Physics of Ice Movement (Glacier Flow), 1562
Doll, R. : Progress in Cancer Research (Ionizing Radiations), 364
Dollar Spot Disease (*Sclerontinia homoeocarpa*) : Control of (Sports Turf Research Institute), 564
Dolomite : Formation of, in Saline Lakes near Kingston, South Australia (A. R. Alderman and H. C. W. Skinner), 21
Dolphin, G. W. (Kirby-Smith, J. S., and) : Chromosome Breakage at High Radiation Dose-Rates, 270
Domain Boundary (Ferromagnetic), in 'Perminvar' : Direct Measurement of the Velocity of Propagation of a (Dr. E. W. Lee and D. R. Callaby), 254
Domestic Sheep (Primitive), and in Parchment : Follicle Arrangement in Skin from Wild Sheep, (Dr. M. L. Ryder), 781
Donald, Prof. C. M. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1642
Donald, Prof. C. M., and Black, J. N. : Significance of Leaf Area in Pasture Growth, 707
Donaldson, Norman : The Chemistry and Technology of Naphthalene Compounds, *review* by Dr. G. Baddeley, 751
Donaldson, P. E. K. (Gregory, R. L., and) : A 'Solid-Image' Microscope, 1434
Doncaster Grammar School : Sixth Vaughan Memorial Lecture (Prof. W. H. G. Armytage), 985
Donelan, J. A. : Pressure Welding of Metals, 638
Donohue, Prof. Jerry, and others : Crystal Structure of Rhombohedral Sulphur, 518
Donor (Phosphate), in Muscular Contraction : Carnosine Phosphate as (D. F. Cain, Dr. A. M. Delluva and Prof. R. E. Davies), 720
Donovan, A. F., and Lawrence, H. R. (edited by) : Aerodynamic Components of Aircraft at High Speeds, *review* by Dr. W. P. Jones, 1582
Dorfman, Prof. Robert, and others : Linear Programming and Economic Analysis, *review* by Dr. L. S. Goddard, 1046
Dormancy in the Seeds of *Viburnum trilobum* (R. H. Knowles and S. Zalik), 1415
Dormancy in Wild Oats (*Avena fatua* L.) : Light and (Bruce G. Cumming and James R. Hay), 609
Dorsey, jun., Mantley, and others : Tubule Formation in Rat Brains by Monkey Kidney Cells previously grown *in vitro*, 1034
Dosage–Mortality Curves for Houseflies Susceptible and Resistant to DDT (K. Wilson-Jones and G. Davidson), 403 ; (Dr. P. S. Hewlett), 404
Dose-Rates (High Radiation) : Chromosome Breakage at (J. S. Kirby-Smith and G. W. Dolphin), 270
Dosimeter : A Highly Sensitive Chemical, for Ionizing Radiation (W. A. Armstrong and Dr. D. W. Grant), 747
Doucette, E. I. (Kinney, Prof. C. R., and) : Infra-Red Spectra of a Coalification Series from Cellulose and Lignin to Anthracite, 785
Dougall, D. K. (White, Dr. D. E., and) : Chemistry of Plant Products ('Primary' Tars obtained by Distillation of Jarrah and Karri Sawdust *in vacuo*), 299
Douglas, Prof. R. W. : Soviet Research in Glass and Ceramics, *review*, 827
Downer, J. M., and others : Preparation of Block and Graft Copolymers in Systems where the Lift-time of the Kinetic Chain is Long, 245
Downhill, B., and others : Observations on the Explosion at Ripple Rock, 1597
Downie, Dr. D. G. : Ecology of Soil Fungi, 1560
Doyle, Dr. W. P., and Lonergan, G.: Ions of the Transition Elements (Measurements on the Transmission of Radiation by Films of Cobaltous and Nickelous Oxides between 360 and 1,000 mμ thick), 1350
Doyle, Dr. W. P., and others : Glucose Catabolism in the American Cockroach, 102
Drag (Air) : Effect of, on the Orbit of an Earth Satellite (D. G. Parkyn), 787 ; (D. G. King-Hele and Dr. D. C. M. Leslie), 788
Drag (Satellite) : Irregularities of, and Diurnal Variations in Density of the Air (G. V. Groves), 1533
Drag Effects (Atmospheric), on *Sputniks* 2 and 3 (Satellites 1957β, 1958δ, and $1958\delta_2$) : An Irregularity in the (D. G. King-Hele and Mrs. D. M. C. Walker), 860
Dragonfly : Emergence of a Summer Species of (Dr. Philip S. Corbet and Sarah A. Corbet), 194
Drake, J. F., and Williams, Dr. R. J. P. : Uptake of Molecular Oxygen by Ferrous Complexes, 1084
Drakeley, Dr. T. J. (edited by) : Annual Report on the Progress of Rubber Technology (Institution of the Rubber Industry), 294
Drew, Thomas B., and Hooper, Jr., John W. (edited by) : Advances in Chemical Engineering, Vol. 2, *review*, 822
Dreyfus, J. C., and others : Different Heterogeneities of Mouse Haemoglobin according to Strains, 947
Dried Bacterial Spores : An Observed 'Oxygen Effect' during Gamma-Irradiation of (Alan Tallentire), 1024
Drier Habitats (Wetter and) : Further Inherent Characters of Plant Species of (Dr. M. L. R. Pettersson and G. E. J. Gray), 450
Drier Regions of Uganda : A Revised Interpretation of the Causes of Loss of Crops of Cotton in the (J. Bowden and W. R. Ingram), 1750
Drift of Birds Plotted by Radar : Migrational (Dr. David Lack), 221
Drift Measurements (Horizontal), in the Ionosphere near the Equator (N. J. Skinner, J. Hope and R. W. Wright), 1363
Driscoll, Shirley G., and others : The Heterozygous Carrier in Galactosaemia, 1389
Driver, G. W. (Davies, G. E., and) : Inhibitory Action of Ethyl Mercaptan on Intracellular Tubercle Bacilli, 664
Droop, Dr. M. R. : At the Third International Seaweed Symposium (Evidence for and against the view that Vitamin B_{12} may become a Limiting Nutrient for Phytoplankton Populations in the Sea), 1781
Drosophila spp. : Genetical Interference in (P. A. Parsons), 1816
Drosophila melanogaster : Competition between Genotypes in (P. A. Parsons), 271
  Conditional Anti-Mutagenesis in (Dr. Thomas Alderson), 508
  Genotypic Control of Crossing-over on the First Chromosome of (M. J. Lawrence), 889
Drouhet, Dr. E. : Human and Animal Mycology (Difference between *Histoplasma duboisii* and *H. capsulatum*), 1648
Drug : Metamidium, a New Trypanocidal (W. R. Wragg, K. Washbourn, K. N. Brown and J. Hill), 1005
Drug Resistance in Micro-organisms—Mechanisms of Development : Ciba Foundation Symposium on (edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by I. M. Rollo, 416
Drug Resistance of Micro-organisms (Robert J. Schnitzer and Emanuel Grunberg), *review* by I. M. Rollo, 416
Drugs : Effect of, on Conditioning and Habituation to Arousal Stimuli in Animals (Dr. B. J. Key and Dr. P. B. Bradley), 1517
  Effect of, on Emotional Behaviour in Rats (R. W. Ryall), 1606
  Microbes and, *review* by I. M. Rollo, 416
  Psychotropic—Proceedings of the International Symposium on Psychotropic Drugs, Milan, 1957 (edited by S. Garattini and V. Ghetti), *review* by Prof. H. J. Eysenck, 823
  Self-depression of the Subcutaneous Absorption of, due to Release of Histamine (Jens Schou), 324
Drugs (Morphine-like) : Lenticular Effect in Mice of some (Marta Weinstock, Dr. H. C. Stewart and K. R. Butterworth), 1519
Drugs (Radioactive Tracers and), circulating in the Blood : Concentration in the Human Ovarian Follicular Fluid of (Prof. Kurt N. von Kaulla, Jerry K. Aikawa and John D. Pettigrew), 1238
Drugs and the Brain, *review* by Prof. H. J. Eysenck, 823
Drummond, Sir Walter : Appointed chairman of the Farm Buildings Research Committee of the Agricultural Research Council, 1416
Drummond Fellowship for Research in Nutrition, 1488
Dryden, I. G. C. : Science in the Use of Coal (Physics and Chemistry of Coal), 24
DuBridge, President L. A. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Engineering Education, and its Place in the University), 1284
Dubiski, Dr. S. (Rapacz, Dr. J., and) : Serological Test for Determination of Parentage in Cattle, 1176

Dublin Institute of Advanced Studies : Appointment of Dr. Mervyn A. Ellison as senior professor of astronomy and director of the Dunsink Observatory, 1412
Duchesne, Prof. Jules, and Depireux Joseph : Ferromagnetism of Meteorites, 931
Duchesne, Prof. Jules (Burnelle, Louis, and) : Molecular Orbitals and Vibrational Potential Function of Nitryl Fluoride, 653
Duck : Histochemical Study of the Nasal (Supra-Orbital) Gland of the (Dr. R. J. Scothorne), 732
Duck Erythrocytes and Reticulocytes : Incorporation of Carbon-14 Dioxide by, *in vitro* (G. Giustina and E. Lazzarini), 1311
Duckworth, R. B. (Hawthorn, Dr. J., and) : Fall-out of Radioactivity in a Deer's Antlers, 1294
Ductility of Chromium deposited from Molten Chloride Baths (Dr. R. S. Dean and F. X. McCawley), 746
Dudley, Dr. N. A. : The Production Engineering Research Association, 233
Dufay, Jean, and Mao-Lin, Tcheng : Spectrum of the Night Sky, 361
Dumas Nitrogen Estimation : Swift (Dr. Irmgard K. H. Otter), 656
Dumbell, Dr. K. R. (McCarthy, Dr. K., and): Appointed senior lecturers in bacteriology in the University of Liverpool, 22
Duncan, Prof. W. J. : High-Speed Flight, 695
Duncanson, L. A., and others : Ions of the Transition Elements (Measurements using Infra-red Spectra of the N—H Vibration Frequencies in various Amine Complexes), 1350
Dunham, Prof. K. C. : Future of Mineral Exploration in Great Britain and Ireland, 1136
Dunnicliff, Prof. Horace B. : *Obituary* by Prof. J. N. Ray, 1771
Dunning, John R., and Prentice, Brice R. (edited by) : Advances in Nuclear Engineering—Proceedings of the Second Nuclear Engineering and Science Conference held at Philadelphia, *review* by Dr. T. E. Allibone, 210
Dunsheath, Dr. P. : The Engineer and Human Progress (The History and Philosophy of Science and Technology), 1349
Dunsink Observatory : Appointment of Dr. Mervyn A. Ellison as director, 1412
Dunster, H. J. (Chamberlain, A. C., and) : Deposition of Radioactivity in North-west England from the Accident at Windscale, 629
Dunworth, Dr. J. V. : Appointed assistant director (reactor research policy) of the Atomic Energy Research Establishment, Harwell, 1129
Duplicate Assays of Human Urinary Gonadotrophins : Differences between (F. J. Cunningham and P. S. Brown), 1238
Duran-Reynals, Dr. Francisco : *Obituary* by Prof. A. Haddow, 1549
Durie, Dr. E. B. : Human and Animal Mycology (Ecology of Dermatophytes), 1648
Dust, Smoke and Mist, *review* by R. L. Brown, 682
Duthie, D. W., and others : Effect of Maize on Fat Hardness and Growth-Rate in Bacon Pigs, 953
Dutt and Co., Ltd., P. J.: Equipment for Archaeology and Geology, 1486
Dutta, Prof. P. C. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1642
Dutton, Anne H., and others : Effect of 8-Azaguanine on Antibody Synthesis *in vitro*, 1377
Dutton, Dr. R. W., and others : Effect of 8-Azaguanine on Antibody Synthesis *in vitro*, 1377
Dutton, W. A. : Awarded the Institute Medal of the Textile Institute, 1205
Duty (Import), on Scientific Apparatus and Instruments, 1708
Dux, Dr. E. : The German Starch Convention (1958), 231
Dwarf Pea Assay : A Colorimetric Test for Gibberellic Acid and Evidence from a, for the Occurrence of a Gibberellin-like Substance in Wheat Seedlings (G. M. Simpson), 528
Dye, D. W. : Host Specificity in *Xanthomonas*, 1813
Dye-labelled Protein : Effect of Hyaluronidase on Capillary Permeability, Lymph Flow and Passage of, from Plasma to Lymph (Dr. G. Szabó and S. Magyar), 377
Dyeing : A Scientific Analysis of Fixation and, *review* by Prof. J. Brachet, 1579
Dynamic Aspects of Biochemistry (Prof. Ernest Baldwin), third edition, *review* by Prof. D. C. Harrison, 684
Dynamic Biochemistry, *review* by Prof. D. C. Harrison, 684
Dynamic Programming (Richard Bellman), *review* by Dr. L. S. Goddard, 1187
Dynamics : Gas (Dr. Klaus Oswatitsch), English version by Prof. Gustav Kuerti, *review* by E. P. Sutton, 76
Dynamics of Exploited Fish Populations : On the (R. J. H. Beverton and S. J. Holt), *review* by Dr. E. B. Worthington and J. G. Skellam, 686
Dynamics (Population) : Perfect and Imperfect Density Dependence in (Dr. A. Milne), 1251 ; (M. E. Solomon), 1252

EADES, Dr. R. G., and others : Nuclear Magnetic Resonance Spectra from a Crystal rotated at High Speed, 1659
Early Cysticercoid Stage in a Cyclophyllidean Cestode : A New Type of (Joyce E. Rigby and Mrs. Dilys Rawson), 121
Early Embryos : Successful Development and Birth of Mice cultivated *in vitro* as (Dr. Anne McLaren and Dr. J. D. Biggers), 877
Early Metabolic Effects of Thyrotropic Hormone and Triiodothyronine : Differences between the (Dr. B. S. Hetzel, J. S. Charnock and B. F. Good), 1166
Early Writing in Greece (R. M. Cook), 152
Earth : Energy Spectrum of Particles Bombarding the (B. J. O'Brien), 521
  The Gravitational Field of the, *review* by Sir Edward Bullard, 1580
  Motion of the Nodal Line of the Second Russian Earth Satellite (1957β) and Flattening of the (Prof. E. Buchar), 198
Earth and its Gravity Field (W. A. Heiskanen and Prof. F. A. Vening Meinesz), *review* by Sir Edward Bullard, 1580
Earth Satellite: Effect of Air Drag on the Orbit of an (D. G. Parkyn), 787; (D. G. King-Hele and Dr. D. C. M. Leslie), 788
  Seasonal Illumination of a Circumpolar, at its Extreme-Latitude Orbit Point (Dr. W. N. Abbott), 651
Earth Satellite 1957β : Effect of Solar Flares on (T. Nonweiler), 468
  Motion of the Nodal Line of the Second Russian, and Flattening of the Earth (Prof. E. Buchar), 198
Earth Satellite *Sputnik* 3 (1958δ) : Progress of the Russian (D. G. King-Hele), 1409
Earth Satellite Signals : Faraday Fading of (Dr. Fred B. Daniels and Dr. Siegfried J. Bauer), 599
Earth Satellites : Investigation of the Ionosphere using Signals from (Dr. E. Woyk) (E. Chvojková), 1362
  A New Method of Tracking Artificial (A. P. Willmore), 1008
  Rotation of Artificial (Prof. R. N. Bracewell and O. K. Garriott), 760
Earth's Company (Leslie Reid), *review* by Prof. Alan R. Gemmell, 683
Earth's Crust : Beneath the (Prof. L. R. Wager), 580
  Measurement of the Thickness of the, in the Albertan Plains of Western Canada (Dr. T. C. Richards), 384
Earth's Crust during Geological Times : Migration of the Chemical Elements in the (A. A. Saukov), 362
Earth's Gravitational Field : Use of Artificial Satellites to Explore the—Results from *Sputnik* 2 (1957β), (R. H. Merson and D. G. King-Hele), 640
Earth's Magnetic Field : Reversals of the (Dr. D. W. Allan), 469
Earth's Mantle ? : A Borehole to the (Dr. T. F. Gaskell), 692
Earwig (Common) : Population Studies of the (P. F. Baker), 162
Easily Decomposed Substrates : A Technique for the Investigation of the Competitive Saprophytic Ability of Soil Fungi by the Use of (S. T. Matturi and Dr. H. Stenton), 1248
East (Far) : Biology in the, 501
East Africa : Nematoses of Pyrethrum in (A. G. Whitehead), 542
  Scientific Research and Development in, 703
East Africa (Southern and) : A List of Zoological and Botanical Types preserved in Collections in (South African Museums Association), Vol. 1, Zoology, Part 1, 431
East Africa High Commission : Annual Report for 1956-57 of the East African Industrial Research Board, 499
  Annual Report for 1957, 703
  Report for 1957 of the East African Agriculture and Forestry Research Organization, 1783
East African Agriculture and Forestry Research Organization : Report for 1957, 1783
East African Industrial Research Board : Annual Report for 1956-57, 499
East London : Family and Kinship in (Michael Young and Peter Willmott), *review* by Prof. E. Grebenik), 9
East Malling Research Station : Abstracts and Index to the Annual Research Reports, 1913-1953 (compiled by Dr. F. W. Andrews and A. C. Painter), 499
  Annual Report for 1956-57, 1355
East Wind Brought the Locusts' : '. . . the, *review* by Dr. R. C. Rainey, 1257
Eastbourne College : Soddy Memorial Plaque in the new Soddy Senior Chemistry Laboratory unveiled by Dr. F. M. Brewer, 1203
Easter Island : Aku-Aku, the Secret of (Thor Heyerdahl), *review* by Prof. Raymond Firth, 487
Easter Island, a Stone-Age Civilization of the Pacific (Dr. Alfred Metraux), translated from the French by Michael Bullock, *review* by Prof. Raymond Firth, 280
Easter Island Culture, *review* by Prof. Raymond Firth, 487
Easterlin, Richard A., and others : Population Redistribution and Economic Growth, United States, 1870-1950, 1, Methodology Considerations and Reference Tables (prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), (Memoirs of the American Philosophical Society, Vol. 45), *review*, 420
Eastern Siberia : The Neolithic Age in (Henry N. Michael), 1061
Eastham, Prof. L. E. S. : Title of emeritus professor of zoology in the University of Sheffield conferred on, 1279
Eastwood, T. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1136
Eastwood, W. S. : Advances in the Use of Radioisotopes—General Uses, 1408
Easty, Dr. G. C. : Invasiveness and Surface Properties of Cancer Cells (Physico-chemical Techniques for a Direct Study of the Nature of the Cell Surface), 1420
Eayrs, Dr. J. T. : Title of reader in comparative neurology in the University of Birmingham conferred on, 1487
Ebert, Dr. Michael, and Hornsey, Mrs. Shirley : Effect of Nitrous Oxide on the Radiosensitivity of Mouse Ehrlich Ascites Tumour, 1240
Echoes (Radio), from the Aurora Australis and Aurora Borealis : A Comparison of (D. P. Harrison and C. D. Watkins), 43
Eckstein, Dr. P. : Comparative Endocrinology, 774
l'École Supérieure de Physique et Chimie Industrielle de Paris : Seventy-fifth Anniversary of, 840
l'École Supérieure de Physique et Chimie Industrielle de Paris, Association des Élèves de : Physique et Chimie (ouvrage édité à l'occasion du 75e Anniversaire de leur École), 840
Ecological Society, British : Symposium on the Biology of Weeds, 1710
Ecology : Physiological, *review* by Dr. Kenneth Mellanby, 72
  Quantitative Plant (P. Greig-Smith), *review* by Prof. W. H. Pearsall, 347
  Research Studentships in (Nature Conservancy Awards), 771
Ecology of Invasions by Animals and Plants (Charles S. Elton), *review* by Prof. Ronald Good, 1576
Ecology of the Louse *Lepidophthirus macrorhini* Enderlein 1904 on the Elephant Seal *Mirounga leonina* (L.), (M. D. Murray), 404
Ecology of Soil Fungi (Symposium on, at the University of Liverpool), 1559
Ecology (Human and Animal), International Society for : Meeting in Lisbon, 1648
Ecology and Natural History of Woodlice, 'Myriapods' and Arachnids : Spiders, Scorpions, Centipedes and Mites—the (Dr. J. L. Cloudsley-Thompson), *review* by Theodore Savory, 825
Economic Analysis : Linear Programming and (Prof. Robert Dorfman, Prof. A. Samuelson and Prof. Robert M. Solow), *review* by Dr. L. S. Goddard, 1046
Economic Aspect of Applied Chemistry in Europe and North America : The Chemical Industry during the Nineteenth Century, a Study of the (Dr. L. F. Haber), *review* by J. L. S. Steel, 347
Economic Conference, Commonwealth Trade and : Report of the, 1693
Economic Development in South and South-East Asia, Colombo Plan for Co-operative : Sixth Annual Report of the Consultative Committee (1957), 1718
Economic Growth, United States, 1870-1950 : Population Redistribution and, 1, Methodological Considerations and Reference Tables (Everett S. Lee, Ann Ratner Miller, Carol P. Brainerd and Richard A. Easterlin), (prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), (Memoirs of the American Philosophical Society, Vol. 45), *review*, 420

Economic Incentives : Productivity and (J. P. Davison, Prof. P. Sargant Florence, Dr. Barbara Gray and Dr. N. S. Ross), *review* by T. H. Hawkins, 1697
Economic Planning by Programme and Control in Great Britain (Prof. Gilbert Walker), *review* by Norman Cuthbert, 418
Economics and Statistical Research, Centre for (Portugal) : Grant of £11,250 from the Gulbenkian Foundation, Lisbon, for seminars and training of future research workers, 1493
Economy (British), under Inflation (Prof. A. J. Brown), 582
Eddy, Dr. Alan A. : Appointed to the chair of biochemistry in the Faculty of Technology at the Manchester College of Science and Technology, 1202 ; work of, 1202
Edels, Dr. H. : Appointed reader in electric power engineering in the University of Liverpool, 22
Edelstein, L. A. : Anomalous Dissociation of Molecular Hydrogen by Electron Impact, 932
Eden, Dr. T. : Tea, *review* by Dr. F. N. Howes, 1577
Eder, Dr. G., and Motz, Dr. H. : Contribution of High-Energy Particles to Thermonuclear Reaction Rates, 1140
Edgar, R. : Bacteriophage Research, 1770
Edinburgh Mathematical Society : *Proceedings* of the, June 1958, Memorial to the late Sir Edmund Whittaker, 562
Edney, Prof. E. B. : The Water Relations of Terrestrial Arthropods, *review* by Dr. Kenneth Mellanby, 72
Edsall, John T., and Wyman, Jeffries : Biophysical Chemistry, Vol. I, Thermodynamics, Electrostatics and the Biological Significance of the Properties of Matter, *review* by Prof. J. A. V. Butler, 5
Education in 1957, being the Report of the Ministry of Education and the Statistics of Public Education for England and Wales, 481, 632
Education, an Investment for the Future, 1039
Education : Adult (Prof. Robert Peers), *review* by T. H. Hawkins, 1041
  The Costs of (John Vaizey), 1040
  Expanding (Sir Hector Hetherington), 1283
  The Partnership between Industry and (Sir Willis Jackson), 585
  Partnership in (Dr. B. E. Lawrence), 1777
  Physiology as an, and as a Career (British Association for the Advancement of Science, Sections I (Physiology and Biochemistry) and L (Education), Joint Discussion on), 1065
  Policy, Purpose and Partnership in, 749
  Science, Business and, 545
  Utopian, 985
Education, Department of (Oxford): Grant of £3,000 from the Gulbenkian Foundation, Lisbon, to enable a study to be made of specialization in schools and its real relevance to university requirements, 1493
Education, Minister of : The Supply of Teachers in the 1960's—Correspondence between the Chairman of the National Advisory Council on the Training and Supply of Teachers and the (July 1958), 1039
Education, Ministry of : Report on Education in 1957, and the Statistics of Public Education for England and Wales, 481, 632
  Administrative Memorandum No. 577, Use of Radioactive Substances and X-Rays in Schools, 1203
  Report on the Regional European Seminar on the Universities and Adult Education, Bangor (1956), 1627
Education, Ministry of, and the Scottish Education Department : Committee on Grants to Students, 20, 561
Education of Adults, *review* by T. H. Hawkins, 1041
Education and Training of Student Apprentices in Electrical Engineering (Institution of Electrical Engineers), 1649
Education (Adult) : Report on the Regional European Seminar on the Universities and (Bangor, 1956), (Ministry of Education), 1627
Education (Adult), in Wales, 924
Education (Adult), Universities Council for : Report on the Year 1956-1957, 924
Education (English) : The Utopist Tradition in (Prof. W. H. G. Armytage), 985
Education (Further), Northern Advisory Council for : Eleventh Annual Report, 1708
Education (Higher), in the United Kingdom (British Council and the Association of Universities of the British Commonwealth), revised edition, 1277
Education (Higher) Overseas, Inter-University Council for : Completion by S. J. Worsley of his term of office as secretary, 1774
  Appointment of I. C. M. Maxwell as secretary, 1774
Education (Higher Technological), London and Home Counties Regional Advisory Council for : Bulletin of Special Courses in Higher Technology, including Management Studies and Commerce, 1958-59, Part I, Autumn Term, 842
Education (Public), for England and Wales : Education in 1957, being the Report of the Ministry of Education and the Statistics of, 481
Education (Science), in South Africa, 87
Education (Technical), and Social Change, 481
Education (Technical), and Social Change (Dr. Stephen F. Cotgrove), 481
Education (Technological) : The Background to Specialist (Dr. M. L. R. Pettersson), 503
Education (University), in Britain : Expansion of, 137
Educational Associations : Forty-second Annual Conference, 1777
  Presidential Address : Partnership in Education (Dr. B. E. Lawrence), 1777
Educational Journal : *Forum*, a new, 1347
Educational Treatment (Modern), of Deafness : International Congress on the, 89
Educational Treatment (Modern), of Deafness : International Congress on the (Prof. A. W. G. Ewing), 919
Edwards, C. : Hydromedusae New to the British List from the Firth of Clyde, 1484
Edwards, Dr. D. C. : Production of High-Titre Diphtheria Toxin in Baffled Shake Flasks, 190
Edwards, Prof. Ronald S., and Townsend, Harry : Business Enterprise, its Growth and Organization, *review* by L. G. Jaeger, 971
Edwards, R. W. : Aquatic and Air Pollution, 1208
Eeckhaut, Z., and others : Neutron Activation Analysis using an Internal Standard, 600
Eelworm (Potato Root), *Heterodera rostochiensis* Wollenweber : Influence of certain Inorganic Ions on the Hatching of the (Dr. C. Ellenby and A. B. Gilbert), 925
Eesti Loodus (Estonian Nature), (Academy of Sciences of the Estonian Soviet Socialist Republic), 769
Effect of Adrenaline on Neurofibril Formation in Adult Mammalian Cortical Neurones in Tissue Culture (R. S. Geiger), 1674
Effect of Air Drag on the Orbit of an Earth Satellite (D. G. Parkyn), 787 ; (D. G. King-Hele and Dr. D. C. M. Leslie), 788
Effect of γ-Aminobutyryl-Choline upon the Electrical Activity of the Cerebral Cortex (Hidehiko Takahashi, Akira Nagashima and Chikao Koshino), 1443
Effect of Analogues of Glutathione on the Feeding Reaction of Hydra (E. E. Cliffe and Dr. S. G. Waley), 804
Effect of Atmospheric Contaminants on Paper Chromatography of Urinary Indole and Phenol Acids (K. N. F. Shaw and J. Trevarthen), 664
Effect of 8-Azaguanine on Antibody Synthesis *in vitro* (Dr. R. W. Dutton, Anne H. Dutton and Mariam George), 1377
Effect of Benzene on Rat Thyroid (Dr. Angelo Iannaccone and Dr. Giuseppe Cicchella), 669
Effect of Bile Salts upon the Activity of Antibiotics (Dr. S. Stanley Schneierson and Daniel Amsterdam), 56
Effect of the Borate Ion in Buffers on the Electrophresis of Rat Serum (C. F. Garbers and F. J. Joubert), 530
Effect of Calcium Ions on the Binding of Chromium-51 to Erythrocytes *in vitro* (G. von Ehrenstein and B. Zacharias), 1384
Effect of the Carrier Gas on the Sensitivity of a Thermal Conductivity Detector in Gas Chromatography (Dr. N. H. Ray), 1663
Effect of Chloramphenicol on a Fungus (A. Broadbent and D. A. Terry), 1107
Effect of Colchicine on the Utilization of Labelled Thymidine during Chromosomal Reproduction (L. F. La Cour and Dr. S. R. Pelc), 506
Effect of Copper on Growth and Catalase Levels of *Corcura cephalonica* St. in Zinc Toxicity (K. Sivarama Sastry and Prof. P. S. Sarma), 533
Effect of Copper Deficiency on Synthesis of Haem (R. L. Anderson and Prof. S. B. Tove), 315
Effect of the Cotton Plant in the Sudan Gezira on certain Leaf-feeding Insect Pests (R. J. V. Joyce), 1463
Effect of DDT on Egg-laying by *Oscinella frit* L. (T. J. Legowski and H. J. Gould), 1682
Effect of Diet on Imidazole Compounds and Creatine in Chinook Salmon (Dr. A. Lukton), 1019
Effect of Dietary Salt Additions : Volume and Acidity of Urine of Sheep fed Hay Rich in Silica and (S. A. Forman, F. Sauer, D. H. Laughland and W. M. Davidson), 1358
Effect of Diphosphopyridine Nucleotide on the Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by 2-Acetylaminofluorene and N-2-Fluorenyl-diacetamide (Prof. E. Quagliariello, S. Auricchio, E. Rinaldi and A. Rubino), 1744
Effect of Drugs on Conditioning and Habituation to Arousal Stimuli in Animals (Dr. B. J. Key and Dr. P. B. Bradley), 1517
Effect of Drugs on Emotional Behaviour in Rats (R. W. Ryall), 1606
Effect of Ethanol and Auxins on the Growth of Unicellular Algae (Auxins and their Effect on the Growth of Unicellular Algae), (Dr. M. K. Bach and J. Fellig), 1359
Effect of Ethylenediamine Tetraacetic Acid on the Enzyme System of Yeast Cells (J. P. Shukla and K. A. Prabhu), 1316
Effect of Fumigation and Moisture Content on the Seedling Growth of Cowpea (*Vigna unguiculata*), (G. H. Caswell and Dr. H. T. Clifford), 540
Effect of Gamma-Radiation on Ferriprotoporphyrin (Dr. Mary-Louise Rothschild, Laura Cosi and Lawrence S. Myers, jun.), 316
Effect of Gibberellic Acid on Corolla Size (Mrs. Audrey Plack), 610
Effect of Gibberellic Acid on Leaf Form (Dr. E. Njoku), 1097
Effect of Gibberellic Acid on the Nodulation of White Clover (*Trifolium repens* L.), (Dr. Wm. W. Fletcher, J. W. S. Alcorn and J. C. Raymond), 1319
Effect of Gibberellin on the Extensibility of the Pea Stem (S. Yoda and J. Ashida), 879
Effect of Gibberellin on Sunflower Tissue Culture (James H. M. Henderson), 880
Effect of Glucose on Bacteriophage Synthesis in *Salmonella typhimurium* (Nathan Entner and Ellis Engelsberg), 1808
Effect of Gravity on Flowering and Shoot Growth in Japanese Larch (*Larix leptolepis*, Murray), (Gravimorphism in Trees), (K. A. Longman and Dr. P. F. Wareing), 380
Effect on the Growth of Unicellular Algae : Auxins and their—Effect of Ethanol and Auxins on the Growth of Unicellular Algae (Dr. M. K. Bach and J. Fellig), 1359 ; Ethanol as a Carbon Source for the Growth of *Chlorella vulgaris* (Prof. H. E. Street, D. J. Griffiths, C. L. Thresher and M. Owens), 1360
Effect of Growth Substrates on Isocitratase Formation by *Pseudomonas ovalis* Chester (Dr. H. L. Kornberg, A. M. Gotto and Patricia Lund), 1430
Effect of *Haemophilus pertussis* : Mast Cell and Histamine in Rat Anaphylaxis —the (I. Mota), 1021
Effect of Heat Treatment on the Sintering of 'Active' Ceramic Oxide Powders (D. T. Livey and Dr. P. Murray), 1362
Effect of Hyaluronidase on Capillary Permeability, Lymph Flow and Passage of Dye-labelled Protein from Plasma to Lymph (Dr. G. Szabó and S. Magyar), 377
Effect of Hydrocortisone on Mitochondrial Membrane Permeability (Dr. C. H. Gallagher), 1315
Effect of Hydrogen Peroxide on Transplanted Rat and Mouse Tumours (Dr. Kanematsu Sugiura), 1310
Effect of Larval Brain on the Imaginal Differentiation in the Silkworm (Masatoshi Kobayashi), 110
Effect on Life Span of Irradiated and Control *Habrobracon* Females : Ingestion of Ethylenediaminetetraacetic Acid and the (Leo E. LaChance), 870
Effect of Low Temperature on the Vertical Distribution of Two Wood-boring Crustacenas (Dr. N. Balakrishnan Nair and H. Leivestad), 814
Effect of some Lytic Agents on *Aerobacter aerogenes* (J. M. Gebicki and Dr. A. M. James), 725
Effect of Magnesium Ion on the Purified Fraction : Separation of the Condensing Enzyme of *Aspergillus niger* from Acetyl Coenzyme A Deacylase and Citridesmolase and the (Prof. C. V. Ramakrishnan), 1601
Effect of Maize on Fat Hardness and Growth-Rate in Bacon Pigs (D. W. Duthie, A. F. Dent and H. P. Ledger), 953

Effect of Metal Ions on the Development of Wheat Stem Rust (D. Wang, Dr. P. K. Isaac and Prof. E. R. Waygood), 268
Effect of Monovalent Cations on Type Specificity Transformation in Pneumococci (M. Kohoutová), 188
Effect of various Natural Steroids on the Phagocytic Activity of the Reticulo-Endothelial System (Dr. D. L. J. Bilbey and Prof. T. Nicol), 674
Effect of Nicotinic Acid on the Cholesterol Contents of Rat Livers (Dr. Harald Schön), 534
Effect of Nitric Oxide on the Radiosensitivity of Tumour Cells (Dr. L. H. Gray, F. O. Green and C. A. Hawes), 952
Effect of Nitrous Oxide on the Radiosensitivity of Mouse Ehrlich Ascites Tumour (Dr. Michael Ebert and Mrs. Shirley Hornsey), 1240
Effect of Number of Sprouts per Set on Yield and Grading of Main-crop Potatoes (R. D. Toosey), 269
Effect of Oxy-chlororaphin on the Growth *in vitro* of *Streptomyces* Species and some Pathogenic Fungi (G. Sierra and H. A. Veringa), 265
Effect of Oxygen on the Electron Spin Resonance Spectrum of α,α'-Diphenyl-β-picrylhydrazyl (Dr. J. E. Bennett and E. J. H. Morgan), 199
Effect of Oxytocin Administration on Respiration of Lactating Mammary Gland Tissues in Rats (K. Ôta and A. Yokoyama), 1509
Effect of Rust Infection on Oxidative Phosphorylation of Wheat Leaves (B. I. Pozsár and Z. Király), 1686
Effect of Simulated Field Deposits of Gamma-BHC and Dieldrin on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles (G. Davidson and D. G. Pollard), 739
Effect of Solar Flares on Earth Satellite 1957β (T. Nonweiler), 468
Effect of Splenectomy on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 534
Effect of Storage Conditions on the Incidence of *Gloeosporium* Rots of Apple Fruits (H. B. S. Montgomery), 737
Effect of the Synthetic Œstrogen Stilboestrol on Pregnancy in the Rabbit (Dr. Brenda M. Schofield), 58
Effect of Temperature on the Multiplication of Foot-and-Mouth Disease Virus in Suspensions of Kidney Cells of the Pig (Dr. H. Subak Sharpe), 1803
Effect of Temperature on the Structure of Set Gypsum Plaster (M. J. Ridge), 1224
Effect of Thyroid Pre-treatment on the Mortality of X-Irradiated Mice (Dr. L. Novák and Dr. M. Pospíšil), 1603
Effect of Thyroxin Administration on the Rate and Steric Course of Enzymatic Reduction of Steroids (Dr. Joseph McGuire and Gordon Tomkins), 261
Effect of Total Body Irradiation on Capillary Permeability (Prof. G. Szabó, S. Magyar, P. Kertai and E. Zádory), 885
Effect of Trauma on Wool Growth (Dr. S. B. Slen), 1322
Effect of Triiodothyronine on Radiosensitivity (Dr. Joseph A. Stein and Dr. Melvin L. Griem), 1681
Effect of Tryptophan Analogues on Reversion of a Tryptophan-requiring Strain of *Escherichia coli* (N. M. Schwartz and B. S. Strauss), 888
Effect of Ultra-violet and X-Rays on the Capillaries of the Frog's Web : Comparison of the (Horst Bücker and Wilfried Hanke), 1375
Effect of Viral Infection and Cortisone upon Tumour Growth in Homologous and Heterologous Hosts (Dr. T. Kuwata, Y. Yasumura and M. Kanisawa), 1678
Effect of Vitamin B Complex on the Teratogenic Activity of Hypervitaminosis A (Dr. J. W. Millen and Dr. D. H. M. Woollam), 940
Effect (After-) of Movement produced by a Rotating Spiral (Miss M. J. Pickersgill and M. A. Jeenes), 1820
Effect (An Age), on Seta Elongation in *Pellia epiphylla* (W. Mary Crombie and Jean A. Paton), 541
Effect (Critical), of Oxygen Tension on Rate of Growth of Animal Cells in Continuous Suspended Culture (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Effect (Growth-promoting), of Ethanol on Oat Seedlings (Dr. C. L. Mer), 1812
Effect (Hypoglycaemic), of Monoiodoacetic Acid and Iodoacetamide in Rats (Gösta T. Hultquist), 318
Effect (Kinetic Isotope), in the Iodination of Aromatic Amines (E. Shilov and F. Weinstein), 1300
Effect (Lenticular), in Mice of some Morphine-like Drugs (Marta Weinstock, Dr. H. C. Stewart and K. R. Butterworth), 1519
Effect (New Oxygen) : Electron Spin Resonance in Carbons—a (C. Jackson, Dr. H. Harker and Prof. W. F. K. Wynne-Jones), 1154
Effect (An Overhauser), in Natural Crude Oil (Dr. Edward Poindexter), 1087
Effect (Oxygen) : Chromatid Breakage by Irradiation and the (Dr. G. J. Neary and Dr. H. J. Evans), 890
Effect (Radiation) : Mechanism of, on the Process of Synthesis of Deoxyribonucleic Acid (Studies in Synthesis of Deoxyribonucleic Acid), (L. G. Lajtha, R. Oliver, R. Berry and W. D. Noyes), 1788
Effect (Wave-length), in Flash Photolysis (Dr. C. A. Parker), 130 ; (Dr. K. Bridge and Prof. G. Porter), 130
Effects of Atomic Radiation (Dr. C. Auerbach), 1543
  Report of the United Nations Scientific Committee on the, 1543
Effects of Electron Bombardment upon Sodium Tetraborate and Boric Acid in an Electron Microscope (Helena Lopes de Souza Santos), 1297
Effects of Environment (Radiation, Substrate and Allelic Genes) on the Melezitose Gene in *Saccharomyces* (Prof. Carl C. Lindegren and David D. Pittman), 271
Effects of Flavin Monosulphate and Flavin Adenine Dinucleotide on the Electroencephalogram (Tsuneo Muramatsu, Moriaki Ando, Toshiharu Nagatsu and Kunio Yagi), 457
Effects of Gravity on Growth, Apical Dominance and Flowering in Fruit Trees (Gravimorphism in Trees), (Dr. P. F. Wareing and T. Nasr), 379
Effects of Plant Decomposition Products in the Soil (Z. A. Patrick and L. W. Koch), 1717
Effects of Pollution on Living Material (Institute of Biology Symposium on), 1208
Effects of Potassium and Sodium Ions on the Resting and Action Potentials of the Giant Axon of the Cockroach (T. Yamasaki and T. Narahashi), 1805
Effects of Pressure on some Optical and Electrical Properties of Diamonds (Dr. F. C. Champion and J. R. Prior), 1079
Effects of Reserpine on Secretion from the Adrenal Medulla (Dr. L. Stjärne and Dr. S. Schapiro), 1450
Effects of Rust Infection on the Carbohydrate Metabolism of Wheat Seedlings (A. C. Jain and Prof. R.-L. Pelletier), 882
Effects of Starvation, Glucose Feeding and Insulin : Liver Glucosyl Oligosaccharides and Glycogen— (Dr. Hsien-Gieh Sie and Prof. W. H. Fishman), 240
Effects of Water-Strain on the Mimimum Intercellular Space Carbon Dioxide Concentration Γ in Wheat Leaves (Prof. O. V. S. Heath and Dr. H. Meidner), 1524
Effects of Weather on Plant Behaviour (Prof. J. P. Hudson), 1337
Effects (Anti-Tumour and Biochemical), of Purified Bovine Xanthine Oxidase in *C3H* and *C* Mice (Prof. A. Haddow, Dr. G. de Lamirande, Prof. F. Bergel, Dr. R. C. Bray and D. A. Gilbert), 1144
Effects (Atmospheric Drag), on *Sputniks* 2 and 3 (Satellites 1957β, 1958δ, and 1958δ_2) : An Irregularity in the (D. G. King-Hele and Mrs. D. M. C. Walker), 860
Effects (Biological), of Radiation (Dr. J. F. Loutit), 1118
Effects (Some Biological), of Low Temperatures (Dr. A. S. Parkes), 581
Effects (Some Cytological), of Griseofulvin (Dr. G. E. Paget and Dr. A. L. Walpole), 1320
Effects (Early Metabolic), of Thyrotropic Hormone and Triiodothyronine : Differences between the (Dr. B. S. Hetzel, J. S. Charnock and B. F. Good), 1166
Effects (Kinetic Energy) : Capillary-tube Viscometry with Negligible (W. A. Caw and R. G. Wylie), 1153
Effects (Lethal and Sterilizing), of Single and Fractionated Doses of Gamma Radiation on *Calandra granaria* L. (D. J. Jefferies and P. B. Cornwell), 402
Effects (Permeabilizing), of Heparin and Heparin-like Substances (Prof. V. Capraro, F. Marro and G. Valzelli), 603
Effects (Physico-Chemical), of Pressure (Dr. S. D. Hamann), *review* by K. E. Bett, 75
Effects (Steric), in Conjugated Systems (Chemical Society Symposium on), 568
Effects (Toxic), produced by Pyrimethamine in Chickens and their Antagonism by Folic Acid (J. M. S. Lucas), 1449
Effects (Typhoon), at Jaluit Atoll in the Marshall Islands (Dr. David I. Blumenstock), 1267
Efficiency (Individual), in Industry (1953-57) : Report of the Joint Committee on, and Final Report of the Joint Committee on Human Relations in Industry (1954-57), (Department of Scientific and Industrial Research), 1539
Efficient Trace-Labelling of Proteins with Iodine (Dr. A. S. McFarlane), 53
Egeberg, Dr. : Human and Animal Ecology (*Coccidioides immitis* in the Soil of the South-West Joaquin Valley of California), 1648
Egerton, Sir Alfred : Advance of Chemical Technology, *review*, 549
  Awarded the Alfred C. Egerton Medal of the Combustion Institute, Pittsburgh, 771
Egerton (Alfred C.) Metal of the Combustion Institute, Pittsburgh, awarded to Sir Alfred Egerton, 771
Egg-laying by *Oscinella frit* L. : Effect of DDT on (T. J. Legowski and H. J. Gould), 1682
Egg Production : Flash Lighting for (S. Fox and T. R. Morris), 1752
Egg Rafts of Angler Fish (Miss P. Rasquin), 21
Egg-Yolks : Nature of the Carcinogenic Substance in (Jan Hradec), 52
Eggleston, Dr. H. G. : Convexity, *review* by Prof. T. A. A. Broadbent, 1472
  Problems in Euclidean Space—Application of Convexity, *review* by Prof. T. A. A. Broadbent, 1472
Eggs of the Crane Fly (*Tipula oleracea*, L.): Desiccation of (Roger Laughlin), 613
Egypt : Scientific Institutions in (Unesco Science Co-operation Office, Cairo), 562
Egypt Exploration Society and Ashmolean Museum, Oxford : Grant of £350 a year for three years from the Gulbenkian Foundation, Lisbon, for a technician to be trained in the technique of piecing together fragments of ancient papyri by matching the fibres instead of the text, 1493
Ehrenpreis, S., and others : Comparative Kinetic Behaviour of Thrombin, Plasmin and Trypsin toward Synthetic Substrates, 461
Ehrlich Ascites Tumour (Mouse) : Effect of Nitrous Oxide on the Radiosensitivity of (Dr. Michael Ebert and Mrs. Shirley Hornsey), 1240
Ehrlich Ascites Tumour Cells of Mice *in vitro* : Calcium Exchanges of (Doreen Thomason and Raymond Schofield), 809
Ehrlich Mouse Carcinoma : Forssman's Antigen in (Prof. H. W. Julius and P. J. de Vries), 1165
Eiby, G. A. : Origin of Tektites, 1298
Eichler, Prof. Wd. : Insecticides, *review*, 1578
Eichornia crassipes in the Nile of the Sudan (Dr. Peter A. Gay), 538
Eigenfunction Expansions associated with Second-Order Differential Equations (Prof. E. C. Titchmarsh), Part 2, *review* by Prof. G. Temple, 1184
Eigenfunctions, *review* by Prof. G. Temple, 1184
Eirich, Frederick R. (edited by) : Rheology—Theory and Applications, Vol. 2, *review* by Dr. G. W. Scott Blair, 685
Eiseley, Prof. Loren : Darwin's Century—Evolution and the Men who Discovered It, *review* by Dr. G. S. Carter, 1112
Eisner, H. S., and others : Stabilization of Water Mists, 1724
Elaesis guineensis (Jacq.) : Factors controlling Seed Germination in the West African Oil Palm (G. Hussey), 699
  Field Observations of Midday Closure of Stomata in the Oil Palm (A. R. Rees), 735
Elastic Constants : Number of, required in Crystal Elasticity (N. Joel and Dr. W. A. Wooster), 1078
Elastic Constants of Diamond (Dr. W. A. Wooster and N. Joel), 1149
  The Four (Prof. R. S. Krishnan, Dr. V. Chandrasekharan and E. S. Rajagopal), 518
Elastic Fibres : Submicroscropic Structure of, as observed in the Polarization Microscope (Dr. G. Romhányi), 929
Elasticity (Crystal) : Number of Elastic Constants required in (N. Joel and Dr. W. A. Wooster), 1078
Elastin : A Yellow Fluorescent Pigment in (Dr. F. J. Loomeijer), 182
Eldjarn, L., and others : Alleged Susceptibility of Sulphydryl Enzymes to Ionizing Radiation, 1732
Electric Field : Production of Compounds labelled with Carbon-14 from Carbon-14 Dioxide accelerated in an (M. Guillaume), 1592
Electric Field Theory of Aurorae (Dr. G. C. Reid), 1791
Electric Technology, U.S.S.R., No. 1, 1709

Electrical Activity of the Cerebral Cortex : Effect of γ-Aminobutyryl-Choline on the (Hidehiko Takahashi, Akira Nagashima and Chikao Koshino), 1443
Electrical Activity (Spontaneous), in the Denervated Muscles of the Cockroach *Periplaneta americana* (Dr. R. Beránek and Dr. I. Novotny), 957
Electrical Engineering : Conformal Transformations in (Dr. W. J. Gibbs), *review* by Dr. L. S. Goddard, 1630
The Education and Training of Student Apprentices in (Institution of Electrical Engineers), 1649
Student Apprenticeship in (Prof. J. Greig), 1649
Electrical Engineers, Institution of : Scope and Activities of the Medical Electronics Discussion Group, 1062
Convention on Thermo-Nuclear Processes, 1488
Christmas Lecture (Dr. E. R. Laithwaite), 1554
The Education and Training of Student Apprentices in Electrical Engineering, 1649
Electrical Engineers (American Institute of), and others : Annual Conference on Electrical Techniques in Medicine and Biology, 433, 771
Electrical Properties of Materials, *review*, 73
Electrical Properties (Optical and), of Diamonds : Effects of Pressure on some (Dr. F. C. Champion and J. R. Prior), 1079
Electrical Research Association (Prof. J. Greig), 369
Thirty-seventh Annual Report (1957), 369
Electrical Techniques in Medicine and Biology (Institute of Radio Engineers, the American Institute of Electrical Engineers and the Instrument Society of America Annual Conference on), 433, 771
Electrical and Mechnical Events in Contraction : Inward Movement of Calcium as a Link between (Prof. George B. Frank), 1800
Electricity Council : The History and Philosophy of Science and Technology, 1349
Some Implications of Modern Science (Sir Henry Self), 1349
Electricity Industries (Coal, Gas and) : Capital Investment in the (White Paper on), 343
Elektrische Leitungsphänomene I (Handbuch der Physik, herausgegeben von S. Flügge, Band 19), Elektrische Leitungsphämomene II (Handbuch der Physik, herausgegeben von S. Flügge, Band 20), *review*, 73
Electrochemistry—Principles and Applications (Dr. Edmund C. Potter), *review* by Prof. H. T. S. Britton, 1185
Electrode (Hanging Mercury Drop) : Application of the, to an Investigation of Intermetallic Compounds in Mercury (Prof. Wiktor Kemula, Zbigniew Galus and Zenon Kublik), 1228
Electrode (Silver–Silver Chloride), in Formamide : Standard Potential at 25°C. of the (Dr. M. Mandel and P. Decroly), 794
Electrodes (Germanium) : Hydrogen Overpotential on (V. R. Erdélyi and Mino Green), 1592
Electrodynamics of Moving Media, *review* by Prof. V. C. A. Ferraro, 1045
Electrodynamics (Quantum) : Experimental Tests of (Prof. W. E. Lamb), 160
Electroencephalogram : Effects of Flavin Monosulphate and Flavin Adenine Dinucleotide on the (Tsuneo Muramatsu, Moriaki Ando, Toshiharu Nagatsu and Kunio Yagi), 457
Electroencephalograph Correlates of Ammonium Carbonate Intoxication in the Rat (Dr. Robert Cohn and Comdr. Thomas R. Ulshafer), 1735
Electrolysis (Controlled Potential), of Aromatic Substances : Electron Resonance Study of the Radicals produced by (D. E. G. Austen, Dr. P. H. Given, Dr. D. J. E. Ingram and M. E. Peover), 1784
Electrolyte Solutions : Temperature Dependence of the Conductivity of (N. van Meurs), 1532
Electromagnetic Force Field : Fractionation of Cell Suspensions in an (Prof. Alexander Kolin and Raymond T. Kado), 510
Electromagnetic Induction : Electromagnetism and Relativity with particular reference to Moving Media and (Prof. E. G. Cullwick), *review* by Prof. V. C. A. Ferraro, 1045
Electromagnetism and Relativity with particular reference to Moving Media and Electromagnetic Induction (Prof. E. G. Cullwick), *review* by Prof. V. C. A. Ferraro, 1045
Electron Accelerators (Linear) : Anomalous Attenuation in (Dr. V. L. Vanhuyse), 1081
Electron Affinity of Atomic Oxygen (Dr. L. M. Branscomb), 248 ; (Dr. D. F. C. Morris and H. N. Schmeising), 249
Electron Bombardment : Effects of, upon Sodium Tetraborate and Boric Acid in an Electron Miscroscope (Helena Lopes de Souza Santos), 1297
Electron Emission from Thin Mercury Films : A New Phenomenon of (Dr. H. von Bertele), 1148
Electron Impact : Anomalous Dissociation of Molecular Hydrogen by (L. A. Edelstein), 932
Electron Micrographs : Determination of the Mass Thickness of Cell Membranes from their (M. L. De and P. Sadhukhan), 1008
Electron Microscope : Effects of Electron Bombardment upon Sodium Tetraborate and Boric Acid in an (Helena Lopes de Souza Santos), 1297
Electron Microscope Studies of the Chemical Reactivity in Keratin Cuticle (Dr. J. Sikorski and W. S. Simpson), 1235
Electron Microscopic Observations (Light Microscopic and), on the Dividing Walls of Cells in *Chara* spp. (Dr. Lóránd Fridvalszky and Dr. Béla Lovas), 736
Electron-Microscopic Study of the Ciliature of the Trochophore Larva (Dr. H. Seuntjens and Dr. W. G. Braams), 1611
Electron Microscopy : Collagen in Human Cementum as shown by (C. H. Tonge and E. H. Boult), 459
Fourth International Conference on (Deutsche Gesellschaft für Elektronenmikroskopie), 295
Electron Microscopy in Biology (Prof. R. D. Preston), 1402
Electron Microscopy of Metals : X-Ray Analysis and, 771
Electron Microscopy (Transmission), of Beryllium (J. D. Baird, O. P. Hartree and R. Phillips), 1660
Electron Physics (Applied), at the Imperial College of Science and Technology, 496
Electron Resonance Study of the Radicals produced by Controlled Potential Electrolysis of Aromatic Substances (D. E. G. Austen, Dr. P. H. Given, Dr. D. J. E. Ingram and M. E. Peover), 1784
Electron Spin Resonance in Carbons—a New Oxygen Effect (C. Jackson, Dr. H. Harker and Prof. W. F. K. Wynne-Jones), 1154
Electron Spin Resonance Investigations of Rat Liver and Rat Hepatoma (Frank K. Truby and Joseph W. Goldzieher), 1371
Electron Spin Resonance Spectrum of α,α'-Diphenyl-β-picrylhydrazyl : Effect of Oxygen on the (Dr. J. E. Bennett and E. J. H. Morgan), 199
Electron Staining (Electron Microscopy Group of the Institute of Physics Symposium on), 771
Electron Temperature in SCEPTRE III (Dr. S. Kaufman and R. V. Williams), 557
Electron Transfer and Thermal Racemization of Ethylenediaminetetraacetatocobaltate (III), (Yong Ae Im and Prof. Daryle H. Busch), 1368
Electronic Computer Exhibition at Olympia, 565, 918
Electronic Computer Exhibition and Business Computer Symposium (Electronic Engineering Association and the Office Appliance and Business Equipment Trades Association), 565, 918
Electronic Configuration d^4 in a Complex Ion (Dr. Almon G. Turner, jun., and Alan F. Clifford), 1369
Electronic Counting and Sizing of Bacteria (Herbert E. Kubitschek), 234
Electronic Digital Computers (Franz L. Alt), *review* by Dr. A. D. Booth, 1583
Electronic Digital Computers and their Industrial Applications (Conference at Birmingham College of Technology), 1205
Electronic Engineering Association and the Office Appliance and Business Equipment Trades Association : Electronic Computer Exhibition and Business Computer Symposium, 565, 918
Electronic Temperatures of Planetary Nebulae, 431
Electronics : Radio Engineering and, Vol. 2, No. 2, 1957, English edition, 989
Electronics, Radio and Telecommunications, 988
Electro-Optical Shutter : Kerr Cell (Avco Manufacturing Corporation), 362
Electrophoresis : Micro- (Dr. A. M. James), 1315 ; (Dr. A. D. Bangham), 1315
Electrophoresis of Fluorescent Antibody (Dr. C. C. Curtain), 1305
Electrophoresis of Rat Serum : Effect of the Borate Ion in Buffers on the (C. F. Garbers and F. J. Joubert), 530
Electrophoresis ('Crossing' Paper), for the Detection of Immune Reactions (Prof. S. Nakamura and T. Ueta), 875 ; *erratum*, 1063
Electrophoresis (Preparative) : Application of Direct Photographic Photometry to (Dr. N. Ressler), 463
Electrophoresis (Starch Gel) : High Resolution of Human Plasma Components by (Dr. J. M. Fine, J. Loeb and E. Waszczenko-z), 452
Electrophoresis (Zone) : Detection of Haemoglobin, Haemoglobin–Haptoglobin Complexes and other Substances with Peroxidase Activity after (Dr. J. A. Owen, H. J. Silberman and C. Got), 1373
Electrophoresis Column : Migration-elution of Zones in an (Dr. J. Porath, Miss E. B. Lindner and S. Jerstedt), 744
Electrophoretic Charge on its Substrate Surface : Control of Lecithinase Activity by the (Dr. A. D. Bangham and Dr. R. M. C. Dawson), 1292
Electrophoretic Patterns (Agar), of Red Blood Cell Proteins (Prof. K. V. Giri, G. J. Sathyanarayana Rao and S. Natarajan), 184
Electrophoretic Strips Transparent : A Simple Method for making Starch-gel (S. D. Vesselinovitch), 665
Elements of Partial Differential Equations (Prof. Ian N. Sneddon), *review* by Prof. T. A. A. Broadbent, 902
Elements (Chemical), in the Earth's Crust during Geological Times : Migration of the (A. A. Saukov), 362
Elements (Trace) : Influence of, upon Plant Protein Composition (K. H. Schütte and H. E. Schendel), 958
Elements (Transition) : Ions of the (Faraday Society General Discussion on), 158, 1349
Elements (Transuranic) : The Chemistry of the (Prof. H. J. Emeléus), 579
Elephant Seal *Mirounga leonina* (L.) : Ecology of the Louse *Lepidophthirus macrorhini* Enderlein 1904 on the (M. D. Murray), 404
Eliasson, Dr. R. : Formation of Prostaglandin *in vitro*, 256
Eliminate Inflammation to Homografts in Rabbits : Conditions which (Dr. Richard H. Andresen, Dr. Clarence W. Monroe, Dr. George M. Hass and Dr. Dorothy A. Madden), 1452
Elimination of Macrophage Cells of the Reticulo-Endothelial System by Way of the Bronchial Tree (Prof. T. Nicol and Dr. D. L. J. Bilbey), 192
Elkington, T. T. : Awarded a research studentship in botany by the Nature Conservancy, 771
Ellenby, Dr. C., and Gilbert, A. B. : Influence of certain Inorganic Ions on the Hatching of the Potato Root Eelworm, *Heterodera rostochiensis* Wollenweber, 925
Elliot, C. G.: Appointed to a lectureship in agricultural botany at the University of Glasgow, 1644
Elliot, Dr. K. A. C. : Chemical Pathology of the Nervous System (Problem of Swelling and Shrinkage in Nervous Tissue), 1647
Elliott, Dr. A., and Hanby, W. E. : Deuterium Exchange in Polypeptides, 654
Elliott, Kathleen (van den Brenk, H. A. S., and) : Radioprotective Action of 5-Hydroxytryptamine, 1506
Ellis, F. : Advances in the Use of Radioisotopes—Medical Uses, 1407
Ellis, H. A. : Appointed a lecturer in pathology at the University of Birmingham, 990
Ellis, J. E., and others : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Ellison, Dr. Mervyn A. : The Lyot $H\alpha$ Heliograph at the Cape of Good Hope, 624
Appointed senior professor of astronomy at the Dublin Institute of Advanced Studies and director of the Dunsink Observatory, 1412 ; work of, 1412
Elmes, Dr. P. C. : Appointed to a lectureship in therapeutics and pharmacology at the University of Belfast, 1554
Elongation (Seta), in *Pellia epiphylla* : An Age Effect on (W. Mary Crombie and Jean A. Paton), 541
Elops saurus : A Bucco-hypophysial Canal in (R. Olsson), 1745
Elsdale, T. R., and others : Sexually Mature Individuals of *Xenopus laevis* from the Transplantation of Single Somatic Nuclei, 64
Elste, Dr. G. (Bruggencate, Prof. P. ten, and) : Temperature and Turbulence in Quiescent Prominences determined from Line-widths, 1154
Elton, Charles S. : Geographical Distribution of Animals, *review*, 140
The Ecology of Invasion by Animals and Plants, *review* by Prof. Ronald Good, 1576
Elution Chromatography (Gradient) : Separation of Mixtures of Œstrogens in Urinary Extracts using (Dr. Stanley Kushinsky, James A. Demetriou, Wilmonte Nasutavicus and Jane Wu), 874
Elving, Dr. H., and Zemel, Dr. B. : Charge Transfer Processes (Electrochemical Reductions other than those involving Hydrogen or Metal Deposition—Mechanism of Reduction of Chloraquo–Chromium-III Ions in Acid Media, studied at the Dropping Mercury Electrode), 1354

Emanuel, Dr. C. F. : Physarosterol, a New Stero lfrom a Slime Mould, 1234
Embryology of *Atkinsonia ligustrina* (A. Cunn, ex F. Muell.) F. Muell. (Miss Sudha Garg), 1615
Embryonic Rat Tibiae (Isolated) : Cultivation of, on a Chemically Defined Medium (Susan Heyner and Dr. J. D. Biggers), 810
Embryonic Stage : Sarcoma in Albino Rats treated during the, with Rous Virus (G. J. Svet-Moldavsky), 1452
Embryos (Bean) : Auxins in the Development of (M. Furuys and K. Soma), 563
Embryos (Bird) : Transplantation of the Forebrain Region in, before the Establishment of a Circulation—Homoplastic Transplants (Dr. Petar N. Martinovitch and Miroslava R. Pavlović), 571 ; Heteroplastic Transplants (Dr. Petar N. Martinovitch), 572
Embryos (Early) : Successful Development and Birth of Mice cultivated *in vitro* as (Dr. Anne McLaren and Dr. J. D. Biggers), 877
Embryos and Ancestors (Sir Gavin de Bear), third edition, *review* by Dr. G. S. Carter, 1112
Emeléus, Prof. H. J. : The Chemistry of the Transuranic Elements (Presidential Address to Section B (Chemistry) of the British Association for the Advancement of Science), 579
  Theoretical Organic Chemistry, 1341
Emelyanov, Prof. V. S. : Appointed to serve on the Scientific Advisory Committee of the International Atomic Energy Agency, 1413
Emergence of Darwinism (Sir Julian Huxley), 434
Emergence of a Summer Species of Dragonfly (Dr. Philip S. Corbet and Sarah A. Corbet), 194
Emerging Mind : Man's (Dr. N. J. Berrill), *review* by Prof. H. J. Fleure, 1572
Emerson, W. H. : Awarded a James Clayton Grant by the Institution of Mechanical Engineers, 433
Emission (Electron), from Thin Mercury Films : A New Phenomenon of (Dr. H. von Bertele), 1148
Emission Spectra of N_2O^+ (B. Brocklehurst), 1366
Emission and Absorption Spectra of NCO and NCS (R. Holland, Prof. D. W. G. Style, R. N. Dixon and D. A. Ramsay), 336
Emmons, Dr. C. W. : Human and Animal Ecology (Ecology of Pathogenic Fungi), 1648
Emotional Behaviour in Rats : Effect of Drugs on (R. W. Ryall), 1606
Emperor Penguin Rookeries in Antarctica during 1954-57 : Australian Discoveries of (Dr. Richard L. Willing), 1393
Emperor Penguins : Feeding Habits of (Dr. Richard L. Willing), 194
Emulsion Crystals (Photographic) : Mosaic Structure of (J. F. C. Boardman, Dr. R. H. Herz and G. C. Terry), 1726
Emulsions (Paul Becher), *review* by Sir Eric Rideal, 550
Emulsions (Photographic) : Synthetic Polypeptide Substitutes for Gelatin in, and Observations on Gelation (Dr. H. W. Wood), 106
Encephalartos : Temperature Variations in Male Cones of (Amy Jacot-Guillarmod), 474
Encephalomyelitis : Experimental Allergic—Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and Killed Tubercle Bacilli (Dr. Marian W. Kies, Dr. Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104 ; Experimental Allergic Encephalomyelitis induced with combined 'Purified' Spinal Cord and Bacillary Fractions (Dr. J. Colover), 105
Encephalomyeltis (Allergic) : Prevention of, by Prior Injection of Adjuvants (Dr. Marian W. Kies and Dr. Ellsworth C. Alvord, jun.), 1106
Encephalomyocarditis Virus : An Ineffective 'Ribonucleic Acid' Component from Tumour Cells infected with (J. Huppert and F. K. Sanders), 515
Encyclopaedia of Physics, *review* by Dr. E. Bretscher, 968
Encyclopaedia Statistica, *review* by Dr. D. J. Finney, 1470
Encyclopedia : Scientific (Van Nostrand's), third edition, *review* by Dr. L. S. Goddard, 1587
Encyclopedia of Chemical Technology (edited by Raymond E. Kirk and Donald F. Othmer), First Supplement Volume, *review* by Sir Alfred Egerton, 549
Endeavour Prizes for the 1958 Essay Competition : Presentation of (British Association for the Advancement of Science), 632
Endo, Toru : Separation of Anthocyanin and Leuco-anthocyanin in Flowers of *Camellia japonica*, 801
Endocrinology : Biochemical Contributions to—Experiments in Hormonal Research (Sir Charles Dodds), *review* by Dr. A. E. Kellie, 484
  Ciba Foundation Colloquia on, Vol. 11, Hormones in Blood (edited by G. E. W. Wolstenholme and Elaine C. P. Millar), *review* by Prof. F. G. Young, 901
  Comparative (Columbia University Symposium on), 774
Endocrinology, Society for (Section of Endocrinology of the Royal Society of Medicine and the) : Joint Endocrine Meeting, 1279
Endogenous Metabolism in Brain Cortex Slices (Dr. R. Vrba and Jaroslava Folberger), 237
Ends (The Atlantic), of Europe (Prof. E. E. Evans), 581
Energy (Chemical into Mechanical) : Size and Shape Changes of Polyelectrolytes—Conversion of (Seminar at University College, London, on), 762
Energy (Light) : Transfer of, and Photosensitization (Society of Physical Chemists of France Symposium on), 231
Energy Effects (Kinetic) : Capillary-tube Viscometry with Negligible (W. A. Caw and R. G. Wylie), 1153
Energy Spectrum of Particles Bombarding the Earth (B. J. O'Brien), 521
Energy Spectrum of Protons emitted from the Fusion Reaction in SCEPTRE III : Measurement of the (W. M. Jones, A. C. L. Barnard, S. E. Hunt and D. R. Chick), 216
Engelsberg, Ellis (Entner, Nathan, and) : An Effect of Glucose on Bacteriophage Synthesis in *Salmonella typhimurium*, 1808
Engineer : Heat and the (Prof. O. A. Saunders), 582
  Nuclear Power and the (Sir Christopher Hinton), 1047
Engineering : Nuclear, *review* by B. Cutts and G. R. H. Geoghegan, 4
  Nuclear (edited by Prof. Charles F. Bonilla), *review* by Prof. W. Murgatroyd, 350
  Nuclear Chemical (Prof. Manson Benedict and Prof. Thomas H. Pigford), *review* by Prof. W. Murgatroyd, 489
  Physics for Science and (Robert L. Weber, Marsh W. White and Kenneth V. Manning), *review* by G. R. Noakes, 420
  Transistor Circuit (edited by Richard F. Shea), *review* by D. D. Jones, 756
Engineering : Radio, Vol. 12, No. 8, 1957, first English issue, 989
Engineering Heat Transfer : Principles of (Prof. Warren H. Giedt), *review* by Dr. H. Cohen, 623
Engineering Industry : Age Structure in the (K. F. H. Murrell and S. Grew), 430
Engineering (Chemical) : Advances in (edited by Thomas B. Drew and John W. Hoopes, Jr.), Vol. 2, *review*, 822
  Graduate Training in, 1061
  Progress in, *review*, 822
Engineering (Chemical) Practice (edited by Herbert W. Cremer and Trefor Davies), Vol. 4, Fluid State, *review* by Prof. J. M. Coulson, 822
Engineering (Electrical) : Conformal Transformations in (Dr. W. J. Gibbs), *review* by Dr. L. S. Goddard, 1630
  The Education and Training of Student Apprentices in (Institution of Electrical Engineers), 1649
  Student Apprenticeship in (Prof. J. Greig), 1649
Engineering (Electronic) Association and the Office Appliance and Business Equipment Trades Association : Electronic Computer Exhibition and Business Computer Symposium, 565, 918
Engineering (Marine) : Parsons Scholarship in (Institution of Naval Architects), 1554
  Yarrow Scholarship in (Institution of Naval Architects), 1554
Engineering (Mechanical), at Liverpool, 18
Engineering (Mechanical) Research 1957—Report of the Mechanical Engineering Research Board, with the Report of the Director of Mechanical Engineering Research, 1287
Engineering (Mechanical) Research Board : Mechanical Engineering Research 1957—Report of the, with the Report of the Director of Mechanical Engineering Research (Department of Scientific and Industrial Research), 1287
Engineering (Mechanical) Research Laboratory (R. J. F. Franklin), 436
Engineering (Mechanical) Research Laboratory : Research on Heat Transfer, 293
Engineering (Naval) : Denny Scholarship in (Institution of Naval Architects), 1554
Engineering (Nuclear) : Advances in—Proceedings of the Second Nuclear Engineering and Science Conference held at Philadelphia (edited by John R. Dunning and Brice R. Prentice), *review* by Dr. T. E. Allibone, 210
  Recent Developments in (Sir John Cockcroft), 1334
Engineering (Nuclear), and Science Congress : Selected Papers from the 1st, held at Cleveland, Ohio (edited by D. J. Hughes, Stuart McLain and Clark Williams), Vol. 1, Problems in Nuclear Engineering ; Vol. 2, Reactor Operational Problems, *review* by B. Cutts and G. R. H. Geoghegan, 4
Engineering (Production) Research Association (Dr. N. A. Dudley), 233
  Liaison and Advisory Service, 293
Engineering (Radio), and Electronics, Vol. 2, No. 2, 1957, English edition, 989
Engineering Materials and Design, Vol. 1, No. 1, 1642
Engineering Materials, Machine Tools and Processes (W. Steeds), third edition, *review* by K. J. Pascoe, 8
Engineering Research, 293
Engineering Vibrations with Applications to Structures and Machinery (Prof. Lydik S. Jacobsen and Prof. Robert S. Ayre), *review* by Prof. R. E. D. Bishop, 1581
Engineers (Chemical), in Britain : Supply and Distribution of (Prof. H. E. Watson), 1712
Engineers (Chemical), Institution of : Advisory Note on Graduate Training in Chemical Engineering, 1061
Engineers (Civil), Institution of : Election of Officers, 158
Engineers (Electrical), Institution of : Scope and Activities of the Medical Electronics Discussion Group, 1062
  Convention on Thermo-Nuclear Processes, 1488
  Christmas Lecture (Dr. E. R. Laithwaite), 1554
  The Education and Training of Student Apprentices in Electrical Engineering, 1649
Engineers (Electrical), American Institute of, and others : Annual Conference on Electrical Techniques in Medicine and Biology, 433, 771
Engineers (Licensed Aircraft), Society of (Royal Aeronautical Society and the) : Members to repair and maintain the Nash Collection of historic aircraft, 1131
Engineers (Lubrication), American Society of : Transactions, Vol. 1, No. 1, Lubrication Science and Technology (edited by John Boyd), *review* by Dr. D. Tabor, 1763
Engineers (Mechanical), Institution of : Award of Clayton and Manville Fellowships and Grants, 433
Engineers (Radio), British Institution of : Clerk Maxwell Premium awarded to Dr. T. B. Tomlinson, 295
  Election of Prof. E. E. Zepler as president, 1416
  Formation of a Medical Electronics Group, 1644
Engineers (Radio), Institute of, and others : Eleventh Annual Conference on Electrical Techniques in Medicine and Biology, 433
Engineers (Telecommunication), Indian Institution of : Second Technical Convention, 842
England : Fire-blight of Pear in (J. E. Crosse, Margery Bennett and Constance M. E. Garrett), 1530
  New Nature Reserves in (Nature Conservancy), 161
England (North-west) : Deposition of Radioactivity in, from the Accident at Windscale (A. C. Chamberlain and H. J. Dunster), 629
England (Rural), Council for the Preservation of : Thirty-second Annual Report (1957-1958), 777
  Nineteenth National Conference (Rural Problems of the Moment), 565
England (Rural), Council for the Preservation of (Sheffield and Peak District Branch) : Twenty-seventh Annual Report, 156
England (South-East) : Archaeology of (Dr. Gordon J. Copley), *review* by M. C. Burkitt, 971
England and Wales : Alkali, etc., Works in (Ninety-fourth Annual Report on), 499
  Education in 1957, being the Report of the Ministry of Education and the Statistics of Public Education for, 481
  Statistical Review of—Supplement on Mental Health for 1952-53 ; Supplement on Cancer for 1953 (Registrar General), 1061
  A Survey of Social Conditions in, as illustrated by Statistics (Sir Alexander Carr-Saunders, D. Caradog Jones and C. A. Moser), third edition, *review* by Prof. E. Grebenik, 1330
English : Soviet Scientific and Technical Journals available in (United States National Science Foundation), 632
English Education : The Utopist Tradition in (Prof. W. H. G. Armytage), 985

Englman, Dr. R. : How Neutrons get There, *review*, 630
Enigmatical Trematode '*Dictyocotyle coeliaca*' (Dr. Ben Dawes and Dr. Ivor Griffiths), 1033
Enteroviruses in the Pig (P. H. Lamont and Dr. A. O. Betts), 608
Enterprise : Business—its Growth and Organization (Prof. Ronald S. Edwards and Harry Townsend), *review* by L. G. Jaeger, 971
Entner, Nathan, and Engelsberg, Ellis : An Effect of Glucose on Bacteriophage Synthesis in *Salmonella typhimurium*, 1808
Entomology : General, *review* by Dr. W. H. Thorpe, 486
  A General Textbook of (Dr. A. D. Imms), ninth edition, entirely revised by Prof. O. W. Richards and R. G. Davies, *review* by Dr. W. H. Thorpe, 486
Entomology and Parasitology at Liverpool, 358
Entrance Exhibitions (Trinity College, Cambridge), 1205
Entropy Production in Irreversible Mechanical Processes (D. H. Everett), 1084
Entry of Water into Silica Glass (A. J. Moulson and J. P. Roberts), 200
Environment (Radiation, Substrate and Allelic Genes) : Effects of, on the Melezitose Gene in *Saccharomyces* (Prof. Carl C. Lindegren and David D. Pittman), 271
Environmental Temperature : Change in Oxygen Consumption of the New-Born Pig with a Fall in (Dr. L. E. Mount), 536
Enzymatic Reduction of Steroids : Effect of Thyroxin Administration on the Rate and Steric Course of (Dr. Joseph McGuire and Gordon Tomkins), 261
Enzymatically Dephosphorylated Casein : Rennin Coagulation of (Robert Y. H. Hsu, Prof. Laurens Anderson, R. L. Baldwin, C. A. Ernstrom and A. M. Swanson), 798
Enzyme from an Ultra-Violet-induced Mutant of *Aspergillus terreus* : Itaconicoxidase, an (Dr. Ján Arpai), 661
Enzyme (Condensing), of *Aspergillus niger* : Separation of the, from Acetyl Coenzyme A Deacylase and Citridesmolase and the Effect of Magnesium Ion on the Purified Fraction (Prof. C. V. Ramakrishnan), 1601
Enzyme (Proteolytic), from Beef Pancreas : Pancrinogen, a New Zymogen of (Masami Soejima and Kensuke Shimura), 49
Enzyme Action : The Chemical Kinetics of (Prof. Keith J. Laidler), *review* by Dr. B. R. Hammond, 1578
Enzyme Kinetics, *review* by Dr. B. R. Hammond, 1578
Enzyme System of Yeast Cells : Effect of Ethylenediamine Tetraacetic Acid on the (J. P. Shukla and K. A. Prabhu), 1316
Enzyme-catalysed Group-Transfer : Group-Translocation—a Consequence of (Dr. Peter Mitchell and Dr. Jenniger Moyle), 372
Enzymes (Dr. Malcolm Dixon and Dr. Edwin C. Webb), *review* by Prof. Britton Chance, 969
  All the, review by Prof. Britton Chance, 969
Enzymes and their Action (Agricultural University of Wageningen International Conference on), 1710
Enzymes in the Dry State : Changes in the Sensitivity of, to Radiation (Dr. Reinier Braams, Franklin Hutchinson and Dilip Ray), 1506
Enzymes and related Topics, *review* by Dr. Edwin C. Webb, 897
Enzymes inhibited by Organo-Phosphorus Compounds : Nature of the Reactive Serine Residue in, (Mechanism of Esterase Action). (G. R. Porter, Prof. H. N. Rydon and J. A. Schofield), 927
Enzymes (Pectolytic) : Absence of, in a Pathogenic Strain of *Fusarium oxysporum* f. *lycopersici* (Dr. K. McDonnell), 1025
Enzymes (Sulphydryl) : Alleged Susceptibility of, to Ionizing Radiation (Dr. A. Pihl, R. Lange and L. Eldjarn), 1732
Enzymic Synthesis of Serine : Interaction of Formaldehyde and Tetrahydrofolic Acid and its relation to the (Dr. R. L. Blakley), 1719
Enzymology and related Subjects of Biochemistry : Advances in (edited by F. F. Nord), Vols. 18 and 19, *review* by Dr. Edwin C. Webb, 897
Epidemics : The Mathematical Theory of (Norman T. J. Bailey), *review* by S. J. Kilpatrick, 9
Epidemiological and Vital Statistics : Annual (1954), Bilingual edition (French and English), (United Nations World Health Organization), *review* by S. J. Kilpatrick, 9
Epidermal Structures in a Rhinoceros (*Ceratotherium simum*), (Prof. A. J. E. Cave and D. B. Allbrook), 196
Epinephrine : Inability of, to protect Rhode Island Chicks against the Lethal Action of X-Rays (Dr. M. -L. Beaumariage), 803
  The Rearrangement of (Dr. J. H. Fellman), 311
Epinephrine and Norepinephrine : Fluorescent Derivatives obtained by the Reaction of Ethylene Diamine with (Dr. Guy Nadeau and Louis-P. Joly), 180
Epizooties, Office International des (United Nations Food and Agriculture Organization and the) : Meeting to discuss Problems of Ticks and Tick-borne Diseases, 1416
Eppelsheimer, Prof. D. S., and Reitsma, Jun., L. J. : Tensile Strength of Indium, 339
Epstein, Prof. S. (Sharp, Prof. R. P., and) : Physics of Ice Movement (Ice Movement on Glaciers), 1561
Equations : Differential—Geometric Theory (Solomon Lefschetz), *review* by Prof. T. A. A. Broadbent, 1332
  Integral (Prof. F. G. Tricomi), *review* by Prof. T. A. A. Broadbent, 1259
  Linear (P. M. Cohn), *review* by Prof. T. A. A. Broadbent, 827
Equations (Elementary Differential), and Operators (G. E. H. Reuter), *review* by Prof. T. A. A. Broadbent, 827
Equations (Integral) : Theory and Application of, *review* by Prof. T. A. A. Broadbent, 1259
Equations (Integral), and their Applications to certain Problems in Mechanics, Mathematical Physics and Technology (S. G. Mikhlin), translated from the Russian by A. H. Armstrong, *review* by Prof. T. A. A. Broadbent, 1259
Equations (Maxwell) : Maxwell Fish-eye treated by (Prof. Chen To Rai), 1600
Equations (Partial Differential) : Elements of (Prof. Ian N. Sneddon), *review* by Prof. T. A. A. Broadbent, 902
Equations (Second-Order Differential) : Eigenfunction Expansions associated with (Prof. E. C. Titchmarsh), Part 2, *review* by Prof. G. Temple, 1184
Equator : Horizontal Drift Measurements in the Ionosphere near the (N. J. Skinner, J. Hope and R. W. Wright), 1363
Equatorial Atlantic Deep-Sea Core : Secondary Oscillations in an (Dr. J. D. H. Wiseman), 1534
Equatorial (Atlantic), Deep-Sea Sediments : Rate of Accumulation of Nickel in, and its Bearing on Possible Extra-Terrestrial Sources (Karl K. Tyrekian), 1728
Equatorial Undercurrent (Pacific) : Observations of the (John A. Knauss and Joseph E. King), 601
Equine Liver Tissue : Molybdenum Content of (P. A. Moore), 1175
Equipment for Archaeology and Geology (P. J. Dutt and Co., Ltd.), 1486
Equipment and Methods (New), for the Evaluation of the Performances of Lense for Television (W. N. Sproson), 1490
Eränkö, Prof. O. : Differential Demonstration of Acetylcholinesterase and Non-specific Cholinesterase in the Adrenal Medulla of the Rat, 183
Erdélyi, V. R., and Green, Mino : Hydrogen Overpotential on Germanium Electrodes, 1592
Erickson, John G., and others : The 1,2,3- and 1,2,4-Triazines, Tetrazines and Pentazines, *review* by Dr. F. G. Mann, 1762
Erne (River) : Movement of Salmon on the (P. A. Jackson), 543
Ernstrom, C. A., and others : Rennin Coagulation of Enzymatically Dephosphorylated Casein, 798
Erosion : Coastal, 1347
Erosion (Bat), as a Factor in Cave Formation (J. H. D. Hooper), 1464
Error at a Rectangular Corner in Relaxation Methods (R. Butler and S. V. Fagg), 600
Error (Counting), due to Overlapping Particles in Thermal Precipitator Samples (S. A. Roach), 134
Errors in the Measurement of Film Thickness by Multiple-Beam Interferometry (C. Weaver and P. Benjamin), 1149
Eruptions of the Volcano Benzymyannyi (G. S. Gorshkov), 500
Erythrocyte Preparations (Chicken) : Evidence for the Involvement of Ferrous Iron in the Biosynthesis of δ-Amino-laevulic Acid by (E. G. Brown), 313
Erythrocyte Stromata Powder : Applications of (Dr. Felix Milgrom and Dr. Miguel Layrisse), 189
Erythrocyte Suspensions : Comparison of the Tendency to cling to Glass and Haemagglutination produced in, by Ferric Chloride and by Influenza Virus (William R. Chesbro and Prof. Leslie R. Hedrick), 1164
Erythrocytes : Incorporation of Manganese into, as Evidence for a Manganese Porphyrin in Man (Donald C. Borg and Dr. George C. Cotzias), 1677
Erythrocytes *in vitro* : Effect of Calcium Ions on the Binding of Chromium-51 to (G. von Ehrenstein and B. Zacharias), 1384
Erythrocytes (Extravasated) : Heinz Bodies in (R. S. Smith, M. M. Boddington and A. I. Spriggs), 455
Erythrocytes and Reticulocytes (Duck) : Incorporation of Carbon-14 Dioxide by, *in vitro* (G. Giustina and E. Lazzarini), 1311
Erythropoiesis : The Kidney and (Dr. J. P. Naets), 1516
Escherichia coli : Effect of Tryptophan Analogues on Reversion of a Tryptophan-requiring Strain of (N. M. Schwartz and B. S. Strauss), 888
  Heat as an Agent producing High Frequency of Mutations and Unstable Genes in (Prof. Stephen Zamenhof and Dr. Sheldon Greer), 611
  Ribonucleoprotein Particles from (Dr. A. Tissières and Dr. J. D. Watson), 778
Escherichia coli K-12 Protoplasts : Recombination Ability of (Dr. Atsuyoshi Hagiwara), 456
Esdaile, Dr. Arundell : National Libraries of the World, second edition, *review* by R. Brightman, 758
Eshelby, J. D. : Mechanical Properties of Whiskers and Thin Films (Theory of Dislocations in Whiskers), 297
Eskdalemuir Observatory : Jubilee of, 706
Essay on Corrosion Science (Education Panel of the Corrosion Group of the Society of Chemical Industry Prize for an), 1063
Essay Competition : Presentation of *Endeavour* Prizes for the 1958 (British Association for the Advancement of Science), 632
  Waverley Gold Medal (Scientific Advisory Board of *Research* Awards), 1060, 1348
Essen, Dr. L., and others : Comparison of Caesium Frequency Standards of Different Construction, 41
Essenhigh, R. H., and Perry, M. G. : Science in the Use of Coal (Combustion and Gasification), 25
Essenhigh, R. H., and Thring, M. W. : Science in the Use of Coal (Combustion and Gasification), 25
Esserman, N. A. : Appointed the first director of the National Standards Laboratory (Commonwealth Scientific and Industrial Research Organization), Sydney, 291 ; work of, 291
Establishment of a Circulation : Transplantation of the Forebrain Region in Bird Embryos before the —Homoplastic Transplants (Dr. Petar N. Martinovitch and Miroslava R. Pavlović), 571 ; Heteroplastic Transplants (Dr. Petar N. Martinovitch), 572
Establishment of Permanent Cell Strains from Human Adult Peripheral Blood (Dr. John Paul), 808
Establishment of *Pythium* in Soils (R. Barton), 1776
Establishments (Government) : Research and Development in, 1485
Ester (Vitamin A), in Rat Serum : Transport of (C. F. Garbers), 1018
Esterase (Post-Heparin), in Human Serum : Difference between Lipoprotein Lipase and (S. Novák and Dr. J. Skořepa), 117
Esterase Action : Mechanism of—Nature of the Reactive Serine Residue in Enzymes inhibited by Organo-Phosphorus Compounds (G. R. Porter, Prof. H. N. Rydon and J. A. Schofield), 927 ; A Possible Mechanism of Action of Esterases inhibitable by Organo-Phosphorus Compounds (Prof. H. N. Rydon), 928
Esterases inhibitable by Organo-Phosphorus Compounds : A Possible Mechanism of Action of, (Mechanism of Esterase Action), (Prof. H. N. Rydon), 928
Esters (Brominated Long-Chain Fatty Acid) : Detection of certain, by Gas Liquid Chromatography (R. A. Landowne and Prof. S. R. Lipsky), 1731
Estey, Dr. R. H. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Estimates, Select Committee on : Fifth Report from the, together with part of the Minutes of the Evidence taken before Sub-Committee B and Appendices, Session 1957-58—The Department of Scientific and Industrial Research, 1111, 1181
  Sixth Report, Session 1957-58, Treasury Control and Expenditure, 1467
Estimating the Numbers of Phosphate-dissolving and Acid-producing Bacteria in Soil : A Plate Method for (H. A. Louw and Dr. D. M. Webley), 1317
Estimation of Strontium in Biological Materials by means of a Flame Spectrophotometer (Dr. G. E. Harrison), 792
Estimation (Radiometric), of Unsaturated Fatty Acids on Chromatograms (A. Z. Budzyński, Z. J. Zubrzycki and I. G. Campbell), 173

Estonian Natural History Journal : A New, 769
η-Tocopherol : Biological Potency of (J. Bunyan), 1237
Etching of Radiation Damage in Lithium Fluoride (Dr. D. A: Young), 375
Ethanol : Growth-promoting Effect of, an Oat Seedlings (Dr. C. L. Mer), 1812
Ethanol as a Carbon Source for the Growth of *Chlorella vulgaris* (Auxins and their Effect on the Growth of Unicellular Algae), (Prof. H. E. Street, D. J. Griffiths, C. L. Thresher and M. Owens), 1360
Ethanol and Auxins : Effect of, on the Growth of Unicellular Algae (Auxins and their Effect on the Growth of Unicellular Algae), (Dr. M. K. Bach and J. Fellig), 1359
Ethical and Political Problems of the Atomic Age (Dr. C. F. von Weizsäcker), 156
19-nor-Ethinyltestosterone in the Liver of the Guinea Pig : Behaviour of 19-nor-Progesterone and (Silvia Girardi, Dusan Jadrejevič, Rigoberto Iglesias and Prof. Alexander Lipschutz), 1450
3-Ethoxy-4-hydroxybenzoic Acid in Human Urine (G. A. Hill, J. Ratcliffe and P. Smith), 1160
Ethyl Alcohol : Oxidation of, to Acetic Acid by Proliferating Yeasts (Juan Santa María), 937
Ethyl Mercaptan: Inhibitory Action of, on Intracellular Tubercle Bacilli (G. E. Davies and G. W. Driver), 664
Ethylene Diamine : Fluorescent Derivatives obtained by the Reaction of, with Epinephrine and Norepinephrine (Dr. Guy Nadeau and Louis-P. Joly), 180
Ethylenediaminetetraacetatocobaltate (III) : Electron Transfer and Thermal Racemization of (Yong Ae Im and Prof. Daryle H. Busch), 1368
Ethylenediamine Tetraacetic Acid : The Analytical Uses of (Prof. Frank J. Welcher), *review* by C. O. Harvey, 1471
  Effect of, on the Enzyme System of Yeast Cells (J. P. Shukla and K. A. Prabhu), 1316
  Ingestion of, and the Effect on Life Span of Irradiated and Control *Habrobracon* Females (Leo E. LaChance), 870
Etiolated Sunflower Seedlings : Incorporation of Carbon-14 Dioxide into Sugars by Darkened Cotyledons from (Dr. Clive Bradbeer), 1429
Euclidean Space : Problems in—Application of Convexity (Dr. H. G. Eggleston), *review* by Prof. T. A. A. Broadbent, 1472
Eugenics Society : Broadsheet No. 1, West Indian Immigration into Britain (Colin Bertram), 1060
Euratom : Agreement for co-operation in the civil uses of atomic energy between the United States and, 1551
Eurochemic Company : European Nuclear Energy Agency and the (First Report of the Steering Committee for Nuclear Energy to the Organization for European Economic Co-operation Council), 1069
Europa : Bestimmungstabellen der Blattminen von (Prof. Erich M. Hering), Band 1, Pflanzengattungen A-L; Band 2, Pflanzengattungen M-Z; Band 3, Neubeschreibungen von Minen-Erzeugern Systematische Übersicht der Wirtspflanzen und der Minen-Erzeuger, *review* by Dr. Kenneth Mellanby, 213
Europe : The Atlantic Ends of (Prof. E. E. Evans), 581
  The Teaching of Hygiene and Public Health in (Prof. F. Grundy and Prof. J. M. Mackintosh), *review* by Prof. Thomas McKeown, 619
Europe and North America : The Chemical Industry during the Nineteenth Century, a Study of the Economic Aspect of Applied Chemistry in (Dr. L. F. Haber), *review* by J. L. S. Steel, 347
  The Faunal Connections between (Dr. Car. H. Lindroth), *review* by Charles S. Elton, 140
European Agricultural Aviation Centre : Set up under the auspices of the European Productivity Agency of the Organization for European Economic Co-operation, 226
European Collections : Amber Spiders in (Alexander Petrunkevitch), *review* by T. H. Savory, 1588
European Economic Co-operation, Organization for : International Certification of Herbage Seed, 157
  European Nuclear Energy Agency and the Eurochemic Company (First Report of the Steering Committee for Nuclear Energy), 1069
  European Nuclear Energy Agency—Structure and Functions, First Joint Undertakings, 1346
European Economic Co-operation, Organization for (European Nuclear Energy Agency) : Catalogue of Courses on Nuclear Energy in O.E.E.C. Countries (1958-59), new edition, 918
European Economic Co-operation, Organization for (European Productivity Agency) : European Agricultural Aviation Centre, 226
European Nuclear Energy Agency : Catalogue of Courses on Nuclear Energy in O.E.E.C. Countries (1958-59), new edition, (Organization for European Economic Co-operation), 918
  Structure and Functions, First Joint Undertakings (Organization for European Economic Co-operation), 1346
European Nuclear Energy Agency and the Eurochemic Company (First Report of the Steering Committee for Nuclear Energy to the Organization for European Economic Co-operation Council), 1069
European Organization for Nuclear Research : Progress during 1958, 1708
European Orthoptera, *review* by Dr. David R. Ragge, 141
European Productivity Agency of the Organization for European Economic Co-operation : European Agricultural Aviation Centre, 226
European Seismological Commission (E. Tillotson), 26
  Election of Officers, 27
European Seminar (Regional) on the Universities and Adult Education, Bangor, 1956 : Report on the (Ministry of Education), 1627
Evaluation of the Performances of Lenses for Television : New Equipment and Methods for the (W. N. Sproson), 1490
Evans, Dr. Alice M. : At the eighth Plant Breeders' Conference (Use of Polyploidy and Species Hybridization in the Breeding of Forage Legumes), 843
Evans, Clifford (Meggers, Betty J., and) : Archaeological Investigations at the Mouth of the Amazon, *review* by Dr. G. H. S. Bushnell, 1044
Evans, C. C., and others : Mechanical Properties of Whiskers and Thin Films (Properties of Non-metallic Whiskers of Hydroquinone, Nickel Sulphate, Sodium Chloride, Potassium Chloride and Potassium Permanganate), 297
Evans, Sir Charles Lovatt : Physiology as an Education and as a Career, 1067
Evans, C. R. : Awarded a James Clayton Fellowship by the Institution of Mechanical Engineers, 433
Evans, Dr. D. E .M., and others : Preparative-Scale Gas Chromatography, 591
Evans, Prof. E. E. : The Atlantic Ends of Europe (Presidential Address to Section E (Geography) of the British Association for the Advancement of Science), 581
Evans, Dr. Frank : Growth and Maturity of the Barnacles *Lepas hillii* and *Lepas anatifera*, 1245
Evans, Gwilym : Conference on Plant Breeding, 843
Evans, Dr. G. O. : Research Methods in Soil Zoology (Systematics and the Ecologist), 705
Evans, Dr. H. J. (Neary, Dr. G. J., and) : Chromatid Breakage by Irradiation and the Oxygen Effect, 890
Evans, I. : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Evans, J. V., and others : Haemoglobin and Potassium Blood Types in some Non-British Breeds of Sheep and in certain Rare British Breeds, 320
Evans, Dr. L. T.: *Lolium temulentum* L., a Long-day Plant requiring only One Inductive Photocycle, 197
Evans, R. S. : A Dictionary of *p*H Applications, *review* by Prof. H. T. S. Britton, 1258
Evans, T. : Mechanical Properties of Whiskers and Thin Films (Tensile Deformation of Single-crystal Films of Gold, Gold/Palladium, Rhodium and Platinum), 298
Evans, Prof. W. C. (Fernley, H. N., and) : Oxidative Metabolism of Polycyclic Hydrocarbons by Soil Pseudomonads, 373
Evapo-transpiration from Different Crops exposed to the Same Weather (Dr. G. Stanhill), 125
Evaporated Films : Stability of (M. Wyn Roberts), 1151, *erratum*, 1205
Evaporated Layers of Cadmium Sulphide : Photoconductivity and Crystal Size in (J. M. Gilles and J. Van Cakenberghe), 862
Evaporation from Reservoirs : : Reduction of (F. Grundy), 500
Events (Electrical and Mechanical), in Contraction : Inward Movement of Calcium as a Link between (Prof. George B. Frank), 1800
Everett, D. H. : Entropy Production in Irreversible Mechanical Processes, 1084
Everett, Dr. J. W. : Comparative Endocrinology (Neuro-endocrine Reflex and Co-ordinating Mechanisms), 775
Everett, Prof. N. B., and others : Labelling of Cells in Thoracic Duct Lymph of the Guinea Pig after Tritiated Thymidine, 1608
Eveson, G. F., and Gresham, J. E. : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Evidence from a Dwarf Pea Assay for the Occurrence of a Gibberellin-like Substance in Wheat Seedlings : A Colorimetric Test for Gibberellic Acid and (G. M. Simpson), 528
Evidence for $^{4}_{2}$He 'Clusters' in Nuclei (Prof. L. H. Ahrens and R. D. Cherry), 1434
Evidence for the Involvement of Ferrous Iron in the Biosynthesis of δ-Aminolaevulic Acid by Chicken Erythrocyte Preparations (E. G. Brown), 313
Evidence of Lattice Defects preceding Oriented Transformation during the Heat Treatment of Kaolinite (Dr. G. B. Mitra), 1794
Evidence for a Manganese Porphyrin in Man : Incorporation of Manganese into Erythrocytes as (Donald C. Borg and Dr. George C. Cotzias), 1677
Evidence for Permeability Minima in Low-Pressure Gas Flow through Porous Media (Dr. D. M. Grove and M. G. Ford), 999
Evidence for a Relation between Creatine Phosphate Level and Polarity of the Cerebral Cortex (J. Křivánek, Dr. J. Bureš and O. Burešová), 1799
Evolution : Books on, *review* by Dr. G. S. Carter, 1112
  Palaeontology and (Palaeontological Association in conjunction with the Geological Survey and Museum Exhibition on), 22
  The Story of (Sir Julian Huxley), *review* by T. H. Hawkins, 1763
Evolution of Evolution (Prof. Thomas W. M. Cameron), 701
Evolution of Form and Function in Molluscs : Aspects of the (British Association for the Advancement of Science, Section D (Zoology), Discussion on), 996
Evolution of the Human Mind, *review* by Prof. H. J. Fleure, 1572
Evolution in Man : Control of (Prof. C. D. Darlington), 14
Evolution and the Men who Discovered It : Darwin's Century— (Prof. Loren Eiseley), *review* by Dr. G. S. Carter, 1112
Evolution by Natural Selection (Charles Darwin and Alfred Russel Wallace), *review* by Dr. G. S. Carter, 1112
Ewe : Pregnanediol in the Urine of the (Dr. Hamish Robertson and W. F. Coulson), 1512
Ewe Lambs (Romney), grazed on Red Clover (*Trifolium pratense*) Pastures : Reptroductive Disturbances of (T. S. Ch'ang), 1175
Ewing, Prof. A. W. G. : Modern Educational Treatment of Deafness, 919
Ewing, Dr. Irene : Modern Educational Treatment of Deafness, 920
Examination of Metals by X-Ray Diffraction (X-Ray Diffraction Group of the Institute of Physics Discussion on), 771
Example of Noise in a Biological Servo-mechanism : Pupil Unrest, an (Lawrence Stark, Fergus W. Campbell and John Atwood), 857
Excess Substrate : Inhibition of Dextransucrase by (W. Brock Neely), 1007
Exchange of Information on Atomic Energy, 635
Exchange of Scientific Information, 1345
Exchange Labelling with Tritium : Molecular Changes in (P. H. Jellinck and D. G. Smyth), 46
Exchange (Deuterium), in Polypeptides (Dr. A. Elliott and W. E. Hanby), 654
Exchange Lectureship : Perkin, awarded to Prof. A. J. Birch, 295
Exchange Reactions : Isotopic (Faraday Society Discussion on), 295
Exchange Scholarships in Medical Science : French (Medical Research Council Awards for 1958-59), 634
Exchanges (Calcium), of Ehrlich Ascites Tumour Cells of Mice *in vitro* (Doreen Thomason and Raymond Schofield), 809
Excised Nodules of *Coriaria arborea* Lindsay : Fixation of Nitrogen-15 by (Dr. G. P. Harris and T. M. Morrison), 1812
Excitation due to Gamma-Aminobutyric Acid in the Central Nervous System : Inhibition and (Prof. Takashi Hayashi), 1076
Excitation Spectra (Fluorescence) : Direct Recording of (Dr. C. A. Parker), 1002
Excretion (Purine), by the Sheep Ked, *Melophagus ovinus* (L.), (W. A. Nelson), 115
Excretion (Salt), in Marine Birds (Dr. F. S. Russell), 1755
Exhibition : Electronic Computer (To be held at Olympia), 565, 918
Exhibition of 1851, Royal Commission for the : Research Awards for 1958, 155
Exhibition on Controlled Nuclear Fusion (Science Museum, London), 1710

Exhibition on Palaeontology and Evolution (Palaeontological Association in conjunction with the Geological Survey and Museum), 22
Exhibition (Brussels Universal and International) : The International Science Hall at the (Dr. D. C. Phillips), 284
Exhibition (Electronic Computer), and Business Computer Symposium (Electronic Engineering Association and the Office Appliance and Business Equipment Trades Association), 565, 918
Exhibitions : Entrance (Trinity College, Cambridge), 1205
Existence and Significance of a Physiological Anticoagulating System (Prof. B. A. Kudrjashov and P. D. Ulytina), 397
Existing Coelacanth, *Latimeria chalumnae* : Specimen of an, on view in the Fish Gallery of the British Museum (Natural History), 227
Exogenous Sources of Urinary Phenol and Indole Acids (K. N. F. Shaw and J. Trevarthen), 797
Exotic Oligochaete *Branchiura sowerbyi* Beddard, 1892, in the River Thames: Occurrence of an (Dr. K. H. Mann), 732
Exotoxins (Bacterial) : Protective Action of Venoms containing Phosphatidase-*A* against certain (Dr. E. A. North and Hazel M. Doery), 1374
Expanding Education (Sir Hector Hetherington), 1283
Expansion of University Education in Britain, 137
Expansion (Moisture), of Ceramic Bodies : A New Approach to the Investigation of the Cause of (Thaisa Demediuk and W. F. Cole), 1223
Expansion (Permanent Moisture), of Clay Products on Autoclaving (Dr. J. S. Hosking and Dr. H. V. Hueber), 1142
Expansion (University) : Report on a Policy for (Association of University Teachers), 137
Expansions (Eigenfunction), associated with Second-Order Differential Equations (Prof. E. C. Titchmarsh), Part 2, *review* by Prof. G. Temple, 1184
Expenditure : Treasury Control and (Sixth Report from the Select Committee on Estimates, Session 1957-58), 1467
Expedition to North Rona and Sula Sgeir : Glasgow University (T. B. Bagenal and H. T. Howell), 775
Experiment (Manurial), in Ghana : Cocoa Shade and (R. K. Cunningham and J. Lamb), 119
Experimental Allergic Encephalomyelitis—Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and Killed Tubercle Bacilli (Dr. Marian W. Kies, Dr. Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104 ; Experimental Allergic Encephalomyelitis induced with Combined 'Purified' Spinal Cord and Bacillary Fractions (Dr. J. Colover), 105
Experimental Approach to Life (Prof. David Lewis), 497
Experimental Approaches to the Problems of Growth and Form in Plants (Experimental Plant Morphology Group of the Linnean Society Symposium on), 1416
Experimental Biology, Society for : Thirteenth Symposium (Utilization of Nitrogen and its Compounds by Plants), 229
Experimental Chemotherapy of Tumours with Hydrogen Peroxide (Dr. M. Chorazy, A. Gettlich, L. Góral, B. Koloczek, E. Molawka, B. Penar and Z. Szweda), 395
Experimental Hepatic Necrosis : Aldosterone and (Dr. K. Aterman), 1324
Experimental Ringworm in Guinea Pigs—Oral Treatment with Griseofulvin (J. C. Gentles), 476
Experimental Science : Harvard Case Histories in (edited by James Bryant Conant and Leonard K. Nash), 2 vols., *review* by J. A. Ratcliffe, 348
Experimental Scurvy : Production of, in a Bird Species (R. N. Roy and Prof. B. C. Guha), 1689
Experimental Solution to the Paradox of Discontinuous Respiration in Insects (Robert I. Levy and Dr. Howard A. Schneiderman), 491
Experimental Staphylococcal Infection : Role of Hypersensitivity in (Dr. J. Johanovsky), 1454
Experimental Suppression of Increased Capillary Permeability in Thermal Burns in Rats (Dr. W. G. Spector and Dr. D. A. Willoughby), 949
Experimental Technical Liaison Service run by the Scottish Council (Development and Industry) : Small Firms with Big Problems—a Short Account of an (Department of Scientific and Industrial Research), 1139
Experimental Tests of Quantum Electrodynamics (Prof. W. E. Lamb), 160
Experiments in Hormonal Research : Biochemical Contributions to Endocrinology— (Sir Charles Dodds), *review* by Dr. A. E. Kellie, 484
Experiments in Numerical Integration (E. Knighting, D. E. Jones and Mavis K. Hinds), 440
Experiments on the Setting Behaviour of *Spirorbis*: Use of Artificially Liberated Larvae in (P. H. D. H. de Silva), 1751
Experiments (Tree Crop) : Yield Variations in, with specific reference to Cacao (T. A. Jones and G. K. Maliphant), 1613
Exploited Fish Populations : On the Dynamics of (R. J. H. Beverton and S. J. Holt), *review* by Dr. E. B. Worthington and J. G. Skellam, 686
Exploration (Mineral) : The Future of (Anton Gray), 1136
    Future of, in Great Britain and Ireland (Prof. K. C. Dunham), 1136
Explore the Earth's Gravitational Field : Use of Artificial Satellites to—Results from *Sputnik* 2 (1957β), (R. H. Merson and D. G. King-Hele), 640
Explosion at Ripple Rock : Observations on the (J. K. Wright, E. W. Carpenter, A. G. Hunt and B. Downhill), 1597
Explosives : The Impact Testing of (Dr. Paul W. Levy), 37
Exports : Book, 430
Expression (A Theoretical), for Solubility Product (Dr. K. Krishnamurti), 1227
Extensibility of the Pea Stem : Effect of Gibberellin on the (S. Yoda and J. Ashida), 879
Exterior Ballistics of Rockets (Prof. Leverett Davis, Jr., James W. Follin, Jr., and Prof. Leon Blitzer), *review* by D. G. King-Hele, 821
Extinct and Vanishing Birds of the World (James C. Greenway, Jr.), *review* by Dr. A. J. Marshall, 758
Extra Pharmacopoeia (Martindale), Vol. I, twenty-fourth edition, *review* by Dr. David Train, 279
Extra-Regional Oocytes in Teleosts (Prof. A. Stolk), 1241
Extra-Solar-System Meteorites ? : Are Tektites (Dr. Truman P. Kohman), 252
Extra Streaks in the X-Ray Diffraction Pattern of Vanadium Single Crystals (E. Sandor and Dr. W. A. Wooster), 1435
Extra-Terrestrial Sources : Rate of Accumulation of Nickel in Atlantic Equatorial Deep-Sea Sediments and its Bearing on Possible (Karl K. Turekian), 1728
Extracellular Metabolic Products of a *Hirsutella* Species (T. C. Loughheed and Dr. D. M. MacLeod), 114
Extract (Parathyroid) : Increased Survival of Rats irradiated with X-Rays and Treated with (R. H. Rixon, J. F. Whitfield and T. Youdale), 1374
Extraction of Antibiotics : A Paper Chromatography Method for the Determination of Suitable *p*H Values for the (Vladimír Betina), 796
Extractives from Klinki Pine (*Araucaria klinkii* Lauterbach), (W. E. Hillis and Ann Carle), 1593
Extracts of Mammalian Cells : Synthesis of Deoxyribonucleic Acid in (Prof. J. N. Davidson, Dr. R. M. S. Smellie, Dr. H. M. Keir and A. Hope McArdle), 589
Extravasated Erythrocytes : Heinz Bodies in (R. S. Smith, M. M. Boddington and A. I. Spriggs), 455
Extreme-Latitude Orbit Point : Seasonal Illumination of a Circumpolar Earth Satellite at its (Dr. W. N. Abbott), 651
Extreme Values of Sound Pressure : Investigation of (D. E. L. Shorter and W. I. Manson), (Analysis and Measurement of Programme Levels, Part 1), 1490
Extruded Bar (Aluminium Alloy) : Abnormally High Fatigue Strengths in (J. M. Finney and J. Y. Mann), 1366
Eye Movements and the Stability of the Visual World (R. L. Gregory), 1214
Eyles, Dr. V. A. : A Phosphatic Band underlying Bauxite Deposits in Jamaica, 1367
Eyre, Dr. J. Vargas : Henry Edward Armstrong, 1848-1937—the Doyen of British Chemists and Pioneer of Technical Education, *review* by Prof. G. R. Clemo, 1399
Eysenck, Prof. H. J. : Drugs and the Brain, *review*, 823

FABER, Dr. T. E.: Appointed Armourers and Brasiers' Company Research Fellow at the Cavendish Laboratory, Cambridge, 18
Fabry, Dr. Claudine : Structure of Precipitated Apatitic Phosphates, 523
Factor in Cave Formation : Bat Erosion as a (J. H. D. Hooper), 1464
Factor Inhibiting Biting in *Aedes aegypti* : Presence of a (M. M. J. Lavoipierre), 1567
Factor (Intrinsic), in the Gastrectomized Rat : Failure of Sorbitol to Replace (Dr. Bernard A. Cooper), 647
Factor (Thermolabile), causing the Conversion of Protochlorophyll to a Leuco-Compound : Presence in Root Tips of a (Z. Hejnowitz), 1023
Factors controlling Seed Germination in the West African Oil Palm, *Elaeis guineensis* (Jacq), (G. Hussey), 699
Factors (Antituberculosis), of Milk (Zdenek Franc, Ivo M. Hais and Oldřich Horešovsky), 884
Factors (Vascular Permeability), in the Secretion of the Guinea Pig Coagulating Gland (Jules Freund, and Prof. A. A. Miles, P. J. Mill and D. L. Wilhelm), 174
Fading (Faraday), of Earth Satellite Signals (Dr. Fred B. Daniels and Dr. Siegfried J. Bauer), 599
Fading-Rate (Rapid), of Ultra High-Frequency Signals reflected from the Moon : Comparison of Measured and Computed Values of the (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
Fagerson, Irving S., and others (edited by) : Gas Chromatography—a Symposium held under the auspices of the Analysis Instrumentation Division of the Instrument Society of America, *review* by N. H. Ray, 1630
Fagg, S. V. (Butler, R., and) : Error at a Rectangular Corner in Relaxation Methods, 600
Fahmy, N. I. (Morton, Prof. R. A., and) : Indole-3-aldehyde from Tissues, 939
Fahraeus, R. : Biochemical Response to Physical Injury (Tissue Injury due to the Reduced Filtrability of the Erythrocytes), 1494
Failure to induce Immunological Tolerance during Recovery from Irradiation (G. J. V. Nossal and Lois Larkin), 1447
Failure of Sorbitol to Replace Intrinsic Factor in the Gastrectomized Rat (Dr. Bernard A. Cooper), 647
Failure (Correlated), of Synthetic Activities in a Wheat Chromosome (H. K. Jain), 1458
Fairbairn, Dr. A. R. : Appointed to the General Motors Corporation of Detroit postdoctoral fellowship in flame spectroscopy at the Imperial College of Science and Technology, 363
Falcon, N. L. : Geology and Oil (Contribution of Oil Exploration to the Advancement of Geological Science), 833
Fall of Environmental Temperature : Change in Oxygen Consumption of the New-Born Pig with a (Dr. L. E. Mount), 536
Fall-out Radioactivity in a Deer's Antlers (Dr. J. Hawthorn and R. B. Duckworth), 1294
Falla, Dr. R. A. : Antarctic Research (Biology), 288 ; (Future Research in the Antarctic), 289
Family and Kinship in East London (Michael Young and Peter Willmott), *review* by Prof. E. Grebenik, 9
Fange, Ragnar (Schmidt-Nielsen, Knut, and) : Salt Glands in Marine Reptiles, 783
Fankuchen, Arthur N., and Fankuchen, Prof. I. : Detection of Polarization by Biological Organisms, 1372
Fankuchen, Prof. I. (Fankuchen, Arthur N., and) : Detection of Polarization by Biological Organisms, 1372
Fant, -. : Modern Educational Treatment of Deafness, 920
Far East : Biology in the, 501
Faraday Fading of Earth Satellite Signals (Dr. Fred B. Daniels and Dr. Siegfried J. Bauer), 599
Faraday Society : Discussion on Free Radical Stabilization, 89, 1496
    General Discussion on Ions of the Transition Elements, 158, 1349
    Discussion on Isotopic Exchange Reactions, 295
    Bourke Lectures (Prof. R. H. Stokes), 1205
    Discussion on Relaxation Processes, 1348
Farenden, P. J., and Pritchard, E. : Science in the Use of Coal (Physics and Chemistry of Coal), 25
Farm : Plants of the, *review* by Prof. A. H. Bunting, 1257
Farmer's Guide to Animal Diseases, *review* by Dr. J. O. L. King, 551
Farmers : Veterinary Guide for (G. W. Stamm), edited by Dallas S. Burch, third edition, *review* by Dr. J. O. L. King, 551
Farming : Food and—a Survey of Problems and Remedies (Association of Agriculture Conference on), 700
Farnsworth, H. E. : Solid State Physics, 567

Farthing, A. C., and Nam, B. : Steric Effects in Conjugated Systems (A Four-parameter, modified Hammett Equation for *ortho*-Substituted Systems), 569
Fat and the Protein Content of Human Milk : Correlation between the (Dr. O. A. Roels), 673
Fat Body in the Silkworm, *Bombyx mori* L. : Synthesis of Blood Protein by the (Hajime Shigematsu), 880
Fat Body (Locust) : Intracellular Particles of (M. L. Fenwick), 607
Fat Hardness and Growth-Rate in Bacon Pigs : Effect of Maize on (D. W. Duthie, A. F. Dent and H. P. Ledger), 953
Fat Transport Activity : Isolation from Human Blood of a New Substance associated with (Dr. W. S. Reith and M. J. Thomas), 604
Fatal Disease in Separated Rat Parabionts : Tolerance of Skin Homografts related to (Dr. B. Nakič and V. Silobrčić), 264
Fate of Beta-Sitosterol in Housefly Larvae (Dr. Ernst D. Bergmann and Zwi H. Levinson), 723
Fatigue Strengths (Abnormally High), in Aluminium Alloy Extruded Bar (J. M. Finney and J. Y. Mann), 1365
Fatty Acid Esters (Brominated Long-Chain) : Detection of certain, by Gas Liquid Chromatography (R. A. Landowne and Prof. S. R. Lipsky), 1731
Fatty Acids : Formation of Ketones from, by Spores of *Penicillium roqueforti* (R. F. Gehrig and Prof. S. G. Knight), 1237
Fatty Acids (Unsaturated), on Chromatograms : Radiometric Estimation of (A. Z. Budzyński, Z. J. Zubrzycki and I. G. Campbell), 178
Faulkner, R. O. : *Obituary* of R. W. Sloley, 1128
Fauna (Antarctic) : Protection of, 430
Faunal Connections between Europe and North America (Dr. Carl H. Lindroth), *review* by Charles S. Elton, 140
Fayez, M. B. E., and others : Isolation of Marmesin from the Fruits of *Ammi majus* Linn., 54
Feast, M. W., and Thackeray, A. D. : Galactic Rotation, 1347
Features (Myasthenic-like), of Neuromuscular Transmission after Administration of an Inhibitor of Acetylcholine Synthesis (Dr. J. E. Desmedt), 1673
Federation of British Industries : The Training of Designers for Industry, 360
Feeding Habits of Emperor Penguins (Dr. Richard L. Willing), 194
Feeding Reaction of Hydra : Effect of Analogues of Glutathione on the (E. E. Cliffe and Dr. S. G. Waley), 804
Feenberg, Prof. Eugene : Shell Theory of the Nucleus, second printing, *review* by Dr. A. M. Lane, 756
Fegler, Prof. George : *Obituary* by Dr. Catherine O. Hebb, 1128
Feigl, Prof. Fritz : Spot Tests in Inorganic Analysis, fifth English edition (translated by Prof. Ralph E. Oesper), *review* by C. O. Harvey, 1588
Feinberg, Dr. R. : Awarded a grant of £545 from the Paul Instrument Fund, for the construction of an instrument for measuring the intensity of soft X-radiation generated in experimental high-voltage valves, 1643
Felc, Dr. S. R. (La Cour, L. F., and) : Effect of Colchicine on the Utilization of Labelled Thymidine during Chromosomal Reproduction, 506
Feldherr, Carl (Harding, Clifford V., and) : Semipermeability of the Nuclear Membrane, 676
Feldspars : Rubidium Depletion in (Dr. S. R. Taylor and Dr. K. S. Heier), 202
Fell, Dr. H. B. : Salt and Water Balance in Animals (Transformation of Epithelial Cells), 1207
Feller, Prof. William : An Introduction to Probability Theory and its Applications, Vol. I, second edition, *review* by Dr. L. S. Goddard, 489
Fellig, J. (Bach, Dr. M. K., and) : Auxins and their Effect on the Growth of Unicellular Algae—Effect of Ethanol and Auxins on the Growth of Unicellular Algae, 1359
Fellman, Dr. J. H. : The Rearrangement of Epinephrine, 311
Fellows of the Royal Society : Undergraduate Academic Record of (C. Gross and L. Hudson), 787, 1178 ; (Prof. Robert Platt), 1178 ; (L. Hudson), 1326
Fellowship : Corday-Morgan Commonwealth for 1958-59, awarded to Miss Rama Bhattacharya, 700
  Granada Television Research (Granada TV Network Ltd.), 228
  Manville, awarded to P. B. Davies (Institution of Mechanical Engineers), 433
  Perkin Centenary, awarded to Dennis Balmforth, 295
  Underwood, awarded to Dr. Lewis E. Lloyd by the Agricultural Research Council, 990
Fellowship in Medicine : Lederle Travelling (Medical Research Council Award for 1958-59), 634
Fellowship in Ophthalmology and Otology : Alexander Pigott Wernher Memorial Travelling (Medical Research Council Award for 1958-59), 634
Fellowship for Research in Nutrition : Drummond, 1488
Fellowship (Travelling), and Student Prizes in Psychiatry (Mental Health Research Fund), 157
Fellowships (Foundations' Fund for Research in Psychiatry), 363
  Carlsberg–Wellcome Travelling Research (Awards for 1958-59), 228
  Commonwealth, 1276, 1487
  Co-operative Graduate (National Science Foundation, Washington), 1486
  Harkness (Commonwealth Fund), 699
  Mond Nickel (Awards for 1958), 1415 ; (Awards for 1959), 1416
  Research (Department of Scientific and Industrial Research Awards for 1958-59), 1062
  Science Faculty (National Science Foundation Awards for 1958-59), 501
  Senior Postdoctoral (National Science Foundation Awards for 1958-59), 501
Fellowships for 1959-60 (Ciba Fellowship Trust), 1776
Fellowships in Chemistry (Ramsay Memorial Fellowships Trustees Awards for 1958-59), 432
Fellowships in Medical Science : United States Public Health Services (National Institutes of Health, Bethesda) Travelling (Medical Research Council Awards), 634
Fellowships in Medicine : Lilly Travelling (Medical Research Council Awards), 634
  Rockefeller Travelling (Medical Research Council Awards for 1958-59), 634
Fellowships and Grants : James Clayton (Institution of Mechanical Engineers Awards), 433
Fells, I. : Appointed lecturer in fuel technology and chemical engineering at the University of Sheffield, 22
Feltynowski, A., and others : Anti-brucella Phage, 1610
Female : The Reproductive Development of the, with special reference to the Period of Adolescent Sterility (Prof. M. F. Ashley Montagu), *review* by Dr. Kenneth Walker, 1573
Females (Irradiated and Control *Habrobracon*) : Ingestion of Ethylenediaminetetraacetic Acid and the Effect on Life Span of (Leo E. LaChance), 870
Fenn, Robert W. : Inside the Comprehensive School, *review*, 1590
Fenton, G. W., and Smith, A. H. V. : Science in the Use of Coal (Carbonization of Coal), 25
Fenwick, M. L. : Intracellular Particles of Locust Fat Body, 607
Ferguson, jun., Dr. Albert B. (Laing, Dr. P. G., and) : Sodium-24 as an Indicator of the Blood Supply of Bone, 1442
Ferguson-Smith, Dr. M. A., and others : Representation of the X-Chromosome in Intermitotic Nuclei in Man, 124
  Colour Vision Studies and the X-Chromosome Constitution of Patients with Klinefelter's Syndrome, 1092
Fergusson, J. E. : Awarded a New Zealand fellowship in chemistry (renewal) at University College, London, by the Ramsay Memorial Fellowships Trustees, 432
Fermentation : Nucleotide Pool of Brewers' Yeast during Growth and (G. Harris, J. W. Davies and R. Parsons), 1565
Fermentation of Glucose by *Chlorella vulgaris* (P. J. Syrett), 1734
Fermentation Wastes : Serological Detection of (Robert L. Bunch and Edwin F. Barth, jun.), 1680
Fermentations: Bacterial (H. A. Barker), *review* by Dr. Kenneth McQuillen, 1587
Fern (Coenopterid) : Megaspore Tetrads in a (W. G. Chaloner), 771
Fernley, H. N., and Evans, Prof. W. C. : Oxidative Metabolism of Polycyclic Hydrocarbons by Soil Pseudomonads, 373
Ferns (Polypodiaceous) : Induced Apospory in (P. R. Bell and B. M. Richards), 1748
Ferrar, Dr. W. L. : Introduction to the Theory of Determinants and Matrices, *review*, 1599
Ferraro, Prof. V. C. A. : Electrodynamics of Moving Media, *review*, 1045
Ferric Chloride and by Influenza Virus : Comparison of the Tendency to cling to Glass and Haemagglutination produced in Erythrocyte Suspensions by (William R. Chesbro and Prof. Leslie R. Hedrick), 1164
Ferriprotoporphyrin : Effect of Gamma-Radiation on (Dr. Mary-Louise Rothschild, Laura Cosi and Lawrence S. Myers, jun.), 316
  The Spontaneous Change of, in Alkaline Solution (Dr. Mary-Louise Rothschild and Lawrence S. Myers, jun.), 1671
Ferromagnetic Domain Boundary in 'Perminvar' : Direct Measurement of the Velocity of Propagation of a (Dr. E. W. Lee and D. R. Callaby), 254
Ferromagnetism of Meteorites (Prof. Jules Duchesne and Joseph Depireux), 931
Ferrous Complexes : Uptake of Molecular Oxygen by (J. F. Drake and Dr. R. J. P. Williams), 1084
Ferrous Ion in Aqueous Solution : Oxidation of, by Atomic Hydrogen (Gideon Czapski and Prof. Gabriel Stein), 598
Ferrous Iron in the Biosynthesis of δ-Aminolaevulic Acid by Chicken Erythrocyte Preparations : Evidence for the Involvement of (E. G. Brown), 313
Ferrous Sulphate : Photo-reduction of Methylene Blue and Thionine by, using Flash Irradiation (Dr. C. A. Parker), 245
'Ferroxcube' at 24,000 Mc./s. : Measurements of the Permeability Tensor for (G. G. Robbrecht and J. L. Verhaeghe), 1080
Fertility : Human Sterility and, *review* by Dr. Kenneth Walker, 1573
Fertilizers : Response of Cacao to (D. B. Murray), 1613
Festuca : Trisaccharides of *Lolium* and (Dr. Anna M. MacLeod and Dr. H. McCorquodale), 815
Few, the late Dr. A. V. (Gilby, Dr. A. R., and) : Lutein in a Bacterial Membrane, 55
Feys, Prof. Robert, and others: Combinatory Logic, Vol. I, *review* by F. I. G. Rawlins, 1590
Fiala, Dr. Silvio : Intracellular Changes in Levels of Polarographically Active Sulphydryl Groups in Rat Liver during Carcinogenesis, 257
Fibre (Single), in Mammalian Visual System : Synapse Discharge by (Prof. P. O. Bishop, Dr. W. Burke and Dr. R. Davis), 728
Fibre Microscopy (Dr. J. L. Stoves), *review* by Prof. W. T. Astbury, 350
Fibres (Elastic) : Submicroscopic Structure of, as observed in the Polarization Microscope (Dr. G. Romhányi), 929
Fibres (Giant Nerve Cells and), in *Arenicola claparedii* (Polychaeta), (Prof. G. P. Wells), 1609
Fibres (Myelinated Nerve) : Some Structural Characteristics of (Dr. C. P. Wendell-Smith and Dr. P. L. Williams), 1608
Ficin : Characterization of (William Cohen), 659
Ficin and Papain : Degradation of Blood Group-Specific Mucopolysaccharides by (A. Pusztai and Prof. W. T. J. Morgan), 648
Fidler, Sheppard : Museum Architecture, 503
Fidleris, V., and Whitmore, R. L. : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Field of Knowledge : Library Classification and the (D. J. Foskett), 1277
Field Deposits (Simulated), of Gamma-BHC and Dieldrin : Effect of, on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles (G. Davidson and D. G. Pollard), 739
Field Guide to British Deer (compiled and edited by F. J. Taylor Page), *review* by Richard Morse, 825
Field Museum of Natural History (Chicago) : Fieldiana, Zoology, Vol. 40, A Monograph on the Termitophilous Staphylinidae (Coleoptera), (Prof. Charles H. Seevers), *review* by E. B. Britton, 144
  Fieldiana, Botany, Vol 30, No. 1, Orchids of Peru (Charles Schweinfurth), 500
Field Observations of Midday Closure of Stomata in the Oil Palm, *Elaeis guineensis* Jacq. (A. R. Rees), 735
Field Spark Gaps (Overvolted Uniform) : Observations on (K. R. Allen and K. Phillips), 1083
Field Stations (British Columbia) : Research on Guiding Young Salmon at Two (J. R. Brett and D. F. Alderdice), 162
Fifty Years of Medical Genetics (Dr. Laurence H. Snyder), 1416
Figgis, Dr. B. N. : Magnetic Properties of Spin-Free Transition Series Complexes, 1568

Figgis, Dr. B. N., and others : Ions of the Transition Elements (Magnetic Properties—Magnetic Susceptibilities of some Complexes of Osmium, Ruthenium, Rhenium and Iridium over a Temperature Range), 1350
Film Association, Scientific : Change of address, 700
  Sixth Annual Report of the Council, 770
Film Thickness : Errors in the Measurement of, by Multiple-Beam Interferometry (C. Weaver and P. Benjamin), 1149
Films (Evaporated) : Stability of (M. Wyn Roberts), 1151, *erratum*, 1205
Films (Scientific), at the British Association, 1211
Films (Thin) : Mechanical Properties of Whiskers and (J. E. Gordon and Dr. J. W. Menter), 296
Films (Thin Mercury) : A New Phenomenon of Electron Emission from (Dr. H. von Bertele), 1148
Films (Thin Metal) : Calculation of Absorption Peaks in (Robert M. Hill), 1150
Filter : The Design of a Linear Phase-Shift Low-Pass (L. E. Weaver), 1490
  A Method for Determination of Particle Penetration Depths in a (Jan Sisefsky), 1437
Finan, P. A. : At the Third International Seaweed Symposium (Use of the Mass Spectrometer in Carbohydrate Problems), 1780
Findlay, Dr. W. P. K. : Appointed assistant director of the Brewing Industry Research Foundation, 86 ; work of, 86
Fine, J., and others : Biochemical Response to Physical Injury (The Bacterial Factor in Traumatic Shock), 1496
Fine, Dr. J. M., and others : High Resolution of Human Plasma Components by Starch Gel Electrophoresis, 452
Fine Structure of the Nuclear Envelope of Carcinoma Cells (H. De Groodt, Prof. F. Derom, A. Lagasse, Prof. M. Sebruyns and Dr. M. Thiery), 1030
Fine Structure (Genetic) : Distribution of Proflavin-induced Mutations in the (Dr. S. Brenner, Prof. S. Benzer and Mrs. L. Barnett), 983
Finer Structure of the Galeal Lamella in Adult Mosquitoes (G. Surtees), 812
Finlayson, P. C., and Macrae, J. C. : Science in the Use of Coal (Carbonization of Coal), 25
Finley, M. I. : The History of a Decipherment, *review*, 1627
Finney, Dr. D. J. : Encyclopaedia Statistica, *review*, 1470
Finney, J. M., and Mann, J. Y. : Abnormally High Fatigue Strengths in Aluminium Alloy Extruded Bar, 1366
Finniston, Dr. H. M., and Murray, Dr. P. : Some Recent Trends in Metallurgy (The Newer Metals in Industry), 1124
Fiori, Dr. Angelo, and Marigo, Dr. Mario : Identification of Meprobamate by Adsorption Chromatography on Chromatoplates, 943
Fire-blight of Pear in England (J. E. Crosse, Margery Bennett and Constance M. E. Garrett), 1530
Fire Offices' Committee (Department of Scientific and Industrial Research and the) : Appointment of D. I. Lawson as director of fire research, 292
  Fire Research 1957—Report of Fire Research Board and the Report of the Director of Fire Research, 1651
Fire Research 1957—Report of Fire Research Board and the Report of the Director of Fire Research (Department of Scientific and Industrial Research and Fire Offices' Committee), 1651
Fire Research Board : Report of, and the Report of the Director of Fire Research (1957), 1651
Fire Research Organization of the Department of Scientific and Industrial Research and the Fire Offices' Committee (Joint) : Appointment of D. I. Lawson as director of fire research, 292
Firket, Prof. Henri : Distribution of Newly Synthesized Deoxyribonucleic Acid in Mitotic Division, 397
Firms (Small), with Big Problems—a Short Account of an Experimental Technical Liaison Service run by the Scottish Council (Development and Industry), (Department of Scientific and Industrial Research), 1139
First Chromosome of *Drosophila melanogaster* : Genotypic Control of Crossing-over on the (M. J. Lawrence), 889
First Principles of Industrial Relations (Dr. A. E. C. Hare), *review* by T. H. Hawkins, 1697
Firth, Prof. Raymond : Social Change in Simpler Societies, *review*, 280
  Easter Island Culture, *review*, 487
Firth of Clyde : Hydromedusae New to the British List from the (C. Edwards), 1564
Fischberg, Dr. M., and others : Sexually Mature Individuals of *Xenopus laevis* from the Transplantation of Single Somatic Nuclei, 64
Fischer, Dr. P., and others : Sodium Fluoroacetate as a Protecting Agent against Irradiation, 175
Fish and Crustacea : Analogies between the Compensatory Responses of, to Horizontal Displacement of the Body (D. H. A. Marr), 1621
Fish (Angler) : Egg Rafts of (Miss P. Rasquin), 21
Fish (Cold-stored) : Measurement of Toughness in (Dr. R. M. Love), 108
Fish (Marine) : Vitamin B_{12} in (Olaf R. Braekkan), 1386
Fish (The Saw-), of Sierra Leone (J. C. D. Watts), 961
Fish Populations (Exploited) : On the Dynamics of (R. J. H. Beverton and S. J. Holt), *review* by Dr. E. B. Worthington and J. G. Skellam, 686
Fish-eye (Maxwell), treated by Maxwell Equations (Prof. Chen To Tai), 1600
Fisher, Sir Ronald : The Life of Darwin, *review*, 71
  Lung Cancer and Cigarettes?, 108
  Cancer and Smoking, 596
Fisher, Dr. R. C. : *Obituary* by J. D. Bletchly, 1549
Fisheries Research Board of Canada : Bulletin No. 117, Research on Guiding Young Salmon at Two British Columbia Field Stations (J. R. Brett and D. F. Alderdice), 162
Fishery : The Herring and its (Dr. W. C. Hodgson), *review* by Dr. H. O. Bull, 6
Fishes (Parrot-) : Review of the (L. P. Schultz), 1415
Fishman, Jack, and others : 16β-Hydroxyoestrone, a Metabolite of Œstradiol in Man, 50
Fishman, Prof. W. H. (Sie, Dr. Hsien-Gieh, and) : Liver Glucosyl Oligosaccharides and Glycogen—Effects of Starvation, Glucose Feeding and Insulin, 240
Fission Products in Biological Material : Radioactivity due to (Prof. W. V. Mayneord, W. Anderson, R. E. Bentley, J. K. Burton, J. O. Crookall and N. G. Trott), 1473
Fitzgerald, L. M. (Mordike, B. L., and) : Study of Metals and Alloys above 1,200°C. (Measurement of Mechanical Properties), 1419
Five Years' Work in Librarianship, 1951-1955 (edited for the Library Association by P. H. Sewell), *review* by R. Brightman, 1590
5,000 Years : Carbon-14 Activity during the past (Dr. C. Crowe), 470 ; (Dr. K. O. Münnich, H. G. Östlund and Hl. de Vries), 1432 ; (H. Barker), 1433
Fixation of Nitrogen in the Presence of Colloidal Molybdenum Oxide as Catalyst : Photosynthesis of Amino-Acids from Paraformaldehyde involving the (K. Bahadur, S. Ranganayaki and Prof. L. Santamaria), 1668
Fixation of Nitrogen-15 by Excised Nodules of *Coriaria arborea* Lindsay (Dr. G. P. Harris and T. M. Morrison), 1812
Fixation (Carbon Dioxide), in Germinating Pine Pollen (*Pinus ponderosa*), (R. G. Stanley, L. C. T. Young and J. S. D. Graham), 1462
Fixation (Nitrogen), by Gram-Negative Bacteria (Michael H. Proctor and P. W. Wilson), 891
Fixation (Nitrogen), by Non-nodulated Plants, and by Nodulated *Coriaria arborea* (Greta Stevenson), 1523
Fixation and Dyeing : A Scientific Analysis of, *review* by Prof. J. Brachet, 1579
Flagellum (Sperm) : Motility of the (Dr. David W. Bishop), 1638
Flame Spectrophotometer : Estimation of Strontium in Biological Materials by means of a (Dr. G. E. Harrison), 792
Flames : Identity of Ions in some (J. Deckers and Prof. A. van Tiggelen), 863
Flare (Solar), at 4·3-mm. Wave-length ; Observation of a (R. J. Coates), 861
Flares (Solar) : Effect of, on Earth Satellite 1957β (T. Nonweiler), 468
Flash Irradiation : Photo-reduction of Methylene Blue and Thionine by Ferrous Sulphate using (Dr. C. A. Parker), 245
Flash Lighting for Egg Production (S. Fox and T. R. Morris), 1752
Flash Photolysis : Wave-length Effect in (Dr. C. A. Parker), 130 ; (Dr. K. Bridge and Prof. G. Porter), 130
Flashes (Lightning) : Correlation of Whistlers and, by Direct Aural and Visual Observation (Prof. M. G. Morgan), 332
Flasks (Baffled Shake) : Production of High-Titre Diphtheria Toxin in (Dr. D. C. Edwards), 190
Flattening of the Earth : Motion of the Nodal Line of the Second Russian Earth Satellite (1957β) and (Prof. E. Buchar), 198
Flavanones and Flavonols (Chalcones,) : Separation of, by Chromatography with Polyamide (Dr. Richard Neu), 660
Flavin Adenine Dinucleotide : Effects of Flavin Monosulphate and, on the Electroencephalogram (Tsuneo Muramatsu, Moriaki Ando, Toshiharu Nagatsu and Kunio Yagi), 457
Flavin Monosulphate and Flavin Adenine Dinucleotide : Effects of, on the Electroencephalogram (Tsuneo Muramatsu, Moriaki Ando, Toshiharu Nagatsu and Kunio Yagi), 457
Flavonols (Chalcones, Flavanones and) : Separation of, by Chromatography with Polyamide (Dr. Richard Neu), 660
Fleas of the Rat in Tanganyika (J. G. Halcrow), 817
Fleck, Sir Alexander : Science and Business—a Balanced Partnership (Presidential Address to the British Association for the Advancement of Science), 573
  Soddy Commemoration Plaque in the Chemistry Department of the University of Glasgow unveiled by, 631
  Appointed chairman of the Scientific Advisory Council of the Ministry of Power, 918
Flemans, R., and others : An Apparatus for Microelectrophoresis of Small Particles, 642
Fleming-Brown, D. H. : Awarded a James Clayton Grant by the Institution of Mechanical Engineers, 433
Fletcher, P. T. : Fuel and Power in British Industry (Nuclear Power), 1715
Fletcher, Dr. Wm. W., and others : Effect of Gibberellic Acid on the Nodulation of White Clover (*Trifolium repens* L.), 1319
Fleure, Prof. H. J. : Evolution of the Human Mind, *review*, 1572
Flies (House-) Susceptible and Resistant to DDT ; Dosage-Mortality Curves for (K. Wilson-Jones and G. Davidson), 403 ; (Dr. P. S. Hewlett), 404
Flies (Saw-) : Geographical Colour Polymorphism and Chromosome Constitution in Sympatric Species of (Dr. F. L. Waterhouse and Dr. Ann R. Sanderson), 477
Flight : High-Speed (British Association for the Advancement of Science, Sections A (Mathematics and Physics) and G (Engineering), Discussion on), 695
Flight (High-Speed) : The Human Operator and (A. Cadman Clinton), 1562
  Problems of, *review* by Dr. W. P. Jones, 1582
Flight (Rocket) : Theory of, *review* by D. G. King-Hele, 821
Flocculated Cane Sugar Juice : Zeta Potential and Sedimentation Behaviour in (Dr. M. C. Bennett), 1439
Flockhart (Duncan) Research Laboratories, Edinburgh : Extensions to the, 1485
Flood, D. T. : At the Third International Seaweed Symposium (Seasonal Variation in the Alginic Acid Content of *Ascophyllum nodosum*), 1780
Flood, W., and others : Spectroscopy of Solids (Fine Structure in the Recombination Radiation of Silicon), 159
Floodgate, G. D., and others : A National Type Culture Collection of Marine Bacteria, 1423
Flora of the Canadian Arctic Archipelago : Illustrated (A. E. Porsild), 294
Flora (Ancient African) : The Cape as an (Prof. R. S. Adamson), 585
Florence, Prof. P. Sargant, and others : Productivity and Economic Incentives, *review* by T. H. Hawkins, 1697
Florey, Sir Howard : New building of the John Curtin School of Medical Research at the Australian National University opened by, 355
Florin, R. E. : Free Radical Stabilization, 1497
Floristic Studies: New, 294
Florkin, Prof. M., and others : Utilization of the Carboxyl Group of Glycine for the Synthesis of the Amino-Acids of Silk by *Bombyx mori*, 1515
Floud, Mrs. J. E. : Title of reader in sociology of education in the University of London at the Institute of Education conferred on, 363
Flow of Blood in relation to the Vessel Wall (Discussion at Charing Cross Hospital Medical School), 90
Flow in Vascular Beds : Resistance to (Prof. Alan C. Burton), 1456
Flow (Air), over Mountains—Notes for Forecasters and Pilots (G. A. Corby), 94
Flow (Low-Pressure Gas), through Porous Media : Evidence for Permeability Minima in (Dr. D. M. Grove and M. G. Ford), 999
Flow (Sap) : Measurement of, by Heat Transfer (D. C. Marshall), 878
Flow (Two- and Three-Dimensional), of Grains through Apertures (R. L. Brown and J. C. Richards), 600
Flowering in Black-Currant : Photoperiodic Induction of (T. Nasr and Dr. P. F. Wareing), 269

Flowering in Fruit Trees : Effects of Gravity on Growth, Apical Dominance and (Gravimorphism in Trees), (Dr. P. F. Wareing and T. Nasr), 379
Flowering in Peas : Gibberellic Acid and the Physiological Genetics of (Prof. H. N. Barber, W. D. Jackson, I. C. Murfet and J. I. Sprent), 1321
Flowering Trees and Shrubs : The Book of (Stanley B. Whitehead), *review* by J. Robert Sealy, 684
Flowering and Shoot Growth in Japanese Larch (*Larix leptolepis*, Murray) : Effect of Gravity on (Gravimorphism in Trees), (K. A. Longman and Dr. P. F. Wareing), 380
Flowers of *Camellia japonica* : Separation of Anthocyanin and Leucoanthocyanin in (Toru Endo), 801
Flowers (Wild-) : Western Australian (with annotations by C. A. Gardner), *review* by Dr. R. Melville, 1587
Fluctuations (Geomagnetic), having a Six-Second Period : Possible Causes of (Dr. Fred B. Daniels), 1439
Fluctuations (Temperature) : Observability of Spontaneous (T. P. Gill), 239
Flügge, S. (herausgegeben von) : Handbuch der Physik, Band 17, Dielektrika ; Band19, Elektrische Leitengsphãnomene I ; Band 20, Elektrische Leitengsphãnomene II, *review*, 73
  Handbuch der Physik, Band 40, Kerkreaktionen I ; Band 42, Kernreaktionen III, *review* by Dr. E. Bretscher, 968
  Handbuch der Physik, Band 39, Bau der Atomkerne, *review* by Dr. E. Bretscher, 1333
  Handbuch der Physik, Band 47, Geophysik I ; Band 48, Geophysik II, *review* by Sir Edward Bullard, 1582
Fluid (Cerebrospinal) : The Free Amino-Acids of the (Dr. H. G. Knauff), 937
Fluid Motion in Nature, *review* by Sir Graham Sutton, 1182
Fluid State (Chemical Engineering Practice, edited by Herbert W. Cremer and Trefor Davies, Vol. 4), *review* by Prof. J. M. Coulson, 822
Fluids : Thermodynamics and, *review* by Prof. J. M. Coulson, 822
N-2-Fluorenyl-diacetamide : Effect of Diphosphopyridine Nucleotide on the Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by 2-Acetylaminofluorine and (Prof. E. Quagliariello, S. Auricchio, E. Rinaldi and A. Rubino), 1744
Fluorescence of Adsorbed Water (Prof. K. Przibram), 520
Fluorescence Excitation Spectra : Direct Recording of (Dr. C. A. Parker), 1002
Fluorescent Antibody : Electrophoresis of (Dr. C. C. Curtain), 1305
Fluorescent Derivatives obtained by the Reaction of Ethylene Diamine with Epinephrine and Norepinephrine (Dr. Guy Nadeau and Louis-P. Joly), 180
Fluorescent Mast-Cell Reaction in Precancerous Skin of the Lizard *Lacetta agilis* (Prof. A. Stolk), 1177
Fluorescent Pigment in Elastin : A Yellow (Dr. F. J. Loomeijer), 182
Fluorescent Pigment of *Microsporum* (Prof. Frederick T. Wolf, Ernest A. Jones and Helene A. Nathan), 475
Fluoridation : Water (World Health Organization, Technical Report Series No. 146, First Report of the Expert Committee on), 1352
Fluoridation (Water), and Dental Caries (Dr. G. Lapage), 1351
Fluoride (Lithium) : Etching of Radiation Damage in (Dr. D. A. Young), 375
Fluoride (Lithium-6), and Lithium-7 Fluoride : Infra-Red Transmission Limits and Reflectivity of (Dr. R. W. H. Stevenson and Dr. P. T. Nettley), 471
Fluoride (Nitryl) : Molecular Orbitals and Vibrational Potential Function of (Louis Burnelle and Prof. Jules Duchesne), 653
Fluoride (Potassium Hydrogen) : The Problem of Negative Anharmonicity and the Nature of the Hydrogen Bond in (R. Blinc), 1016
Fluorine Compounds : Chemistry of (British Association for the Advancement of Science, Section B (Chemistry), Discussion on), 1269
Fluoroacetate (Sodium), as a Protecting Agent against Irradiation (Prof. Z. M. Bacq and Dr. P. Fischer, Dr. A. Herve, and Prof. C. Liébecq and Dr. S. Liébecq-Hutter), 175
Fly (Crane), *Tipula oleracea*, L. : Desiccation of Eggs of the (Roger Laughlin), 613
Fly (Dragon-) : Emergence of a Summer Species of (Dr. Philip S. Corbet and Sarah A. Corbet), 194
Fly (House-) Larvae : Fate of Beta-Sitosterol in (Dr. Ernst D. Bergmann and Zwi H. Levinson), 723
Focke, R. : Fodder Plants (Tetraploid Red Clovers), 703
Fodder Plants (Institute of Plant Breeding of the Polish Academy of Sciences Symposium on), 702
Fodder Resources of India : The Grassland (R. O. Whyte), *review* by Dr. J. P. Cooper, 71
Foetuses (Rabbit) : Thyroxine-binding Protein in the Serum of (Carlos Osorio and N. B. Myant), 866
Fogg, Dr. G. E. : At the Third International Seaweed Symposium (Mass Culture of Marine Phytoplankton), 1781
Folberger, Jaroslava (Vrba, Dr. R., and) : Endogenous Metabolism in Brain Cortex Slices, 237
Folic Acid : Toxic Effects produced by Pyrimethamine in Chickens and their Antagonism by (J. M. S. Lucas), 1449
Folk Life : The Study of, and its part in the Defence of Civilization (Dr. Iorwerth C. Peate), 583
Folk Museum, Welsh : Grant of £1,500 from the Gulbenkian Foundation, Lisbon, for recording equipment for a survey of Welsh oral traditions of the countryside, 1493
Folkes, Joan P., and others: Incorporation of Amino-Acids by Disrupted Staphylococcal Cells, 592
Follicle Arrangement in Skin from Wild Sheep, Primitive Domestic Sheep and in Parchment (Dr. M. L. Ryder), 781
Follicles (Hair) : Content of Citrulline and other Amino-Acids in a Protein of (G. E. Rogers and D. H. Simmonds), 186
Follicular Fluid (Human Ovarian) : Concentration in the, of Radioactive Tracers and Drugs circulating in the Blood (Prof. Kurt N. von Kaulla, Jerry K. Aikawa and John D. Pettigrew), 1238
Follin, Jr., James W., and others : Exterior Ballistics of Rockets, *review* by D. G. King-Hele, 821
Fomes noxius, a Thiamine-deficient Fungus (A. Riggenbach), 1390
Fonnesu, A. : Biochemical Response to Physical Injury (Changes in Energy Transformations as an Early Response of the Cell to Injury), 1494
Food Supplies : Britain's (Department of Extra-Mural Studies of the University of London and the Association of Agriculture course of lectures on), 1644
Food and Agriculture : Nuclear Radiation in (edited by Prof. W. Ralph Singleton), *review* by Dr. Lorna J. Lilly, 758
Food and Agriculture Organization (United Nations) : Nutritional Studies No. 16, Protein Requirements—Report of the F.A.O. Committee (Rome, 1955), 228
  Procedures for the Testing of Intentional Food Additives to establish their Safety for Use—Second Report of the Joint FAO/WHO Expert Committee on Food Additives, 850
  World Forest Products Statistics—a Ten-Year Summary, 1946-1955, 1553
  Yearbook for 1957, 1553
Food and Agriculture Organization (United Nations), and the Office International des Epizooties : Meeting to discuss Problems of Ticks and Tick-borne Diseases, 1416
Food and Farming, a Survey of Problems and Remedies (Association of Agriculture Conference on), 700
Food and Population, *review* by Dr. J. P. Cooper, 71
Food Additives (Miss M. W. Grant), 850
Food Additives (Intentional) : Procedures for the Testing of, to establish their Safety for Use—Second Report of the Joint FAO/WHO Expert Committee on Food Additives (World Health Organization), 850
Food Residues : Retention of, in the Midgut by Nymphs of the Milkweed Bug, *Oncopeltus fasciatus* Dall. (P. W. Miles), 959
Food Technological Research Institute (Central), Mysore : Fruit and Vegetable Preservation Industry in India (Proceedings of the Symposium on, 1954), *review* by Dr. R. G. Tomkins, 420
Foods : Nutritional Hazards caused by Radioactive Contamination of (Scottish Group of the Nutrition Society Symposium on), 700
Foot-and-Mouth Disease : Infectivity of Ribonucleic Acid from Mice and Tissue Culture infected with the Virus of (F. Brown, R. F. Sellers and Doreen L. Stewart), 535
  Use of Two Properties of the Virus of, in Studies of its Multiplication (Sheila F. Cartwright and H. V. Thorne), 717
  World Reference Laboratory for, 1417
Foot-and-Mouth Disease Virus in Suspensions of Kidney Cells of the Pig : Effect of Temperature on the Multiplication of (Dr. H. Subak Sharpe), 1803
Forbes, L. M. : Poles, North and South, *review*, 620
Forbes, Prof. W. F. : Steric Effects in Conjugated Systems (Steric Effect in Ultra-violet Absorption Spectra), 569
Ford, M. G. (Grove, Dr. D. M., and) : Evidence for Permeability Minima in Low-Pressure Gas Flow through Porous Media, 999
Forebrain Region : Transplantation of the, in Bird Embryos before the Establishment of a Circulation—Homoplastic Transplants (Dr. Petar N. Martinovitch and Miroslava R. Pavlovic), 571 ; Heteroplastic Transplants (Dr. Petar N. Martinovitch), 572
Forecasters and Pilots : Air Flow over Mountains—Notes for (G. A. Corby), 94
Foreign Surface Reactions (Plasma) : Hageman Factor in (J. Margolis), 1102
Forest Archaeology : Tropical, *review* by Dr. G. H. S. Bushnell, 1044
Forest Park Guides, National : The Border (edited by Prof. John Walton), 1131
Forest Products Research Laboratory : Research work to be undertaken at the, 498
  Steering Committee set up by the Council for Scientific and Industrial Research, to look after the research programme, 1204
Forest Products Statistics : World—a Ten-Year Summary, 1946-1955 (Food and Agriculture Organization of the United Nations), 1553
Forest Trees : The Physiology of—a Symposium held at the Harvard Forest, 1957 (edited by Prof. Kenneth V. Thimann, with the assistance of William B. Critchfield and Martin H. Zimmermann), *review* by Dr. L. Leyton, 1698
Forestry in Northern Ireland (Ministry of Agriculture for Northern Ireland), 989
Forestry in Ulster, 989
Forestry Commission : Bulletin No. 17, Cultivation of the Cricket Bat Willow, 361
  National Forest Park Guides—The Border (edited by Prof. John Walton), 1131
Forestry Policy in Britain, 706
Form in Plants : Experimental Approaches to the Problems of Growth and (Experimental Plant Morphology Group of the Linnean Society Symposium on), 1416
Form and Function in Molluscs : Aspects of the Evolution of (British Association for the Advancement of Science, Section D (Zoology), Discussion on), 996
Form (Leaf) : Effect of Gibberellic Acid on (Dr. E. Njoku), 1097
Form (A New), of Tricalcium Phosphate (Dr. R. W. Nurse, J. H. Welch and W. Gutt), 1230
Form (An Unusual), of Corrosion Product (G. Butler and H. C. K. Ison), 1229
Formaldehyde and Tetrahydrofolic Acid : Interaction of, and its relation to the Enzymic Synthesis of Serine (Dr. R. L. Blakley), 1719
Formamide : Standard Potential at 25°C. of the Silver–Silver Chloride Electrode in (Dr. M. Mandel and P. Decroly), 794
Forman, S. A., and others : Volume and Acidity of Urine of Sheep fed Hay Rich in Silica and Effect of Dietary Salt Additions, 1385
Formate : Utilization of, for the Biosynthesis of Glycine Carbon-1 and -2 in *Bombyx mori* (Dr. S. Bricteux-Grégoire and W. G. Verly), 1515
Formation of Activated Amino-Acids by Intact Cells of *Azotobacter vinelandii* (R. W. Bernlohr and Dr. G. C. Webster), 531
Formation of Antifungal Antibiotics by a New *Streptomyces* Species (Dr. P. L. Narasimha Rao and Miss B. N. Uma), 115
Formation of Carbon by Decomposition of Carbon Suboxide at 750-780°C. (R. L. Bond and F. J. Pinchin), 129
Formation of Complexes between Acridine Orange and Polynucleotides : Inhibition and Activation of Polynucleotide Phosphorylase through the (Dr. Roland F. Beers, jun., and Dr. Daniel D. Hendley, and Dr. Robert F. Steiner), 242
Formation of Condensed Tannins in Plants (W. E. Hillis), 1371
Formation of Dolomite in Saline Lakes near Kingston, South Australia (A. R. Alderman and H. C. W. Skinner), 21
Formation of a Helical Steroid Complex (Dr. Alexander Rich and Dr. David M. Blow), 423
Formation of Higher Bromo-Complexes of Tervalent Gold in Non-Aqueous Solution (C. M. Harris and I. H. Reece), 1665
Formation of Ketones from Fatty Acids by Spores of *Penicillium roqueforti* (R. F. Gehrig and Prof. S. G. Knight), 1237

INDEX

Formation of Non-Enzymatic Haem (T. Heikel, W. H. Lockwood and Prof. R. Rimington), 313
Formation of Phosphoserine from 3-Phosphoglycerate in Higher Plants (J. Hanford and Dr. D. D. Davies), 532
Formation of Prostaglandin *in vitro* (Dr. R. Eliasson), 256
Formation of Pyroglutamic Acid : Carbon Dioxide Catalysis of the (A. Hubert, R. Buijle and Dr. B. Hargitay), 259
Formation of a Transition Metal–Hydrogen Bond in Aqueous Solution (W. P. Griffith, L. Pratt and Prof. G. Wilkinson), 466
Formation (Cave) : Bat Erosion as a Factor in (J. H. D. Hooper), 1464
Formation (Isocitratase), by *Pseudomonas ovalis* Chester : Effect of Growth Substrates on (Dr. H. L. Kornberg, A. M. Gotto and Patricia Lund), 1430
Formation (Neurofibril), in Adult Mammalian Cortical Neurones in Tissue Culture : Effect of Adrenaline on (R. S. Geiger), 1674
Formation (Plateau), and Sulphydryl Groups in the Plasma Membrane (Hidehiko Takahashi, Takayoshi Murai and Toshi Sasaki), 1675
Formation (Terpene), in Pine from Mevalonic Acid (Robert G. Stanley), 738
Formation (Tubule), in Rat Brains by Monkey Kidney Cells previously grown *in vitro* (Prof. M. Michael Sigel, Thomas M. Scotti, Martha A. Wryk and Mantley Dorsey, jun.), 1034
Formol-treated Red Cells (Lyophilized) : Use of, in Blood-Group Serology (E. R. Gold, W. J. Lockyer and Dr. Geoffrey H. Tovey), 951
Forms of *Fucus distichus* L. emend. Powell on North Rona and Sula Sgeir : Occurrence of (H. T. Powell), 1246
Forms (Complex), of Cellulase (Dr. P. Reinouts van Haga), 1232
Formularies : Pharmacopoeias and, *review* by Dr. David Train, 279
Formulary : British National, 1957, *review* by Dr. David Train, 279 ; Alternative edition based on a Pharmacological Classification, *review* by Dr. David Train, 279
Forssman's Antigen in Ehrlich Mouse Carcinoma (Prof. H. W. Julius and P. J. de Vries), 1165
Forsyth, P. D. : Awarded a Research Fellowship in nuclear physics for 1958-59 by the Department of Scientific and Industrial Research, 1063
Forsyth, P. J. E. : Promoted to Senior Principal Scientific Officer in the Scientific Civil Service, 992 ; work of, 992
Forsyth, Dr. W. G. C., and others : Occurrence of Poly-β-Hydroxybutyric Acid in Aerobic Gram-Negative Bacteria, 800
Fort Jesus, Mombasa : Grant of £30,000 from the Gulbenkian Foundation, Lisbon, for the restoration of the Fort and its conversion into a museum of East African history and archaeology under the care of the Royal National Parks of Kenya, 1493
Forty, Dr. A. J. : Appointed lecturer in physics at the University of Bristol, 1487
Forty Years of Age : Unemployment among Women over (Miss A. F. Young), 923
Forum, a new Educational Journal, 1347
Forum (Roman) : Bones of a Vulture among the Remains of Animals sacrificed on the 'Burial of Romulus' below the *Niger lapis* in the (G. A. Blanc and Prof. A. C. Blanc), 66
Forward-Mutation Rates in *Neurospora crassa* : A Direct Method for Determination of (F. J. de Serres and H. G. Kølmark), 1249
Foskett, D. J. : Library Classification and the Field of Knowledge, 1277
Fossil Mammals, *review* by Dr. P. M. Butler, 899
Fossil Vertebrates : Studies on—Essays presented to David Meredith Seares Watson (edited by Prof. T. Stanley Westoll), *review* by Dr. Tor Ørvig, 485
Fossils (Some New Vertebrate), from the Panchet Series of West Bengal (Dr. Pamela Lamplugh Robinson), 1722
Foster, Prof. Edwin M., and others : Dairy Microbiology, *review* by Dr. L. F. L. Clegg, 141
Foster, Dr. G. E. : Modern Analytical Chemistry in the Service of Pharmacy and Medicine (Chairman's Address to the British Pharmaceutical Conference), 995
Foster, Prof. Joseph F. (Fox, Prof. Sidney W., and) : Introduction to Protein Chemistry, *review* by Dr. E. Stedman, 144
Foundations' Fund for Research in Psychiatry : Fellowships, 363
Fouquey, C., and others : Synthesis of 3,6-Dideoxy-D-*ribo*-hexose (3,6-Dideoxy-D-glucose) and its Identification with Paratose, 944
Four Elastic Constants of Diamond (Prof. R. S. Krishnan, Dr. V. Chandrasekharan and E. S. Rajagopal), 518
Fourier Analysis and Generalized Functions : Introduction to (Prof. M. J. Lighthill), *review* by Prof. T. A. A. Broadbent, 1584
Fowden, Dr. L. : δ-Acetylornithine, a Constituent of some Common Grasses, 406
Utilization of Inorganic Nitrogen Sources by Plants, 1197
Fowke, Dr. V. C.: At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy ?), 1283
Fowl : Artificial Light and Sexual Maturity in the (T. R. Morris and S. Fox), 1522
Fowl Typhoid : New Vaccine for (Animal Health Trust), 1062
Fowl (Wild-) Trust : Ninth Annual Report, 769
Fowler, A. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1137
Fowler, P. H., and Waddington, C. J. : An Artificial Aurora, 1728
Fox, S., and Morris, T. R. : Flash Lighting for Egg Production, 1752
Fox, S. (Morris, T. R., and) : Artificial Light and Sexual Maturity in the Fowl, 1522
Fox, S. E. : *Obituary*, 840
Fox, Prof. Sidney W., and Foster, Prof. Joseph F. : Introduction to Protein Chemistry, *review* by Dr. E. Stedman, 144
Foxboro-Yoxall's Training School, 1278
Fractionating High Polymers : A New Method of (Dr. F. W. Peaker and Prof. J. C. Robb), 1591
Fractionation of Cell Suspensions in an Electromagnetic Force Field (Prof. Alexander Kolin and Raymond T. Kado), 510
Fractions of Rabbit Gamma-Globulin containing the Antibody and Antigenic Combining Sites : Separation and Isolation of (Dr. R. R. Porter), 670
Fractions (Bacillary) : Experimental Allergic Encephalomyelitis induced with combined 'Purified' Spinal Cord and (Dr. J. Colover), 105
Fractions (Centrifugal), of Rat Liver : Distribution of Tissue-Specific Antigens in (Dr. Peter Vogt), 1807
Fracture : The Atomic Mechanisms of (United States National Academy of Sciences–National Research Council Seminar on), 1348
Fracture Markings in Polymethyl Methacrylate (Dr. D. C. Smith), 132
Fraenkel, L. E. : Title of reader in aerodynamics in the University of London (at the Imperial College of Science and Technology) conferred on, 1279
Franc, Zdenek, and others : Antituberculosis Factors of Milk, 884
Francis, E. W. R., and others : Removal of Gases in High Vacuum Systems by Metal Abrasion, 931, *erratum*, 1348
Francis, Prof. John : Tuberculosis in Animals and Man, *review* by Prof. Harold Burrow, 281
Francis, J. R. D. : Appointed to the University of London readership in fluid mechanics at the Imperial College of Science and Technology, 1554
Francois, Dr. P. E., and Szur, Leon : Use of Iron-52 as a Radioactive Tracer, 1665
Frank, E. D., and others : Biochemical Response to Physical Injury (The Bacterial Factor in Traumatic Shock), 1496
Frank, Prof. George B. : Inward Movement of Calcium as a Link between Electrical and Mechanical Events in Contraction, 1800
Frank, Dr. I. M., and Tamm, Dr. I. (Cerenkov, Dr. P. A.,) : Awarded the Nobel Prize for Physics for 1958, 1275 ; work of, 1275
Frankel, Dr. P. H. : Fuel and Power in British Industry (Economic Aspect of Oil), 1714
Franklin, Prof. K. J. : Title of professor emeritus of physiology in the University of London (at St. Bartholomew's Hospital Medical College) conferred on, 363
Retirement from the University of London chair of physiology at St. Bartholomew's Hospital Medical College, 1129 ; work of, 1129
Franklin, Dr. Rosalind E. : *Obituary* by Prof. J. D. Bernal, 154
Franklin, R. J. F. : The Mechanical Engineering Research Laboratory, 436
Franz, Prof. H. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704 ; (Systematics and the Ecologist), 705 ; (Soil Zoology and Pedology), 705
Fraser, D. C. : Decay of Immediate Memory with Age, 1163
Fraudulent Documents, *review* by Dr. L. C. Nickolls, 1399
Frédéricq, R. : Bacteriophage Research, 1770
Free Amino-Acids : Rate of Absorption of Supplementary, during Digestion (Dr. J. B. Longenecker and N. L. Hause), 1739
Free Amino-Acids of the Cerebrospinal Fluid (Dr. H. G. Knauff), 937
Free Radical Stabilization (Faraday Society Discussion on), 89, 1496
Freeman, Dr. J. J. : Principles of Noise, *review* by C. O. Harvey, 1471
Freeman, R. M. : Awarded an Overseas Scholarship by the Royal Commission for the Exhibition of 1851, for research in physics, 156
Freemartins in Sheep (N. W. Moore and L. E. A. Rowson), 1754
Freitag, Dr. E. : Modern Problems in Friction and Lubrication (Sliding Friction between Solid Surfaces at Speeds of 2,000 m.p.h.), 980
Fremlin, Dr. J. H. : Title of reader in physics in the University of Birmingham conferred on, 1487
French Exchange Scholarships in Medical Science (Medical Research Council Awards for 1958-59), 634
French Oceania : Work and Life on Raroia, an Acculturation Study from the Tuamotu Group (Dr. Bengt Danielsson), *review* by Prof. Raymond Firth, 280
Freney, J. R. : Aerobic Transformation of Cysteine to Sulphate in Soil, 1318
Frequencies (Different), of Supernumerary Chromosomes in Diploid Populations of *Dactylis glomerata* in Israel (Dr. David Zohary and Israel Ashkenazi), 477
Frequency (High), of Mutations and Unstable Genes in *Escherichia coli* : Heat as an Agent producing (Prof. Stephen Zamenhof and Dr. Sheldon Greer), 611
Frequency (Vibrational), associated with the Boron–Nitrogen Dative Bond in Amine Boranes (R. C. Taylor and C. L. Cluff), 390
Frequency Standard (Caesium Atomic) : Comparison of an Ammonia Maser with a (J. -P. Blaser and J. Bonanomi), 859
Frequency Standards (Atomic) : Comparison of Astronomical Time Measurements with (J. -P. Blaser and J. De Prins), 859
Frequency Standards (Caesium), of Different Construction : Comparison of (Dr. L. Essen, J. V. L. Parry, J. H. Holloway, W. A. Mainberger, F. H. Reder and G. M. R. Winkler), 41
Freshwater Biological Association : Twenty-sixth Annual Report(1957-58), 1286
Freund, Jules, and others : Vascular Permeability Factors in the Secretion of the Guinea Pig Coagulating Gland, 174
Frey-Wyssling, Prof. A. : Macromolecules in Cell Structure, *review* by Prof. W. T. Astbury, 213
Frick, E. L. (Kirby, Dr. A. H. M., and) : 'Karathane'—the Relative Importance of the Phenolic and Unsaturated Acid Components in Toxicity towards certain Plant Pathogens, 1445
Fricker, S. J., and others : Comparison of Measured and Computed Values of the Rapid Fading-Rate of Ultra High-Frequency Signals reflected from the Moon, 1438
Friction and Lubrication : Modern Problems in (British Association for the Advancement of Science, Sections A (Mathematics and Physics) and G (Engineering), Joint Discussion on), 980
Fridvalszky, Dr. Lóránd, and Lovas, Dr. Béla: Light Microscopic and Electron Microscopic Observations on the Dividing Walls of Cells in *Chara* spp., 736
Friend, C. : Progress in Cancer Research (Viruses), 365
Friend, R. G. : Appointed director of electronics research and development (telecommunications) in the Ministry of Supply, 224 ; work of, 224
Fringilla coelebs gengleri : Further Studies on the Process of Song Learning in the Chaffinch (Dr. W. H. Thorpe), 554
Frisken, W. R. : Awarded an Overseas Scholarship by the Royal Commission for the Exhibition of 1851, for research in nuclear physics, 156
Fritz, James S., and Hammond, George S. : Quantitative Organic Analysis, *review* by Dr. A. D. Mitchell, 1187
Frog's Web : Comparison of the Effect of Ultra-Violet and X-Rays on the Capillaries of the (Horst Bücker and Wilfried Hanke), 1375
Fröhlich, Prof. H. : Theory of Dielectrics, second edition, *review* by Dr. A. F. Devonshire, 972
Fruit Trees : Effects of Gravity on Growth, Apical Dominance and Flowering in (Gravimorphism in Trees), (Dr. P. F. Wareing and T. Nasr), 379
Fruit and Vegetable Preservation Industry in India (Proceedings of the Symposium held at the Central Food Technological Research Institute, Mysore, 1954), *review* by Dr. R. G. Tomkins, 420
Fruit (Apple-) Tissue : Cultivation of, *in vitro* (Dr. D. S. Letham), 473
Fruits of *Ammi majus* Linn. : Isolation of Marmesin from the (Effat A. Abu-Mustafa, Nasry Badran, M. B. E. Fayez and N. A. Starkowsky), 54

Fruits (Apple) : Effect of Storage Conditions on the Incidence of *Gloeosporium* Rots of (H. B. S. Montgomery), 737
Frumkin, Prof. A. : Charge Transfer Processes (The Double-Layer and Adsorption at Electrodes—Influence of Surface-active Anions on the Electro-reduction of Persulphate Anions at Negative Potentials), 1355
Fry, D. W. : Appointed to be responsible to the director of the Research Group of the Atomic Energy Research Establishment at Winfrith Heath for its development and the initiation of the programme, 1129 ; work of, 1129
Fry, T. M. : Appointed head of the Reactor Division of the Atomic Energy Research Establishment, Harwell, 1129
Fucus distichus L. emend. Powell on North Rona and Sula Sgeir : Occurrence of Forms of (H. T. Powell), 1246
Fuel, Institute of : Conference on Science in the Use of Coal, 24
Fuel, Institute of (British Section of the Combustion Institute and the) : Seventh International Symposium on Combustion, 363
Fuel Abstracts, 293
Fuel Cycles : Nuclear (Institute of Physics Symposium on), 565
Fuel Research Institute, Indian Central : Symposium on the Nature of Coal, 295
Fuel and Power in British Industry (Manchester Joint Research Council Conference on), 1063, 1713
Fuhrman, Frederick A. : Biochemical Response to Physical Injury (Electrolytes and Glycogen in Injured Tissues), 1493
Fuhrman, Frederick A., and Giese, Arthur C. (edited by Hall, Victor E., in association with) : Annual Review of Physiology, Vol. 20, *review* by Prof. J. H. Gaddum, 901
Fulbright Programme : Travel Grants, 1488
Fullman, B. : Tensile Strength of Indium, 862
Fumigation and Moisture Content : Effect of, on the Seedling Growth of Cowpea (*Vigna unguiculata*), (G. H. Caswell and Dr. H. T. Clifford), 540
Function : Virus Structure and, *review* by Dr. M. R. J. Salton, 1576
Function in Molluscs : Aspects of the Evolution of Form and (British Association for the Advancement of Science, Section D (Zoology), Discussion on), 996
Function of Universities, 1625
Function (The Biochemical), of Cobalt (Hedley Marston), 1348
Function (Thyroid) : Influence of Temperature and Light on (F. A. Soliman, H. M. Badawi and Y. S. Ghanem), 57
Function-Space : Numerical Methods in, *review* by Prof. D. N. de G. Allen, 1695
Functions (Autonomic), of the Hippocampus (B. G. Cragg), 675
Functions (Generalised) : Introduction to Fourier Analysis and (Prof. M. J. Lighthill), *review* by Prof. T. A. A. Broadbent, 1584
Functions (Light-Scattering) : Tables of (R. H. Boll, J. A. Leacock, G. C. Clark and S. W. Churchill), *review* by Dr. B. J. Mason, 1117
Fundamental Molecular Event in Muscular Contraction (Dr. F. G. E. Pautard), 788
Fundamental Research in Safety Glass, 1779
Fundamentals of Symbolic Form, *review* by F. I. G. Rawlins, 1586
Funds for Research in Britain : Allocation of, 1757
Fungal Spores : Relationship between the Presence of, and a Test for Hepatotoxic Grass (J. C. Percival and Dr. R. H. Thornton), 1095
Fungi : Autoradiography of, through a Layer of Soil and in Agar Culture (Dr. Erna Grossbard), 854
Fungi (Pathogenic) : Effect of Oxy-chlororaphin on the Growth *in vitro* of *Streptomyces* Species and some (G. Sierra and H. A. Veringa), 265
Fungi (Soil) : Ecology of (Symposium on, at the University of Liverpool), 1559
  A Technique for the Investigation of the Competitive Saprophytic Ability of, by the Use of Easily Decomposed Substrates (S. T. Matturi and Dr. H. Stenton), 1248
Fungi Pathogenic to Man and Animals : Nomenclature for—Names recommended for use in Great Britain (Medical Research Council, Memorandum No. 23), second edition, 500
Fungitoxic Action of 8-Hydroxyquinoline, Pyridine-N-oxide-2-thiol and Sodium Dialkyldithiocarbamates, and their Copper Complexes (A. Kaars Sijpesteijn and M. J. Janssen), 1313
Fungus : Effect of Chloramphenicol on a (D. Broadbent and D. A. Terry), 1107
  Fomes noxius, a Thiamine-deficient (A. Riggenbach), 1390
Fungus Trap : A Soil (Dr. R. H. Thornton), 1690
Furth, P. : Progress in Cancer Research (Ionizing Radiations), 364
Further Education, Northern Advisory Council for : Eleventh Annual Report, 1708
Further Inherent Characters of Plant Species of Wetter and Drier Habitats (Dr. M. L. R. Pettersson and G. E. J. Gray), 450
Furuya, M., and Soma, K. : Auxins in the Development of Bean Embryos, 563
Fusarium culmorum : Microbial Antagonism of (E. Griffiths and M. A. Siddiqi), 956
Fusarium oxysporum f. *lycopersici* : Absence of Pectolytic Enzymes in a Pathogenic Strain of (Dr. K. McDonnell), 1025
Fused Quartz : Visualization of Mode Conversion of an Ultrasonic Beam in (V. J. Hammond and R. Carter), 790
Fused Salts : Soviet Research in (1949-1955), (Chemistry Collection No. 1), *review* by Prof. A. R. Ubbelohde, 619
  Work on, *review* by Prof. A. R. Ubbelohde, 619
Fusion (Controlled) : The United States Programme in (Project Sherwood), (A. S. Bishop), 1053
Fusion Reaction in SCEPTRE III : Measurement of the Energy Spectrum of Protons emitted from the (W. M. Jones, A. C. L. Barnard, S. E. Hunt and D. R. Chick), 216
Fussell, G. E. : Agricultural History in Holland, 845
Future : Education, an Investment for the, 1039
Future of Antarctica (Prof. David L. Linton), 1781
Future of Mineral Exploration (Anton Gray), 1136
Future of Mineral Exploration in Great Britain and Ireland (Prof. K. C. Dunham), 1136
Future of Non-Ferrous Mining in Great Britain and Ireland (Institution of Mining and Metallurgy Symposium on), 1136
Future of Timber Research in the United Kingdom, 1204
Fyfe, J. L. : At the eighth Plant Breeders' Conference (Evaluation of Inbred Lines of Lucerne), 843

GABOR, Dr. Dennis : Appointed to a newly created University of London chair of applied electron physics at the Imperial College of Science and Technology, 363, 496 ; work of, 496
Gaddum, Prof. J. H. : Metabolism of the Nervous System, *review*, 282
  Annual Review of Physiology, *review*, 901
Gadsden, M. : Antarctic Research (Aurora), 289
Gadsden, M., and Salmon, K. : Presence of 6707 A. Radiation in the Twilight Sky, 1598
Gagnebin, A. P. : Elected a vice-president of the International Nickel Company, Inc., 1133 ; work of, 1133
Gairdner Charitable Foundation, Ontario : International Awards for 1958, 21
  Awards in Arthritis and Heart Disease, 1710
Gakkel, Y. Y. : A Submarine Volcano, 633
Galactan from *Mycoplasma mycoides* (P. Plackett and S. H. Buttery), 1236
Galactic Rotation (M. W. Feast and A. D. Thackeray), 1347
Galactosaemia : The Heterozygous Carrier in (David Yi-Yung Hsia, Irene Huang and Shirley G. Driscoll), 1389
Galactosamine with Bakers' Yeast : Analysis of Mixtures of Glucosamine and (Dr. Burton M. Pogell and Dr. Donald F. Koenig), 127
Galateanu, I., and others : Radiometric Titrations with Complexons, 936
Galaxies : The Local Supercluster of (Gerard de Vaucouleurs), 1478
Galaxies (Spiral) : Tilt Criteria and Direction of Rotation of (G. de Vaucouleurs), 1287
Gale, Dr. E. F., and others : Incorporation of Amino-Acids by Disrupted Staphylococcal Cells, 592
Galeal Lamella in Adult Mosquitoes : The Finer Structure of the (G. Surtees), 812
Galileo : The Crime of (Prof. Giorgio de Santillana), *review* by Dr. E. J. Dijksterhuis, 7
Galileo and the Holy Office, *review* by Dr. E. J. Dijksterhuis, 7
Gallagher, Dr. C. H. : Effect of Hydrocortisone on Mitochondrial Membrane Permeability, 1315
Gallagher, Dr. T. F., and others : 16β-Hydroxyoestrone, a Metabolite of Œstradiol in Man, 50
Gallien, Prof. L. : Comparative Endocrinology (Endocrine Basis of Reproductive Adaptations), 774
Gallinaceous Birds : Immunology and Chromatography in Taxonomic Studies on (Danilo Mainardi), 1388
Gallium Arsenide : Diffusion of Zinc in (J. W. Allen and F. A. Cunnell), 1158
Galloway : Different Phases of Tectonic Deformation in the Rhinns of (Dr. Maurits Lindström), 48
Galus, Zbigniew, and others : Application of the Hanging Mercury Drop Electrode to an Investigation of Intermetallic Compounds in Mercury, 1228
'Galveston' Type : Haemoglobin *P*, the (Dr. Rose G. Schneider and Dr. Mary Ellen Haggard), 322, *erratum*, 771
Gameson, A. L. H. : Effects of Pollution on Living Material (Aspects of the Carbon, Nitrogen and Sulphur Cycles in the Thames Estuary), 1209
γ-Aminobutyric Acid in the Central Nervous System : Inhibition and Excitation due to (Prof. Takashi Hayashi), 1076
γ-Amino-*n*-Butyric Acid and Spinal Synaptic Transmission (Dr. D. R. Curtis and J. W. Phillis), 323
γ-Aminobutyryl-Choline : Effect of, upon the Electrical Activity of the Cerebral Cortex (Hidehiko Takahashi, Akira Nagashima and Chikao Koshino), 1443
γ-Benzene Hexachloride and Dieldrin : Effect of Simulated Field Deposits of, on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles (G. Davidson and D. G. Pollard), 739
γ-BHC and Dieldrin : Effect of Simulated Field Deposits of, on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles (G. Davidson and D. G. Pollard), 739
γ-Globulin (Rabbit), containing the Antibody and Antigenic Combining Sites : Separation and Isolation of Fractions of (Dr. R. R. Porter), 670
γ-Irradiation of Dried Bacterial Spores : An Observed 'Oxygen Effect' during (Alan Tallentire), 1024
γ-Radiation : Effect of, on Ferriprotoporphyrin (Dr. Mary-Louise Rothschild, Laura Cosi and Lawrence S. Myers, jun.), 316
  Lethal and Sterilizing Effects of Single and Fractionated Doses of, on *Calandra granaria* L. (D. J. Jefferies and P. B. Cornwell), 402
γ-Rays (1·33 MeV.) : Coherent Scattering of, by Lead (Dr. K. G. Standing and J. V. Jovanovich), 521
Gammarus sp. : Reactions of, to Water Currents (P. R. M. Pattisson), 563
Ganesan, A. T. (Swaminathan, Dr. M. S., and) : Kinetics of Mitosis in Yeasts, 610
Ganglioside (Brain) : Structure of (Dr. Samuel Bogoch), 229
Gani, J., and Prabhu, N. U. : Continuous Time Treatment of a Storage Problem, 39
Garattini, S., and Ghetti, V. (edited by) : Psychotropic Drugs—Proceedings of the International Symposium on Psychotropic Drugs (Milan, 1957), *review* by Prof. H. J. Eysenck, 823
Garbers, C. F. : Transport of Vitamin A Ester in Rat Serum, 1018
Garbers, C. F., and Joubert, F. J. : Effect of the Borate Ion in Buffers on the Electrophoresis of Rat Serum, 530
Garbuglio, C., and others : Thio-Thiophthen, an Unusual New Type of Aromatic System, 247
García-Moliner, F. : Measurements of Conduction at Low Temperatures (Theory of Galvano-magnetism), 84
Gardner, C. A. (with annotations by) : Western Australian Wildflowers, *review* by Dr. R. Melville, 1587
Gardner, Miss I. C. : Awarded a Senior Studentship by the Royal Commission for the Exhibition of 1851, for research in plant biochemistry, 155
Gardner, Martin : Logic Machines and Diagrams, *review* by Dr. A. D. Booth, 1583
Garg, Miss Sudha: Embryology of *Atkinsonia ligustrina* (A. Cunn. ex F. Muell.) F. Muell., 1615
Garlick, Prof. G. F. J. : Thermo-electric Power, *review*, 72
Garner, D. M. : A Radiocarbon Profile in the Tasman Sea, 466
Garrard, Dr. E. H. : Ecology of Soil Fungi, 1559
Garratt, A. J. : The National Physical Laboratory, 10
Garrett, Constance M. E., and others : Fire-blight of Pear in England, 1530
Garriott, O. K. (Bracewell, Prof. R. N., and) : Rotation of Artificial Earth Satellites, 760

Garry, Prof. R. C. : *Obituary* of Prof. G. M. Wishart, 427
Garstang, Dr. R. H. : Planetary Co-ordinates for the Years 1960-1980, *review*, 1763
Garton, Dr. G. A., and others : Lipolysis in the Rumen, 1511
Garven, Dr. H. S. D. : Physiology as an Education and as a Career, 1065
Gas (Carrier) : Effect of the, on the Sensitivity of a Thermal Conductivity Detector in Gas Chromatography (Dr. N. H. Ray), 1663
Gas (Natural), in the Witwatersrand : Helium in (S. H. U. Bowie), 1082
Gas Chromatograph as a Methanometer in the Coal Industry (P. Whatmough), 863
Gas Chromatographic Terms and Definitions (Marcel J. E. Golay), 1146
Gas Chromatography—a Symposium held under the auspices of the Analysis Instrumentation Division of the Instrument Society of America (edited by Vincent J. Coates, Henry J. Noebels and Irving S. Fagerson), *review* by Dr. N. H. Ray, 1630
Gas Chromatography : A Detector for use with Capillary Tube Columns in (Dr. J. E. Lovelock), 1663
  Effect of the Carrier Gas on Sensitivity of a Thermal Conductivity Detector in (Dr. N. H. Ray), 1663
  A Methane-Conversion Detector for (Prof. Albert Zlatkis and J. A. Ridgway), 130
  A Micro Sample Introduction System for (Robert L. Bowman and Dr. Arthur Karmen), 1233
  Preparative-Scale (Dr. D. E. M. Evans, W. E. Massingham, Prof. M. Stacey and Dr. J. C. Tatlow), 591
  Separation of some Tobacco Alkaloids by (Dr. Louis D. Quin), 865
  Use of Molecular Sieves in, for the Determination of the Normal Paraffins in Petroleum Fractions (B. T. Whitham), 391
Gas Chromatography Discussion Group : Inaugural General Meeting and Informal Symposium, 158
Gas Discharges (Physical Society Conference on), 433
Gas Dynamics (Dr. Klaus Oswatitsch), English version by Prof. Gustav Kuerti, *review* by E. P. Sutton, 76
Gas Flow (Low-Pressure), through Porous Media : Evidence for Permeability Minima in (Dr. D. M. Grove and M. G. Ford), 999
Gas Liquid Chromatography : Detection of certain Brominated Long-Chain Fatty Acid Esters by (R. A. Landowne and Prof. S. R. Lipsky), 1731
Gas Refrigerating Machine (Philips) : New development of (Research and Control Instruments, Ltd.), 228
Gas and Electricity Industries (Coal,) : Capital Investment in the (White Paper on), 343
Gases : Mode of Growth of Ice Crystals in Air and other (K. Isono), 1221
Gases in High Vacuum Systems : Removal of, by Metal Abrasion (M. E. Haine, E. W. R. Francis and R. N. Bloomer), 931, *erratum*, 1348
Gaskell, Dr. T. F. : A Borehole to the Earth's Mantle?, 692
Gastrectomized Rat : Failure of Sorbitol to Replace Intrinsic Factor in the (Dr. Bernard A. Cooper), 647
Gatenby, Prof. J. Brontë : Modern Cytology, *review*, 1114
Gatenby, Prof. J. Brontë, and Dalton, Dr. A. J. : Origin and Connexions of the Central Nutrient Mass in *Lumbricus* Spermatogenesis, 886
Gates, Prof. R. Ruggles : The African Pygmies, 88
Gatherum, D. P., and others : Abnormally Low Ultimate *p*H in Pig Muscle, 807
Gause, Prof. G. F. : Biochemical Mutants in Bacteria with Impaired Respiration, 97
Gay, J. A. : Appointed patents exploitation officer to the United Kingdom Atomic Energy Authority, 1276 ; work of, 1276
Gay, Dr. Peter A. : *Eichornia crassipes* in the Nil of the Sudan, 538
Gayet, Prof. J. : Physical Reactivity of Liver and Brain Cortex Mitochondria, 941
Geach, G. A., and Charsley, P. E. : Mechanical Properties of Whiskers and Thin Films (Optical and Electron Microscope Replica Studies of Copper Whiskers), 296
Geach, G. A., and Jones, F. O. : Study of Metals and Alloys above 1,200°C. (High-temperature Techniques), 1418
Geballe, T. H., and others : Development of a Low-Temperature Thermometer, 770
Gebicki, J. M., and James, Dr. A. M. : Effect of some Lytic Agents on *Aerobacter aerogenes*, 725
Gehrig, R. F., and Knight, Prof. S. G. : Formation of Ketones from Fatty Acids by Spores of *Penicillium roqueforti*, 1237
Geiger, R. S. : Effect of Adrenaline on Neurofibril Formation in Adult Mammalian Cortical Neurones in Tissue Culture, 1674
Gel (Starch) : Isolation of the α_2-Globulin Pattern on (S. Baar), 259
Gel (Starch) Electrophoresis : High Resolution of Human Plasma Components by (Dr. J. M. Fine, J. Loeb and E. Waszczenko-z), 452
Gel (Starch-) Electrophoretic Strips Transparent : A Simple Method for making (S. D. Vesselinovitch), 665
Gel (Wedge-shaped Agar) : Diffusion of Proteins through a (Dr. Ch. Wunderly), 1087
Gelatin in Photographic Emulsions : Synthetic Polypeptide Substitutes for, and Observations on Gelation (Dr. H. W. Wood), 106
Gelatine and Glue Research Association, British : Fifteenth meeting of the Research Panel (A. G. Ward), 439
Gelation : Synthetic Polypeptide Substitutes for Gelatin in Photographic Emulsions and Observations on (Dr. H. W. Wood), 106
Gelée Royale des Abeilles (B. de Belvefer), *review* by Dr. H. Kalmus, 142
Gemmell, Prof. Alan R. : Jolly Good Company, *review*, 683
Gene (Melezitose), in *Saccharomyces* : Effects of Environment (Radiation, Substrate and Allelic Genes) on the (Prof. Carl C. Lindegren and David D. Pittman), 271
Gene Control of Specificity and Activity—Loss by Mutation and Restoration by Complementation (Prof. D. Lewis), 1620
General Biology : Contribution of Radiobiology to, *review* by Prof. P. C. Koller and Dr. P. Alexander, 74
General Entomology, *review* by Dr. W. H. Thorpe, 486
General Microbiology, Society for : Twenty-seventh General Meeting, 158
Generalized Functions : Introduction to Fourier Analysis and (Prof. M. J. Lighthill), *review* by Prof. T. A. A. Broadbent, 1584
Genes (Loosely Linked) : Use of, to estimate Chromatid Interference by Tetrad Analysis (Dr. H. L. K. Whitehouse), 1173
Genes (Unstable), in *Escherichia coli* : Heat as an Agent producing High Frequency of Mutations and (Prof. Stephen Zamenhof and Dr. Sheldon Greer), 611
Genesis of the Rat Skeleton (Donald G. Walker and Zolton T. Wirtschafter), *review* by Prof. H. A. Harris, 419
Genetic Code : A Possible Mechanism for the Initial Transfer of the, from Deoxyribonucleic Acid to Ribonucleic Acid (Dr. Geoffrey Zubay), 112
Genetic Control of the Cytologically Diploid Behaviour of Hexaploid Wheat (Dr. Ralph Riley and Victor Chapman), 713
Genetic Fine Structure : Distribution of Proflavin-induced Mutations in the (Dr. S. Brenner, Prof. S. Benzer and Mrs. L. Barnett), 983
Genetic Hazard of Ionizing Radiations (Dr. T. C. Carter, Mary F. Lyon and Rita J. S. Phillips), 409
Genetic Mechanism for 'Thread Protein' Polymorphism in Cattle (Dr. G. C. Ashton), 65
Genetic Statistics : An Introduction to (Prof. Oscar Kempthorne), *review* by Prof. Kenneth Mather, 899
Genetic Test for Side-chains in a Phage Chromosome (Myron Levine and Roy Curtiss, III), 126
Genetical Control of Resistance in Living Organisms : Nature and (British Association for the Advancement of Science, Sections D (Zoology) and K (Botany), Joint Discussion on), 921
Genetical Interference in *Drosophila* spp. (P. A. Parsons), 1816
Genetics : Theoretical, *review* by Prof. Kenneth Mather, 899
Genetics of β-Globulin Polymorphism in British Cattle (Dr. G. C. Ashton), 370
Genetics (Medical) : Fifty Years of (Dr. Laurence H. Snyder), 1416
Genetics (Physiological), of Flowering in Peas : Gibberellic Acid and the (Prof. H. N. Barber, W. D. Jackson, I. C. Murfet and J. I. Sprent), 1321
Geneva Series on the Peaceful Uses of Atomic Energy : Nuclear Radiation in Food and Agriculture (edited by Prof. W. Ralph Singleton), *review* by Dr. Lorna J. Lilly, 758
Genotypes in *Drosophila melanogaster* : Competition between (P. A. Parsons), 271
Genotypic Control of Crossing-over on the First Chromosome of *Drosophila melanogaster* (M. J. Lawrence), 889
Gentisic Acid in Plant Tissues : Occurrence of (Dr. L. A. Griffiths), 733
Gentles, Dr. J. C. : Experimental Ringworm in Guinea Pigs—Oral Treatment with Griseofulvin, 476
  Human and Animal Mycology, 1648
Geochemistry, 362
Geodesy and Geophysics, International Union of (International Union of Theoretical and Applied Mechanics and the) : International Symposium on Atmospheric Diffusion and Air Pollution, 22, 1134
Geoghegan, G. R. H. (Cutts, B., and) : Nuclear Engineering, *review* 4
Geographical Analysis of British Weather, *review* by Prof. Gordon Manley, 1696
Geographical Association : Summer School in Mediterranean Geography, 1777
  Summer School in Alpine Studies, 1777
Geographical Colour Polymorphism and Chromosome Constitution in Sympatric Species of Sawflies (Dr. F. L. Waterhouse and Dr. Ann R. Sanderson), 477
Geographical Distribution of Animals, *review* by Charles S. Elton, 140
Geographical Society, Royal : Acceptance of £1,200 from the Gulbenkian Foundation, Lisbon, for a pool of surveying instruments and equipment for loan to university expeditions, 1493
Geography at Birmingham, 496
Geography in the University of Hull, 1774
Geography : Mediterranean (Geographical Association Summer School in), 1777
Geological Age, 563
Geological Map of the World, 502
Geological Museum, London : Exhibition on Palaeontology and Evolution (Palaeontological Association in conjunction with the Geological Survey and Museum), 22
  Short Guide to the Exhibits, 769
Geological Notions of Bernard Palissy, *review* by Dr. F. J. North, 754
Geological Society of London : R. H. Worth Prizes awarded to E. W. J. Moore and to C. W. Wright, 1348
  Anniversary Address (Prof. L. Hawkes), 1553
Geological Society of London (Royal Society, in conjunction with the Linnean Society and the) : Conversazione to mark the centenary of the reading before the Linnean Society of the paper 'On the Tendency of Species fo form Varieties', by Charles Darwin and Alfred Russel Wallace, 86
Geological Survey and Museum (Palaeontological Association in conjunction with the) : Exhibition on Palaeontology and Evolution, 22
Geological Times : Migration of the Chemical Elements in the Earth's Crust during (A. A. Saukov), 352
Geologists' Association—a Centenary (Prof. David Williams), 1271
Geology at the Imperial College of Science and Technology, 560
Geology at Southampton, 358
Geology : Equipment for Archaeology and (P. J. Dutt and Co., Ltd.), 1486
  Progress in (Prof. L. Hawkes), 1553
Geology and Oil (British Association for the Advancement of Science, Section C (Geology), Symposium on), 832
Geomagnetic Fluctuations having a Six-Second Period : Possible Causes of (Dr. Fred B. Daniels), 1439
Geomagnetism : Secular Variation in the Direction of, as the Standard Scale for Geomagnetochronology in Japan (Naotune Watanabe), 383
Geomagnetochronology in Japan : Secular Variation in the Direction of Geomagnetism as the Standard Scale for (Naotune Watanabe), 383
Geometrical and Physical Optics (Dr. R. S. Longhurst), *review* by G. R. Noakes, 348
Geometry : Convex, *review* by Prof. T. A. A. Broadbent, 1472
Geophysical Research : International Co-operation and, 428
Geophysical Survey of Cornwall : Aerial, 359
Geophysical Volumes of the Handbuch der Physik, *review* by Sir Edward Bullard, 1582
Geophysical Year, International : Fifth Meeting of the Special Committee, to be held in Moscow, 294
  Geophysics and the IGY—Proceedings of the Symposium at the Opening of the (edited by Hugh Odishaw and Stanley Ruttenberg), *review* by D. Taylor Smith, 1187
Geophysics and the IGY—Proceedings of the Symposium at the Opening of the International Geophysical Year (edited by Hugh Odishaw and Stanley Ruttenberg), *review* by D. Taylor Smith, 1187

Geophysics, Indian Journal of Meteorology and : Special issue in honour of the Silver Jubilee of the Agricultural Meteorology Division of the India Meteorology Department, 360
Geophysics (Geodesy and), International Union of (International Union of Theoretical and Applied Mechanics and the) : International Symposium on Atmospheric Diffusion and Air Pollution, 22, 1134
Geophysics and Radio Communications : The Ionosphere—its Significance for (Dr. Karl Rawer), translated from the German by Ludwig Katz, *review* by T. W. Bennington, 1116
Geophysik (Handbuch der Physik, herausgegeben von S. Flügge, Band 47 und Band 48), *review* by Sir Edward Bullard, 1582
George, K. A. : Neutron Production and Temperature in ZETA, 745
George, Mariam, and others : Effect of 8-Azaguanine on Antibody Synthesis *in vitro*, 1377
Georgia Birds (Thomas D. Burleigh), *review* by Sir Landsborough Thomson, 759
Geradflügler Mitteleuropas (Kurt Harz), *review* by Dr. David R. Ragge, 141
Gerard, Prof. R. W. : Physiology as an Education and as a Career, 1065
Gerber, Georg B., and Altman, Kurt I. : Ribosyl Transfer between Ribose Nucleotides in the Rat, 1513
German Starch Convention, 1958 (Dr. E. Dux), 231
Germanium Electrodes : Hydrogen Overpotential on (V. R. Erdélyi and Mino Green), 1592
Germinating Pine Pollen (*Pinus ponderosa*) : Carbon Dioxide Fixation in (R. G. Stanley, L. C. T. Young and J. S. D. Graham), 1462
Germination in *Kennedya* Vent. : Temperature and (J. H. Silsbury), 954
Germination (Seed), in the West African Oil Palm, *Elaeis guineensis* (Jacq.) : Factors controlling (G. Hussey), 699
Gerroidea (Hemiptera Heteroptera) : Alary Polymorphism in the (Dr. R. O. Brinkhurst), 1461 ; *erratum*, 1644
Geschwind, Dr. I. I. : Comparative Endocrinology (Biochemical Variations of Hormones among Vertebrates), 775
Gettlich, A., and others : Experimental Chemotherapy of Tumours with Hydrogen Peroxide, 395
Gezira (Sudan) : Effect of the Cotton Plant in the, on certain Leaf-feeding Insect Pests (R. J. V. Joyce), 1463
Ghana : Cocoa Shade and Manurial Experiment in (R. K. Cunningham and J. Lamb), 119
Ghanem, Y. S., and others : Influence of Temperature and Light on Thyroid Function, 57
Ghetti, V. (edited by Garattini, S., and) : Psychotropic Drugs—Proceedings of the International Symposium on Psychotropic Drugs (Milan, 1957), *review* by Prof. H. J. Eysenck, 823
Ghilarov, Prof. M. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
Ghosh, D. K. : Free Radical Stabilization, 1497
Ghosh, Dr. J. J., and others : Hexokinase Activity in Cell-free Extracts of *Leishmania donovani*, 109
Ghosh, R. S. (Iyengar, M. S., and) : Science in the Use of Coal (Carbonization of Coal), 25
Ghosh, Dr. Sudhamoy, and others : Arylaminopyrimidines as Growth-Inhibitors of *Streptococcus faecalis* and *Lactobacillus arabinosus*, 187
Giant Axon of the Cockroach : Effects of Potassium and Sodium Ions on the Resting and Action Potentials of the (T. Yamasaki and T. Narahashi), 1805
Giant Axon (Squid) : An Anodal Threshold Phenomenon in the (John R. Segal), 1370
Giant Nerve Cells and Fibres in *Arenicola claparedii* (Polychaeta), (Prof. G. P. Wells), 1609
Gibberellic Acid : A Colorimetric Test for, and Evidence from a Dwarf Pea Assay for the Occurrence of a Gibberellin-like Substance in Wheat Seedlings (G. M. Simpson), 528
  Effect of, on Corolla Size (Mrs. Audrey Plack), 610
  Effect of, on Leaf Form (Dr. E. Njoku), 1097
  Effect of, on the Nodulation of White Clover (*Trifolium repens* L.), (Dr. Wm. W. Fletcher, J. W. S. Alcorn and J. C. Raymond), 1319
Gibberellic Acid and Photoperiod : Interaction of, on the Vegetative Growth of *Pinus elliottii* (Prof. Philippe F. Bourdeau), 118
Gibberellic Acid and the Physiological Genetics of Flowering in Peas (Prof. H. N. Barber, W. D. Jackson, I. C. Murfet and J. I. Sprent), 1321
Gibberellic Acid and Vernalization (Prof. S. C. Chakravarti), 1612
Gibberellic Acid-like Substances in Higher Plants (M. Radley), 1279
Gibberellin : Effect of, on the Extensibility of the Pea Stem (S. Yoda and J. Ashida), 879
  Effect of, on Sunflower Tissue Culture (James H. M. Henderson), 880
Gibberellin-like Substance in Wheat Seedlings : A Colorimetric Test for Gibberellic Acid and Evidence from a Dwarf Pea Assay for the Occurrence of a (G. M. Simpson), 528
Gibberellin-like Substances in the Coconut : Occurrence of (Margaret Radley and Enid Dear), 1098
Gibbs, Prof. Martin, and Cynkin, Morris A. : Conversion of Carbon-14 Dioxide to Starch Glucose during Photosynthesis by Spinach Chloroplasts, 1241
Gibbs, Dr. W. J. : Conformal Transformations in Electrical Engineering, *review* by Dr. L. S. Goddard, 1630
Gibson, J. F., and others : Ions of the Transition Elements (Application of Paramagnetic Resonance Spectroscopy to Transition Metal Ions—Electron Resonance Measurements of Ferri-haemoglobin Derivatives), 1350

Gilpin-Brown, J. B., and others : Bathyscaphoid Squid, 1810
Ginetzinsky, A. G. : Role of Hyaluronidase in the Re-Absorption of Water in Renal Tubules—the Mechanism of Action of the Antidiuretic Hormone, 1218
Giovanelli, Dr. R. G. : Appointed chief of the Division of Physics of the National Standards Laboratory (Commonwealth Scientific and Industrial Research Organization), Sydney, 292 ; work of, 292
Giraldi, Dr. P. N., and others : Diuretic Activity of Chlorothiazide Derivatives, 1510
Girardi, Silvia, and others : Behaviour of 19-nor-Progesterone and 19-nor-Ethinyltestosterone in the Liver of the Guinea Pig, 1450
Giri, Prof. K. V. : *Obituary* by Prof. R. A. Morton and H. R. Cama, 1201
Giri, Prof. K. V., and others : Agar Electrophoretic Patterns of Red Blood Cell Proteins, 184
Gisin, Dr. H. : Research Methods in Soil Zoology (Systematics and the Ecologist), 705
Giustina, G., and Lazzarini, E. : Incorporation of Carbon-14 Dioxide by Duck Erythrocytes and Reticulocytes *in vitro*, 1311
Given, Dr. P. H., and others : Electron Resonance Study of the Radicals produced by Controlled Potential Electrolysis of Aromatic Substances, 1784
Given, Dr. P. H., and Peover, M. E. : Science in the Use of Coal (Physics and Chemistry of Coal), 24
  Anodic Reactions of Mercury with Halide Ions in Dimethylformamide, 1226
Glaciological Observations on Ruwenzori (Prof. David L. Linton), 302
Gladych, J. M. Z., and others : Some New Neuromuscular Blocking Agents, 1424
Gland (Adrenal), of the Rat : Replacement of Adrenaline and Noradrenaline in the Innervated and Denervated, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 1020
Gland (Guinea Pig Coagulating) : Vascular Permeability Factors in the Secretion of the (Jules Freund, and Prof. A. A. Miles, P. J. Mill and D. L. Wilhelm), 174
Gland (Nasal (Supra-Orbital)), of the Duck : Histochemical Study of the (Dr. R. J. Scothorne), 732
Gland (Rat's Denervated Adrenal) : Catechol Amine Depletion in the, following Chronic Administration of Reserpine (Dr. Bernard L. Mirkin), 113
Gland Tissues (Lactating Mammary), in Rats : Effect of Oxytocin Administration on Respiration of (K. Ota and A. Yokoyama), 1509
Glands (Adrenal), of the Hedgehog : Adrenaline/Noradrenaline Ratio in the, during Summer Activity and Hibernation (Prof. Paavo Suomalainen and Dr. Veikko J. Uuspää), 1500
Glands (Coxal), of the Scorpion : Ultrastructure of the (Dr. R. Rasmont, G. Vandermeersche and P. Castiaux), 328
Glands (Parotid), in a Sheep : Comparison of the Salivary Secretion of both (M. Somers), 400
Glands (Salt), in Marine Reptiles (Knut Schmidt-Nielsen and Ragnar Fange), 783
Glasgow Region, a General Survey (edited by Prof. Ronald Miller and Dr. Joy Tivy), *review*, 587
Glasgow University Expedition to North Rona and Sula Sgeir (T. B. Bagenal and H. T. Howell), 775
Glass : Comparison of the Tendency to cling to, and Haemagglutination produced in Erythrocyte Suspensions by Ferric Chloride and by Influenza Virus (William R. Chesbro and Prof. Leslie R. Hedrick), 1164
Glass (Safety) : Fundamental Research in, 1779
Glass (Silica) : Entry of Water into (A. J. Moulson and J. P. Roberts), 200
Glass and Ceramics : Soviet Research in—Basic Science I ; Basic Science II ; Glass, Glazes and Enamels ; Cements, Limes and Plasters ; Refractories ; Miscellaneous, *review* by Prof. R. W. Douglas, 827
Glasses (Rare-Earth) : Verdet Constants of, measured with a New Polarimeter (Niels O. Young), 333
Glasstone, Dr. Samuel : Sourcebook on Atomic Energy, second edition, *review* by Dr. E. Bretscher, 1589
Glassy State : Rheology of the (British Society of Rheology Discussion on), 229
Glastonbury, H. A., and others : A Direct-Plating Method for the Assay of Radioactive Isotopes in Aqueous and Alcoholic Samples, 1100
Glazier, Dr. E. V. D. : Promoted to Deputy Chief Scientific Officer in the Ministry of Supply, 768 ; work of, 768

Glen, Dr. J. W. : Physics of Ice Movement, 1560
Glen, Dr. W. L., and others: Isolation of $\Delta^{5,7,9}$-Œstratrienol-3-one-17 from the Urine of Pregnant Mares, 1308
α_2-Globulin Pattern on Starch Gel : Isolation of the (S. Baar), 259
β-Globulin Phenotypes in Sheep : Further (Dr. G. C. Ashton), 1101
β-Globulin Polymorphism in British Cattle : Genetics of (Dr. G. C. Ashton), 370
β-Globulin Polymorphism in Cattle, Sheep and Goats (Dr. G. C. Ashton and E. I. McDougall), 945
β-Globulin Variants in Man (Dr. H. Harris, Miss E. B. Robson and Dr. M. Siniscalco), 452
γ-Globulin (Rabbit), containing the Antibody and Antigenic Combining Sites : Separation and Isolation of Fractions of (Dr. R. R. Porter), 670
Gloeosporium Rots of Apple Fruits : Effect of Storage Conditions on the Incidence of (H. B. S. Montgomery), 737
Glomeruli from Rabbit Kidney : A Rapid Method for separating (W. F. Cook and Sir George Pickering), 1103
Glossary (International), of Terms used in Wood Anatomy (International Association of Wood Anatomists), 1709
Glover, Dr. J., and King, Dr. H. K. : Appointed senior lecturers in biochemistry in the University of Liverpool, 22
Glucocorticoids : A Simple and Rapid Method for the Biological Assay of (B. P. Block and P. F. D'Arcy), 181
Glucosamine and Galactosamine with Bakers' Yeast : Analysis of Mixtures of (Dr. Burton M. Pogell and Dr. Donald F. Koenig), 127
Glucose : An Effect of, on Bacteriophage Synthesis in *Salmonella typhimurium* (Nathan Entner and Ellis Engelsberg), 1808
  Fermentation of, by *Chlorella vulgaris* (P. J. Syrett), 1734
  Production of, by the Liver during Hyperglycaemia (Robert Steele and Paul A. Marks), 1444
  Straight-Growth Inhibitors in (R. F. M. Van Steveninck), 950
Glucose labelled with Carbon-14 : Use of, to determine the Amino-Acids essential for an Insect (R. Kasting and A. J. McGinnis), 1380
Glucose (Starch) : Conversion of Carbon-14 Dioxide to, during Photosynthesis by Spinach Chloroplasts (Prof. Martin Gibbs and Morris A. Cynkin), 1241
Glucose (Uridine Diphosphate) : Biosynthesis of Plant Glycosides from (Dr. C. E. Cardini and Dr. Tsutomu Yamaha), 1446
Glucose Catabolism in the American Cockroach (Gabriel M. Silva, W. P. Doyle and Dr. C. H. Wang), 102
Glucose Feeding and Insulin : Liver Glucosyl Oligosaccharides and Glycogen—Effects of Starvation, (Dr. Hsien-Gieh Sie and Prof. W. H. Fishman), 240
Glucose-l-Phosphate and Adenosine Triphosphate : Colorimetric Determination of Inorganic Phosphorus in the Presence of (Michinori Nakamura and Kenji Mori), 1441
Glucose-l-Phosphate and Glucose-6-Phosphate : Separation of, by Paper Chromatography (F. E. G. Harrap), 876
Glucosyl Oligosaccharides (Liver), and Glycogen—Effects of Starvation, Glucose Feeding and Insulin (Dr. Hsien-Gieh Sie and Prof. W. H. Fishman), 240
Glucuronate Metabolism by *Aerobacter aerogenes* (Robert A. McRorie and G. David Novelli), 1504
Glutathione : Effect of Analogues of, on the Feeding Reaction of Hydra (E. E. Cliffe and Dr. S. G. Waley), 804
Glycine : Utilization of the Carboxyl Group of, for the Synthesis of the Amino-Acids of Silk by *Bombyx mori* (Dr. S. Bricteux-Grégoire, W. G. Verly and Prof. M. Florkin), 1515
Glycine Carbon-l and -2 in *Bombyx mori* : Utilization of Formate for the Biosynthesis of (Dr. S. Bricteux-Grégoire and W. G. Verly), 1515
Glycogen : Liver Glucosyl Oligosaccharides—Effects of Starvation, Glucose Feeding and Insulin (Dr. Hsien-Gieh Sie and Prof. W. H. Fishman), 240
Glycogen (Liver), in Ketosis : Level of (Dr. P. A. Mayes), 324
Glycol (Polyethylene) : Substances in the Calf Alimentary Tract interfering in the Determination of (R. H. Smith), 260
Glycosides (Cardiac), and Thyroidal Iodide Transport (Dr. J. Wolff and J. R. Maurey), 957
Glycosides (Plant) : Biosynthesis of, from Uridine Diphosphate Glucose (Dr. C. E. Cardini and Tsutomu Yamaha), 1446
Glynn, Miss Angela : Awarded the second prize in the 1958 *Endeavour* Essay Competition, 632
Goats (Cattle, Sheep and) : Beta-Globulin Polymorphism in (Dr. G. C. Ashton and E. I. McDougall), 945
Goddard, Dr. L. S. : An Introduction to Probability Theory and its Applications, *review*, 489
  Commutative Algebra, *review*, 759
  Numerical Analysis, *review*, 972
  Linear Programming and Economic Analysis, *review*, 1046
  Dynamic Programming, *review*, 1187
  Van Nostrand's Scientific Encyclopedia, *review*, 1587
  Conformal Transformations in Electrical Engineering, *review*, 1630
Godfrey, W. E. : Quelques Oiseaux du Canada, 1347
Golay, Marcel J. E. : Gas Chromatographic Terms and Definitions, 1146
Gold, E. : Awarded the International Meteorological Organization Prize for 1958 by the World Meteorological Organization, 18 ; work of, 18
Gold, E. R., and others : Use of Lyophilized Formol-treated Red Cells in Blood-Group Serology, 951
Gold (Tervalent) : Formation of Higher Bromo-Complexes of, in Non-Aqueous Solution (C. M. Harris and I. H. Reece), 1665
Goldacre, Dr. R. J. : Invasiveness and Surface Properties of Cancer Cells (Problem of Cell Movements and Cell Contacts—Use of Electronic Models), 1421
Goldblatt Method : Histochemical Changes in Kidneys and Adrenals of Rats made Hypertensive by the (Dr. Antonio Pasqualino and Prof. Geoffrey H. Bourne), 1426
Golden Hamster : Sex Ratio in the, before Uterine Implantation (Prof. P. E. Lindahl and G. Sundell), 1392
Goldfish, Elihu, and others : Crystal Structure of Rhombohedral Sulphur, 518
Goldin, Prof. Abraham, and others : Significance of Induced *in vivo* Synthesis of Diphosphopyridine Nucleotide, 512
Goldrick, R. B., and Whyte, H. M. : Serum Lipoproteins and Blood Coagulation, 1743
Goldsack, Miss : Modern Educational Treatment of Deafness, 920
Goldschmidt, Prof. B. : Appointed to serve on the Scientific Advisory Committee of the International Atomic Energy Agency, 1413
Goldzieher, Joseph W. (Truby, Frank K., and) : Electron Spin Resonance Investigations of Rat Liver and Rat Hepatoma, 1371
Gonadotrophins (Human Urinary) : Differences between Duplicate Assays of (F. J. Cunningham and P. S. Brown), 1238
Goncalves, N. Botafogo, and others : Analeptic Action of Anibine, 938
Good, B. F., and others : Differences between the Early Metabolic Effects of Thyrotropic Hormone and Triiodothyronine, 1166
Good, Dr. I. J. : Promoted to Deputy Chief Scientific Officer in the Scientific Civil Service, 991 ; work of, 991
Good, Prof. Ronald : Biological D-Days, *review*, 1576

Gould, H. J. (Legowski, T. J., and) : Effect of DDT on Egg-laying by *Oscinella frit* L., 1682
Government : Soldiers and (R. Blake), 89
Government in Canada : Industry and (Rt. Hon. C. D. Howe), 1422
Government of the United Kingdom of Great Britain and Northern Ireland and the Government of the United States of America : Agreement for Co-operation on the Uses of Atomic Energy for Mutual Defence Purposes (Washington, 1958), 635
Government of the United States of America (Government of the United Kingdom of Great Britain and Northern Ireland and the) : Agreement for Co-operation on the Uses of Atomic Energy for Mutual Defence Purposes (Washington, 1958), 635
Government Departments : Scientific and Industrial Research in, 1111
Government Establishments : Research and Development in, 1485
Government Museum, Madras : Administration Report for 1955-56, 228
Government Scheme, 1956-57 : Research for Industry, a Summary of Work done by the Industrial Research Associations in the (Department of Scientific and Industrial Research, 93
Governments (State) : Scientific Activities in Six (United States National Science Foundation), 1347
Gradient Elution Chromatography : Separation of Mixtures of Œstrogens in Urinary Extracts using (Dr. Stanley Kushinsky, James A. Demetriou, Wilmonte Nasutavicus and Jane Wu), 874
Grading of Main-Crop Potatoes : Effect of Number of Sprouts per Set on Yield and (R. D. Toosey), 269
Graduate Fellowships : Co-operative (National Science Foundation, Washington), 1486
Graduate Training in Chemical Engineering, 1061
Graefe, Dr. G. : At the International Starch Conference (Stable Syrups of Low Monosaccharide Content produced by Using Initial Starch Dispersions of High Concentration), 232
Graft Polymers : Preparation of Block and, in Systems where the Life-time of the Kinetic Chain is Long (Dr. P. E. M. Allen, G. M. Burnett, J. M. Downer, R. Hardy and Sir Harry Melville), 245
Graham, Prof. A. : The Alimentary Tract of the Ruminant, *review*, 622
Graham, Edward : Conservation of Natural Resources, 1406
Graham, Dr. Janet S. D. : Appointed lecturer in botany at the University of Birmingham, 990
Graham, Dr. Janet S. D., and others : Carbon Dioxide Fixation in Germinating Pine Pollen (*Pinus ponderosa*), 1462
Grains through Apertures : Two- and Three-Dimensional Flow of (R. L. Brown and J. C. Richards), 600
Grains (Airborne Pollen) : An Atlas of (H. A. Hyde and K. F. Adams), *review* by Dr. J. Hutchinson, 1117

Gram-Negative Bacteria : Nitrogen Fixation by (Michael H. Proctor and P. W. Wilson), 891
Gram-Negative Bacteria (Aerobic) : Occurrence of Poly-β-Hydroxybutyric Acid in (Dr. W. G. C. Forsyth, Dr. A. C. Hayward and J. B. Roberts), 800
Grammar Schools : Laboratories in, 707
Granada TV Network, Ltd. : Offer of £30,000 to the University of Leeds, for a Granada Television Research Fellowship, 228
Grandison, A. G. C. : *Obituary* of Dr. Malcolm A. Smith, 697
Grant, Dr. D. W. (Armstrong, W. A., and) : A Highly Sensitive Chemical Dosimeter for Ionizing Radiation, 747
Grant, Prof. Michael : Elected president and vice-chancellor of the Queen's University, Belfast, 1707 ; work of, 1707
Grant, Miss M. W. : Food Additives, 850
Grant-aid Research Associations (J. Wilson), 1133
Grants : James Clayton Fellowships and (Institution of Mechanical Engineers Awards), 433
Grants for Research (Wellcome Trust), 1203
Grants for Research in Chemistry (Chemical Society), 363
Grants for Science (United States National Science Foundation), 362
Grants for Special Research, 20
Grants to Students (Ministry of Education and the Scottish Education Department Committee on), 20, 561
Grants for Undergraduate Research (United States National Science Foundation), 1346
Grants (Travel), under the Fulbright Programme, 1488
Graphite : Direct Observation of Dislocations in (Dr. Alexander Grenall), 448
Graphitization and Plastic Deformation of Diamond (Dr. M. Seal), 1264
Grass for Winter-feeding : Preservation of, by Radiation Sterilization (Erna Grossbard, D. J. Minson, Dr. William Davies and T. Horne), 331
Grass (Hepatotoxic) : Relationship between the Presence of Fungal Spores and a Test for (J. C. Percival and Dr. R. H. Thornton), 1095
Grass Species and Strains : Nitrate Content of some (Dr. G. ap Griffith), 1099
Grass Swards : Changes in the Tiller Population of (Dr. R. H. M. Langer), 1817
Grassé, Prof. Pierre-P. (publié sous la direction de) : Traité de Zoologie, Tome 13, Agnathes et Poissons, *review* by Prof. C. H. O'Donoghue, 1574
Grasses (Common) : δ-Acetylornithine, a Constituent of some (Dr. L. Fowden), 406
Grasshopper, *Melanoplus bilituratus* (Wlk.) : Albinism in the Migratory (L. G. Putnam), 1529
Grassland and Fodder Resources of India (R. O. Whyte), *review* by Dr. J. P. Cooper, 71
Graticules, Ltd. : New Graticule Process, 'maXta', 699
Gravimorphism in Trees—Effects of Gravity on Growth, Apical-Dominance and Flowering in Fruit Trees (Dr. P. F. Wareing and T. Nasr), 379 ; Effect of Gravity on Flowering and Shoot Growth in Japanese Larch (*Larix leptolepis*, Murray), (K. A. Longman and Dr. P. F. Wareing), 380
Gravitational Field (Earth's) : Use of Artificial Satellites to Explore the—Results from *Sputnik* 2 (1957β), (R. H. Merson and D. G. King-Hele), 640
Gravitational Field of the Earth, *review* by Sir Edward Bullard, 1580
Gravity : Effect of, on Flowering and Shoot Growth in Japanese Larch (*Larix leptolepis*, Murray), (Gravimorphism in Trees), (K. A. Longman and Dr. P. F. Wareing), 380
  Effects of, on Growth, Apical Dominance and Flowering in Fruit Trees (Gravimorphism in Trees), (Dr. P. F. Wareing and T. Nasr), 379
Gravity Field ; The Earth and its (W. A. Heiskanan and Prof. F. A. Vening Meinesz), *review* by Sir Edward Bullard, 1580
Gray, Anton : The Future of Mineral Exploration (Sir Julius Wernher Memorial Lecture of the Institution of Mining and Metallurgy), 1136
Gray, A. R. : Awarded a Research Training Scholarship for 1958-59 by the Animal Health Trust, 432
Gray, Dr. Barbara, and others : Productivity and Economic Incentives, *review* by T. H. Hawkins, 1697
Gray, Prof. Charles H. : Weight Reduction in the Human Subject, *review*, 685
Gray, G. E. J. (Pettersson, Dr. M. L. R., and) : Further Inherent Characters of Plant Species of Wetter and Drier Habitats, 450

Group-Translocation—a Consequence of Enzyme-catalysed Group-Transfer (Dr. Peter Mitchell and Dr. Jennifer Moyle), 372
Grove, Dr. D. M., and Ford, M. G. : Evidence for Permeability Minima in Low-Pressure Gas Flow through Porous Media, 999
Groves, G. V. : Irregularities of Satellite Drag and Diurnal Variations in Density of the Air, 1533
Growth of Animal Cells in Continuous Suspended Culture : Critical Effect of Oxygen Tension on Rate of (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Growth of *Chlorella vulgaris* : Ethanol as a Carbon Source for the (Auxins and their Effect on the Growth of Unicellular Algae), (Prof. H. E. Street, D. J. Griffiths, C. L. Thresher and M. Owens), 1360
Growth of Ice Crystals in Air and other Gases : Mode of (K. Isono), 1221
Growth of Rats : Hydrogen Peroxide Ingestion and the (Lester Hankin), 1453
Growth *in vitro* of *Streptomyces* Species and some Pathogenic Fungi : Effect of Oxy-chlororaphin on the (G. Sierra and H. A. Veringa), 265
Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* and Large-scale Production of Tuberculin Purified Protein Derivative : Importance of Zinc for the (T. Dekker and H. Hultema), 1387
Growth of Unicellular Algae : Auxins and their Effect on the—Effect of Ethanol and Auxins on the Growth of Unicellular Algae (Dr. M. K. Bach and J. Fellig), 1359 ; Ethanol as a Carbon Source for the Growth of *Chlorella vulgaris* (Prof. H. E. Street, D. J. Griffiths, C. L. Thresher and M. Owens), 1360
Growth, Apical Dominance and Flowering in Fruit Trees : Effects of Gravity on (Gravimorphism in Trees), (Dr. P. F. Wareing and T. Nasr), 379
Growth and Catalase Levels of *Corcyra cephalonia* St. in Zinc Toxicity : Effect of Copper on (K. Sivarama Sastry and Prof. P. S. Sarma), 533
Growth and Fermentation : Nucleotide Pool of Brewers' Yeast during (G. Harris, J. W. Davies and R. Parsons), 1565
Growth and Maturity of the Barnacles *Lepas hillii* and *Lepas anatifera* (Dr. Frank Evans), 1245
Growth (Normal and Neoplastic) : Ribonuclease and Deoxyribonuclease Activities during (Dr. Sam Brody and Dr. M. Earl Balis), 940
Growth (Pasture) : Significance of Leaf Area in (C. M. Donald and J. N. Black), 707
Growth (Seedling), of Cowpea (*Vigna unguiculata*) : Effect of Fumigation and Moisture Content on the (G. H. Caswell and Dr. H. T. Clifford), 540
Growth (Shoot), in Japanese Larch (*Larix leptolepis*, Murray) ; Effect of Gravity on Flowering and (Gravimorphism in Trees), (K. A. Longman and Dr. P. F. Wareing), 380
Growth (Tumour) : Plasma Cells and (Prof. B. D. Baruah), 1455
Growth (Tumour), in Homologous and Heterologous Hosts : Effect of Viral Infection and Cortisone upon (Dr. T. Kuwata, Y. Yasumura and M. Kanisawa), 1678
Growth (Vegetative), of *Pinus elliottii* : Interaction of Gibberellic Acid and Photoperiod on the (Prof. Philippe F. Bourdeau), 118
Growth (Wool) : Effect of Trauma on (Dr. S. B. Slen), 1322
Growth Hormone (Anterior Pituitary) : Influence of the Thymus upon the Reaction of the Rat to (Dr. J. Comsa), 728
Growth-Inhibitors of *Streptococcus faecalis* and *Lactobacillus arabinosus* : Arylaminopyrimidines as (Dr. Sudhamoy Ghosh, Dolly Roy and Prof. B. C. Guha), 187
Growth Inhibitors (Straight–), in Glucose (R. F. M. Van Steveninck), 950
Growth-Rate in Bacon Pigs : Effect of Maize on Fat Hardness and (D. W. Duthie, A. F. Dent and H. P. Ledger), 953
Growth Spirals and Possible Polytypism : Cadmium Bromide— (Richard S. Mitchell), 337
Growth-Substances (New Plant), with Selective Herbicidal Activity (Dr. Mary B. Pybus, Prof. R. L. Wain and Dr. F. Wightman), 1094
Growth Substrates : Effect of, on Isocitratase Formation by *Pseudomonas ovalis* Chester (Dr. H. L. Kornberg, A. M. Gotto and Patricia Lund), 1430
Growth-promoting Activity of Potato Tuber Extracts in the Coleoptile Straight-Growth Test—Quantitative Aspects of Indoleacetic Acid Detection (A. Booth and Dr. P. F. Wareing), 406
Growth-promoting Effect of Ethanol on Oat Seedlings (Dr. C. L. Mer), 1812
Growth and Form in Plants : Experimental Approaches to the Problems of (Experimental Plant Morphology Group of the Linnean Society Symposium on), 1416
Grunberg, Emanuel (Schnitzer, Robert J., and) : Drug Resistance of Micro-organisms, *review* by I. M. Rollo, 416
Grunberg, Dr. L. : Promoted to Senior Principal Scientific Officer in the Scientific Civil Service, 992 ; work of, 992
Grundy, Prof. F. : Reduction of Evaporation from Reservoirs, 500
Grundy, Prof. F., and Mackintosh, Prof. J. M. : The Teaching of Hygiene and Public Health in Europe, *review* by Prof. Thomas McKeown, 619
Guernsey Cattle: Lack of 'Slow-Alpha' Proteins in some (Dr. G. C. Ashton), 193
Guha, Prof. B. C., and others : Arylaminopyrimidines as Growth-Inhibitors of *Streptococcus faecalis* and *Lactobacillus arabinosus*, 187
Guha, Prof. B. C. (Roy, R. N., and) : Species Difference in regard to the Biosynthesis of Ascorbic Acid, 319
  Production of Experimental Scurvy in a Bird Species, 1689
Guide to the Literature of Chemistry (E. J. Crane, Austin M. Patterson and Prof. Eleanor B. Marr), second edition, *review* by R. Brightman, 8
Guide to Unpublished Research Materials—Lectures delivered at a Vacation Course of the University of London School of Librarianship and Archives in April 1956 (edited by Ronald Staveley), *review* by R. Brightman, 902
Guide (A Farmer's), to Animal Diseases, *review* by Dr. J. O. L. King, 551
Guide (Field), to British Deer (compiled and edited by F. J. Taylor Page), *review* by Richard Morse, 825
Guide (Veterinary), for Farmers (G. W. Stamm), edited by Dallas S. Burch, third edition, *review* by Dr. J. O. L. King, 551
Guiding Young Salmon at Two British Columbia Field Stations : Research on (J. R. Brett and D. F. Alderdice), 162
Guignard, Flight-Lieut. J. C. : Space Medicine (Physiological Effects of Transient Mechanical Forces), 1645
Guillaume, M. : Production of Compounds labelled with Carbon-14 from Carbon-14 Dioxide accelerated in an Electric Field, 1592
Guillemat, Prof. J. : Ecology of Soil Fungi, 1559
Guinea Pig : Behaviour of 19-nor-Progesterone and 19-nor-Ethinyl-testosterone in the Liver of the (Silvia Girardi, Dusan Jadrejević, Rigoberto Iglesias and Prof. Alexander Lipschutz), 1450
  Labelling of Cells in Thoracic Duct Lymph of the after Tritiated Thymidine (Prof. J. M. Yoffey, Prof. N. B. Everett and Prof. W. O. Reinhardt), 1608
Guinea Pig Coagulating Gland: Vascular Permeability Factors in the Secretion of the (Jules Freund, and Prof. A. A. Miles, P. J. Mill and D. L. Wilhelm), 174
Guinea Pigs : Experimental Ringworm in—Oral Treatment with Griseofulvin (J. C. Gentles), 476
  Production of Experimental Allergic Encephalomyelitis in, with Fractions isolated from Bovine Spinal Cord and Killed Tubercle Bacilli (Dr. Marian W. Kies, Dr. Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104
Gulbenkian Foundation, Lisbon : Grants during 1958, 1493
Gulick, Z. R., and others : Inhibition of Pancreatic Deoxyribonuclease by Acidic Polymers, 1234
Gunn, Prof. J. A. : *Obituary* by Dr. H. R. Ing, 1411
Gunn, Prof. J. C. : Physics of Quanta and Parity (The Non-Conservation of Parity), 1121
Gupta, Brij L. : Ringed Appearance of Lipid Spheres under the Phase-Contrast Microscope, 537
Gupta, Hansraj (initiated and computed by) : Tables of Partitions (computed independently by C. E. Gwyther and J. C. P. Miller), *review* by Dr. J. A. Todd, 1046
Gurdon, J. B., and others : Sexually Mature Individuals of *Xenopus laevis* from the Transplantation of Single Somatic Nuclei, 64
Gustavson, Prof. K. H. : A Novel Type of Metal-Protein Compounds, 1125
Guthrie, Dr. Douglas : William Harvey and his Critics, *review*, 1571
Guthrie Lecture of the Physical Society (Prof. W. E. Lamb), 160
Gutman, Alexander B., and others: Relationship between *pKa* and Uricosuric Activity in Phenylbutazone Analogues, 1162
Gutmann, H. R.: Progress in Cancer Research (Metabolism of Carcinogens), 364
Gutt, W., and others : A New Form of Tricalcium Phosphate, 1230
Guy's Hospital, London : Symposium on the Tools of Biological Research, 918
Guy's Hospital Medical School, London : Appointment of Dr. W. J. H. Butterfield to the University of London chair of experimental medicine, 363
  Appointment of W. J. Tulley to the University of London readership in orthodontics, 1554
Gymnarthridae American Permian Microsaurs : Revision of the (Joseph T. Gregory, Frank E. Peabody and Llewellyn I. Price), *review* by Dr. W. E. Swinton, 1115
Gypsum Plaster (Set) : Effect of Temperature on the Structure of (M. J. Ridge), 1224

HABER, Dr. L. F. : The Chemical Industry during the Nineteenth Century, a Study of the Economic Aspect of Applied Chemistry in Europe and North America, *review* by J. L. S. Steel, 347
Habitats (Wetter and Drier) : Further Inherent Characters of Plant Species of (Dr. M. L. R. Pettersson and G. E. J. Gray), 450
Habits (Feeding), of Emperor Penguins (Dr. Richard L. Willing), 194
Habituation to Arousal Stimuli in Animals : Effect of Drugs on Conditioning and (Dr. B. J. Key and Dr. P. B. Bradley), 1517
Habrobracon Females (Irradiated and Control) : Ingestion of Ethylenediaminetetraacetic Acid and the Effect on Life Span of (Leo E. La Chance), 870
Hackbarth, Prof. J. : Fodder Plants (Mutants of Lupins), 703
Hackerman, N. (Snavely, Dr. E. S., and) : Charge Transfer Processes (Anodic Processes—Analytical and Coulombic Studies on the Anodic Passivation of Iron), 1354
Hackett, Dr. C. J. : An International Nomenclature of Yaws Lesions, 1132
Haddow, Prof. A. : Invasiveness and Surface Properties of Cancer Cells, 1419
  Obituary of Dr. Francisco Duran-Reynals, 1549
Haddow, Prof. A., and others : Anti-Tumour and Biochemical Effects of Purified Bovine Xanthine Oxidase in *C3H* and *C* Mice, 1144
  Tumour-inhibiting Action of 1:6-Dimethanesulphonyl-D-mannitol, 1164
Haem : Effect of Copper Deficiency on Synthesis of (R. L. Anderson and Prof. S. B. Tove), 315

Haem (Non-Enzymatic) : Formation of (T. Heikel, W. H. Lockwood and Prof. C. Rimington), 313
Haem Biosynthesis : Mode of Action of 5:6-Dimethylbenzimidazole and certain Keto-Acids as Inhibitors of (Dr. E. G. Brown), 1091
Haemagglutination produced in Erythrocyte Suspensions by Ferric Chloride and by Influenza Virus : Comparison of the Tendency to cling to Glass and (William R. Chesbro and Prof. Leslie R. Hedrick), 1164
Haematin Compounds in Plants : Day-length and (C. Sironval), 1170
Haemoglobin : Different Types of, in Two Strains of Mice (W. Welling and Dr. D. W. van Bekkum), 946
  Dissociation of Serological Complexes of Ovalbumin and, using Aqueous Carbon Dioxide (Dr. B. T. Tozer, K. A. Cammack and Dr. H. Smith), 668, *erratum*, 842
Haemoglobin (An Abnormal), in a Chinese—Haemoglobin *G* (F. Vella, J. A. M. Ager and Dr. H. Lehmann), 460
Haemoglobin (Mouse) : Different Heterogeneities of, according to Strains (J. Rosa, G. Schapira, J. C. Dreyfus, J. de Grouchy, G. Mathé and J. Bernard), 947
Haemoglobin *D* (Human) : Three Varieties of (S. Benzer and Dr. V. M. Ingram, and Dr. H. Lehmann), 852
Haemoglobin *G* : An Abnormal Haemoglobin in a Chinese— (F. Vella, J. A. M. Ager and Dr. H. Lehmann), 460
Haemoglobin *P* (the 'Galveston' Type), (Dr. Rose G. Schneider and Dr. Mary Ellen Haggard), 322, *erratum*, 771
Haemoglobin, Haemoglobin–Haptoglobin Complexes and other Substances with Peroxidase Activity : Detection of, after Zone Electrophoresis (Dr. J. A. Owen, H. J. Silberman and C. Got), 1373
Haemoglobin-Haptoglobin Complexes and other Substances (Haemoglobin,), with Peroxidase Activity : Detection of, after Zone Electrophoresis (Dr. J. A. Owen, H. J. Silberman and C. Got), 1373
Haemoglobin and Potassium Blood Types in some Non-British Breeds of Sheep and in certain Rare British Breeds (J. V. Evans, Dr. H. Harris and Prof. F. L. Warren), 320
Haemoglobins : Sheep (Dr. T. H. J. Huisman, G. van Vliet and T. Sebens), 171
Haemoglobins (Larval and Adult), of the Cyclostome *Petromyzon planeri* (M. Adinolfi and G. Chieffi), 730
β-Haemolytic (Group *A*) Streptococci : Protoplasts of (H. Gooder and W. R. Maxted), 808
Haemophilus pertussis : Mast Cell and Histamine in Rat Anaphylaxis—the Effect of (I. Mota), 1021
Hagberg, A. : Fodder Plants (Use of Polyploidy in Plant Breeding in Sweden), 702
Hageman Factor in Plasma Foreign Surface Reactions (J. Margolis), 1102
Haggard, Dr. Mary Ellen (Schneider, Dr. Rose G. and) : Haemoglobin *P* (the 'Galveston' Type), 322, *erratum*, 771
Hagiwara, Dr. Atsuyoshi : Recombination Ability of *Escherichia coli K*-12 Protoplasts, 456
Hailsham, Lord : Commonwealth Co-operation in Scientific Research, 1551
Haine, M. E., and others : Removal of Gases in High Vacuum Systems by Metal Abrasion, 931, *erratum*, 1348
Haines, Prof. F. M. : Title of professor emeritus of botany in the University of London (at Queen Mary College) conferred on, 363
Haines, Dr. R. L., and others : Charge Transfer Processes (Homogeneous Processes—Equivalent Redox Potential of Aqueous Solutions under γ-Irradiation), 1354
Hair Follicles : Content of Citrulline and other Amino-Acids in a Protein of (G. E. Rogers and D. H. Simmonds), 186
Hais, Ivo M., and others : Antituberculosis Factors of Milk, 884
Halst, R. E. : Biochemical Response to Physical Injury (Influence of Environment on the Metabolic Response to Injury), 1495
Haken, H. : Transfer of Light Energy and Photosensitization, 231
Hakim, A. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy ?), 1284 ; (Engineering Education, and its Place in the University), 1284
Halcrow, J. G. : Fleas of the Rat in Tanganyika, 817
Haldane, A. D., and others : Perchlorate, an Important Constituent of Sea Water, 645
Hale, Dr. Arthur J. : The Interference Microscope in Biological Research, *review* by Dr. R. Barer, 1630
Hale, Dr. D. : Antarctic Research (Biology), 288
Hale, H. P., and others : Abnormally Low Ultimate *p*H in Pig Muscle, 807
Half-wave Potentials of Aromatic Ketones (Jayanti Nag Chaudhuri and Dr. Sadhan Basu), 179
Halide Ions in Dimethylformamide : Anodic Reactions of Mercury with (Dr. P. H. Given and M. E. Peover), 1226
Halides in the Carbohydrate Series : Reactivity of Sulphonyloxyl Groups with (Dr. N. F. Taylor), 660
Halides (Alkali) : Dispersion of the Stress Optical Coefficient of the (Dr. R. Srinivasan), 1660
Halides (Complex), of the Transition Metals : Stereochemistry of (Dr. Naida S. Gill, Prof. Ronald S. Nyholm and Peter Pauling), 168
Hall, A. J. C., and Hayes, J. G. : Awarded the Waverley Gold Medal and First Prize in the Waverley Gold Medal Essay Competition, 1060
Hall, Dr. A. R. : From Divine to Continuous Creation, *review*, 277
Hall, Dr. A. R., and others (edited by) : A History of Technology, Vol. 3, From the Renaissance to the Industrial Revolution *c.* 1500-*c.*1750, *review* by K. R. Gilbert, 3
Hall, G. E. : Awarded a Research Fellowship in chemistry for 1948-59 by the Department of Scientific and Industrial Research, 1063
Hall, Prof. K. R. L. : Spatial Summation for Heat-Pain, 307, 876
Hall, T. E. : The Diploma in Technology, 160
Hall, Victor E. (edited by, in association with Fuhrman, Frederick A., and Giese, Arthur C.) : Annual Review of Physiology, Vol. 20, *review* by Prof. J. H. Gaddum, 901
Hall, William H. (Smirk, Sir Horace, and) : Inherited Hypertension in Rats, 727
Halldén, Dr. Ulf : A Simple Device for Observing the Polarization of Light from the Sky, 333
Hallén, Dr. O., and Röckert, Dr. H. : A New Method for obtaining Thin Plane Parallel Sections of Mineralized Specimens, 1225
Halley Bay : Ionospheric Measurements made at (W. H. Bellchambers and W. R. Piggott), 1596
Halogen-Molecule Bridges in Solid Addition Compounds (Prof. O. Hassel and Knut O. Strømme), 1155
Halpern, Dr. J. : Charge Transfer Processes (Homogeneous Processes—Applicability of the Principle of Equi-valance Change to Inorganic Oxidation-reduction Reactions), 1354
Hamann, Dr. S. D. : Physico-Chemical Effects of Pressure, *review* by K. E. Bett, 75
Hamer, A. N. (Bentley, P. G., and) : Boron-10 Abundance in Nature, 1156
Hamilton, L. D., and others : A New Configuration of Deoxyribonucleic Acid, 387
Hamilton (Rowan) Bridge, 1552
Hamilton, Hon. William : New laboratories of the Pulp and Paper Research Institute of Canada opened by, 1556
Hammett Sigma Constants : Determination of, by Intramolecular Hydrogen Bonding (A. T. Shulgin and A. W. Baker), 1299
Hammond, Dr. B. R. : Enzyme Kinetics, *review*, 1578
Hammond, George S. (Fritz, James S., and) : Quantitative Organic Analysis, *review* by Dr. A. D. Mitchell, 1187
Hammond, V. J., and Carter, R. : Visualization of Mode Conversion of an Ultrasonic Beam in Fused Quartz, 790
Hampton Site Question : Memorandum on the Museum and Art Gallery Service, with special reference to the National Gallery and the (Bow Group), 681
Hamster (Golden) : Sex Ratio in the, before Uterine Implantation (Prof. P. E. Lindahl and G. Sundell), 1392
Hamster (Hibernating) : Toxicity of a Cholinesterase Inhibitor to the (J. F. Scaife and D. H. Campbell), 1739
Hanby, W. E. (Elliott, Dr. A., and) : Deuterium Exchange in Polypeptides, 654
Hancock, L. H. : The Diploma in Technology, 160
Hand : The Human—a Psychological Study (Prof. Géza Révész), translated by John Cohen, *review* by Prof. R. C. Oldfield, 1042
Hand and Human Nature, *review* by Prof. R. C. Oldfield, 1042
Handschumacher, R. E. : Bacterial Preparation of Orotidine-5'-phosphate and Uridine-5'-phosphate, 1090
Hanford, J., and Davies, Dr. D. D. : Formation of Phosphoserine from 3-Phosphoglycerate in Higher Plants, 532
Hanging Mercury Drop Electrode : Application of the, to an Investigation of Intermetallic Compounds in Mercury (Prof. Wiktor Kemula, Zbigniew Galus and Zenon Kublik), 1228
Hanke, Wilfried (Bücker, Horst, and) : Comparison of the Effect of Ultraviolet and X-Rays on the Capillaries of the Frog's Web, 1375
Hankin, Lester : Hydrogen Peroxide Ingestion and the Growth of Rats, 1453
Hansen, Dr. B. L., and Landauer, Dr. J. K. : Physics of Ice Movement (Experiments on Glaciers which have bearing on the Mechanical Properties of Ice), 1560
Hansen, Dr. R. S., and Hickson, Dr. D. A. : Charge Transfer Processes (The Double-Layer and Adsorption at Electrodes—Apparent Dependence on Frequency of the Capacity of the Double-Layer), 1355
Hanson, S. W. F. : Space Medicine (Problems of Feeding during Travel in Space), 1646
Hanuabada, an Urban Community in Papua : The Great Village, the Economic and Social Welfare of (Prof. Cyril S. Belshaw), *review* by G. K. Roth, 6
Happold, Prof. F. C., and others : Utilization of Thiocyanate by *Thiobacillus thioparus* and *T. thiocyanoxidans*, 266
Haptoglobin Types in Man : Atypical Segregation of (Dr. H. Harris, Miss E. B. Robson and Dr. M. Siniscalco), 1324
Hardcastle, J. W., and Thring, M. W. : Science in the Use of Coal (Combustion and Gasification), 26
Harden, Dr. D. B. : Museums in the Commonwealth and Overseas with special reference to the Training of Curators, 503
Hardening (Direct) Nickel Alloy Steels : Transformation Characteristics of (Mond Nickel Co., Ltd.), 1643
Harding, Clifford V., and Feldherr, Carl : Semipermeability of the Nuclear Membrane, 676
Harding, Dr. J. P., and Wheeler, A. C. : Heavy Infestation by the Parasitic Copepod *Lernaeenicus* of Sprats in the River Crouch, 542
Hardness (Fat), and Growth-Rate in Bacon Pigs : Effect of Maize on (D. W. Duthie, A. F. Dent and H. P. Ledger), 953
Hardy, R., and others : Preparation of Block and Graft Copolymers in Systems where the Life-time of the Kinetic Chain is Long, 245
Hardy, Prof. : Modern Educational Treatment of Deafness, 920
Hare, Dr. A. E. C. : The First Principles of Industrial Relations, *review* by T. H. Hawkins, 1697
Hargitay, Dr. B., and others : Carbon Dioxide Catalysis of the Formation of Pyroglutamic Acid, 259
Harker, Dr. H., and others : Electron Spin Resonance in Carbons—a New Oxygen Effect, 1154
Harkness Fellowships of the Commonwealth Fund, 699
Harley, Dr. J. : Ecology of Soil Fungi, 1559
Harmer, the late Sir Sidney F. : The Polyzoa of the *Siboga* Expedition, Part 4, Cheilostomata Ascophora, II (Ascophora, except Reteporidae, with additions to Part 2, Anasca), *review*, 753
Harnwell, President G. P. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Engineering Education, and its Place in the University), 1284
Harrap, F. E. G. : Separation of Glucose-1-Phosphate and Glucose-6-Phosphate by Paper Chromatography, 876
Harrington, Dr. H. J. : Nomenclature of Rock Units in the Ross Sea Region, Antarctica, 290
Harris, C. M., and Reece, I. H. : Formation of Higher Bromo-Complexes of Tervalent Gold in Non-Aqueous Solution, 1665
Harris, G., and others : Nucleotide Pool of Brewers' Yeast during Growth and Fermentation, 1565
Harris, Dr. G. P., and Morrison, T. M. : Fixation of Nitrogen-15 by Excised Nodules of *Coriaria arborea* Lindsay, 1812
Harris, Dr. G. P. (Morrison, T. M., and) : Root Nodules in *Discaria toumatou* Raoul Choix, 1746
Harris, Prof. G. W. : Comparative Endocrinology (Neuro-endocrine Reflex and Co-ordinating Mechanisms), 775
Harris, Dr. H. : Invasiveness and Surface Properties of Cancer Cells (Study of Groups of White Blood Cells), 1421
Harris, Dr. H., and others : β-Globulin Variants in Man, 452
  Haemoglobin and Potassium Blood Types in some Non-British Breeds of Sheep and in certain Rare British Breeds, 320
  Atypical Segregation of Haptoglobin Types in Man, 1324

Harris, Prof. H. A. : The Rat, *review*, 419
Harris, Dr. R. J. C. : Appointed head of the Division of Experimental Biology and Virology of the Imperial Cancer Research Fund, 697
Harris, W. V. : La Lutte contre *Stephenoderes hampei* Ferr., 215
Harrison, D. : Invasiveness and Surface Properties of Cancer Cells (Growth of *Hartmanella* in Sterile Culture), 1420
Harrison, Prof. D. C. : Dynamic Biochemistry, *review*, 684
  5-Hydroxytryptamine, *review*, 898
  An International Symposium on Aldosterone, *review*, 902
Harrison, D. P., and Watkins, C. D. : A Comparison of Radio Echoes from the Aurora Australis and Aurora Borealis, 43
Harrison, Dr. G. E. : Estimation of Strontium in Biological Materials by means of a Flame Spectrophotometer, 792
Harrison, Dr. Wilson R. : Suspect Documents—their Scientific Examination, *review* by Dr. L. C. Nickolls, 1399
Harrison, —. : Modern Educational Treatment of Deafness, 919
Harrison-Church, Dr. R. J. : Title of reader in geography in the University of London (at the London School of Economics and Political Science) conferred on, 363
Harrisson, Tom, and Jamuh, George : Pigmy Sperm Whale (*Kogia breviceps*) in Borneo, 543
Hart, L. I., and others : Vitamin B_{12} and Cobalt Concentrations in Livers from Healthy and Cobalt-deficient Lambs, 869
Hart, Dr. P. D'Arcy, and Lovelock, Dr. J. E. : Protection of Living Cells against Acid by certain Non-ionic and Amphcteric Soaps, 304
Hartles, Dr. R. L. : Nutrition and Teeth (Incidence of Dental Caries in Britain and other Countries), 1705
Hartley, Dr. B. S. : Awarded a United States Public Health Services (National Institutes of Health, Bethesda) Travelling Fellowship in Medical Science, 634
Hartley, Sir Harold : At the Meeting in the Yugoslav Embassy in London to celebrate the bicentenary of the publication of Boscovich's 'Theoria Philosophiae Naturalis' (Boscovich's Relations with England and the Royal Society), 230
Hartley, Janet W., and others : Observations on the Spread of Mouse Polyoma Virus Infection, 1617
Hartmann, Prof. H., and Müller, H. : Ions of the Transition Elements (Spectra of the Hexa- and Hepta- Hydrates of Nickel Sulphate compared with Calculations made on the Ni $(H_2O)_6^{2+}$ ion), 1350
Hartree, O. P., and others : Transmission Electron Microscopy of Beryllium, 1660
Hartshorne, Dr. J. N. : Pigmentation and Sexuality in Plants, 1382
Harvard Case Histories in Experimental Science (edited by James Bryant Conant and Leonard K. Nash), 2 vols., *review* by J. A. Ratcliffe, 348
Harvey, C. O. : Colorimetric Analysis, *review*, 1331
  Complexometric Analysis, *review*, 1471
  Spot Tests in Inorganic Analysis, *review*, 1588
  The Science of Photography, *review*, 1599
Harvey, William : The Circulation of the Blood—Two Anatomical Essays by, together with nine letters written by him (translated from the Latin and slightly annotated by Prof. Kenneth J. Franklin), *review* by Dr. Douglas Guthrie, 1571
Harvey, William, and his Critics, *review* by Dr. Douglas Guthrie, 1571
Harwell Reactor School : Course on the Control and Instrumentation of Reactors (Atomic Energy Research Establishment), 295
  Course at the, 363
Harz, Kurt : Die Geradflügler Mitteleuropas, *review* by Dr. David R. Ragge, 141
Hashimoto, T., and others : Nuclear Changes occurring during Bud-formation in *Saccharomyces cerevisiae* as revealed by Ultra-thin Sectioning, 454
Hašková, Dr. Vera, and Hrubešová, Miroslava : Part played by Deoxyribonucleic Acid in Transplantation Immunity, 61
Hašková, Dr. Vera, and Mitchison, Dr. N. A. : Migration of Spleen Cells from Subcutaneous Implantation Sites, 410
Haslewood, Prof. G. A. D. : The Bile Solid, *review*, 1332
Hass, Dr. George M., and others : Conditions which eliminate Inflammation to Homografts in Rabbits, 1452
Hassel, Prof. O., and Strømme, Knut O. : Halogen-Molecule Bridges in Solid Addition Compounds, 1155
Hatching of the Potato Root Eelworm, *Heterodera rostochiensis* Wollenweber : Influence of certain Inorganic Ions on the (Dr. C. Ellenby and A. B. Gilbert), 925
Hatherton, Dr. T. : Antarctic Research, 285
Haubrich, Richard (Munk, Prof. Walter, and) : The Annual Pole Tide, 42
Haug, A.: At the Third International Seaweed Symposium (Effect of Species, Habitat, Pre-treatment of the Seaweed and Isolation Procedures on the Viscosity of Alginate Solutions), 1780 ; (Fucosan Content of *Ascophyllum nodosum*), 1780
Hausdorff, Felix : Set Theory (translated from the German by John R. Aumann *et al.*), *review* by Dr. R. G. Cooke, 1046
Hause, N. L. (Longenecker, Dr. J. B., and) : Rate of Absorption of Supplementary Free Amino-Acids during Digestion, 1739
Hawes, C. A., and others : Effect of Nitric Oxide on the Radiosensitivity of Tumour Cells, 952
Hawfinch : The (Guy Mountfort), *review* by Sir Landsborough Thomson, 419
Hawkes, Prof. Christopher : Grant of £600 over two years from the Gulbenkian Foundation, Lisbon, for visits to Portugal to collaborate with Colonel Mario Cardoza of Guimaraes in the excavation of early Celtic *castros* and in the training of Portuguese archaeologists in the latest techniques of excavation, 1493
Hawkes, Prof. L. : Progress in Geology (Anniversary Address to the Geological Society of London), 1553
Hawkins, Desmond (edited by) : The B.B.C. Naturalist, *review* by R. W. Hayman, 8
Hawkins, Jr., D., and others : A Water-soluble, Diffusible Pigment produced by a Strain of *Serratia marcescens* (*Chromobacterium prodigiosum*), 1028
Hawkins, Dr. K. M. : Health Yearbook (1956), *review*, 553
Hawkins, T. H. : Training Managers, *review*, 214
  The Education of Adults, *review*, 1041
  Industry and the Worker, *review*, 1697
  The Story of Evolution, *review*, 1763
Haworth, C. W. : Study of Metals and Alloys above 1,200°C. (High-temperature Equilibria), 1419
Hawthorn, Dr. J., and Duckworth, R. B. : Fall-out Radioactivity in a Deer's Antlers, 1294
Haxo, Prof. F. T. : At the Third International Seaweed Symposium (Growth of *Macrocystis pyrifera* at various depths of the Sea), 1780
Hay, James R. (Cumming, Bruce G., and) : Light and Dormancy in Wild Oats (*Avena fatua* L.), 609
Hay, Prof. R. : Trends in Metallurgy, 1123
Hay Rich in Silica : Volume and Acidity of Urine of Sheep fed, and Effect of Dietary Salt Additions (S. A. Forman, F. Sauer, D. H. Laughland and W. M. Davidson), 1385
Hayashi, Prof. Takashi : Inhibition and Excitation due to Gamma-Aminobutyric Acid in the Central Nervous System, 1076
Hayes, J. D. : At the eighth Plant Breeders' Conference (Problems of Selecting for Yield in Oats), 844
Hayes, J. G. (Hall, A. J. C., and) : Awarded the Waverley Gold Medal and First Prize in the Waverley Gold Medal Essay Competition, 1060
Hayes, P. R., and others : A National Type Culture Collection of Marine Bacteria, 1423
Hayes, Dr. W. : Ions of the Transition Elements (Application of Paramagnetic Resonance Spectroscopy to Transition Metal Ions—Ions such as Cr^+ and Fe^+ contained in a Sodium Fluoride Lattice and produced there by γ-rays, X-rays or Electrons), 1350
Hayhoe, Dr. F. G. J. : Stedman's Medical Dictionary, *review*, 215
Hayman, R. W. : The B.B.C. Naturalist, *review*, 8
Haynes, J. R., and others : Spectroscopy of Solids (Fine Structure in the Recombination Radiation of Silicon), 159
Hayward, Dr. A. C., and others : Occurrence of Poly-β-Hydroxybutyric Acid in Aerobic Gram-Negative Bacteria, 800
Hazard of Ionizing Radiations : Genetic (Dr. T. C. Carter, Mary F. Lyon and Rita J. S. Phillips), 409
Hazards (Health), from Powerful Radio Transmission (D. H. Shinn), 1792
Hazards (Nutritional), caused by Radioactive Contamination of Foods (Scottish Group of the Nutrition Society Symposium on), 700
Heacock, Dr. R. A., and Laidlaw, Miss B. D. : Reduction of Adrenochrome with Ascorbic Acid, 526, *erratum*, 700
Heal, Dr. H. G. : Appointed to a lectureship in inorganic chemistry at the Queen's University, Belfast, 158
Health in the Tropics, 1132
Health Hazards from Powerful Radio Transmissions (D. H. Shinn), 1792
Health Yearbook, 1956 (compiled by Prof. Oliver E. Byrd), *review* by Dr. K. M. Hawkins, 553
Health (Animal), Commonwealth Bureau of : Review Series No. 5, Salmonellosis in Animals (Dr. A. Buxton), *review* by Dr. Joan Taylor, 1046
Health (Mental) : Cancer and, in 1952-53 (Registrar General), 1061
Health (Mental) Research Fund : First Travelling Fellowship awarded to J. A. Baldwin, 157
  Prizes awarded to Dr. G. Sedman, J. D. Swales and A. P. K. John, 158
  Work of the, 301
Health (Public), in Europe : The Teaching of Hygiene and (Prof. F. Grundy and Prof. J. M. Mackintosh), *review* by Prof. Thomas McKeown, 619
Health Physics, Vol. 1, No. 1, 633
Health and Safety in the Field of Nuclear Energy (Dr. W. G. Marley), 1262
Healthy and Cobalt-deficient Lambs : Vitamin B_{12} and Cobalt Concentrations in Livers from (E. D. Andrews, L. I. Hart and B. J. Stephenson), 869
Healy, M. J. R. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
Heard, Dr. Dorothy H., and others : An Apparatus for Microelectrophoresis of Small Particles, 642
Hearnshaw, Prof. L. S. : Age and Ability, *review*, 826
Heart Disease : Arthritis and (Gairdner Foundation Awards in), 1710
Heat as an Agent producing High Frequency of Mutations and Unstable Genes in *Escherichia coli* (Prof. Stephen Zamenhof and Dr. Sheldon Greer), 611
Heat and the Engineer (Prof. O. A. Saunders), 582
Heat, Salt and Hormones in Panting and Sweating Animals (Prof. W. V. Macfarlane, Kathleen Robinson, Beth Howard and Rosemary Kinne), 672
Heat-Pain : Spatial Summation for (Prof. K. R. L. Hall), 307, 876
Heat Transfer : Chair of, in London, 155
  Measurement of Sap Flow by (D. C. Marshall), 878
  Principles of Engineering (Prof. Warren H. Giedt), *review* by Dr. H. Cohen, 623
Heat Treatment : Effect of, on the Sintering of 'Active' Ceramic Oxide Powders (D. T. Livey and Dr. P. Murray), 1362
Heat Treatment of Kaolinite : Evidence of Lattice Defects preceding Oriented Transformations during the (Dr. G. B. Mitra), 1794
Heath, Prof. O. V. S., and Meidner, Dr. H. : Effects of Water-Strain on the Minimum Intercellular Space Carbon Dioxide Concentration Γ in Wheat Leaves, 1524
Heath, Prof. O. V. S. (Recaldin, D. A., and) : Chelation or Complex-formation by Indoleacetic Acid *in vitro*, 539
Heating and Ventilating Research Council : Appointment of N. S. Billington as director, 700
Heating, Ventilating, Refrigeration and Fan Engineering, National College for : Resignation of N. S. Billington as head of the, 700
  Appointment of Dr. David R. Scott as head of the, 700
Heats of Wetting: A Calorimeter for Determination of (A. J. Groszek), 1152
Heavy Infestation by the Parasitic Copepod *Lernaeenicus* of Sprats in the River Crouch (Dr. J. P. Harding and A. C. Wheeler), 542
Heavy Metals : Populations of *Agrostis* spp. Tolerant of (D. Jowett), 816
Heavy Slime and Acid: A New Species of *Azotobacter* producing (A. B. Roy), 120
Heavy Water : Kinetics of Muscular Contraction in (M. C. Goodall), 677
Hebb, Dr. Catherine O. : *Obituary* of Prof. George Fegler, 1128
Hedgehog : Adrenaline/Noradrenaline Ratio in the Adrenal Glands of the, during Summer Activity and Hibernation (Prof. Paavo Suolamainen and Dr. Veikko J. Uuspää), 1500
Hedges, Mrs. Celia : Alfred Vander Hedges collection of British Moths presented to the British Museum (Natural History) by, 1553
Hedley, Dr. R. H. : Confusion between *Gromia oviformia* and *Allogromia ovoidea*, 1391
Hedrick, Prof. Leslie R. (Chesbro, William R., and) : Comparison of the Tendency to cling to Glass and Haemagglutination produced in Erythrocyte Suspensions by Ferric Chloride and by Influenza Virus. 1164

Heicke, B., and others : A Biological Action of Injected Deoxyribonucleic Acid, 1679
Heidelberger, C. : Progress in Cancer Research (Metabolism of Carcinogens), 364
Heidenstams (V. von) Foundation in Sweden : Silver Medal awarded to Miss I. Phyllis Barclay-Smith, 229
Heier, Dr. K. S. (Taylor, Dr. S. R., and) : Rubidium Depletion in Feldspars, 202
Height (Scale), of the Upper Atmosphere (C. H. Bosanquet), 1010
Heikel, T., and others : Formation of Non-Enzymatic Haem, 313
Heim, Prof. R. : Conservation of Natural Resources, 1405
Heinz Bodies in Extravasated Erythrocytes (R. S. Smith, M. M. Boddington and A. I. Spriggs), 455
Heiskanen, W. A., and Meinesz, Prof. F. A. Vening : The Earth and its Gravity Field, *review* by Sir Edward Bullard, 1580
Hejnowicz, Z. : Presence in Root Tips of a Thermolabile Factor causing the Conversion of Protochlorophyll to a Leuco-Compound, 1023
Helander, Einar : Adaptive Muscular 'Allomorphism', 1035
Helical Steroid Complex : Formation of a (Dr. Alexander Rich and Dr. David M. Blow), 423
Heliograph at the Cape of Good Hope : The Lyot $H\alpha$ (Dr. M. A. Ellison), 624
Helium in Natural Gas in the Witwatersrand (S. H. U. Bowie), 1082
$^{4}_{2}$He 'Clusters' in Nuclei : Evidence for (Prof. L. H. Ahrens and R. D. Cherry), 1434
Hellawell, A. : Study of Metals and Alloys above 1,200°C. (High-temperature Equilibria), 1419
Hellenic Society for the Protection of Nature : Seventh Technical Meeting to be held jointly with the Sixth General Assembly of the International Union for Conservation of Nature and Natural Resources, 89, 1405
Heller, Prof. H., and Lederis, K. : Paper Chromatography of Small Amounts of Vasopressins and Oxytocins, 1231
Hemihydrate (Calcium Sulphate) : Transformation of the α- and β-Forms of, to Insoluble Anhydrite (D. A. Powell), 792
Hemming, Francis : Resignation as a member of the International Trust for Zoological Nomenclature and as managing director and secretary, 842
Hen (Laying) : Progesterone in the Blood of the (I. M. Lytle and Prof. F. W. Lorenz), 1681
Henderson, A. E. : Aspects of the Evolution of Form and Function in Molluscs, 998
Henderson, Dr. I. H., and others : Charge Transfer Processes (Homogeneous Processes—Equivalent Redox Potential of Aqueous Solutions under γ-irradiation), 1354
Henderson, James H. M. : Effect of Gibberellin on Sunflower Tissue Culture, 880
Henderson, Dr. M. E. K. : Ecology of Soil Fungi, 1559
Hendley, Dr. Daniel D., and others : Inhibition and Activation of Polynucleotide Phosphorylase through the Formation of Complexes between Acridine Orange and Polynucleotides, 242
Hendy, Sir Philip : Presidential Address to the sixty-fourth Annual Conference of the Museums Association, 502
Henshaw, J. E. : Reports of H.M. Inspectors of Mines under the Coal Mines Act (1911) for 1956—West Midland and Southern Division, 637
  Reports of H.M. Inspectors of Mines and Quarries under the Mines and Quarries Act (1954) for 1957—West Midland and Southern Division, 638
Heparin and Heparin-like Substances : Permeabilizing Effects of (Prof. V. Capraro, F. Marro and G. Valzelli), 603
Heparin Content of Adipose Tissue (H. G. Hind and S. M. McGinn), 117
Heparin-like Substances : Permeabilizing Effects of Heparin and (Prof. V. Capraro, F. Marro and G. Valzelli), 603
Heparin (Post-) Esterase in Human Serum : Difference between Lipoprotein Lipase and (S. Novák and Dr. J. Skořepa), 117
Hepatic Necrosis (Experimental) : Aldosterone and (Dr. K. Aterman), 1324
Hepatoma (Rat) : Electron Spin Resonance Investigations of Rat Liver and (Frank K. Truby and Joseph W. Goldzieher), 1371
Hepatotoxic Grass : Relationship between the Presence of Fungal Spores and a Test for (J. C. Percival and Dr. R. H. Thornton), 1095
Hepple, Dr. S. : Ecology of Soil Fungi, 1559
HERALD Reactor at the Atomic Weapons Research Establishment, Aldermaston, 19
Herbage Seed : International Certification of (Organization for European Economic Co-operstion), 157
Herbage Seed Production (National Institute of Agricultural Botany Conference on), 501
Herbaria : British (compiled by D. H. Kent, with the assistance of E. B. Bangerter and J. E. Lousley), *review* by Dr. W. B. Turrill, 759
Herbarium : An Important, *review* by Dr. W. B. Turrill, 752
  The Sloane—an Annotated List of the *Horti Sicci* composing it, with Biographical Accounts of the Principal Contributors, based on Records compiled by the late James Britten, revised and edited by J. E. Dandy, *review* by Dr. W. B. Turrill, 752
Herbicidal Activity (Selective) : New Plant Growth-Substances with (Dr. Mary B. Pybus, Prof. R. L. Wain and Dr. F. Wightman), 1094
Heredity : Natural Selection and (P. M. Sheppard), *review* by Prof. H. Graham Cannon, 490
Hering, Prof. Erich M. : Bestimmungstabellen der Blattminen von Europa, Band 1, Pflanzengattungen A-L ; Band 2, Pflanzengattungen M-Z ; Band 3, Neubeschreibungen von Minen-Erzeugern Systematische Übersicht der Wirtspflanzen und der Minen-Erzeuger, *review* by Dr. Kenneth Mellanby, 213
Herman, F. : Spectroscopy of Solids (Phonon Spectrum of Germanium), 159
Herpes Virus : Mode of Intercellular Transfer of (Dr. M. G. P. Stoker), 1525
Herring : Homage to the, *review* by Dr. H. O. Bull, 6
Herring and its Fishery (Dr. W. C. Hodgson), *review* by Dr. H. O. Bull, 6
Herriott, R. M. : Bacteriophage Research, 1769
Hertz, Prof. G. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
He[illegible]e, Dr. A., and others : Sodium Fluoroacetate as a Protecting Agent against Irradiation, 175
Herz, Dr. R. H., and others : Mosaic Structure of Photographic Emulsion Crystals, 1726
Herzens : Rhythmusstörungen des (Prof. Konrad Spang), *review* by Dr. J. P. D. Mounsey, 1574
Heterocycles Oxygenes : Les (Colloques Internationaux du Centre National de la Recherche Scientifique, 64, Lyon 1955), *review* by Dr. F. G. Mann, 1762
Heterocyclic Chemistry, *review* by Dr. F. G. Mann, 1762
  Current Trends in—Proceedings of a Symposium held at the John Curtin School of Medical Research, Australian National University, Canberra, 1957, under the auspices of the Chemical Society (edited by A. Albert, Dr. G. M. Badger and Dr. C. W. Shoppee), *review* by Dr. F. G. Mann, 1762
Heterodera rostochiensis Wollenweber : Influence of certain Inorganic Ions on the Hatching of the Potato Root Eelworm (Dr. C. Ellenby and A. B. Gilbert), 925
Heterogeneities (Different), of Mouse Haemoglobin according to Strains (J. Rosa, G. Schapira, J. C. Dreyfus, J. de Groucht, G. Mathé and J. Bernard), 947
Heterologous Hosts (Homologous and) : Effect of Viral Infection and Cortisone upon Tumour Growth in (Dr. T. Kuwata, Y. Yasumura and M. Kanisawa), 1678
Heterologous Sera : Cytotoxicity of, to Normal and Leukaemic Human Lymphocytes (Robert Schrek), 724
Heterozygous Carrier in Galactosaemia (David Yi-Yung Hsia, Irene Huang and Shirley G. Driscoll), 1389
Hetherington, Sir Hector : Expanding Education (Opening Address to the eighth Quinquennial Congress of the Universities of the Commonwealth), 1283
Hetzel, Dr. B. S., and others : Differences between the Early Metabolic Effects of Thyrotropic Hormone and Triiodothyronine, 1166
Heubner, Robert J., and others : Observations on the Spread of Mouse Polyoma Virus Infection, 1617
Hevea brasiliensis : Uptake and Utilization of DL-[2-^{14}C] Mevalonic Acid by (G. B. Barlow and Dr. A. D. Patrick), 662
Hewitt, B. R. : Spectrophotometric Determination of Protein in Alkaline Solution, 246
  Spectrophotometric Determination of Total Carbohydrate, 246
Hewlett, E. : Chairman's Address to the thirteenth Annual Delegate Conference of the Institution of Professional Civil Servants, 86
Hewlett, Dr. P. S. : Dosage–Mortality Curves for Houseflies Susceptible and Resistant to DDT, 404
Hexaploid Wheat : Genetic Control of the Cytologically Diploid Behaviour of (Dr. Ralph Riley and Victor Chapman), 713
Hexokinase Activity in Cell-free Extracts of *Leishmania donovani* (A. N. Chatterjee, J. C. Ray and Dr. J. J. Ghosh), 109
Hey, Prof. D. H. : Theoretical Organic Chemistry (Reactions of Aroyl Peroxides with Naphthalene), 1342
Hey, Prof. D. H., and Williams, Dr. G. H. : Structure and Reactions in Organic Chemistry—The Kekulé Symposium, 1340
Hey, Dr. J. S., and others : Radio Observations of Hypersonic Shock Waves, 1220
Hey, Dr. M. H. : Nicolaus Steno, *review*, 278
Heyerdahl, Thor : Aku-Aku, the Secret of Easter Island, *review* by Prof. Raymond Firth, 487
Heymann, Dr. Hans, and others : Inhibition of Pancreatic Deoxyribonuclease by Acidic Polymers, 1234
Heyner, Susan, and Biggers, Dr. J. D. : Cultivation of Isolated Embryonic Rat Tibiae on a Chemically Defined Medium, 810
Heyworth, Lord : Advertising (Address at the Annual General Meeting of Unilever, Ltd.), 227
Hibernating Hamster : Toxicity of a Cholinesterase Inhibitor to the (J. F. Scaife and D. H. Campbell), 1739
Hibernation : Adrenaline/Noradrenaline Ratio in the Adrenal Glands of the Hedgehog during Summer Activity and (Prof. Paavo Suomalainen and Dr. Veikko J. Uuspää), 1500
Hickling Broad Nature Reserve, 161
Hicks, D. : Fuel and Power in British Industry (Coal Utilization), 1714
Hicks, R., and West, Dr. G. B. : Adrenalectomy and Tissue Amines, 401
Hickson, Dr. D. A. (Hansen, Dr. R. S., and) : Charge Transfer Processes (The Double-Layer and Adsorption at Electrodes—Apparent Dependence on Frequency of the Capacity of the Double-Layer), 1355
Higashi, Taneaki, and others : Preparation of Crystalline *Pseudomonas* Cytochrome$_{551}$ from *Pseudomonas aeruginosa*, 1307
Higginbottom, Brian : Awarded a Perkin Centenary Scholarship, 295
Higgins, Joseph, and others : Localization of Interaction Sites in Multi-Component Transfer Systems—Theorems derived from Analogues, 1190
High-Altitude Research, 1414
High-Caste Hindus : The Twice-Born, a Study of a Community of (Dr. G. Morris Carstairs), *review* by Prof. K. de B. Codrington, 76
High Concentrations of Hydrogen Atoms : Production of (K. R. Jennings and Dr. J. W. Linnett), 597
High-Energy Nuclear Particles: Research on (Grant of 450,000 dollars from the United States National Science Foundation to the University of Chicago for), 916
High-Energy Nuclear Physics : International Conference on (International Union of Pure and Applied Physics), 356
High-Energy Particles : Contribution of, to Thermonuclear Reaction Rates (Dr. G. Eder and Dr. H. Motz), 1140
High-Energy Proton Beam as a Neurosurgical Tool (Börje Larsson, Lars Leksell, Prof. Bror Rexed, Patrick Sourander, William Mair and Bengt Andersson), 1222
High Frequency of Mutations and Unstable Genes in *Escherichia coli* : Heat as an Agent producing (Prof. Stephen Zamenhof and Dr. Sheldon Greer), 611
High-Frequency Signals (Ultra), reflected from the Moon : Comparison of Measured and Computed Values of the Rapid Fading-Rate of (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
High Polymers (Prof. C. E. H. Bawn), 772
  A New Method of Fractionating (Dr. F. W. Peaker and Prof. J. C. Robb), 1591
High Pressures : Physical Chemistry at, *review* by K. E. Bett, 75
High Purity : Use of Ion Exchange Resins in preparing Water of (I. Raleigh), 1667 ; (Dr. J. A. Kitchener), 1667
High Radiation Dose-Rates : Chromosome Breakage at (J. S. Kirby-Smith and G. W. Dolphin), 270
High Resolution of Human Plasma Components by Starch-Gel Electrophoresis (Dr. J. M. Fine, J. Loeb and E. Waszczenkó-z), 452

High Speed : Nuclear Magnetic Resonance Spectra from a Crystal rotated at (Prof. E. R. Andrew, A. Bradbury and Dr. R. G. Eades), 1659
High-Speed Aerodynamics (Compressible Flow), (Prof. Elie Carafoli), *review* by Dr. W. P. Jones, 755
  Compressible Flow in, *review* by Dr. W. P. Jones, 755
High-Speed Flight (British Association for the Advancement of Science, Sections A (Mathematics and Physics) and G (Engineering), Discussion on), 695
  The Human Operator and (A. Cadman Clinton), 1562
  Problems of, *review* by Dr. W. P. Jones, 1582
High Speeds : Aerodynamic Components of Aircraft at (edited by A. F. Donovan and H. R. Lawrence), *review* by Dr. W. P. Jones, 1582
High-Titre Diphtheria Toxin in Baffled Shake Flasks: Production of (Dr. D. C. Edwards), 190
High Vacuum Systems : Removal of Gases in, by Metal Abrasion (M. E. Haine, E. W. R. Francis and R. N. Bloomer), 931, *erratum*, 1348
High Velocity : Southern Stars of (compiled by William Buscombe and Pamela M. Morris), 923
High (Abnormally) Fatigue Strengths in Aluminium Alloy Extruded Bar (J. M. Finney and J. Y. Mann), 1366
Higher Bromo-Complexes of Tervalent Gold : Formation of, in Non-Aqueous Solution (C. M. Harris and I. H. Reece), 1665
Higher Education in the United Kingdom (British Council and the Association of Universities of the British Commonwealth), revised edition, 1277
Higher Education Overseas, Inter-University Council for : Completion by S. J. Worsley of his term of office as secretary, 1774
  Appointment of I. C. M. Maxwell as secretary, 1774
Higher Plants : Formation of Phosphoserine from 3-Phosphoglycerate in (J. Hanford and Dr. D. D. Davies), 532
  Gibberellic Acid-like Substances in (M. Radley), 1279
Higher Technical Institute, Lisbon : Grant of £1,250 from the Gulbenkian Foundation, Lisbon, to the Organic Chemistry Laboratory, for equipment, 1493
Higher Technological Award : A New (National Council for Technological Awards,) 1345
Higher Technological Education, London and Home Counties Regional Advisory Council for : Bulletin of Special Courses in Higher Technology, including Management Studies and Commerce, 1958-59, Part I, Autumn Term, 842
Higher Technology, including Management Studies and Commerce : Special Courses in (1958-59), Part I, Autumn Term (London and Home Counties Regional Advisory Council for Higher Technological Education Bulletin of), 842
Highkin, Dr. H. R. : Transmission of Phenotypic Variability within a Pure Line, 1460
Highly Sensitive Chemical Dosimeter for Ionizing Radiation (W. A. Armstrong and Dr. D. W. Grant), 747
Hilbert, Dr. G. E. : At the International Starch Conference (Development and Present State of the Starch Industry in the United States), 231
Hilger, Sister M. Inez : Araucanian Child Life and its Cultural Background, *review* by Dr. G. H. S. Bushnell, 76
Hill, Prof. A. V. : Physiology as an Education and as a Career, 1065
Hill, G.A., and others : 3-Ethoxy-4-hydroxybenzoic Acid in Human Urine, 1160
Hill, J., and others : Metamidium, a New Trypanocidal Drug, 1005
Hill, J. M. M. : Time-Span of Discretion in Job Analysis, 998
Hill, Robert (Vann, Leon S., and) : Activation of an Ascorbic Acid Concentrating Mechanism by some Corticosteroids *in vitro*, 458
Hill, Robert M. : Calculation of Absorption Peaks in Thin Metal Films, 1150
Hillis, W. E. : Chemistry of Plant Products (Chemical Aspects of the Sapwood-Heartwood Transformation), 299
  Formation of Condensed Tannins in Plants, 1371
Hillis, W. E., and Carle, Ann : Extractives from Klinki Pine (*Araucaria klinkii* Lauterbach), 1593
Hillis, W. E., and Urbach, Mrs. Gerda : Leuco-Anthocyanins as the Possible Precursors of Tannins, 657
Hilton, Dr. P. J. : Appointed Mason professor of pure mathematics in the University of Birmingham, 158, 359 ; work of, 359
  Differential Calculus, *review* by Prof. T. A. A. Broadbent, 827
Hilsum, C., and Rose-Innes, A. C. : A New Method of Measuring Susceptibility, 1082
Himalayas (Sikkim): Common Medicinal Plants of Darjeeling and the (Dr. K. Biswas), *review* by N. L. Bor, 76
Himwich, Dr. H. E. : Chemical Pathology of the Nervous System (Carbohydrate Metabolism in Mental Disease), 1647
Hinchley Medal for 1957 of the British Association of Chemists awarded to J. Wilson, 1133
Hinchley Memorial Address of the British Association of Chemists (J. Wilson), 1133
Hind, H. G., and McGinn, S. M. : Heparin Content of Adipose Tissue, 117
Hindle, Dr. Edward : The Fifteenth International Congress of Zoology, 434
  A Record 'Zoological Record', *review*, 970
Hinds, Mavis K., and others : Experiments in Numerical Integration, 440
Hindus (High-Caste) : The Twice-Born, a Study of a Community of (Dr. G. Morris Carstairs), *review* by Prof. K. de B. Codrington, 76
Hiner, O. S. : The American Business School, 841
Hinshelwood, Sir Cyril : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
  Some Modern Scientific Themes (Anniversary Address to the Royal Society), 1634
  Re-elected president of the Royal Society, 1641
Hintenberger, Prof. H. (edited by) : Nuclear Masses and their Determination—Proceedings of the Conference held in the Max-Planck-Institut für Chemie, Mainz, 1956, *review* by Dr. G. Dearnaley, 1579
Hinton, Sir Christopher : Nuclear Power and the Engineer, 1047
Hinton, Dr. W. E. : A Reivision of the Australian Chafers, *review*, 350
Hippocampus : Autonomic Functions of the (B. G. Cragg), 675
Hirono, Dr. Iwao : Amoeboid Motility of Fresh Ascites Tumour Cells, 809
Hirsch, Dr. K. A. : Title of professor of pure mathematics in the University of London (at Queen Mary College) conferred on, 158
Hirsch, P. B. : Science in the Use of Coal (Physics and Chemistry of Coal), 24
Hirsch, P. B., and Whelan, M. J. : Mechanical Properties of Whiskers and Thin Films (Strength of Thin Metal Foils with Free Surfaces), 298
Hirschfeld, Dr. M. A. : Institute of Nuclear Science of the Weizmann Institute of Science, Rehovoth, Israel, 494
Hirst, Prof. E. L. : At the Third International Seaweed Symposium (Chemistry of the Polysaccharides of the Brown, Red and Green Algae), 1779
Hirst, W. (Archard, Dr. J. F., and) : Modern Problems in Friction and Lubrication (The Wear of Metals), 981
Hirsutella Species : Extracellular Metabolic Products of a (T. C. Loughheed and Dr. D. M. MacLeod), 114
Hirth, J. P. : Mechanical Properties of Whiskers and Thin Films (Theory of Dislocations in Whiskers), 297
Hisaw, Prof. F. L. : Comparative Endocrinology (Endocrine Basis of Reproductive Adaptations), 774
Histamine : Release of, from Mast Cells by Tissue Extracts (G. T. Archer), 726
  Self-depression of the Subcutaneous Absorption of Drugs due to Release of (Jens Schou), 324
Histamine in Rat Anaphylaxis : Mast Cell and—the Effect of *Haemophilus pertussis* (I. Mota), 1021
L-Histidyl-L-Phenylalanyl-L-Arginyl-L-Tryptophyl-Glycine and its Melanocyte-stimulating Activity : A New Synthesis of the Pentapeptide (Dr. R. Schwyzer and Prof. Choh Hao Li), 1669
Histochemical Changes in Kidneys and Adrenals of Rats made Hypertensive by the Goldblatt Method (Dr. Antonio Pasqualino and Prof. Geoffrey H. Bourne), 1426
Histochemical Study of the Nasal (Supra-Orbital) Gland of the Duck (Dr. R. J. Scothorne), 732
Histoire de la Science (publié sous la direction de Maurice Daumas), *review* by Dr. A. Armitage, 142
Histologie von *Thermosbaena mirabilis* : Anatomie und (Dr. Rolf Siewing), *review* by Dr. Isabella Gordon, 1186
Historic Aircraft, Nash Collection of : To be repaired and maintained by members of the Royal Aeronautical Society and the Society of Licensed Aircraft Engineers, 1131
Historical Documents (American Philosophical Society, *Proceedings*, Vol. 101, No. 6), 20
History : Science and (Prof. Douglas McKie), 1774
History of the British Iron and Steel Industry from *c.* 450 B.C. to A.D. 1775 (Dr. H. R. Schubert), *review* by Prof. F. C. Thompson, 349
History of a Decipherment, *review* by M. I. Finley, 1627
History of Iron in Britain, *review* by Prof. F. C. Thompson, 349
History of Mathematics from Antiquity to the Beginning of the Nineteenth Century (Dr. J. F. Scott), *review* by Prof. T. A. A. Broadbent, 211
History of Technology (edited by Charles Singer, E. J. Holmyard, A. R. Hall and Trevor I. Williams), Vol. 3, From the Renaissance to the Industrial Revolution *c.* 1500-*c.* 1750, *review* by K. R. Gilbert, 3
History of Thermometry, 1487
History (Agricultural), in Holland (G. E. Fussell), 845
History and Philosophy of Science and Technology (Electricity Council), 1349
History and Prehistory (British) : Mammals in (Mammal Society of the British Isles Symposium on), 1133
Hitchborn, Dr. J. H. : Virus and Vegetable, *review*, 752
Hoar, Prof. W. : Comparative Endocrinology (Endocrine Factors in Ecological Adaptation), 774
Hoare, Dr. C. A. : Veterinary Protozoology, *review*, 758
Hoare, Dr. D. E., and others : Thermal Decomposition of Hydrogen Peroxide Vapour, 654
Hoare, Dr. F. E. : Measurements of Conduction at Low Temperatures, 84
Hoare, Dr. J. P. (Schuldiner, Dr. S., and) : Charge Transfer Processes (Mechanism of Cathodic Electrochemical Reactions—Transport of Hydrogen through Palladium-clad Electrodes), 1354
Hobbiger, Dr. F., and others : New Potent Reactivators of Acetocholinesterase inhibited by Tetraethyl Pyrophosphate, 1498
Hobbiger, Dr. F., and Sadler, Dr. P. W. : Protection by Oximes of *bis*-Pyridinium Ions against Lethal Di*iso*propyl Phosphonofluoridate Poisoning, 1672
Hobbs, H. H., and others : Mechanical Properties of Whiskers and Thin Films (Creep of Vapour-grown Zinc and Cadmium Whiskers), 296
Hobin, T. P. : Free Radical Stabilization, 1497
Hobson, Dr. J. D. : Appointed lecturer in chemistry at the University of Birmingham, 158
Hobson, Dr. P. N., and others : Lipolysis in the Rumen, 1511
Hodes, Prof. M. E., and others : Possible Use of Synthetic Surface-active Agents for the Preparation of Tumour Cell Nuclei, 529
Hodges, Dr. J. R., and Vernikos, Joan : Influence of Circulating Adrenocorticotrophin on the Pituitary Adrenocorticotrophic Response to Stress in the Adrenalectomized Rat, 725
Hodgkin, Prof. A. L. : Awarded a Royal Medal for 1958 of the Royal Society, 1412, 1632 ; work of, 1632
Hodgson, Dr. W. C. : The Herring and its Fishery, *review* by Dr. H. O. Bull, 6
Hodson, Dr. F. : Appointed to the newly created chair of geology in the University of Southampton, 358 ; work of, 358
Hofmann, Dr. W. : Physics of Ice Movement (Glacier Flow), 1562
Hofstadter, Robert, and Schiff, Leonard I. (edited by Beckerley, James G., in association with) : Annual Review of Nuclear Science, Vol. 7, *review* by Dr. F. Mandl, 489
Hogben, Prof. C. Adrian M. : The Teleostean Swim-Bladder, 1622
Höie, Prof. J., and Jensen, A. : At the Third International Seaweed Symposium (Use of Seaweed Meal as a Supplement in Animal Feeding-stuffs), 1780
Hoinkes, Prof. H. : Antarctic Research (Radiation), 287
Hokkaido : On the Laminariaceae of (Dr. K. Miyabe), now available in an English translation, 228
Holden, H. W., and Robb, Prof. J. C. : Mass Spectrometry of Substances of Low Volatility, 340
Holden, J. T., and others : A New Type of Titanium Getter Pump, 851
Holečková, Dr. E. (Hruza, Dr. Z., jointly with) : Awarded a Ciba Foundation Award for 1958 for Research in Ageing, 19
Holgate, J. A., and Cambridge, Dr. G. W. : Responses of the Anterior Retractor Muscle of the Byssus of *Mytilus edulis*, 34
Holgate, W., and others : Accumulation of Strontium-90 in Dental Tissues, 1294
Holland, B. H., and others : Science in the Use of Coal (Carbonization of Coal), 25
Holland, L., and others : A New Type of Titanium Getter Pump, 851
Holland, R., and others : Emission and Absorption Spectra of NCO and NCS, 336

Holland : Agricultural History in (G. E. Fussell), 845
Hollerith Computer Training Centre : Bradenham Manor leased by the National Trust to the British Tabulating Machine Co., Ltd., for use as a, 563
Hollingsworth, Miss D. F. : Nutrition and Teeth, 1704
Hollis, Prof. John P. : Induced Swarming of a Nematode as a Means of Isolation, 956
Holloway, D. G. : Mechanical Properties of Whiskers and Thin Films (Importance of the Surface Condition), 297
Holloway, J. H., and others : Comparison of Caesium Frequency Standards of Different Construction, 41
Holloway, P. J. : Awarded a Rockefeller Travelling Fellowship in Medicine for 1958-59, 634
Holmberg, R. : Free Radical Stabilization, 1497
Holmes, Dr. E. : Pressure Welding of Metals, 638
Holmes, Matthew : Appointed to a lectureship in physiology at the University of Glasgow, 1644
Holmes, William, and others : Localization of Interaction Sites in Multi-Component Transfer Systems—Theorems derived from Analogues 1190
Holmyard, Dr. E. J., and others (edited by) : A History of Technology, Vol. 3, From the Renaissance to the Industrial Revolution c.1500-c.1750, *review* by K. R. Gilbert, 3
Holt, S. J. (Beverton, R. J. H., and) : On the Dynamics of Exploited Fish Populations, *review* by Dr. E. B. Worthington and J. G. Skellam, 686
Holy Office : Galileo and the, *review* by Dr. E. J. Dijksterhuis, 7
Homage to the Herring, *review* by Dr. H. O. Bull, 6
Homogenates (Rat-Liver) : An Anticlumping Factor for Mitochondria in the Supernatant Fraction of (Dr. J. St. L. Philpot and Dr. J. E. Stanier), 1167
Homografts in Rabbits : Conditions which Eliminate Inflammation to (Dr. Richard H. Andresen, Dr. Clarence W. Monroe, Dr. George M. Hass and Dr. Dorothy A. Madden), 1452
Homografts (Cartilage) : Antigenicity and Survival of (M. B. L. Craigmyle), 1248
Homografts (Skin) : Tolerance of, related to Fatal Disease in Separated Rat Parabionts (Dr. B. Nakič and V. Silobrčić), 264
Homologous and Heterologous Hosts : Effect of Viral Infection and Cortisone upon Tumour Growth in (Dr. T. Kuwata, Y. Yasimura and M. Kanisawa), 1678
Hong Kong and the New Territories : A Survey of Land Use in (Dr. Thomas R. Tregear), 1285
Hood of the Hooded Seal, *Cystophora cristata* Erxl. (Björn Berland), 408
Hooded Seal, *Cystophora cristata* Erxl. : The Hood of the (Björn Berland), 408
Hooge, F. N., and others : Synthesis and Structure of 2,6-Dihalo-Benzenone-Indophenylacetate and Benzenone-Indo-3',5'-Dihalo-Phenylacetate, 1017
Hooijer, Dick A. (Singer, Dr. Ronald, and) : A Stegolophodon from South Africa, 101
Hooper, J. H. D. : Bat Erosion as a Factor in Cave Formation, 1464
Hoopes, Jr., John W. (edited by Drew, Thomas B., and) : Advances in Chemical Engineering, Vol. 2, *review*, 822
Hoover, Comdr. G. W. : Space Medicine (The Man–Machine System in Space Vehicles), 1645
Hope, J., and others : Horizontal Drift Measurements in the Ionosphere near the Equator, 1363
Hopf, H. S., and Taylor, R. T. : Role of Cholinesterase in Insecticidal Action, 1381
Hopkins, L. M. T. : Study of Metals and Alloys above 1,200°C. (Determinations of the Creep Properties of Ceramics and High Melting-point Metals in Air and *in vacuo*), 1419
Hopkins Prize of the Cambridge Philosophical Society awarded to Prof. A. Salam, 1644
HORACE, a Zero Energy Reactor, at the Atomic Weapons Research Establishment, Aldermaston, 19
Horešovsky, Oldřich, and others : Antituberculosis Factors of Milk, 884
Horio, Takekazu, and others : Preparation of Crystalline *Pseudomonas* Cytochromes$_{551}$ from *Pseudomonas aeruginosa*, 1307
Horizon : Influence of the Semi-Permanent Low-Level Ocean Duct on Centimetre Wave Scatter Propagation beyond the (F. A. Kitchen, W. R. R. Joy and E. G. Richards), 385
Horizontal Displacement of the Body : Analogies between the Compensatory Responses of Fish and Crustacea to (D. H. A. Marr), 1621
Horizontal Drift Measurements in the Ionosphere near the Equator (N. J. Skinner, J. Hope and R. W. Wright), 1363
Hörl, E. M. : Free Radical Stabilization, 1497
Horlock, Dr. J. H. : Appointed to the Harrison chair of mechanical engineering in the University of Liverpool, 18 ; work of, 18
Hormonal Research : Biochemical Contributions to Endocrinology—Experiments in (Sir Charles Dodds), *review* by Dr. A. E. Kellie, 484
Hormonal Secretions : Activation of—Precorticotropin (P. R. Dasgupta and Prof. F. G. Young), 32 ; A Crustacean Chromactivator (Dr. D. B. Carlisle), 33
Hormone (Adrenocorticotropic), in the Rat : Influence of the Thymus on the Reaction of the Adrenal to (Dr. J. Comsa), 57
Hormone (Anterior Pituitary Growth) : Influence of the Thymus upon the Reaction of the Rat to (Dr. J. Comsa), 728
Hormone (Antidiuretic) : Role of Hyaluronidase in the Re-Absorption of Water in Renal Tubules—the Mechanism of Action of the (A. G. Ginetzinsky), 1218
Hormone (Thyrotropic), and Triiodothyronine : Differences between the Early Metabolic Effects of (Dr. B. S. Hetzel, J. S. Charnock and B. F. Good), 1166
Hormones, *review* by Dr. A. E. Kellie, 484
Hormones in Blood, *review* by Prof. F. G. Young, 901
Hormones in Panting and Sweating Animals : Heat, Salt and (Prof. W. V. Macfarlane, Kathleen Robinson, Beth Howard and Rosemary Kinne), 672
Hormones (Mammalian) : Spawning Catfish with (Dr. L. S. Ramaswami and A. B. Lakshman), 122
Horne, T., and others : Preservation of Grass for Winter-feeding by Radiation Sterilization, 331
Hornsey, Mrs. Shirley (Ebert, Dr. Michael, and) : Effect of Nitrous Oxide on the Radiosensitivity of Mouse Ehrlich Ascites Tumour, 1240
Horological Society, Antiquarian : Meeting in Birmingham, 771
Horrocks, John Christopher : Awarded the third prize in the 1958 *Endeavour* Essay Competition, 632
Horses : Serum Protein Variations in (Dr. G. C. Ashton), 1029
Horsnell, A. M. : Nutrition and Teeth (Gross Caries in Young Children), 1705
Horton, L. : Science in the Use of Coal (Physics and Chemistry of Coal), 24
Hosking, Dr. J. S., and Hueber, Dr. H. V. : Permanent Moisture Expansion of Clay Products on Autoclaving, 1142
Hosking, K. F. G. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1137
Hospital of Dona Estaphania, Lisbon : Grant of £1,080 from the Gulbenkian Foundation, Lisbon, for scientific meetings organized by the head of the Department of Child Health, 1493
Hospital (North Shore) of Sydney : Grant of up to £17,000 from the Wellcome Trust, to build and equip laboratories for experimental medicine and surgery, 1204
Hospital Services in Britain (House of Lords Debate on), 571
Host of Larval Nematodes : *Sagitta* as a, including a New and Unique Type of Cercaria (Dr. Ben Dawes), 960
Host Specificity in *Xanthomonas* (D. W. Dye), 1813
Host—Parasite Relationships (British Association for the Advancement of Science, Section M (Agriculture), Discussion on), 1352
Hoste, J., and others : Neutron Activation Analysis using an Internal Standard, 600
Hosts (Homologous and Heterologous) : Effect of Viral Infection and Cortisone upon Tumour Growth in (Dr. T. Kuwata, Y. Yasumura and M. Kanisawa), 1678
Hottentot Mole-Rat, *Cyrptomys hottentotus* Lesson, 1826 : Albinism in the Common or (Peter St. J. Turnbull-Kemp), 63
Houghton, Peggy B., and Martin, Prof. N. H. : Immuno-chemical Observations on the Intimate Structure of Human Albumin, 329
Hours of Labour : Time Rates of Wages and (Ministry of Labour and National Service), twelfth edition, 770
House of Commons : Debate on Plutonium from Civil Nuclear Power Stations, 292
  Debate on the Grey Seal, 561
  Second reading of the Development of Inventions Bill, 1484
House of Lords : Debate on the Aircraft Industry, 226
  Second reading of the Distribution of Industry (Industrial Finance) Bill, 293
  Second reading of the Opencast Coal Bill, 505
  Debate on the Overseas Information Services, 570
  Debate on the Hospital Services in Britain, 571
House Sparrow, *Passer domesticus* : Photoperiodic Response of the (Dr. L. T. Threadgold), 407
Houseflies Susceptible and Resistant to DDT : Dosage–Mortality Curves for (K. Wilson-Jones and G. Davidson), 403 ; (Dr. P. S. Hewlett), 404
Housefly Larvae : Fate of Beta-Sitosterol in (Dr. Ernst D. Bergmann and Zwi H. Levinson), 723
Housing and Local Government, Ministry of : Memorandum on the Industrial Provisions of the Clean Air Act 1956, 226
Houssay, Prof. B. : Comparative Endocrinology (Endocrine Basis of Reproductive Adaptations), 774
Howard, Beth, and others : Heat, Salt and Hormones in Panting and Sweating Animals, 672
Howard, Dr. H. W. : Transformation of a Monochlamydius into a Dichlamydius Chimaera by X-Ray Treatment, 1620
Howard, N. R. : Solid State Physics, 568
Howarth, C. I., and Treisman, M. : Lowering of an Auditory Threshold produced by a Light Signal occurring after the Threshold Stimulus, 1093
Howden, Dr. G. F., and Hunter-Jones, P. : An Artificial Diet for the Laboratory Rearing of Locusts, 1527
Howe, Rt. Hon. C. D. : Industry and Government in Canada (Messel Lecture of the Society of Chemical Industry), 1422
Howell, A. R. : Promoted to Deputy Chief Scientific Officer in the Scientific Civil Service, 991 ; work of, 991
Howell, H. T. (Bagenal, T. B., and) : Glasgow University Expedition to North Rona and Sula Sgeir, 775
Howes, Dr. F. N. : Tea, *review*, 1577
Howitt, Dr. F. O. : Awarded the Service Medal of the Textile Institute, 1279
Howson, D. P. : Appointed lecturer in electrical engineering at the University of Birmingham, 990
Hoyle, G. : Reports of H.M. Inspectors of Mines under the Coal Mines Act (1911) for 1956—North Western Division, 637
  Reports of H.M. Inspectors of Mines and Quarries under the Mines and Quarries Act (1954) for 1957—North Western Division, 638
Hoyle, Dr. Graham : Comparative Physiology of the Nervous Control of Muscular Contraction, *review* by Dr. J. W. S. Pringle, 416
Hoyle, Dr. R. D'A. : Appointed to the University of London readership in mechanical engineering at the Imperial College of Science and Technology, 363
Hradec, Jan : Nature of the Carcinogenic Substance in Egg-Yolks, 52
Hrubešová, Miroslava (Hašková, Vera, and) : Part played by Deoxyribonucleic Acid in Transplantation Immunity, 61
Hruška, A., and others : Polarization of Light of the Comets Arend-Roland (1956*h*) and Mrkos (1957*d*), 331
Hruza, Dr. Z., jointly with Holečková, Dr. E. : Awarded a Ciba Foundation Award for 1958 for Research in Ageing, 19
Hsia, David Yi-Yung, and others : The Heterozygous Carrier in Galactosaemia, 1389
Hsu, Robert Y. H., and others : Rennin Coagulation of Enzymatically Dephosphorylated Casein, 798
Huang, Irene, and others : The Heterozygous Carrier in Galactosaemia, 1389
Hubert, A., and others : Carbon Dioxide Catalysis of the Formation of Pyroglutamic Acid, 259
Hübscher, Dr. G., and others : *In vitro* Incorporation of Serine labelled with Carbon-14 into Mitochondrial Phospholipids, 1806
Huby, Dr. R. : Appointed senior lecturer in theoretical physics in the University of Liverpool, 22
Hudgins, Dr. : Modern Educational Treatment of Deafness, 919
Hudson, Prof. J. P. : Effects of Weather on Plant Behaviour, 1337
Hudson, L. : Undergraduate Academic Record of Fellows of the Royal Society, 1326

Hudson, L. (Gross, C., and) : Undergraduate Academic Record of Fellows of the Royal Society, 787, 1178
Hudson, Dr. P. S. : Fodder Plants, 702
Hueber, Dr. H. V. (Hosking, Dr. J. S., and) : Permanent Moisture Expansion of Clay Products on Autoclaving, 1142
Huggins, C. : Progress in Cancer Research (Hormones), 364
Hughes, Alec M. : Appointed visual aids officer of the British Association for the Advancement of Science, 1133
Hughes, D. J., and others (edited by) : Selected Papers from the 1st Nuclear Engineering and Science Congress, held at Cleveland, Ohio, Vol. 1, Problems in Nuclear Engineering ; Vol. 2, Reactor Operational Problems, *review* by B. Cutts and G. R. H. Geoghegan, 4
Hughes, Prof. E. D. : Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy, 762
  Theoretical Organic Chemistry (Researches on the Mechanism of Nitration), 1342
Hughes, G. (Bickerdike, R. L., and) : Study of Metals and Alloys above 1,200°C. (Vacuum-quenching Furnace to examine the Titanium-rich End of the Titanium-Carbon System between 1,558°C. and 1,763°C.), 1418
Hughes, I. M. (Mandel, S. P. H., and) : Change in Mean Viability at a Multi-allelic Locus in a Populaton under Random Mating, 63
Hughes, Ian S. : Appointed to a lectureship in natural philosophy at the University of Glasgow, 1644
Hughes, Dr. R. D. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
Hughes, W. J. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1136
Hughes Medal for 1958 of the Royal Society awarded to Prof. E. N. da C. Andrade, 1344, 1633
Huisgen, Prof. R. : Theoretical Organic Chemistry (Role of 'Benzyne' Intermediates in rearrangements observed during Nucleophilic Aromatic Substitutions with Alkali Amides or Organolithium Compounds), 1342
Huisman, Dr. T. H. J., and others : Sheep Haemoglobins, 171
Huitema, H. (Dekker, T., and) : Importance of Zinc for the Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* and Large-scale Production of Tuberculin Purified Protein Derivative, 1387
Huizing, Prof. : Modern Educational Treatment of Deafness, 920
Hull, G. W., and others : Development of a Low-Temperature Thermometer, 770
Hulse, C., and others : Science in the Use of Coal (Carbonization of Coal), 25
Hulthen, E. : At the ninth General Physics Conference of the Swedish National Committee for Physics (The proposed New Physics Building for the University of Stockholm), 698
Hultin, T. (Perlmann, P., and): Autoradiographic Analysis on Agar Plates of Labelled Antigens from Rat Liver, 1530
Hultquist, Gösta T. : Hypoglycaemic Effect of Monoiodoacetic Acid and Iodoacetamide in Rats, 318
Human Adrenal Cortex : Microvilli of the Cells of the (I. A. Carr), 607
Human Adult Peripheral Blood : Establishment of Permanent Cell Strains from (Dr. John Paul), 808
Human Albumin : Immuno-chemical Observations on the Intimate Structure of (Peggy B. Houghton and Prof. N. H. Martin), 329
Human Blood : Isolation from, of a New Substance associated with Fat Transport Activity (Dr. W. S. Reith and M. J. Thomas), 604
Human Blood Serum : Calcium and Magnesium Content of Normal (Dr. G. Hunter), 263
Human Cancer Cells in Tissue Culture : Action of Hydrocortisone on Respiration of (Henry Grossfeld), 35
Human Cementum : Collagen in, as shown by Electron Microscopy (C. H. Tonge and E. H. Boult), 459
Human Diet in the United Kingdom : Deposition of Strontium-90 and its Content in Vegetation and in (Dr. R. Scott Russell), 834
Human Haemoglobin *D* : Three Varieties of (S. Benzer and Dr. V. M. Ingram, and Dr. H. Lehmann), 852
Human Hand : The—a Psychological Study (Prof. Géza Révész), translated by John Cohen, *review* by Prof. R. C. Oldfield, 1042
Human Leucocytes : Separation of, from Blood (Dr. Peter Wildy and Dr. Mark Ridley), 1801
Human Liver Slices *in vitro* : Metabolism of 16-Oxooestrone by (Dr. H. Breuer and R. Knuppen), 1512
Human Lymphocytes (Normal and Leukaemic) : Cytotoxicity of Heterologous Sera to (Robert Schrek). 724
Human Milk : Correlation between the Fat and the Protein Content of (Dr. O. A. Roels), 673
Human Mind : Evolution of the, *review* by Prof. H. J. Fleure, 1572
Human Nature : The Hand and, *review* by Prof. R. C. Oldfield, 1042
Human Operator and High-Speed Flight (A. Cadman Clinton), 1562
Human Ovarian Follicular Fluid : Concentration in the, of Radioactive Tracers and Drugs circulating in the Blood (Prof. Kurt N. von Kaulla, Jerry K. Aikawa and John D. Pettigrew), 1238
Human Plasma Components : High Resolution of, by Starch Gel Electrophoresis (Dr. J. M. Fine, J. Loeb and E. Waszczenko-z), 452
Human Relations in Industry : Final Report of the Joint Committee on (1954-57), and Report of the Joint Committee on Individual Efficiency in Industry (1953-57), (Department of Scientific and Industrial Research), 1539
Human Serum : Difference between Lipoprotein Lipase and Post-Heparin Esterase in (S. Novák and Dr. J. Skořepa), 117
  Separation and Characterization of Two Coeruloplasmins from (Dr. Lars Broman), 1655
Human Skill : Ageing and—a Report centred on work by the Nuffield Unit for Research into Problems of Ageing (A. T. Welford), *review* by Prof. L. S. Hearnshaw, 826
Human Sterility and Fertility, *review* by Dr. Kenneth Walker, 1573
Human Subject : Weight Reduction in the, *review* by Prof. Charles H. Gray, 685
Human Thyroids : Iodine-131 in, following the Windscale Reactor Accident (G. Maycock and J. Vennart), 1545
Human Urinary Gonadotrophins : Differences between Duplicate Assays of (F. J. Cunningham and P. S. Brown), 1238
Human Urine : 3-Ethoxy-4-hydroxybenzoic Acid in (G. A. Hill, J. Ratcliffe and P. Smith), 1160
Human and Animal Mycology, International Society for : Meeting in Lisbon, 1648
Humanism of Science : The New (Frank Greenaway), 1642
Humanities : Science for Students of the, *review* by J. A. Ratcliffe, 348
Hume-Rothery, Prof. W. : Study of Metals and Alloys above 1,200°C., 1418
Humidity (Relative), and Precipitation for the World : Tables of Temperature, (Meteorological Office), 361
Humphreys, R. H. (Parkin, P. H., and) : Acoustics, Noise and Buildings, *review* by T. Somerville, 1258
Humphries, Dr. E. C. : Root–Shoot Relationships, 563
  Mineral Requirements of Plants and Animals, *review*, 621
Humus Decomposition : Further Aspects of (H. F. Birch), 1172
Hundred Years of Chemical Industry, *review* by J. L. S. Steel, 347
Hunt, A. G., and others : Observations on the Explosion at Ripple Rock, 1597
Hunt, S.E., and others : Measurement of the Energy Spectrum of Protons emitted from the Fusion Reaction in SCEPTRE III, 216
Hunter, Dr. G. : Calcium and Magnesium Content of Normal Human Blood Serum, 263
Hunter, Irvine J. : Striations of Skeletal Muscle, 1107
  Importance of Taxonomy in Biological Investigations, 1818
Hunter, Dr. W. Russell : Aspects of the Evolution of Form and Function in Molluscs, 998
Hunter-Jones, P. (Howden, Dr. G. F., and) : An Artificial Diet for the Laboratory Rearing of Locusts, 1527
Huppert, J, and Sanders, F. K. : An Ineffective 'Ribonucleic Acid' Component from Tumour Cells infected with Encephalomyocarditis Virus, 515
Hurcombe, Lord : Presidential Address at the inaugural meeting of the Council for Nature, 701
Hurlimann, Dr. A. A. : Awarded a Ciba Foundation Award for 1958 for Research in Ageing, 19
Hurst, H. M. : Ecology of Soil Fungi, 1559
Hurst, Dr. J. E. : Awarded the Bronze Medal of the Worshipful Company of Founders, 1777
Hush, N. S. : Ions of the Transition Elements (Variation in Internuclear Separation for the Halides, Oxides, etc., of the Transition Metals of the First Long Period), 1350
Hussey, G. : Factors controlling Seed Germination in the West African Oil Palm, *Elaesis guineensis* (Jacq.), 699
Hutchinson, Franklin, and others : Changes in the Sensitivity of Enzymes in the Dry State to Radiation, 1506
Hutchinson, Prof. J. : An Atlas of Airborne Pollen Grains, *review*, 1117
Hutton, Geoffrey (Sofer, Cyril, and) : New Ways In Management Training, *review* by T. H. Hawkins, 214
Huxley, Dr. H. E. : Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy (Structural Changes during Contraction of Striated Muscle), 763
Huxley, Sir Julian : Darwin–Wallace Memorial Lecture, 86
  The Emergence of Darwinism (Inaugural lecture at the fifteenth International Congress of Zoology), 434
  The Story of Evolution, *review* by T. H. Hawkins, 1763
Hyaluronate (Sodium) : Crystalline (Prof. Frederick A. Bettelheim), 1301
Hyaluronidase : Effect of, on Capillary Permeability, Lymph Flow and Passage of Dye-labelled Protein from Plasma to Lymph (Dr. G. Szabó and S. Magyar), 377
  Role of, in the Re-Absorption of Water in Renal Tubules—the Mechanism of Action of the Antidiuretic Hormone (A. G. Ginetzinsky), 1218
Hybrid and Resistant Strains of *Anopheles gambiae*, Giles (Susceptible,) : Effect of Simulated Field Deposits of Gamma-BHC and Dieldrin on (G. Davidson and D. G. Pollard), 739
Hyde, H. Reports of H.M. Inspectors of Mines under the Coal Mines Act (1911) for 1956—Northumberland and Cumberland Division, 637
  Reports of H.M. Inspectors of Mines and Quarries under the Mines and Quarries Act (1954) for 1957—Northumberland and Cumberland Division, 638
Hyde, H. A., and Adams, K. F. : An Atlas of Airborne Pollen Grains, *review* by Dr. J. Hutchinson, 1117
Hydén, H., and others : Incorporation of Orotic Acid-^{14}C and Lysine-^{14}C in Regenerating Single Nerve Cells, 801
Hydra : Effect of Analogues of Glutathione on the Feeding Reaction of (E. E. Cliffe and Dr. S. G. Waley), 804
Hydrocarbons (Polycyclic): Oxidative Metabolism of, by Soil Pseudomonads (H. N. Fernley and Prof. W. C. Evans), 373
Hydrocortisone : Action of, on Respiration of Human Cancer Cells in Tissue Culture (Henry Grossfeld), 35
  Effect of, on Mitochondrial Membrane Permeability (Dr. C. H. Gallagher), 1315
  Influence of, on the Action of Sodium on Isolated Rabbit Auricles (Dr. T. H. Rindani), 1521
Hydrogen (Atomic) : Oxidation of Ferrous Ion in Aqueous Solution by (Gideon Czapski and Prof. Gabriel Stein), 598
Hydrogen (Molecular) : Anomalous Dissociation of, by Electron Impact (L. A. Edelstein), 932
Hydrogen Atoms : Production of High Concentrations of (K. R. Jennings and Dr. J. W. Linnett), 597
Hydrogen Bond in Potassium Hydrogen Fluoride : The Problem of Negative Anharmonicity and the Nature of the (R. Blinc), 1016
Hydrogen Bonding (Intramolecular) : Determination of Hammett Sigma Constants by (A. T. Shulgin and A. W. Baker), 1299
Hydrogen Fluoride (Potassium) : The Problem of Negative Anharmonicity and the Nature of the Hydrogen Bond in (R. Blinc), 1016
Hydrogen Ion Concentration and Activity, *review* by Prof. H. T. S. Britton, 1258
Hydrogen Overpotential on Germanium Electrodes (V. R. Erdélyi and Mino Green), 1592
Hydrogen Peroxide : Effect of, on Transplanted Rat and Mouse Tumours (Dr. Kanematsu Sugiura), 1310
  Experimental Chemotherapy of Tumours with (Dr. M. Chorazy, A. Gettlich, L. Góral, B. Koloczek, E. Molawka, B. Penar and Z. Szweda), 395
Hydrogen Peroxide Ingestion and the Growth of Rats (Lester Hankin), 1453
Hydrogen Peroxide Vapour : Thermal Decomposition of (Dr. D. E. Hoare, J. B. Protheroe and Prof. A. D. Walsh), 654
Hydrogen Peroxide and Cancer (Dr. Grace M. Jeffree), 892
Hydrology (Scientific), International Association of (Commission for Snow and Ice) : Symposium on the Physics of Ice Movement, 1560

Hydrolysis (Cholinesterase), of Dihydromurexine : Inhibition of, by Lysergic Acid Diethylamide and its 2-Bromo Derivative—a Selective Relationship (Dr. I. I. A. Tabachnick and M. E. Grelis), 935
Hydromedusae New to the British List from the Firth of Clyde (C. Edwards), 1564
Hydroxyamino-Acids (New), in Plants and their Identification—Hydroxyvaline in *Kalanchoe daigremontiana* (Dr. J. K. Pollard, Dr. E. Sondheimer and Prof. F. C. Steward), 1356 ; O-acetylhomoserine in *Pisum* (Dr. N. Grobbelaar and Prof. F. C. Steward), 1358
3-Hydroxyanthranilic-Acid Oxidase (Rat Liver): Effect of Diphosphopyridine Nucleotide on the Inhibition of, by 2-Acetylaminofluorene and N-2-Fluorenyl-diacetamide (Prof. E. Quagliariello, S. Auricchio, E. Rinaldi and A. Rubino), 1744
16β-Hydroxyoestrone, a Metabolite of Œstradiol in Man (Barry T. Brown, Jack Fishman and Dr. T. F. Gallagher), 50
16β-Hydroxyoestrone from the Urine of Pregnant Women : Isolation of (D. S. Layne and Prof. G. F. Marrian), 50
Hydroxyproline : ^{14}C-Proline and, in the Protein Metabolism of Plants—an Episode in the relation of Metabolism to Cell Growth and Morphogenesis (Prof. F. C. Steward and Dr. J. K. Pollard), 828
  A Rapid Paper Chromatographic Procedure for the Quantitative Determination of (Henry R. Roberts, Michael G. Kolor and Wesley Bucek), 1602
8-Hydroxyquinoline, Pyridine-N-oxide-2-thiol and Sodium Dialkyldithiocarbamates, and their Copper Complexes : Fungitoxic Action of (A. Kaars Sijpesteijn and M. J. Janssen), 1313
5-Hydroxytryptamine : Proceedings of a Symposium held in London, 1957 (edited by Dr. G. P. Lewis), *review* by Prof. D. C. Harrison, 898
  Radioprotective Action of (H. A. S. van den Brenk and Kathleen Elliott), 1506
5-Hydroxytryptamine subjected to various Simple Treatments : Relative Stability of Adrenaline, Noradrenaline and (Daphne Joyce), 463
5-Hydroxytryptamine and Hyperglycaemia (Dr. G. B. West), 182
5-Hydroxytryptophan : Hyperglycaemia produced in Rabbits by (Prof. H. Konzett), 1168
Hydroxyvaline in *Kalanchoe daigremontiana* (New Hydroxyamino-Acids in Plants and their Identification), (Dr. J. K. Pollard, Dr. E. Sondheimer and Prof. F. C. Steward), 1356
Hygiene and Public Health in Europe : The Teaching of (Prof. F. Grundy and Prof. J. M. Mackintosh), *review* by Prof. Thomas McKeown, 619
Hynek, J. A., and others (compiled by) : Orbital Data and Preliminary Analyses of Satellites 1957α and 1957β, 1062
Hynes, Dr. H. B. N. : Appointed senior lecturer in zoology in the University of Liverpool, 22
  Effects of Pollution on Living Material (Biological Effects of Water Pollution), 1209
Hyperchromicity and Nucleic Acids (Dr. A. M. Michelson), 1502
Hypercircle in Mathematical Physics (Prof. J. L. Synge), *review* by Prof. D. N. de G. Allen, 1695
Hyperglycaemia : 5-Hydroxytryptamine and (Dr. G. B. West), 182
  Production of Glucose by the Liver during (Robert Steele and Paul A. Marks), 1444
Hyperglycaemia produced in Rabbits by 5-Hydroxytryptophan (Prof. H. Konzett), 1168
Hypersensitivity : Role of, in Experimental Staphylococcal Infection (Dr. J. Johanovsky), 1454
Hypersonic Shock Waves : Radio Observations of (Dr. J. S. Hey, J. T. Pinson and P. G. Smith), 1220
Hypertension in Rats : Inherited (Sir Horace Smirk and William H. Hall), 727
Hypertensive by the Goldblatt Method : Histochemical Changes in Kidneys and Adrenals of Rats made (Dr. Antonio Pasqualino and Prof. Geoffrey H. Bourne), 1426
Hyperthyroid Rat : Selenium and Liver Necrosis in the (Dr. K. Aterman), 1514
Hypervitaminosis A : Effect of Vitamin B Complex on the Teratogenic Activity of (Dr. J. W. Millen and Dr. D. H. M. Woollam), 940
Hypoglycaemic Effect of Monoiodoacetic Acid and Iodoacetamide in Rats (Gösta T. Hultquist), 318
Hypothalamic Extract : Influence of a Crude, on the Acid Phosphatase Activity of Rat Pituitaries (Prof. J. Charvát, V. Schreiber and V. Kmentová), 62
Hypothesis of Developmental Selection (J. Langridge), 20
Hypothesis (Peroxide Accumulation), of Isoniazid Action : Rejection of the (Dr. Frank Winder), 565

IANNACCONE, Dr. Angelo, and Cicchella, Dr. Giuseppe : Effect of Benzene on Rat Thyroid, 669
Ice Crystals : Mode of Growth of, in Air and other Gases (K. Isono), 1221
Ice Movement : Physics of (Commission for Snow and Ice of the International Association of Scientific Hydrology Symposium on), 1560
Ideas (New), about Muscles, *review* by Prof. J. D. Bernal, 345
Identification : New Hydroxyamino-Acids in Plants and their—Hydroxyvaline in *Kalanchoe daigremontiana* (Dr. J. K. Pollard, Dr. E. Sondheimer and Prof. F. C. Steward), 1356 ; O-acetylhomoserine in *Pisum* (Dr. E. Grobbelaar and Prof. F. C. Steward), 1358
Identification of Meprobamate by Adsorption Chromatography on Chromatoplates (Dr. Angelo Fiori and Dr. Mario Marigo), 943
Identification with Paratose : Synthesis of 3,6-Dideoxy-D-*ribo*-hexose (3,6-Dideoxy-D-glucose) and its (C. Fouquey, J. Polonsky, Dr. E. Lederer, O. Westphal and O. Lüderitz), 944
Identity of Ions in some Flames (J. Deckers and Prof. A. van Tiggelen), 863
Identity of the Tetanus Toxin Receptor in Nervous Tissue (Dr. W. E. van Heyningen), 1809
Iggo, Dr. A. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1642
Iglesias, Rigoberto, and others : Behaviour of 19-nor-Progesterone and 19-nor-Ethinyltestosterone in the Liver of the Guinea Pig, 1450
Illinois Institute of Technology (Armour Research Foundation of the) : 1958 Computer Applications Symposium, 918
Illumination (Seasonal), of a Circumpolar Earth Satellite at its Extreme-Latitude Orbit Point (Dr. W. N. Abbott), 651
Im, Yong Ae, and Busch, Prof. Daryle H. : Electron Transfer and Thermal Racemization of Ethylenediaminetetraacetatocobaltate (III), 1368
Image' (A 'Solid-) Microscope (R. L. Gregory and P. E. K. Donaldson), 1434
Imaginal Differentiation in the Silkworm : Effect of Larval Brain on the (Masatoshi Kobayashi), 110
Imbert, B. : Antarctic Research (The Topography of the Sub-Glacial Continent), 286 : (Future Research in the Antarctic), 289
Imidazole Compounds and Creatine : Effect of Diet on, in Chinook Salmon (Dr. A. Lukton), 1019
Immediate Memory : Decay of, with Age (D. C. Fraser), 1163
Immigration into Britain : West Indian (Colin Bertram), 1060
Imms, Dr. A. D. : A General Textbook of Entomology, ninth edition, entirely revised by Prof. O. W. Richards and R. G. Davies, *review* by Dr. W. H. Thorpe, 486
Immune Reactions : 'Crossing' Paper Electrophoresis for the Detection of (Prof. S. Nakamura and T. Ueta), 875 ; *erratum*, 1063
Immunity (Transplantation) : Part played by Deoxyribonucleic Acid in (Vera Hašková and Miroslava Hrubešová), 61 ; (Prof. P. B. Medawar), 62
Immuno-chemical Observations on the Intimate Structure of Human Albumin (Peggy B. Houghton and Prof. N. H. Martin), 329
Immunological Theory of Cancer : Further Observations on Tumour-enhancing Factors—their Bearing on the (Prof. H. N. Green and R. Wilson), 1054
Immunological Tolerance : Failure to Induce, during Recovery from Irradiation (G. J. V. Nossal and Lois Larkin), 1447
Immunology and Chromatography in Taxonomic Studies on Gallinaceous Birds (Danilo Mainardi), 1388
Impact : Vaporization of Projectiles on (G. Larikov), 468
Impact (Electron) : Anomalous Dissociation of Molecular Hydrogen by (L. A. Edelstein), 932
Impact Testing of Explosives (Dr. Paul W. Levy), 37
Impaired Respiration : Biochemical Mutants in Bacteria with (Prof. G. F. Gause), 97
Imperfect Density Dependence : Perfect and, in Population Dynamics (Dr. A. Milne), 1251 ; (M. E. Solomon), 1252
Imperial Cancer Research Fund : Fifty-fifth Annual Report (1956-57), 157
  Resignation of Dr. J. Craigie as director of the Mill Hill Laboratories, 697
  Appointment of Dr. R. J. C. Harris as head of the Division of Experimental Biology and Virology, 697
  Appointment of A. R. Currie as head of the Division of Pathology, 697
Imperial Chemical Industries Transfer Scholarships, 1554
Imperial College of Science and Technology : Appointment of Dr. D. B. Spalding to the new University of London chair of heat transfer, 155
  Appointment of Dr. D. Gabor to the University of London chair of applied electron physics, 363, 496
  Appointment of Dr. J. Sutton to the University of London chair of geology, 363, 560
  Appointment of Dr. R. D'A. Hoyle to the University readership in mechanical engineering, 363
  Appointment of Dr. A. R. Fairbairn to the General Motors Corporation of Detroit postdoctoral fellowship in flame spectroscopy, 363
  Appointment of Dr. P. L. Pratt to the University of London readership in physical metallurgy, 700
  Appointment of Dr. W. O. James as University of London professor of botany and head of the Department, 916, 990
  Appointment of H. Charnock as reader in physical oceanography, 990
  Title of Henry Mark Pease (Standard) professor of telecommunications in the University of London conferred on Dr. E. C. Cherry, 990
  Appointment of F. H. Ludlam to the readership in meteorology, 1279
  Title of reader in aerodynamics in the University of London conferred on L. E. Fraenkel, 1279
  Appointment of J. R. D. Francis to the University of London readership in fluid mechanics, 1554
  Title of professor emeritus of plant physiology in the University of London conferred on Prof. F. G. Gregory, 1777
Implantation Sites : Migration of Spleen Cells from Subcutaneous (Dr. V. Hašková and Dr. N. A. Mitchison), 410
Implantation (Uterine) : Sex Ratio in the Golden Hamster before (Prof. P. E. Lindahl and G. Sundell), 1392
Implications (Moral), of Atomic Energy, 156
Implications (Some), of Modern Science (Sir Henry Self), 1349
Import Duty on Scientific Apparatus and Instruments, 1708
Importance of Taxonomy in Biological Investigations (Irvine J. Hunter), 1818
Importance of Zinc for the Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* and Large-scale Production of Tuberculin Purified Protein Derivative (T. Dekker and H. Huitema), 1387
Importance (Relative), of the Phenolic and Unsaturated Acid Components in Toxicity towards certain Plant Pathogens : 'Karathane'—the (Dr. A. H. M. Kirby and E. L. Frick), 1445
Important Constituent of Sea Water : Perchlorate, an (L. G. M. Baas Becking, A. D. Haldane and David Izard), 645
Important Herbarium : An, *review* by Dr. W. B. Turrill, 752
Improprieties Resolved, *review* by Prof. T. A. A. Broadbent, 1584
Improving the Solute Selectivity of Osmotic Membranes : A Method for (M. F. Vaughan), 1730
Inability of Epinephrine to protect Rhode Island Chicks against the Lethal Action of X-Rays (Dr. M.-L. Beaumariage), 803
Incentives (Economic) : Productivity and (J. P. Davison, Prof. P. Sargant Florence, Dr. Barbara Gray and Dr. N. S. Ross), *review* by T. H. Hawkins, 1697
Inch–Metric Conversions in British Standards (F. A. Gould), 1767
Incidence of *Gloeosporium* Rots of Apple Fruits : Effect of Storage Conditions on the (H. B. S. Montgomery), 737
Incidence (Oblique), and Sound Intensity : Diffraction of Light by Ultrasonic Waves, (Dr. S. Parthasarathy and C. B. Tipnis), 1795
Inclination of a Satellite Orbit : Change of (C. H. Bosanquet), 1533
Inclusions : Sucrose Crystal (H. E. C. Powers), 715
Incorporation of Amino-Acids by Disrupted Staphylococcal Cells (Dr. E. F. Gale, Dr. C. J. Shepherd and Joan P. Folkes), 592
Incorporation of Carbon-14 Dioxide by Duck Erythrocytes and Reticulocytes *in vitro* (G. Giustina and E. Lazzarini), 1311
Incorporation of Carbon-14 Dioxide into Sugars by Darkened Cotyledons from Etiolated Sunflower Seedlings (Dr. Clive Bradbeer), 1429

Incorporation of Manganese into Erythrocytes as Evidence for a Manganese Porphyrin in Man (Donald C. Borg and Dr. George C. Cotzias), 1677
Incorporation or Orotic Acid-^{14}C and Lysine-^{14}C in Regenerating Single Nerve Cells (S.-O. Brattgard, H. Hydén and J. Sjöstrand), 801
Incorporation of Radioactive Sulphur by *Thiobacillus thioparus* (Prof. B. Skarzynski and W. Ostrowski), 933
Incorporation (*In vitro*) of Serine labelled with Carbon-14 into Mitochondrial Phospholipids (Dr. G. Hübscher, Dr. R. R. Dils and Dr. W. F. R. Pover), 1806
Increased Capillary Permeability in Thermal Burns in Rats : Experimental Suppression of (Dr. W. G. Spector and Dr. D. A. Willoughby), 949
Increased Survival of Rats Irradiated with X-Rays and Treated with Parathyroid Extract (R. H. Rixon, J. F. Whitfield and T. Youdale), 1374
Indexing in Science : Classification and (B. C. Vickery), *review* by R. Brightman, 1698
India : Agricultural Meteorology in, 360
  Agricultural Research in—Institutes and Organizations (Dr. M. S. Randhawa), *review* by F. C. Bawden, 1628
  Fruit and Vegetable Preservation Industry in (Proceedings of the Symposium held at the Central Food Technological Research Institute, Mysore, 1954), *review* by Dr. R. G. Tomkins, 420
  The Grassland and Fodder Resources of (R. O. Whyte), *review* by Dr. J. P. Cooper, 71
  Medical Research in, 708
  Research and Development in, 20
India Meteorology Department : Special issue of the *Indian Journal of Meteorology and Geophysics* in honour of the Silver Jubilee of the Agricultural Meteorology Division, 360
Indian Agricultural Service, *review* by F. C. Bawden, 1628
Indian Central Fuel Research Institute : Symposium on the Nature of Coal, 295
Indian Council of Agricultural Research : Scientific Monograph No. 22, The Grassland and Fodder Resources of India (R. O. Whyte), *review* by Dr. J. P. Cooper, 71
Indian Council of Medical Research : Technical Report of the Scientific Advisory Board for 1956, 708
  Progress made in Research Projects (1950-57), 708
Indian Institution of Telecommunication Engineers : Second Technical Convention, 842
Indian Journal of Meteorology and Geophysics : Special issue in honour of the Silver Jubilee of the Agricultural Meteorology Division of the India Meteorology Department, 360
Indian Society of Theoretical and Applied Mechanics : Fourth Congress on Theoretical and Applied Mechanics, 1133
Indian (West) Immigration into Britain (Colin Bertram), 1060
Indicator of the Blood Supply of Bone : Sodium-24 as an (Dr. P. G. Laing and Dr. Albert B. Ferguson, jun.), 1442
Indicator of Changes after Irradiation: Deoxycytidine in Urine as an (Dr. J. Pařízek, M. Arient, Z. Dienstbier and J. Skoda), 721
Indirect Action of Angiotensin I on Smooth Muscle (P. A. Robertson and Dana Rubin), 867
Indium : Tensile Strength of (Prof. D. S. Eppelsheimer and L. J. Reitsma, jun.), 339 ; (B. Fullman), 862
Individual and the Organization in Modern Society (Institute of Personnel Management Conference on), 700, 918
Individual Efficiency in Industry (1953-57) : Report of the Joint Committee on, and Final Report of the Joint Committee on Human Relations in Industry (1954-57), (Department of Scientific and Industrial Research), 1539
Individual *Mansonioides* Mosquitoes : Age Determination for (Prof. D. S. Bertram and W. A. Samarawickrema), 444
Indole (Urinary), and Phenol Acids : Effect of Atmospheric Contaminants on Paper Chromatography of (K. N. F. Shaw and J. Trevarthen), 664
Indole Acids (Urinary Phenol and) : Exogenous Sources of (K. N. F. Shaw and J. Trevarthen), 797
Indole Acetic Acid : Determination of, by the Salkowsky Reaction (Dr. A. M. Mayer), 1670
Indoleacetic Acid *in vitro* : Chelation or Complex-formation by (D. A. Recaldin and Prof. O. V. S. Heath), 539
Indoleacetic Acid Detection : Growth-promoting Activity of Potato Tuber Extracts in the Coleoptile Straight-Growth Test—Quantitative Aspects of (A. Booth and Dr. P. F. Wareing), 406
Indole-3-Acetic Acid : Release of Ammonia by Plant Tissues treated with (Leonora Reinhold), 1022
Indole-3-Aldehyde from Tissues (Prof. R. A. Morton and N. I. Fahmy), 939
Induced Apospory in Polypodiaceous Ferns (P. R. Bell and B. M. Richards), 1748
Induced Resistance of Mice to Infection with *Brucella abortus* 2308 through Vaccination with *BCG* (Dr. A. Bekierkunst and D. Sulitzeanu), 883
Induced Swarming of a Nematode as a Means of Isolation (Prof. John P. Hollis), 956
Induced *in vivo* Synthesis of Diphosphopyridine Nucleotide : Significance of (Dr. Louis Shuster, Thomas A. Langan, jun., Prof. Nathan O. Kaplan and Prof. Abraham Goldin), 512
Induction of Respiratory Deficiency in Yeast by Manganese, Copper, Cobalt and Nickel (Prof. Carl C. Lindegren, Susumu Nagai and Hideko Nagai), 446
Induction (Electromagnetic) : Electromagnetism and Relativity with particular reference to Moving Media and (Prof. E. G. Cullwick), *review* by Prof. V. C. A. Ferraro, 1045
Induction (Photoperiodic), of Flowering in Black-Currant (T. Nasr and Dr. P. F. Wareing), 269
Inductive Photocycle : *Lolium temulentum* L., a Long-day Plant requiring only One (Dr. L. T. Evans), 197
Industrial Applications : Electronic Digital Computers and their (Conference at Birmingham College of Technology), 1205
Industrial Biochemistry at Manchester, 1202
Industrial Psychology, National Institute of : Courses and Seminars, 918
Industrial Relations : The First Principles of (Dr. A. E. C. Hare), *review* by T. H. Hawkins, 1697
Industrial Research : Scientific and, in Government Departments, 1111
  Scientific and—the State and Industry, 1181
Industrial Research in East Africa, 499
Industrial Research Associations in the Government Scheme, 1956-57 : Research for Industry, a Summary of Work done by the (Department of Scientific and Industrial Research), 93
Industrial Training Council : Functions of the, 1060
Industries (Coal, Gas and Electricity) : Capital Investment in the (White Paper on), 343
Industry : Distribution of (Industrial Finance) Bill (Second reading in the House of Lords), 293
  Final Report of the Joint Committee on Human Relations in (1954-57), and Report of the Joint Committee on Individual Efficiency in Industry (1953-57), (Department of Scientific and Industrial Research), 1539
  Individual Efficiency in—Report of the Joint Committee on (1953-57), and Final Report of the Joint Committee on Human Relations in Industry (1954-57), (Department of Scientific and Industrial Research), 1539
  Radio-isotopes in (Isotope School, Atomic Energy Research Establishment, Harwell, Course on), 700
  Redundancy in, 895
  Research for—a Summary of Work done by the Industrial Research Associations in the Government Scheme, 1956-57 (Department of Scientific and Industrial Research), 93
  Scientific and Industrial Research—the State and, 1181
  The Training of Designers for (Federation of British Industries), 360
Industry and Education : The Partnership between (Sir Willis Jackson), 585
Industry and Government in Canada (Rt. Hon. C. D. Howe), 1422
Industry and the Worker, *review* by T. H. Hawkins, 1697
Industry (Aircraft) : Persons employed in the, 86
  Research in the, 226
Industry (British) : Fuel and Power in (Manchester Joint Research Council Conference on), 1063, 1713
Industry (Coal) : Gas Chromatograph as a Methanometer in the (P. Whatmough), 863
Industry (Engineering) : Age Structure in the (K. F. H. Murrell and S. Grew), 430
Industry (Plastics) : Careers in the, 989
Ineffective 'Ribonucleic Acid' Component from Tumour Cells infected with Encephalomyocarditis Virus (J. Huppert and F. K. Sanders), 515
Infection with *Brucella abortus* 2308 : Induced Resistance of Mice to, through Vaccination with *BCG* (Dr. A. Bekierkunst and D. Sulitzeanu), 883
Infection (Experimental Staphylococcal) : Role of Hypersensitivity in (Dr. J. Johanovsky), 1454
Infection (Mouse Polyoma Virus) : Observations on the Spread of (Dr. Wallace P. Rowe, Janey W. Hartley, Isadore Brodsky, Robert J. Heubner and Lloyd W. Law), 1617
Infection (Rust) : Effect of, on Oxidative Phosphorylation of Wheat Leaves (B. I. Pozsár and Z. Király), 1686
  Effects of, on the Carbohydrate Metabolism of Wheat Seedlings (A. C. Jain and Prof. R. -L. Pelletier), 882
Infection (Viral), and Cortisone : Effect of, upon Tumour Growth in Homologous and Heterologous Hosts (Dr. T. Kuwata, Y. Yasumura and M. Kanisawa), 1678
Infections Involved : Relationship between Phytoalexin Output and the Number of (K. O. Müller), 167
Infections (Panama Disease) : Role of Root Injury in (Dr. Luis Sequeira, Dr. Taylor A. Steeves, Margaret W. Steeves and Dr. Joseph M. Riedhart), 309
Infectious Diseases, Centre for Research in (Portugal) : Grant of £12,850 from the Gulbenkian Foundation, Lisbon, for capital and running costs for three years, 1493
Infectivity of Ribonucleic Acid from Mice and Tissue Culture infected with the Virus of Foot-and-Mouth Disease (F. Brown, R. F. Sellers and Doreen L. Stewart), 535
Infeld, Dr. Leopold : *Obituary* of Prof. Stanislaw Loria, 1411
Infestation (Heavy), by the Parasitic Copepod *Lernaeenicus* of Sprats in the River Crouch (Dr. J. P. Harding and A. C. Wheeler), 542
Inflation : British Economy under (Prof. A. J. Brown), 582
Influence of Amino-Acids on Actinomycin Biosynthesis (Edward Katz and William A. Goss), 1668
Influence of Circulating Adrenocorticotrophin on the Pituitary Adrenocorticotrophic Response to Stress in the Adrenalectomized Rat (Dr. J. R. Hodges and Joan Vernikos), 725
Influence of a Crude Hypothalamic Extract on the Acid Phosphatase Activity of Rat Pituitaries (Prof. J. Charvát, V. Schreiber and V. Kmentová), 62
Influence of Cysteamine on the Teratogenic Action of X-Radiation (Dr. D. H. M. Woollam and Dr. J. W. Millen), 1801
Influence of Hydrocortisone on the Action of Sodium on Isolated Rabbit Auricles (Dr. T. H. Rindani), 1521
Influence of certain Inorganic Ions on the Hatching of the Potato Root Eelworm, *Heterodera rostochiensis* Wollenweber (Dr. C. Ellenby and A. B. Gilbert), 925
Influence of Linoleic and Linolenic Acids on Symptoms of Vitamin E Deficiency in Chicks (Prof. H. Dam, G. Kofoed Nielsen, I. Prange and E. Søndergaard), 802
Influence of the Semi-Permanent Low-Level Ocean Duct on Centimetre Wave Scatter Propagation beyond the Horizon (F. A. Kitchen, W. R. R. Joy and E. G. Richards), 385
Influence of Temperature and Light on Thyroid Function (F. A. Soliman, H. M. Badawi and Y. S. Ghanem), 57
Influence of the Thymus on the Reaction of the Adrenal to Adrenocorticotropic Hormone in the Rat (Dr. J. Comsa), 57
Influence of the Thymus upon the Reaction of the Rat to Anterior Pituitary Growth Hormone (Dr. J. Comsa), 728
Influence of Trace Elements upon Plant Protein Composition (K. H. Schütte and H. E. Schendel), 958
Influence of Water on the Photolytic Decomposition of Ozone (W. D. McGrath and Prof. R. G. W. Norrish), 235
Influence of Water Deprivation on Taste Sensitivity in Man (Roy Yensen), 677
Influenza Virus : Comparison of the Tendency to cling to Glass and Haemagglutination produced in Erythrocyte Suspensions by Ferric Chloride and by (William R. Chesbro and Prof. Leslie R. Hedrick), 1164
Information on Atomic Energy : Exchange of, 635
Information (Scientific) : Exchange of, 1345
Information Gain in Tasks involving Different Stimulus-Response Relationships (Dr. Stephen Griew), 1819
Information Processing : International Conference on (Unesco), 700

Information Services : British, 1414
  Overseas (House of Lords Debate on), 570
Information Systems in Current Use : Non-Conventional Technical (Office of Scientific Information of the National Science Foundation, Washington), 562
Infra-Red Spectra of a Coalification Series from Cellulose and Lignin to Anthracite (Prof. C. R. Kinney and E. I. Doucette), 785
Infra-Red Spectrophotometry : Determination of Traces of Oxygen in Sodium Metal by (H. J. de Bruin and L. E. Smythe), 387
Infra-Red Transmission Limits and Reflectivity of Lithium-6 Fluoride and Lithium-7 Fluoride (Dr. R. W. H. Stevenson and Dr. P. T. Nettley), 471
Ing, Dr. H. R. : *Obituary* of Prof. J. A. Gunn, 1411
Ingalls, R. P., and others : Comparison of Measured and Computed Values of the Rapid Fading-Rate of Ultra High-Frequency Signals reflected from the Moon, 1438
Ingestion of Ethylenediaminetetraacetic Acid and the Effect on Life Span of Irradiated and Control *Habrobracon* Females (Leo. E. LaChance), 870
Ingestion (Hydrogen Peroxide), and the Growth of Rats (Lester Hankin), 1453
Inglis, Dr. N. P., and Cotton, J. B. : Some Recent Trends in Metallurgy (Corrosion Behaviour of Tantalum, Niobium, Titanium, Zirconium and Beryllium), 1125
Ingold, Sir Christopher : Theoretical Organic Chemistry (Nucleophilic Octahedral Substitution), 1341
Ingram, Dr. D. J. E. : Microwave Physics, 1121
  Free Radical Stabilization, 1497
Ingram, Dr. D. J. E., and others : Ions of the Transition Elements (Application of Paramagnetic Resonance Spectroscopy to Transition Metal Ions—Electron Resonance Measurements of Ferri-haemoglobin Derivatives), 1350
  Electron Resonance Study of the Radicals produced by Controlled Potential Electrolysis of Aromatic Substances, 1784
Ingram, Dr. D. J. E. (Austen, D. E. G., and) : Science in the Use of Coal (Physics and Chemistry of Coal), 25
Ingram, Dr. V. M., and others : Three Varieties of Human Haemoglobin *D*, 852
Ingram, W. R. (Bowden, J., and) : A Revised Interpretation of the Causes of Loss of Crops of Cotton in the Drier Regions of Uganda, 1750
Inhaca Island, Mocambique: A Natural History of (edited by Dr. William Macnae and Dr. Margaret Kalk), *review* by Dr. W. J. Rees, 1761
Inherent Characters of Plant Species of Wetter and Drier Habitats : Further (Dr. M. L. R. Pettersson and G. E. J. Gray), 450
Inheritance of Photoperiodic Reaction in Rice (Prof. P. K. Sen and G. N. Mitra), 119
Inherited Hypertension in Rats (Sir Horace Smirk and William H. Hall), 727
Inhibiting Biting in *Aedes aegypti* : Presence of a Factor (M. M. J. Lavoipierre), 1567
Inhibition of Cholinesterase Hydrolysis of Dihydromurexine by Lysergic Acid Diethylamide and its 2-Bromo Derivative—a Selective Relationship (Dr. I. I. A. Tabachnick and M. E. Grelis), 935
Inhibition of Dextransucrase by Excess Substrate (W. Brock Neely), 1007
Inhibition of Pancreatic Deoxyribonuclease by Acidic Polymers (Dr. Hans Heymann, Z. R. Gulick and R. L. Mayer), 1234
Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by 2-Acetlaminofluorene and N-2-Fluorenyl-diacetamide : Effect of Diphosphopyridine Nucleotide on the (Prof. E. Quagliariello, S. Auricchio, E. Rinaldi and A. Rubino), 1744
Inhibition of Sulphate Reduction in Paddy Soils (R. Vámos), 1688
Inhibition of Yeast Metabolism by a Cationic Detergent : Reversal by Magnesium Ions of the (Dr. W. McD. Armstrong), 326
Inhibition (Vanadium), of Phospholipid Synthesis and Sulphydryl Activity in Rat Liver (Fred Snyder and Prof. W. E. Cornatzer), 462
Inhibition and Activation of Polynucleotide Phosphorylase through the Formation of Complexes between Acridine Orange and Polynucleotides (Dr. Ronald F. Beers, Jun., and Dr. Daniel D. Hendley, and Dr. Robert F. Steiner), 242
Inhibition and Excitation due to Gamma-Aminobutyric Acid in the Central Nervous System (Prof. Takashi Hayashi), 1076
Inhibitor of Acetylcholine Synthesis : Myasthenic-like Features of Neuromuscular Transmission after Administration of an (Dr. J. E. Desmedt), 1673
Inhibitor (Cholinesterase) : Toxicity of a, to the Hibernating Hamster (J. F. Scaife and D. H. Campbell), 1739
Inhibitor (New), of the Tricarboxylic Acid Cycle : Potassium Atractylate, a (Prof. R. Santi), 257
Inhibitors of Haem Biosynthesis : Mode of Action of 5:6-Dimethylbenzimidazole and certain Keto-Acids as (Dr. E. G. Brown), 1091
Inhibitors (Growth-), of *Streptococcus faecalis* and *Lactobacillus arabinosus :* Arylaminopyrimidines as (Dr. Sudhamoy Ghosh, Dolly Roy and Prof. B. C. Guha), 187
Inhibitors (Straight-Growth), in Glucose (R. F. M. Van Steveninck), 950
Inhibitory Action of Ethyl Mercaptan on Intracellular Tubercle Bacilli (G. E. Davies and G. W. Driver), 664
Initial Irradiation Reaction in Mice (Dr. Harold Blondal), 1026
Initial Transfer of the Genetic Code from Deoxyribonucleic Acid to Ribonucleic Acid : A Possible Mechanism for the (Dr. Geoffrey Zubay), 112
Injected Deoxyribonucleic Acid : A Biological Action of (Dr. Rudolf K. Zahn, A. Docter, B. Heicke, H. Kuhlemann, G. Ochs, E. Torz, R. Torz, W. Ziegler and G. Zahn), 1679
Injection (Prior), of Adjuvants : Prevention of Allergic Encephalomyelitis by (Dr. Marian W. Kies and Dr. Ellsworth C. Alvord, jun.), 1106
Injuries and Causes of Death : Manual of the International Statistical Classification of Diseases, (World Health Organization), *review*, 417
Injury (Physical) : Biochemical Response to (Council for the Organization of Medical Sciences, with the assistance of the Wellcome Trust and the International Union of Biochemistry Symposium on), 1493
Injury (Root) : Role of, in Panama Disease Infections (Dr. Luis Sequeira, Dr. Taylor A. Steeves, Margaret W. Steeves and Dr. Joseph M. Riedhart), 309
Inland Saline Waters : Classification of Brackish and (International Association of Limnology and the International Union of Biological Sciences Conference on), 27
Innervated and Denervated Adrenal Gland of the Rat : Replacement of Adrenaline and Noradrenaline in the, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 1020
Inoculating Pathogenic Bacteria on Susceptible Plant Leaves : A Simple Technique for (M. A. Nour and J. J. Nour), 96
Inorganic Analysis : Spot Tests in (Prof. Fritz Feigl), fifth English edition (translated by Prof. Ralph E. Oesper), *review* by C. O. Harvey, 1588
Inorganic Ions : Influence of certain, on the Hatching of the Potato Root Eelworm, *Heterodera rostochiensis* Wollenweber (Dr. C. Ellenby and A. B. Gilbert), 925
Inorganic Nitrogen Sources : Utilization of, by Plants (British Association for the Advancement of Science, Section K (Botany), Discussion on), 1197
Inorganic Phosphorus in the Presence of Glucose-I-phosphate and Adenosine Triphosphate : Colorimetric Determination of (Michinori Nakamura and Kenji Mori), 1441
Inoué, Shinya, and Kubota, Prof. Hiroshi : Diffraction Anomaly in Polarizing Microscopes, 1725
Insect : Use of Glucose labelled with Carbon-14 to determine the Amino-Acids essential for an (R. Kasting and A. J. McGinnis), 1380
Insect Conductive Tissue : Distribution of Choline Acetylase in (E. H. Colhoun), 1378
Insect Migration (Dr. C. B. Williams), *review* by Dr. R. C. Rainey, 1257
Insect Pests (Leaf-feeding) : Effect of the Cotton Plant in the Sudan Gezira on certain (R. J. V. Joyce), 1463
Insecticidal Action : Role of Cholinesterase in (H. S. Hopf and R. T. Taylor), 1381
Insecticide : A New Type of (Zenichi Ogita), 1529
Insecticide Tolerance of Insects : Variations in the (Dr. D. Spiller), 1177
Insecticides, *review* by Prof. Wd. Eichler, 1578
  Biological Testing of, in the Laboratory, *review* by Dr. A. H. McIntosh, 486
  A Critical Review of the Techniques for Testing (Dr. J. R. Busvine), *review* by Dr. A. H. McIntosh, 486
  Spray-collecting Areas of Locusts and their Susceptibility to (R. D. MacCuaig), 478
Insects : Collecting, Preserving and Studying (Harold Oldroyd), *review* by B. D. Moreton, 420
  An Experimental Solution to the Paradox of Discontinuous Respiration in (Robert I. Levy and Dr. Howard A. Schneiderman), 491
  Responses of, to Polarized Light in the Presence of Dark Reflecting Surfaces (Dr. H. Kalmus), 1526
  Variations in the Insecticide Tolerance of (Dr. D. Spiller), 1177
Insects labelled with Phosphorus-32 and Sulphur-35 : A Simple Autoradiographic Method for distinguishing (Dr. M. T. Gillies), 1683
Insects (Aquatic), in Lake Victoria : Lunar Periodicity of (Dr. Philip S. Corbet), 330
Insects (Intact) : Survival of, immersed in Liquid Oxygen without any Antifreeze Agent (Eizo Asahina and Kiyoshi Aoki), 327
Insects (Leaf-mining) : A Key to, *review* by Dr. Kenneth Mellanby, 213
Insektizide : Die (Dr. Werner Perkow), *review* by Prof. Wd. Eichler, 1578
Inside the Comprehensive School—a Symposium contributed by Heads of Comprehensive Schools in England and Wales (collected and edited by the National Union of Teachers), *review* by Robert W. Fenn, 1590
Insoluble Anhydrite : Transformation of the α- and β-Forms of Calcium Sulphate Hemihydrate to (D. A. Powell), 792
Inspection of Nuclear Power Plants : International, 225
Institut National pour l'Étude Agronomique du Congo Belge : Série scientifique No. 70, La Lutte contre *Stephanoderes hampei* Ferr. (G. Schmitz et P. Crisinel), *review* by W. V. Harris, 215
Institute Medal of the Textile Institute awarded to W. A. Dutton and H. Marsden, 1205
Institutions (Technical) : Salaries of Teachers in, 1414
Instrument Society of America (Analysis Instrumentation Division) : Symposium on Gas Chromatography (edited by Vincent J. Coates, Henry J. Noebels and Irving S. Fagerson), *review* by N. H. Ray, 1630
Instrument Society of America, and others : Eleventh Annual Conference on Electrical Techniques in Medicine and Biology, 433, 771
Instrumentation of Reactors : Course on the Control and (Harwell Reactor School, Atomic Energy Research Establishment), 295
Instruments (Scientific Apparatus and) : Import Duty on, 1708
Insulating Materials : Space-Charge Limited Current in (Dr. G. T. Wright), 1296
Insulin : Liver Glucosyl Oligosaccharides and Glycogen—Effects of Starvation, Glucose Feeding and (Dr. Hsien-Gieh Sie and Prof. W. H. Fishman), 240
Intact Cells of *Azotobacter vinelandii :* Formation of Activated Amino-Acids by (R. W. Bernlohr and Dr. G. C. Webster), 531
Intact Insects immersed in Liquid Oxygen without any Antifreeze Agent : Survival of (Eizo Asahina and Kiyoshi Aoki), 327
Integral Equations (Prof. F. G. Tricomi), *review* by Prof. T. A. A. Broadbent, 1259
  Theory and Application of, *review* by Prof. T. A. A. Broadbent, 1259
Integral Equations and their Applications to certain Problems in Mechanics, Mathematical Physics and Technology (S. G. Mikhlin), translated from the Russian by A. H. Armstrong, *review* by Prof. T. A. A. Broadbent, 1259
Integration (Numerical) : Experiments in (E. Knighting, D. E. Jones and Mavis K. Hinds), 440
Intellectual Mysticism, *review* by the Very Rev. W. R. Matthews, 681
Intensities (Relative), of the Oxygen Lines at 5577 A. and 6300 A. in the Night Sky (B. P. Sandford), 42
Intensity (Sound) : Diffraction of Light by Ultrasonic Waves, Oblique Incidence and (Dr. S. Parthasarathy and C. B. Tipnis), 1795
Intentional Food Additives : Procedures for the Testing of, to establish their Safety for Use—Second Report of the Joint FAO/WHO Expert Committee on Food Additives (World Health Organization), 850
Inter-University Council for Higher Education Overseas : Completion by S. J. Worsley of his term of office as secretary, 1774
  Appointment of I. C. M. Maxwell as secretary, 1774
Interaction : Neutron–Proton (Dr. Yatendra Pal Varshni), 1726
Interaction of Formaldehyde and Tetrahydrofolic Acid and its relation to the Enzymic Synthesis of Serine (Dr. R. L. Blakley), 1719
Interaction of Gibberellic Acid and Photoperiod on the Vegetative Growth of *Pinus elliottii* (Prof. Philippe F. Bourdeau), 118
Interaction Sites in Multi-Component Transfer Systems : Localization of—Theorems derived from Analogues (Prof. Britton Chance, Willia[illegible] Holmes and Joseph Higgins, and Dr. C. M. Connelly), 1190

Intercellular Space Carbon Dioxide Concentration Γ in Wheat Leaves : Effects of Water-Strain on the Minimum (Prof. O. V. S. Heath and Dr. H. Meidner), 1524
Intercellular Transfer of Herpes Virus : Mode of (Dr. M. G. P. Stoker), 1525
Interface Couples in Crystals (Prof. Frank A. McClintock, Patricia A. André, Kurt R. Schwerdt and Robert E. Stoeckly), 652
Interference (Chromatid) : Use of Loosely Linked Genes to estimate, by Tetrad Analysis (Dr. H. L. K. Whitehouse), 1173
Interference (Genetical), in *Drosophila* spp. (P. A. Parsons), 1816
Interference Microscope in Biological Research (Dr. Arthur J. Hale), *review* by Dr. R. Barer, 1630
Interferometry (Multiple-Beam) : Errors in the Measurement of Film Thickness by (C. Weaver and P. Benjamin), 1149
Interferon: Mode of Action of (Dr. Alick Isaacs and Dr. Derek C. Burke), 1073
Interlayers (Aluminium), in Soil Clay Minerals, Montmorillonite and Vermiculite (B. L. Sawhney), 1595
Intermediate Physics (Dr. C. J. Smith), fourth edition, *review* by G. R. Noakes, 622
Intermediates (Transient), in Redox Processes : Observation of, by variable Voltage Oscillo-polarography and Cyclic Voltammetry (Prof. W. Kemula and Z. Kublik), 793
Intermetallic Compounds in Mercury : Application of the Hanging Mercury Drop Electrode to an Investigation of (Prof. Wiktor Kemula, Zbigniew Galus and Zenon Kublik), 1228
Intermitotic Nuclei in Man : Representation of the X Chromosome in (D. M. Serr, M. A. Ferguson-Smith, Dr. B. Lennox and J. Paul), 124
Internal Standard : Neutron Activation Analysis using an (G. Leliaert, J. Hoste and Z. Eeckhaut), 600
International Agency for Carbon-14 Determination, 1413
International Association of Allergology : Third International Congress of Allergology, 363
International Association of Limnology and the International Union of Biological Sciences : Conference on the Classification of Brackish and Inland Saline Waters, 27
International Association of Scientific Hydrology (Commission for Snow and Ice) : Symposium on the Physics of Ice Movement, 1560
International Association of Sedimentology : Election of Dr. F. P. Shepard as president, 91
International Association of Wood Anatomists : International Glossary of Terms used in Wood Anatomy, 1709
International Atomic Energy Agency : Appointment of members of the Scientific Advisory Committee, 1413
  First Annual Report of the Board of Governors (1957-58), 1489
  Programme and Budget for 1959, 1489
International Awards for 1958 (Gairdner Charitable Foundation, Ontario), 21
International Cancer Congress : Seventh (International Union against Cancer), 364
International Certification of Herbage Seed (Organization for European Economic Co-operation), 157
International Code of Nomenclature of Bacteria and Viruses (edited by the Editorial Board of the International Committee on Bacteriological Nomenclature), *review* by Dr. K. A. Bisset, 1760
International Code of Nomenclature for Cultivated Plants, 500
International Colloquium on Communication and Language (Faculty of Medicine of the Université de Paris, the Société Française de Phoniatrie and the Laboratory of Physiological Acoustics of the Collège de France), 1644
International Committee on Bacteriological Nomenclature (edited by the Editorial Board of the) : International Code of Nomenclature of Bacteria and Viruses, *review* by Dr. K. A. Bisset, 1760
International Conference for Analogue Computations : Second, 22
International Conference on Co-ordination Chemistry (Chemical Society sponsored by the International Union of Pure and Applied Chemistry), 1710
International Conference on Electron Microscopy : Fourth (Deutsche Gesellschaft für Elektronenmikroskopie), 295
International Conference on Enzymes and their Action (Agricultural University of Wageningen), 1710
International Conference on High-Energy Nuclear Physics (International Union of Pure and Applied Physics), 356
International Conference on High Polymers, 772
International Conference on Information Processing (Unesco), 700
International Conference on Operational Research : Proceedings of the First (Oxford, 1957), *review* by Dr. K. Pennycuick, 821
International Conference on the Peaceful Uses of Atomic Energy : Second United Nations (Publication of volumes dealing with the American participation), 1133
  Second United Nations—Sessions on Isotopes and Biology, 1118
  Second United Nations—Session on Health and Safety in the Field of Nuclear Energy, 1262
  Second United Nations—Extension of the pre-publication period for the Proceedings of the, 1416
International Conference on Scientific Measurements (Dr. W. A. Wooster), 1781
International Conference on Semiconductors (Dr. P. T. Landsberg), 1067
International Conference on Small Angle X-Ray Scattering from Metals (Midwest Research Institute, Kansas City), 634
International Congress of Aeronautical Sciences : First (International Council of the Aeronautical Sciences), 89, 1562
International Congress of Allergology : Third (International Association of Allergology), 363
International Congress on Astronautics : Ninth (British Interplanetary Society), 501
International Congress on Biochemistry : Publication of the Transactions of the fourth, 1644
International Congress on the Modern Educational Treatment of Deafness, 89, 919
International Congress on the Modern Educational Treatment of Deafness (Prof. A. W. G. Ewing), 919
International Congress of Sedimentation : Fifth (Prof. J. H. Taylor), 91
International Congress of Speleology : Second, 363
International Congress of Surface Activity : Proceedings of the Second (edited by J. H. Schulman), Vol. 1, Gas/Liquid and Liquid/Liquid Interface ; Vol. 2, Solid/Gas Interface ; Vol. 3, Electrical Phenomena and Solid/Liquid Interface : Vol. 4, Solid/Liquid Interface (Washings, etc.), Cell/Water Interface, *review*, 972
International Congress of Zoology : Fifteenth (Dr. Edward Hindle), 434
International Co-operation in Science and Technology, 1329
International Co-operation in Scientific Research, 1397
International Co-operation Administration (United States) : Visit to Africa, 1276
International Co-operation and Geophysical Research, 428
International Council of the Aeronautical Sciences : First International Congress of Aeronautical Sciences, 89, 1562
International Council of Scientific Unions : Year Book for 1958, 431
  Appointment of Sir Rudolph Peters as president, 990, 1205
  Establishment of a Committee on Space Research, 1552
International Exhibition (Brussels Universal and) : The International Science Hall at the (Dr. D. C. Phillips), 284
International Geophysical Year : Fifth Meeting of the Special Committee, to be held in Moscow, 294
  Geophysics and the IGY—Proceedings of the Symposium at the Opening of the (edited by Hugh Odishaw and Stanley Ruttenberg), *review* by D. Taylor Smith, 1187
International Glossary of Terms used in Wood Anatomy (International Association of Wood Anatomists), 1709
International Inspection of Nuclear Power Plants, 225
International Institute for the Conservation of Museum Objects : Grant from the Gulbenkian Foundation, Lisbon, of up to £6,000 over three years, 1493
  Work of the, 1709
International Measurements Conference, 990
International Meteorological Organization Prize for 1958 awarded to E. Gold by the World Meteorological Organization, 18
International Milk Teeth Radiation Census (Dr. Herman M. Kalckar), 283
International Neurochemical Symposium : Third (The Chemical Pathology of the Nervous System), 229, 1646
International Nickel Company, Inc. : Election of A. P. Gagnebin as a vice-president, 1133
International Nomenclature of Yaws Lesions (Dr. C. J. Hackett), 1132
International Phage Colloquim : Second, 1769
International Press Censorship : Soviet, 1774
International Review of Cytology (edited by Dr. G. H. Bourne and Prof. J. F. Danielli), Vol. 6, *review* by Prof. J. Brontë Gatenby, 1114
International Science Hall at the Brussels Universal and International Exhibition (Dr. D. G. Phillips), 284
International Seaweed Symposium : Third (Dr. W. D. Richardson and Dr. E. T. Dewar), 1779
  Abstracts of the third (University College, Galway), 1131
International Society for Human and Animal Mycology : Meeting in Lisbon, 1648
International Society of Soil Science (Soil Zoology Committee) : Colloquium on Research Methods in Soil Zoology, 704
International Starch Conference, 231
International Statistical Classification of Diseases, Injuries and Causes of Death : Manual of the (World Health Organization), *review*, 417
International Symposium on Aldosterone (edited by Alex F. Muller and Cecilia M. O'Connor), *review* by Prof. D. C. Harrison, 902
International Symposium on Antibiotics, 1279
International Symposium on Atmospheric Diffusion and Air Pollution (International Union of Theoretical and Applied Mechanics and the International Union of Geodesy and Geophysics), 22
International Symposium on Combustion : Sixth (Yale University, 1956), *review* by Dr. J. H. Burgoyne, 490
  Seventh (British Section of the Combustion Institute and the Institute of Fuel), 363
  Eighth (Combustion Institute, Pittsburgh), 771
International Symposium on Psychotropic Drugs, Milan, 1957: Proceedings of the (edited by S. Garattini and V. Ghetti), *review* by Prof. H. J. Eysenck, 823
International Trust for Zoological Nomenclature : Resignation of Francis Hemming as a member of the Trust and as managing director and secretary, 842
  Appointment of Lieut.-Colonel F. J. Griffin as managing director and secretary, 842
  Appointment of R. V. Melville as scientific controller (with responsibility for the scientific and editorial work), 842
International Union of Biochemistry (Council for the Organization of Medical Sciences, with the assistance of the Wellcome Trust and the) : Symposium on Biochemical Response to Physical Injury, 1493
International Union of Biological Sciences (International Association of Limnology and the) : Conference on the Classification of Brackish and Inland Saline Waters, 27
International Union against Cancer : Seventh International Cancer Congress, 364
International Union for Conservation of Nature and Natural Resources : Sixth General Assembly to be held jointly with the Seventh Technical Meeting of the Hellenic Society for the Protection of Nature, 89, 1405
International Union of Geodesy and Geophysics (International Union of Theoretical and Applied Mechanics and the): International Symposium on Atmospheric Diffusion and Air Pollution, 22, 1134
International Union of Pure and Applied Chemistry : Symposium on Protein Structure, Paris 1957 (edited by Prof. Albert Neuberger), *review* by Dr. Kenneth Bailey, 1587
International Union of Pure and Applied Chemistry (sponsored by) : International Conference on Co-ordination Chemistry (Chemical Society), 1710
International Union of Pure and Applied Chemistry (Section of Organic Chemistry), (organized by the Chemical Society, under the auspices of the) : Symposium on Theoretical Organic Chemistry, 22, 1340
International Union of Pure and Applied Physics : Annual International Conference on High-Energy Nuclear Physics, 356
International Union of Theoretical and Applied Mechanics and the International Union of Geodesy and Geophysics : International Symposium on Atmospheric Diffusion and Air Pollution, 22, 1134
International Wild Life Protection, American Committee for : Special Publication No. 13, Extinct and Vanishing Birds of the World (James C. Greenway, Jr.), *review* by Dr. A. J. Marshall, 758
International Zoological Congress, 86
Interplanetary Society, British : Ninth International Congress on Astronautics, 501
  Symposium on Space Medicine, 1645

Interpretation (A Revised), of the Causes of Loss of Crops of Cotton in the Drier Regions of Uganda (J. Bowden and W. R. Ingram), 1750
Intimate Structure of Human Albumin : Immuno-chemical Observations on the (Peggy B. Houghton and Prof. N. H. Martin), 329
Intoxication (Ammonium Carbonate), in the Rat : Electroencephalograph Correlates of (Dr. Robert Cohn and Comdr. Thomas R. Ulshafer), 1735
Intracellular Changes in Levels of Polarographically Active Sulphydryl Groups in Rat Liver during Carcinogenesis (Dr. Silvio Fiala), 257
Intracellular Particles of Locust Fat Body (M. L. Fenwick), 607
Intracellular Tubercle Bacilli : Inhibitory Action of Ethyl Mercaptan on (G. E. Davies and G. W. Driver), 664
Intramolecular Hydrogen Bonding : Determination of Hammett Sigma Constants by (A. T. Shulgin and A. W. Baker), 1299
Intrinsic Factor in the Gastrectomized Rat : Failure of Sorbitol to Replace (Dr. Bernard A. Cooper), 647
Introduction System (A Micro Sample), for Gas Chromatography (Robert L. Bowman and Dr. Arthur Karmen), 1233
Invasion by Animals and Plants : The Ecology of (Charles S. Elton), *review* by Prof. Ronald Good, 1576
Invasiveness and Surface Properties of Cancer Cells (Symposium at the Chester Beatty Research Institute), 1419
Invention : The Sources of (Prof. John Jewkes, David Sawyers and Richard Stillerman), 275
Invention and Research, 275
Invention and New Machines (Dr. E. R. Laithwaite), 1554
Inventions Bill : Development of (Second reading in the House of Commons), 1484
Invertase from Disintegrated Yeast Cells : Liberation of (M. Burger, E. Elizabeth Bacon and Dr. J. S. D. Bacon), 1508
Invertase Activity in Clay Mineral–Soil Mixtures (István Kiss), 203
Invertebrates : The Living, *review* by Theodore Savory, 825
Investigation of the Cause of Moisture Expansion of Ceramic Bodies : A New Approach to the (Thaisa Demediuk and W. F. Cole), 1223
Investigation of the Competitive Saprophytic Ability of Soil Fungi : A Technique for the, by the Use of Easily Decomposed Substrates (S. T. Matturi and Dr. H. Stenton), 1248
Investigation of Intermetallic Compounds in Mercury : Application of the Hanging Mercury Drop Electrode to an (Prof. Wiktor Kemula, Zbigniew Galus and Zenon Kublik), 1228
Investigation of the Ionosphere using Signals from Earth Satellites (Dr. E. Woyk) (E. Chvojková), 1362
Investigation of Virus Diseases of Brassica Crops (Dr. L. Broadbent), *review* by Dr. J. H. Hitchborn, 752
Investigation (Social) : Survey Methods in (C. A. Moser), *review* by Prof. T. S. Simey, 1256
Investigations (Biological) : Importance of Taxonomy in (Irvine J. Hunter), 1818
Investigations (Electron Spin Resonance), of Rat Liver and Rat Hepatoma (Frank K. Truby and Joseph W. Goldzieher), 1371
Investigations (Thermogravimetric), of Peat (J. A. Waddams and P. S. Gray), 1729
Investment for the Future : Education—an, 1039
Investment (Capital), in the Coal, Gas and Electricity Industries (White Paper on), 343
Involvement of Ferrous Iron in the Biosynthesis of δ-Aminolaevulic Acid by Chicken Erythrocyte Preparations : Evidence for the (E. G. Brown), 313
Inward Movement of Calcium as a Link between Electrical and Mechanical Events in Contraction (Prof. George B. Frank), 1800
Iodide Uptake of Wheat Seedlings : Relationships between the Chloride and (Z. Böszörményi and Edith Cseh), 1811
Iodide (Thyroidal) Transport : Cardiac Glycosides and (Dr. J. Wolff and J. R. Maurey), 957
Iodination of Aromatic Amines : Kinetic Isotope Effect in the (E. Shilov and F. Weinstein), 1300
Iodine : Efficient Trace-Labelling of Proteins with (Dr. A. S. McFarlane), 53
Iodine-131 in Human Thyroids following the Windscale Reactor Accident (G. Maycock and J. Vennart), 1545
Iodine (Oxidized), in Sea Water (Ken Sugawara and Kikuo Terada), 250 ; (J. K. Johannesson), 251 ; (T. I. Shaw and Dr. L. H. N. Cooper), 251
Iodoacetamide in Rats : Hypoglycaemic Effect of Monoiodoacetic Acid and (Gösta T. Hultquist), 318
Ioffe, Prof. A. F. : Semiconductor Thermoelements and Thermoelectric Cooling (translated from the Russian), *review* by Prof. G. F. J. Garlick, 72
Ion (Borate), in Buffers : Effect of the, on the Electrophoresis of Rat Serum (C. F. Garbers and F. J. Joubert), 530
Ion (Complex) : Electronic Configuration d^4 in a (Dr. Almon G. Turner, jun., and Alan F. Clifford), 1369
Ion (Ferrous), in Aqueous Solution : Oxidation of, by Atomic Hydrogen (Gideon Czapski and Prof. Gabriel Stein), 598
Ion (Hydrogen) Concentration and Activity, *review* by Prof. H. T. S. Britton, 1258
Ion (Magnesium), on the Purified Fraction : Separation of the Condensing Enzyme of *Aspergillus niger* from Acetyl Coenzyme *A* Deacylase and Citridesmolase and the Effect of (Prof. C. V. Ramakrishnan), 1601
Ion (Tropylium) : Polarographic Study of Acid-Base Reactions of the (P. Zuman, J. Chodkowski, H. Potešilová and F. Santavy), 1535
Ion Bombardment : Catalytic Activity and Surface Structure after (H. M. C. Sosnovsky, G. J. Ogilvie and E. Gilham), 523
Ion-exchange Resins : Contamination of Surfaces by Conductivity Water from (J. H. Schenkel and Dr. J. A. Kitchener), 131
  Use of, in preparing Water of High Purity (I. Raleigh), 1667 ; (Dr. J. A. Kitchener), 1667
Ionizing Radiation : Alleged Susceptibility of Sulphydryl Enzymes to (Dr. A. Pihl, R. Lange and L. Eldjarn), 1732
  A Highly Sensitive Chemical Dosimeter for (W. A. Armstrong and Dr. D. W. Grant), 747
Ionizing Radiations : Genetic Hazard of (Dr. T. C. Carter, Mary F. Lyon and Rita J. S. Phillips), 409
Ionophoresis (Paper), of Bile Salts : Moving Acid Boundary (*p*H Gradient), (Thomas Briggs, Dr. Michael W. Whitehouse and Dr. Ezra Staple), 394
Ionosphere : The—its Significance for Geophysics and Radio Communications (Dr. Karl Rawer), translated from the German by Ludwig Katz, *review* by T. W. Bennington, 1116
  Horizontal Drift Measurements in the, near the Equator (N. J. Skinner, J. Hope and R. W. Wright), 1363
  Investigation of the, using Signals from Earth Satellites (Dr. E. Woyk) (E. Chvojková), 1362
Ionospheric Measurements made at Halley Bay (W. H. Bellchambers and W. R. Piggott), 1596
Ions in some Flames : Identity of (J. Deckers and Prof. A. van Tiggelen), 863
Ions of the Transition Elements (Faraday Society General Discussion on), 158, 1349
Ions (Alkali) : Radiochromatography of (Dr. H. J. Arnikar), 1230
Ions (Calcium) : Effect of, on the Binding of Chromium-51 to Erythrocytes *in vitro* (G. von Ehrenstein and B. Zacharias), 1384
Ions (Halide), in Dimethylformamide : Anodic Reactions of Mercury with (Dr. P. H. Given and M. E. Peover), 1226
Ions (Inorganic) : Influence of certain, on the Hatching of the Potato Root Eelworm, *Heterodera rostochiensis* Wollenweber (Dr. C. Ellenby and A. B. Gilbert), 925
Ions (Magnesium) : Reversal by, of the Inhibition of Yeast Metabolism by a Cationic Detergent (Dr. W. McD. Armstrong), 326
Ions (Metal) : Effect of, on the Development of Wheat Stem Rust (D. Wang, Dr. P. K. Isaac and Prof. E. R. Waygood), 268
Ions (Potassium and Sodium) : Effects of, on the Resting and Action Potentials of the Giant Axon of the Cockroach (T. Yamasaki and T. Narahashi), 1805
Ions (*bis*-Pyridinium) : Protection by Oximes of, against Lethal Di*iso*propyl Phosphonofluoridate Poisoning (Dr. R. Hobbiger and Dr. P. W. Sadler), 1672
Ireland (Great Britain and) : Future of Mineral Exploration in (Prof. K. C. Dunham), 1136
  The Future of Non-Ferrous Mining in (Institution of Mining and Metallurgy Symposium on), 1136
Ireland (Northern) : Forestry in (Ministry of Agriculture for Northern Ireland), 989
Ireland (Northern), Government of the United Kingdom of Great Britain and, and the Government of the United States of America : Agreement for Co-operation on the Uses of Atomic Energy for Mutual Defence Purposes (Washington, 1958), 635
Iron in Britain : History of, *review* by Prof. F. C. Thompson, 349
α-Iron : Aluminium Nitride Precipitates in (G. R. Booker and J. Norbury), 255
Iron-52 : Use of, as a Radioactive Tracer (Dr. P. E. Francois and Leon Szur), 1665
Iron (Ferrous), in the Biosynthesis of δ-Aminolaevulic Acid by Chicken Erythrocyte Preparations : Evidence for the Involvement of (E. G. Brown), 313
Iron and Steel Industry (British) : History of the, from *c.* 450 B.C. to A.D. 1775 (Dr. H. R. Schubert), *review* by Prof. F. C. Thompson, 349
Iron and Steel Institute : Election of Dr. Harold Moore as an honorary member, 1063
  Nomination of William Barr as president for 1959-60, 1777
Ironmonger, E. E. : The Royal Institution and the Teaching of Science in the Nineteenth Century, 80
Irradiated and Control *Habrobracon* Females : Ingestion of Ethylenediaminetetraacetic Acid and the Effect on Life Span of (Leo E. LaChance), 870
Irradiation : Chromatid Breakage by, and the Oxygen Effect (Dr. G. J. Neary and Dr. H. J. Evans), 890
  Chromosome Aberrations in Calcium-deficient *Tradescantia* produced by (Dale Steffensen), 1750
  Deoxycytidine in Urine as an Indicator of Changes after (Dr. J. Pařízek, M. Arient, Z. Dienstbier and J. Skoda), 721
  Failure to induce Immunological Tolerance during Recovery from (G. J. V. Nossal and Lois Larkin), 1447
  Sodium Fluoroacetate as a Protecting Agent against (Prof. Z. M. Bacq and Dr. P. Fischer, Dr. A. Herve, and Prof. C. Liébecq and Dr. S. Liébecq-Hutter), 175
Irradiation Reaction in Mice : Initial (Dr. Harold Blondal), 1026
Irradiation (Flash) : Photo-reduction of Methylene Blue and Thionine by Ferrous Sulphate using (Dr. C. A. Parker), 245
γ-Irradiation of Dried Bacterial Spores : An Observed 'Oxygen Effect' during (Alan Tallentire), 1024
Irradiation (Total Body) : Effect of, on Capillary Permeability (Prof. G. Szabó, S. Magyar, P. Kertai and E. Zádory), 885
Irregularities of Satellite Drag and Diurnal Variations in Density of the Air (G. V. Groves), 1533
Irregularity in the Atmospheric Drag Effects on *Sputniks* 2 and 3 (Satellites 1957β, 1958δ, and $1958\delta_2$), (D. G. King-Hele and Mrs. D. M. C. Walker), 860
Irreversible Mechanical Processes : Entropy Production in (D. H. Everett), 1084
Irwin, Prof. Raymond : Work and Technique of Librarianship (Presidential Address to the Library Association Conference at Brighton), 1716
Isaac, Dr. P. K., and others : Effect of Metal Ions on the Development of Wheat Stem Rust, 268
Isaacs, Dr. Alick, and Burke, Dr. Derek C. : Mode of Action of Interferon, 1073
Ishida, Dr. K. : Human and Animal Mycology (Intestinal Yeast Flora of Man and Domestic Animals), 1648
Ishihara, Hiroshi, and others : Changes in Ultra-Violet Absorption Spectra of Deoxyribonucleic Acid by Treatment with Bromine, 1302
Ishimoto, Nobutoshi, and others : Composition of the Cell Wall of *Staphylococcus aureus* 209*P*, 959
Islam, M. M. : Awarded an Overseas Scholarship by the Royal Commission for the Exhibition of 1851, for research in physics, 156
Island (Easter), a Stone-Age Civilization of the Pacific (Dr. Alfred Metraux), translated from the French by Michael Bullock, *review* by Prof. Raymond Firth, 280
  Aku-Aku, the Secret of (Thor Heyerdahl), *review* by Prof. Raymond Firth, 487
Island (Inhaca), Mocambique : A Natural History of (edited by Dr. William Macnae and Dr. Margaret Kalk), *review* by Dr. W. J. Rees, 1761
Islands (Marshall) : Typhoon Effects at Jaluit Atoll in the (Dr. David L. Blumenstock), 1267

Isocitratase Formation by *Pseudomonas ovalis* Chester : Effect of Growth Substrates on (Dr. H. L. Kornberg, A. M. Gotto and Patricia Lund), 1430
Isoda, Hiroshi (Kumagai, Prof. Seiichiro, and) : Awarded the Silver Medal of the Combustion Institute, Pittsburgh, 771
Isolated Chloroplasts : Separation of Light and Dark Phases in the Photosynthesis of (Dr. Achim V. Trebst, Harry Y. Tsujimoto and Prof. Daniel I. Arnon), 351
Isolated Embryonic Rat Tibiae on a Chemically Defined Medium : Cultivation of (Susan Heyner and Dr. J. D. Biggers), 810
Isolated Rabbit Auricles : Influence of Hydrocortisone on the Action of Sodium on (Dr. T. H. Rindani), 1521
Isolation : Induced Swarming of a Nematode as a Means of (Prof. John P. Hollis), 956
Isolation of Active Mitochondria from Apples (Dr. J. M. Tager), 1521
Isolation of Fractions of Rabbit Gamma-Globulin containing the Antibody and Antigenic Combining Sites : Separation and (Dr. R. R. Porter), 670
Isolation of the α_2-Globulin Pattern on Starch Gel (S. Baar), 259
Isolation from Human Blood of a New Substance associated with Fat Transport Activity (Dr. W. S. Reith and M. J. Thomas), 604
Isolation of 16β-Hydroxyoestrone from the Urine of Pregnant Women (D. S. Layne and Prof. G. F. Marrian), 50
Isolation of Marmesin from the Fruits of *Ammi majus* Linn. (Effat A. Abu-Mustafa, Nasry Badran, M. B. E. Fayez and N. A. Starkowsky), 54
Isolation of $\Delta^{5,7,9}$-Œstratrienol-3-one-17 from the Urine of Pregnant Mares (Dr. W. L. Glen, R. Barber and G. Papineau-Couture), 1308
Isolation of Oxo-Steroids under Neutral Conditions (Dr. W. Taylor), 1735
Isolation of Piperonylic Acid from *Ocotea pretiosa* (Otto Richard Gottlieb and Maura Taveira Magalhaes), 742
Isolation and Pure Culture of *Monoblepharis* (Dr. Elizabeth Perrott), 1322
Ison, H. C. K. (Butler, G., and) : An Unusual Form of Corrosion Product, 1229
Isoniazid Action : Rejection of the Peroxide Accumulation Hypothesis of (Dr. Frank Winder), 565
Isono, K. : Mode of Growth of Ice Crystals in Air and other Gases, 1221
Isotope (Radioactive), Barium-140—Lanthanum-140 : Tracing the Movement of Pebbles marked with the (C. Kidson, A. P. Carr and D. B. Smith), 1347
Isotope Effect (Kinetic), in the Iodination of Aromatic Amines (E. Shilov and F. Weinstein), 1300
Isotope School, Harwell : Course on Radioisotopes in Industry, 700
Isotopes (Radio-) in Industry : Course on (Isotope School, Atomic Energy Research Establishment, Harwell), 700
Isotopes (Radioactive), in Aqueous and Alcoholic Samples : A Direct-Plating Method for the Assay of (H. Campbell, H. A. Glastonbury and Margaret D. Stevenson), 1100
Isotopes (Stable), and Radiation in the National Economy and Science : Abstracts of Papers given in the Session of Radiation Chemistry at the All-Union Conference on the Application of Radioactive and (Moscow, 1957), (translated from the Russian), *review* by Prof. G. Porter, 1588
Isotopic Exchange Reactions (Faraday Society Discussion on), 295
Israel : Different Frequencies of Supernumerary Chromosomes in Diploid Populations of *Dactylis glomerata* in (Dr. Daniel Zohary and Israel Ashkenazi), 477
Issery, I. T. S. : Appointed senior lecturer in civil engineering at the University of Birmingham, 158
Istituto di Sanita (Society for Applied Bacteriology and the) : Symposium on Cultural and Metabolic Aspects of Moulds, 1279
Itaconicoxidase, an Enzyme from an Ultra-Violet-induced Mutant of *Aspergillus terreus* (Dr. Ján Arpai), 661
Italian Society of Nuclear Biology and Medicine : Third Congress of the (Medical Clinic of the University of Florence), 229
Ito, Eiji, and others : Composition of the Cell Wall of *Staphylococcus aureus* 209*P*, 959
Ivanovics, G. : Bacteriophage Research, 1769
Ives, Dr. D. J. G. : Charge Transfer Processes (Mechanism of Cathodic Electrochemical Reactions—Abnormal Hydrogen Electrode Reactions at Gold), 1354
Ivins, Dr. J. D. : Appointed to the chair of agriculture in the University of Nottingham, 155 ; work of, 155
Iyengar, K. : Spectroscopy of Solids (High-resolution Absorption Spectra), 159
Iyengar, M. S., and Ghosh, R. S. : Science in the Use of Coal (Carbonization of Coal), 25
Izard, David, and others : Perchlorate, an Important Constituent of Sea Water, 645

JACKA, Dr. F. : Antarctic Research (The Topography of the Sub-Glacial Continent), 287 ; (Aurora), 289 ; (Future Research in the Antarctic), 289
Jacks, G. V. : Conservation of Natural Resources, 1406
Jackson, C., and others : Electron Spin Resonance in Carbons—a New Oxygen Effect, 1154
Jackson, Miss C. E. : Nature and Genetical Control of Resistance in Living Organisms (Appearance on Resistance to Chlorinated Hydrocarbon Insecticides), 921
Jackson, F. L., and Lawton, Valerie D. : 'Solubilization' of a Cytochrome *b* Component from *Micrococcus lysodeikticus*, 799, *erratum*, 1279
Jackson, Dr. K. F. : Space Medicine (The Impairment of Human Performance in Control), 1646
Jackson, P. A. : Movement of Salmon in the River Erne, 543
Jackson, P. B. N. : A Lungfish (*Protopterus*) from the Middle Zambezi, 123
Jackson, Dr. R. M. : Ecology of Soil Fungi, 1559
Jackson, Sir Willis : The Partnership between Industry and Education (Presidential Address to Section L (Education) of the British Association for the Advancement of Science), 585
Jackson, W. D., and others : Gibberellic Acid and the Physiological Genetics of Flowering in Peas, 1321
Jacob, F. : Bacteriophage Research, 1770
Jacob, Sir Ian : Diffusion of Scientific Skills and Knowledge (Address to the School Broadcasting Council), 1485
Jacobs, T. : Kinetics of the Thermal Dehydration of Kaolinite, 1086
Jacobs, Prof. W. P. : At the Third International Seaweed Symposium (Culture, Growth and Differentiation of *Caulerpa prolifera*), 1780
Jacobsen, Prof. Lydik S., and Ayre, Prof. Robert S. : Engineering Vibrations with Applications to Structures and Machinery, *review* by Prof. R. E. D. Bishop, 1581
Jacot-Guillarmod, Amy : Temperature Variations in Male Cones of *Encephalartos*, 474
Jadrijevič, Dusan, and others : Behaviour of 19-nor-Progesterone and 19-nor-Ethinyltestosterone in the Liver of the Guinea Pig, 1450
Jaeger, L. G. : Studies in Business Organization, *review*, 971
Jaffé, Dr. H. L. C. : Museum Architecture, 503
Jaffé (Mr. and Mrs. John) Donation Studentships in original scientific research awarded by the Royal Society to Dr. E. A. Magnusson and to Dr. Jennifer Wildy, 359
Jain, A. C., and Pelletier, Prof. R. -L. : Effects of Rust Infection on the Carbohydrate Metabolism of Wheat Seedlings, 882
Jain, H. K. : Correlated Failure of Synthetic Activities in a Wheat Chromosome, 1458
Jakobs, Dr. H. : Chemistry of Plant Products (Chemical Research and Agricultural Development in the Dutch East Indies), 299
Jaluit Atoll in the Marshall Islands : Typhoon Effects at (Dr. David I. Blumenstock), 1267
Jamaica : A Phosphatic Band underlying Bauxite Deposits in (Dr. V. A. Eyles), 1367
James, Dr. A. M. : Micro-electrophoresis, 1315
James, Dr. A. M. (Gebicki, J. M., and) : Effect of some Lytic Agents on *Aerobacter aerogenes*, 725
James, Dr. W. O. : Appointed to the University of London chair of botany and headship of the Department at the Imperial College of Science and Technology, 916, 990 ; work of, 916
James, Prof. W. O., and Leech, Rachel M. : Cytochromes in Chloroplasts, 1684
Jamieson, Dr. Margaret F. (Bearcroft, Dr. W. G. C., and) : An Outbreak of Subcutaneous Tumours in Rhesus Monkeys, 195
Jamuh, George (Harrisson, Tom, and) : Pigmy Sperm Whale (*Kogia breviceps*) in Borneo, 543
Jansen, A. P., and Wydeveld, P. G. A. B., : α-(*p*-Nitrophenyl) Maltoside as a Substrate for the Assay of Amylase, 525
Jansen, Prof. B. C. P. : Elected to honorary membership of the Nutrition Society, 22
Janssen, M. J. (Sijpesteijn, A. Kaars, and): Fungitoxic Action of 8-Hydroxyquinoline, Pyridine-N-oxide-2-thiol and Sodium Dialkyldithiocarbamates, and their Copper Complexes, 1313
Japan : Secular Variation in the Direction of Geomagnetism as the Standard Scale for Geomagnetochronology in (Naotune Watanabe), 383
Japanese Laminariaceae, 228
Japanese Larch (*Larix leptolepis*, Murray) : Effect of Gravity on Flowering and Shoot Growth in (Gravimorphism in Trees), (K. A. Longman and Dr. P. F. Wareing), 380
Jeeves, M. A. (Pickersgill, Miss M. J., and) : After-Effect of Movement produced by a Rotating Spiral, 1820
Jefferies, D. J., and Cornwell, P. B. : Lethal and Sterilizing Effects of Single and Fractionated Doses of Gamma Radiation on *Calandra granaria* L., 402
Jefferies, Dr. P. R. : Chemistry of Plant Products (Use of Gas Chromatography for the Quantitative Analysis of Simple Mixtures), 299
Jefferies, Dr. P. R., and others : Chemistry of Plant Products (Constitution of the Sesquiterpene Alcohol Globulol), 299
Jefferson, G. T. : A White-eyed Mutant Form of the American Cockroach, *Periplaneta americana* (L.), 892
Jeffery, Dr. J. W. : Grant of £285 from the Paul Instrument Fund, to carry out crystal structure determination by X-Ray diffraction, 432
Jeffree, Dr. Grace M. : Hydrogen Peroxide and Cancer, 892
Jellinck, P. H., and Smyth, D. G. : Molecular Changes in Exchange Labelling with Tritium, 46
Jelly : Royal, *review* by Dr. H. Kalmus, 142
Jen, K. : Free Radical Stabilization, 1497
Jencks, William P., and Carriuolo, Joan: Structure of Pyruvate in Aqueous Solution, 598
Jenkins, A. D. : Free Radical Stabilization, 1497
Jenkins, Dr. G. N. : Nutrition and Teeth (Dental Caries), 1705
Jennett, W. B. : Awarded a Rockefeller Travelling Fellowship in Medicine for 1958-59, 634
Jennings, K. R., and Linnett, Dr. J. W. : Production of High Concentrations of Hydrogen Atoms, 597
Jennings, W. O., and Mardles, Dr. E. W. J. : Accurate Measurement of the Viscosity of Liquids (Average Change in the Constant of four Master Viscometers), 439
Jensen, A. (Höie, Prof. J., and) : At the Third International Seaweed Symposium (Use of Seaweed Meal as a Supplement in Animal Feedingstuffs), 1780
Jensen, Dr. S. E. : Awarded a Carlsberg–Wellcome Travelling Research Fellowship for 1958-59, 228
Jerstedt, S., and others : Migration-elution of Zones in an Electrophoresis Column, 744
Jervis, Dr. G. A. : Chemical Pathology of the Nervous System (Inborn Errors of Metabolism), 1646
Jewkes, Prof. John, and others : The Sources of Invention, 275
Jinks, Dr. John L. (Mather, Prof. Kenneth, and) : Cytoplasm in Sexual Reproduction, 1188
Jirgensons, Prof. Bruno : Organic Colloids, *review* by Dr. C. H. Bamford, 751
Jivago, Dr. A. V. : Antarctic Research (Oceanography), 288
Job Analysis : Time-Span of Discretion in (J. M. M. Hill), 998
Jodrell Bank Radio Telescope : Appeal, 1484
  Evidence regarding the cost of construction, 1551
Joel, N., and Wooster, Dr. W. A. : Number of Elastic Constants required in Crystal Elasticity, 1078
Joel, N. (Wooster, Dr. W. A., and) : Elastic Constants of Diamond, 1149
Johannesson, J. K. : Oxidized Iodine in Sea Water, 251
Johanovsky, Dr. J. : Role of Hypersensitivity in Experimental Staphylococcal Infection, 1454
John, A. P. K. : Awarded a Student Prize in Psychiatry by the Mental Health Research Fund, 158
John, -. : Modern Educational Treatment of Deafness, 920
Johnson, Dr. A. G. : Male Sterility in *Brassica*, 1523

Johnson, A. O. : Fuel and Power in British Industry (Electricity), 1715
Johnson, Dr. E. A. : Steric Effects in Conjugated Systems (Vapour-phase Chromatography of Alkyldiphenyls), 568
Johnson, Dr. Edward A., and others : Purkinje and Ventricular Membrane Resistances during the Rising Phase of the Action Potential, 1161
Johnson, F. A. : Spectroscopy of Solids (Lattice Absorption Spectra of Silicon), 159
Johnson, Dr. M. A. (Kitchen, F. A., and) : Role of Turbulent Scattering in Long-Distance Radio Propagation at Metre Wave-lengths, 302
Johnson, Dr. N. L. : Multivariate Analysis, *review*, 1183
Johnston, Prof. T. B., and others (edited by) : Gray's Anatomy, Descriptive and Applied, thirty-second (centenary) edition, *review* by Prof. Ruth E. M. Bowden, 1760
Joliot, Prof. J. F. : *Obituary* by Prof. S. Rosenblum, 1273
Jolley, L. J., and Stanton, J. E. : Science in the Use of Coal (Reactivity of Cokes and Chars), 26
Jolly Good Company, *review* by Prof. Alan R. Gemmell, 683
Joly, Louis-P. (Nadeau, Dr. Guy, and) : Fluorescent Derivatives obtained by the Reaction of Ethylene Diamine with Epinephrine and Norepinephrine, 180
Jones, Dr. A. L., and others : Design and Management of a Nuclear Science Laboratory, 367
Jones, D. Caradog, and others : A Survey of Social Conditions in England and Wales as illustrated by Statistics, third edition, *review* by Prof. E. Grebenik, 1330
Jones, D. D. : Transistors, *review*, 756
Jones, D. E., and others : Experiments in Numerical Integration, 440
Jones, Dr. Emrys : Appointed to the University of London readership in social geography at the London School of Economics and Political Science, 1554
Jones, Ernest A., and others : Fluorescent Pigment of *Microsporum*, 475
Jones, Dr. F. E. : Promoted to Senior Principal Scientific Officer in the Scientific Civil Service, 992 ; work of, 992
Jones, F. O. (Geach, G. A., and) : Study of Metals and Alloys above 1,200°C. (High-temperature Techniques), 1418
Jones, F. O., and others : Study of Metals and Alloys above 1,200°C. (High-temperature Techniques—Arc-Furnace Techniques), 1419
Jones, G. L., and others : Utilization of Thiocyanate by *Thiobacillus thioparus* and *T. thiocyanoxidans*, 266
Jones, Prof. Jack Colvard : Anaesthesia and the Action of DDT on *Anopheles* Larvae, 722
Jones, Dr. Keith : At the eighth Plant Breeders' Conference (Cytological Basis for Interspecific Hybridization in Cocksfoot Breeding), 843
Jones, Ll. Iorwerth : At the eighth Plant Breeders' Conference (Height of Cutting when sampling Herbage Plants with different habits of growth affected the Assessment of their Yield), 843
Jones, L. T. : Chemistry of Plant Products (Use of Growth Regulators in Viticulture), 299
Jones, N. G. B. : Awarded a research studentship in zoology by the Nature Conservancy, 771
Jones, Prof. O. T. : Awarded the Medal of the Liverpool Geological Society, 295
Jones, P. B. : Awarded a Senior Studentship by the Royal Commission for the Exhibition of 1851, for research in nuclear physics, 155
Jones, T. A. : Reports of H.M. Inspectors of Mines under the Coal Mines Act (1911) for 1956—South Western Division, 637
  Reports of H.M. Inspectors of Mines and Quarries under the Mines and Quarries Act (1954) for 1957—South Western Division, 638
Jones, T. A., and Maliphant, G. K.: Yield Variations in Tree Crop Experiments with specific reference to Cacao, 1613
Jones, V. E. (Orlans, E. S., and) : Beta-Propiolactone as a Toxoiding Agent, 1216
Jones, W. M., and others : Measurement of the Energy Spectrum of Protons emitted from the Fusion Reaction in SCEPTRE III, 216
Jones, Dr. W. P. : Compressible Flow in High-Speed Aerodynamics, *review*, 755
  Problems of High-Speed Flight, *review*, 1582
Jonscher, A. K. : Solid State Physics, 567
Joossens, J. V., and others : Surface Tension of the Blood and Atherogenesis, 59
Jorgensen, Dr. C. K. : Ions of the Transition Elements (Decrease in Repulsion between Electrons in the *d*-shell of a Complex Ion compared with that in a Free Ion), 1350
Joslyn, Prof. M. A. (Peterson, R. G., and) : Nature of Betanin, the Pigment of Red Beet, 45
Joubert, F. J. (Garbers, C. F., and) : Effect of the Borate Ion in Buffers on the Electrophoresis of Rat Serum, 530
Journal of the Institute of Wood Science, No. 1, 769
Journal of Nuclear Energy : To be issued in two parts, 294
Journals (Scientific and Technical) : Soviet, available in English Translation (United States National Science Foundation), 632
Journées Métalligiques d'Automne of the Société Française de Métallurgie, 990
Jovanovich, J. V. (Standing, Dr. K. G., and) : Coherent Scattering of 1·33 MeV. γ-Rays by Lead, 521
Jowett, D. : Populations of *Agrostis* spp. Tolerant of Heavy Metals, 816
Joy, A. S. : Science in the Use of Coal (Physics and Chemistry of Coal), 25
Joy, W. R. R., and others : Influence of the Semi-Permanent Low-Level Ocean Duct on Centimetre Wave Scatter Propagation beyond the Horizon, 385
Joyce, Daphne : Relative Stability of Adrenaline, Noradrenaline and 5-Hydroxytryptamine subjected to various Simple Treatments, 463
Joyce, R. J. V. : Effect of the Cotton Plant in the Sudan Gezira on certain Leaf-feeding Insect Pests, 1463
Jubilee of Eskdalemuir Observatory, 706
Jubilee (Silver) of the Agricultural Meteorology Division of the India Meteorology Department : Special issue of the *Indian Journal of Meteorology and Geophysics* in honour of the, 360
Judah, J. D., and others : Mechanism of Oxidative Phosphorylation, 875
Juice (Flocculated Cane Sugar) : Zeta Potential and Sedimentation Behaviour in (Dr. M. C. Bennett), 1439
Juice (Lemon) : Occurrence of Coumarin Analogues in (Prof. Richard A. Bernhard), 1171
Julius, Prof. H. W., and de Vries, P. J. : Forssman's Antigen in Ehrlich Mouse Carcinoma, 1165
Junction Transistor Theory : An Introduction to (Dr. R. D. Middlebrook), *review* by D. D. Jones, 756
Junge, Chr. E., and Ryan, T. G. : Sulphur Dioxide in Atmospheric Chemistry, 21
Jungk, Dr. Robert : Brighter than a Thousand Suns, the Moral and Political History of the Atomic Scientists (translated into English by James Cleugh), *review* by Sir John Cockcroft, 547

KADLECOVÁ, V., and others : Dependence on Age of the Diameter of the Pupil in the Dark, 1520
Kado, Raymond T. (Kolin, Prof. Alexander, and) : Fractionation of Cell Suspensions in an Electromagnetic Force Field, 510
Kalanchoe daigremontiana : Hydroxyvaline in (New Hydroxyamino-Acids in Plants and their Identification), (Dr. J. K. Pollard, Dr. E. Sondheimer and Prof. F. C. Steward), 1356
Kalckar, Dr. Herman M. : An International Milk Teeth Radiation Census, 283
Kalk, Dr. Margaret (edited by Macnae, Dr. William, and) : A Natural History of Inhaca Island, Mocambique, *review* by Dr. W. J. Rees, 1761
Kalmus, Dr. H. : Royal Jelly, *review*, 142
  Title of reader in biology in the University of London (at University College) conferred on, 1279
  Responses of Insects to Polarized Light in the Presence of Dark Reflecting Surfaces, 1526
Kamchatka : Volcanic Eruptions in, 500
Kameda, Prof. Yukio, and others : A New Method for Resolving Amino-acids by Metabolism of Bacteria on Benzoyl Derivatives of DL-Amino-acids, 453
Kamrin, A. A., and others : Selection of Cell Lines in Tissue Culture by the Use of Cytotoxic Antisera, 1246
Kanisawa, M., and others : Effect of Viral Infection and Cortisone upon Tumour Growth in Homologous and Heterologous Hosts, 1678
Kanwisher, Dr. J. W. : Life at Low Temperatures, 912
  At the Third International Seaweed Symposium (A New Method of Continuous Oxygen Recording for Measuring the Photosynthetic and Respiratory Capacity of several Intertidal Algae), 1781
Kaolinite : Evidence of Lattice Defects preceding Oriented Transformations during the Heat Treatment of (Dr. G. B. Mitra), 1794
  Kinetics of the Thermal Dehydration of (T. Jacobs), 1086
Kaplan, H. S. : Progress in Cancer Research (Ionizing Radiations), 364
Kaplan, Prof. Nathan O., and others : Significance of Induced *in vivo* Synthesis of Diphosphopyridine Nucleotide, 512
Karamoja, Uganda : Miocene Mammalia from the Napak Volcanics, (Dr. W. W. Bishop), 1480
'Karathane'—the Relative Importance of the Phenolic and Unsaturated Acid Components in Toxicity towards certain Plant Pathogens (Dr. A. H. M. Kirby and E. L. Frick), 1445

Kendrick, B. : Ecology of Soil Fungi, 1559
Kennedya Vent. : Temperature and Germination in (J. H. Silsbury), 954

Kenny, Dr. A. J. : Appointed lecturer in biochemistry at the University of Leeds, 1279
Kent, A. K. : Awarded a Research Fellowship in zoology for 1958-59 by the Department of Scientific and Industrial Research, 1063
Kent, D. H. (compiled by, with the assistance of Bangerter, E. B. and Lousley, J. E.) : British Herbaria, *review* by Dr. W. B. Turrill, 759
Kent, J. L. : Ships in Rough Water, *review*, 1696
Kent, Kate : Cultivation and Weaving of Cotton in the Prehistoric Southwestern United States, 1775
Kent Incorporated Society for Promoting Experiments in Horticulture : Abstracts and Index to the Annual Research Reports, 1913-1953 (compiled by Dr. F. W. Andrews and A. C. Painter), (East Malling Research Station), 499
Keratin Cuticle : Electron Microscope Studies of the Chemical Reactivity in (Dr. J. Sikorski and W. S. Simpson), 1235
Keratinomyces ajelloi and *Trichophyton terrestre* in some British Soils: Occurrence of *Microsporum gypseum*, (Phyllis M. Stockdale), 1754
Kerney, M. P. : Awarded a Senior Studentship by the Royal Commission for the Exhibition of 1851, for research in palaeontology, 155
Kerr, I. : Antarctic Research (Meteorology), 287
Kerr, J. A., and Trotman-Dickenson, A. F. : Absorbents for Aldehydes and Olefins, 466
Kerr Cell Electro-Optical Shutter (Avco Manufacturing Corporation), 362
Kershaw, Dr. W. E. : Appointed to the Dutton and Walter Myers chair of entomology and parasitology in the University of Liverpool, 358 ; work of, 358
Kerslake, Dr. D. McK. : Promoted to Senior Principal Scientific Officer in the Scientific Civil Service, 992 ; work of, 992
Kertai, P., and others : Effect of Total Body Irradiation on Capillary Permeability, 885
Keto-Acids : Mode of Action of 5:6-Dimethylbenzimidazole and certain, as Inhibitors of Haem Biosynthesis (Dr. E. G. Brown), 1091
Ketones from Fatty Acids : Formation of, by Spores of *Penicillium roqueforti* (R. F. Gehrig and Prof. S. G. Knight), 1237
Ketones (Aromatic) : Half-wave Potentials of (Jayanti Nag Chaudhuri and Dr. Sadhan Basu), 179
Ketosis : Level of Liver Glycogen in (Dr. P. A. Mayes), 324
Kettleborough, Dr. C. F. : Awarded a James Clayton Grant by the Institution of Mechanical Engineers, 433
Kety, Dr. S. S. : Chemical Pathology of the Nervous System (Theories of the Biochemical Etiology of Mental Diseases), 1647
Key, Dr. B. J., and Bradley, Dr. P. B. : Effect of Drugs on Conditioning and Habituation to Arousal Stimuli in Animals, 1517
Key to Leaf-mining Insects, *review* by Dr. Kenneth Mellanby, 213
Key to Metallurgy : Carbon, the (Sir Charles Goodeve), 990
Keyes, Robert W. : An Antibonding Morse Potential, 1071
Khalil, Prof. I. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Kidney and Erythropoiesis (Dr. J. P. Naets), 1516
Kidney (Rabbit) : A Rapid Method for Separating Glomeruli from (W. F. Cook and Sir George Pickering), 1103
Kidney Cells of the Pig : Effect of Temperature on the Multiplication of Foot-and-Mouth Disease Virus in Suspensions of (Dr. H. Subak Sharpe), 1803
Kidney Cells (Monkey), previously grown *in vitro* : Tubule Formation in Rat Brains by (Prof. M. Michael Sigel, Thomas M. Scotti, Martha A. Wryk and Mantley Dorsey, jun.), 1034
Kidneys and Adrenals of Rats made Hypertensive by the Goldblatt Method : Histochemical Changes in (Dr. Antonio Pasqualino and Prof. Geoffrey H. Bourne), 1426
Kidson, C., and others : Tracing the Movement of Pebbles marked with the Radioactive Isotope Barium-140—Lanthanum-140, 1347
Kieffer, R., and others : Study of Metals and Alloys above 1,200°C. (Sintered High-melting Tungsten Alloys), 1418
Kies, Dr. Marian W., and Alvord, jun., Dr. Ellsworth C. : Prevention of Allergic Encephalomyelitis by Prior Injection of Adjuvants, 1106
Kies, Dr. Marian W., and others : Experimental Allergic Encephalomyelitis —Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and Killed Tubercle Bacilli, 104
Kihlman, B. A. : Respiration and Radiosensitivity of Broad Bean Roots, 730
Killed Tubercle Bacilli : Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and (Dr. Marian W. Kies, Dr. Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104
Kilpatrick, Dr. M. : Charge Transfer Processes (Homogeneous Processes—The Mechanism of Anomalous Proton Mobility in Hydrogen-bonded Systems), 1354
Kilpatrick, S. J. : Annual Epidemiological and Vital Statistics, 1954, *review*, 9
  The Mathematical Theory of Epidemics, *review*, 9.
Kilsheimer, Dr. Grace S., and Axelrod, Prof. B. : Phylogenetic Distribution of Acid Phosphatase inhibited by (+)-Tartrate, 1733
Kimpton, Chancellor L. A. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy ?), 1283
Kimura, Yukio, and others : A New Method for Resolving Amino-Acids by Metabolism of Bacteria on Benzoyl Derivatives of DL-Amino-acids, 453
Kind, S. S. : Stable Test-Papers for Seminal Acid Phosphatase, 1372
Kinetic Behaviour (Comparative), of Thrombin, Plasmin and Trypsin toward Synthetic Substrates (Dr. H. A. Scheraga, S. Ehrenpreis and E. Sullivan), 461
Kinetic Chain is Long : Preparation of Block and Graft Copolymers in Systems where the Life-time of the (Dr. P. E. M. Allen, G. M. Burnett, J. M. Downer, R. Hardy and Sir Harry Melville), 245
Kinetic Energy Effects : Capillary-tube Viscometry with Negligible (W. A. Caw and R. G. Wylie), 1153
Kinetic Isotope Effect in the Iodination of Aromatic Amines (E. Shilov and F. Weinstein), 1300
Kinetics : Enzyme, *review* by Dr. B. R. Hammond, 1578
Kinetics of Mitosis in Yeasts (Dr. M. S. Swaminathan and A. T. Ganesan), 610
Kinetics of Muscular Contraction in Heavy Water (M. C. Goodall), 677
Kinetics of the Thermal Dehydration of Kaolinite (T. Jacobs), 1086
Kinetics (Chemical), of Enzyme Action (Prof. Keith J. Laidler), *review* by Dr. B. R. Hammond, 1578
King, Dr. C. V. : Charge Transfer Processes (Mechanism of Cathodic Electrochemical Reactions—Studies of Exchange between Metals and their Ions in Solution), 1354
King, Prof. E. J. : Elected president for 1958-59 of the Association of Clinical Biochemists, 1063
King, Dr. H. K. : Microbes and the Biochemist, *review*, 823
King, Dr. H. K. (Glover, Dr. J., and) : Appointed senior lecturers in biochemistry in the University of Liverpool, 22
King, H. Raymond : Secondary Modern Schools in Britain, *review*, 1585
King, Joseph E. (Knauss, John A., and) : Observations of the Pacific Equatorial Undercurrent, 601
King, Dr. J. O. L. : A Comprehensive Handbook on the Care of Laboratory Animals, *review*, 281

Kublik, Zenon, and others : Application of the Hanging Mercury Drop Electrode to an Investigation of Intermetallic Compounds in Mercury, 1228
Kubota, Prof. Hiroshi (Inoué, Shinya, and): Diffraction Anomaly in Polarizing Microscopes, 1725
Kudrjashov, Prof. B. A., and Ulytina, P. D. : Existence and Significance of a Physiological Anticoagulating System, 397
Kuentzel, L. E. : Free Radical Stabilization, 1498
Kuhlemann, H., and others : A Biological Action of Injected Deoxyribonucleic Acid, 1679
Kuhn, Prof. W. : Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy (Transformation of Chemical Energy into Mechanical Energy by High Polymer Systems made from Vinyl Alcohol and Allyl Alloxan), 762
Kühnelt, Prof. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
Kum-Tatt, Dr. Lee : Quantitative Separation of Nitrogenous Organic Bases using Ammonium Reineckate, 655
Kumagai, Prof. Seiichiro, and Isoda, Hiroshi : Awarded the Silver Medal of the Combustion Institute, Pittsburgh, 771
Kumar, Dr. R. C. : Appointed Rutherford Scholar at University College, London, 18
Kunz, Kaiser S. : Numerical Analysis, *review* by Dr. L. S. Goddard, 972
Kunzler, J. E., and others : Development of a Low-Temperature Thermometer, 770
Kurti, Dr. N. : Presented with the Fritz London Award, 92
  Nuclear Orientation and Nuclear Cooling, 92
Kusai, Kiyoshi, and others : Preparation of Crystalline *Pseudomonas* Cytochrome$_{551}$ from *Pseudomonas aeruginosa*, 1307
Kushinsky, Dr. Stanley, and others : Separation of Mixtures of Œstrogens in Urinary Extracts using Gradient Elution Chromatography, 874
Kuwata, Dr. T., and others : Effect of Viral Infection and Cortisone upon Tumour Growth in Homologous and Heterologous Hosts, 1678

L-FORMS : Mutations in (Zb. Lorkiewicz and Irena Zelazna), 1619
LaChance, Leo E. : Ingestion of Ethylenediaminetetraacetic Acid and the Effect on Life Span of Irradiated and Control *Habrobracon* Females, 870
La Cour, L. F., and Felc, Dr. S. R. : Effect of Colchicine on the Utilization of Labelled Thymidine during Chromosomal Reproduction, 506
Labelled Antigens from Rat Liver : Autoradiographic Analysis on Agar Plates of (P. Perlmann and T. Hultin), 1530
Labelled Thymidine : Effect of Colchicine on the Utilization of, during Chromosomal Reproduction (L. F. La Cour and Dr. S. R. Felc), 506
Labelling of Cells in Thoracic Duct Lymph of the Guinea Pig after Tritiated Thymidine (Prof. J. M. Yoffey, Prof. N. B. Everett and Prof. W. O. Reinhardt), 1608
Labelling (Exchange), with Tritium : Molecular Changes in (P. H. Jellinck and D. G. Smyth), 46
Labelling (Trace-) of Proteins with Iodine : Efficient (Dr. A. S. McFarlane), 53
Laboratories : Science Teachers and, 1345
Laboratories in Grammar Schools, 707
Laboratories (Science), in Schools, 768
Laboratory : Biological Testing of Insecticides in the, *review* by Dr. A. H. McIntosh, 486
Laboratory (Nuclear Science) : Design and Management of a (Prof. A. J. Woodall, C. G. Wilson, Dr. A. L. Jones and D. K. Thomas), 367
Laboratory Animals : A Comprehensive Handbook on the Care of, *review* by Dr. J. O. L. King, 281
  The UFAW Handbook on the Care and Management of (edited by Alastair N. Worden and W. Lane-Petter), second edition, *review* by Dr. J. O. L. King, 281
Laboratory Balances (North of England Section of the Society for Analytical Chemistry Discussion on), 771
Laboratory Rearing of Locusts : An Artificial Diet for the (Dr. G. F. Howden and P. Hunter-Jones), 1527
Labour : Time Rates of Wages and Hours of (Ministry of Labour and National Service), twelfth edition, 770
Labour and National Service, Ministry of : Time Rates of Wages and Hours of Labour, twelfth edition, 770
Lacerta agilis : Fluorescent Mast-Cell Reaction in Precancerous Skin of the Lizard (Prof. A. Stolk), 1177
Lack, Dr. C. H., and Rogers, Dr. H. J. : Action of Plasmin on Cartilage, 948
Lack, Dr. David : Migrational Drift of Birds Plotted by Radar, 221
Lack of 'Slow-Alpha' Proteins in some Guernsey Cattle (Dr. G. C. Ashton), 193
Lactating Mammary Gland Tissues in Rats : Effect of Oxytocin Administration on Respiration of (K. Ôta and A. Yokoyama), 1509
Lactobacillus arabinosus : Arylaminopyrimidines as Growth-Inhibitors of *Streptococcus faecalis* and (Dr. Sudhamoy Ghosh, Dolly Roy and Prof. B. C. Guha), 187
Lafargue, M. (Millecamps, Prof. R. G., and) : Physics of Ice Movement (Ice Movement on Glaciers), 1561
Lagasse, A., and others : Fine Structure of the Nuclear Envelope of Carcinoma Cells, 1030
Laidlaw, Miss B. D. (Heacock, Dr. R. A., and) : Reduction of Adrenochrome with Ascorbic Acid, 526, *erratum*, 700
Laidler, Dr. K. J. : Charge Transfer Processes (Homogeneous Processes—Electron-Transfer Reactions in Aqueous Solutions), 1354
  The Chemical Kinetics of Enzyme Action, *review* by Dr. B. R. Hammond, 1578
Laing, Dr. J. A. : Appointed to the Courtauld chair of animal husbandry and veterinary hygiene at the Royal Veterinary College, 1777
Laing, Dr. P. G., and Ferguson, Jun., Dr. Albert B. : Sodium-24 as an Indicator of the Blood Supply of Bone, 1442
Lainson, Dr. R. : Some Observations on the Life-Cycle of *Atoxoplasma*, with particular reference to the Parasite's Schizogony and its Transmission by the Mite *Dermanyssus gallinae*, 1250
Laithwaite, Dr. E. R. : Invention and New Machines (Christmas Lecture of the Institution of Electrical Engineers), 1554
Lajtha, Dr. A. : Chemical Pathology of the Nervous System (Isotopic Evidence suggesting that Protein Synthesis occurs continuously in the Nerve Cell Body), 1647
Lajtha, Dr. L. G., and Vane, J. R. : Dependence of Bone Marrow Cells on the Liver for Purine Supply, 191
Lajtha, Dr. L. G., and others : Studies in Synthesis of Deoxyribonucleic Acid—Mechanism of Radiation Effect on the Process of Synthesis of Deoxyribonucleic Acid, 1788
Lake, Dr. N. C. : The Flow of Blood in relation to the Vessel Wall, 90
Lake Victoria : Lunar Periodicity of Aquatic Insects in (Dr. Philip S. Corbet), 330
Lakes (Saline), near Kingston, South Australia : Formation of Dolomite in (A. R. Alderman and H. C. W. Skinner), 21
Lakshman, A. B. (Ramaswami, Dr. L. S., and) : Spawning Catfish with Mammalian Hormones, 122
Lalor Foundation : Awards for 1959 for Research in the Biological Sciences, 1063
Lamb, J. (Cunningham, R. K., and) : Cocoa Shade and Manurial Experiment in Ghana, 118
Lamb, Prof. W. E. : Experimental Tests of Quantum Electrodynamics (Guthrie Lecture of the Physical Society), 160

Lamb : Changes in the Potassium Concentration and Metabolism of Red Blood Cells of the (Prof. R. D. Wright, T. R. Bradley, J. F. Nelson and J. P. Coghlan), 1742
Lambeth Conference 1958 : The Encyclical Letter from the Bishops together with the Resolutions and Reports, 965
Lambs (Healthy and Cobalt-deficient) : Vitamin B_{12} and Cobalt Concentrations in Livers from (E. D. Andrews, L. I. Hart and B. J. Stephenson), 869
Lambs (Romney Ewe), grazed on Red Clover (*Trifolium pratense*) Pastures : Reproductive Disturbances of (T. S. Ch'ang), 1175
Lamella (Galeal), in Adult Mosquitoes : The Finer Structure of the (G. Surtees), 812
Laminariaceae of Hokkaido : On the (Dr. K. Miyabe), now available in an English translation, 228
Lammiman, K. A., and Morris, P. P. : Accurate Measurement of the Viscosity of Liquids (Precise Measurement of Kinematic Viscosity in the Petroleum Industry), 438
Lammie, S. : Pulp and Paper Research Institute of Canada—New Laboratories, 1556
Lamont, P. H., and Betts, Dr. A. O. : Enteroviruses in the Pig, 608
Lance, Dr. G. N. (Williams, Prof. W. T., and) : Automatic Subdivision of Associated Populations, 1755
Lanchester Memorial Lecture of the Royal Aeronautical Society (Prof. A. R. Collar), 1643
Lanczos, Prof. Cornelius : Applied Analysis, *review* by Prof. T. A. A. Broadbent, 1401
Land of Australia, *review* by Prof. L. Dudley Stamp, 1400
Land Use in Hong Kong and the New Territories : A Survey of (Dr. Thomas R. Tregear), 1285
Land Use Survey : The World (Prof. Robert W. Steel), 1285
Land Use Survey, World : Monograph I, A Survey of Land Use in Hong Kong and the New Territories (Dr. Thomas R. Tregear), 1285
Land Utilization in Australia (Samuel Wadham and the late Gordon L. Wood), third edition by Sir Samuel Wadham, R. Kent Wilson and Joyce Wood, *review* by Prof. L. Dudley Stamp, 1400
Landauer, Dr. J. K. (Butkovich, Dr. T. R., and) : Physics of Ice Movement (Flow Law for Ice Single Crystals), 1560
Landauer, Dr. J. K. (Hansen, Dr. B. L., and) : Physics of Ice Movement (Experiments on Glaciers which have bearing on the Mechanical Properties of Ice), 1560
Landowne, R. A., and Lipsky, Prof. S. R. : Detection of certain Brominated Long-Chain Fatty Acid Esters by Gas Liquid Chromatography, 1731
Lands (Arid) : Unesco Programme for (Unesco Information Manual 3), 1414
Landsberg, Dr. P. T. : Solid State Physics—Conference in Brussels, 567
  Semiconductor Research, 1067
Landslides in Clays (Alexandre Collin, 1846), translated by W. R. Schriever, *review* by K. L. Nash, 552
Lane, Dr. A. M. : Nuclear Theory, *review*, 756
Lane, W. R. (Green, H. L., and) : Particulate Clouds—Dusts, Smokes and Mists, their Physics and Physical Chemistry and Industrial and Environmental Aspects, *review* by R. L. Brown, 682
Lane Medical Lectures, 1956 (Sir Charles Dodds), *review* by Dr. A. E. Kellie, 484
Lane-Petter, W. (edited by Worden, Alastair N., and) : The UFAW Handbook on the Care and Management of Laboratory Animals, second edition, *review* by Dr. J. O. L. King, 281
Langan, jun., Thomas A., and others : Significance of Induced *in vivo* Synthesis of Diphosphopyridine Nucleotide, 512
Lange, R., and others : Alleged Susceptibility of Sulphydryl Enzymes to Ionizing Radiation, 1732
Langer, Dr. R. H. M. : Changes in the Tiller Population of Grass Swards, 1817
Langford, W. J. : Contemporary Problems in Mathematical Teaching and Staffing, 1064
Langmaack, Dr. L. : At the Third International Seaweed Symposium (Birefringent Properties of Alginate and Carragheenate with Colloid Cations), 1780
Langridge, J. : A Hypothesis of Developmental Selection, 20
Language : International Colloquium on Communication and (Faculty of Medicine of the Université de Paris, the Société Française de Phoniatrie and the Laboratory of Physiological Acoustics of the Collège de France), 1644
Langway, Dr. C. C. : Physics of Ice Movement, 1561
Lansberg, Dr. M. P. : Space Medicine (Some Consequences of Weightlessness), 1645
Lapage, Dr. G. : Water Fluoridation and Dental Caries, 1351
Larch (Japanese), *Larix leptolepis*, Murray : Effect of Gravity on Flowering and Shoot Growth in (Gravimorphism in Trees), (K. A. Longman and Dr. P. F. Wareing), 380
Large-scale Production of Tuberculin Purified Protein Derivative : Importance of Zinc for the Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis*, and (T. Dekker and H. Hultema), 1387
Larikov, G. : Vaporization of Projectiles on Impact, 468
Larix leptolepis, Murray : Effect of Gravity on Flowering and Shoot Growth in Japanese Larch (Gravimorphism in Trees), (K. A. Longman and Dr. P. F. Wareing), 380
Larkin, Lois (Nossal, G. J. V., and) : Failure to induce Immunological Tolerance during Recovery from Irradiation, 1447
Larsen, B. : At the Third International Seaweed Symposium (Influence of Habitat on the Fucosan Content and other constituents of *Ascophyllum nodosum*), 1780 ; (Influence of Season, Habitat and Age of Tissue on the Niacin Content of Brown Algae), 1780
Larsson, Börje, and others : The High-Energy Proton Beam as a Neurosurgical Tool, 1222
Larva (Trochophore) : An Electron-Microscopic Study of the Ciliature of the (Dr. H. Seuntjens and Dr. W. G. Braams), 1611
Larvae (*Anopheles*) : Anaesthesia and the Action of DDT on (Prof. Jack Colvard Jones), 722
Larvae (Artificially Liberated) : Use of, in Experiments on the Setting Behaviour of *Spirorbis* (P. H. D. H. de Silva), 1751
Larvae (Housefly) : Fate of Beta-Sitosterol in (Dr. Ernst D. Bergmann and Zwi H. Levinson), 723
Larvae (Silkworm), *Bombyx mori* : Substances in Mulberry Leaves which attract (Tadao Watanabe), 325
Larval Brain : Effect of, on the Imaginal Differentiation in the Silkworm (Masatoshi Kobayashi), 110
Larval Nematodes : *Sagitta* as a Host of, including a New and Unique Type of Cercaria (Dr. Ben Dawes), 960
Larval and Adult Haemoglobins of the Cyclostome *Petromyzon planeri* (M. Adinolfi and G. Chieffi), 730
Lashley, Prof. K. S. : *Obituary* by Sir Frederic Bartlett, 1343
Last Minutes of Satellite 1957β (*Sputnik* 2), (D. G. King-Hele and Mrs. D. M. C. Walker), 426
Latarjet, T. : Progress in Cancer Research (Viruses), 365
Latent Period in Muscle : Dependence of, on Strength of Stimulus (M. C. Goodall), 1736
Lathyrism in Mice (H. Morag McCallum), 1169
Latimeria chalumnae : Specimen of an Existing Coelacanth Fish, on view in the Fish Gallery of the British Museum (Natural History), 227
Latter, Miss P. M. : Ecology of Soil Fungi, 1559
Lattice Defects preceding Oriented Transformations during the Heat Treatment of Kaolinite : Evidence of (Dr. G. B. Mitra), 1794
Lauffer, Max A. (edited by Smith, Dr. Kenneth M., and) : Advances in Virus Research, Vol. 4, *review* by Dr. M. R. J. Salton, 1576
Laughland, D. H., and others : Volume and Acidity of Urine of Sheep fed Hay Rich in Silica and Effect of Dietary Salt Additions, 1385
Laughlin, Roger : Desiccation of Eggs of the Crane Fly (*Tipula oleracea*, L.), 613
Laurence, G. S. : Awarded a general fellowship in chemistry at the University of Leeds by the Ramsay Memorial Fellowships Trustees, 432
Laurenson, L., and others : A New Type of Titanium Getter Pump, 851
Lavoipierre, M. M. J. : Presence of a Factor Inhibiting Biting in *Aedes aegypti*, 1567
Law, L. W. : Progress in Cancer Research (Ionizing Radiations), 364
Law, L. W., and others : Observations on the Spread of Mouse Polyoma Virus Infection, 1617
Law (World) : World Peace through (Grenville Clark and Prof. Louis B. Sohn), 966
Lawrence, Dr. B. E. : Partnership in Education (Presidential Address at the Annual Conference of Educational Associations), 1777
Lawrence, Prof. F. O. : *Obituary* by Dr. S. C. Curran, 1058
Lawrence, H. R. (edited by Donovan, A. F., and) : Aerodynamic Components of Aircraft at High Speeds, *review* by Dr. W. P. Jones, 1582
Lawrence, John H., and Tobias, Cornelius A. (edited by) : Advances in Biological and Medical Physics, Vol. 5, *review* by Prof. J. A. V. Butler, 827
Lawrence, M. J. : Genotypic Control of Crossing-over on the First Chromosome of *Drosophila melanogaster*, 889
Lawrenson, I. J., and Rushworth, Dr. F. A. : Molecular Structure of *cyclo*-Octatetraene, 391
Lawrie, R. A., and others : Abnormally Low Ultimate *p*H in Pig Muscle, 807
Laws in Social Science, 561
Lawson, D. I. : Appointed director of fire research of the Joint Fire Research Organization of the Department of Scientific and Industrial Research and the Fire Offices' Committee, 292 ; work of, 292
Lawther, Dr. P. J. : Effects of Pollution on Living Material (Injury from Acute Air Pollution), 1209
Lawton, Valerie D. (Jackson, F. L., and) : 'Solubilization' of a Cytochrome *b* Component from *Micrococcus lysedeikticus*, 799, *erratum*, 1279
Lax, B. : Spectroscopy of Solids (Effect of Strong Magnetic Fields on the Absorption Spectrum of Germanium and other Semi-conductors), 159
Lax, M., and others : Spectroscopy of Solids (Fine Structure in the Recombination Radiation of Silicon), 159
Layer of Soil and in Agar Culture : Autoradiography of Fungi through a (Dr. Erna Grossbard), 854
Layers (Evaporated), of Cadmium Sulphide : Photoconductivity and Crystal Size in (J. M. Gilles and J. Van Cakenberghe), 862
Laying Hen : Progesterone in the Blood of the (I. M. Lytle and Prof. F. W. Lorenz), 1681
Layne, D. S., and Marrian, Prof. G. F. : Isolation of 16β-Hydroxyoestrone from the Urine of Pregnant Women, 50
Layrisse, Dr. Miguel (Milgrom, Dr. Felix, and) : Applications of Erythrocyte Stromata Powder, 189
Lazzarini, E. (Giustina, G., and) : Incorporation of Carbon-14 Dioxide by Duck Erythrocytes and Reticulocytes *in vitro*, 1311
Le Goff, P. : Free Radical Stabilization, 1498
Leach, A. A. : At the fifteenth meeting of the Research Panel of the British Gelatine and Glue Research Association (Modified Neuman and Logan Technique for Hydroxyproline Determination), 440
Leach, J. S. Llewelyn : Surface Oxide Films and the Breakaway Corrosion of Uranium, 1085
Leacock, J. A., and others : Tables of Light-Scattering Functions, *review* by Dr. B. J. Mason, 1117
Lead : Coherent Scattering of 1·33 MeV. γ-Rays by (Dr. K. G. Standing and J. V. Jovanovich), 521
Leaf, Dr. Alexander (Maffly, Dr. LeRoy H., and) : Water Activity of Mammalian Tissues, 60
Leaf, Dr. G. : Chemistry of Plants, *review*, 550
  Utilization of Inorganic Nitrogen Sources by Plants, 1198
Leaf Area : Significance of, in Pasture Growth (C. M. Donald and J. N. Black), 707
Leaf Form : Effect of Gibberellic Acid on (Dr. E. Njoku), 1097
Leaf-feeding Insect Pests : Effect of the Cotton Plant in the Sudan Gezira on certain (R. J. V. Joyce), 1463
Leaf-mining Insects : A Key to, *review* by Dr. Kenneth Mellanby, 213
Learned Societies : Tax Concessions on Subscriptions to, 294
Learning (Temporal Discrimination) : Phenylketonuria in the Rat associated with Decreased (Victor H. Auerbach, Prof. Harry H. Waisman and L. Benjamin Wyckoff, jun.), 871
Leaves of *Nardus stricta* L. : Silicification of Branched Cells in the (D. Wynn Parry and Frank Smithson), 1460
Leaves (Mulberry) : Substances in, which attract Silkworm Larvae (*Bombyx mori*), (Tadao Watanabe), 325
Leaves (Susceptible Plant) : A Simple Technique for Inoculating Pathogenic Bacteria on (M. A. Nour and J. J. Nour), 96
Leaves (Wheat) : Effect of Rust Infection on Oxidative Phosphorylation of (B. I. Pozsár and Z. Király), 1686
  Effects of Water-Strain on the Minimum Intercellular Space Carbon Dioxide Concentration Γ in (Prof. O. V. S. Heath and Dr. H. Meidner), 1524

Lecithinase Activity : Control of, by the Electrophoretic Charge on its Substrate Surface (Dr. A. D. Bangham and Dr. R. M. C. Dawson), 1292
Lecture (Christmas), of the Institution of Electrical Engineers (Dr. E. R. Laithwaite), 1554
Lectures on Britain's Food Supplies : Course of (Department of Extra-Mural Studies of the University of London and the Association of Agriculture), 1644
Lectures (Christmas) of the Royal Institution, 1416
Lectures (Christmas), of the Royal Photographic Society (Picture Making in Photography), 1554
Lectures (Christmas), at the Science Museum, 1710
Leactures (Selected), in Modern Physics for School Science Teachers (edited by Prof. H. Messel), *review* by G. R. Noakes, 623
Lectures (Travelling) : Research for Teachers and (United States National Science Foundation), 1276
Lectureship : Perkin Exchange, awarded to Prof. A. J. Birch, 295
Lederberg, Prof. J. : Bacteriophage Research, 1770
Lederberg, Prof. J., Beadle, Prof. G. W., and Tatum, Dr. E. L. : Nobel Prize for Medicine and Physiology for 1958 awarded jointly to, 1344 ; work of, 1344
Lederer, Dr. E., and others : Synthesis of 3,6-Dideoxy-D-*ribo*-hexose (3,6-Dideoxy-D-glucose) and its Identification with Paratose, 944
Lederis, K. (Heller, Prof. H., and) : Paper Chromatography of Small Amounts of Vasopressins and Oxytocins, 1231
Lederle Travelling Fellowship in Medicine (Medical Research Council Award for 1958-59), 634
Ledger, H. P., and others : Effect of Maize on Fat Hardness and Growth-Rate in Bacon Pigs, 953
Lee, Everett S., and others : Population Redistribution and Economic Growth, United States, 1870-1950, I, Methodology Considerations and Reference Tables (prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), (Memoirs of the American Philosophical Society, Vol. 45), *review*, 420
Lee, Dr. E. W., and Callaby, D. R. : Direct Measurement of the Velocity of Propagation of a Ferromagnetic Domain Boundary in 'Perminvar', 254
Leech, H. R. : Chemistry of Fluorine Compounds (The Industrial Advance of Fluorine), 1269
Leech, Rachel M. (James, Prof. W. O., and) : Cytochromes in Chloroplasts, 1684
Leech Muscle : The Morphinized–Eserinized, for the Assay of Acetylcholine (Prof. Maurice F. Murnaghan), 317
Lees, Dr. H. (Butt, W. D., and) : Cytochromes of *Nitrobacter*, 732
Lees, Dr. M. : Chemical Pathology of the Nervous System (Cerebral Lipidoses), 1646
Lefschetz, Solomon : Differential Equations—Geometric Theory, *review* by Prof. T. A. A. Broadbent, 1332
Legget, Dr. R. F. : At the seventy-sixth Annual Meeting of the Royal Society of Canada (Potentialities of the North-West—Transportation and Housing Possibilities), 701
Legowski, T. J., and Gould, H. J. : Effect of DDT on Egg-laying by *Oscinella frit* L., 1682
Lehane, J. A., and others : Air Showers of Size Greater than 10^5 Particles, 4, The Distribution of Nuclear-Active Particles and of Mu-Mesons, 1699
Lehmann, Dr. H., and others : An Abnormal Haemoglobin in a Chinese—Haemoglobin *G*, 460
  Three Varieties of Human Haemoglobin *D*, 852
Lehrle, Dr. R. S. : Appointed lecturer in chemistry at the University of Birmingham, 158
Leighton, J. : Josiah Wedgwood and Research (Presidential Address to the North Staffordshire Field Club), 1130
Leishmania donovani : Hexokinase Activity in Cell-free Extracts of (A. N. Chatterjee, J. C. Ray and Dr. J. J. Ghosh), 109
Leishmanicides : A New Series of (Dr. E. Beveridge, Dr. L. G. Goodwin and L. P. Walls), 316
Leivestad, H. (Nair, Dr. N. Balakrishnan, and) : Effect of Low Temperature on the Vertical Distribution of Two Wood-boring Crustaceans, 814
Leksell, Lars, and others : The High-Energy Proton Beam as a Neurosurgical Tool, 1222
Leliaert, G., and others : Neutron Activation Analysis using an Internal Standard, 600
Lemass, Seán : Third International Seaweed Symposium opened by, 1779
Lemon Juice : Occurrence of Coumarin Analogues in (Prof. Richard A. Bernhard), 1171
Lennox, Dr. B., and others : Representation of the X-Chromosome in Intermitotic Nuclei in Man, 124
  Colour Vision Studies and the X-Chromosome Constitution of Patients with Klinefelter's Syndrome, 1092
Lenses for Television : New Equipment and Methods for the Evaluation of the Performances of (W. N. Sproson), 1490
Lenticular Effect in Mice of some Morphine-like Drugs (Marta Weinstock, Dr. H. C. Stewart and K. R. Butterworth), 1519
Leontovitch, -. (edited by) : Plasma Physics and the Problems of Controlled Thermonuclear Reactions, 1053
Lepas hillii and *Lepas anatifera* : Growth and Maturity of the Barnacles (Dr. Frank Evans), 1245
Lepidophthirus macrorhini Enderlein 1904 : Ecology of the Louse, on the Elephant Seal *Mirounga leonina* (L.), (M. D. Murray), 404
Leprosy Research Fund, 1278
Leptaspis and *Streptogyna* (Poaceae) : Somatic Chromosomes of (Dr. T. Tateoka), 1619
Lernaeenicus : Heavy Infestation by the Parasitic Copepod, of Sprats in the River Crouch (Dr. J. P. Harding and A. C. Wheeler), 542
Lesion (Radiobiochemical), in Animal Cells (Studies in Synthesis of Deoxyribonucleic Acid), (Margery G. Ord and Dr. L. A. Stocken), 1787
Lesions (Complete Transverse), of the Spinal Cord : Adrenal Activity in Subjects with (Dr. R. Robinson and Dr. A. F. Munro), 805
Lesions (Yaws) : An International Nomenclature of (Dr. C. J. Hackett), 1132
Leslie, Dr. D. C. M. (King-Hele, D. G., and) : Effect of Air Drag on the Orbit of an Earth Satellite, 788
Lethal Action of X-Rays : Inability of Epinephrine to protect Rhode Island Chicks against the (Dr. M. -L. Beaumariage), 803
Lethal Di*iso*propyl Phosphonofluoridate Poisoning : Protection by Oximes of *bis*-Pyridinium against (Dr. F. Hobbiger and Dr. P. W. Sadler), 1672
Lethal and Sterilizing Effects of Single and Fractionated Doses of Gamma Radiation on *Calandra granaria* L. (D. J. Jefferies and P. B. Cornwell), 402
Letham, Dr. D. S. : Cultivation of Apple-fruit Tissue *in vitro*, 473
Lettuce Seeds : A Reduced Diphosphopyridine Nucleotide Oxidase in (Dr. A. M. Mayer), 317
Leuco-anthocyanin in Flowers of *Camellia japonica* : Separation of Anthocyanin and (Toru Endo), 801
Leuco-Anthocyanins as the Possible Precursors of Tannins (W. E. Hillis and Mrs. Gerda Urbach), 657
Leuco-Compound : Presence in Root Tips of a Thermolabile Factor causing the Conversion of Protochlorophyll to a (Z. Hejnowicz), 1023
Leucocytes (Human) : Separation of, from Blood (Dr. Peter Wildy and Dr. Mark Ridley), 1801
Leukaemia induced by a Virus : Metabolic Alteration in (Hilton B. Levy and Isadore Brodsky), 1379
Leukaemic Human Lymphocytes (Normal and) : Cytotoxicity of Heterologous Sera to (Robert Schrek), 724
Level of Liver Glycogen in Ketosis (Dr. P. A. Mayes), 324
Levels in Polarographically Active Sulphydryl Groups in Rat Liver during Carcinogenesis : Intracellular Changes in (Dr. Silvio Fiala), 257
Levels of Serum Cholesterol in Obese Mice (Claire Zomzely and Jean Mayer), 1738
Levi, D. L., and others: Study of Metals and Alloys above 1,200°C. (High-temperature Equilibria—Methods for Determining the Thermodynamic Activities of Alloy Constituents at High Temperatures), 1419
Levin, Dr. Irvin : Photovoltaic Pile, 44
Levin, Dr. Nyman : Appointed a deputy director of the Atomic Weapons Research Establishment, 155 ; work of, 155
Levine, Myron, and Curtiss, III, Roy : A Genetic Test for Side-chains in a Phage Chromosome, 126
Levinson, Zwi H. (Bergmann, Dr. Ernst D., and) : Fate of Beta-Sitosterol in Housefly Larvae, 723
Levinthal, C. : Bacteriophage Research, 1769
Levisohn, Dr. I. : Ecology of Soil Fungi, 1560
Levvy, Dr. G. A. : Promoted to Senior Principal Scientific Officer by the Agricultural Research Council, 993 ; work of, 993
Levy, Prof. H. : Contemporary Problems in Mathematical Teaching and Staffing, 1065
Levy, Hilton B., and Brodsky, Isadore : Metabolic Alteration in Leukaemia induced by a Virus, 1379
Levy, Dr. Paul W. : The Impact Testing of Explosives, 37
Levy, Robert I., and Schneiderman, Dr. Howard A. : An Experimental Solution to the Paradox of Discontinuous Respiration in Insects, 491
Lewis, Dr. Bernard : Awarded the first Bernard Lewis Medal of the Combustion Institute, Pittsburgh, 771
Lewis, Prof. D. : The Experimental Approach to Life, 497
  Chromosomes, *review*, 1401
  Gene Control of Specificity and Activity—Loss by Mutation and Restoration by Complementation, 1620
Lewis, Elfed J. : At the eighth Plant Breeders' Conference (Experiment to assess, by means of a Diallel Cross, the Potential Breeding Value of Plants selected from an Outbreeding Species), 843
Lewis, Dr. G. P. (edited by) : 5-Hydroxytryptamine—Proceedings of a Symposium held in London, 1957, *review* by Prof. D. C. Harrison, 898
Lewis, Dr. J., and others : Ions of the Transition Elements (Magnetic Properties—Magnetic Susceptibilities of some Complexes of Osmium, Ruthenium, Rhenium and Iridium over a Temperature Range), 1350
Lewis, Prof. L. J. : Appointed to the University of London chair of education, with special reference to education in tropical areas, at the Institute of Education, 363
Lewis, Prof. M. M. : Modern Educational Treatment of Deafness, 921
Lewis, Prof. W. B. : Appointed to serve on the Scientific Advisory Committee of the International Atomic Energy Agency, 1413
Lewis, Dr. W. D. : Appointed a director of research at Bell Telephone Laboratories, Murray Hill, N.J., 1550
Lewis (Bernard) Medal of the Combustion Institute, Pittsburgh, awarded to Dr. Bernard Lewis, 771
Leyton, Dr. L. : Tree Physiology, *review*, 1698
Li, Prof. Choh Hao (Schwyzer, Dr. R., and) : A New Synthesis of the Pentapeptide L-Histidyl-L-Phenylalanyl-L-Arginyl-L-Tryptophyl-Glycine and its Melanocyte-stimulating Activity, 1669
Li, Dr. Kuang C., and Wagenknecht, Dr. A. C. : A Minor Anthocyanin Pigment of Sweet Cherry, 657
Liaison Service (Experimental Technical), run by the Scottish Council (Development and Industry) : Small Firms with Big Problems—a Short Account of an (Department of Scientific and Industrial Research), 1139
Liberated Larvae (Artificially) : Use of, in Experiments on the Setting Behaviour of *Spirorbis* (P. H. D. H. de Silva), 1751
Liberation of Invertase from Disintegrated Yeast Cells (M. Burger, E. Elizabeth Bacon and Dr. J. S. D. Bacon), 1508
Librarianship : Classics of (John L. Thornton), *review* by R. Brightman, 1117
  Five Years' Work in, 1951-1955 (edited for the Library Association by P. H. Sewell), *review* by R. Brightman, 1590
Libraries for Research, *review* by R. Brightman, 1698
Libraries (National), of the World (Dr. Arundell Esdaile), second edition, *review* by R. Brightman, 758
Library Association : Occasional Paper No. 1, Library Classification and the Field of Knowledge (D. J. Foskett), 1277
  Conference at Brighton, 1716
  Presidential Address (Prof. Raymond Irwin), 1716
Library Association (edited by Sewell, P. H., for the) : Five Years' Work in Librarianship, 1951-1955, *review* by R. Brightman, 1590
Library Association (West Midlands Group of the Reference and Special Libraries Section) : Guide to Library Resources in the West Midlands (edited by B. G. Staples), 633
Library Classification and the Field of Knowledge (Dr. J. Foskett), 1277
Library Resources in the West Midlands : Guide to (edited by B. G. Staples), 633
Library Work : Practical Aspects of Special (Northern Branch of Aslib Symposium on), 1063
Licensed Aircraft Engineers, Society of (Royal Aeronautical Society and the) : Members to repair and maintain the Nash Collection of historic aircraft, 1131

Lichen Society, British : *The Lichenologist*, No. 1, 1278
Lichenologist, The (British Lichen Society), No. 1, 1278
Liébecq, Prof. C., and others : Sodium Fluoroacetate as a Protecting Agent against Irradiation, 175
Liébecq-Hutter, Dr. S., and others : Sodium Fluoroacetate as a Protecting Agent against Irradiation, 175
Liebster, Jindřich, and others : Degradation of DL-Methionine by Radiation, 1074
Life : Darwin, Demography and Development of, 497
The Experimental Approach to (Prof. David Lewis), 497
Mineral Nutrition and the Balance of (Dr. Frank A. Gilbert), *review* by Dr. E. C. Humphries, 621
Life (Animal), on Wave-beaten Rocks (Dr. H. Gorvett), 1652
Life (Folk) : The Study of, and its part in the Defence of Civilization (Dr. Iorwerth C. Peate), 583
Life of Henry Armstrong, *review* by Prof. G. R. Clemo, 1399
Life of Darwin, *review* by Sir Ronald Fisher, 71
Life at Low Temperatures (British Association for the Advancement of Science, Sections D (Zoology) and I (Physiology and Biochemistry), Joint Discussion on), 911
Life on Raroia : Work and—an Acculturation Study from the Tuamotu Group, French Oceania (Dr. Bengt Danielsson), *review* by Prof. Raymond Firth, 280
Life-Cycle of *Atoxoplasma*, with particular reference to the Parasite's Schizogony and its Transmission by the Mite *Dermanyssus gallinae:* Some Observations on the (Dr. R. Lainson), 1250
Life Span of Irradiated and Control *Habrobracon* Females : Ingestion of Ethylenediaminetetraacetic Acid and the Effect on (Leo E. LaChance), 870
Life-time of the Kinetic Chain is Long : Preparation of Block and Graft Copolymers in Systems where the (Dr. P. E. M. Allen, G. M. Burnett, J. M. Downer, R. Hardy and Sir Harry Melville), 245
Light : Diffraction of, by Ultrasonic Waves—Oblique Incidences (Dr. S. Parthasarathy and C. B. Tipnis), 1083
Diffraction of, by Ultrasonic Waves, Oblique Incidence and Sound Intensity (Dr. S. Parthasarathy and C. B. Tipnis), 1795
Influence of Temperature and, on Thyroid Function (F. A. Soliman, H. M. Badawi and Y. S. Ghanem), 57
Polarization of, of the Comets Arend-Roland (1956*h*) and Mrkos (1957*d*), (M. Blaha, A. Hruška, Z. Svestka and V. Vanysek), 331
The Scattering of, by Small Particles, *review* by James Paton, 1470
Light from the Sky : A Simple Device for Observing the Polarization of (Dr. Ulf Halldén), 333
Light (Artificial), and Sexual Maturity in the Fowl (T. R. Morris and S. Fox), 1522
Light (Polarized) : Responses of Insects to, in the Presence of Dark Reflecting Surfaces (Dr. H. Kalmus), 1526
Light (Ultra-Violet) : Condensation produced by (Dr. A. J. Barnard and W. L. Mouton), 1001
Light and Dark Adaptation : Corneo-Fundal Potential Variations during (Christine Kris), 1027
Light and Dark Phases : Separation of, in the Photosynthesis of Isolated Chloroplasts (Dr. Achim V. Trebst, Harry Y. Tsujimoto and Prof. Daniel I. Arnon), 351
Light and Dormancy in Wild Oats (*Avena fatua* L.), (Bruce G. Cumming and James R. Hay), 609
Light Energy : Transfer of, and Photosensitization (Society of Physical Chemists of France Symposium on), 231
Light Microscopic and Electron Microscopic Observations on the Dividing Walls of Cells in *Chara* spp. (Dr. Lóránd Fridvalszky and Dr. Béla Lovas), 736
Light Scattering by Small Particles (Dr. H. C. van de Hulst), *review* by James Paton, 1470
Light-Scattering by Spheres : Tables of Angular Distribution Coefficients for (Chiao-Min Chu, George C. Clark and Stuart W. Churchill), *review* by Dr. B. J. Mason, 1117
Light-Scattering Functions : Tables of (R. H. Boll, J. A. Leacock, G. C. Clark and S. W. Churchill), *review* by Dr. B. J. Mason, 1117
Light Signal occurring after the Threshold Stimulus : Lowering of an Auditory Threshold produced by a (C. I. Howarth and M. Treisman), 1093
Lightfoot, E. : Title of reader in civil engineering in the University of Leeds conferred on, 22
Lighthill, Prof. M. J. : Introduction to Fourier Analysis and Generalised Functions, *review* by Prof. T. A. A. Broadbent, 1584
Lighting (Flash), for Egg Production (S. Fox and T. R. Morris), 1752
Lightning Flashes : Correlation of Whistlers and, by Direct Aural and Visual Observation (Prof. M. G. Morgan), 332
Lignin to Anthracite : Infra-Red Spectra of a Coalification Series from Cellulose and (Prof. C. R. Kinney and E. I. Doucette), 785
Lilley, Miss M. D. : Awarded a special Prize in the Waverley Gold Medal Essay Competition, 1060, 1348
Lilly, Dr. Lorna J. : Nuclear Radiation in Food and Agriculture, *review*, 758
Lilly Travelling Fellowships in Medicine (Medical Research Council Awards), 634
Limited Current (Space-Charge), in Insulating Materials (Dr. G. T. Wright), 1296
Limnology, International Association of, and the International Union of Biological Sciences : Conference on the Classification of Brackish and Inland Saline Waters, 27
Lincoln, G. J. (White, Dr. I. G., and) : Riboflavin in Yellow Semen, 667
Lindahl, Prof. P. E., and Sundell, G. : Sex Ratio in the Golden Hamster before Uterine Implantation, 1392
Lindegren, Prof. Carl C., and others : Induction of Respiratory Deficiency in Yeast by Manganese, Copper, Cobalt and Nickel, 446
Lindegren, Prof. Carl C., and Pittman, David D. : Effects of Environment (Radiation, Substrate and Allelic Genes) on the Melezitose Gene in *Saccharomyces*, 271
Linden, Dr. R. J. : Awarded a Lederle Travelling Fellowship in Medicine for 1958-59, 634
Linderstrøm-Lang, Prof. K. V. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Lindner, Miss E. B., and others: Migration-elution of Zones in an Electrophoresis Column, 744
Lindroth, Dr. Carl H. : The Faunal Connections between Europe and North America, *review* by Charles S. Elton, 140
Lindström, Dr. Maurits : Different Phases of Tectonic Deformation in the Rhinns of Galloway, 48
Line (Pure) : Transmission of Phenotypic Variability within a (Dr. H. R. Highkin), 1460
Line-widths : Temperature and Turbulence in Quiescent Prominences determined from (Prof. P. ten Bruggencate and Dr. G. Elste), 1154
Linear B : The Decipherment of (John Chadwick), *review* by M. I. Finley, 1627
Linear Electron Accelerators : Anomalous Attentuation in (Dr. V. L. Vanhuyse), 1081
Linear Equations (P. M. Cohn), *review* by Prof. T. A. A. Broadbent, 827
Linear Phase-Shift Low-Pass Filter : The Design of a (L. E. Weaver), 1490
Linear Programming : Reading in (Dr. S. Vajda), *review* by Dr. A. D. Booth, 1583
Linear Programming and Economic Analysis (Prof. Robert Dorfman, Prof. A. Samuelson and Prof. Robert M. Solow), *review* by Dr. L. S. Goddard, 1046
Lingafelter, Prof. E. C. : Tetrahedral Co-ordination of Nickel (II), 1730
Linguistic Problems : Mechanical Resolution of (Dr. Andrew D. Booth, L. Brandwood and Dr. J. P. Cleave), *review* by R. A. Brooker, 618
Link between Electrical and Mechanical Events in Contraction : Inward Movement of Calcium as a (Prof. George B. Frank), 1800
Linkage : Possible Autosomal, in Man (Dr. A. M. O. Veale), 409
Linked Genes (Loosely) : Use of, to estimate Chromatid Interference by Tetrad Analysis (Dr. H. L. K. Whitehouse), 1173
Linnean Society of London : Plaque commemorating the centenary of the reading of the joint communication by Charles Darwin and Alfred Wallace on their theory of evolution by natural selection unveiled by Dr. C. F. A. Pantin, 19
Special number of the *Journals* in celebration of the centenary of the first publication of the theory of evolution by natural selection in the papers by Darwin and Wallace, 1351
Linnean Society of London (Experimental Plant Morphology Group) : Symposium on Experimental Approaches to the Problems of Growth and Form in Plants, 1416
Linnean Society and the Geological Society (Royal Society, in conjunction with the) : Conversazione to mark the centenary of the reading before the Linnean Society of the paper 'On the Tendency of Species to form Varieties', by Charles Darwin and Alfred Russel Wallace, 86
Linnett, Dr. J. W. : Ions of the Transition Elements, 1349
Linnett, Dr. J. W. (Jennings, K. R., and) : Production of High Concentrations of Hydrogen Atoms, 597
Linoleic and Linolenic Acids : Influence of, on Symptoms of Vitamin E Deficiency in Chicks (Prof. H. Dam, G. Kofoed Nielsen, I. Prange and E. Søndergaard), 802
Linolenic Acids : Influence of Linoleic and, on Symptoms of Vitamin E Deficiency in Chicks (Prof. H. Dam, G. Kofoed Nielsen, I. Prange and E. Søndergaard), 802
Linschitz, H. : Free Radical Stabilization, 1498
Linton, Prof. David L. : Appointed to the chair of geography in the University of Birmingham, 158, 497 ; work of, 497
Glaciological Observations on Ruwenzori, 302
The Future of Antarctica, 1781
Lipase (Lipoprotein), and Post-Heparin Esterase in Human Serum : Difference between (S. Novák and Dr. J. Skořepa), 117
Lipid Spheres under the Phase-Contrast Microscope : Ringed Appearance of (Brij L. Gupta), 537
α-Lipoic Acid : Anticholesterol Activity of (David Kritchevsky and A. W. Moyer), 396 ; (Dr. L. Angelucci and E. Mascitelli-Coriandoli), 396
Lipolysis in the Rumen (Dr. G. A. Garton, Dr. P. N. Hobson and Dr. A. K. Lough), 1511
Lipoprotein Lipase and Post-Heparin Esterase in Human Serum : Difference between (S. Novák and Dr. J. Skořepa), 117
Lipoproteins (Serum), and Blood Coagulation (R. B. Goldrick and H. M. Whyte), 1743
Lipschutz, Prof. A. : Progress in Cancer Research (Hormones), 364
Lipschutz, Prof. A., and others : Behaviour of 19-nor-Progesterone and 19-nor-Ethinyltestosterone in the Liver of the Guinea Pig, 1450
Lipsky, Prof. S. R. (Landowne, R. A., and) : Detection of certain Brominated Long-Chain Fatty Acid Esters by Gas Liquid Chromatography, 1731
Liquid Chromatography (Gas) : Detection of certain Brominated Long-Chain Fatty Acid Esters by (R. A. Landowne and Prof. S. R. Lipsky), 1731
Liquid Mercury–Thallium Alloys containing 25-35 Atomic per cent Thallium : Ordering in (R. G. Ward and J. R. Wilson), 334
Liquid Oxygen : Survival of Intact Insects Immersed in, without any Anti-freeze Agent (Eizo Asahina and Kiyoshi Aoki), 327
Liquid Polymer–Polymer Two-Phase Systems : Partition of Proteins in (Dr. Per-Åke Albertsson), 709, *erratum*, 918
Liquid Scintillation Spectrometer : Radioassay of Carbon-14 in Aqueous Solutions using a (Dr. Daniel Steinberg), 740
Liquids : Accurate Measurement of the Viscosity of (Institute of Petroleum and the British Society of Rheology Symposium on), 438
A Method of Studying the Variation with Temperature of Ultrasonic Absorption in (Dr. B. Ramachandra Rao and Dr. H. S. Rama Rao), 1794
Lister, R. M. : Preparation of Virus Antisera from Strawberry, 1814
Literature : Russian Scientific and Technological (Department of Scientific and Industrial Research Lending Library Unit Translating Programme for), 917
Literature on Atomic Energy : Guide to (United Kingdom Atomic Energy Authority), 88
Literature of Chemistry : A Guide to the (E. J. Crane, Austin M. Patterson and Prof. Eleanor B. Marr), second edition, *review* by R. Brightman, 8
Lithium Fluoride : Etching of Radiation Damage in (Dr. D. A. Young), 375
Lithium-6 Fluoride and Lithium-7 Fluoride : Infra-Red Transmission Limits and Reflectivity of (Dr. R. W. H. Stevenson and Dr. P. T. Nettley), 471
Little (Arthur D.) Research Institute, Inveresk : First Annual Report, 360
Littler, Dr. T. S. : Modern Educational Treatment of Deafness, 920
Littlewood, Prof. J. E. : Awarded the Copley Medal for 1958 of the Royal Society, 1344, 1631 ; work of, 1631
Liver : Dependence of Bone Marrow Cells on the, for Purine Supply (Dr. L. G. Lajtha and J. R. Vane), 191
Production of Glucose by the, during Hyperglycaemia (Robert Steele and Paul A. Marks), 1444

Liver of the Guinea Pig : Behaviour of 19-nor-Progesterone and 19-nor-Ethinyltestosterone in the (Silvia Girardi, Dusan Jadrejevič, Rigoberto Iglesias and Prof. Alexander Lipschutz), 1450
Liver (Mouse) : Biochemical Changes in Virus-infected and Regenerating (David S. Nelson and Prof. P. M. de Burgh), 1617
Liver (Normal, Regenerating, Precancerous and Cancerous Rat) : Deoxyribonuclease Activity and Deoxyribonucleic Acid Synthesis in (Dr. Sam Brody), 1386
Liver (Rat) : Autoradiographic Analysis on Agar Plates of Labelled Antigens from (P. Perlmann and T. Hultin), 1530
  Distribution of Tissue-Specific Antigens in Centrifugal Fractions of (Dr. Peter Vogt), 1807
  Vanadium Inhibition of Phospholipid Synthesis and Sulphydryl Activity in (Fred Snyder and Prof. W. E. Cornatzer), 462
Liver (Rat), during Carcinogenesis : Intracellular Changes in Levels of Polarographically Active Sulphydryl Groups in (Dr. Silvio Fiala), 257
Liver (Rat) 3-Hydroxyanthranilic-Acid Oxidase : Effect of Diphosphopyridine Nucleotide on the Inhibition of, by 2-Acetylaminofluorene and N-2-Fluorenyl-diacetamide (Prof. E. Quagliariello, S. Auricchio, E. Rinaldi and A. Rubino), 1744
Liver (Rat), and Rat Hepatoma: Electron Spin Resonance Investigations of (Frank K. Truby and Joseph W. Goldzieher), 1371
Liver Cytoplasm: Ribonucleic Acids in (Dr. E. Reid and Barbara M. Stevens), 441
Liver Damage in X-Irradiated Animals : Anaemia and (Dr. M. Skalka), 1602
Liver Glucosyl Oligosaccharides and Glycogen—Effects of Starvation, Glucose Feeding and Insulin (Dr. Hsien-Gieh Sie and Prof. W. H. Fishman), 240
Liver Glycogen in Ketosis : Level of (Dr. P. A. Mayes), 324
Liver Homogenates (Rat-) : An Anticlumping Factor for Mitochondria in the Supernatant Fraction of (Dr. J. St. L. Philpot and Dr. J. E. Stanier), 1167
Liver Mitochondria (Rat-) : Forms of Pyridine Nucleotides in (Dr. J. L. Purvis), 711
Liver Necrosis in the Hyperthyroid Rat : Selenium and (Dr. K. Aterman), 1514
Liver Slices (Human), *in vitro* : Metabolism of 16-Oxooestrone by (Dr. H. Breuer and R. Knuppen), 1512
Liver Tissue (Equine) : Molybdenum Content of (P. A. Moore), 1175
Liver and Brain Cortex Mitochondria : Physical Reactivity of (Prof. J. Gayet), 941
Liverpool Geological Society : Medal awarded to Prof. O. T. Jones, 295
Livers from Healthy and Cobalt-deficient Lambs : Vitamin B_{12} and Cobalt Concentrations in (E. D. Andrews, L. I. Hart and B. J. Stephenson), 869
Livers (Rat) : Effect of Nicotinic Acid on the Cholesterol Contents of (Dr. Harold Schön), 534
Livey, D. T. : Study of Metals and Alloys above 1,200°C. (High-temperature Stability of Oxides and Sulphides), 1419
Livey, D. T., and Murray, Dr. P. : Effect of Heat Treatment on the Sintering of 'Active' Ceramic Oxide Powders, 1362
Living Cells : Protection of, against Acid by certain Non-Ionic and Amphoteric Soaps (Dr. P. D'Arcy Hart and Dr. J. E. Lovelock), 304
Living Cells of Conifers : Sol-Gel Transitions in the, and their relation to Resistance to Cold (Johnson Parker), 1815
Living Invertebrate : The, *review* by Theodore Savory, 825
Living Material : Effects of Pollution on (Institute of Biology Symposium on), 1208
Living Organisms : Nature and Genetical Control of Resistance in (British Association for the Advancement of Science, Sections D (Zoology) and K (Botany), Joint Discussion on), 921
Livingston, Dr. H. K. (Adam, Prof. N. K., and) : Contact Angles and Work of Adhesion, 128
Livingston, R. : Free Radical Stabilization, 1497
Lizard *Lacerta agilis* : Fluorescent Mast-Cell Reaction in Precancerous Skin of the (Prof. A. Stolk), 1177
Lliboutry, Prof. L. : Physics of Ice Movement (Theory of Glacier Flow), 1561
Lloyd, Dr. Lewis E. : Awarded the Underwood Fellowship by the Agricultural Research Council, 990
Lloyd, Dr. P. F. : At the Third International Seaweed Symposium (Chemical and Enzymic Methods for removing Sulphate Groups from Carbohydrates), 1780
Local Reaction to Non-metastasizing and Metastasizing Transplantable Tumours (Dr. C. Maltoni), 1742
Local Societies : The Cultural Value of (Lord Boyd-Orr), 586
Local Supercluster of Galaxies (Gerard de Vaucouleurs), 1478
Localization of Interaction Sites in Multi-Component Transfer Systems—Theorems derived from Analogues (Prof. Britton Chance, William Holmes and Joseph Higgins, and Dr. C. M. Connelly), 1190
Lockwood, W. H., and others : Formation of Non-Enzymatic Haem, 313
Lockyer, W. J., and others : Use of Lyophilized Formol-treated Red Cells in Blood-Group Serology, 951
Locust Fat Body : Intracellular Particles of (M. L. Fenwick), 607
Locusts : An Artificial Diet for the Laboratory Rearing of (Dr. G. F. Howden and P. Hunter-Jones), 1527
  . . . the East Wind Brought the, *review* by Dr. R. C. Rainey, 1257
  Spray-collecting Areas of, and their Susceptibility to Insecticides (R. D. MacCuaig), 478
Loeb, J., and others : High Resolution of Human Plasma Components by Starch Gel Electrophoresis, 452
Logan, Dr. D. W. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (The Establishment of New Universities), 1284
Logemann, W., and others : Diuretic Activity of Chlorothiazide Derivatives, 1510
Longevity in Thoroughbred Mares : Coat-Colour and (Dr. Alex Comfort), 1531
Logic : Combinatory (Prof. Haskell B. Curry, Prof. Robert Feys and Prof. William Craig), Vol. I, *review* by F. I. G. Rawlins, 1590
  The Province of, *review* by Prof. J. O. Urmson, 212
Logic for Digital Devices : Mathematics and (Dr. James T. Culbertson), *review* by Dr. A. D. Booth, 1583
Logic Machines and Diagrams (Martin Gardner), *review* by Dr. A. D. Booth, 1583
Logie, Prof. H. J. : *Obituary* by Prof. F. R. N. Nabarro, 1772
Lolium temulentum L., a Long-day Plant requiring only One Inductive Photocycle (Dr. L. T. Evans), 197
Lolium and *Festuca* : Trisaccharides of (Dr. Anna M. MacLeod and Dr. H. McCorquodale), 815
Lomer, Miss J. N. : Measurements of Conduction at Low Temperatures (Scattering by Impurities), 85
London (Fritz) Award (S. Weintroub), 92
London (Fritz) Award presented to Dr. N. Kurti, 92
London School of Economics and Political Science : Appointment of A. Stuart to the University of London readership in statistics, 158
  Title of reader in geography in the University of London conferred on Dr. R. J. Harrison-Church, 363
  Title of professor emeritus of social geography in the University of London conferred on Prof. L. Dudley Stamp, 363
  Appointment of Dr. Emrys Jones to the University of London readership in social geography, 1554
London School of Hygiene and Tropical Medicine : Report of the thirty-second Meeting of the Ross Institute Industrial Advisory Committee, 1132
  Indefinite loan from the Wellcome Trust of an electron microscope, 1204
London (East) : Family and Kinship in (Michael Young and Peter Willmott), *review* by Prof. E. Grebenik, 9
London and Home Counties Regional Advisory Council for Higher Technological Education : Bulletin of Special Courses in Higher Technology, including Management Studies and Commerce, 1958-59, Part I, Autumn Term, 842
Lonergan, G. (Doyle, Dr. W. P., and) : Ions of the Transition Elements (Measurements on the Transmission of Radiation by Films of Cobaltous and Nickelous Oxides between 360 and 1,000 mμ thick), 1350
Long, E. John, and Weiner, George : Adventures in Science at the Smithsonian, 561
Long, V. D. (Burgoyne, Dr. J. H., and) : Science in the Use of Coal (Combustion and Gasification), 25
Long-day Plant requiring only One Inductive Photocycle : *Lolium temulentum* L., a (Dr. L. T. Evans), 197
Long-Chain Fatty Acid Esters (Brominated) : Detection of certain, by Gas Liquid Chromatography (R. A. Landowne and Prof. S. R. Lipsky), 1731
Long-Distance Radio Propagation at Metre Wave-lengths : Role of Turbulent Scattering in (F. A. Kitchen and Dr. M. A. Johnson), 302
Long-range Travel of the Radioactive Cloud from the Accident at Windscale (N. G. Stewart and R. N. Crooks), 627
Longenecker, Dr. J. B., and Hause, N. L. : Rate of Absorption of Supplementary Free Amino-Acids during Digestion, 1739
Longevity of *Proteus* Group of Amoebae (Sister Monica Taylor), 1245
Longhurst, Dr. R. S. : Geometrical and Physical Optics, *review* by G. R. Noakes, 348
Longuet-Higgins, Prof. H. C. : Theoretical Organic Chemistry (Comparison of the Results of the Resonance and Molecular-orbital Theories when applied to the Ground States of some π-Electron Systems), 1341
Longuet-Higgins, Dr. M. S. : Contributions to the Theory of Water Waves, *review*, 967
Longworth, G. H. : Awarded a Mond Nickel Fellowship for 1958, 1415
Lonsdale, Dr. T. : The Road Research Laboratory—Open Days, 23
Looking at Chromosomes (John McLeish and Brian Snoad), *review* by Prof. D. Lewis, 1401
Loomeijer, Dr. F. J. : A Yellow Fluorescent Pigment in Elastin, 182
Loosely Linked Genes : Use of, to estimate Chromatid Interference by Tetrad Analysis (Dr. H. L. K. Whitehouse), 1173
Lopes de Souza Santos, Helena : Effects of Electron Bombardment upon Sodium Tetraborate and Boric Acid in an Electron Microscope, 1297
Lord, E. : Awarded the Warner Medal of the Textile Institute, 771
Lords, House of : Debate on the Aircraft Industry, 226
  Second reading of the Distribution of Industry (Industrial Finance) Bill, 293
  Second reading of the Opencast Coal Bill, 505
  Debate on the Overseas Information Services, 570
  Debate on the Hospital Services in Britain, 571
Lorenz, Prof. F. W. : Carbohydrate Metabolism of Cock Spermatozoa, 397
Lorenz, Prof. F. W. (Lytle, I. M., and) : Progesterone in the Blood of the Laying Hen, 1681
Loria, Prof. Stanislaw : *Obituary* by Dr. Leopold Infeld, 1411
Lorkiewicz, Zb., and Zelazna, Irena : Mutations in L-Forms, 1619
Los, Dr. J. M., and Tompkins, Dr. C. K. : Charge Transfer Processes (Adsorption of Methylene Blue at Mercury), 1355
Loss of Crops of Cotton in the Drier Regions of Uganda : A Revised Interpretation of the Causes of (J. Bowden and W. R. Ingram), 1750
Loss of Mutation and Restoration by Complementation : Gene Control of Specificity and Activity— (Prof. D. Lewis), 1620
Loss of Sodium from the Skin of the Dehydrated Toad, *Bufo marinus* (P. J. Bentley), 1810
Lough, Dr. A. K., and others : Lipolysis in the Rumen, 1511
Loughheed, T. C., and MacLeod, Dr. D. M. : Extracellular Metabolic Products of a *Hirsutella* Species, 114
Louse *Lepidophthirus macrorhini* Enderlein 1904 on the Elephant Seal *Mirounga leonina* (L.) : Ecology of the (M. D. Murray), 404
Lousley, J. E. (compiled by Kent, D. H., with the assistance of Bangerter, E. B., and) : British Herbaria, *review* by Dr. W. B. Turrill, 759
Loutit, Dr. J. F. : Biological Effects of Radiation, 1118
Louw, H. A., and Webley, Dr. D. M. : A Plate Method for Estimating the Numbers of Phosphate-dissolving and Acid-producing Bacteria in Soil, 1317
Lovas, Dr. Béla (Fridvakszky, Dr. Lóránd, and) : Light Microscopic and Electron Microscopic Observations on the Dividing Walls of Cells in *Chara* spp., 736
Love, Dr. R. M. : Measurement of Toughness in Cold-stored Fish, 108
Lovelock, Dr. J. E. : A Detector for use with Capillary Tube Columns in Gas Chromatography, 1663
Lovelock, Dr. J. E. (Hart, Dr. P. D'Arcy, and) : Protection of Living Cells against Acid by certain Non-Ionic and Amphoteric Soaps, 304
Lovering, Dr. E. G., and others : Charge Transfer Processes (Homogeneous Processes—Equivalent Redox Potential of Aqueous Solutions under γ-Irradiation), 1354
Low, Dr. Eva M. : Composition of the Nucleic Acids of some Algae, 1096
Low (Abnormally) Ultimate *p*H in Pig Muscle (R. A. Lawrie, D. P. Gatherum and H. P. Hale), 807

Low-Angle X-Ray Scattering by Glasses (E. A. Poral-Koshits and N. S. Andreyev), 335
Low-Level Ocean Duct (Semi-Permanent) : Influence of the, on Centimetre Wave Scatter Propagation beyond the Horizon (F. A. Kitchen, W. R. R. Joy and E. G. Richards), 385
Low-Pass Filter : The Design of a Linear Phase-Shift (L. E. Weaver), 1490
Low-Pressure Gas Flow through Porous Media : Evidence for Permeability Minima in (Dr. D. M. Grove and M. G. Ford), 999
Low Temperature : Effect of, on the Vertical Distribution of Two Wood-boring Crustaceans (Dr. N. Balakrishnan Nair and H. Leivestad), 814
Low-Temperature Thermometer (J. E. Kunzler, T. H. Geballe and G. W. Hull), 770
Low Temperatures : Life at (British Association for the Advancement of Science, Sections D (Zoology) and I (Physiology and Biochemistry), Joint Discussion on), 911
  Measurements of Conduction at (Low Temperature Group of the Physical Society Symposium on), 83
  Some Biological Effects of (Dr. A. S. Parkes), 581
  Thermal Contact at (Dr. R. Berman and C. F. Mate), 1661
Low Volatility : Mass Spectrometry of Substances of (H. W. Holden and Prof. J. C. Robb), 340
Lowe, A. E., and Moore, D. : Scintillation Counter for Measuring Radioactivity of Vapours, 133
Lowering of an Auditory Threshold produced by a Light Signal occurring after the Threshold Stimulus (C. I. Howarth and M. Treisman), 1093
Lowther, Dr. D. A. (Green, Dr. N. M., and) : At the fifteenth meeting of the Research Panel of the British Gelatine and Glue Research Association (Biosynthesis of Collagen), 439
Lubrication : Modern Problems in Friction and (British Association for the Advancement of Science, Sections A (Mathematics and Physics), and G (Engineering), Joint Discussion on), 980
Lubrication Engineers, American Society of : Transactions, Vol. I, No. I, Lubrication Science and Technology (edited by John Boyd), *review* by Dr. D. Tabor, 1763
Lubrication Science and Technology (edited by John Boyd), Vol. I, No. I, *review* by Dr. D. Tabor, 1763
Lucas, J. M. S. : Toxic Effects produced by Pyrimethamine in Chickens and their Antagonism by Folic Acid, 1449
Lucas, J. W., and Pickering, D. C. : Direct Absorption of Dissolved Strontium-90 and Yttrium-90 by Tadpoles of *Rana temporaria*, 1242
Lucas, Dr. L. N. D. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1642
Lucchelli, P., and others : Action of Testosterone Propionate and 4-Chlorotestosterone Acetate on Protein Synthesis *in vitro*, 663
Lüderitz, O., and others : Synthesis of 3,6-Dideoxy-D-*ribo*-hexose (3,6-Dideoxy-D-glucose) and its Identification with Paratose, 944
Ludlam, F. H. : Appointed reader in meteorology at the Imperial College of Science and Technology, 1279
Lugworms : Movements of (Prof. G. P. Wells), 1107
Lukton, Dr. A. : Effect of Diet on Imidazole Compounds and Creatine in Chinook Salmon, 1019
Lumbricus Spermatogenesis : Origin and Connexions of the Central Nutrient Mass in (Prof. J. Brontë Gatenby and Dr. A. J. Dalton), 886
Lunar Periodicity of Aquatic Insects in Lake Victoria (Dr. Philip S. Corbet), 330
Lunar Probe : The American Air Force, 1060
Lunar Topography—Gift to the University of Manchester, 1552
Lund, Patricia, and others : Effect of Growth Substrates on Isocitratase Formation by *Pseudomonas ovalis* Chester, 1430
Lundy Field Society : Eleventh Annual Report (1957), 499
Lung Cancer and Cigarettes ? (Sir Ronald Fisher), 108
Lungfish (*Protopterus*) from the Middle Zambezi (P. B. N. Jackson), 123
Lungs of the Bottlenose Whale : Microscopic Structure of the (J. R. Goudappel and Prof. E. J. Slijper), 479
Lupton, V. : Science in the Use of Coal (Physics and Chemistry of Coal), 24
Lurie, Dr. H. I. : Human and Animal Ecology (Distribution of Histoplasmosis in South Africa), 1648
Lutein in a Bacterial Membrane (Dr. A. R. Gilby and the late Dr. A. V. Few), 55
Lutte contre *Stephanoderes hampei* Ferr. (G. Schmitz et P. Crisinel), *review* by W. V. Harris, 215
Lwoff, Dr. André : *Obituary* of Prof. Maurice Caullery, 1059
  Bacteriophage Research, 1770
Lymph (Thoracic Duct), of the Guinea Pig : Labelling of Cells in, after Tritiated Thymidine (Prof. J. M. Yoffey, Prof. N. B. Everett and Prof. W. O. Reinhardt), 1608
Lymphomatous Mouse Tissue (Normal and) : Lysins and Agglutinins in (Dr. Eric Ponder and Ruth V. Ponder), 1737
Lyophilized Formol-treated Red Cells : Use of, in Blood-Group Serology (E. R. Gold, W. J. Lockyer and Dr. Geoffrey H. Tovey), 951
Lysergic Acid Diethylamide and its 2-Bromo Derivative : Inhibition of Cholinesterase Hydrolysis of Dihydromurexine by—a Selective Relationship (Dr. I. I. A. Tabachnick and M. E. Grelis), 935
Lysine-^{14}C : Incorporation of Orotic Acid-^{14}C and, in Regenerating Single Nerve Cells (S.-O. Brattgard, H. Hydén and J. Sjöstrand), 801
Lysins and Agglutinins in Normal and Lymphomatous Mouse Tissue (Dr. Eric Ponder and Ruth V. Ponder), 1737
Lymph : Effect of Hyaluronidase on Capillary Permeability, Lymph Flow and Passage of Dye-labelled Protein from Plasma to (Dr. G. Szabó and S. Magyar), 377
Lymph Flow and Passage of Dye-labelled Protein from Plasma to Lymph : Effect of Hyaluronidase on Capillary Permeability, (Dr. G. Szabó and S. Magyar), 377
Lymphocytes (Normal and Leukaemic Human) : Cytotoxicity of Heterologous Sera to (Robert Schrek), 724
Lyon, Mary F., and others : Genetic Hazard of Ionizing Radiations, 409
Lyons, M. J. : Presence of 1,2,3,4-Dibenzopyrene in Cigarette Smoke, 178, *erratum*, 363
Lyot *Hα* Heliograph at the Cape of Good Hope (Dr. M. A. Ellison), 624
Lytic Agents : Effect of some, on *Aerobacter aerogenes* (J. M. Gebicki and Dr. A. M. James), 725
Lytle, I. M., and Lorenz, Prof. F. W. : Progesterone in the Blood of the Laying Hen, 1681

Mann, Dr. Monica (Callingham, B. A., and) : Replacement of Adrenaline and Noradrenaline in the Innervated and Denervated Adrenal Gland of the Rat, following Depletion with Reserpine, 1020
Mann, Dr. T. (King, Dr. Tsoo, and) : Sorbitol Dehydrogenase in Spermatozoa, 868
Manning, Kenneth V., and others : Physics for Science and Engineering, *review* by G. R. Naokes, 420
Manson, W. I. (Shorter, D. E. L., and) : Analysis and Measurement of Programme Levels, Part I, Investigation of Extreme Values of Sound Pressure, 1490
Mansonioides Mosquitoes : Age Determination for Individual (Prof. D. S. Bertram and W. A. Samarawickrema), 444
Manurial Experiment in Ghana : Cocoa Shade and (R. K. Cunningham and J. Lamb), 119
Manville Fellowship of the Institution of Mechanical Engineers awarded to P. B. Davies, 433
Mao-Lin, Tcheng (Dufay, Jean, and) : Spectrum of the Night Sky, 361
Map (Geological), of the World, 502
Maps : British Weather in (James A. Taylor and R. A. Yates), *review* by Prof. Gordon Manley, 1696
Marcus, Dr. R. A. : Charge Transfer Processes (Homogeneous Processes—Electrochemical and Chemical-Electron Transfers), 1354
Mardles, Dr. E. W. J. : Accurate Measurement of the Viscosity of Liquids, 438
Mardles, Dr. E. W. J. (Jennings, W. O., and) : Accurate Measurement of the Viscosity of Liquids (Average Change in the Constant of four Master Viscometers), 439
Mares (Pregnant): Isolation of $\Delta^{5,7,9}$-Œstratrienol-3-one-17 from the Urine of (Dr. W. L. Glen, R. Barber and G. Papineau-Couture), 1308
Mares (Thoroughbred) : Coat-Colour and Longevity in (Dr. Alex Comfort), 1531
Margolis, J. : Hageman Factor in Plasma Foreign Surface Reactions, 1102
María, Juan Santa : Oxidation of Ethyl Alcohol to Acetic Acid by Proliferating Yeasts, 937
Marigo, Dr. Mario (Fiori, Dr. Angelo, and) : Identification of Meprobamate by Adsorption Chromatography on Chromatoplates, 943
Marine Bacteria : A National Type Culture Collection of (Dr. J. M. Shewan, G. D. Floodgate and P. R. Hayes), 1423
Marine Biology in South-East Africa, *review* by Dr. W. J. Rees, 1761
Marine Birds : Salt Excretion in (Dr. F. S. Russell), 1755
Marine Engineering : Parsons Scholarship in (Institution of Naval Architects), 1554
  Yarrow Scholarship in (Institution of Naval Architects), 1554
Marine Fish : Vitamin B_{12} in (Olaf R. Braekkan), 1386
Marine Laboratories (Development Commissioners' Scheme), (Challenger Society and the) : Joint Meeting at the Dove Marine Laboratory, 501
Marine Reptiles : Salt Glands in (Knut Schmidt-Nielson and Ragnär Fange), 783
Mark, Prof. H. : Opening Address at the International Conference on High Polymers, 772
Markings (Fracture), in Polymethyl Methacrylate (Dr. C. D. Smith), 132
Marks, Paul A. (Steele, Robert, and) : Production of Glucose by the Liver during Hyperglycaemia, 1444
Marley, Dr. W. G. : Health and Safety in the Field of Nuclear Energy, 1262
Marmesin from the Fruits of *Ammi majus* Linn. : Isolation of (Effat A. Abu-Mustafa, Nasry Badran, M. B. E. Fayez and N. A. Starkowsky), 54
Marotta, Prof. Domenico : Presented with the insignia of C.B.E., 1777
Marr, D. H. A. : Analogies between the Compensatory Responses of Fish and Crustacea to Horizontal Displacement of the Body, 1621
Marr, Prof. Eleanor B., and others : A Guide to the Literature of Chemistry, second edition, *review* by R. Brightman, 8
Marrian, Prof. G. F. : *Obituary* of Dr. W. S. Bauld, 427
Marrian, Prof. G. F. (Layne, D. S., and) : Isolation of 16β-Hydroxyoestrone from the Urine of Pregnant Women, 50
Marro, F., and others : Permeabilizing Effects of Heparin and Heparin-like Substances, 603
Marrow Cells (Bone) : Dependence of, on the Liver for Purine Supply (Dr. L. G. Lajtha and J. R. Vane), 191
Marsden, H. : Awarded the Institute Medal of the Textile Institute, 1205
Marsden-Jones, E. M., and Turrill, Dr. W. B. : The Bladder Campions (*Silene maritima* and *S. vulgaris*), *review* by Prof. T. G. Tutin, 970
Marsh, D. M., and others : Mechanical Properties of Whiskers and Thin Films (Properties of Non-metallic Whiskers of Hydroquinone, Nickel Sulphate, Sodium Chloride, Potassium Chloride and Potassium Permanganate), 297 ; (Size, Strength and Structure in Glass), 297
Marsh, R. W. : Appointed to a readership in plant pathology in the University of Bristol, 158
Marshall, Dr. A. J. : Extinct and Vanishing Birds of the World, *review*, 758
Marshall, D. C. : Measurement of Sap Flow by Heat Transfer, 878
Marshall, E. W. : Antarctic Research (Special Investigations in Glaciology), 286
Marshall, T. K. : Appointed to a lectureship in pathology (forensic medicine) at the Queen's University, Belfast, 158
Marshall Islands : Typhoon Effects at Jaluit Atoll in the (Dr. David I. Blumenstock), 1267
Marshall Pulse Height Analyser *HS* 100, 989
Marston, Hedley : The Biochemical Function of Cobalt (Second Annual Lecture of the Australian Biochemical Society), 1348
Martin, A. J., and Moore, A. : Study of Metals and Alloys above 1,200°C. (Crystal Structure—Structure of Beryllium at Temperatures between -185°C. and 1,290°C.), 1419
Martin, G. R. : *Obituary* of Prof. F. A. Paneth, 1274
Martin, Dr. J. W. : Metals and Alloys above 1,200°C., 1418
Martin, Sir Leslie : Appointed first chairman of the Australian University Grants Committee, 1202
Martin, Prof. N. H. (Houghton, Peggy B., and) : Immuno-chemical Observations on the Intimate Structure of Human Albumin, 329
Martindale : The Extra Pharmacopoeia, Vol. I, twenty-fourth edition, *review* by Dr. David Train, 279
Martinez, Dr. J. Rodriguez : Awarded a Spanish fellowship in chemistry at the Atomic Energy Research Establishment, Harwell, and Rothamsted Experimental Station, by the Ramsay Memorial Fellowships Trustees, 432
Martinovitch, Dr. Petar N. : Transplantation of the Forebrain Region in Bird Embryos before the Establishment of a Circulation—Heteroplastic Transplants, 572
Martinovitch, Dr. Petar N., and Pavlovič, Miroslava R. : Transplantation of the Forebrain Region in Bird Embryos before the Establishment of a Circulation—Homoplastic Transplants, 571
Marvin, D. A., and others : A New Configuration of Deoxyribonucleic Acid, 387
Mascitelli-Coriandoli, E. (Angelucci, Dr. L., and): Anticholesterol Activity of α-Lipoic Acid, 396
Maser (Ammonia) : Comparison of a, with a Caesium Atomic Frequency Standard (J.-P. Blaser and J. Bonanomi), 859
Mason, Dr. B. J. : Tables of Light-Scattering Functions, *review*, 1117
  Tables of Angular Distribution Coefficients for Light-Scattering by Spheres, *review*, 1117
  Microwave Physics, 1121
Mason, C. C. : *Obituary*, 1129
Mason, Vice-Admiral Sir Frank : Appointed a member of the Council for Scientific and Industrial Research, 990
Mason, I. L. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1642
Mason, W. C., and others : Comparison of Measured and Computed Values of the Rapid Fading-Rate of Ultra High Frequency Signals reflected from the Moon, 1438
Masoro, E. J. : Biochemical Response to Physical Injury (Effect of Physical Injury on Lipid Metabolism), 1495
Mass Spectroscopy, *review* by Dr. G. Dearnaley, 1579
Mass Spectrometry of Substances of Low Volatility (H. W. Holden and Prof. J. C. Robb), 340
Mass Thickness of Cell Membranes : Determination of the, from their Electron Micrographs (M. L. De and P. Sadhukhan), 1008
Masses (Nuclear), and their Determination—Proceedings of the Conference held in the Max-Planck-Institut für Chemie, Mainz, 1956 (edited by Prof. H. Hintenberger), *review* by Dr. G. Dearnaley, 1579
Massey, Prof. H. S. W. : Awarded a Royal Medal for 1958 of the Royal Society, 1412, 1632 ; work of, 1632
Massey, Prof. H. S. W., and Boyd, Dr. R. L. F. : The Upper Atmosphere, *review* by Prof. D. R. Bates, 1629
Massingham, W. E., and others : Preparative-Scale Gas Chromatography, 591
Mast Cell and Histamine in Rat Anaphylaxis—the Effect of *Haemophilus pertussis* (I. Mota), 1021
Mast-Cell Reaction (Fluorescent), in Precancerous Skin of the Lizard *Lacerta agilis* (Prof. A. Stolk), 1177
Mast Cells : Release of Histamine from, by Tissue Extracts (G. T. Archer), 726
Masui, Dr. M. : Awarded a Japanese fellowship in chemistry (renewal) at University College, London, by the Ramsay Memorial Fellowships Trustees, 432
Mataré, H. F. : Solid State Physics, 568
Matchinski, Prof. M. : Physics of Ice Movement (Glacier Theory), 1561
Mate, C. F. (Berman, Dr. B., and) : Thermal Contact at Low Temperatures, 1661
Material (Biological) : Radioactivity due to Fission Products in (Prof. W. V. Mayneord, W. Anderson, R. E. Bentley, J. K. Burton, J. O. Crookall and N. G. Trott), 1473
  Separation and Determination of Millimicrogram Amounts of Cobalt and Microgram Amounts of Copper in (Aleksandra Smoczkiewiczowa and Witold Mizgalski), 53
Material (Living) : Effects of Pollution on (Institute of Biology Symposium on), 1208
Materials : Electrical Properties of, *review*, 73
Materials (Biological) : Estimation of Strontium in, by means of a Flame Spectrophotometer (Dr. G. E. Harrison), 792
Materials (Engineering), Machine Tools and Processes (W. Steeds), third edition, *review* by K. J. Pascoe, 8
Materials (Insulating): Space-Charge Limited Current in (Dr. G. T. Wright), 1296
Materials (Road) : Rheology of (British Society of Rheology Conference on), 363
Materials and Design (*Engineering*), Vol. I, No. I, 1642
Mathé, G., and others : Different Heterogeneities of Mouse Haemoglobin according to Strains, 947
Mathematical Association : Proposal to establish an examination machinery in mathematics, 1644
Mathematical Physics : The Hypercircle in (Prof. J. L. Synge), *review* by Prof. D. N. de G. Allen, 1695
Mathematical Physics and Technology : Integral Equations and their Applications to certain Problems in Mechanics, (S. G. Mikhlin), translated from the Russian by A. H. Armstrong, *review* by Prof. T. A. A. Broadbent, 1259
Mathematical Teaching and Staffing: Contemporary Problems in (British Association for the Advancement of Science, Sections A (Mathematics and Physics) and L (Education), Joint Discussion on), 1064

Mathematical Theory of Epidemics (Norman T. J. Bailey), *review* by S. J. Kilpatrick, 9
Mathematics : Anatomy of, *review* by Prof. T. A. A. Broadbent, 211
  Qualifications in, 1644
Mathematics from Antiquity to the Beginning of the Nineteenth Century : A History of (Dr. J. F. Scott), *review* by Prof. T. A. A. Broadbent, 211
Mathematics in Schools : Science and, 1485
Mathematics (Applied), at Aberystwyth, 359
Mathematics (Pure), at Birmingham, 359
Mathematics, Astronomy or Physics : Prize of £150 for an academic work in (Artemis Press, Ltd.), 501
Mathematics and Logic for Digital Devices (Dr. James T. Culbertson), *review* by Dr. A. D. Booth, 1583
Mather, Prof. Kenneth : Theoretical Genetics, *review*, 899
Mather, Prof. Kenneth, and Jinks, Dr. John L. : Cytoplasm in Sexual Reproduction, 1188
Matheson, M. S. : Free Radical Stabilization, 1497
Mathias, Dr. A. P. : Awarded a Rockefeller Travelling Fellowship in Medicine for 1958-59, 634
Mating (Random) : Change in Mean Viability at a Multiallelic Locus in a Population under (S. P. H. Mandel and I. M. Hughes), 63
Matkovič, B. (Grdenič, Prof. D., and) : Co-ordination in Thorium-IV Acetylacetonate, 465
Matrices : Introduction to the Theory of Determinants and (Edward T. Browne), *review* by Dr. W. L. Ferrar, 1599
  Vector Spaces and (Prof. Robert M. Thrall and Leonard Tornheim), *review* by Dr. R. G. Cooke, 1117
Matsui, Katsuhiko, and others : A New Method for Resolving Amino-acids by Metabolism of Bacteria on Benzoyl Derivatives of DL-Amino-acids, 453
Matsumoto, J. (Sekiguchi, N., and) : Construction of a Polar Tube at Tokyo Observatory, 1643
Matthews, Dr. L. Harrison : Calving Time of Grey Seals, 1325
Matthews, Very Rev. W. R. : Intellectual Mysticism, *review*, 681
Mattingly, P. F. : Malaysian Parasites, *review*, 9
Matturi, S. T., and Stenton, Dr. H. : A Technique for the Investigation of the Competitive Saprophytic Ability of Soil Fungi by the Use of Easily Decomposed Substrates, 1248
Mature Individuals (Sexually), of *Xenopus laevis* from the Transplantation of Single Somatic Nuclei (J. B. Gurdon, T. R. Elsdale and Dr. M. Fischberg), 64
Maturity of the Barnacles *Lepas hillii* and *Lepas anatifera* : Growth and (Dr. Frank Evans), 1245
Maturity (Sexual), in the Fowl: Artificial Light and (T. R. Morris and S. Fox), 1522
Maudsley Hospital, London : Grant of up to £37,000 from the Wellcome Trust to the Institute of Psychiatry, to provide laboratories in which integrated research by the Departments of Neuro-endocrinology and Neuropathology may be carried out, 1203
Maurey, J. R. (Wolff, Dr. J., and) : Cardiac Glycosides and Thyroidal Iodide Transport, 957
Mawson, Sir Douglas : *Obituary* by Sir Raymond Priestley, 1273
Maxim, I., and others : Radiometric Titrations with Complexons, 936
'maXta', a New Graticule Process (Graticules, Ltd.), 699
Maxted, W. R. (Gooder, H., and) : Protoplasts of Group *A* Beta-haemolytic Streptococci, 808
Maxwell (Clerk) Premium of the British Institution of Radio Engineers awarded to Dr. T. B. Tomlinson, 295
Maxwell, Dr. E. A. : Contemporary Problems in Mathematical Teaching and Staffing, 1065
Maxwell, I. C. M. : Appointed secretary of the Inter-University Council for Higher Education Overseas, 1774 ; work of, 1774
Maxwell Equations : Maxwell Fish-eye treated by (Prof. Chen To Tai), 1600
Maxwell Fish-eye treated by Maxwell Equations (Prof. Chen To Tai), 1600
Mayandon, Dr. J. : Ecology of Soil Fungi, 1559
Maycock, G., and Vennart, J. : Iodine-131 in Human Thyroids following the Windscale Reactor Accident, 1545
Mayer, Dr. A. M. : A Reduced Disphosphopyridine Nucleotide Oxidase in Lettuce Seeds, 317
  Determination of Indole Acetic Acid by the Salkowsky Reaction, 1670
Mayer, Jean (Zomzely, Claire, and) : Levels of Serum Cholesterol in Obese Mice, 1738
Mayer, R. L., and others : Inhibition of Pancreatic Deoxyribonuclease by Acidic Polymers, 1234
Mayes, Dr. P. A. : Level of Liver Glycogen in Ketosis, 324
Mayne, Stanley : Science in the Civil Service, 86
Mayneord, Prof. W. V., and others : Radioactivity due to Fission Products in Biological Material, 1473
Mean Viability at a Multiallelic Locus : Change in, in a Population under Random Mating (S. P. H. Mandel and I. M. Hughes), 63
Means of Isolation : Induced Swarming of a Nematode as a (Prof. John P. Hollis, 956
Measured and Computed Values of the Rapid Fading-Rate of Ultra High-Frequency Signals reflected from the Moon : Comparison of (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
Measurement of the Energy Spectrum of Protons emitted from the Fusion Reaction in SCEPTRE III (W. M. Jones, A. C. L. Barnard, S. E. Hunt and D. R. Chick), 216
Measurement of Film Thickness by Multiple-Beam Interferometry : Erorrs in the (C. Weaver and P. Benjamin), 1149
Measurement of Programme Levels : Analysis and, Part 1, Investigation of Extreme Values of Sound Pressure (D. E. L. Shorter and W. I. Manson) ; Part 2, A Description of an Optical Instrument for Monitoring Sound Signals (E. R. Wigan), 1490
Measurement of Sap Flow by Heat Transfer (D. C. Marshall), 878
Measurement of the Thickness of the Earth's Crust in the Albertan Plains of Western Canada (Dr. T. C. Richards), 384
Measurement of Toughness in Cold-stored Fish (Dr. R. M. Love), 108
Measurement (Accurate), of the Viscosity of Liquids (Institute of Petroleum and the British Society of Rheology Symposium on), 438
Measurement (Direct), of the Velocity of Propagation of a Ferromagnetic Domain Boundary in 'Perminvar' (Dr. E. W. Lee and D. R. Callaby), 254
Measurements Conference : International, 990
Measurements of Conduction at Low Temperatures (Low Temperature Group of the Physical Society Symposium on), 83
Measurements of the Permeability Tensor for 'Ferroxcube' at 24,000 Mc./s (G. G. Robbrecht and J. L. Verhaeghe), 1080
Measurements (Astronomical Time) : Comparison of, with Atomic Frequency Standards (J.-P. Blaser and J. De Prins), 859
Measurements (Horizontal Drift), in the Ionosphere near the Equator (N. J. Skinner, J. Hope and R. W. Wright), 1363
Measurements (Ionospheric), made at Halley Bay (W. H. Bellchambers and W. R. Piggott), 1596
Measurements (Scientific) : International Conference on (Dr. W. A Wooster), 1781
Measurements (Temperature) : A Story of (Negretti and Zambra), 1487
Measuring Radioactivity of Vapours : Scintillation Counter for (A. E. Lowe and D. Moore), 133
Measuring Susceptibility : A New Method of (C. Hilsum and A. C. Rose-Innes), 1082
Mechanical Energy : Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into (Seminar at University College, London, on), 762
Mechanical Engineering at Liverpool, 18
Mechanical Engineering Research 1957—Report of the Mechanical Engineering Research Board, with the Report of the Director of Mechanical Engineering Research, 1287
Mechanical Engineering Research Board : Mechanical Engineering Research 1957—Report of the, with the Report of the Director of Mechanical Engineering Research (Department of Scientific and Industrial Research), 1287
Mechanical Engineering Research Laboratory (R. J. F. Franklin), 436
  Research on Heat Transfer, 293
Mechanical Engineers, Institution of : Award of Clayton and Manville Fellowships and Grants, 433
Mechanical Events in Contraction : Inward Movement of Calcium as a Link between Electrical and (Prof. George B. Frank), 1800
Mechanical Processes : Entropy Production in Irreversible (D. H. Everett), 1084
Mechanical Properties of Whiskers and Thin Films (J. E. Gordon and Dr. J. W. Menter), 296
Mechanical Resolution of Linguistic Problems (Dr. Andrew D. Booth, L. Brandwood and Dr. J. P. Cleave), *review* by R. A. Brooker, 618
Mechanical Translation, *review* by R. A. Brooker, 618
Mechanical Vibration, *review* by Prof. R. E. D. Bishop, 1581
Mechanics : Quantum, *review* by Prof. N. Kemmer, 755
  Theoretical and Applied (Indian Society of Theoretical and Applied Mechanics fourth Congress on), 1133
Mechanics of Solids : Sir Geoffrey Taylor's Work on the, *review* by Prof. A. H. Cottrell, 546
Mechanics (Quantum) : The Principles of (Prof. P. A. M. Dirac), fourth edition, *review* by Prof. N. Kemmer, 755
Mechanics (Soil) : Alexandre Collin—a Pioneer in, *review* by K. L. Nash, 552
Mechanics (Theoretical and Applied), Indian Society of : Fourth Congress on Theoretical and Applied Mechanics, 1133
Mechanics (Theoretical and Applied), International Union of, and the International Union of Geodesy and Geophysics : International Symposium on Atmospheric Diffusion and Air Pollution, 22, 1134
Mechanics, Mathematical Physics and Technology : Integral Equations and their Applications to certain Problems in (S. G. Mikhlin), translated from the Russian by A. H. Armstrong, *review* by Prof. T. A. A. Broadbent, 1259
Mechanism of Action of the Antidiuretic Hormone : Role of Hyaluronidase in the Re-Absorption of Water in Renal Tubules—the (A. G. Ginetzinsky), 1218
Mechanism of Action (A Possible), of Esterases inhibitable by Organo-Phosphorus Compounds (Mechanism of Esterase Action), (Prof. H. N. Rydon), 928
Mechanism of Chlorophyll Action in Photosynthesis (Wolf Vishniac and Irwin A. Rose), 1089
Mechanism of Esterase Action—Nature of the Reactive Serine Residue in Enzymes inhibited by Organo-Phosphorus Compounds (G. R. Porter, Prof. H. N. Rydon and J. A. Schofield), 927 ; A Possible Mechanism of Action of Esterases inhibitable by Organo-Phosphorus Compounds (Prof. H. N. Rydon), 928
Mechanism of Oxidative Phosphorylation (M. J. R. Dawkins, J. D. Judah and Dr. K. R. Rees), 875
Mechanism of Radiation Effect on the Process of Synthesis of Deoxyribonucleic Acid (Studies in Synthesis of Deoxyribonucleic Acid), (L. G. Lajtha, R. Oliver, R. Berry and W. D. Noyes), 1788
Mechanism (A Genetic), for 'Thread Protein' Polymorphism in Cattle (Dr. G. C. Ashton), 65
Mechanism (A Possible), fot the Initial Transfer of the Genetic Code from Deoxyribonucleic Acid to Ribonucleic Acid (Dr. Geoffrey Zubay), 112
Mechanism (Reaction), of Cytochrome Oxidase : Reconstruction of the (Shigeki Takemori, Ichiro Sekuzu, Takashi Yonetani and Prof. Kazuo Okunuki), 1306
Mechanisms (Atomic), of Fracture (United States National Academy of Sciences—National Research Council Seminar on), 1348
Mechanization of Thought Processes (Symposium at the National Physical Laboratory), 1416
Medal of the Liverpool Geological Society awarded to Prof. O. T. Jones, 295
Medawar, Prof. P. B. : Part played by Deoxyribonucleic Acid in Transplantation Immunity, 62
Media (Moving) : Electrodynamics of, *review* by Prof. V. C. A. Ferraro, 1045
Media (Moving), and Electromagnetic Induction : Electromagnetism and Relativity with particular reference to (Prof. E. G. Cullwick), *review* by Prof. V. C. A. Ferraro, 1045
Media (Porous) : Evidence for Permeability Minima in Low-Pressure Gas Flow through (Dr. D. M. Grove and M. G. Ford), 999
Medical Congress (Australian) : Sir Henry Simpson Newland Oration (Rt. Hon. R. G. Menzies), 1557
Medical Dictionary : Stedman's (edited by Norman Burke Taylor in collaboration with Lieut.-Colonel Allen Ellsworth Taylor), nineteenth edition *review* by Dr. F. G. J. Hayhoe, 215
Medical Electronics Discussion Group : Scope and Activities of the (Institution of Electrical Engineers), 1062
Medical Genetics : Fifty Years of (Dr. Laurence H. Snyder), 1416.

Medical Physics (Biological and) : Advances in (edited by John H. Lawrence and Cornelius A. Tobias), Vol. 5, *review* by Prof. J. A. V. Butler, 827
Medical Research, Jane Coffin Childs Memorial Fund for : Grants for the Year 1957-58, 1492
Medical Research, Indian Council of : Technical Report of the Scientific Advisory Board for 1956, 708
  Progress made in Research Projects (1950-57), 708
Medical Research, Institute for (Federation of Malaya) : Studies from the, No. 28, Malaysian Parasites, 16-34 (edited by J. R. Audy), *review* by P. J. Mattingly, 9
Medical Research Council : Memorandum No. 23, Nomenclature for Fungi Pathogenic to Man and Animals—Names recommended for use in Great Britain, second edition, 500
  Awards for 1958-59 of Rockefeller Travelling Fellowships in Medicine, 634
  Award for 1958-59 of a Lederle Travelling Fellowship in Medicine, 634
  Awards for 1958-59 of Alexander Pigott Wernher Memorial Travelling Fellowships in Ophthalmology and Otology, 634
  Awards for 1958-59 of French Exchange Scholarships in Medical Science, 634
  Awards of Lilly Travelling Fellowships in Medicine, 634
  Awards of United States Public Health Services (National Institutes of Health, Bethesda) Travelling Fellowships in Medical Science, 634
  Technical Careers in the, 698
  Appointment of Prof. R. H. S. Thompson, Prof. E. J. Wayne and Prof. B. W. Windeyer as members, 771
  Indefinite loan from the Wellcome Trust of an electron microscope to the Biophysics Research Unit at King's College, London, 1204
Medical Science : French Exchange Scholarships in (Medical Research Council Awards for 1958-59), 634
  United States Public Health Services (National Institutes of Health, Bethesda) Travelling Fellowships in (Medical Research Council Awards), 634
Medical Sciences, Council for the Organization of, with the assistance of the Wellcome Trust and the International Union of Biochemistry : Symposium on Biochemical Response to Physical Injury, 1493
Medical Statistics, *review*, 417
Medicinal Plants of Darjeeling and the Sikkim Himalayas : Common (Dr. K. Biswas), *review* by N. L. Bor, 76
Medicine : Lederle Travelling Fellowship in (Medical Research Council Award for 1958-59), 634
  Lilly Travelling Fellowships in (Medical Research Council Awards), 634
  Modern Analytical Chemistry in the Service of Pharmacy and (Dr. G. E. Foster), 995
  Rockefeller Travelling Fellowships in (Medical Research Council Awards for 1958-59), 634
  Social, *review* by Prof. Thomas McKeown, 619
  Space (British Interplanetary Society Symposium on), 1645
Medicine, Royal Society of (Section of Endocrinology); and the Society for Endocrinology : Joint Endocrine Meeting, 1279
Medicine and Biology : Electrical Techniques in (Institute of Radio Engineers, the American Institute of Electrical Engineers and the Instrument Society of America Annual Conference on), 433, 771
Medicine (Nuclear Biology and), Italian Society of : Third Congress of the (Medical Clinic of the University of Florence), 229
Mediterranean Geography (Geographical Association Summer School in), 1777
Medulla (Adrenal) : Effects of Reserpine on Secretion from the (Dr. L. Stjärne and Dr. S. Schapiro), 1450
Medulla (Adrenal), of the Rat : Differential Demonstration of Acetylcholinesterase and Non-specific Cholinesterase in the (Prof. O. Eränkö), 183
Megaspore Tetrads in a Coenopterid Fern (W. G. Chaloner), 771
Meggers, Betty J., and Evans, Clifford : Archaeological Investigations at the Mouth of the Amazon, *review* by Dr. G. H. S. Bushnell, 1044
Mehl, Dr. W., and Bockris, Dr. J. O'M. : Charge Transfer Processes (Mechanism of Cathodic Electrochemical Reactions—Mechanism of Electrolytic Silver Deposition), 1354
Meidner, Dr. H. (Heath, Prof. O. V. S., and) : Effects of Water-Strain on the Minimum Intercellular Space Carbon Dioxide Concentration T in Wheat Leaves, 1524
Meinesz, Prof. F. A. Vening (Heiskanan, W. A., and) : The Earth and its Gravity Field, *review* by Sir Edward Bullard, 1580
Melanesian Urban Community, *review* by G. K. Roth, 6
Melanin, a Naturally Occurring Cation Exchange Material (Dr. Laurens P. White), 1427
Melanocyte-stimulating Activity : A New Synthesis of the Pentapeptide L.-Histidyl-L-Phenylalanyl-L-Arginyl-L-Tryptophyl-Glycine and its (Dr. R. Schwyzer and Prof. Choh Hao Li), 1669
Melanoplus bilituratus (Wlk.) : Albinism in the Migratory Grasshopper (L. G. Putnam), 1529
Meldola Medal for 1959 of the Society of Maccabaeans, 990
Melezitose Gene in *Saccharomyces* : Effects of Environment (Radiation, Substrate and Allelic Genes) on the (Prof. Carl C. Lindegren and David D. Pittman), 271
Mellanby, Dr. Kenneth : Physiological Ecology, *review*, 72
  A Key to Leaf-mining Insects, *review*, 213
  Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
  Life at Low Temperatures, 911
  Science in Africa, *review*, 1043
Mellanby, Lady : Nutrition and Teeth, 1704
Melophagus ovinus (L.) : Purine Excretion by the Sheep Ked (W. A. Nelson), 115
Melrose, G. J. H., and others : Chemistry of Plant Products (Constitution of the Sesquiterpene Alcohol Globulol), 299
Melville, Sir Harry, and others : Preparation of Block and Graft Copolymers in Systems where the Life-time of the Kinetic Chain is Long, 245
Melville, Dr. R. : Western Australia Wildflowers, *review*, 1587
Melville, R. V. : Appointed scientific controller (with responsibility for the scientific and editorial work) of the International Trust for Zoological Nomenclature, 842
Melvin, M. A. : At the Ninth General Physics Conference of the Swedish National Committee for Physics (Conservation-Invariance Principles and the Behaviour of Elementary Particles), 698
Membrane (Bacterial) : Lutein in a (Dr. A. R. Gilby and the late Dr. A. V. Few), 55
Membrane (Nuclear) : Semipermeability of the (Clifford V. Harding and Carl Feldherr), 676
Membrane (Plasma) : Plateau Formation and Sulphydryl Groups in the (Hidehiko Takahashi, Takayoshi Murai and Toshi Sasaki), 1675
Membrane Permeability (Mitochondrial) : Effect of Hydrocortisone on (Dr. C. H. Gallagher), 1315
Membrane Resistances (Purkinje and Ventricular), during the Rising Phase of the Action Potential (Dr. Edward A. Johnson, P. A. Robertson and J. J. Tille), 1161
Membranes (Cell) : Determination of the Mass Thickness of, from their Electron Micrographs (M. L. De and P. Sadhukhan), 1008
  Metabolic Aspects of Transport across (edited by Q. R. Murphy), *review*, 1575
Membranes (Osmotic) : A Method for Improving the Solute Selectivity of (M. F. Vaughan), 1730
Memory (Immediate) : Decay of, with Age (D. C. Fraser), 1163
Men (Business) : Atom School for, 700
Menard, Prof. H. W., and Shipek, C. J. : Surface Concentrations of Manganese Nodules, 1156
Mendelssohn, Dr. K. : Measurements of Conduction at Low Temperatures, 83
Menschen : Die Bluteiweisskörper des (Prof. Ferdinand Wuhrmann und Dr. Charlie Wunderly), dritte Auflage, *review* by Dr. R. Consden, 623
Mental Health : Cancer and, in 1952-53 (Registrar General), 1061
Mental Health Research Fund : First Travelling Fellowship awarded to J. A. Baldwin, 157
  Prizes awarded to Dr. G. Sedman, J. D. Swales and A. P. K. John, 158
  Work of the, 301
Menter, Dr. J. W. (Gordon, J. E., and) : Mechanical Properties of Whiskers and Thin Films, 296
Menzies, Rt. Hon. R. G. : Modern Science and Civilization (Sir Henry Simpson Newland Oration before the Australian Medical Congress), 1557
Meprobamate : Identification of, by Adsorption Chromatography on Chromatoplates (Dr. Angelo Fiori and Dr. Mario Marigo), 943
Mer, Dr. C. L. : Growth-promoting Effect of Ethanol on Oat Seedlings, 1812
Mercaptan (Ethyl) : Inhibitory Action of, on Intracellular Tubercle Bacilli (G. E. Davies and G. W. Driver), 664
Mercer, Dr. E. H. : Invasiveness and Surface Properties of Cancer Cells (High-resolution Electron Microscopy of Cell Contacts), 1421
Merck Veterinary Manual, second printing, *review* by Prof. J. G. Wright, 75
Mercury : Anodic Reactions of, with Halide Ions in Dimethylformamide (Dr. P. H. Given and M. E. Peover), 1226
  Application of the Hanging Mercury Drop Electrode to an Investigation of Intermetallic Compounds in (Prof. Wiktor Kemula, Zbigniew Galus and Zenon Kublik), 1228
Mercury in *Coffee arabica* : Zinc Deficiency induced by (K. R. Bock, J. B. D. Robinson and G. T. Chamberlain), 1607
Mercury (Liquid)–Thallium Alloys containing 25-35 Atomic per cent Thallium : Ordering in (R. G. Ward and J. R. Wilson), 334
Mercury Drop Electrode (Hanging) : Application of the, to an Investigation of Intermetallic Compounds in Mercury (Prof. Wiktor Kemula, Zbigniew Galus and Zenon Kublik), 1228
Mercury Films (Thin) : A New Phenomenon of Electron Emission from (Dr. H. von Bertele), 1148
Merson, R. H., and King-Hele, D. G. : Use of Artificial Satellites to Explore the Earth's Gravitational Field—Results from *Sputnik* 2 (1957β), 640
Merton, Dr. P. A. : Progress in Biophysics and Biophysical Chemistry, *review*, 489
Merton, Sir Thomas : Awarded the Rumford Medal for 1958 of the Royal Society, 1344, 1631 ; work of, 1631
Meselson, M. : Bacteriophage Research, 1769
Messel, Prof. H. (edited by) : Selected Lectures in Modern Physics for School Science Teachers, *review* by G. R. Noakes, 623
Messel Lecture of the Society of Chemical Industry (Rt. Hon. C. D. Howe), 1422
Meston, A. L. : Van Diemen's Land Company (1825-1842), 699
Metabolic Alteration in Leukaemia induced by a Virus (Hilton B. Levy and Isadore Brodsky), 1379
Metabolic Aspects of Moulds : Cultural and (Society for Applied Bacteriology and the Istituto di Sanita Symposium on), 1279
Metabolic Aspects of Transport across Cell Membranes (edited by Q. R. Murphy), *review*, 1575
Metabolic Effects (Early), of Thyrotropic Hormone and Triiodothyronine : Differences between the (Dr. B. S. Hetzel, J. S. Charnock and B. F. Good), 1166
Metabolic Products (Extracellular), of a *Hirsutella* Species (T. C. Loughheed and Dr. D. M. MacLeod), 114
Metabolism of Bacteria on Benzoyl Derivatives of DL-Amino-acids : A New Method for Resolving Amino-acids by (Prof. Yukio Kameda, Etsuko Toyoura, Katsuhiko Matsui, Yukio Kimura and Shizue Kitagawa), 453
Metabolism of Coumarin and related Compounds in Cultures of *Penicillium* Species (David M. Bellis), 806
Metabolism of the Nervous System (edited by Derek Richter), *review* by Prof. J. H. Gaddum, 282
Metabolism of Oligosaccharides in the Broad Bean (*Vicia faba*) : Occurrence and (Dr. J. B. Pridham), 1687
Metabolism of 16-Oxooestrone by Human Liver Slices *in vitro* (Dr. H. Breuer and R. Knuppen), 1512
Metabolism of Phenolic Compounds by the Broad Bean *Vicia faba* (Dr. J. B. Pridham), 795
Metabolism (Calcium and Phosphorus), after Surgery (K. W. Starr, K. N. Wynne and S. H. Chorlton), 1505
Metabolism (Carbohydrate), of Cock Spermatozoa (Prof. F. W. Lorenz), 397
Metabolism (Carbohydrate), of Wheat Seedlings : Effects of Rust Infection on the (A. C. Jain and Prof. R. -L. Pelletier), 882
Metabolism (Endogenous), in Brain Cortex Slices (Dr. R. Vrba and Jaroslava Folberger), 237
Metabolism (Glucuronate), by *Aerobacter aerogenes* (Robert A. McRorie and G. David Novelli), 1504
Metabolism (Oxidative). of Polycyclic Hydrocarbons by Soil Pseudomonads (H. N. Fernley and Prof. W. C. Evans), 373

Metabolism (Potassium Concentration and), of Red Blood Cells of the Lamb : Changes in the (Prof. R. D. Wright, T. R. Bradley, J. F. Nelson and J. P. Coghlan), 1742
Metabolism (Protein), of Plants : ^{14}C-Proline and Hydroxyproline in the—an Episode in the relation of Metabolism to Cell Growth and Morphogenesis (Prof. F. C. Steward and Dr. J. K. Pollard), 828
Metabolism (Yeast) : Reversal by Magnesium Ions of the Inhibition of, by a Cationic Detergent (Dr. W. McD. Armstrong), 326
Metabolite of Œstradiol in Man : 16*β*-Hydroxyoestrone, a (Barry T. Brown, Jack Fishman and Dr. T. F. Gallagher), 50
Metal (Sodium) : Determination of Traces of Oxygen in, by Infra-red Spectrophotometry (H. J. de Bruin and L. E. Smythe), 387
Metal Abrasion : Removal of Gases in High Vacuum Systems by (M. E. Haine, E. W. R. Francis and R. N. Bloomer), 931, *erratum*, 1348
Metal Alkoxide Polymers: A Structural Theory for (Dr. D. C. Bradley), 1211
Metal Complexes : Stability of, with Salicyclic Acid and related Substances (D. D. Perrin), 741
Metal Films (Thin) : Calculation of Absorption Peaks in (Robert M. Hill), 1150
Metal Ions : Effect of, on the Development of Wheat Stem Rust (D. Wang, Dr. P. K. Isaac and Prof. E. .R Waygood), 268
Metal–Hydrogen Bond (Transition), in Aqueous Solution : Formation of a (W. P. Griffith, L. Pratt and Prof. G. Wilkinson), 466
Metal-Protein Compounds : A Novel Type of (Prof. K. H. Gustavson), 1125
Metallurgical Research Laboratory (National), Jamshedpur : Publication of the papers contributed to the Symposium on Production, Properties and Application of Alloy and Special Steels, 1777
Métallurgie, Société Française de: Journées Métallurgiques d'Automne, 990
Metallurgists, Institution of : Year Book and List of Members for 1957-58, 698
Metallurgy : Carbon, the Key to (Sir Charles Goodeve), 990
  Some Recent Trends in (British Association for the Advancement of Science, Section B (Chemistry), Discussion on), 1123
Metals : Examination of, by X-Ray Diffraction (X-Ray Diffraction Group of the Institute of Physics Discussion on), 771
  Pressure Welding of (Conference at the University of Birmingham), 638
  Small Angle X-Ray Scattering from (Midwest Research Institute, Kansas City, International Conference on), 634
  Void Nucleation Sites in Creep of (P. W. Davies and Dr. J. P. Dennison), 131
  X-Ray Analysis and Electron Microscopy of, 771
Metals, Institute of : Golden Jubilee Autumn Meeting, 501
  Golden Jubilee and Activities of the (Prof. F. C. Thompson), 981
Metals and Alloys above 1,200°C. : Study of (Symposium at the University of Oxford), 1418
Metals (Heavy) : Populations of *Agrostis* spp. Tolerant of (D. Jowett), 816
Metals (Non-) : Colorimetric Determination of (edited by David F. Boltz), *review* by C. O. Harvey, 1331
Metals (Transition) : Stereochemistry of Complex Halides of the (Dr. Naida S. Gill, Prof. Ronald S. Nyholm and Peter Pauling), 168
Metamidium, a New Trypanocidal Drug (W. R. Wragg, K. Washbourn, K. N. Brown and J. Hill), 1005
Metamorphosing Salmon : Acid-Soluble Nucleotides from the Blood of (Per Olov Svärd), 1448
Metastasizing Transplantable Tumours : Local Reaction to Non-metastasizing and (Dr. C. Maltoni), 1742
Meteorites: Are Tektites Extra-Solar-System (Dr. Truman P. Kohman), 252
  Ferromagnetism of (Prof. Jules Duchesne and Joseph Depireux), 931
Meteorological Office : Meteorological Report No. 18, Air Flow over Mountains, Notes for Forecasters and Pilots (G. A. Corby), 94
  Tables of Temperature, Relative Humidity and Precipitation for the World, 361
  Annual Report for 1957-1958, 1711
  Reorganization of the (J. Paton), 1711
Meteorological Organization (International) : Prize for 1958 awarded to E. Gold by the World Meteorological Organization, 18
Meteorological Organization, World : International Meteorological Organization Prize for 1958 awarded to E. Gold, 18
Meteorological Society, Royal : Election of Officers for 1958-59, 88
Meteorology : Antarctic, *review* by Dr. G. E. R. Deacon, 900
  Introduction to (Prof. Sverre Petterssen), second edition, *review* by Dr. R. C. Sutcliffe, 1599
Meteorology of the Antarctic (edited by M. P. van Rooy), *review* by Dr. G. E. R. Deacon, 900
Meteorology (Agricultural), in India, 360
Meteorology Department (India) : Special Issue of the *Indian Journal of Meteorology and Geophysics* in honour of the Silver Jubilee of the Agricultural Meteorology Division, 360
Meteorology and Geophysics, Indian Journal of : Special issue in honour of the Silver Jubilee of the Agricultural Meteorology Division of the India Meteorology Department, 360
Methacrylate (Polymethyl) : Fracture Markings in (Dr. D. C. Smith), 132
Methane from Carbon : Production of (Dr. J. D. Blackwood), 1014
Methane-Conversion Detector for Gas Chromatography (Prof. Albert Zlatkis and J. A. Ridgway), 130
Methanometer in the Coal Industry : Gas Chromatograph as a (P. Whatmough), 863
DL-Methionine : Degradation of, by Radiation (Jiřina Kopoldová, Jaroslav Koloušek, Arnošt Babicky and Jindřich Liebster), 1074
Method for Determination of Particle Penetration Depths in a Filter (Jan Sisefsky), 1437
Method for Improving the Solute Selectivity of Osmotic Membranes (M. F. Vaughan), 1730
Method of Studying the Variation with Temperature of Ultrasonic Absorption in Liquids (Dr. B. Ramachandra Rao and Dr. H. S. Rama Rao), 1794
Method for Succinate Analysis : A Sensitive Micro-Spectrophotometric (Dr. M. B. Waitzman and E. Q. Adams), 129
Method (Continuous-Flow), for the Study of Microbiological Processes in Soil Samples (Dr. J. Macura and Dr. I. Málek), 1796
Method (A Direct), for Determination of Forward-Mutation Rates in *Neurospora crassa* (F. J. de Serres and H. G. Kølmark), 1249
Method (A Direct-Plating), for the Assay of Radioactive Isotopes in Aqueous and Alcoholic Samples (H. Campbell, H. A. Glastonbury and Margaret D. Stevenson), 1100
Method (Goldblatt) : Histochemical Changes in Kidneys and Adrenals of Rats made Hypertensive by the (Dr. Antonio Pasqualino and Prof. Geoffrey H. Bourne), 1426
Method (A New), of Fractionating High Polymers (Dr. F. W. Peaker and Prof. J. C. Robb), 1591
Method (A New), of Measuring Susceptibility (C. Hilsum and A. C. Rose-Innes), 1082
Method (A New), for obtaining Thin Plane Parallel Sections of Mineralized Specimens (Dr. O. Hallén and Dr. H. Röckert), 1225
Method (New), for Preparing Scaly Alumina (Dr. Persio de Souza Santos), 525
Method (New), for Resolving Amino-acids by Metabolism of Bacteria on Benzoyl Derivatives of DL-Amino-acids (Prof. Yukio Kameda, Etsuko Toyoura, Katsuhiko Matsui, Yukio Kimura and Shizue Kitagawa), 453
Method (A New), of Tracking Artificial Earth Satellites (A. P. Willmore), 1008
Method (A Paper Chromatography), for the Determination of Suitable *p*H Values for the Extraction of Antibiotics (Vladimir Betina), 796
Method (A Plate), for Estimating the Numbers of Phosphate-dissolving and Acid-producing Bacteria in Soil (H. A. Louw and Dr. D. M. Webley), 1317
Method (A Rapid), for Separating Glomeruli from Rabbit Kidney (W. F. Cook and Sir George Pickering), 1103
Method (A Simple), for making Starch-gel Electrophoretic Strips Transparent (S. D. Vesselinovitch), 665
Method (A Simple Autoradiographic), for Distinguishing Insects labelled with Phosphorus-32 and Sulphur-35 (Dr. M. T. Gillies), 1683
Method (A Simple and Rapid), for the Biological Assay of Glucocorticoids (B. P. Block and P. F. D'Arcy), 181
Method (A Simple, Rapid), for Circular Paper Chromatography (Dr. A. J. Philippu), 1159
Methods (New Equipment and), for the Evaluation of the Performances of Lenses for Television (W. N. Sproson), 1490
Methods (Numerical), in Function-Space, *review* by Prof. D. N. de G. Allen, 1695
Methods (Physical), in Organic Chemistry (Royal Society of Canada Symposium on), 701
Methods (Relaxation) : Error at a Rectangular Corner in (R. Butler and S. V. Fagg), 600
Methods (Research), in Soil Zoology (Soil Zoology Committee of the International Society of Soil Science Colloquium on), 704
Methods (Survey), in Social Investigation (C. A. Moser), *review* by Prof. T. S. Simey, 1256
Methoxyl Groups in Spirilloxanthin : Origin of the—a Carotenoid synthesized by the Photosynthetic Bacterium *Rhodospirillum rubrum* (G. D. Braithwaite and Dr. T. W. Goodwin), 1304
Methylene Blue and Thionine : Photoreduction of, by Ferrous Sulphate using Flash Irradiation (Dr. C. A. Parker), 245
Metraux, Dr. Alfred : Easter Island, a Stone-Age Civilization of the Pacific (translated from the French by Michael Bullock), *review* by Prof. Raymond Firth, 280
Metre Wave-lengths : Role of Turbulent Scattering in Long-Distance Radio Propagation at (F. A. Kitchen and Dr. M. A. Johnson), 302
Metric (Inch–) Conversions in British Standards (F. A. Gould), 1767
Mevalonic Acid : Terpene Formation in Pine from (Robert G. Stanley), 738
DL-[2^{14}-*C*] Mevalonic Acid : Uptake and Utilization of, by *Hevea brasiliensis* (G. B. Barlow and Dr. A. D. Patrick), 662
Meyer (Charles Leopold) Award for 1958 of the Société de Chimie Biologique awarded jointly to Dr. François Gros and to Prof. Jean Turchini, 1643
Mice : Calcium Exchanges of Ehrlich Ascites Tumour Cells of, *in vitro* (Doreen Thomason and Raymond Schofield), 809
  Different Types of Haemoglobin in Two Strains of (W. Welling and Dr. D. W. van Bekkum), 946
  Induced Resistance of, to Infection with *Brucella abortus* 2308 through Vaccination with *BCG* (Dr. A. Bekierkunst and D. Sulitzeanu), 883
  Initial Irradiation Reaction in (Dr. Harold Blondal), 1026
  Lathyrism in (H. Morag McCallum), 1169
  Lenticular Effect in, of some Morphine-like Drugs (Marta Weinstock, Dr. H. C. Stewart and K. R. Butterworth), 1519
Mice cultivated *in vitro* as Early Embryos : Successful Development and Birth of (Dr. Anne McLaren and Dr. J. D. Biggers), 877
Mice (*C3H* and *C*) : Anti-Tumour and Biochemical Effects of Purified Bovine Xanthine Oxidase in (Prof. A. Haddow, Dr. G. de Lamirande, Prof. F. Bergel, Dr. R. C. Gray and D. A. Gilbert), 1144
Mice (Obese) : Levels of Serum Cholesterol in (Claire Zomzely and Jean Mayer), 1738
Mice (X-Irradiated) : Effect of Thyroid Pre-treatment on the Mortality o (Dr. L. Novák and Dr. M. Pospíšil), 1603
Mice and Tissue Culture infected with the Virus of Foot-and-Mouth Disease : Infectivity of Ribonucleic Acid from (F. Brown, R. F. Sellers and Doreen L. Stewart), 535
Micelle Series : Origin of Time-dependent Organization in a (T. Nash), 1536
Michael, Henry N. : The Neolithic Age in Eastern Siberia, 1061
Michael, Dr. R. P. : Awarded a Rockefeller Travelling Fellowship in Medicine for 1958-59, 634
Michalska, E., and others : Phagocytosis and the Antigenic Structure of Bacteria, 1243
Michelson, Dr. A. M. : Hyperchromicity and Nucleic Acids, 1502
Michie, Dr. Donald, and others : Variance Control in the Animal House, 77
Micro Sample Introduction System for Gas Chromatography (Robert L. Bowman and Dr. Arthur Karmen), 12[illegible]3
Microbes and the Biochemist, *review* by Dr. H. K. King, 823
Microbes and Drugs, *review* by I. M. Rollo, 416
Microbial Antagonism of *Fusarium culmorum* (E. Griffiths and M. A. Siddiqi), 956
Microbiological Processes in Soil Samples : Continuous-Flow Method for the Study of (Dr. J. Macura and Dr. I. Málek), 1796
Microbiology : Annual Review of (edited by Charles E. Clifton, in association with Sidney Taffel and Roger Y. Stanier), Vol. 11, *review* by Dr. H. K. King, 823
  Dairy (Prof. Edwin M. Foster, Prof. F. Eugene Nelson, Prof. Marvin L. Speck, Prof. Raymond N. Doetsch and Prof. Joseph C. Olson, Jr.), *review* by Dr. L. F. L. Clegg, 141
Microbiology (General), Society for : Twenty-seventh General Meeting, 158

Microchemistry (Midlands Section and the Microchemistry Group of the Society for Analytical Chemistry Symposium on), 22
Micrococcal Phosphodiesterase : Action of, on Tobacco Mosaic Virus Nucleic Acid (K. K. Reddi), 1308
Micrococcus lysodeikticus : 'Solubilization' of a Cytochrome *b* Component from (F. L. Jackson and Valerie D. Lawton), 799, *erratum*, 1279
Microelectrode : A Simple, for Recording from the Central Nervous System (J. D. Green), 962
Micro-electrophoresis (Dr. A. M. James), 1315 ; (Dr. A. D. Bangham), 1315
Microelectrophoresis of Small Particles : An Apparatus for (Dr. A. D. Bangham, R. Flemans, Dr. Dorothy H. Heard and G. V. F. Seaman), 642
Microgram Amounts of Copper in Biological Material : Separation and Determination of Millimicrogram Amounts of Cobalt and (Aleksandra Smoczkiewiczowa and Witold Mizgalski), 53
Micrographs (Electron) : Determination of the Mass Thickness of Cell Membranes from their (M. L. De and P. Sadhukhan), 1008
Micro-organisms : Drug Resistance in—Mechanisms of Development (Ciba Foundation Symposium on), (edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by I. M. Rollo, 416
  Drug Resistance of (Robert J. Schnitzer and Emanuel Grunberg), *review* by I. M. Rollo, 416
Micro-organisms in Milk and Milk Products, *review* by Dr. L. F. L. Clegg, 141
Micro-organisms, United Kingdom National Committee of the British Commonwealth Collections of : Preparation of a new edition of the Directory of Collections and List of Species maintained in the United Kingdom and Crown Colonies, 1277
Micro-palaeontology (Palaeontological Association Discussion on), 1554
Microradiography : X-Ray Microscopy and—Proceedings of a Symposium held at the Cavendish Laboratory, Cambridge, 1956, *review* by Prof. R. D. Preston, 1113
Microsaur Relationships, *review* by Dr. W. E. Swinton, 1115
Microsaurs : Revision of the Gymnarthridae American Permian (Joseph T. Gregory, Frank E. Peabody and Llewellyn I. Price), *review* by Dr. W. E. Swinton, 1115
Microscope : A 'Solid-Image' (R. L. Gregory and P. E. K. Donaldson), 1434
Microscope (Interference), in Biological Research (Dr. Arthur J. Hale), *review* by Dr. R. Barer, 1630
Microscope (Phase-Contrast) : Ringed Appearance of Lipid Spheres under the (Brij L. Gupta), 537
Microscope (Polarization) : Submicroscopic Structure of Elastic Fibres as observed in the (Dr. G. Romhányi), 929
Microscopes (Polarizing) : Diffraction Anomaly in (Shinya Inoué and Prof. Hiroshi Kubota), 1725
Microscopic Structure of the Lungs of the Bottlenose Whale (J. R. Goudappel and Prof. E. J. Slijper), 479
Microscopic (Light), and Electron Microscopic Observations on the Dividing Walls of Cells in *Chara* spp. (Dr. Lóránd Frisvalszky and Dr. Béla Lovas), 736
Microscopy : Fibre (Dr. J. L. Stoves), *review* by Prof. W. T. Astbury, 350
  Modern, *review* by Prof. R. D. Preston, 1113
Microscopy (X-Ray), and Microradiography—Proceedings of a Symposium held at the Cavendish Laboratory, Cambridge, 1956, *review* by Prof. R. D. Preston, 1113
Micro-Spectrophotometric Method (A Sensitive), for Succinate Analysis (Dr. M. B. Waitzman and E. Q. Adams), 129
Microsporum : Fluorescent Pigment of (Prof. Frederick T. Wolf, Ernest A. Jones and Helene A. Nathan), 475
Microsporum gypseum, *Keratinomyces ajelloi* and *Trichophyton terrestre* in some British Soils : Occurrence of (Phyllis M. Stockdale), 1754
Microtechnique (Biological) : Principles of—a Study of Fixation and Dyeing (Dr. John R. Baker), *review* by Prof. J. Brachet, 1579
Microvilli of the Cells of the Human Adrenal Cortex (I. A. Carr), 607
Microwave Physics (British Association for the Advancement of Science, Section A (Mathematics and Physics), Discussion on), 1121
Microwave Radiation : Scattering of, by a Plasma Column (Forrest I. Boley), 790
Midday Closure of Stomata in the Oil Palm, *Elaeis guineensis* Jacq. : Field Observations of (A. R. Rees), 735
Middle Cambrian Trilobite *Centropleura* in Queensland (Dr. A. A. Öpik), 204
Middle Zambezi : A Lungfish (*Protopterus*) from the (P. B. N. Jackson), 123
Middlebrook, Dr. R. D. : An Introduction to Junction Transistor Theory, *review* by D. D. Jones, 756
Midgut : Retention of Food Residues in the, by Nymphs of the Milkweed Bug, *Oncopeltus fasciatus* Dall. (P. W. Miles), 959
Midlands (West) : Guide to Library Resources in the (edited by B. G. Staples), 633
Midwest Research Institute, Kansas City : International Conference on Small Angle X-Ray Scattering from Metals, 634
Migration : Insect (Dr. C. B. Williams), *review* by Dr. R. C. Rainey, 1257
Migration of the Chemical Elements in the Earth's Crust during Geological Times (A. A. Saukov), 362
Migration of Spleen Cells from Subcutaneous Implantation Sites (Dr. V. Hašková and Dr. N. A. Mitchison), 410
Migration-elution of Zones in an Electrophoresis Column (Dr. J. Porath, Miss E. B. Lindner and S. Jerstedt), 744
Migrational Drift of Birds Plotted by Radar (Dr. David Lack), 221
Migratory Grasshopper, *Melanoplus bilituratus* (Wlk.) : Albinism in the (L. G. Putnam), 1529
Mikaelian,-. : Modern Educational Treatment of Deafness, 920
Mikhlin, S. G. : Integral Equations and their Applications to certain Problems in Mechanics, Mathematical Physics and Technology (translated from the Russian by A. H. Armstrong), *review* by Prof. T. A. A. Broadbent, 1259
Miledi, R. (Krnjević, K., and) : Acetylcholine in Mammalian Neuromuscular Transmission, 805
Miles, Prof. A. A. : Biochemical Response to Physical Injury (The Endogenous Substances inducing Pathological Increases in Capillary Permeability—The Activation of Endogenous Substances increasing Capillary Permeability), 1494
Miles, Prof. A. A., and others : Vascular Permeability Factors in the Secretion of the Guinea Pig Coagulating Gland, 174
Miles, P. W. : Retention of Food Residues in the Midgut by Nymphs of the Milkweed Bug, *Oncopeltus fasciatus* Dall., 959
Milgrom, Dr. Felix, and Layrisse, Dr. Miguel : Applications of Erythrocyte Stromata Powder, 189
Milk : Antituberculosis Factors of (Zdenek Franc, Ivo M. Hais and Oldřich Horešovsky), 884
  Specificity of Agglutinins in (J. McPhillips), 869
Milk, Committee on the Composition of : First meeting, 87
Milk (Human) : Correlation between the Fat and the Protein Content of (Dr. O. A. Roels), 673
Milk and Milk Products : Micro-organisms in, *review* by Dr. L. F. L. Clegg, 141
Milk Products : Micro-organisms in Milk and, *review* by Dr. L. F. L. Clegg, 141
Milk Teeth Radiation Census : An International (Dr. Herman M. Kalckar), 283
Milkweed Bug, *Oncopeltus fasciatus* Dall. : Retention of Food Residues in the Midgut by Nymphs of the (P. W. Miles), 959
Mill, P. J., and others : Vascular Permeability Factors in the Secretion of the Guinea Pig Coagulating Gland, 174
Millar, Dr. D. D., and others : Air Showers of Size Greater than 10^5 Particles, 1, Core Location and Shower Size Determination, 905 ; 2, Cerenkov Radiation accompanying the Showers, 973 ; 3, Comparison between the Response of Geiger Counters and Scintillation Counters, 1053 ; 4, The Distribution of Nuclear-active Particles and of Mu-Mesons, 1699
Millar, Elaine C. P. (edited by Wolstenholme, G. E. W., and) : Ciba Foundation Colloquia on Endocrinology, Vol. 11, Hormones in Blood, *review* by Prof. F. G. Young, 901
Millecamps, Prof. R. G., and Lafargue, M. : Physics of Ice Movement (Ice Movement on Glaciers), 1561
Millen, Dr. J. W., and Woollam, Dr. D. H. M. : Effect of Vitamin B Complex on the Teratogenic Activity of Hypervitaminosis A, 940
Millen, Dr. J. W., (Woollam, Dr. D. H. M., and) : Influence of Cysteamine on the Teratogenic Action of X-Radiation, 1801
Miller, Ann Ratner, and others : Population Redistribution and Economic Growth, United States, 1870-1950, I, Methodology Considerations and Reference Tables (prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), (Memoirs of the American Philosophical Society, Vol. 45), *review*, 420
Miller, D. S., and Naismith, D. J. : A Correlation between Sulphur Content and Net Dietary-Protein Value, 1786
Miller, Prof. Erston V. : The Chemistry of Plants, *review* by Dr. G. Leaf, 550
Miller, Dr. Joseph : Appointed to the chair of chemistry in the University of Khartoum, 85 ; work of, 85
Miller, Dr. M. R. : Comparative Endocrinology (Reptilian Reproduction), 774 ; (Endocrine Basis of Reproductive Adaptations), 774
Miller, Dr. N. : *Obituary* by Prof. F. S. Dainton, 1201
Miller, Prof. Ronald, and Tivy, Dr. Joy (edited by) : The Glasgow Region, a General Survey, *review*, 587
Miller, Rev. R. A. : Shifts of Arc Lines at various Pressures in Magnetic Fields, 1295
Miller, Mrs. : Modern Educational Treatment of Deafness, 921
Millican, Dr. R. C. : Biochemical Response to Physical Injury (Fluid, Electrolyte and Plasma Protein Disturbance in Shock), 1495
Millimicrogram Amounts of Cobalt and Microgram Amounts of Copper in Biological Material : Separation and Determination of (Aleksandra Smoczkiewiczowa and Witold Mizgalski), 53
Millot, J., and Anthony, J. : At the fifteenth International Congress of Zoology (Résultats actuels de l'étude du Coelacanthe *Latimeria chalumnae* Smith, dernier des Crossoptérygiens, 435
Mills, Lord : Opencast Mining in Britain, 505
  Fuel and Power in British Industry, 1713
Milne, Dr. A. : Perfect and Imperfect Density Dependence in Population Dynamics, 1251
Milner, D. R. : Pressure Welding of Metals, 638
Milner, Prof. S. R. : *Obituary* by J. R. Clarke, 839
Mind : Man's Emerging (Dr. N. J. Berrill), *review* by Prof. H. J. Fleure, 1572
  Parapsychology—Frontier Science of the (Prof. J. B. Rhine and J. G. Pratt), *review* by Dr. E. J. Dingwall, 143
Mind (Human) : Evolution of the, *review* by Prof. H. J. Fleure, 1572
Mineral Exploration : The Future of (Anton Gray), 1136
Mineral Exploration in Great Britain and Ireland : Future of (Prof. K. C. Dunham), 1136
Mineral Nutrition and the Balance of Life (Dr. Frank A. Gilbert), *review* by Dr. E. C. Humphries, 621
Mineral Requirements of Plants and Animals, *review* by Dr. E. C. Humphries, 621
Mineral (Clay)–Soil Mixtures : Invertase Activity in (István Kiss), 203
Mineralized Specimens : A New Method for obtaining Thin Plane Parallel Sections of (Dr. O. Hallén and Dr. H. Röckert), 1225
Mineralogical Society : Election of Officers, 1348
Mineralogy (Clay), of a Soil Sample from Antarctica : Chemistry and (L. C. Blakemore and L. D. Swindale), 47
Minerals : Potassium Uptake by Cation-Exchange Resins from Soils and (P. W. Arnold), 1594
Minerals (Rare Phosphate) : X-Ray Study of (Dr. B. Mukherjee and U. Prasad), 472
Minerals (Soil Clay), Montmorillonite and Vermiculite : Aluminium Interlayers in (B. L. Sawhney), 1595
Mines, H.M. Inspectors of : Reports under the Coal Mines Act (1911) for 1956—Durham Division (W. Brown) ; North Western Division (G. Hoyle) ; North Eastern Division (C. W. Scott) ; Scottish Division (W. Widdas) ; East Midland Division (W. B. Brown) ; South Western Division (T. A. Jones) ; West Midland and Southern Division (J. E. Henshaw) ; Northumberland and Cumberland Division (H. Hyde), 637
Mines in Great Britain : Safety in (Prof. S. G. Ward), 637
Mines and Quarries, H.M. Inspectors of : Reports under the Mines and Quarries Act (1954) for 1957—Northumberland and Cumberland Division (H. Hyde) ; Scottish Division (W. Widdas) ; North Western Division (G. Hoyle) ; Durham Division (W. Brown) ; South Western Division (T. A. Jones) ; West Midland and Southern Division (J. E. Henshaw) ; North Eastern Division (C. W. Scott) ; East Midland Division (W. B. Brown), 638
Minima (Permeability), in Low-Pressure Gas Flow through Porous Media : Evidence for (Dr. D. M. Grove and M. G. Ford), 999
Minimum Intercellular Space Carbon Dioxide Concentration Γ in Wheat Leaves : Effects of Water-Strain on the (Prof. O. V. S. Heath and Dr. H. Meidner), 1524

Mining (Non-Ferrous), in Great Britain and Ireland : The Future of (Institution of Mining and Metallurgy Symposium on), 1136
Mining (Opencast), in Britain, 505
Mining and Metallurgy, Institution of : Sir Julius Wernher Memorial Lecture (Anton Gray), 1136
  Symposium on the Future of Non-Ferrous Mining in Great Britain and Ireland, 1136
Minnis, C. M. : Behaviour of the Present Sunspot Cycle, 1599
Minor Anthocyanin Pigment of Sweet Cherry (Dr. Kuang C. Li and Dr. A. C. Wagenknecht), 657
Minson, D. J., and others : Preservation of Grass for Winter-feeding by Radiation Sterilization, 331
Minutes : The Last, of Satellite 1957β (*Sputnik* 2), (D. G. King-Hele and Mrs. D. M. C. Walker), 426
Miocene Mammalia from the Napak Volcanics, Karamoja, Uganda (Dr. W. W. Bishop), 1480
Mirabito, Comdr. J. : Antarctic Research (Meteorology), 287
Mirkin, Dr. Bernard L. : Catechol Amine Depletion in the Rat's Denervated Adrenal Gland following Chronic Administration of Reserpine, 113
Mirounga leonina (L.) : Ecology of the Louse *Lepidophthirus macrorhini* Enderlein 1904 on the Elephant Seal (M. D. Murray), 404
Missile (British 'Black Knight' Ballistic), fired from Woomera, 698
Mist : Dust, Smoke and, *review* by R. L. Brown, 682
Mists (Water) : Stabilization of (H. S. Eisner, F. R. Brookes and B. W. Quince), 1724
Mitchell, Dr. A. D. : Quantitative Organic Analysis, *review*, 1187
  The Chemistry of Borates, *review*, 1588
Mitchell, M. E. : Awarded an Overseas Scholarship by the Royal Commission for the Exhibition of 1851, for research in ecological botany, 156
Mitchell, Margaret H. : Observations on Birds of Southeastern Brazil, *review*, 215
Mitchell, Dr. Peter, and Moyle, Dr. Jennifer : Group-Translocation—a Consequence of Enzyme-catalysed Group-Transfer, 372
Mitchell, Richard S. : Cadmium Bromide—Growth Spirals and Possible Polytypism, 337
Mitchison, Dr. N. A. (Hašková, Dr. V., and) : Migration of Spleen Cells from Subcutaneous Implantation Sites, 410
Mite *Dermanyssus gallinae* : Some Observations on the Life-Cycle of *Atoxoplasma*, with particular reference to the Parasite's Schizogony and its Transmission by the (Dr. R. Lainson), 1250
Mites : Spiders, Scorpions, Centipedes and—the Ecology and Natural History of Woodlice, 'Myriapods' and Arachnids (Dr. J. L. Cloudsley-Thompson), *review* by Theodore Savory, 825
Mitochondria in the Supernatant Fraction of Rat-Liver Homogenates : An Anticlumping Factor for (Dr. J. St. L. Philpot and Dr. J. E. Stanier), 1167
Mitochondria (Active) : Isolation of, from Apples (Dr. J. M. Tager), 1521
Mitochondria (Brain Cortex) : Physical Reactivity of Liver and (Prof. J. Gayet), 941
Mitochondria (Rat-Liver) : Forms of Pyridine Nucleotides in (Dr. J. L. Purvis), 711
Mitochondrial Membrane Permeability : Effect of Hydrocortisone on (Dr. C. H. Gallagher), 1315
Mitochondrial Phospholipids : *In vitro* Incorporation of Serine labelled with Carbon-14 into (Dr. G. Hübscher, Dr. R. R. Dils and Dr. W. F. R. Pover), 1806
Mitochondrial Swelling : Dependence of, on Oxidizable Substrates (J. B. Chappell and G. D. Greville), 813
Mitosis in Yeasts : Kinetics of (Dr. M. S. Swaminathan and A. T. Ganesan), 610
Mitotic Division : Distribution of Newly Synthesized Deoxyribonucleic Acid in (Prof. W. Plaut), 399 ; (Prof. Henri Firket), 399
Mitotic Poisons and the Cancer Problem (Dr. John J. Biesele), *review* by Dr. C. Auerbach, 750
Mitra, Dr. G. B. : Evidence of Lattice Defects preceding Oriented Transformations during the Heat Treatment of Kaolinite, 1794
Mitra, G. N. (Sen, Prof. P. K., and) : Inheritance of Photoperiodic Reaction in Rice, 119
Mitteleuropas : Die Geradflügler (Kurt Harz), *review* by Dr. David R. Ragge, 141
Mixed Bacterial Populations : Counting of Sulphate-reducing Bacteria in (Prof. Y. Abd-El-Malek and S. G. Rizk), 538
Mixtures of Glucosamine and Galactosamine with Bakers' Yeast : Analysis of (Dr. Burton M. Pogell and Dr. Donald F. Koenig), 127
Mixtures of Œstrogens in Urinary Extracts : Separation of, using Gradient Elution Chromatography (Dr. Stanley Kushinsky, James A. Demetriou, Wilmonte Nasutavicus and Jane Wu), 874
Mixtures (Clay Mineral–Soil) : Invertase Activity in (István Kiss), 203
Miyabe, Dr. K. : On the Laminariaceae of Hokkaido (now available in an English translation), 228
Mizgalski, Witold (Smoczkiewiczowa, Aleksandra, and) : Separation and Determination of Millimicrogram Amounts of Cobalt and Microgram Amounts of Copper in Biological Material, 53
Mo-Zso, Prof. Kuo : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Mobility : Academic and Professional, 413, *erratum*, 1133
Mode of Action of 5:6-Dimethylbenzimidazole and certain Keto-Acids as Inhibitors of Haem Biosynthesis (Dr. E. G. Brown), 1091
Mode of Action of Interferon (Dr. Alick Isaacs and Dr. Derek V. Burke), 1073
Mode of Growth of Ice Crystals in Air and other Gases (K. Isono), 1221
Mode of Intercellular Transfer of Herpes Virus (Dr. M. G. P. Stoker), 1525
Mode Conversion of an Ultrasonic Beam in Fused Quartz : Visualization of (V. J. Hammond and R. Carter), 790
Model (A Template), for the Synthesis of Ribonucleic Acid from Deoxyribonucleic Acid (Dr. Geoffrey Zubay), 1290
Modern Analytical Chemistry in the Service of Pharmacy and Medicine (Dr. G. E. Foster), 995
Modern Approach to Organic Chemistry (Prof. J. Packer and J. Vaughan), *review* by Dr. W. A. Waters, 1114
Modern Cytology, *review* by Prof. J. Brontë Gatenby, 1114
Modern Educational Treatment of Deafness : International Congress on the, 89
Modern Educational Treatment of Deafness : International Congress on the (Prof. A. W. G. Ewing), 919
Modern Microscopy, *review* by Prof. R. D. Preston, 1113
Modern Physics for School Science Teachers : Selected Lectures in (edited by Prof. H. Messel), *review* by G. R. Noakes, 623
Modern Problems in Friction and Lubrication (British Association for the Advancement of Science, Sections A (Mathematics and Physics) and G (Engineering), Joint Discussion on), 980
Modern Schools : Secondary (Prof. H. C. Dent), *review* by H. Raymond King, 1585
Modern Science : Some Implications of (Sir Henry Self), 1349
  Theories of the Universe from Babylonian Myth to (edited by Milton K. Munitz), *review* by Dr. A. R. Hall, 277
Modern Science and Civilization (Rt. Hon. R. G. Menzies), 1557
Modern Scientific Themes : Some (Sir Cyril Hinshelwood), 1634
Modern Society : The Individual and the Organization in (Institute of Personnel Management Conference on), 700, 918
Mohanty, S. R. (Maddock, Dr. A. G., and) : Thermal Annealing of Chemical Radiation Damage, 1797
Moisture Content : Effect of Fumigation and, on the Seedling Growth of Cowpea (*Vigna unguiculata*), (G. H. Caswell and Dr. H. T. Clifford), 540
Moisture Expansion of Ceramic Bodies : A New Approach to the Investigation of the Cause of (Thaisa Demediuk and W. F. Cole), 1223
Moisture Expansion (Permanent), of Clay Products on Autoclaving (Dr. J. S. Hosking and Dr. H. V. Hueber), 1142
Molawka, E., and others : Experimental Chemotherapy of Tumours with Hydrogen Peroxide, 395
Mole, R. H., and others : Accumulation of Strontium-90 in Dental Tissues, 1294
Mole-Rat, *Cryptomys hottentotus* Lesson, 1826 (Common or Hottentot) : Albinism in the (Peter St. J. Turnbull-Kemp), 63
Molecular Biology in the University of Oregon, 1708
Molecular Changes in Exchange Labelling with Tritium (P. H. Jellinck and D. G. Smyth), 46
Molecular Event : The Fundamental, in Muscular Contraction (Dr. F. G. E. Pautard), 788
Molecular Hydrogen : Anomalous Dissociation of, by Electron Impact (L. A. Edelstein), 932
Molecular Orbitals and Vibrational Potential Function of Nitryl Fluoride (Louis Burnelle and Prof. Jules Duchesne), 653
Molecular Oxygen : Uptake of, by Ferrous Complexes (J. F. Drake and Dr. R. J. P. Williams), 1084
Molecular Sieves in Gas Chromatography : Use of, for the Determination of the Normal Paraffins in Petroleum Fractions (B. T. Whitham), 391
Molecular Structure of *cyclo*-Octatetraene (I. J. Lawrenson and Dr. F. A. Rushworth), 391
Molecular Weight (Antibody) : Relationship of Serological Activity to (Harry S. Goodman), 1100
Molecule (Halogen-) Bridges in Solid Addition Compounds (Prof. O. Hassel and Knut O. Strømme), 1155
Molecule (Protein) : Architecture of a (Dr. J. C. Kendrew), 764
Molecules in the Solar System (A. McKellar), 564
Molecules (Adsorbed) : Diffusion of (Dr. J. D. Babbitt), 201 ; (Dr. P. C. Carman), 201
Moles, F. D. : Science in the Use of Coal (Reactivity of Cokes and Chars), 26
Møller, Chr. Kn. : Crystal Structure and Photoconductivity of Caesium Plumbohalides, 1436
Molluscan Development, *review* by Prof. C. M. Yonge, 484
Molluscs : Aspects of the Evolution of Form and Function in (British Association for the Advancement of Science, Section D (Zoology), Discussion on), 996
Molten Chloride Baths : Ductility of Chromium deposited from (Dr. R. S. Dean and F. X. McCawley), 746
Molybdenum Content of Equine Liver Tissue (P. A. Moore), 1175
Molybdenum Oxide (Colloidal), as Catalyst : Photosynthesis of Amino-Acids from Paraformaldehyde involving the Fixation of Nitrogen in the Presence of (K. Bahadur, S. Ranganayaki and Prof. L. Santamaria), 1668
Moment : Rural Problems of the (Council for the Preservation of Rural England National Conference on), 565
Mond Nickel Co., Ltd. : Transformation Characteristics of Direct Hardening Nickel Alloy Steels, 1643
Mond Nickel Fellowships (Awards for 1958), 1415
Mond Nickel Fellowships for 1959, 1416
Monitoring Sound Signals : A Description of an Optical Instrument for (E. R. Wigan), (Analysis and Measurement of Programme Levels, Part 2), 1490
Monkey Kidney Cells previously grown *in vitro* : Tubule Formation in Rat Brains by (Prof. M. Michael Sigel, Thomas M. Scotti, Martha A. Wryk and Mantley Dorsey, jun.), 1034
Monkeys (Rhesus) : An Outbreak of Subcutaneous Tumours in (Dr. W. G. C. Bearcroft and Dr. Margaret F. Jamieson), 195
Mono-, Di and Tri-bromoacetates (Cupric) : Structure of (Ryutaro Tsuchida and Shoichiro Yamada), 1230
Monoblepharis : Isolation and Pure Culture of (Dr. Elizabeth Perrott), 1322
Monochlamydius : Transformation of a, into a Dichlamydius Chimaera by X-Ray Treatment (Dr. H. W. Howard), 1620
Monoiodoacetic Acid and Iodoacetamide in Rats : Hypoglycaemic Effect of (Gösta T. Hultquist), 318
Monosulphate (Flavin), and Flavin Adenine Dinucleotide : Effects of, on the Electroencephalogram (Tsuneo Muramatsu, Moriaki Ando, Toshiharu Nagatsu and Kunio Yagi), 457
Monovalent Cations : Effect of, on Type Specificity Transformation in Pneumococci (M. Kohoutová), 188
Monroe, Dr. Clarence W., and others : Conditions which eliminate Inflammation to Homografts in Rabbits, 1452
Montagu, Prof. M. F. Ashley : The Reproductive Development of the Female with special reference to the Period of Adolescent Sterility, *review* by Dr. Kenneth Walker, 1573
Montegut, Prof. J. : Ecology of Soil Fungi, 1559
Montgomery, Dr. H. : Measurements of Conduction at Low Temperatures (Superconductors), 84
Montgomery, H. B. S. : Effect of Storage Conditions on the Incidence of *Gloeosprium* Rots of Apple Fruits, 737
Montmorillonite and Vermiculite : Aluminium Interlayers in Soil Clay Minerals, (B. L. Sawhney), 1595
Montserrat, Dr. Pedro : Root Nodules of *Coriaria*, 475

Moon : Comparison of Measured and Computed Values of the Rapid Fading-Rate of Ultra High-Frequency Signals reflected from the (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
Moon Rocket Tracking, 1413
Moore, A. (Martin, A. J., and) : Study of Metals and Alloys above 1,200°C. (Crystal Structure—Structure of Beryllium at Temperatures between -185°C. and 1,290°C.), 1419
Moore, D. (Lowe, A. E., and) : Scintillation Counter for Measuring Radioactivity of Vapours, 133
Moore, E. W. J. : Awarded a R. H. Worth Prize of the Geological Society of London, 1348
Moore, Dr. Harold : Elected an honorary member of the Iron and Steel Institute, 1063
Moore, N. W., and Rowson, L. E. A. : Freemartins in Sheep, 1754
Moore, P. A. : Molybdenum Content of Equine Liver Tissue, 1175
Moral Implications of Atomic Energy, 156
Moral and Political History of the Atomic Scientists : Brighter than a Thousand Suns—the (Dr. Robert Jungk), translated into English by James Cleugh, *review* by Sir John Cockcroft, 547
Morawetz, Dr. H. : Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy, 763
Mordike, B. L., and Fitzgerald, L. M. : Study of Metals and Alloys above 1,200°C. (Measurement of Mechanical Properties), 1419
Mordovsky, V. T. : Ancient Vertex of Asia, 563
Moreau, Dr. R. : Ecology of Soil Fungi, 1559
Moreton, B. D. : Collecting, Preserving and Studying Insects, *review*, 420
Morgan, E. J. H. (Bennett, Dr. J. E., and) : Effect of Oxygen on the Electron Spin Resonance Spectrum of α,α^1-Diphenyl-β-picrylhydrazyl, 199
Morgan, Dr. K. J. : Appointed lecturer in chemistry at the University of Birmingham, 158
Morgan, Prof. M. G. : Correlation of Whistlers and Lightning Flashes by Direct Aural and Visual Observation, 332
Morgan, Prof. W. T. J. (Pusztai, A., and) : Degradation of Blood Group-Specific Mucopolysaccharides by Ficin and Papain, 648
Mori, Kenji (Nakamura, Michinori, and) : Colorimetric Determination of Inorganic Phosphorus in the Presence of Glucose-1-phosphate and Adenosine Triphosphate, 1441
Morley College, *review* by Prof. W. H. G. Armytage, 1585
Morosova, Dr. : Modern Educational Treatment of Deafness, 921
Morphine-like Drugs : Lenticular Effect in Mice of some (Marta Weinstock, Dr. H. C. Stewart and K. R. Butterworth), 1519
Morphinized–Eserinized Leech Muscle for the Assay of Acetylcholine (Prof. Maurice F. Murnaghan), 317
Morphogenesis, the Analysis of Molluscan Development (Prof. Chr. P. Raven), *review* by Prof. C. M. Yonge, 484
Morphology : Submicroscopic, *review* by Prof. W. T. Astbury, 213
Morrill, President J. L. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (The Establishment of New Universities), 1284
Morris, Sir Charles : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy ?), 1284
Morris, Dr. D. : Appointed curator of mammals at the Zoological Society of London, 1345 ; work of, 1345
Morris, Dr. D. F. C., and Schmeising, H. N. : The Electron Affinity of Atomic Oxygen, 249
Morris, M. G. : Awarded the first V. H. Blackman Postgraduate Research Studentship, 1063
Morris, Pamela M. (compiled by Buscombe, William, and) : Southern Stars of High Velocity, 923
Morris, P. P. (Lammiman, K. A., and) : Accurate Measurement of the Viscosity of Liquids (Precise Measurement of Kinematic Viscosity in the Petroleum Industry), 438
Morris, Dr. R. : Salt and Water Balance in Animals (Changes in the Respiratory Epithelium of the River Lamprey), 1207
Morris, T. R., and Fox, S. : Artificial Light and Sexual Maturity in the Fowl, 1522
Morris, T. R. (Fox, S., and) : Flash Lighting for Egg Production, 1752
Morrison, J. C. : Awarded a Mond Nickel Fellowship for 1958, 1415
Morrison, T. M., and Harris, Dr. G. P. : Root Nodules in *Discaria toumatou* Raoul Choix, 1746
Morrison, T. M. (Harris, Dr. G. P., and) : Fixation of Nitrogen-15 by Excised Nodules of *Coriaria arborea* Lindsay, 1812
Morse, Richard : Our Native Mammals, *review*, 825
Morse Potential : An Antibonding (Robert W. Keyes), 1071
Mortality of X-Irradiated Mice : Effect of Thyroid Pre-treatment on the (Dr. L. Novák and Dr. M. Pospíšil), 1603
Morton, Prof. R. A. : Ubiquinone, 1764
Morton, Prof. R. A., and Cama, H. R. : *Obituary* of Prof. K. V. Giri, 1201
Morton, Prof. R. A., and Fahmy, N. I. : Indole-3-aldehyde from Tissues, 939
Mosaic Structure of Photographic Emulsion Crystals (J. F. C. Boardman, Dr. R. H. Herz and G. C. Terry), 1726
Mosaic Virus (Cucumber) : Purification and Serology of (Dr. J. A. Tomlinson, Dr. R. J. Shepherd and Prof. J. C. Walker), 1616
Mosaic Virus (Tobacco) : Production of Mutants of, by Chemical Alteration of its Ribonucleic Acid *in vitro* (Dr. Alfred Gierer and Dr. Karl-Wolfgang Mundry), 1457
Mosaic Virus Nucleic Acid (Tobacco) : Action of Micrococcal Phosphodiesterase on (K. K. Reddi), 1308
Moscow : British Scientific Attaché in, 292, 768
Moser, C. A. : Survey Methods in Social Investigation, *review* by Prof. T. S. Simey, 1256
Moser, C. A., and others : A Survey of Social Conditions in England and Wales as illustrated by Statistics, third edition, *review* by Prof. E. Grebenik, 1330
Mosquito Populations : Relationship between certain Biological Constants and Trophic Condition in (Dr. Donald H. Colless), 951
Mosquitoes (Adult) : The Finer Structure of the Galeal Lamella in (G. Surtees), 812
Mosquitoes (*Mansonioides*) : Age Determination for Individual (Prof. D. S. Bertram and W. A. Samarawickrema), 444
Moss, A. R. : Study of Metals and Alloys above 1,200°C. (Thermal, Mechanical and Physical Factors affecting the Grain Structure of Arc-melted Molybdenum), 1418 ; (High-temperature Techniques—Basic Principles of Vacuum-Arc and Inert-Gas Arc-Melting Processes), 1418
Moss, Dr. T. S. : Promoted to Senior Principal Scientific Officer in the Scientific Civil Service, 992 ; work of, 992
Mosse, Dr. B. : Ecology of Soil Fungi, 1560
Mota, I. : Mast Cell and Histamine in Rat Anaphylaxis—the Effect of *Haemophilus pertussis*, 1021
Moths (British) : Alfred Vander Hedges collection of, presented to the British Museum (Natural History) by Mrs. Celia Hedges, 1553
Motility of the Sperm Flagellum (Dr. David W. Bishop), 1638
Motility (Amoeboid), of Fresh Ascites Tumour Cells (Dr. Iwao Hirono), 809
Motion of the Nodal Line of the Second Russian Earth Satellite (1957β) and Flattening of the Earth (Prof. E. Buchar), 198
Motion (Collective) : Problems of (Physical Society Conference on), 1554
Motion (Fluid), in Nature, *review* by Sir Graham Sutton, 1182
Mott, R. A. : Science in the Use of Coal (Carbonization of Coal), 25
Motz, Dr. H. (Eder, Dr. G., and) : Contribution of High-Energy Particles to Thermonuclear Reaction Rates, 1140
Motzel, Werner, and Cook, Dr. Elton S. : Antibiotic Substances from Yeast, 455
Mould (Slime) : Physarosterol, a New Sterol from a (Dr. C. F. Emanuel), 1234
Moulds : Cultural and Metabolic Aspects of (Society for Applied Bacteriology and the Istituto di Sanita Symposium on), 1279
Moulson, A. J., and Roberts, J. P. : Entry of Water into Silica Glass, 200
Mounsey, Dr. J. P. D. : The Arrhythmias, *review*, 1574
Mount, Dr. L. E. : Change in Oxygen Consumption of the New-Born Pig with a Fall in Environmental Temperature, 536
Mount Stromlo Observatory : Annual Report for 1957, 95
  Memoir No. 14, Southern Stars of High Velocity (compiled by William Buscombe and Pamela M. Morris), 923
Mount Wilson and Palomar Observatories : Retirement of Dr. Walter Baade from the staff of, 225
Mountains : Air Flow over—Notes for Forecasters and Pilots (G. A. Corby), 94
Mountford, D. D. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
Mountfort, Guy : The Hawfinch, *review* by Sir Landsborough Thomson, 419
  Portrait of a Wilderness—the Story of the Coto Doñana Expeditions, *review* by Dr. W. Rydzewski, 1044
Mouse : Secretion of Androgens by the Adrenal Cortex of the (Dr. Ruth Deanesly), 262
Mouse Carcinoma (Ehrlich) : Forssman's Antigen in (Prof. H. W. Julius and P. J. de Vries), 1165
Mouse Ehrlich Ascites Tumour : Effect of Nitrous Oxide on the Radiosensitivity of (Dr. Michael Ebert and Mrs. Shirley Hornsey), 1240
Mouse Haemoglobin : Different Heterogeneities of, according to Strains (J. Rosa, G. Schapira, J. C. Dreyfus, J. de Grouchy, G. Mathé and J. Bernard), 947
Mouse Liver : Biochemical Changes in Virus-infected and Regenerating (David S. Nelson and Prof. P. M. de Burgh), 1617
Mouse Polyoma Virus Infection : Observations on the Spread of (Dr. Wallace P. Rowe, Janet W. Hartley, Isadore Brodsky, Robert J. Heubner and Lloyd W. Law), 1617
Mouse Tissue (Normal and Lymphomatous) : Lysins and Agglutinins in (Dr. Eric Ponder and Ruth V. Ponder), 1737
Mouse Tumours (Transplanted Rat and) : Effect of Hydrogen Peroxide on (Dr. Kanematsu Sugiura), 1310
Mouth of the Amazon : Archaeological Investigations at the (Betty J. Meggers and Clifford Evans), *review* by Dr. G. H. S. Bushnell, 1044
Mouton, W. L. (Barnard, Dr. A. J., and) : Condensation produced by Ultra-Violet Light, 1001
Movement of Pebbles marked with the Radioactive Isotope Barium-140—Lanthanum-140 : Tracing the (C. Kidson, A. P. Carr and D. B. Smith), 1347
Movement produced by a Rotating Spiral : After-Effect of (Miss M. J. Pickersgill and M. A. Jeeves), 1820
Movement of Salmon on the River Erne (P. A. Jackson), 543
Movement (Ice) : Physics of (Commission for Snow and Ice of the International Association of Scientific Hydrology Symposium on), 1560
Movement (Inward), of Calcium as a Link between Electrical and Mechanica Events in Contraction (Prof. George B. Frank), 1800
Movements of Lugworms (Prof. G. P. Wells), 1107
Movements of Potassium in Rabbit Auricles (D. A. Persoff), 605
Movements (Eye), and the Stability of the Visual World (R. L. Gregory), 1214
Moving Acid Boundary (*p*H Gradient) Paper Ionophoresis of Bile Salts (Thomas Briggs, Dr. Michael W. Whitehouse and Dr. Ezra Staple), 394
Moving Media : Electrodynamics of, *review* by Prof. V. C. A. Ferraro, 1045
Moving Media and Electromagnetic Induction : Electromagnetism and Relativity with particular reference to (Prof. E. G. Cullwick), *review* by Prof. V. C. A. Ferraro, 1045
Moyer, A. W. (Kritchevsky, David, and) : Anticholesterol Activity of α-Lipoic Acid, 396
Moyle, Dr. Jennifer (Mitchell, Dr. Peter, and) : Group-Translocation—a Consequence of Enzyme-catalysed Group-Transfer, 372
Mrkos (1957*d*), (Comets Arend-Roland (1956*h*) and) : Polarization of light of the (M. Blaha, A. Hruška, Z. Svestka and V. Vanysek), 331
Mucopolysaccharides (Blood Group-Specific) : Degradation of, by Ficin and Papain (A. Pusztai and Prof. W. T. J. Morgan), 648
Muftic, Dr. M. : Human and Animal Ecology (Trials of Mycostatin (Nystatin) Derivatives used intravenously and intramuscularly for the Treatment of Coccidioidomycosis), 1649
Mukherjee, Dr. B., and Prasad, U. : X-Ray Study of Rare Phosphate Minerals, 472
Mulberry Leaves : Substances in, which attract Silkworm Larvae (*Bombyx mori*), (Tadao Watanabe), 325
Mülhbock, O. : Progress in Cancer Research (Hormones), 364
Muller, Alex F., and O'Connor, Cecilia M. (edited by) : An International Symposium on Aldosterone, *review* by Prof. D. C. Harrison, 902
Müller, H. (Hartmann, Prof. H., and) : Ions of the Transition Elements (Spectra of the Hexa- and Hepta- Hydrates of Nickel Sulphate compared with Calculations made on the Ni $(H_2O)_6^{2+}$ Ion), 1350
Müller, K. O. : Relationship between Phytoalexin Output and the Number of Infections Involved, 167

Müller-Stoll, Prof. W. R. : At the Third International Seaweed Symposium (Effects of Environment on the Development of *Fucus vesiculosus*), 1780
Mulligan, Dr. W. : Host—Parasite Relationships, 1353
Multiallelic Locus in a Population under Random Mating : Change in Mean Viability at a (S. P. H. Mandel and I. M. Hughes), 63
Multi-Component Transfer Systems : Localization of Interaction Sites in—Theorems derived from Analogues (Prof. Britton Chance, William Holmes and Joseph Higgins, and Dr. C. M. Connelly), 1190
Multiple-Beam Interferometry : Errors in the Measurement of Film Thickness by (C. Weaver and P. Benjamin), 1149
Multiple Time-Series : The Analysis of (M. H. Quenouille), *review* by Dr. N. L. Johnson, 1183
Multiplication : Use of Two Properties of the Virus of Foot-and-Mouth Disease in Studies of its (Sheila F. Cartwright and H. V. Thorne), 717
Multiplication of Foot-and-Mouth Disease Virus in Suspensions of Kidney Cells of the Pig : Effect of Temperature on the (Dr. H. Subak Sharpe), 1803
Multivariate Analysis, *review* by Dr. N. L. Johnson, 1183
  Some Aspects of (Prof. S. N. Roy), *review* by Dr. N. L. Johnson, 1183
Multivariate Statistical Analysis : An Introduction to (Prof. T. W. Anderson), *review* by Dr. N. L. Johnson, 1183
Mundry, Dr. Karl-Wolfgang (Gierer, Dr. Alfred, and) : Production of Mutants of Tobacco Mosaic Virus by Chemical Alteration of its Ribonucleic Acid *in vitro*, 1457
Munitz, Milton K. (edited by) : Theories of the Universe from Babylonian Myth to Modern Science, *review* by Dr. A. R. Hall, 277
Munk, Prof. Walter, and Haubrich, Richard : The Annual Pole Tide, 42
Münnich, Dr. K. O., and others : Carbon-14 Activity during the Past 5,000 Years, 1432
Munro, Dr. A. F. : Appointed senior lecturer in veterinary physiology at the University of Glasgow, 1644
Munro, Dr. A. F. (Robinson, Dr. R., and) : Adrenal Activity in Subjects with Complete Transverse Lesions of the Spinal Cord, 805
Munro, Dr. D. C. : Appointed lecturer in the Department of Inorganic and Structural Chemistry, University of Leeds, 22
Murai, Takayoshi, and others : Plateau Formation and Sulphydryl Groups in the Plasma Membrane, 1675
Murakami, Dr. M. : Awarded a Ciba Foundation Award for 1958 for Research in Ageing, 19
Muramatsu, Tsuneo, and others : Effects of Flavin Monosulphate and Flavin Adenine Dinucleotide on the Electroencephalogram, 457
Murfet, I. C., and others : Gibberellic Acid and the Physiological Genetics of Flowering in Peas, 1321
Murgatroyd, Prof. W. : Nuclear Engineering, *review*, 350
  Nuclear Chemical Engineering, *review*, 489
Murnaghan, Prof. Maurice F. : The Morphinized–Eserinized Leech Muscle for the Assay of Acetylcholine, 317
Murphy, Dr. P. W. : Research Methods in Soil Zoology (Extraction Methods), 704
Murphy, Q. R. (edited by) : Metabolic Aspects of Transport across Cell Membranes, *review*, 1575
Murphy, Dr. : Modern Educational Treatment of Deafness, 920
Murray, D. B. : Response of Cacao to Fertilizers, 1613
Murray, Prof. E. G. D., and others : Bergey's Manual of Determinative Bacteriology, seventh edition, *review* by Dr. S. T. Cowan, 553
Murray, J. R., and Williamson, G. K. : Study of Metals and Alloys above 1,200°C. (High-temperature Techniques—Application of Arc-Melting and other Melting Techniques in Alloy Investigations at Temperatures above 1,200°C.), 1418
Murray, Sir Keith : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy ?), 1284
Murray, M. D. : Ecology of the Louse *Lepidophthirus macrorhini* Enderlein 1904 on the Elephant Seal *Mirounga leonina* (L.), 404
Murray, Dr. P. (Finniston, Dr. H. M., and) : Some Recent Trends in Metallurgy (The Newer Metals in Industry), 1124
Murray, Dr. P. (Livey, D. T., and) : Effect of Heat Treatment on the Sintering of 'Active' Ceramic Oxide Powders, 1362
Murrell, K. F. H., and Grew, S. : Age Structure in the Engineering Industry, 430
Musca domestica L. in Sweden : Resistance to Pyrethrins and to Pyrethrins–Piperonyl Butoxide in a Wild Strain of (Dr. M. Davies, Dr. J. Keiding and Dr. C. G. von Hofsten), 1816
Muscle: Dependence of Latent Period in, on Strength of Stimulus (M. C. Goodall), 1736
Muscle (Anterior Retractor), of the Byssus of *Mytilus edulis* : Responses of the (J. A. Holgate and Dr. G. W. Cambridge), 34 ; (Dr. G. W. Cambridge), 35
Muscle (Leech) : The Morphinized–Eserinized, for the Assay of Acetylcholine (Prof. Maurice F. Murnaghan), 317
Muscle (Pig) : Abnormally Low Ultimate *p*H in (R. A. Lawrie, D. P. Gatherum and H. P. Hale), 807
Muscle (Skeletal) : Striations of (Irvine J. Hunter), 1107
Muscle (Smooth) : An Indirect Action of Angiotensin I on (P. A. Robertson and Dana Rubin), 867
Muscle Protein (Skeletal) : Development of (Dr. Yoshito Ogawa), 1311
Muscles : Nerves and, *review* by Dr. J. W. S. Pringle, 416
  New Ideas about, *review* by Prof. J. D. Bernal, 345
Muscles (Denervated), of the Cockroach *Periplaneta americana* : Spontaneous Electrical Activity in the (Dr. R. Beránek and Dr. I. Novotny), 957
Muscular 'Allomorphism' : Adaptive (Einar Helander), 1035
Muscular Contraction : Carnosine Phosphate as Phosphate Donor in (D. F. Cain, Dr. A. M. Delluva and Prof. R. E. Davies), 720
  Comparative Physiology of the Nervous Control of (Dr. Graham Hoyle), *review* by Dr. J. W. S. Pringle, 416
  The Fundamental Molecular Event in (Dr. F. G. E. Pautard), 788
  Kinetics of, in Heavy Water (M. C. Goodall), 677
Museum of Applied Science of Victoria : Annual Report for 1956-57, 562
Museum Architecture (Museums Association Discussion on), 503
Museum (Australian), Sydney : Handbook to the, 633
  Report of the Trustees (1956-57), 633
Museum (National), Bloemfontein : Annual Report (1957-58), 1775
Museum (National), of Canada : Bulletin No. 146 (Biological Series No. 50), Illustrated Flora of the Canadian Arctic Archipelago (A. E. Porsild), 294
  Report for 1955-56, 1486
Museum (National), of Wales : Illustrated Guide, new edition, 1278
Museum Objects, International Institute for the Conservation of : Grant from the Gulbenkian Foundation, Lisbon, of up to £6,000 over three years, 1493
  Work of the, 1709
Museum and Art Gallery Service : Memorandum on the, with special reference to the National Gallery and the Hampton Site Question (Bow Group), 681
Museums in the Commonwealth and Overseas with special reference to the Training of Curators (Museums Association Discussion on), 503
Museums (National), Ceylon : Annual Reports for 1956 and 1957, 562
Museums and Art Galleries as Cultural Centres, 681
Museums Association : Sixty-fourth Annual Conference, 502
  Discussion on Museums in the Commonwealth and Overseas with special reference to the Training of Curators, 503
  Discussion on Museum Architecture, 503
Museums Association, South African : A List of Zoological and Botanical Types preserved in Collections in Southern and East Africa, Vol. 1, Zoology, Part 1, 431
Mutagenesis (Artificial), in Plant Breeding (D. Roy Davies and E. T. Wall), 955
Mutant (Carotenoid-deficient), of *Chlamydomonas* : Pigments and Photosynthesis in a (Dr. Ruth Sagar and Dr. Marko Zalokar), 98
Mutant (Ultra-Violet-induced), of *Aspergillus terreus* : Itaconicoxidase, an Enzyme from an (Dr. Ján Arpai), 661
Mutant Form (A White-eyed), of the American Cockroach, *Periplaneta americana* (L.), (G. T. Jefferson), 892
Mutants of Tobacco Mosaic Virus : Production of, by Chemical Alteration of its Ribonucleic Acid *in vitro* (Dr. Alfred Gierer and Dr. Karl-Wolfgang Mundry), 1457
Mutants (Biochemical), in Bacteria with Impaired Respiration (Prof. G. F. Gause), 97
Mutation : Gene Control of Specificity and Activity—Loss by, and Restoration by Complementation (Prof. D. Lewis), 1620
Mutation (Forward-) Rates in *Neurospora crassa* : A Direct Method for Determination of (F. J. de Serres and H. G. Kølmark), 1249
Mutations in L-Forms (Zb. Lorkiewicz and Irena Zelazna), 1619
Mutations (Proflavin-induced), in the Genetic Fine Structure : Distribution of (Dr. S. Brenner, Prof. S. Benzer and Mrs. L. Barnett), 983
Mutations and Unstable Genes in *Escherichia coli* : Heat as an Agent producing High Frequency of (Prof. Stephen Zamenhof and Dr. Sheldon Greer), 611
Mutton-Bird, *Puffinus tenuirostris* : The Tasmanian (D. L. Serventy), 1070
Mutual Assistance between Commonwealth Countries, 1693
Mutual Defence Purposes : Agreement between the Government of the United Kingdom of Great Britain and Northern Ireland and the Government of the United States of America for Co-operation on the Uses of Atomic Energy for (Washington, 1958), 635
Myant, N. B. (Osorio, Carlos, and) : Thyroxine-binding Protein in the Serum of Rabbit Foetuses, 866
Myasthenic-like Features of Neuromuscular Transmission after Administration of an Inhibitor of Aceylcholine Synthesis (Dr. J. E. Desmedt), 1673
Mycenae Tablets II (edited by Emmett J. Bennett, Jr.), translations and commentary by John Chadwick (Transactions of the American Philosophical Society, New Series, Vol. 48, Part 1), 153
Mycobacterium tuberculosis var, *bovis* : Importance of Zinc for the Growth of Surface-Culture of, and Large-scale Production of Tuberculin Purified Protein Derivative (T. Dekker and H. Huitema), 1387
Mycological Society, British (Société Mycologique de France and the) : Joint Foray at Reading, 158
Mycoplasma mycoides : A Galactan from (P. Plackett and S. H. Buttery), 1236
Myelinated Nerve Fibres : Some Structural Characteristics of (Dr. C. P. Wendell-Smith and Dr. P. L. Williams), 1608
Myers, A. : Measurements of Conduction at Low Temperatures (Superconductors), 84
Myers, jun., Lawrence S., and others : Effect of Gamma-Radiation on Ferriprotoporphyrin, 316
Myers, jun., Lawrence S. (Rothschild, Dr. Mary-Louise, and) : The Spontaneous Change of Ferriprotoporphyrin in Alkaline Solution, 1671
Myerscough, P. J. : Awarded a research studentship in botany by the Nature Conservancy, 771
'Myriapods' and Arachnids : Spiders, Scorpions, Centipedes and Mites—the Ecology and Natural History of Woodlice, (Dr. J. L. Cloudsley-Thompson), *review* by Theodore Savory, 825
Mysticism : Intellectual, *review* by the Very Rev. W. R. Matthews, 681
Myth (Babylonian), to Modern Science : Theories of the Universe from (edited by Milton K. Munitz), *review* by Dr. A. R. Hall, 277
Mythical Thought (The Philosophy of Symbolic Forms, by Ernst Cassirer, Vol. 2), translated by Ralph Manheim, *review* by F. I. G. Rawlins, 1586
Mytilus edulis : Responses of the Anterior Retractor Muscle of the Byssus of (J. A. Holgate and Dr. G. W. Cambridge), 34 ; (Dr. G. W. Cambridge), 35

NABARRO, Prof. F. R. N. : *Obituary* of Prof. H. J. Logie, 1772
Nadeau, Dr. Guy, and Joly, Louis-P. : Fluorescent Derivatives obtained by the Reaction of Ethylene Diamine with Epinephrine and Norepinephrine, 180
Nadzhakov, Prof. G. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Naets, Dr. J. P. : The Kidney and Erythropoiesis, 1516
Nagai, Hideko, and others : Induction of Respiratory Deficiency in Yeast by Manganese, Copper, Cobalt and Nickel, 446
Nagai, Susumu, and others : Induction of Respiratory Deficiency in Yeast by Manganese, Copper, Cobalt and Nickel, 446
Nagashima, Akira, and others : Effect of γ-Aminobutyryl-Choline upon the Electrical Activity of the Cerebral Cortex, 1443

Nagatsu, Toshiharu, and others : Effects of Flavin Monosulphate and Flavin Adenine Dinucleotide on the Electroencephalogram, 457
Nagelschmidt, Dr. J. G. : Promoted to Deputy Chief Scientific Officer in the Scientific Civil Service, 991 ; work of, 991
Nair, Dr. N. Balakrishnan, and Leivestad, H. : Effect of Low Temperature on the Vertical Distribution of Two Wood-boring Crustaceans, 814
Naismith, D. J. (Miller, D. S., and) : A Correlation between Sulphur Content and Net Dietary-Protein Value, 1786
Nakai, Masashi, and others : Preparation of Crystalline *Pseudomonas* Cytochrome$_{551}$ from *Pseudomonas aeruginosa*, 1307
Nakamura, M., and Mori, Kenji : Colorimetric Determination of Inorganic Phosphorus in the Presence of Glucose-1-phosphate and Adenosine Triphosphate, 1441
Nakamura, M., and others : Preparation of Kojibiose, 1303
Nakamura, Prof. S., and Ueta, T. : 'Crossing' Paper Electrophoresis for the Detection of Immune Reactions, 875 ; *erratum*, 1063
Nakaya, Prof. U. : Physics of Ice Movement (Tests on Single Crystals of Ice from an Alaskan Glacier), 1560 ; (Mechanical Tests on Ice), 1561
Nakič, Dr. B., and Silobrčić, V.: Tolerance of Skin Homografts related to Fatal Disease in Separated Rat Parabionts, 264
Nalbandov, Prof. A. V. : Comparative Endocrinology (Neuro-endocrine Reflex and Co-ordinating Mechanisms), 775
  Reproductive Physiology, *review* by Dr. Kenneth Walker, 1573
Nam, B. (Farthing, A. C., and) : Steric Effects in Conjugated Systems (A Four-parameter, modified Hammett Equation for *ortho*-Substituted Systems), 569
Napak Volcanics, Karamoja, Uganda : Miocene Mammalia from the (Dr. W. W. Bishop), 1480
Naphthalene Compounds : The Chemistry and Technology of (Norman Donaldson), *review* by Dr. G. Baddeley, 751
Narahashi, T. (Yamasaki, T., and) : Synaptic Transmission in the Cockroach, 1805
  Effects of Potassium and Sodium Ions on the Resting and Action Potentials of the Giant Axon of the Cockroach, 1805
Nardus stricta L. : Silicification of Branched Cells in the Leaves of (D. Wynn Parry and Frank Smithson), 1460
Nasal (Supra-Orbital) Gland of the Duck : Histochemical Study of the (Dr. R. J. Scothorne), 732
Nash, K. L. : Alexandre Collin, a Pioneer in Soil Mechanics, *review*, 552
Nash, Leonard K. (edited by Conant, James Bryant, and) : Harvard Case Histories in Experimental Science, 2 vols., *review* by J. A. Ratcliffe, 348
Nash, T. : Origin of Time-dependent Organization in a Micelle Series, 1536
Nash Collection of Historic Aircraft : To be repaired and maintained by members of the Royal Aeronautical Society and the Society of Licensed Aircraft Engineers, 1131
Nasr, T., and Wareing, Dr. P. F. : Photoperiodic Induction of Flowering in Black-Currant, 269
Nasutavicus, Wilmonte, and others: Separation of Mixtures of Œstrogens in Urinary Extracts using Gradient Elution Chromatography, 874
Natarajan, S., and others : Agar Electrophoretic Patterns of Red Blood Cell Proteins, 184
Nathan, Helene A., and others : Fluorescent Pigment of *Microsporum*, 475
National Academy of Sciences, India : Symposium on the Chemistry of Co-ordination Compounds, 1279
National Academy of Sciences, United States : Formation of a Space Science Board, 497
National Academy of Sciences, United States (National Research Council) : Seminar on the Atomic Mechanisms of Fracture, 1348
National Advisory Council on the Training and Supply of Teachers and the Minister of Education : The Supply of Teachers in the 1960's—Correspondence between the Chairman of the (July, 1958), 1039
National Agronomy Station, Portugal : Grant of £4,170 from the Gulbenkian Foundation, Lisbon, for books for the Library, 1493
National Astronomical Observatory (United States) : Allocation of 4,000,000 dollars by the National Science Foundation to the Association of Universities for Research in Astronomy, Inc., for the construction of a solar telescope for the, 1552
National Chemical Laboratory : New name of the Chemical Research Laboratory, Teddington, 156
  Open Days, 295, 1778
  Steering Committee, 429
National Coal Board : Gift of £1,100 to the Department of Physical and Inorganic Chemistry, University of Bristol, for a continuation of the study of reactivity of carbon surfaces with oxygen, 1487
National College for Heating, Ventilation, Refrigeration and Fan Engineering : Resignation of N. S. Billington as head of the, 700
  Appointment of Dr. David R. Scott as head of the, 700
National Conference on Rural Problems of the Moment (Council for the Preservation of Rural England), 565
National Council for Technological Awards: To create a higher award, 1345
National Forest Park Guides : The Border (edited by Prof. John Walton), 1131
National Formulary : British, 1957, *review* by Dr. David Train, 279 ; Alternative edition based on a Pharmacological Classification, *review* by Dr. David Train, 279
National Gallery and the Hampton Site Question : Memorandum on the Museum and Art Gallery Service, with special reference to the (Bow Group), 681
National Institute of Agricultural Botany : Conference on Herbage Seed Production, 501
  Thirty-eighth Report (1957), 1717
National Institute of Industrial Psychology : Courses and Seminars, 918
National Institute for Research in Dairying : Annual Report for 1957, 989
National Institutes of Health, Bethesda (United States Public Health Services) : Travelling Fellowships in Medical Science (Medical Research Council Awards), 634
  Grant of 45,000 dollars for one year (renewable at the rate of 27,000 dollars for each of the four successive years), for the expansion of research on human genetics in the Department of Genetics in the University of Glasgow, under Prof. G. Pontecorvo, 1644
National Libraries of the World (Dr. Arundell Esdaile), second edition, *review* by R. Brightman, 758
National Metallurgical Research Laboratory, Jamshedpur : Publication of the papers contributed to the Symposium on Production, Properties and Application of Alloy and Special Steels, 1777
National Museum, Bloemfontein : Annual Report (1957-58), 1775
National Museum of Canada : Bulletin No. 146 (Biological Series No. 50), Illustrated Flora of the Canadian Arctic Archipelago (A. E. Porsild), 294
  Report for 1955-56, 1486
National Museum, United States : Appointment of Dr. A. C. Smith as director of the Museum of Natural History, 916
  Bulletin 214, Review of the Parrotfishes, Family Scaridae (L. P. Schultz), 1415
National Museum of Wales : Illustrated Guide, new edition, 1278
National Museums, Ceylon : Annual Reports for 1956 and 1957, 562
National Parks of the Union of South Africa (Board of Trustees of the) : *Koedoe*, No. 1, 227
National Parks Commission : Appointment of Prof. H. C. Darby as a member, 700
National Physical Laboratory : Open Days (A. J. Garratt), 10
  Appointment of Dr. J. A. Pople as superintendent of the newly created Basic Physics Division, 85
  Proceedings of a Symposium on the Direction of Research Establishments (1956), 275
  Symposium on the Mechanization of Thought Processes, 1416
  Report for the Year 1957, 1650
National Research Council of Canada : Award of Scholarships for 1958-59, 228
  Appointment of Dr. Joseph Auer as assistant director of the Division of Medical Research, 700
National Research Council, United States (National Academy of Sciences) : Seminar on the Atomic Mechanisms of Fracture, 1348
National Research Development Corporation, 1484
National Research Development Corporation of India : Third Annual Report (1956-57), 20
National Science Foundation (United States) : Appointment of Dr. R. M. Robertson as assistant director for mathematical, physical and engineering sciences, 292
  Atmospheric Sciences Programme, 360
  Grants for Science, 362
  Award of Science Faculty Fellowships for 1958-59, 501
  Award of Senior Postdoctoral Fellowships for 1958-59, 501
  List of Soviet Scientific and Technical Journals available in English Translation, 632
  Scientific Manpower 1957—Papers of the Sixth Conference on Scientific Manpower, 819
  Appointment of Dr. Henry S. Odbert as programme director for psychobiology, Division of Biological and Medical Sciences, 842
  Grant of 450,000 dollars to the University of Chicago, for high-energy nuclear particle research with balloons, 916
  Research for Teachers and Travelling Lectures, 1276
  Grants for Undergraduate Research, 1346
  Scientific Activities in Six State Governments, 1347
  Co-operative Graduate Fellowships, 1486
  Allocation of 4,000,000 dollars to the Association of Universities for Research in Astronomy, Inc., for the construction of a solar telescope for the National Astronomical Observatory, 1552
National Science Foundation, United States (Office of Scientific Information) : Report on Non-Conventional Technical Information Systems in Current Use, 562
National Society for Clean Air : Twenty-fifth Annual Conference, 771
National Standards Laboratory, Sydney : Appointment of N. A. Esserman as the first director, 291
  Retirement of Dr. G. H. Briggs as chief of the Division of Physics, 291
  Appointment of Dr. R. G. Giovanelli as chief of the Division of Physics, 292
  Annual Report for 1956-57 of the Division of Metrology, 1137
National Trust : Bradenham Manor leased to the British Tabulating Machine Co., Ltd., for use as a Hollerith Computer Training Centre, 563
  Sixty-third Annual Report, 1553
National Type Culture Collection of Marine Bacteria (Dr. J. M. Shewan, G. D. Floodgate and P. R. Hayes), 1423
National Union of Teachers (collected and edited by the) : Inside the Comprehensive School—a Symposium contributed by Heads of Comprehensive Schools in England and Wales, *review* by Robert W. Fenn, 1590
National University, Australian : Annual Report for 1957 of Mount Stromlo Observatory, 95
  The John Curtin School of Medical Research, 355
National Vegetable Research Station : Members' Day (J. A. Nelder), 435
  Annual Report for 1956-57, 1417
Native Mammals : Our, *review* by Richard Morse, 825
Natural Aerodynamics (Dr. R. S. Scorer), *review* by Sir Graham Sutton, 1182
Natural Beauty' (Outstanding) : New 'Area of, 917
Natural Crude Oil : An Overhauser Effect in (Dr. Edward Poindexter), 1087
Natural Gas in the Witwatersrand : Helium in (S. H. U. Bowie), 1082
Natural History of Inhaca Island, Mocambique (edited by Dr. William Macnae and Dr. Margaret Kalk), *review* by Dr. W. J. Rees, 1761
Natural History of the Otter (Marie N. Stephens), *review* by Richard Morse, 825
Natural History of Woodlice, 'Myriapods' and Arachnids : Spiders, Scorpions, Centipedes and Mites—the Ecology and (Dr. J. L. Cloudsley-Thompson) ,*review* by Theodore Savory, 825
Natural Relationships of the Nitrogen-fixing Bacteria (Dr. K. A. Bisset), 405
Natural Resources : Conservation of (Prof. W. H. Pearsall), 1405
Natural Resources, International Union for the Conservation of Nature and: Sixth General Assembly to be held jointly with the Seventh Technical Meeting of the Hellenic Society for the Protection of Nature, 89, 1405
Natural Science and Social Science (Sir Alexander Carr-Saunders), 561
Natural Selection : Evolution, by (Charles Darwin and Alfred Russel Wallace), *review* by Dr. G. S. Carter, 1112
Natural Selection and Heredity (P. M. Sheppard), *review* by Prof. H. Graham Cannon, 490
Natural Steroids : Effect of various, on the Phagocytic Activity of the Reticulo-Endothelial System (Dr. D. L. J. Bilbey and Prof. T. Nicol), 674
Naturalist : The B.B.C. (edited by Desmond Hawkins), *review* by R. W. Hayman, 8

Naturally Occurring Cation Exchange Material : Melanin, a (Dr. Laurens P. White), 1427
Nature : Boron-10 Abundance in (P. G. Bentley and A. N. Hamer), 1156
  Fluid Motion in, *review* by Sir Graham Sutton, 1182
Nature, Council for : Inaugural Meeting, 701
  Presidential Address (Lord Hurcombe), 701
Nature, Hellenic Society for the Protection of : Seventh Technical Meeting to be held jointly with the Sixth General Assembly of the International Union for the Conservation of Nature and Natural Resources, 89, 1405
Nature and Natural Resources, International Union for Conservation of : Sixth General Assembly to be held jointly with the Seventh Technical Meeting of the Hellenic Society for the Protection of Nature, 89, 1405
Nature Conservancy : New Nature Reserves at Hickling Broad, Bure Marshes, Thetford Heath, Weeting Heath and Knocking Hoe, 161
  Award of Research Studentships in Ecology, 771
Nature Reserves (New), in England (Nature Conservancy), 161
Nature of Betanin, the Pigment of Red Beet (R. G. Peterson and Prof. M. A. Joslyn), 45 ; (Sir Robert Robinson), 46
Nature of the Carcinogenic Substance in Egg-Yolks (Jan Hradec), 52
Nature of Coal (Indian Central Fuel Research Institute Symposium on), 295
Nature of the Hydrogen Bond in Potassium Hydrogen Fluoride : The Problem of Negative Anharmonicity and the (R. Blinc), 1016
Nature of the Reactive Serine Residue in Enzymes inhibited by Organo-Phosphorus Compounds, (Mechanism of Esterase Action), (G. R. Porter, Prof. H. N. Rydon and J. A. Schofield), 927
Nature and Genetical Control of Resistance in Living Organisms (British Association for the Advancement of Science, Sections D (Zoology) and K (Botany), Joint Discussion on), 921
Nature (Human) : The Hand and, *review* by Prof. R. C. Oldfield, 1042
Nautical Almanac Office, H.M. (prepared by) : Planetary Co-ordinates for the Years 1960-1980, *review* by Dr. R. H. Garstang, 1763
Naval Architects, Institution of : Denny Scholarships in Naval Architecture and Naval Engineering, 1554
  Parsons Scholarship in Marine Engineering, 1554
  Yarrow Scholarship in Marine Engineering, 1554
Naval Architecture : Denny Scholarship in (Institution of Naval Architects), 1554
Naval Engineering : Denny Scholarship in (Institution of Naval Architects), 1554
Naval Research Laboratory, United States : Upper Atmosphere Research Report No. 32, 431
Navigation : Radio Aids to (British Association for the Advancement of Science, Section G (Engineering), Discussion on), 978
Naylor, Prof. H. B., and others : Nuclear Changes occurring during Bud-formation in *Saccharomyces cerevisiae* as revealed by Ultra-thin Sectioning, 454
NCO and NCS : Emission and Absorption Spectra of (R. Holland, Prof. D. W. G. Style, R. N. Dixon and D. A. Ramsay), 336
Neal, Ernest : The Pelican, *review* by Richard Morse, 825
Neary, Dr. G. J., and Evans, Dr. H. J. : Chromatid Breakage by Irradiation and the Oxygen Effect, 890
Nebulae (Planetary) : Electronic Temperatures of, 431
Nébuleuses planétaires : Les témperatures électroniques des (Henri Andrillat), 431
Necrosis (Experimental Hepatic) : Aldosterone and (Dr. K. Aterman), 1324
Necrosis (Liver), in the Hyperthyroid Rat : Selenium and (Dr. K. Aterman), 1514
Needs (Water), in Scotland : Water Resources and (British Association for the Advancement of Science, Section E (Geography), Symposium on), 1193
Néel, Prof. Louis : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Neely, W. Brock : Inhibition of Dextransucrase by Excess Substrate, 1007
Negative Anharmonicity : The Problem of, and the Nature of the Hydrogen Bond in Potassium Hydrogen Fluoride (R. Blinc), 1016
Negligible Kinetic Energy Effects : Capillary-tube Viscometry with (W. A. Caw and R. G. Wylie), 1153
Negretti and Zambra : A Study of Temperature Measurements, 1487
Nelder, J. A. : The National Vegetable Research Station—Members' Day, 435
Nelson, David S., and de Burgh, Prof. P. M. : Biochemical Changes in Virus-infected and Regenerating Mouse Liver, 1617
Nelson, Prof. F. Eugene, and others : Dairy Microbiology, *review* by Dr. L. F. L. Clegg, 141
Nelson, J. F., and others : Changes in the Potassium Concentration and Metabolism of Red Blood Cells of the Lamb, 1742
Nelson, W. A. : Purine Excretion by the Sheep Ked, *Melophagus ovinus* (L.), 115
Nematode : Induced Swarming of a, as a Means of Isolation (Prof. John P. Hollis), 956
Nematodes (Larval) : *Sagitta* as a Host of, including a New and Unique Type of Cercaria (Dr. Ben Dawes), 960
Nematoses of Pyrethrum in East Africa (A. G. Whitehead), 542
Neolithic Age in Eastern Siberia (Henry N. Michael), 1061
Neomycin—its Nature and Practical Application (edited by Dr. Selman A. Waksman), *review* by Prof. J. H. Birkinshaw, 1185
Neoplastic Growth (Normal and) : Ribonuclease and Deoxyribonuclease Activities during (Dr. Sam Brody and Dr. M. Earl Balis), 940
Nerve Cells (Regenerating Single) : Incorporation of Orotic Acid-^{14}C and Lysine-^{14}C in (S. -O. Brattgard, H. Hydén and J. Sjöstrand), 801
Nerve Cells and Fibres (Giant), in *Arenicola claparedii* (Polychaeta), (Prof. G. P. Wells), 1609
Nerve Fibres (Myelinated) : Some Structural Characteristics of (Dr. C. P. Wendell-Smith and Dr. P. L. Williams), 1608
Nerves and Muscles, *review* by Dr. J. W. S. Pringle, 416
Nervous Control of Muscular Contraction : Comparative Physiology of the (Dr. Graham Hoyle), *review* by Dr. J. W. S. Pringle, 416
Nervous System : The Chemical Pathology of the (Third International Neurochemical Symposium), 229, 1646
  Metabolism of the (edited by Derek Richter), *review* by Prof. J. H. Gaddum, 282
Nervous System (Central) : Inhibition and Excitation due to Gamma-Aminobutyric Acid in the (Prof. Takashi Hayashi), 1076
  A Simple Microelectrode for Recording from the (J. D. Green), 962
Nervous System (Central), of Man : Biochemical Basis of Disturbances caused by Thermal Stress in the (M. Krause), 1376
Nervous Tissue : Identity of the Tetanus Toxin Receptor in (Dr. W. E. van Heyningen), 1809
Net Dietary-Protein Value : A Correlation between Sulphur Content and (D. S. Miller and D. J. Naismith), 1786
Netherlands–Norwegian Joint Establishment for Nuclear Energy Research : Sixth Annual Report (1956-57), 1489
Nets : Seals and, 561
Nettley, Dr. P. T. (Stevenson, Dr. R. W. H., and) : Infra-Red Transmission Limits and Reflectivity of Lithium-6 Fluoride and Lithium-7 Fluoride, 471
Neu, Dr. Richard : Separation of Chalcones, Flavanones and Flavonols by Chromatography with Polyamide, 660
Neuberger, Prof. A. : At the fifteenth meeting of the Research Panel of the British Gelatine and Glue Research Association (General Aspects of the Metabolism of Collagen), 439
Neuberger, Prof. A. (edited by) : Symposium on Protein Structure (International Union of Pure and Applied Chemistry, Paris 1957), *review* by Dr. Kenneth Bailey, 1587
Neurochemical Symposium : Third International (Chemical Pathology of the Nervous System), 229, 1646
Neurofibril Formation in Adult Mammalian Cortical Neurones in Tissue Culture : Effect of Adrenaline on (R. S. Geiger), 1674
Neuromuscular Blocking Agents : Some New (Dr. H. O. J. Collier, J. M. Z. Gladych, Barbara Macauley and Dr. E. P. Taylor), 1424
Neuromuscular Transmission : Myasthenic-like Features of, after Administration of an Inhibitor of Acetylcholine Synthesis (Dr. J. A. Desmedt), 1673
Neuromuscular Transmission (Mammalian) : Acetylcholine in (K. Krnjević and R. Miledi), 805
Neurones (Adult Mammalian Cortical), in Tissue Culture : Effect of Adrenaline on Neurofibril Formation in (R. S. Geiger), 1674
Neurospora crassa : A Direct Method for Determination of Forward-Mutation Rates in (F. J. de Serres and H. G. Kølmark), 1249
Neurosurgical Tool : The High-Energy Proton Beam as a (Börge Larsson, Lars Leksell, Prof. Bror Rexed, Patrick Sourander, William Mair and Bengt Andersson), 1222
Neutral Conditions : Isolation of Oxo-Steroids under (Dr. W. Taylor), 1735
Neutron Activation Analysis using an Internal Standard (G. Leliaert, J. Hoste and Z. Eeckhaut), 600
Neutron Production and Temperature in ZETA (K. A. George), 745
Neutron Transport Theory (B. Davison, with the collaboration of J. B. Sykes), *review* by Dr. E. Englman, 620
Neutron–Proton Interaction (Dr. Yatendra Pal Varshni), 1726
Neutrons get There : How, *review* by Dr. R. Englman, 620
New Approach to the Chemotherapy of Cancer (Dr. M. B. Sahasrabudhe), 163
New Approach to the Investigation of the Cause of Moisture Expansion of Ceramic Bodies (Thaisa Demediuk and W. F. Cole), 1223
New 'Area of Outstanding Natural Beauty', 917
New Configuration of Deoxyribonucleic Acid (D. A. Marvin, M. Spencer, Dr. M. H. F. Wilkins and L. D. Hamilton), 387
New Crystalline Antibiotic with Antibacterial and Cytostatic Action : Desertomycin, a (Dr. J. Úri, R. Bognár, I. Békési and B. Varga), 401
New Equipment and Methods for the Evaluation of the Performances of Lenses for Television (W. N. Sproson), 1490
New Estonian Natural History Journal, 769
New Floristic Studies, 294
New Form of Tricalcium Phosphate (Dr. R. W. Nurse, J. H. Welch and W. Gutt), 1230
New Graticule Process : 'maXta', a (Graticules, Ltd.), 699
New Higher Technological Award (National Council for Technological Awards), 1345
New Humanism of Science (Frank Greenaway), 1642
New Hydroxyamino-Acids in Plants and their Identification—Hydroxyvaline in *Kalanchoe daigremontiana* (Dr. J. K. Pollard, Dr. E. Sondheimer and Prof. F. C. Steward), 1356 ; O-acetylhomoserine in *Pisum* (Dr. N. Grobbelaar and Prof. F. C. Steward), 1358
New Ideas about Muscles, *review* by Prof. J. D. Bernal, 345
New Inhibitor of the Tricarboxylic Acid Cycle : Potassium Atractylate, a (Prof. R. Santi), 257
New Machines : Invention and (Dr. E. R. Laithwaite), 1554
New Method of Fractionating High Polymers (Dr. F. W. Peaker and Prof. J. C. Robb), 1591
New Method of Measuring Susceptibility (C. Hilsum and A. C. Rose-Innes), 1082
New Method for Obtaining Thin Plane Parallel Sections of Mineralized Specimens (Dr. O. Hallén and Dr. H. Röckert), 1225
New Method for Preparing Scaly Alumina (Dr. Persio de Souza Santos), 525
New Method for Resolving Amino-Acids by Metabolism of Bacteria on Benzoyl Derivatives of DL-Amino-acids (Prof. Yukio Kameda, Etsuko Toyoura, Katsuhiko Matsui, Yukio Kimura and Shizue Kitagawa), 453
New Method of Tracking Artificial Earth Satellites (A. P. Willmore), 1008
New Nature Reserves in England (Nature Conservancy), 161
New Neuromuscular Blocking Agents : Some (Dr. H. O. J. Collier, J. M. Z. Gladych, Barbara Macauley and Dr. E. P. Taylor), 1424
New Oxygen Effect : Electron Spin Resonance in Carbons—a (C. Jackson, Dr. H. Harker and Prof. W. F. K. Wynne-Jones), 1154
New Phase in a Complex Alloy Steel (G. T. Brown, R. T. Allsop and D. Wilkinson), 1437
New Phenomenon of Electron Emission from Thin Mercury Films (Dr. H. von Bertele), 1148
New Plant Growth-Substances with Selective Herbicidal Activity (Dr. Mary B. Pybus, Prof. R. L. Wain and Dr. F. Wightman), 1094
New Polarimeter : Verdet Constants of Rare-Earth Glasses measured with a (Niels O. Young), 333
New Potent Reactivators of Acetocholinesterase inhibited by Tetraethyl Pyrophosphate (Dr. F. Hobbiger, Dr. D. G. O'Sullivan and Dr. P. W. Sadler), 1498
New Psychological Periodicals, 227
New Round-the-World Telephone Cable, 917
New Series of Leishmanicides (Dr. E. Beveridge, Dr. L. G. Goodwin and L. P. Walls), 316
New Species of *Azotobacter* producing Heavy Slime and Acid (A. B. Roy), 120

New Sterol from a Slime Mould : Physarosterol, a (Dr. C. F. Emanuel), 1234
New *Streptomyces* Species : Formation of Antifungal Antibiotics by a (Dr. P. L. Narasimha Rao and Miss B. N. Uma), 115
New Substance associated with Fat Transport Activity : Isolation from Human Blood of a (Dr. W. S. Reith and M. J. Thomas), 604
New Supersonic Phenomena (Dr. Wladimir Philippoff), 1011
New Synthesis of the Pentapeptide L-Histidyl-L-Phenylalanyl-L-Arginyl-L-Tryptophyl-Glycine and its Melanocyte-stimulating Activity (Dr. R. Schwyzer and Prof. Choh Hao Li), 1669
New Territories : A Survey of Land Use in Hong Kong and the (Dr. Thomas R. Tregear), 1285
New Trypanocidal Drug : Metamidium, a (W. R. Wragg, K. Washbourn, K. N. Brown and J. Hill), 1005
New Type of Aromatic System : Thio-Thiophthen, an Unusual (Prof. S. Bezzi, M. Mammi and C. Garbuglio), 247
New Type of Early Cysticeroid Stage in a Cyclophyllidean Cestode (Joyce E. Rigby and Mrs. Dilys Rawson), 121
New Type of Insecticide (Zenichi Ogita), 1529
New Type of Titanium Getter Pump (L. Holland, L. Laurenson and J. T. Holden), 851
New Vaccine for Fowl Typhoid (Animal Health Trust), 1062
New Vertebrate Fossils (Some), from the Panchet Series of West Bengal (Dr. Pamela Lamplugh Robinson), 1722
New Ways in Management Training (Cyril Sofer and Geoffrey Hutton), *review* by T. H. Hawkins, 214
New Zymogen of Proteolytic Enzyme from Beef Pancreas : Pancrinogen, a (Masami Soejima and Kensuke Shimura), 49
New and Unique Type of Cercaria : *Sagitta* as a Host of Larval Nematodes, including a (Dr. Ben Dawes), 960
New-Born Pig : Change in Oxygen Consumption of the, with a Fall in Environmental Temperature (Dr. L. E. Mount), 536
Newbould, J. G. B. : Awarded a research studentship in botany by the Nature Conservancy, 771
Newell, Dr. G. E. : Title of professor of zoology in the University of London (at Queen Mary College) conferred on, 158
  Effects of Pollution on Living Material (Eutrofication resulting from Organic Pollution), 1209
Newland (Sir Henry Simpson) Oration before the Australian Medical Congress (Rt. Hon. R. G. Menzies), 1557
Newly Synthesized Deoxyribonucleic Acid in Mitotic Division : Distribution of (Prof. W. Plaut), 399 ; (Prof. Henri Firket), 399
Newman, D. R. : Appointed chief aerodynamicist of the de Havilland Aircraft Co., Ltd., 1416
Newman, Prof. M. H. A. : Awarded the Sylvester Medal for 1958 of the Royal Society, 1344, 1633 ; work of, 1633
Newman, R. C. : Solid State Physics, 568
Newton, Isaac—Crime Investigator (Sir John Craig), 149
Newton, Prof. Lily : Retirement from the chair of botany at University College, Aberystwyth, 428 ; work of, 428
Nicholas, M. G., and others : Pressure Welding of Metals, 638
Nicholls, B. : Awarded a Research Fellowship in chemistry for 1958-59 by the Department of Scientific and Industrial Research, 1063
Nicholls, Miss J. A., and others : Measurements of Conduction at Low Temperatures (Electrical Conductivity and Galvanomagnetic Effects on Metals), 84
Nicholson, L. F. : High-Speed Flight (Aerodynamic Aspects of High-Speed Flight), 695
Nicholson, R. B. : Mechanical Properties of Whiskers and Thin Films (Coherency Strains associated with Guinier–Preston Zones in Aluminium/4 per cent Copper Alloys), 298
Nickel : Induction of Respiratory Deficiency in Yeast by Manganese, Copper, Cobalt and (Prof. Carl C. Lindegren, Susumu Nagai and Hideko Nagai), 446
Nickel in Atlantic Equatorial Deep-Sea Sediments : Rate of Accumulation of, and its Bearing on Possible Extra-Terrestrial Sources (Karl K. Turekian), 1728
Ni (II) : Tetrahedral Co-ordination in (Dr. Leonard I. Katzin), 1013
  Tetrahedral Co-ordination of (Prof. E. C. Lingafelter), 1730
Nickel Alloy Steels : Transformation Characteristics of Direct Hardening (Mond Nickel Co., Ltd.), 1643
Nickel Company, Inc. (International) : Election of A. P. Gagnebin as a vice-president, 1133
Nickolls, Dr. L. C. : Fraudulent Documents, *review*, 1399
Nicol, Prof. T., and Bilbey, Dr. D. L. J. : Elimination of Macrophage Cells of the Reticulo-Endothelial System by Way of the Bronchial Tree, 192
  Substances depressing the Phagocytic Activity of the Reticulo-Endothelial System, 606
Nicol, Prof. T. (Bilbey, Dr. D. L. J., and) : Effect of various Natural Steroids on the Phagocytic Activity of the Reticulo-Endothelial System, 674
Nicol, Prof. T., and others : Effect of Splenectomy on the Phagocytic Activity of the Reticulo-Endothelial System, 534
Nicolson, Dr. T. H. : Ecology of Soil Fungi, 1560
Nicot, Dr. J. : Ecology of Soil Fungi, 1559
Nicotinamide in Vertebrates : Biological Deamidation of (K. V. Rajagopalan, T. K. Sundaram and Prof. P. S. Sarma), 51
Nicotinic Acid : Effect of, on the Cholesterol Contents of Rat Livers (Dr. Harald Schön), 534
Nielsen, G. Kofoed, and others : Influence of Linoleic and Linolenic Acids on Symptoms of Vitamin E Deficiency in Chicks, 802
Niger lapis in the Roman Forum : Bones of a Vulture among the Remains of Animals sacrificed on the 'Burial of Romulus' below the (G. A. Blanc and Prof. A. C. Blanc), 66
Night Sky : In August, 229 ; in September, 565 ; in October, 842 ; in November, 1205 ; in December, 1488
  Relative Intensities of the Oxygen Lines at 5577 A. and 6300 A. in the (B. P. Sandford), 42
  Spectrum of the (Jean Dufay and Tcheng Mao-Lin), 361
Nikitine, S. : Transfer of Light Energy and Photosensitization, 231
Nile of the Sudan : *Eichornia crassipes* in the (Dr. Peter A. Gay), 538
Nineteenth Century : The Chemical Industry during the—a Study of the Economic Aspect of Applied Chemistry in Europe and North America (Dr. L. F. Haber), *review* by J. L. S. Steel, 347
  A History of Mathematics from Antiquity to the Beginning of the (Dr. J. F. Scott), *review* by Prof. T. A. A. Broadbent, 211
  The Royal Institution and the Teaching of Science in the (E. E. Ironmonger), 80
Nishi, S. (Koketsu, Dr. K., and) : Synaptic Transmission in a Sodium-free Medium, 887
Nitella : Protoplasmic Streaming and Wall Structure in (M. C. Probine and Prof. R. D. Preston), 1657
Nitrate Content of some Grass Species and Strains (Dr. G. ap Griffith), 1099
Nitric Oxide : Effect of, on the Radiosensitivity of Tumour Cells (Dr. L. H. Gray, F. O. Green and C. A. Hawes), 952
Nitride Precipitates (Aluminium), in α-Iron (G. R. Booker and J. Norbury), 255
Nitrite Accumulation in the North-East Tropical Pacific (Wilhelm Brandhorst), 679
Nitrobacter : Cytochromes of (W. D. Butt and Dr. H. Lees), 732
Nitrogen and its Compounds : Utilization of, by Plants (Society for Experimental Biology Symposium on), 229
Nitrogen in the Presence of Colloidal Molybdenum Oxide as Catalyst : Photosynthesis of Amino-Acids from Paraformaldehyde involving the Fixation of (K. Bahadur, S. Ranganayaki and Prof. L. Santamaria), 1668
Nitrogen-15 : Fixation of, by Excised Nodules of *Coriaria arborea* Lindsay (Dr. G. P. Harris and T. M. Morrison), 1812
Nitrogen Estimation : Swift Dumas (Dr. Irmgard K. H. Otter), 656
Nitrogen Fixation by Gram-Negative Bacteria (Michael H. Proctor and P. W. Wilson), 891
Nitrogen Fixation by Non-nodulated Plants, and by Nodulated *Coriaria arborea* (Greta Stevenson), 1523
Nitrogen-fixing Bacteria : Natural Relationships of the (Dr. K. A. Bisset), 405
Nitrogen Sources (Inorganic) : Utilization of, by Plants (British Association for the Advancement of Science, Section K (Botany), Discussion on), 1197
N_2O^+ : Emission Spectra of (B. Brocklehurst), 1366
Nitrogenous Components of the Tracheal Sap in Apples (E. G. Bollard), 21
Nitrogenous Organic Bases : Quantitative Separation of, using Ammonium Reineckate (Dr. Lee Kum-Tatt), 655
α-(*p*-Nitrophenyl) Maltoside as a Substrate for the Assay of Amylase (A. P. Jansen and P. G. A. B. Wydeveld), 525
Nitrous Oxide : Effect of, on the Radiosensitivity of Mouse Ehrlich Ascites Tumour (Dr. Michael Ebert and Mrs. Shirley Hornsey), 1240
Nitryl Fluoride : Molecular Orbitals and Vibrational Potential Function of (Louis Burnelle and Prof. Jules Duchesne), 653
Njoku, Dr. E. : Effect of Gibberellic Acid on Leaf Form, 1097
Noakes, G. R. : Theoretical Optics, *review*, 348
  Physics for Science and Engineering, *review*, 420
  Intermediate Physics, *review*, 622
  Selected Lectures in Modern Physics for School Science Teachers, *review*, 623
Nobel Prize for Chemistry for 1958 awarded to Dr. F. Sanger, 1275
Nobel Prize for Medicine and Physiology for 1958 awarded to Prof. Joshua Lederberg, and jointly to Prof. G. W. Beadle and Dr. E. L. Tatum, 1344
Nobel Prize for Physics for 1958 awarded to Dr. P. A. Cerenkov, Dr. I. M. Frank and Dr. I. Tamm, 1275
Nodal Line of the Second Russian Earth Satellite (1957β) : Motion of the, and Flattening of the Earth (Prof. E. Buchar), 198
Nodulated *Coriaria arborea* : Nitrogen Fixation by Non-nodulated Plants, and by (Greta Stevenson), 1523
Nodulation of White Clover (*Trifolium repens* L.) : Effect of Gibberellic Acid on the (Dr. Wm. W. Fletcher, J. W. S. Alcorn and J. C. Raymond), 1319
Nodules (Excised), of *Coriaria arborea* Lindsay : Fixation of Nitrogen-15 by (Dr. G. P. Harris and T. M. Morrison), 1812
Nodules (Manganese) : Surface Concentrations of (Prof. H. W. Menard and C. J. Shipek), 1156
Nodules (Root), of *Coriaria* (Dr. G. Bond), 474 ; (Dr. Pedro Montserrat), 475
Nodules (Root), in *Discaria toumatou* Raoul Choix (T. M. Morrison and Dr. G. P. Harris), 1746
Noebels, Henry J., and others (edited by) : Gas Chromatography—a Symposium held under the auspices of the Analysis Instrumentation Division of the Instrument Society of America, *review* by N. H. Ray, 1630
Noise, *review* by R. A. King, 1471
  Principles of (Dr. J. J. Freeman), *review* by R. A. King, 1471
Noise in a Biological Servomechanism : Pupil Unrest, an Example of (Lawrence Stark, Fergus W. Campbell and John Atwood), 857
Noise and Buildings : Acoustics, (P. H. Parkin and H. R. Humphreys), *review* by T. Somerville, 1258
Noltie, Dr. R. H. : Physiology as an Education and as a Career (Development of Physiology Teaching in University and College Departments of Biology and Zoology), 1067
Nomads of Arnhem Land : Yulengor— (Wilbur S. Chaseling), *review* by Prof. Raymond Firth, 280
Nomenclature : Zoological, 362
Nomenclature of Bacteria and Viruses : International Code of (edited by the Editorial Board of the International Committee on Bacteriological Nomenclature), *review* by Dr. K. A. Bisset, 1760
Nomenclature for Cultivated Plants : International Code of, 500
Nomenclature for Fungi Pathogenic to Man and Animals—Names recommended for use in Great Britain (Medical Research Council, Memorandum No. 23), second edition, 500
Nomenclature of Rock Units in the Ross Sea Region, Antarctica (Dr. H. J. Harrington), 290
Nomenclature of Yaws Lesions : An International (Dr. C. J. Hackett), 1132
Nomenclature (Bacteriological), International Committee on (edited by the Editorial Board of the) : International Code of Nomenclature of Bacteria and Viruses, *review* by Dr. K. A. Bisset, 1760
Nomenclature (Zoological), International Trust for : Resignation of Francis Hemming as a member of the Trust and as managing director and secretary, 842
  Appointment of Lieut.-Colonel F. J. Griffin as managing director and secretary, 842
  Appointment of R. V. Melville as scientific controller (with responsibility for the scientific and editorial work), 842
Nomina Rejicienda, *review* by Dr. K. A. Bisset, 1760

- Non-Aqueous Solution : Formation of Higher Bromo-Complexes of Tervalent Gold in (C. M. Harris and I. H. Reece), 1665
- Non-British Breeds of Sheep and in certain Rare British Breeds : Haemoglobin and Potassium Blood Types in some (J. V. Evans, Dr. H. Harris, and Prof. F. L. Warren), 320
- Non-Conventional Technical Information Systems in Current Use (Office of Scientific Information of the National Science Foundation, Washington), 562
- Non-Enzymatic Haem : Formation of (T. Heikel, W. H. Lockwood and Prof. C. Rimington), 313
- Non-Ferrous Mining in Great Britain and Ireland : The Future of (Institution of Mining and Metallurgy Symposium on), 1136
- Non-Ionic and Amphoteric Soaps : Protection of Living Cells against Acid by certain (Dr. P. D'Arcy Hart and Dr. J. E. Lovelock), 304
- Non-Linear Systems : Stability of, *review* by Prof. T. A. A. Broadbent, 1332
- Nonmetals : Colorimetric Determination of (edited by David F. Boltz), *review* by C. O. Harvey, 1331
- Non-metastasizing and Metastasizing Transplantable Tumours : Local Reaction to (Dr. C. Maltoni), 1742
- Non-nodulated Plants : Nitrogen Fixation by, and by Nodulated *Coriaria arborea* (Greta Stevenson), 1523
- Non-specific Cholinesterase in the Adrenal Medulla of the Rat : Differential Demonstration of Acetylcholinesterase and (Prof. O. Eränkö), 183
- Nonweiler, T. : Effect of Solar Flares on Earth Satellite 1957β, 468
- Noradrenaline : Replacement of Adrenaline and, in the Innervated and Denervated Adrenal Gland of the Rat, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 1020
- Noradrenaline and 5-Hydroxytryptamine subjected to various Simple Treatments : Relative Stability of Adrenaline, (Daphne Joyce), 463
- Norbury, J. (Booker, G. R., and) : Aluminium Nitride Precipitates in α-Iron, 255
- Norbury, Dr. J. F. : Awarded a James Clayton Grant by the Institution of Mechanical Engineers, 433
- Nord, F. F. (edited by) : Advances in Enzymology and related Subjects of Biochemistry, Vols. 18 and 19, *review* by Dr. Edwin C. Webb, 897
- Norepinephrine : Fluorescent Derivatives obtained by the Reaction of Ethylene Diamine with Epinephrine and (Dr. Guy Nadeau and Louis-P. Joly), 180
- Normal Human Blood Serum : Calcium and Magnesium Content of (Dr. G. Hunter), 263
- Normal Paraffins in Petroleum Fractions : Use of Molecular Sieves in Gas Chromatography for the Determination of the (B. T. Whitham), 391
- Normal and Leukaemic Human Lymphocytes : Cytotoxicity of Heterologous Sera to (Robert Schrek), 724
- Normal and Lymphomatous Mouse Tissue : Lysins and Agglutinins in (Dr. Eric Ponder and Ruth V. Ponder), 1737
- Normal and Neoplastic Growth : Ribonuclease and Deoxyribonuclease Activities during (Dr. Sam Brody and Dr. M. Earl Balis), 940
- Normal, Regenerating, Precancerous and Cancerous Rat Liver : Deoxyribonuclease Activity and Deoxyribonucleic Acid Synthesis in (Dr. Sam Brody), 1386
- Normand, Sir Charles : *Obituary* of Sir Gilbert Walker, 1706
- Norris, D. : *Rhizobium* needs Magnesium, not Calcium, 734
- Norris, Dr. J. R. : Host—Parasite Relationships, 1352
- Norrish, Prof. R. G. W. : Awarded the Davy Medal for 1958 of the Royal Society, 1344, 1632 ; work of, 1632
- Norrish, Prof. R. G. W. (McGrath, W. D., and) : Influence of Water on the Photolytic Decomposition of Ozone, 235
- North, Dr. E. A., and Doery, Hazel M. : Protective Action of Venoms containing Phosphatidase-*A* against certain Bacterial Exotoxins, 1374
- North, Dr. F. J. : Geological Notions of Bernard Palissy, *review*, 754
- North America : The Chemical Industry during the Nineteenth Century, a Study of the Economic Aspect of Applied Chemistry in Europe and (Dr. L. F. Haber), *review* by J. L. S. Steel, 347
  - The Faunal Connections between Europe and (Dr. Carl H. Lindroth), *review* by Charles S. Elton, 140
- North Rona and Sula Sgeir : Glasgow University Expedition to (T. B. Bagenal and H. T. Howell), 775
  - Occurrence of Forms of *Fucus distichus* L. emend. Powell on (H. T. Powell), 1246
- North Shore Hospital of Sydney : Grant of up to £17,000 from the Wellcome Trust, to build and equip laboratories for experimental medicine and surgery, 1204
- North Staffordshire Field Club : Presidential Address (J. Leighton), 1130
- North-West : Potentialities of the (Royal Society of Canada Symposium on), 701
- Northern Advisory Council for Further Education : Eleventh Annual Report, 1708
- Northern Ireland : Forestry in (Ministry of Agriculture for Northern Ireland), 989
- Northern Ireland (Government of the United Kingdom of Great Britain and), and the Government of the United States of America : Agreement for Co-operation on the Uses of Atomic Energy for Mutual Defence Purposes (Washington, 1958), 635
- Northumberland, Duke of : Office of chairman of the Agricultural Research Council now taken by the, 89
- Nossal, G. J. V., and Larkin, Lois : Failure to induce Immunological Tolerance during Recovery from Irradiation, 1447
- Notions (Geological), of Bernard Palissy, *review* by Dr. F. J. North, 754
- Nour, J. J. (Nour, M. A., and) : A Simple Technique for Inoculating Pathogenic Bacteria on Susceptible Plant Leaves, 96
- Nour, M. A., and Nour, J. J. : A Simple Technique for Inoculating Pathogenic Bacteria on Susceptible Plant Leaves, 96
- Nova Scotia Research Foundation : Selected Bibliography on Algae, No. 4, 1131
- Novák, Dr. L. (Pospíšil, Dr. M., and) : Effect of Thyroid Pre-treatment on the Mortality of X-Irradiated Mice, 1603
- Novák, S. (Skořepa, Dr. J., and) : Difference between Lipoprotein Lipase and Post-Heparin Esterase in Human Serum, 117
- Novel Type of Metal-Protein Compounds (Prof. K. H. Gustavson), 1125
- Novelli, G. David (McRorie, Robert A., and) : Glucuronate Metabolism by *Aerobacter aerogenes*, 1504
- Novick, Dr. A. : Appointed director of the Institute of Molecular Biology at the University of Oregon, 1708 ; work of, 1708
- Novotny, Dr. I. (Beránek, Dr. R., and) : Spontaneous Electrical Activity in the Denervated Muscles of the Cockroach *Periplaneta americana*, 957
- Nowacki, E. : Fodder Plants (Classification of the Genera of the Family Genisteae), 702
- Nowosielski-Slepowron, B. : Ptaki Ziem Polskich (The Birds of Poland), *review*, 972
- Noyes, W. D., and others : Studies in Synthesis of Deoxyribonucleic Acid—Mechanism of Radiation Effect on the Process of Synthesis of Deoxyribonucleic Acid, 1788
- Nuclear Biology and Medicine, Italian Society of : Third Congress of the (Medical Clinic of the University of Florence), 229
- Nuclear Changes occurring during Bud-formation in *Saccharomyces cerevisiae* as revealed by Ultra-Thin Sectioning (T. Hashimoto, S. F. Conti and Prof. H. B. Naylor), 454
- Nuclear Chemical Engineering (Prof. Manson Benedict and Prof. Thomas H. Pigford), *review* by Prof. W. Murgatroyd, 489
- Nuclear Cooling : Nuclear Orientation and (Dr. N. Kurti), 92
- Nuclear Energy : Developments in, 293
  - Health and Safety in the Field of (Dr. W. G. Marley), 1262
- Nuclear Energy in O.E.E.C. Countries (1958-59) : Catalogue of Courses on (European Nuclear Energy Agency of the Organization for European Economic Co-operation), new edition, 918
- *Nuclear Energy, Journal of* : To be issued in two parts, 294
- Nuclear Energy Agency (European) : Catalogue of Courses on Nuclear Energy in O.E.E.C. Countries (1958-59), new edition, 918
  - Structure and Functions, First Joint Undertakings (Organization for European Economic Co-operation), 1346
- Nuclear Energy Agency (European), and the Eurochemic Company: First Report of the Steering Committee for Nuclear Energy to the Organization for European Economic Co-operation Council, 1069
- Nuclear Energy Conference, British : Membership increased by the addition of the Joint Panel on Nuclear Marine Propulsion, 433
- Nuclear Energy Development as a Problem of Man-Power, 343
- Nuclear Energy Research, Centre for (Portugal) : Grant of £32,500 from the Gulbenkian Foundation, Lisbon, for equipment for its mass spectrometry and isotope section, 1493
- Nuclear Energy Research, Netherlands—Norwegian Joint Establishment for : Sixth Annual Report (1956-57), 1489
- Nuclear Engineering, *review* by B. Cutts and G. R. H. Geoghegan, 4
- Nuclear Engineering (edited by Prof. Charles F. Bonilla), *review* by Prof. W. Murgatroyd, 350
  - Advances in—Proceedings of the Second Nuclear Engineering and Science Conference held at Philadelphia (edited by John R. Dunning and Brice R. Prentice), *review* by Dr. T. E. Allibone, 210
  - Recent Developments in (Sir John Cockcroft), 1334
- Nuclear Engineering and Science Congress : Selected Papers from the 1st, held at Cleveland, Ohio (edited by D. J. Hughes, Stuart McLain and Clark Williams), Vol. 1, Problems in Nuclear Engineering ; Vol. 2, Reactor Operational Problems, *review* by B. Cutts and G. R. H. Geoghegan, 4
- Nuclear Envelope of Carcinoma Cells : Fine Structure of the (M. De Groodt, Prof. F. Derom, A. Lagasse, Prof. M. Sebruyns and Dr. M. Thiery), 1030
- Nuclear Fuel Cycles (Institute of Physics Symposium on), 565
- Nuclear Fusion (Controlled) : Exhibition on (Science Museum, London), 1710
- Nuclear Fusion Reactions : Controlled (Dr. R. S. Pease), 1051
- Nuclear Installations (Licensing and Insurance) Bill, 1345
- Nuclear Magnetic Resonance in β-Brass (G. W. West), 1436
- Nuclear Magnetic Resonance Spectra from a Crystal rotated at High Speed (Prof. E. R. Andrew, A. Bradbury and Dr. R. G. Eades), 1659
- Nuclear Masses and their Determination—Proceedings of the Conference held in the Max-Planck-Institut für Chemie, Mainz, 1956 (edited by Prof. H. Hintenberger), *review* by Dr. G. Dearnaley, 1579
- Nuclear Membrane : Semipermeability of the (Clifford V. Harding and Carl Feldherr), 676
- Nuclear Moments : Theories of (R. J. Blin-Stoyle), *review* by J. S. Bell, 8
- Nuclear Orientation and Nuclear Cooling (Dr. N. Kurti), 92
- Nuclear Particles (High-energy) : Research on (Grant of 450,000 dollars from the United States National Science Foundation to the University of Chicago for), 916
- Nuclear Physics (High-Energy) : International Conference on (International Union of Pure and Applied Physics), 356
- Nuclear Physics and Atom Bombs, *review* by Sir John Cockcroft, 547
- Nuclear Power and the Engineer (Sir Christopher Hinton), 1047
- Nuclear Power Plant : The Canadian Study for a Full-Scale (J. E. Woolston), 847
- Nuclear Power Plants : International Inspection of, 225
- Nuclear Power Stations—World Plans and Experience, 1195
- Nuclear Power Stations (Civil) : Plutonium from (House of Commons Debate on), 292
- Nuclear Radiation in Food and Agriculture (edited by Prof. W. Ralph Singleton), *review* by Dr. Lorna J. Lilly, 758
- Nuclear Reactor for Winfrith Heath, 226
- Nuclear Reactor Technology : Analytical Chemistry in (Second Conference on), 22
- Nuclear Reactors at the Atomic Weapons Research Establishment, Aldermaston : Two, 19
- Nuclear Research, European Organization for : Progress during 1958, 1708
- Nuclear Safety Advisory Committee : Appointment of a, 1413
- Nuclear Science : Annual Review of (edited by James G. Beckerley, in association with Robert Hofstadter and Leonard I. Schiff), Vol. 7, *review* by Dr. F. Mandl, 489
- Nuclear Science Laboratory : Design and Management of a (Prof. A. J. Woodall, C. G. Wilson, Dr. A. L. Jones and D. K. Thomas), 367
- Nuclear Theory, *review* by Dr. A. M. Lane, 756
- Nuclear Training Centre : Baghdad Pact, 430
- Nucleation Sites (Void), in Creep of Metals (P. W. Davies and Dr. J. P. Dennison), 131
- Nuclei : Evidence for $^{4}_{2}$He 'Clusters' in (Prof. L. H. Ahrens and R. D. Cherry), 1434
- Nuclei in the Adrenal Cortex of the White Rat : Deoxyribonucleic Acid Content of the (H. Roels), 873
- Nuclei (Atomic) : Structure of, *review* by Dr. E. Bretscher, 1333

Nuclei (Intermitotic), in Man : Representation of the X Chromosome in (D. M. Serr, M. A. Ferguson-Smith, Dr. B. Lennox and J. Paul), 124
Nuclei (Single Somatic) : Sexually Mature Individuals of *Xenopus laevis* from the Transplantation of (J. B. Gurdon, T. R. Elsdale and Dr. M. Fischberg), 64
Nuclei (Tumour Cell) : Possible Use of Synthetic Surface-active Agents for the Preparation of (Prof. M. E. Hodes, Dr. C. G. Palmer and D. S. Williams), 529
Nucleic Acid (Tobacco Mosaic Virus) : Action of Micrococcal Phosphodiesterase on (K. K. Reddi), 1308
Nucleic Acids : Hyperchromicity and (Dr. A. M. Michelson), 1502
Nucleic Acids of some Algae : Composition of the (Dr. Eva M. Low), 1096
Nucleonic Component of Cosmic Ray Air Showers : Dependence of, on Radius (C. S. Wallace, Dr. M. M. Winn and Dr. K. W. Ogilvie), 1653
Nucleotide (Diphosphopyridine) : Effect of, on the Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by 2-Acetylaminofluorene and N-2-Fluorenyl-diacetamide (Prof. E. Quagliariello, S. Aurrichio, E. Rinaldi and A. Rubino), 1744
  Significance of Induced *in vivo* Synthesis of (Dr. Louis Shuster, Thomas A. Langan, jun., Prof. Nathan O. Kaplan and Prof. Abraham Goldin), 512
Nucleotide Oxidase (Diphosphopyridine) : A Reduced, in Lettuce Seeds (Dr. A. M. Mayer), 317
Nucleotide Pool of Brewers' Yeast during Growth and Fermentation (G. Harris, J. W. Davies and R. Parsons), 1565
Nucleotide–Amino-Acid Compounds of Yeast : Soluble Nucleotides and (Dr. D. A. Gilbert and Prof. E. W. Yemm), 1745
Nucleotides (Acid-Soluble), from the Blood of Metamorphosing Salmon (Per Olov Svärd), 1448
Nucleotides (Pyridine), in Rat-Liver Mitochondria : Forms of (Dr. J. L. Purvis), 711
Nucleotides (Ribose), in the Rat : Ribosyl Transfer between (Georg B. Gerber and Kurt I. Altman), 1513
Nucleotides (Soluble), and Nucleotide–Amino-Acid Compounds of Yeast (Dr. D. A. Gilbert and Prof. E. W. Yemm), 1745
Nucleus : Shell Theory of the (Prof. Eugene Feenberg), second printing, *review* by Dr. A. M. Lane, 756
Nuffield Foundation : Gift of £1,000 to the Department of Veterinary Anatomy, University of Bristol, for research on age changes in the vertebral disk of the cat, 1487
Nuffield Foundation (Royal Society and the) : Commonwealth Bursaries Scheme Awards, 88, 1641
Nuffield Unit for Research into Problems of Ageing : Ageing and Human Skill—a Report centred on work by the (A. T. Welford), *review* by Prof. L. S. Hearnshaw, 826
Number of Elastic Constants required in Crystal Elasticity (N. Joel and Dr. W. A. Wooster), 1078
Number of Infections Involved : Relationship between Phytoalexin Output and the (K. O. Müller), 167
Number of Sprouts per Set : Effect of, on Yield and Grading of Main-Crop Potatoes (R. D. Toosey), 269
Numbers, Miss : Modern Educational Treatment of Deafness, 920
Numbers of Phosphate-dissolving and Acid-producing Bacteria in Soil : A Plate Method for Estimating the (H. A. Louw and Dr. D. M. Webley), 1317
Numerical Analysis (Kaiser S. Kunz), *review* by Dr. L. S. Goddard, 972
Numerical Integration : Experiments in (E. Knighting, D. E. Jones and Mavis K. Hinds), 440
Numerical Methods in Function-Space, *review* by Prof. D. N. de G. Allen, 1695
Numerical Weather Forecasting, 440
Nurse, Dr. R. W., and others : A New Form of Tricalcium Phosphate, 1230
Nut Shell Oil (Cashew) : Surface-active Characteristics of Sodium Anacardate isolated from (Arun K. Biswas and Anil Bandhu Roy), 1299
Nutrient Mass (Central), in *Lumbricus* Spermatogenesis : Origin and Connexions of the (Prof. J. Brontë Gatenby and Dr. A. J. Dalton), 886
Nutrition : Drummond Fellowship for Research in, 1488
Nutrition Society : Election of Prof. B. C. P. Jansen to honorary membership, 22
  Symposium on Nutrition and Teeth, 1704
Nutrition Society (Scottish Group) : Symposium on Nutritional Hazards caused by Radioactive Contamination of Foods, 700
Nutrition Society of Canada : Formation of the, 359
  Election of E. W. McHenry as president, 359
Nutrition and Teeth (Nutrition Society Symposium on), 1704
Nutrition (Mineral), and the Balance of Life (Dr. Frank A. Gilbert), *review* by Dr. E. C. Humphries, 621
Nutritional Hazards caused by Radioactive Contamination of Foods (Scottish Group of the Nutrition Society Symposium on), 700
Nutritional Requirements, 228
Nutting, J., and Brandon, D. G. : Mechanical Properties of Whiskers and Thin Films (Iron Foils in Tensile Deformation), 298
Nux Vomica : Determination of Strychnine in, by Paper Chromatography (G. P. Briner), 742
Nye, Dr. J. F. : Physics of Ice Movement, 1560
Nyholm, Prof. R. S., and others : Stereochemistry of Complex Halides of the Transition Metals, 168
  Ions of the Transition Elements (Magnetic Properties—Magnetic Susceptibilities of some Complexes of Osmium, Ruthenium, Rhenium and Iridium over a Temperature Range), 1350
Nymphs of the Milkweed Bug, *Oncopeltus fasciatus* Dall. : Retention of Food Residues in the Midgut by (P. W. Miles), 959

OAK Ridge National Laboratory : New Research Reactor (ORR), 19
  Publications of the, 498
Oak Ridge National Laboratory (Biology Division) : Symposium on Antibodies, their Production and Mechanism of Action, Gatlinburg, 1957, *review* by Prof. P. C. Koller and Dr. P. Alexander, 74
Oat Seedlings : Growth-promoting Effect of Ethanol on (Dr. C. L. Mer), 1812
Oats : Translocation of ^{14}C-labelled 2,4-Dichlorophenoxyacetic Acid in Barley and (H. Ingv. Petersen), 1685
Oats (Wild), *Avena fatua* L. : Light and Dormancy in (Bruce G. Cumming and James R. Hay), 609
Obese Mice : Levels of Serum Cholesterol in (Claire Zomzely and Jean Mayer), 1738
Oblique Incidence and Sound Intensity : Diffraction of Light by Ultrasonic Waves, (Dr. S. Parthasarathy and C. B. Tipnis), 1795
O'Brien, B. J. : Energy Spectrum of Particles Bombarding the Earth, 521
O'Brien, M. V. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1137
Observability of Spontaneous Temperature Fluctuations (T. P. Gill), 239
Observation of a Solar Flare at 4·3-mm. Wave-length (R. J. Coates), 861
Observation of Transient Intermediates in Redox Processes by variable Voltage Oscillo-polarography and Cyclic Voltammetry (Prof. W. Kemula and Z. Kublik), 793
Observation (Direct), of Dislocations in Graphite (Dr. Alexander Grenall), 448
Observations on Birds of Southeastern Brazil (Margaret H. Mitchell), *review*, 215
Observations on the Explosion at Ripple Rock (J. K. Wright, E. W. Carpenter, A. G. Hunt and B. Downhill), 1597
Observations on Gelation : Synthetic Polypeptide Substitutes for Gelatin in Photographic Emulsions and (Dr. H. W. Wood), 106
Observations on Overvolted Uniform Field Spark Gaps (K. R. Allen and K. Phillips), 1083
Observations of the Pacific Equatorial Undercurrent (John A. Knauss and Joseph E. King), 601
Observations on the Spread of Mouse Polyoma Virus Infection (Dr. Wallace P. Rowe, Janet W. Hartley, Isadore Brodsky, Robert J. Heubner and Lloyd W. Law), 1617
Observations (Field), of Midday Closure of Stomata in the Oil Palm, *Elaeis guineensis* Jacq. (A. R. Rees), 735
Observations (Further), on Tumour-enhancing Factors—their Bearing on the Immunological Theory of Cancer (Prof. H. N. Green and R. Wilson), 1054
Observations (Immuno-Chemical), on the Intimate Structure of Human Albumin (Peggy B. Houghton and Prof. N. H. Martin), 329
Observations (Light Microscopic and Electron Microscopic), on the Dividing Walls of Cells in *Chara* spp. (Dr. Lóránd Fridvalszky and Dr. Béla Lovas), 736
Observations (Radio), of Hypersonic Shock Waves (Dr. J. S. Hey, J. T. Pinson and P. G. Smith), 1220
Observations (Some), on the Life-Cycle of *Atoxoplasma*, with particular reference to the Parasite's Schizogony and its Transmission by the Mite *Dermanyssus gallinae* (Dr. R. Lainson), 1250
Observations (Thermo-electric), on Grey Selenium (J. I. Carasso and R. W. Pittman), 1011
Observatory (Eskdalemuir) : Jubilee of, 706
Observatory (Royal), Cape of Good Hope : Report for 1957, 1204
Observatory, United States National Astronomical : Allocation of 4,000,000 dollars by the National Science Foundation to the Association of Universities for Research in Astronomy, Inc., for the construction of a solar telescope for the, 1552
Observed 'Oxygen Effect' during Gamma-Irradiation of Dried Bacterial Spores (Alan Tallentire), 1024
Observing the Polarization of Light from the Sky : A Simple Device for (Dr. Ulf Halldén), 333
Obtaining Thin Plane Parallel Sections of Mineralized Specimens : A New Method for (Dr. O. Hallén and Dr. H. Röckert), 1225
Occupational Psychology (British Association for the Advancement of Science, Section J (Psychology), Discussion on), 993
Occurrence of Coumarin Analogues in Lemon Juice (Prof. Richard A. Bernhard), 1171
Occurrence of an Exotic Oligochaete *Branchiura sowerbyi* Beddard, 1892, in the River Thames (Dr. K. H. Mann), 732
Occurrence of Forms of *Fucus distichus* L. emend. Powell on North Rona and Sula Sgeir (H. T. Powell), 1246
Occurrence of Gentisic Acid in Plant Tissues (Dr. L. A. Griffiths), 733
Occurrence of a Gibberellin-like Substance in Wheat Seedlings : A Colorimetric Test for Gibberellic Acid and Evidence from a Dwarf Pea Assay for the (G. M. Simpson), 528
Occurrence of Gibberellin-like Substances in the Coconut (Margaret Radley and Enid Dear), 1098
Occurrence of *Microsporum gypseum*, *Keratinomyces ajelloi* and *Trichophyton terrestre* in some British Soils (Phyllis M. Stockdale), 1754
Occurrence of α-Picoline in Plants (R. E. R. Grimmett and Dr. F. B. Shorland), 1734
Occurrence of Poly-β-Hydroxybutyric Acid in Aerobic Gram-Negative Bacteria (Dr. W. G. C. Forsyth, Dr. A. C. Hayward and J. B. Roberts), 800
Occurrence and Metabolism of Oligosaccharides in the Broad Bean (*Vicia faba*), (Dr. J. B. Pridham), 1687
Ocean (South Atlantic) : Distribution of Pelagic Polychaetes in the (Norman Tebble), 166
Ocean Duct (Semi-Permanent Low-Level) : Influence of the, on Centimetre Wave Scatter Propagation beyond the Horizon (F. A. Kitchen, W. R. R. Joy and E. G. Richards), 385
Oceania (French) : Work and Life on Raroia, an Acculturation Study from the Tuamotu Group (Dr. Bengt Danielsson), *review* by Prof. Raymond Firth, 280
Oceanography (Royal Society of Canada Symposium on), 701
Ochs, G., and others : A Biological Action of Injected Deoxyribonucleic Acid, 1679
O'Colla, Prof. P. S. : At the Third International Seaweed Symposium (Constitution of the Mucilage from *Laurencia pinnatafida*), 1779
O'Connor, Cecilia M. (edited by Wolstenholme, G. E. W., and) : Ciba Foundation Symposium on Drug Resistance in Micro-organisms—Mechanisms of Development, *review* by I. M. Rollo, 416
O'Connor, Cecilia M. (edited by Muller, Alex F., and) : An International Symposium on Aldosterone, *review* by Prof. D. C. Harrison, 902
O'Connor, J. G., and others : Science in the Use of Coal (Carbonization of Coal), 25
O'Connor, Dr. : Modern Educational Treatment of Deafness, 921
Ocotea pretiosa : Isolation of Piperonylic Acid from (Otto Richard Gottlieb and Maura Taveira Magalhaes), 742
Octatetraene (*cyclo*-) : Molecular Structure of (I. J. Lawrenson and Dr. F. A. Rushworth), 391

Octopus and Cuttlefish : Visual Pigments of the (Paul K. Brown and Mrs. Patricia S. Brown), 1288
Odbert, Dr. Henry S. : Appointed programme director for psychobiology, Division of Biological and Medical Sciences, United States National Science Foundation, 842
Odishaw, Hugh, and Ruttenberg, Stanley (edited by) : Geophysics and the IGY—Proceedings of the Symposium at the Opening of the International Geophysical Year, *review* by D. Taylor Smith, 1187
O'Donald, P. : Awarded a research studentship in zoology by the Nature Conservancy, 771
O'Donoghue, Prof. C. H. : Treatise of Zoology, *review*, 1574
Œstradiol in Man : 16β-Hydroxyoestrone, a Metabolite of (Barry T. Brown, Jack Fishman and Dr. T. F. Gallagher), 50
$\Delta^{5,7,9}$-Œstratrienol-3-one-17 : Isolation of, from the Urine of Pregnant Mares (Dr. W. L. Glen, R. Barber and G. Papineau-Couture), 1308
Œstrogen Stilboestrol (Synthetic) : Effect of the, on Pregnancy in the Rabbit (Dr. Branda M. Schofield), 58
Œstrogens in Urinary Extracts : Separation of Mixtures of, using Gradient Elution Chromatography (Dr. Stanley Kushinsky, James A. Demetriou, Wilmonte Nasutavicus and Jane Wu), 874
Office Appliance and Business Equipment Trades Association (Electronic Engineering Association and the) : Electronic Computer Exhibition and Business Computer Symposium, 565, 918
Office International des Epizooties (United Nations Food and Agriculture Organization and the) : Meeting to discuss Problems of Ticks and Tick-borne Diseases, 1416
Offspring of the Vic—a History of Morley College (Denis Richards), *review* by Prof. W. H. G. Armytage, 1585
Ogawa, Dr. Yoshito : Development of Skeletal Muscle Protein, 1312
Ogilvie, G. J., and others : Catalytic Activity and Surface Structure after Ion Bombardment, 523
Ogilvie, Dr. K. W., and others : Dependence of the Nucleonic Component of Cosmic Ray Air Showers on Radius, 1653
Ogita, Zenichi : A New Type of Insecticide, 1529
Ogryzlo, E. A. : Awarded an Overseas Scholarship by the Royal Commission for the Exhibition of 1851, for research in physical chemistry, 156
O hEocha, Dr. C. : At the Third International Seaweed Symposium (Occurrence and Distribution among a number of Red Algae of four Water-soluble Fluorescent Substances), 1779
Oil : Geology and (British Association for the Advancement of Science, Section C (Geology), Symposium on), 832
Oil (Cashew Nut Shell) : Surface-active Characteristics of Sodium Anacardate isolated from (Arun K. Biswas and Anil Bandhu Roy), 1299
Oil (Natural Crude) : An Overhauser Effect in (Dr. Edward Poindexter), 1087
Oil Palm, *Elaesis guineensis* (Jacq.) : Factors controlling Seed Germination in the West African (G. Hussey), 699
  Field Observations of Midday Closure of Stomata in the (A. R. Rees), 735
Oil Palm Seedlings : Symptoms of Calcium and Phosphorus Deficiency in (R. A. Bull), 1749
Oiseaux du Canada : Quelques (W. E. Godfrey), 1347
Okabe, Norio (Goto, Masao, and) : Cellullolytic Activity of Phytopathogenic Bacteria, 1516
Okunuki, Prof. Kazuo, and others : Reconstruction of the Reaction Mechanism of Cytochrome Oxidase, 1306
  Preparation of Crystalline *Pseudomonas* Cytochromes$_{551}$ from *Pseudomonas aeruginosa*, 1307
Olbers, H. W. M. (1758-1840), 987
Old Bodleian Library, Oxford : Grant of £42,000 from the Gulbenkian Foundation, Lisbon, for restoring the fabric of the building, 1493
Oldfield, Prof. R. C. : The Hand and Human Nature, *review*, 1042
Oldfield, W. : Study of Metals and Alloys above 1,200°C. (High-temperature Techniques—A Special Molybdenum-wound Cooling Curve Furnace), 1419
Oldroyd, Harold : Collecting, Preserving and Studying Insects, *review* by B. D. Moreton, 420
Oldroyd, Miss R. M. : Awarded a research studentship in zoology by the Nature Conservancy, 771
Olefins : Absorbents for Aldehydes and (J. A. Kerr and A. F. Trotman-Dickenson), 466
Oligochaete *Branchiura sowerbyi* Beddard, 1892, in the River Thames : Occurrence of an Exotic (Dr. K. H. Mann), 732
Oligosaccharides in the Broad Bean (*Vicia faba*) : Occurrence and Metabolism of (Dr. J. B. Pridham), 1687
Oligosaccharides (Liver Glucosyl), and Glycogen—Effects of Starvation, Glucose Feeding and Insulin (Dr. Hsien-Gieh Sie and Prof. W. H. Fishman), 240
Oligotrich Protozoa from the Sheep Rumen : Maintenance of, *in vitro* (G. S. Coleman), 1104
Oliver, R., and others : Studies in Synthesis of Deoxyribonucleic Acid—Mechanism of Radiation Effect on the Process of Synthesis of Deoxyribonucleic Acid, 1788
Olson, Jr., Prof. Joseph C., and others : Dairy Microbiology, *review* by Dr. L. F. L. Clegg, 141
Olsson, R. : A Bucco-hypophysial Canal in *Elops saurus*, 1745
Oncopeltus fasciatus Dall. : Retention of Food Residues in the Midgut by Nymphs of the Milkweed Bug (P. W. Miles), 959
One : The Manifold and the (Agnes Arber), *review* by the Very Rev. W. R. Matthews, 681
Ontario Cancer Institute : Appointment of Dr. B. Cinader as head of the Sub-division of Immunochemistry, 842
Ontario Museum, Royal (Division of Zoology and Palaeontology) : Observations on Birds of South-eastern Brazil (Margaret H. Mitchell), *review*, 215
Ontario Research Foundation : Annual Report for 1957, 848
Oocytes (Extra-Regional), in Teleosts (Prof. A. Stolk), 1241
Opencast Coal Bill : Second reading in the House of Lords, 505
Opencast Mining in Britain, 505
Operational Research : Proceedings of the First International Conference on (Oxford, 1957), *review* by Dr. K. Pennycuick, 821
Operational Research in Advertising (J. Maitland), 846
Operational Research Society (United Kingdom), and others : Proceedings of the First International Conference on Operational Research (Oxford, 1957), *review* by Dr. K. Pennycuick, 821
Operations Research Society of America, and others : Proceedings of the First International Conference on Operational Research (Oxford, 1957), *review* by Dr. K. Pennycuick, 821
Operator (The Human), and High-Speed Flight (A. Cadman Clinton), 1562
Operators : Elementary Differential Equations and (G. E. H. Reuter), *review* by Prof. T. A. A. Broadbent, 827
Ophthalmology and Otology : Alexander Pigott Wernher Memorial Travelling Fellowship in (Medical Research Council Award for 1958-59), 634
Öpik, Dr. A. A. : The Middle Cambrian Trilobite *Centropleura* in Queensland, 204
Oppenheimer, E. T. : Progress in Cancer Research (Physical Induction of Cancer by Plastic Films), 365
Optical Coefficient (Stress), of the Alkali Halides : Dispersion of the (Dr. R. Srinivasan), 1660
Optical Instrument for Monitoring Sound Signals : A Description of a (E. R. Wigan), (Analysis and Measurement of Programme Levels, Part 2), 1490
Optical and Electrical Properties of Diamonds : Effects of Pressure on some (Dr. F. C. Champion and J. R. Prior), 1079
Optics : Geometrical and Physical (Dr. R. S. Longhurst), *review* by G. R. Noakes, 348
  Theoretical, *review* by G. R. Noakes, 348
Oral Treatment with Griseofulvin : Experimental Ringworm in Guinea Pigs— (J. C. Gentles), 476
Oranges (Blood) : Anthocyanins of (Dr. B. V. Chandler), 933
Orbit of an Earth Satellie : Effect of Air Drag on the (D. G. Parkyn), 787 ; (D. G. King-Hele and Dr. D. C. M. Leslie), 788
Orbit (Satellite) : Change of Inclination of a (C. H. Bosanquet), 1533
Orbit Point (Extreme-Latitude) : Seasonal Illumination of a Circumpolar Earth Satellite at its (Dr. W. N. Abbott), 651
Orbital Data and Preliminary Analyses of Satellites 1957α and 1957β (compiled by F. L. Whipple, L. G. Boyd, J. A. Hynek and G. F. Schilling), 1062
Orbitals (Molecular), and Vibrational Potential Function of Nitryl Fluoride (Louis Burnelle and Prof. Jules Duchesne), 653
Orchard, Anthony : Awarded a special prize in the 1958 *Endeavour* Essay Competition, 632
Orchids of Peru (Charles Schweinfurth), 500
Ord, Margery G., and Stocken, Dr. L. A. : Studies in Synthesis of Deoxyribonucleic Acid—Radiobiochemical Lesion in Animal Cells, 1787
Order (World) : Spiritual Values and, 965
Ordering in Liquid Mercury–Thallium Alloys containing 25-35 Atomic per cent Thallium (R. G. Ward and J. R. Wilson), 334
Organic Analysis : Quantitative (James S. Fritz and George S. Hammond), *review* by Dr. A. D. Mitchell, 1187
Organic Bases (Nitrogenous) : Quantitative Separation of, using Ammonium Reineckate (Dr. Lee Kum-Tatt), 655
Organic Chemistry : A Modern Approach to (Prof. J. Packer and J. Vaughan), *review* by Dr. W. A. Waters, 1114
  Physical Methods in (Royal Society of Canada Symposium on), 701
  Structure and Reactions in—the Kekulé Symposium (Prof. D. H. Hey and Dr. G. H. Williams), 1340
  Theoretical (Chemical Society, under the auspices of the Section of Organic Chemistry of the International Union of Pure and Applied Chemistry, Symposium on), 22, 1340
Organic Colloids (Prof. Bruno Jirgensons), *review* by Dr. C. H. Bamford, 751
Organic Compounds for Analysis : Swift Combustion of (Dr. Irmgard K. H. Otter), 393
Organisms (Biological) : Detection of Polarization by (Arthur N. Fankuchen and Prof. I. Fankuchen), 1372
Organisms (Living) : Nature and Genetical Control of Resistance in (British Association for the Advancement of Science, Sections D (Zoology), and K (Botany), Joint Discussion on), 921
Organization : Visual (Dr. W. K. Taylor), 29
Organization for European Economic Co-operation : International Certification of Herbage Seed, 157
Organization for European Economic Co-operation (European Nuclear Energy Agency) : Catalogue of Courses on Nuclear Energy in O.E.C.C. Countries (1958-59), new edition, 918
  European Nuclear Energy Agency—Structure and Functions, First Joint Undertakings, 1346
  European Nuclear Energy Agency and the Eurochemic Company (First Report of the Steering Committee for Nuclear Energy), 1069
Organization for European Economic Co-operation (European Productivity Agency) : European Agricultural Aviation Centre, 226
Organization of Medical Sciences, Council for the, with the assistance of the Wellcome Trust and the International Union of Biochemistry : Symposium on Biochemical Response to Physical Injury, 1493
Organization in Modern Society : The Individual and the (Institute of Personnel Management Conference on), 700, 918
Organization (Business) : Studies in, *review* by L. G. Jaeger, 971
Organization (Social) : Productivity and—the Ahmedabad Experiment, Technical Innovation, Work Organization and Management (A. K. Rice), *review* by S. David M. King, 682
Organization (Time-dependent), in a Micelle Series : Origin of (T. Nash), 1536
Organo-Phosphorus Compounds : Nature of the Reactive Serine Residue in Enzymes inhibited by (Mechanism of Esterase Action), (G. R. Porter, Prof. H. N. Rydon and J. A. Schofield), 927
  A Possible Mechanism of Action of Esterases inhibitable by (Mechanism of Esterase Action), (Prof. H. N. Rydon), 928
Orgel, Dr. L. E. : Ions of the Transition Elements (Structure of a number of Transition Metal Oxides), 1350
Orientation (Nuclear), and Nuclear Cooling (Dr. N. Kurti), 92
Oriented Transformations during the Heat Treatment of Kaolinite : Evidence of Lattice Defects preceding (Dr. G. B. Mitra), 1794
Origin of the Methoxyl Groups in Spirilloxanthin—a Carotenoid synthesized by the Photosynthetic Bacterium *Rhodospirillum rubrum* (G. D. Braithwaite and Dr. T. W. Goodwin), 1304
Origin of Tektites (Prof. Harold C. Urey), 1078 ; (G. A. Eiby), 1298
Origin of Time-dependent Organization in a Micelle Series (T. Nash), 1536
Origin and Connexions of the Central Nutrient Mass in *Lumbricus* Spermatogenesis (Prof. J. Brontë Gatenby and Dr. A. J. Dalton), 886
Origins and Philosophy of Technology (Prof. W. H. G. Armytage), 1349

Orlans, E. S., and Jones, V. E. : Beta-Propiolactone as a Toxoiding Agent, 1216
Ormerod, Prof. F. C. : Modern Educational Treatment of Deafness, 919
Orogeny : Sedimentation and (Prof. J. H. Taylor), 91
Orotic Acid-^{14}C and Lysine-^{14}C : Incorporation of, in Regenerating Single Nerve Cells (S.-O. Brattgard, H. Hydén and J. Sjöstrand), 801
Orotidine-5$'$-phosphate and Uridine-5$'$-phosphate : Bacterial Preparation of (R. E. Handschumacher), 1090
ORR (Oak Ridge Research Reactor), 19
Orthoptera : European, *review* by Dr. David R. Ragge, 141
Orton, J. W., and others : Ions of the Transition Elements (Application of Paramagnetic Resonance Spectroscopy to Transition Metal Ions—Single Crystals of Magnesium Oxide which contain Iron Group Impurities), 1350
Ørvig, Dr. Tor : Fossil Vertebrates, *review*, 485
Oscillations (Secondary), in an Equatorial Atlantic Deep-Sea Core (Dr. J. D. H. Wiseman), 1534
Oscillo-polarography (variable Voltage), and Cyclic Voltammetry : Observation of Transient Intermediates in Redox Processes by (Prof. W. Kemula and Z. Kublik), 793
Oscinella frit L. : Effect of DDT on Egg-laying by (T. J. Legowski and H. J. Gould), 1682
Osmic Acid Stains : Removal of (I. A. Carr and Dr. P. Bacsich), 1108
Osmotic Membranes : A Method for Improving the Solute Selectivity of (M. F. Vaughan), 1730
Osorio, Carlos, and Myant, N. B. : Thyroxine-binding Protein in the Serum of Rabbit Foetuses, 866
Östlund, H. G., and others : Carbon-14 Activity during the Past 5,000 Years, 1432
Ostrowski, W. (Skarzynski, Prof. B., and) : Incorporation of Radioactive Sulphur by *Thiobacillus thioparus*, 933
O'Sullivan, Dr. D. G., and others: New Potent Reactivators of Acetocholinesterase inhibited by Tetraethyl Pyrophosphate, 1498
Oswald, Dr. Felix : *Obituary* by Prof. H. H. Swinnerton, 1549
Oswatitsch, Dr. Klaus : Gas Dynamics (English version by Prof. Gustav Kuerti), *review* by E. P. Sutton, 76
Ôta, K., and Yokoyama, A. : Effect of Oxytocin Administration on Respiration of Lactating Mammary Gland Tissues in Rats, 1509
Othmer, Donald F. (edited by Kirk, Raymond E., and) : Encyclopedia of Chemical Technology, First Supplement Volume, *review* by Sir Alfred Egerton, 549
Otology : Alexander Pigott Wernher Memorial Travelling Fellowship in Ophthalmology and (Medical Research Council Award for 1958-59), 634
Otter, Dr. Irmgard K. H. : Swift Combustion of Organic Compounds for Analysis, 393
    Swift Dumas Nitrogen Estimation, 656
Otter : The Natural History of the (Marie N. Stephens), *review* by Richard Morse, 825
Outbreak of Subcutaneous Tumours in Rhesus Monkeys (Dr. W. G. C. Bearcroft and Dr. Margaret F. Jamieson), 195
Outside Broadcasts : A V.H.F. Television Link for (K. C. Quinton), 1490
Outstanding Natural Beauty' : New 'Area of, 917
Ovalbumin and Haemoglobin : Dissociation of Serological Complexes of, using Aqueous Carbon Dioxide (Dr. B. T. Tozer, K. A. Cammack and Dr. H. Smith), 668, *erratum*, 842
Ovarian Follicular Fluid (Human) : Concentration in the, of Radioactive Tracers and Drugs circulating in the Blood (Prof. Kurt N. von Kaulla, Jerry K. Aikawa and John D. Pettigrew), 1238
Overhauser Effect in Natural Crude Oil (Dr. Edward Poindexter), 1087
Overlapping Particles in Thermal Precipitator Samples : Counting Error due to (S. A. Roach), 134
Overpotential (Hydrogen), on Germanium Electrodes (V. R. Erdélyi and Mino Green), 1592
Overseas : Museums in the Commonwealth and, with special reference to the Training of Curators (Museums Association Discussion on), 503
Overseas Information Services (House of Lords Debate on), 570
Overseas Research Council, Commonwealth : Establishment of a, 1413
Overseas Visual Aids Centre, London, 497
Overvolted Uniform Field Spark Gaps : Observations on (K. R. Allen and K. Phillips), 1083
Owen, G. : Aspects of the Evolution of Form and Function in Molluscs, 997
Owen, J. : Science in the Use of Coal (Carbonization of Coal), 25
Owen, Dr. J. : Ions of the Transition Elements (Application of Paramagnetic Resonance Spectroscopy to Transition Metal Ions—The Use of Electron- and Nuclear-Resonance to Measure Electron Transfer), 1350
Owen, Dr. J. A., and others : Detection of Haemoglobin, Haemoglobin–Haptoglobin Complexes and other Substances with Peroxidase Activity after Zone Electrophoresis, 1373
Owens, M., and others : Auxins and their Effect on the Growth of Unicellular Algae—Ethanol as a Carbon Source for the Growth of *Chlorella vulgaris*, 1360
Oxford, Dr. A. E. (Bailey, Dr. R. W., and) : Pre-requisites for Dextran Production by *Streptococcus bovis*, 185
Oxidase (Cytochrome) : Reconstruction of the Reaction Mechanism of (Shigeki Takemori, Ichiro Sekuzu, Takashi Yonetani and Prof. Kazuo Okunuki), 1306
Oxidase (Diphosphopyridine Nucleotide) : A Reduced, in Lettuce Seeds (Dr. A. M. Mayer), 317
Oxidase (Purified Bovine Xanthine), in *C3H* and *C* Mice : Anti-Tumour and Biochemical Effects of (Prof. A. Haddow, Dr. G. de Lamirande, Prof. F. Bergel, Dr. R. C. Bray and D. A. Gilbert), 1144
Oxidase (Rat Liver 3-Hydroxyanthranilic-Acid) : Effect of Diphosphopyridine Nucleotide on the Inhibition of, by 2-Acetylaminofluorene and N-2-Fluorenyl-diacetamide (Prof. E. Quagliariello, S. Auricchio, E. Rinaldi and A. Rubino), 1744
Oxidation of Ethyl Alcohol to Acetic Acid by Proliferating Yeasts (Juan Santa María), 937
Oxidation of Ferrous Ion in Aqueous Solution by Atomic Hydrogen (Gideon Czapski and Prof. Gabriel Stein), 598
Oxidation Reaction highly Dependent on Pressure (N. J. M. Wilkins and J. N. Wanklyn), 653
Oxidative Metabolism of Polycyclic Hydrocarbons by Soil Pseudomonads (H. N. Fernley and Prof. W. C. Evans), 373
Oxidative Phosphorylation : Mechanism of (M. J. R. Dawkins, J. D. Judah and Dr. K. R. Rees), 875
Oxidative Phosphorylation of Wheat Leaves : Effect of Rust Infection on (B. I. Pozsár and Z. Király), 1686
Oxide (Colloidal Molybdenum), as Catalyst : Photosynthesis of Amino-Acids from Paraformaldehyde involving the Fixation of Nitrogen in the Presence of (K. Bahadur, S. Ranganayaki and Prof. L. Santamaria), 1668
Oxide (Nitric) : Effect of, on the Radiosensitivity of Tumour Cells (Dr. L. H. Gray, F. O. Green and C. A. Hawes), 952
Oxide (Nitrous) : Effect of, on the Radiosensitivity of Mouse Ehrlich Ascites Tumour (Dr. Michael Ebert and Mrs. Shirley Hornsey), 1240
Oxide Films (Surface), and the Breakaway Corrosion of Uranium (J. S. Llewelyn Leach), 1085
Oxide Powders ('Active' Ceramic) : Effect of Heat Treatment on the Sintering of (D. T. Livey and Dr. P. Murray), 1362
Oxidizable Substrates : Dependence of Mitochondrial Swelling on (J. B. Chappell and G. D. Greville), 813
Oxidized Iodine in Sea Water (Ken Sugawara and Kikuo Terada), 250 ; (J. K. Johannesson), 251 ; (T. I. Shaw and Dr. L. H. N. Cooper), 251
Oximes of *bis*-Pyridinium Ions : Protection by, against Lethal Di*iso*propryl Phosphonofluoridate Poisoning (Dr. F. Hobbiger and Dr. P. W. Sadler), 1672
16-Oxooestrone : Metabolism of, by Human Liver Slices *in vitro* (Dr. H. Breuer and R. Knuppen), 1512
Oxo-Steroids : Isolation of, under Neutral Conditions (Dr. W. Taylor), 1735
Oxy-chlororaphin : Effect of, on the Growth *in vitro* of *Streptomyces* Species and some Pathogenic Fungi (G. Sierra and H. A. Veringa), 265
Oxygen : Effect of, on the Electron Spin Resonance Spectrum of α,α^1-Diphenyl-β-picrylhydrazyl (Dr. J. E. Bennett and E. J. H. Morgan), 199
Oxygen in Sodium Metal : Determination of Traces of, by Infra-red Spectrophotometry (H. J. de Bruin and L. E. Smythe), 387
O-Acetylhomoserine in *Pisum*, (New Hydroxyamino-Acids in Plants and their Identification), (Dr. N. Grobbelaar and Prof. F. C. Steward), 1358
O-Alkylation : Carcinogenic Activity and (Dr. R. Schoental), 719
Oxygen Consumption of the New-Born Pig : Change in, with a Fall of Environmental Temperature (Dr. L. E. Mount), 536
Oxygen Effect : Chromatid Breakage by Irradiation and the (Dr. G. J. Neary and Dr. H. J. Evans), 890
    Electron Spin Resonance in Carbons—a New (C. Jackson, Dr. H. Harker and Prof. W. F. K. Wynne-Jones), 1154
    An Observed, during Gamma-Irradiation of Dried Bacterial Spores (Alan Tallentire), 1024
Oxygen Tension : Critical Effect of, on Rate of Growth of Animal Cells in Continuous Suspended Culture (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Oxygen (Atomic) : The Electron Affinity of (Dr. L. M. Branscomb), 248 ; (Dr. D. F. C. Morris and H. N. Schmeising), 249
Oxygen (Liquid) : Survival of Intact Insects immersed in, without any Antifreeze Agent (Eizo Asahina and Kiyoshi Aoki), 327
Oxygen (Molecular) : Uptake of, by Ferrous Complexes (J. F. Drake and Dr. R. J. P. Williams), 1084
Oxygen Lines at 5577 A. and 6300 A. in the Night Sky : Relative Intensities of the (B. P. Sandford), 42
Oxygenes : Les Heterocycles (Colloques Internationaux du Centre National de la Recherche Scientifique, 64, Lyon 1955), *review* by Dr. F. G. Mann, 1762
Oxytocin Administration : Effect of, on Respiration of Lactating Mammary Gland Tissues in Rats (K. Ôta and A. Yokoyama), 1509
Oxytocins : Paper Chromatography of Small Amounts of Vasopressins and (Prof. H. Heller and K. Lederis), 1231
Ozanne, Peter G. : Chlorine Deficiency in Soils, 1172
Ozone : Influence of Water on the Photolytic Decomposition of (W. D. McGrath and Prof. R. G. W. Norrish), 235

*p*K*a* and Uricosuric Activity in Phenylbutazone Analogues : Relationship between (J. J. Burns, T. F. Yü, Peter Dayton, Lawrence Berger, Alexander B. Gutman and Bernard B. Brodie), 1162
Pacific : Concept of the (Annual Report for 1957 of the Bernice P. Bishop Museum), 1642
    Easter Island, a Stone-Age Civilization of the (Dr. Alfred Metraux), translated from the French by Michael Bullock, *review* by Prof. Raymond Firth, 280
Pacific (North-East Tropical) : Nitrite Accumulation in the (Wilhelm Brandhorst), 679
Pacific (South) : Social Change in the—Rarotonga and Aitutaki (Prof. Ernest Beaglehole), *review* by Prof. Raymond Firth, 280
Pacific Equatorial Undercurrent : Observations of the (John A. Knauss and Joseph E. King), 601
Packer, Prof. J., and Vaughan, J. : A Modern Approach to Organic Chemistry, *review* by Dr. W. A. Waters, 1114
Paddy Soils : Inhibition of Sulphate Reduction in (R. Vámos), 1688
Paerels, G. B. (Brug, Dr. J., and) : Configuration of N-Acetylneuraminic Acid, 1159
Page, F. J. Taylor (Compiled and edited by) : Field Guide to British Deer, *review* by Richard Morse, 825
Paget, Dr. G. E., and Walpole, Dr. A. L. : Some Cytological Effects of Griseofulvin, 1320
Pain (Heat-) : Spatial Summation for (Prof. K. R. L. Hall), 307, 876
Painter, A. C. (compiled by Andrews, Dr. F. W., and) : Abstracts and Index to the Annual Research Reports of the Kent Incorporated Society for Promoting Experiments in Horticulture, 1913-1953 (East Malling Research Station), 499
Palaeontological Association : Discussion on Micro-palaeontology, 1554
Palaeontological Association, in conjunction with the Geological Survey and Museum : Exhibition on Palaeontology and Evolution, 22
Paléontologie : Traité de (publié sous la direction de Prof. J. Piveteau), Tome 6, Mammifères, évolution ; l'Origin des Mammifères et les aspects fondamentaux de leur évolution, *review* by Dr. P. M. Butler, 899
Palaeontology and Evolution (Palaeontological Association in conjunction with the Geological Survey and Museum Exhibition on), 22

Palevsky, H. : At the Ninth General Physics Conference of the Swedish National Committee for Physics (Use of Cold Neutrons to investigate the Solid State), 698
Palissy, Bernard : The Admirable Discourses of (translated by Aurèle La Rocque), *review* by Dr. F. J. North, 754
Palm (Oil), *Elaesis guineensis* (Jacq.) : Factors controlling Seed Germination in the West African (G. Hussey), 699
  Field Observations of Midday Closure of Stomata in the (A. R. Rees), 735
Palm Seedlings (Oil) : Symptoms of Calcium and Phosphorus Deficiency in (R. A. Bull), 1749
Palmer, Dr. C. G., and others : Possible Use of Synthetic Surface-active Agents for the Preparation of Tumour Cell Nuclei, 529
Palomar Observatories (Mount Wilson and) : Retirement of Dr. Walter Baade from the staff of, 225
Panama Disease Infections : Role of Root Injury in (Dr. Luis Sequeira, Dr. Taylor A. Steeves, Margaret W. Steeves and Dr. Joseph M. Riedhart), 309
Panchet Series of West Bengal : Some New Vertebrate Fossils from the (Dr. Pamela Lamplugh Robinson), 1722
Pancreas (Beef) : Pancrinogen, a New Zymogen of Proteolytic Enzyme from (Masami Soejima and Kensuke Shimura), 49
Pancreatic Deoxyribonuclease : Inhibition of, by Acidic Polymers (Dr. Hans Heymann, Z. R. Gulick and R. L. Mayer), 1234
Pancrinogen, a New Zymogen of Proteolytic Enzyme from Beef Pancreas (Masami Soejima and Kensuke Shimura), 49
Paneth, Prof. F. A. : *Obituary* by G. R. Martin, 1274
  Obituary by Prof. H. Dingle, 1773
Pantin, Dr. C. F. A. : Plaque commemorating the centenary of the reading of the joint communication by Charles Darwin and Alfred Wallace on their theory of evolution by natural selection unveiled by, in the meeting room of the Linnean Society, 19
Panting and Sweating Animals : Heat, Salt and Hormones in (Prof. W. V. Macfarlane, Kathleen Robinson, Beth Howard and Rosemary Kinne), 672
Papain : Degradation of Blood-Group Specific Mucopolysaccharides by Ficin and (A. Pusztai and Prof. W. T. J. Morgan), 648
Paper as a Carrier of Chromium Sesquioxide (J. L. Corbett, J. F. D. Greenhalgh and A. P. MacDonald), 1014
Paper Chromatographic Procedure (A Rapid), for the Quantitative Determination of Hydroxyproline (Henry Roberts, Michael G. Kolor and Wesley Bucek), 1602
Paper Chromatography : Determination of Strychnine in Nux Vomica by (G. P. Briner), 742
  Separation of Glucose-l-Phosphate and Glucose-6-Phosphate by (F. E. G. Harrap), 876
  Separation and Determination of the Dissociation Constants of Chelidonine and Protopine by (Dr. Wanda Debska), 666
  Shape of Spot and Rate of Sorption in (W. G. Kauman and Thor A. Bak), 743
  Tritium and (Dr. A. T. Wilson), 524
Paper Chromatography of Small Amounts of Vasopressins and Oxytocins (Prof. H. Heller and K. Lederis), 1231
Paper Chromatography of Urinary Indole and Phenol Acids : Effect of Atmospheric Contaminants on (K. N. F. Shaw and J. Trevarthen), 664
Paper Chromatography Method for the Determination of Suitable *p*H Values for the Extraction of Antibiotics (Vladimír Betina), 796
Paper Chromatography (Circular) : A Simple, Rapid Method for (Dr. A. J. Philippu), 1159
Paper Electrophoresis ('Crossing'), for the Detection of Immune Reactions (Prof. S. Nakamura and T. Ueta), 875 ; *erratum*, 1063
Paper Ionophoresis of Bile Salts : Moving Acid Boundary (*p*H Gradient), (Thomas Briggs, Dr. Michael W. Whitehouse and Dr. Ezra Staple), 394
Papineau-Couture, G., and others : Isolation of $\Delta^{3,7,9}$-Œstratrienol-3-one-17 from the Urine of Pregnant Mares, 1308
Papua : The Great Village, the Economic and Social Welfare of Hanuabada, an Urban Community in (Prof. Cyril S. Belshaw), *review* by G. K. Roth, 6
Parabionts (Separated Rat) : Tolerance of Skin Homografts related to Fatal Disease in (Dr. B. Nakič and V. Silobrčić), 264
Paradox of Discontinuous Respiration in Insects : An Experimental Solution to the (Robert I. Levy and Dr. Howard A. Schneiderman), 491
Paraffins (Normal), in Petroleum Fractions : Use of Molecular Sieves in Gas Chromatography for the Determination of the (B. T. Whitham), 391
Paraformaldehyde : Photosynthesis of Amino-Acids from, involving the Fixation of Nitrogen in the Presence of Colloidal Molybdenum Oxide as Catalyst (K. Bahadur, S. Ranganayaki and Prof. L. Santamaria), 1668
Parallel Sections (Thin Plane), of Mineralized Specimens : A New Method for obtaining (Dr. O. Hallén and Dr. H. Röckert), 1225
Parapsychology—Frontier Science of the Mind (Prof. J. B. Rhine and J. G. Pratt), *review* by Dr. E. J. Dingwall, 143
Parapsychology Today, *review* by Dr. E. J. Dingwall, 143
Parasite (Host—) Relationships (British Association for the Advancement of Science, Section M (Agriculture), Discussion on), 1352
Parasites : Malaysian, 16-34 (edited by J. R. Audy), *review* by P. J. Mattingly, 9
Parasite's Schizogony and its Transmission by the Mite *Dermanyssus gallinae* : Some Observations on the Life-Cycle of *Atoxoplasma*, with particular reference to the (Dr. R. Lainson), 1250
Parasitic Copepod *Lernaeenicus* : Heavy Infestation by the, of Sprats in the River Crouch (Dr. J. P. Harding and A. C. Wheeler), 542
Parasitology (Entomology and), at Liverpool, 358
Parathyroid Extract : Increased Survival of Rats irradiated with X-Rays and Treated with (R. H. Rixon, J. F. Whitfield and T. Youdale), 1374
Paratose : Synthesis of 3,6-Dideoxy-D-*ribo*-hexose (3,6-Dideoxy-D-glucose) and its Identification with (C. Fouquey, J. Polonsky, Dr. E. Lederer, O. Westphal and O. Lüderitz), 944
Parchment : Follicle Arrangement in Skin from Wild Sheep, Primitive Domestic Sheep and in (Dr. M. L. Ryder), 781
Parentage in Cattle : Serological Test for Determination of (Dr. J. Rapacz and Dr. S. Dubiski), 1176
Parenti, M. A., and others : Diuretic Activity of Chlorothiazide Derivatives, 1510
Parexic Analyst : The, *review* by Prof. T. A. A. Broadbent, 1401
Parish, D. J. : Appointed a lecturer in pathology at the University of Birmingham, 990
Parity : Physics of Quanta and (British Association for the Advancement of Science, Section A (Mathematics and Physics), Discussion on), 1119
Pařízek, Dr. J., and others : Deoxycytidine in Urine as an Indicator of Changes after Irradiation, 721
Park, Dr. D. : Ecology of Soil Fungi, 1559
Parker, Dr. C. A. : Wave-length Effect in Flash Photolysis, 130
  Photo-reduction of Methylene Blue and Thionine by Ferrous Sulphate using Flash Irradiation, 245
  Promoted to Senior Principal Scientific Officer in the Scientific Civil Service, 992 ; work of, 992
  Direct Recording of Fluorescence Excitation Spectra, 1002
Parker, Johnson : Sol-Gel Transitions in the Living Cells of Conifers and their relation to Resistance to Cold, 1815
Parkes, Dr. A. S. : Some Biological Effects of Low Temperatures (Presidential Address to Section D (Zoology) of the British Association for the Advancement of Science), 581
Parkes, Dr. A. S., and Smith, Dr. Audrey U. : Space Medicine (Transport in Space of Life in the Dried or Frozen State), 1646
Parkin, P. H., and Humphreys, R. H. : Acoustics, Noise and Buildings, *review* by T. Somerville, 1258
Parkinson, Dr. D. : Ecology of Soil Fungi, 1559
Parks (National), of the Union of South Africa (Board of Trustees of the) : *Koedoe*, No. 1, 227
Parks Commission, National : Appointment of Prof. H. C. Darby as a member, 700
Parkyn, D. G. : Effect of Air Drag on the Orbit of an Earth Satellite, 787
Parnas, Prof. Jósef, and others : Antibrucella Phage, 1610
Parotid Glands in a Sheep : Comparison of the Salivary Secretion of both (M. Somers), 400
Parratt, M. E. M. L., and others : Mechanical Properties of Whiskers and Thin Films (Size, Strength and Structure in Glass), 297
Parrotfishes : Review of the (L. P. Schultz), 1415
Parry, D. Wynn, and Smithson, Frank : Silicification of Branched Cells in the Leaves of *Nardus stricta* L., 1460
Parry, J. V. L., and others : Comparison of Caesium Frequency Standards of Different Construction, 41
Parsons, P. A. : Competition between Genotypes in *Drosophila melanogaster*, 271
  Genetical Interference in *Drosophila* spp., 1816
Parsons, Dr. R. : Charge Transfer Processes (The Double-Layer and Adsorption at Electrodes—A General Thermodynamic Analysis for the Determination of Heats of Adsorption in Ionic Systems by Electrocapillary Studies), 1355
Parsons, Dr. R., and others : Nucleotide Pool of Brewers' Yeast during Growth and Fermentation, 1565
Parsons Scholarship in Marine Engineering (Institution of Naval Architects), 1554
Partanen, Carl R., and Gifford, jun., Ernest M. : Application of Autoradiographic Techniques to Studies of Shoot Apices, 1747
Parthasarathy, N. V., and Sanghi, Dr. Indra : A Simple Technique for the Calibration of the Wave-length Scale of Spectrophotometers, 44
Parthasarathy, Dr. S., and Tipnis, C. B. : Diffraction of Light by Ultrasonic Waves—Oblique Incidences, 1083
  Diffraction of Light by Ultrasonic Waves, Oblique Incidence and Sound Intensity, 1795
Partial Differential Equations : Elements of (Prof. Ian N. Sneddon), *review* by Prof. T. A. A. Broadbent, 902
Particle Penetration Depths in a Filter : A Method for Determination of (Jan Sisefsky), 1437
Particles Bombarding the Earth : Energy Spectrum of (B. J. O'Brien), 521
Particles (10^5) : Air Showers of Size Greater than, 1, Core Location and Shower Size Determination (M. H. Brennan, Dr. D. D. Millar and C. S. Wallace), 905 ; 2, Cerenkov Radiation accompanying the Showers (M. H. Brennan, J. Malos, Dr. D. D. Millar and C. S. Wallace), 973 ; 3, Comparison between the Response of Geiger Counters and Scintillation Counters (M. H. Brennan, Dr. D. D. Millar, M. H. Rathgeber and C. S. Wallace), 1053 ; 4, The Distribution of Nuclear-active Particles and of Mu-Mesons (J. A. Lehane, Dr. D. D. Millar and M. H. Rathgeber), 1699
Particles (High-Energy) : Contribution of, to Thermonuclear Reaction Rates (Dr. G. Eder and Dr. H. Motz), 1140
Particles (High-energy Nuclear) : Research on (Grant of 450,000 dollars from the United States National Science Foundation to the University of Chicago for) 916
Particles (Intracellular), of Locust Fat Body (M. L. Fenwick), 607
Particles (Overlapping), in Thermal Precipitator Samples : Counting Error due to (S. A. Roach), 134
Particles (Ribonucleoprotein), from *Escherichia coli* (Dr. A. Tissières and Dr. J. D. Watson), 778
Particles (Small) : An Apparatus for Microelectrophoresis of (Dr. A. D. Bangham, R. Flemans, Dr. Dorothy H. Heard and G. V. F. Seaman), 642
  Light Scattering by (Dr. H. C. van de Hulst), *review* by James Paton, 1470
  The Scattering of Light by, *review* by James Paton, 1470
Particulate Clouds—Dusts, Smokes and Mists, their Physics and Physical Chemistry and Industrial and Environmental Aspects (H. L. Green and W. R. Lane), *review* by R. L. Brown, 682
Partition of Proteins in Liquid Polymer–Polymer Two-Phase Systems (Dr. Per-Åke Albertsson), 709, *erratum*, 918
Partitions : Tables of (initiated and computed by Hansraj Gupta ; computed independently by C. E. Gwyther and J. C. P. Miller), *review* by Dr. J. A. Todd, 1046
Partnership : Science and Business—a Balanced (Sir Alexander Fleck), 573
Partnership in Education (Dr. B. E. Lawrence), 1777
Partnership in Education : Policy, Purpose and, 749
Partnership between Industry and Education (Sir Willis Jackson), 585
Pascoe, K. J. : Engineering Materials, Machine Tools and Processes, *review*, 8
Pashley, D. W. : Mechanical Properties of Whiskers and Thin Films (Tensile Deformation of Single-crystal Films of Gold), 298
Pasqualino, Dr. Antonio, and Bourne, Prof. Geoffrey H. : Histochemical Changes in Kidneys and Adrenals of Rats made Hypertensive by the Goldblatt Method, 1426

Pasquill, Dr. F. : Atmospheric Diffusion and Air Pollution, 1134
Pass (Low-) Filter : The Design of a Linear Phase-Shift (L. E. Weaver), 1490
Passage of Dye-labelled Protein from Plasma to Lymph : Effect of Hyaluronidase on Capillary Permeability, Lymph Flow and (Dr. G. Szabó and S. Magyar), 377
Passer domesticus : Photoperiodic Response of the House Sparrow (Dr. I. T. Threadgold), 407
Passmore, R. G. (Coaker, T. H., and) : *Stomoxys* sp. on Cattle in Uganda, 606
Pasture Growth : Significance of Leaf Area in (C. M. Donald and J. N. Black), 707
Pastures (Red Clover (*Trifolium pratense*)) : Reproductive Disturbances of Romney Ewe Lambs grazed on (T. S. Ch'ang), 1175
Patents : Atomic Energy, 1276
Pathogenic Bacteria : A Simple Technique for Inoculating, on Susceptible Plant Leaves (M. A. Nour and J. J. Nour), 96
Pathogenic Fungi : Effect of Oxy-chlororaphin on the Growth *in vitro* of *Streptomyces* Species and some (G. Sierra and H. A. Veringa), 265
Pathogenic Strain of *Fusarium oxysporum* f. *lycopersici* : Absence of Pectolytic Enzymes in a (Dr. K. McDonnell), 1025
Pathogens (Plant): 'Karathane'—the Relative Importance of the Phenolic and Unsaturated Acid Components in Toxicity towards certain (Dr. A. H. M. Kirby and E. L. Frick), 1445
Pathology (Chemical), of the Nervous System (Third International Neurochemical Symposium), 229, 1646
Patients with Klinefelter's Syndrome : Colour Vision Studies and the X-Chromosome Constitution of (Dr. P. E. Polani, Dr. P. M. F. Bishop, Dr. B. Lennox, Dr. M. A. Ferguson-Smith, Dr. J. S. S. Stewart and Dr. A. Prader), 1092
Paton, James : The Scattering of Light by Small Particles, *review*, 1470
  Reorganization of the Meteorological Office, 1711
Paton, Jean A. (Crombie, W. Mary, and) : An Age Effect on Seta Elongation in *Pellia epiphylla*, 541
Paton, Prof. W. D. M., and Zaimis, Prof. Eleanor: Awarded 5,000 dollars by the Gairdner Foundation, 1710
Patrick, Dr. A. D. (Barlow, G. B., and) : Uptake and Utilization of DL-[2-^{14}C] Mevalonic Acid by *Hevea brasiliensis*, 662
Patrick, Z. A., and Koch, L. W. : Effects of Plant Decomposition Products in the Soil, 1717
Patterns (Agar Electrophoretic), of Red Blood Cell Proteins (Prof. K. V. Giri, G. J. Sathyanarayana Rao and S. Natarajan), 184
Patterson, Austin M., and others : A Guide to the Literature of Chemistry, second edition, *review* by R. Brightman, 8
Pattisson, P. R. M. : Reactions of *Gammarus* sp. to Water Currents, 563
Paul, Dr. J. : Establishment of Permanent Cell Strains from Human Adult Peripheral Blood, 808
Paul, Dr. J., and others : Representation of the X Chromosome in Intermitotic Nuclei in Man, 124
Paul Instrument Fund Committee : Grant of £285 to Dr. J. W. Jeffery, to carry out crystal structure determination by X-ray diffraction, 432
  Grant of £2,000 to Prof. J. D. McGee, to construct a television system for X-ray image intensification, 432
  Grant of £11,000 to Dr. V. E. Cosslett, for the further development and improvement of the X-ray microscope, 432
  Grant of £3,835 to Prof. A. L. Cullen, for the construction of a detector in which radiation pressure is used to convert a microwave signal to an audio or intermediate frequency, 1643
  Grant of £545 to Dr. R. Feinberg, for the construction of an instrument for measuring the intensity of soft X-radiation generated in experimental high-voltage valves, 1643
  Grant of £1,000 to R. M. Sillito, for the development of a thirty-channel pulse-height analyser, 1643
Pauling, Prof. Linus : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
  Resignation as chairman of the Division of Chemistry and Chemical Engineering at the California Institute of Technology, 428; work of, 428
  Theoretical Organic Chemistry (Nature of the Double Bond and of Conjugated and Aromatic Molecules), 1341
Pauling, Peter : Applications of Crystallography to Chemistry (A Rebirth of Inorganic Crystallography), 915
Pauling, Peter, and others : Stereochemistry of Complex Halides of the Transition Metals, 168
Pautard, Dr. F. G. E. : The Fundamental Molecular Event in Muscular Contraction, 788
Pavlović, Miroslava R. (Martinovitch, Dr. Petar N., and) : Transplantation of the Forebrain Region in Bird Embryos before the Establishment of a Circulation—Homoplastic Transplants, 571
Pavlovsky, E. N. : At the fifteenth International Congress of Zoology (Some Modes of Evolution of Infections and Parasitic Diseases), 435
Pea Assay (Dwarf) : A Colorimetric Test for Gibberellic Acid and Evidence from a, for the Occurrence of a Gibberellin-like Substance in Wheat Seedlings (G. M. Simpson), 528
Pea Stem : Effect of Gibberellin on the Extensibility of the (S. Yoda and J. Ashida), 879
Peabody, Frank E., and others : Revision of the Gymnarthridae American Permian Microsaurs, *review* by Dr. W. E. Swinton, 1115
Peabody Museum of Natural History : Bulletin 10, Revision of the Gymnarthridae American Permian Microsaurs (Joseph T. Gregory, Frank E. Peabody and Llewellyn I. Price), *review* by Dr. W. E. Swinton, 1115
Peace (World), through World Law (Grenville Clark and Prof. Louis B. Sohn), 966
Peaceful Use for Plutonium : Calibration of a Calorimeter—a Minor (Lord Rothschild), 789
Peaceful Uses of Atomic Energy : Symposium in Australia, 1958 (Prof. J. P. Baxter and C. N. Watson-Munro), 217
  United Nations Conference at Geneva (Sir John Cockcroft), 903 ; (Dr. R. S. Pease), 1051
  Geneva Series on the—Nuclear Radiation in Food and Agriculture (edited by Prof. W. Ralph Singleton), *review* by Dr. Lorna J. Lilly, 758
  Second United Nations International Conference on the (Publication of volumes dealing with the American participation), 113
  Second United Nations International Conference on the—Sessions on Isotopes and Biology, 1118
  Second United Nations International Conference on the —Session on Health and Safety in the Field of Nuclear Energy, 1262
  Extension of the pre-publication period for the Proceedings of the second United Nations International Conference on the, 1416
Peacock, Prof. R. D., and others : Some Complex Cyanides of Rhenium, 393
  Ions of the Transition Elements (Magnetic Properties—Magnetic Susceptibilities of some Complexes of Osmium, Ruthenium, Rhenium and Iridium over a Temperature Range), 1350
Peacock, T. E. : Awarded a general fellowship in chemistry (renewal) at the University College of North Staffordshire by the Ramsay Memorial Fellowships Trustees, 432
Peaker, Dr. F. W., and Robb, Prof. J. C. : A New Method of Fractionating High Polymers, 1591
Peaks (Absorption), in Thin Metal Films : Calculation of (Robert M. Hill), 1150
Pear in England : Fire-blight of (J. E. Crosse, Margery Bennett and Constance M. E. Garrett), 1530
Pearce, Dr. J. G. : Awarded the Bronze Medal of the Worshipful Company of Founders, 1777
Pearce, R. H. : Chemistry of Plant Products (Application of Solvent Extraction and Chromatography to the separation of fractions of *Xanthorrhoea* Resins), 299
Pearsall, Prof. W. H. : The Statistical Description of Vegetation, *review*, 347
  Conservation of Natural Resources, 1405
Peas : Gibberellic Acid and the Physiological Genetics of Flowering in (Prof. H. N. Barber, W. D. Jackson, I. C. Murfet and J. I. Sprent), 1321
Pease, Dr. R. S. : Controlled Nuclear Fusion Reactions, 1051
Peat : Thermogravimetric Investigations of (J. A. Waddams and P. S. Gray), 1729
Peate, Dr. Iorwerth C. : The Study of Folk Life and its part in the Defence of Civilization (Presidential Address to Section H (Anthropology and Archaeology) of the British Association for the Advancement of Science), 583
Pebbles marked with the Radioactive Isotope Barium-140—Lanthanum-140 : Tracing the Movement of (C. Kidson, A. P. Carr and D. B. Smith), 1347
Pectolytic Enzymes : Absence of, in a Pathogenic Strain of *Fusarium oxysporum* f. *lycopersici* (Dr. K. McDonnell), 1025
Peers, Prof. Robert : Adult Education, *review* by T. H. Hawkins, 1041
Peiser, H. S. : Free Radical Stabilization, 1498
Pekkarinen, A. : Biochemical Response to Physical Injury (The Effect of Operation and Physical Injury on the Adrenal Glands and the Vegetative Nervous System in Man), 1495
Pelagic Polychaetes in the South Atlantic Ocean : Distribution of (Norman Tebble), 166
Peleška, M., and others : Dependence on Age of the Diameter of the Pupil in the Dark, 1520
Pelican : The (Ernest Neal), *review* by Richard Morse, 825
Pelletier, Prof. R.-L. (Jain, A. C., and) : Effects of Rust Infection on the Carbohydrate Metabolism of Wheat Seedlings, 882
Pellia epiphylla : An Age Effect on Seta Elongation in (W. Mary Crombie and Jean A. Paton), 541
Pembrey, R. G. : Survey of Vegetation of a Valley, 500
Pena, Dr. Diaz : Awarded a Spanish fellowship in chemistry (renewal) at the University of Reading by the Ramsay Memorial Fellowships Trustees, 432
Penar, B., and others : Experimental Chemotherapy of Tumours with Hydrogen Peroxide, 395
Penetration Depths (Particle), in a Filter : A Method for Determination of (Jan Sisefsky), 1437
Penfield, Prof. W. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Penguin (Emperor) Rookeries in Antarctica during 1954-57 : Australian Discoveries of (Dr. Richard L. Willing), 1393
Penguins (Emperor) : Feeding Habits of (Dr. Richard L. Willing), 194
Penicillium Species : Metabolism of Coumarin and related Compounds in Cultures of (David M. Bellis), 806
Penicillium roqueforti : Formation of Ketones from Fatty Acids by Spores of (R. F. Gehrig and Prof. S. G. Knight), 1237
Pennatularian Genus *Umbellula* (Prof. Hjalmar Broch), 267
Pennycuick, Dr. K. : Operational Research, *review*, 821
Penrose, Prof. L. S. : Cancer and Smoking, 1178
Pentapeptide L-Histidyl-L-Phenylalanyl-L-Arginyl-L-Tryptophenyl-Glycine and its Melanocyte-stimulating Activity : A New Synthesis of the (Dr. R. Schwyzer and Prof. Choh Hao Li), 1669
Pentazines : The 1,2,3- and 1,2,4-Triazines, Tetrazines and (John G. Erickson, Paul F. Wiley and V. P. Wystrach), *review* by Dr. F. G. Mann, 1762
Pentelow, F. T. K. : Effects of Pollution on Living Material (River Pollution), 1208
Peover, M. E. (Given, Dr. P. H., and) : Science in the Use of Coal (Physics and Chemistry of Coal), 24
  Anodic Reactions of Mercury with Halide Ions in Dimethylformamide, 1226
Peover, M. E., and others : Electron Resonance Study of the Radicals produced by Controlled Potential Electrolysis of Aromatic Substances, 1784
Perception and Communication (D. E. Broadbent), *review* by J. A. Deutsch, 1572
Perchlorate, an Important Constituent of Sea Water (L. G. M. Baas Becking, A. D. Haldane and David Izard), 645
Percival, Dr. E. : At the Third International Seaweed Symposium (Polysaccharides of *Acrosiphonia centralis*), 1780
Percival, J. C., and Thornton, Dr. R. H. : Relationship between the Presence of Fungal Spores and a Test for Hepatotoxic Grass, 1095
Perfect and Imperfect Density Dependence in Population Dynamics (Dr. A. Milne), 1251 ; (M. E. Solomon), 1252
Performances of Lenses for Television : New Equipment and Methods for the Evaluation of the (W. N. Sproson), 1490
Periodicals : New Psychological, 227
Periodicity (Lunar), of Aquatic Insects in Lake Victoria (Dr. Philip S. Corbet), 330
Peripheral Blood (Human Adult) : Establishment of Permanent Cell Strains from (Dr. John Paul), 808
Periplaneta americana : Spontaneous Electrical Activity in the Denervated Muscles of the Cockroach (Dr. R. Beránek and Dr. I. Novotny), 957
  A White-eyed Mutant Form of the American Cockroach (G. T. Jefferson), 892
Perkin Centenary Fellowship awarded to Dennis Balmforth, 295

Perkin Centenary Scholarships awarded to Brian Higginbottom and to W. K. McCourt, 295
Perkin Centenary Trust : Perkin Centenary Fellowship awarded to Dennis Balmforth, 295
  Perkin Centenary Scholarships awarded to Brian Higginbottom and to W. K. McCourt, 295
  Perkin Exchange Lectureship awarded to Prof. A. J. Birch, 295
  Awards for 1959-60, 295
Perkin Exchange Lectureship awarded to Prof. A. J. Birch, 295
Perkin (W. H.) and the Young Chair of Technical Chemistry in the Royal College of Science and Technology, Glasgow (R. Brightman), 613
Perkow, Dr. Werner : Die Insektizide, *review* by Prof. Wd. Eichler, 1578
Perlmann, P., and Hultin, T. : Autoradiographic Analysis on Agar Plates of Labelled Antigens from Rat Liver, 1530
Permanent Moisture Expansion of Clay Products on Autoclaving (Dr. J. S. Hocking and Dr. H. V. Hueber), 1142
Permeability (Capillary) : Effect of Total Body Irradiation on (Prof. G. Szabó, S. Magyar, P. Kertai and E. Zádory), 885
Permeability (Capillary), Lymph Flow and Passage of Dye-labelled Protein from Plasma to Lymph : Effect of Hyaluronidase on (Prof. G. Szabó and S. Magyar), 377
Permeability (Increased Capillary), in Thermal Burns in Rats : Experimental Suppression of (Dr. W. G. Spector and Dr. D. A. Willoughby), 949
Permeability (Mitochondrial Membrane) : Effect of Hydrocortisone on (Dr. C. H. Gallagher), 1315
Permeability Factors (Vascular), in the Secretion of the Guinea Pig Coagulating Gland (Jules Freund, and Prof. A. A. Miles, P. J. Mill and D. L. Wilhelm), 174
Permeability Minima in Low-Pressure Gas Flow through Porous Media : Evidence for (Dr. D. M. Grove and M. G. Ford), 999
Permeability Tensor for 'Ferroxcube' at 24,000 Mc./s. : Measurements of the (G. G. Robbrecht and J. L. Verhaeghe), 1080
Permeabilizing Effects of Heparin and Heparin-like Substances (Prof. V. Capraro, F. Marro and G. Valzelli), 603
Permanent Cell Strains from Human Adult Peripheral Blood : Establishment of (Dr. John Paul), 808
Permian Microsaurs : Revision of the Gymnarthridae American (Joseph T. Gregory, Frank E. Peabody and Llewellyn I. Price), *review* by Dr. W. E. Swinton, 1115
'Perminvar' : Direct Measurement of the Velocity of Propagation of a Ferromagnetic Domain Boundary in (Dr. E. W. Lee and D. R. Callaby), 254
Peroxidase Activity : Detection of Haemoglobin, Haemoglobin-Haptoglobin Complexes and other Substances with, after Zone Electrophoresis (Dr. J. A. Owen, H. J. Silberman and C. Got), 1373
Peroxide Accumulation Hypothesis of Isoniazid Action : Rejection of the (Dr. Frank Winder), 565
Peroxide (Hydrogen) : Effect of, on Transplanted Rat and Mouse Tumours (Dr. Kanematsu Sugiura), 1310
  Experimental Chemotherapy of Tumours with (Dr. M. Chorazy, A. Gettlich, L. Góral, B. Koloczek, E. Molawka, B. Penar and Z. Szweda), 395
Peroxide (Hydrogen) Ingestion and the Growth of Rats (Lester Hankin), 1453
Peroxide (Hydrogen), and Cancer (Dr. Grace M. Jeffree), 892
Peroxide Vapour (Hydrogen) : Thermal Decomposition of (Dr. D. E. Hoare, J. B. Protheroe and Prof. A. D. Walsh), 654
Perreira, H. C. : Conservation of Natural Resources, 1406
Perrin, Charles : Awarded the first prize in the 1958 *Endeavour* Essay Competition, 632
Perrin, D. D. : Stability of Metal Complexes with Salicylic Acid and related Substances, 741
Perrin, Prof. F. : Transfer of Light Energy and Photosensitization, 231
Perrott, Dr. Elizabeth : Isolation and Pure Culture of *Monoblepharis*, 1322
Perry, M. G. (Essenhigh, R. H., and) : Science in the Use of Coal (Combustion and Gasification), 25
Perry, M. G., and others: Science in the Use of Coal (Carbonization of Coal), 25
Persoff, D. A. : Movements of Potassium in Rabbit Auricles, 605
Personal Knowledge—Towards a Post-Critical Philosophy (Prof. Michael Polanyi), *review* by F. I. G. Rawlins, 757
Personnel Management, Institute of : Conference on the Individual and the Organization in Modern Society, 700, 918
Peru : Orchids of (Charles Schweinfurth), 500
Pests (Leaf-feeding Insect) : Effect of the Cotton Plant in the Sudan Gezira on certain (R. J. V. Joyce), 1463
Peters, Sir Rudolph : Appointed president of the International Council of Scientific Unions, 990, 1205
Petersen, H. Ingv. : Translocation of ^{14}C-labelled 2,4-Dichlorophenoxyacetic Acid in Barley and Oats, 1685
Peterson, R. G., and Joslyn, Prof. M. A. : Nature of Betanin, the Pigment of Red Beet, 45
Petroleum, Institute of, and the British Society of Rheology : Symposium on Accurate Measurement of the Viscosity of Liquids, 438
Petroleum Fractions : Use of Molecular Sieves in Gas Chromatography for the Determination of the Normal Paraffins in (B. T. Whitham), 391
Petromyzon planeri : Larval and Adult Haemoglobins of the Cyclostome (M. Adinolfi and G. Chieffi), 730
Petrov, N. : Progress in Cancer Research (Ionizing Radiations), 364
Petrunkevitch, Alexander : Amber Spiders in European Collections, *review* by T. H. Savory, 1588
Petterssen, Prof. Sverre : Introduction to Meteorology, second edition, *review* by Dr. R. C. Sutcliffe, 1599
Pettersson, Dr. M. L. R. : The Background to Specialist Technological Education, 503
Pettersson, Dr. M. L. R., and Gray, G. E. J. : Further Inherent Characters of Plant Species of Wetter and Drier Habitats, 450
Pettigrew, John D., and others : Concentration in the Human Ovarian Follicular Fluid of Radioactive Tracers and Drugs circulating in the Blood, 1238
Peuss, Dr. H. : Ecology of Soil Fungi, 1559
Pewe, Dr. T. : Antarctic Research (Special Investigations in Glaciology), 286
Pexton, A. F. : Awarded a James Clayton Fellowship by the Institution of Mechanical Engineers, 433
*p*H : The Book of (R. B. Webber), *review* by Prof. H. T. S. Britton, 1258
*p*H (Abnormally Low Ultimate), in Pig Muscle (R. A. Lawrie, D. P. Gatherum and H. P. Hale), 807
*p*H Applications : A Dictionary of (R. S. Evans), *review* by Prof. H. T. S. Britton, 1258
*p*H Values for the Extraction of Antibiotics : A Paper Chromatography Method for the Determination of suitable (Vladimir Betina), 796
Phage : Anti-brucella (Prof. Jósef Parnas, A. Feltynowski and W. Bulikowski), 1610
Phage Chromosome : A Genetic Test for Side-chains in a (Myron Levine and Roy Curtiss, III), 126
Phage Colloquium : Second International, 1769
Phagocytic Activity of the Reticulo-Endothelial System : Effect of various Natural Steroids on the (Dr. D. L. J. Bilbey and Prof. T. Nicol), 674
  Effect of Splenectomy on the (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 534
  Substances depressing the (Prof. T. Nicol and Dr. D. L. J. Bilbey), 606
Phagocytosis and the Antigenic Structure of Bacteria (Prof. S. Slopek, A. Skurski, E. Michalska and L. Dabrowski), 1243
Pharmaceutical Conference, British : Chairman's Address (Dr. G. E. Foster), 995
Pharmaceutical Society of Great Britain : Presented with a portrait of the late Prof. John Attfield by his grandson, C. A. Brooks, 1130
Pharmacology : Biochemical, Vol. 1, No. 1, 1278
Pharmacopoeia : British, 1958, *review* by Dr. David Train, 279
  The Extra (Martindale), Vol. 1, twenty-fourth edition, *review* by Dr. David Train, 279
Pharmacopoeias and Formularies, *review* by Dr. David Train, 279
Pharmacy and Medicine : Modern Analytical Chemistry in the Service of (Dr. G. E. Foster), 995
Phase (A New), in a Complex Alloy Steel (G. T. Brown, R. T. Allsop and D. Wilkinson), 1437
Phase-Contrast Microscope : Ringed Appearance of Lipid Spheres under the (Brij L. Gupta), 537
Phase-Shift Low-Pass Filter : The Design of a Linear (L. E. Weaver), 1490
Phases (Different), of Tectonic Deformation in the Rhinns of Galloway (Dr. Maurits Lindström), 48
Phases (Light and Dark) : Separation of, in the Photosynthesis of Isolated Chloroplasts (Dr. Achim V. Trebst, Harry Y. Tsujimoto and Prof. Daniel I. Arnon), 351
Phenol Acids : Effect of Atmospheric Contaminants on Paper Chromatography of Urinary Indole and (K. N. F. Shaw and J. Trevarthen), 664
Phenol and Indole Acids (Urinary) : Exogenous Sources of (K. N. F. Shaw and J. Trevarthen), 797
Phenolic Compounds : Biosynthesis of, in Plants (Plant Phenolic Group Meeting on), 229
  Metabolism of, by the Broad Bean *Vicic faba* (Dr. J. B. Pridham), 795
Phenolic and Unsaturated Acid Components : 'Karathane'—the Relative Importance of the, in Toxicity towards certain Plant Pathogens (Dr. A. H. M. Kirby and E. L. Frick), 1445
Phenomena : Co-operative, *review* by Prof. E. C. Stoner, 547
  New Supersonic (Dr. Wladimir Philippoff), 1011
Phenomenology of Knowledge (The Philosophy of Symbolic Forms, by Ernst Cassirer, Vol. 3), translated by Ralph Manheim, *review* by F. I. G. Rawlins, 1586
Phenomenon (An Anodal Threshold), in the Squid Giant Axon (John R. Segal), 1370
Phenomenon (A New), of Electron Emission from Thin Mercury Films (Dr. H. von Bertele), 1148
Phenotypes (Further β-Globulin), in Sheep (Dr. G. C. Ashton), 1101
Phenotypic Variability within a Pure Line : Transmission of (Dr. H. R. Highkin), 1460
Phenylbutazone Analogues : Relationship between *p*K*a* and Uricosuric Activity in (J. J. Burns, T. F. Yü, Peter Dayton, Lawrence Berger, Alexander B. Gutman and Bernard B. Brodie), 1162
Phenylketonuria in the Rat associated with Decreased Temporal Discrimination Learning (Victor H. Auerbach, Prof. Harry A. Waisman and L. Benjamin Wyckoff, jun.), 871
Philippoff, Dr. Wladimir : New Supersonic Phenomena, 1011
Philippu, Dr. A. J.: A Simple, Rapid Method for Circular Paper Chromatography, 1159
Philips Gas Refrigerating Machine : New development of (Research and Control Instruments, Ltd.), 228
Phillips, Dr. D. C. : The International Science Hall at the Brussels Exhibition, 284
Phillips, J. W. (Dainton, A. D., and) : Science in the Use of Coal (Carbonization of Coal), 25
Phillips, K. (Allen, K. R., and) : Observations on Overvolted Uniform Field Spark Gaps, 1083
Phillips, R., and others : Transmission Electron Microscopy of Beryllium, 1660
Phillips, Rita J. S., and others : Genetic Hazard of Ionizing Radiations, 409
Phillips, W. R. : Awarded a Research Fellowship in nuclear physics for 1958-59 by the Department of Scientific and Industrial Research, 1063
Phillipson, Dr. A. T. (Benzie, David, and) : The Alimentary Tract of the Ruminant, *review* by Prof. A. Graham, 622
Phillis, J. W. (Curtis, Dr. D. R., and) : Gamma-Amino-*n*-Butyric Acid and Spinal Synaptic Transmission, 323
Philosophical Society, American : Proceedings, Vol. 101, No. 6, Dealing with Historical Documents, 20
  Transactions, New Series, Vol. 48, Part 1, The Mycenae Tablets II (edited by Emmett L. Bennett, Jr. ; translations and commentary by John Chadwick), 153
  Memoirs, Vol. 45, Population Redistribution and Economic Growth, United States, 1870-1950, I, Methodological Considerations and Reference Tables (Everett S. Lee, Ann Ratner Miller, Carol P. Brainerd and Richard A. Easterlin ; prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), *review*, 420
  Transactions, New Series, Vol. 48, Part 2, The Neolithic Age in Eastern Siberia (Henry N. Michael), 1061
  Transactions, New Series, Vol. 47, Part 3, Cultivation and Weaving of Cotton in the Prehistoric South-western United States (Kate Kent), 1775
Philosophy (Post-Critical) : Personal Knowledge—Towards a (Prof. Michael Polanyi), *review* by F. I. G. Rawlins, 757

Philosophy of Science and Technology : The History and (Electricity Council), 1349
Philosophy of Symbolic Forms (Ernst Cassirer), translated by Ralph Manheim, Vol. 1, Language ; Vol. 2, Mythical Thought ; Vol. 3, The Phenomenology of Knowledge, *review* by F. I. G. Rawlins, 1586
Philosophy of Technology : Origins and (Prof. W. H. G. Armytage), 1349
Philpot, Dr. J. St. L., and Stanier, Dr. J. E. : An Anticlumping Factor for Mitochondria in the Supernatant Fraction of Rat-Liver Homogenates, 1167
Phoniatrie, Société Française de, and others : International Colloquium on Communication and Language, 1644
Phosphatase (Acid), inhibited by (+)- Tartrate : Phylogenetic Distribution of (Dr. Grace S. Kilsheimer and Prof. B. Axelrod), 1733
Phosphatase (Seminal Acid) : Stable Test Papers for (S. S. Kind), 1372
Phosphatase Activity (Acid), of Rat Pituitaries : Influence of a Crude Hypothalamic Extract on the (Prof. J. Charvát, V. Schreiber and V. Kmentová), 62
Phosphate Donor in Muscular Contraction : Carnosine Phosphate as (D. F. Cain, Dr. A. M. Delluva and Prof. R. E. Davies), 720
Phosphate-dissolving and Acid-producing Bacteria in Soil : A Plate Method for Estimating the Numbers of (H. A. Louw and Dr. D. M. Webley), 1317
Phosphate (Carnosine), as Phosphate Donor in Muscular Contraction (D. F. Cain, Dr. A. M. Delluva and Prof. R. E. Davies), 720
Phosphate (Creatine) Level and Polarity of the Cerebral Cortex : Evidence for a Relation between (J. Křivánek, Dr. J. Bureš and O. Burešová), 1799
Phosphate (Tricalcium) : A New Form of (Dr. R. W. Nurse, J. H. Welch and W. Gutt), 1230
Phosphate Minerals : X-Ray Study of Rare (Dr. B. Mukherjee and U. Prasad), 472
Phosphates (Precipitated Apatitic) : Structure of (Dr. Claudine Fabry), 523
Phosphatic Band underlying Bauxite Deposits in Jamaica (Dr. V. A. Eyles), 1367
Phosphatidase-*A* : Protective Action of Venoms containing, against certain Bacterial Exotoxins (Dr. E. A. North and Hazel M. Doery), 1374
Phosphatidyl Serine and Blood Coagulation (Dr. P. Barkhan, Dr. M. J. Silver, Dr. P. B. da Costa and Dr. L. M. Tocantins), 1031
Phosphodiesterase (Micrococcal) : Action of, on Tobacco Mosaic Virus Nucleic Acid (K. K. Reddi), 1308
3-Phosphoglycerate in Higher Plants : Formation of Phosphoserine from (J. Hanford and Dr. D. D. Davies), 532
Phospholipid Synthesis : Vanadium Inhibition of, and Sulphydryl Activity in Rat Liver (Fred Snyder and Prof. W. E. Cornatzer), 462
Phospholipids : Complex (F. D. Collins), 865
Phospholipids (Mitochondrial) : *In vitro* Incorporation of Serine labelled with Carbon-14 into (Dr. G. Hübscher, Dr. R. R. Dils and Dr. W. F. R. Pover), 1806
Phosphorus-32 and Sulphur-35 : A Simple Autoradiographic Method for Distinguishing Insects labelled with (Dr. M. T. Gillies), 1683
Phosphorus (Inorganic), in the Presence of Glucose-1-phosphate and Adenosine Triphosphate : Colorimetric Determination of (Michinori Nakamura and Kenji Mori), 1441
Phosphorus (Radioactive), in Plants : Uptake and Translocation of (G. N. Thorne), 1775
Phosphorus Deficiency (Calcium and), in Oil Palm Seedlings : Symptoms of (R. A. Bull), 1749
Phosphorus Metabolism (Calcium and), after Surgery (K. W. Starr, K. N. Wynne and S. H. Chorlton), 1505
Phosphorylase (Polynucleotide) : Inhibition and Activation of, through the Formation of Complexes between Acridine Orange and Polynucleotides (Dr. Roland F. Beers, jun., and Dr. Daniel D. Hendley, and Dr. Robert F. Steiner), 242
Phosphorylation (Oxidative) : Mechanism of (M. J. R. Dawkins, J. D. Judah and Dr. K. R. Rees), 875
Phosphorylation (Oxidative), of Wheat Leaves : Effect of Rust Infection on (B. I. Pozsár and Z. Király), 1686
Phosphoserine : Formation of, from 3-Phosphoglycerate in Higher Plants (J. Hanford and Dr. D. D. Davies), 532
Photobiology Group : Meeting on Some Aspects of the Physiology of Vision, 634
Photochemical Reactions, 231
Photoconductivity of Caesium Plumbohalides : Crystal Structure and (Chr. Kn. Møller), 1436
Photoconductivity and Crystal Size in Evaporated Layers of Cadmium Sulphide (J. M. Gilles and J. Van Cakenberghe), 862
Photocycle: *Lolium temulentum* L., a Long-day Plant requiring only One Inductive (Dr. L. T. Evans), 197
Photoelectric Spectrometry Group : Meeting on Spectropolarimetry, 700
Photographic Emulsion Crystals : Mosaic Structure of (J. F. C. Boardman, Dr. R. H. Herz and G. C. Terry), 1726
Photographic Emulsions : Synthetic Polypeptide Substitutes for Gelatin in, and Observations on Gelation (Dr. H. W. Wood), 106
Photographic Photometry (Direct) : Application of, to Preparative Electrophoresis (Dr. N. Ressler), 463
Photographic Society, Royal : Christmas Lectures (Picture Making in Photography), 1554
Photographic Society, Royal (Scientific and Technical Group), and the Scientific Films Committee of the British Association : Presentation of Research Films at the Annual Meeting of the British Association, 1211
Photography : Picture Making in (Christmas Lectures of the Royal Photographic Society), 1554
  The Science of (Dr. H. Baines), *review* by C. O. Harvey, 1599
Photolysis (Flash) : Wave-length Effect in (Dr. C. A. Parker), 130 ; (Dr. K. Bridge and Prof. G. Porter), 130
Photolytic Decomposition of Ozone : Influence of Water on the (W. D. McGrath and Prof. R. G. W. Norrish), 235
Photometry (Direct Photographic) : Application of, to Preparative Electrophoresis (Dr. N. Ressler), 463
Photoperiod : Interaction of Gibberellic Acid and, on the Vegetative Growth of *Pinus elliottii* (Prof. Philippe F. Bourdeau, 118
Photoperiodic Induction of Flowering in Black-Currant (T. Nasr and Dr. P. F. Wareing), 269
Photoperiodic Reaction in Rice : Inheritance of (Prof. P. K. Sen and G. N. Mitra), 119
Photoperiodic Response of the House Sparrow, *Passer domesticus* (Dr. L. T. Threadgold), 407
Photo-reduction of Methylene Blue and Thionine by Ferrous Sulphate using Flash Irradiation (Dr. C. A. Parker), 245
Photosensitization : Transfer of Light Energy and (Society of Physical Chemists of France Symposium on), 231
Photosynthesis : Mechanism of Chlorophyll Action in (Wolf Vishniac and Irwin A. Rose), 1089
Photosynthesis of Amino-Acids (A. R. Deschreider), 528
Photosynthesis of Amino-Acids from Paraformaldehyde involving the Fixation of Nitrogen in the Presence of Colloidal Molybdenum Oxide as Catalyst (K. Bahadur, S. Ranganayaki and Prof. L. Santamaria), 1668
Photosynthesis in a Carotenoid-deficient Mutant of *Chlamydomonas* : Pigments and (Dr. Ruth Sager and Dr. Marko Zalokar), 98
Photosynthesis of Isolated Chloroplasts : Separation of Light and Dark Phases in the (Dr. Achim V. Trebst, Harry Y. Tsujimoto and Prof. Daniel I. Arnon), 351
Photosynthesis by Spinach Chloroplasts : Conversion of Carbon-14 Dioxide to Starch Glucose during (Prof. Martin Gibbs and Morris A. Cynkin), 1241
Photosynthetic Bacterium *Rhodospirillum rubrum* : Origin of the Methoxyl Groups in Spirilloxanthin—a Carotenoid synthesized by the (G. D. Braithwaite and Dr. T. W. Goodwin), 1304
Photovoltaic Pile (Dr. Irvin Levin), 44
Photo-voltaic *p–n* 'Sandwich' Layer : Bismuth–Tellurium (Tomasz Piwkowski), 1793
Phycological Bulletin, No. 6 (British Phycological Society), 1131
Phycological Publications : Recent, 1131
Phycological Society, British : *Phycological Bulletin*, No. 6, 1131
Phylogenetic Distribution of Acid Phosphatase inhibited by (+)-Tartrate (Dr. Grace S. Kilsheimer and Prof. B. Axelrod), 1733
Physarosterol, a New Sterol from a Slime Mould (Dr. C. F. Emanuel), 1234
Physical Chemistry at High Pressures, *review* by K. E. Bett, 75
Physical Chemists of France, Society of : Symposium on the Transfer of Light Energy and Photosensitization, 231
Physical Injury : Biochemical Response to (Council for the Organization of Medical Sciences, with the assistance of the Wellcome Trust and the International Union of Biochemistry Symposium on), 1493
Physical Methods in Organic Chemistry (Royal Society of Canada Symposium on), 701
Physical Optics : Geometrical and (Dr. R. S. Longhurst), *review* by G. R. Noakes, 348
Physical Reactivity of Liver and Brain Cortex Mitochondria (Prof. J. Gayet), 941
Physical Review Letters, Vol. 1, No. 1 (American Institute of Physics), 227
Physical Society : Conference on the Spectroscopy of Solids, 159
  Guthrie Lecture (Prof. W. E. Lamb), 160
  Conference on Cosmic Rays, 433, 1281
  Conference on Gas Discharges, 433
  Annual General Meeting (S. Weintroub), 850
  Winter Conference (Physics of the Solid State), 1133
  Conference on Problems of Collective Motion, 1554
Physical Society (Low Temperature Group) : Symposium on Measurements of Conduction at Low Temperatures, 83
  Institution of a Simon Memorial Prize, to be awarded for distinguished work in experimental or theoretical low-temperature physics, 1644
Physico-Chemical Effects of Pressure (Dr. S. D. Hamann), *review* by K. E. Bett, 75
Physics at the University College of Wales, Aberystwyth, 632
Physics : Prize of £150 for an academic work in Mathematics, Astronomy or (Artemis Press, Ltd.), 501
  Encyclopaedia of, *review* by Dr. E. Bretscher, 968
  Intermediate (Dr. C. J. Smith), fourth edition, *review* by G. R. Noakes, 622
  Microwave (British Association for the Advancement of Science, Section A (Mathematics and Physics), Discussion on), 1121
  Solid State—Conference in Brussels (Dr. P. T. Landsberg), 567
Physics : Health, Vol. 1, No. 1, 633
Physics, Institute of : Election of Officers, 88, 776
  Symposium on Nuclear Fuel Cycles, 565
  Thirty-eighth Annual Report (1957), 776
  Election of Sir Lawrence Bragg to Honorary Fellowship, 88, 777
  Conference on Some Aspects of Magnetism, 1710
Physics, Institute of (Electron Microscopy Group) : Symposium on Electron Staining, 771
Physics, Institute of (X-Ray Analysis and Electron Microscopy Groups) : Joint Conference on Precipitation in Alloys, 771
Physics, Institute of (X-Ray Diffraction Group) : Discussion on the Examination of Metals by X-Ray Diffraction, 771
Physics, American Institute of : *Physical Review Letters*, Vol. 1, No. 1, 227
Physics, Swedish National Committee for : Ninth General Physics Conference, 698
Physics of Ice Movement (Commission for Snow and Ice of the International Association of Scientific Hydrology Symposium on), 1560
Physics of Quanta and Parity (British Association for the Advancement of Science, Section A (Mathematics and Physics), Discussion on), 1119
Physics for Science and Engineering (Robert L. Weber, March W. White and Kenneth V. Manning), *review* by G. R. Noakes, 420
Physics of the Solid State (Physical Society Winter Conference on), 1133
Physics (Applied Electron), at the Imperial College of Science and Technology, 496
Physics (Biological and Medical) : Advances in (edited by John H. Lawrence and Cornelius A. Tobias), Vol. 5, *review* by Prof. J. A. V. Butler, 827
Physics (High-Energy Nuclear) : International Conference on (International Union of Pure and Applied Physics), 356
Physics (Mathematical) : The Hypercircle in (Prof. J. L. Synge), *review* by Prof. D. N. de G. Allen, 1695
Physics (Mathematical), and Technology : Integral Equations and their Applications to certain Problems in Mechanics, (S. G. Mikhlin), translated from the Russian by A. H. Armstrong, *review* by Prof. T. A. A. Broadbent, 1259
Physics (Modern), for School Science Teachers : Selected Lectures in (edited by Prof. H. Messel), *review* by G. R. Noakes, 623
Physics (Nuclear), and Atom Bombs, *review* by Sir John Cockcroft, 547
Physics (Plasma), and the Problems of Controlled Thermonuclear Reactions (edited by Leontovitch), 1053

Physics (Pure and Applied), International Union of : Annual International Conference on High-Energy Nuclear Physics, 356
Physics (Solid State) : Applications of Magnetic Resonance to (Radio Frequency Spectroscopy Group Conference on), 634
Physics (Theoretical), at Nottingham, 155
Physics and Chemistry of Carbon Surfaces (Fourth Biennial Conference on Carbon, at the University of Buffalo), 1488
Physik : Handbuch der (herausgegeben von S. Flügge), Band 17, Dielektrika ; Band 19, Elektrische Leitungsphänomene I ; Band 20, Elektrische Leitungsphänomene II, *review*, 73
  Band 40, Kernreaktionen I ; Band 42, Kernreaktionen III, *review* by Dr. E. Bretscher, 968
  Band 39, Bau der Atomkerne, *review* by Dr. E. Bretscher, 1333
  Band 47, Geophysik I ; Band 48, Geophysik II, *review* by Sir Edward Bullard, 1582
Physikalische Abhandlungen und Vorträge (Max Planck), *review* by Prof. W. Wilson, 820
Physiological Anticoagulating System : Existence and Significance of a (Prof. B. A. Kudrjashov and P. D. Ulytina), 397
Physiological Ecology, *review* by Dr. Kenneth Mellanby, 72
Physiological Genetics of Flowering in Peas : Gibberellic Acid and the (Prof. H. N. Barber, W. D. Jackson, I. C. Murfet and J. I. Sprent), 1321
Physiology at Aberdeen, 1773
Physiology at St. Bartholomew's Hospital Medical College, 1129
Physiology : Annual Review of (edited by Victor E. Hall, in association with Frederick A. Fuhrman and Arthur C. Giese), *review* by Prof. J. H. Gaddum, 901
  Cell (Prof. Arthur C. Giese), *review* by Prof. W. Stiles, 1577
  An Introduction to, *review* by Prof. W. Stiles, 1577
  Reproductive (Dr. A. V. Nalbandov), *review* by Dr. Kenneth Walker, 1573
  Tree, *review* by Dr. L. Leyton, 1698
Physiology as an Education and as a Career (British Association for the Advancement of Science, Sections I (Physiology and Biochemistry) and L (Education), Joint Discussion on), 1065
Physiology of Forest Trees—a Synposium held at the Harvard Forest, 1957 (edited by Prof. Kenneth V. Thimann, with the assistance of William B. Critchfield and Martin H. Zimmermann), *review* by Dr. L. Leyton, 1698
Physiology of the Nervous Control of Muscular Contraction : Comparative (Dr. Graham Hoyle), *review* by Dr. J. W. S. Pringle, 416
Physiology of Vision : Some Aspects of the (Photobiology Group Meeting on), 634
Physiology (Plant), Australian Society of : Inaugural Meeting, 1204
  Election of Officers, 1204
Physiology (Respiratory) : Standard Atmospheres in (Dr. R. H. Kay), 1032
Physique et Chimie (ouvrage édité a l'occasion du 75^{e} Anniversaire de l'École Supérieure de Physique et Chimie Industrielle de Paris), 840
Phytoalexin Output and the Number of Infections Involved : Relationship between (K. O. Müller), 167
Phytopathogenic Bacteria : Cellulolytic Activity of (Masao Goto and Norio Okabe), 1516
Pickard, Mrs. Hilda Grace : Legacy of £10,084 from the residuary estate of, to the University of Bristol, upon trust for the purpose of research into the alleviation of cancer, to be called the Pembery Research Trust, 1487
Pickering, D. C. (Lucas, J. W., and) : Direct Absorption of Dissolved Strontium-90 and Yttrium-90 by Tadpoles of *Rana temporaria*, 1242
Pickering, Sir George (Cook, W. F., and) : A Rapid Method for Separating Glomeruli from Rabbit Kidney, 1103
Pickersgill, Miss M. J., and Jeeves, M. A. : After-Effect of Movement produced by a Rotating Spiral, 1820
Pickford, Prof. R. W. : Some Problems of Colour Vision and Colour Blindness (Presidential Address to Section J (Psychology) of the British Association for the Advancement of Science), 584
a-Picoline : Occurrence of, in Plants (R. E. R. Grimmett and Dr. F. B. Shorland), 1734
Picture Making in Photography (Christmas Lectures of the Royal Photographic Society), 1554
Pig : Effect of Temperature on the Multiplication of Foot-and-Mouth Disease Virus in Suspensions of Kidney Cells of the (Dr. H. Subak Sharpe), 1803
  Enteroviruses in the (P. H. Lamont and Dr. A. O. Betts), 608
Pig (New-Born) : Change in Oxygen Consumption of the, with a Fall in Environmental Temperature (Dr. L. E. Mount), 536
Pig Muscle : Abnormally Low Ultimate *p*H in (R. A. Lawrie, D. P. Gatherum and H. P. Hale), 807
Pigford, Prof. Thomas H. (Benedict, Prof. Manson, and) : Nuclear Chemical Engineering, *review* by Prof. M. Murgatroyd, 489
Piggott, W. R. (Bellchambers, W. H., and) : Ionospheric Measurements made at Halley Bay, 1596
Pigment (Fluorescent), of *Microsporum* (Prof. Frederick T. Wolf, Ernest A. Jones and Helene A. Nathan), 475
Pigment (A Minor Anthocyanin), of Sweet Cherry (Dr. Kuang C. Li and Dr. A. C. Wagenknecht), 657
Pigment (A Water-soluble, Diffusible), produced by a Strain of *Serratia marcescens* (*Chromobacterium prodigiosum*), (Prof. R. P. Williams, W. W. Taylor, D. Hawkins, Jr., and I. L. Roth), 1028
Pigment (A Yellow Fluorescent), in Elastin (Dr. F. J. Loomeijer), 182
Pigment of Red Beet : Nature of Betanin, the (R. G. Peterson and Prof. M. A. Joslyn), 45 ; (Sir Robert Robinson), 46
Pigmentation and Sexuality in Plants (Dr. J. N. Hartshorne), 1382
Pigments present in Arms and Pinnules of the Crinoid, *Antedon bifida* (Pennant), (Miss E. J. Dimelow), 812
Pigments (Visual), in the Colour Blind (Dr. W. A. H. Rushton), 690
Pigments (Visual), of the Octopus and Cuttlefish (Paul K. Brown and Mrs. Patricia S. Brown), 1288
Pigments and Photosynthesis in a Carotenoid-deficient Mutant of *Chlamydomonas* (Dr. Ruth Sager and Dr. Marko Zalokar), 98
Pigmy Sperm Whale (*Kogia breviceps*) in Borneo (Tom Harrisson and George Jamuh), 543
Pigs (Bacon) : Effect of Maize on Fat Hardness and Growth-rate in (D. W. Duthie, A. F. Dent and H. P. Ledger), 953
Pihl, Dr. A., and others : Alleged Susceptibility of Sulphydryl Enzymes to Ionizing Radiation, 1732
Pile : Photovoltaic (Dr. Irvin Levin), 44
Pilgeram, Dr. L. O. : Awarded a Ciba Foundation Award for 1958 for Research in Ageing, 19
Pilots : Air Flow over Mountains—Notes for Forecasters and (G. A. Corby), 94
Pinchin, F. J. (Bond, R. L., and) : Formation of Carbon by Decomposition of Carbon Suboxide at 750-780°C., 129
Pine : Terpene Formation in, from Mevalonic Acid (Robert G. Stanley), 738
Pine (Klinki), *Araucaria klinkii* Lauterbach : Extractives from (W. E. Hillis and Ann Carle), 1593
Pine Pollen (Germinating), *Pinus ponderosa* : Carbon Dioxide Fixation in (R. G. Stanley, L. C. T. Young and J. S. D. Graham), 1462
Pinnules of the Crinoid, *Antedon bifida* (Pennant) : Pigments present in Arms and (Miss E. J. Dimelow), 812
Pinson, J. T., and others : Radio Observations of Hypersonic Shock Waves, 1220
Pinus elliotti : Interaction of Gibberellic Acid and Photoperiod on the Vegetative Growth of (Prof. Philippe F. Bourdeau), 118
Pinus ponderosa : Carbon Dioxide Fixation in Germinating Pine Pollen (R. G. Stanley, L. C. T. Young and J. S. D. Graham), 1462
Pioneer in Soil Mechanics : Alexandre Collin—a, *review* by K. L. Nash, 552
Piperonylic Acid : Isolation of, from *Ocotea pretiosa* (Otto Richard Gottlieb and Maura Taveira Magalhaes), 742
Pippard, Prof. A. J. S. : Elected president of the Institution of Civil Engineers, 158
Pisum : O-acetylhomoserine in (New Hydroxyamino-Acids in Plants and their Identification), (Dr. N. Grobbelaar and Prof. F. C. Steward), 1358
Pittman, David D. (Lindegren, Prof. Carl C., and) : Effects of Environment (Radiation, Substrate and Allelic Genes) on the Melezitose Gene in *Saccharomyces*, 271
Pittman, Dr. Frank K. : Appointed director of the Division of Reactor Development of the United States Atomic Energy Commission, 1550 ; work of, 1550
Pittman, R. W. (Carasso, J. I., and) : Thermo-electric Observations on Grey Selenium, 1011
Pituitaries (Rat) : Influence of a Crude Hypothalamic Extract on the Acid Phosphatase Activity of (Prof. J. Charvát, V. Schreiber and V. Kmentová), 62
Pituitary Adrenocorticotrophic Response to Stress in the Adrenalectomized Rat : Influence of Circulating Adrenocorticotrophin on the (Dr. J. R. Hodges and Joan Vernikos), 725
Pituitary (Anterior) Growth Hormone : Influence of the Thymus upon the Reaction of the Rat to (Dr. J. Comsa), 728
Piveteau, Prof. J. (publié sous la direction de) : Traité de Paléontologie, Tome 6, Mammifères, évolution ; l'Origin des Mammifères et les aspects fondamentaux de leur évolution, *review* by Dr. P. M. Butler, 899
Piwkowski, Tomasz : Bismuth–Tellurium Photo-voltaic *p–n* 'Sandwich' Layer, 1793
Plack, Mrs. Audrey : Effect of Gibberellic Acid on Corolla Size, 610
Plackett, P., and Buttery, S. H. : A Galactan from *Mycoplasma mycoides*, 1236
Planck, Max : Collected Works of, *review* by Prof. W. Wilson, 820
  Physikalische Abhandlungen und Vorträge, *review* by Prof. W. Wilson, 820
Plane Parallel Sections of Mineralized Specimens : A New Method for obtaining Thin (Dr. O. Hallén and Dr. H. Röckert), 1225
Planetary Co-ordinates for the Years 1960-1980 (prepared by H.M. Nautical Almanac Office), *review* by Dr. R. H. Garstang, 1763
Planetary Nebulae : Electronic Temperatures of, 431
Planning by Programme and Control in Great Britain : Economic (Prof. Gilbert Walker), *review* by Norman Cuthbert, 418
Plant (Cotton), in the Sudan Gezira : Effect of the, on certain Leaf-feeding Insect Pests (R. J. V. Joyce), 1463
Plant (Long-day), requiring only One Inductive Photocycle : *Lolium temulentum* L., a (Dr. L. T. Evans), 197
Plant Behaviour : Effects of Weather on (Prof. J. P. Hudson), 1337
Plant Breeders' Conference : Eighth, 843
Plant Breeding : Conference on (Gwilym Evans), 843
  Artificial Mutagenesis in (D. Roy Davies and E. T. Wall), 955
Plant Classification (Prof. Lyman Benson), *review* by Prof. T. G. Tutin, 824
Plant Decomposition Products in the Soil : Effects of (Z. A. Patrick and L. W. Koch), 1717
Plant Ecology : Quantitative (P. Greig-Smith), *review* by Prof. W. H. Pearsall, 347
Plant Glycosides from Uridine Diphosphate Glucose : Biosynthesis of (Dr. C. E. Cardini and Dr. Ysutomu Yamaha), 1446
Plant Growth-Substances (New), with Selective Herbicidal Activity (Dr. Mary B. Pubus, Prof. R. L. Wain and Dr. F. Wightman), 1094
Plant Leaves (Susceptible) : A Simple Technique for Inoculating Pathogenic Bacteria on (M. A. Nour and J. J. Nour), 96
Plant Pathogens : 'Karathane'—the Relative Importance of the Phenolic and Unsaturated Acid Components in Toxicity towards certain (Dr. A. H. M. Kirby and E. L. Frick), 1445
Plant Phenolics Group : Meeting on the Biosynthesis of Phenolic Compounds in Plants, 229
  Discussion on the Chemistry of Condensed Tannins, 1488
Plant Physiology, Australian Society of : Inaugural Meeting, 1204
  Election of Officers, 1204
Plant Products (Western Australian Branch of the Royal Australian Chemical Institute and the University of Western Australia Symposium on), 299
Plant Protein Composition : Influence of Trace Elements upon (K. H. Schütte and H. E. Schendel), 958
Plant Species of Wetter and Drier Habitats : Further Inherent Characters of (Dr. M. L. R. Pettersson and G. E. J. Gray), 450
Plant Tissues : Occurrence of Gentisic Acid in (Dr. L. A. Griffiths), 733
Plant Tissues treated with Indole-3-Acetic Acid : Release of Ammonia by (Leonora Reinhold), 1022
Plant Virus Diseases : Seed Transmission of (N. C. Crowley), 634
Plants : The Biosynthesis of Phenolic Compounds in (Plant Phenolics Group Meeting on), 229
  ^{14}C-Proline and Hydroxyproline in the Protein Metabolism of—an Episode in the relation of Metabolism to Cell Growth and Morphogenesis (Prof. F. C. Steward and Dr. J. K. Pollard), 828
  The Chemistry of (Prof. Erston V. Miller), *review* by Dr. G. Leaf, 550
  Day-Length and Haematin Compounds in (C. Sironval), 1170

The Ecology of Invasion by Animals and (Charles S. Elton), *review* by Prof. Ronald Good, 1576
Experimental Approaches to the Problems of Growth and Form in (Experimental Plant Morphology Group of the Linnean Society Symposium on), 1416
Fodder (Institute of Plant Breeding of the Polish Academy of Sciences Symposium on), 702
Formation of Condensed Tannins in (W. E. Hillis), 1371
New Hydroxyamino-Acids in, and their Identification—Hydroxyvaline in *Kalanchoe daigremontiana* (Dr. J. K. Pollard, Dr. E. Sondheimer and Prof. F. C. Steward), 1356 ; O-acetylhomoserine in *Pisum* (Dr. E. Grobbelaar and Prof. F. C. Steward), 1358
Occurrence of α-Picoline in (R. E. R. Grimmett and Dr. F. B. Shorland), 1734
Pigmentation and Sexuality in (Dr. J. N. Hartshorne), 1382
Uptake and Translocation of Radioactive Phosphorus in (G. N. Thorne), 1775
Utilization of Inorganic Nitrogen Sources by (British Association for the Advancement of Science, Section K (Botany), Discussion on), 1197
Utilization of Nitrogen and its Compounds by (Society for Experimental Biology Symposium on), 229
Plants of the Farm, *review* by Prof. A. H. Bunting, 1257
Plants (Common Medicinal), of Darjeeling and the Sikkim Himalayas (Dr. K. Biswas), *review* by N. L. Bor, 76
Plants (Cultivated) : International Code of Nomenclature for, 500
Plants (Higher) : Formation of Phosphoserine from 3-Phosphoglycerate in (J. Hanford and Dr. D. D. Davies), 532
Gibberellic Acid-like Substances in (M. Radley), 1279
Plants (Non-nodulated) : Nitrogen Fixation by, and by Nodulated *Coriaria arborea* (Greta Stevenson), 1523
Plants (Vascular) : Taxonomy of, *review* by Prof. T. G. Tutin, 824
Plants and Animals : Mineral Requirements of, *review* by Dr. E. C. Humphries, 621
Plarre, W. : Fodder Plants (Mutants of Lupins), 703
Plasma to Lymph : Effect of Hyaluronidase on Capillary Permeability, Lymph Flow and Passage of Dye-labelled Protein from (Dr. G. Szabó and S. Magyar), 377
Plasma Cells and Tumour Growth (Prof. B. D. Baruah), 1455
Plasma Column : Scattering of Microwave Radiation by a (Forrest I. Boley), 790
Plasma Components (Human) : High Resolution of, by Starch Gel Electrophoresis (Dr. J. M. Fine, J. Loeb and E. Waszczenko-z), 452
Plasma Foreign Surface Reactions : Hageman Factor in (J. Margolis), 1102
Plasma Membrane : Plateau Formation and Sulphydryl Groups in the (Hidehiko Takahashi, Takayoshi Murai and Toshi Sasaki), 1675
Plasma Physics and the Problems of Controlled Thermonuclear Reactions (edited by Leontovitch), 1053
Plasmin : Action of, on Cartilage (Dr. C. H. Lack and Dr. H. J. Rogers), 948
Plasmin and Trypsin (Thrombin,) : Comparative Kinetic Behaviour of, toward Synthetic Substrates (Dr. H. A. Scheraga, S. Ehrenpreis and E. Sullivan), 461
Plaster (Set Gypsum) : Effect of Temperature on the Structure of (M. J. Ridge), 1224
Plastic Deformation of Diamond : Graphitization and (Dr. M. Seal), 1264
Plastics : Careers in (Plastics Institute Pamphlet on), 989
Plastics Federation, British : Fourth Reinforced Plastics Technical Conference, 501
Plastics Institute : Pamphlet on Careers in Plastics, 989
Plastics (Reinforced) Technical Conference (British Plastics Federation), 501
Plate Method for Estimating the Numbers of Phosphate-dissolving and Acid-producing Bacteria in Soil (H. A. Louw and Dr. D. M. Webley), 1317
Plateau Formation and Sulphydryl Groups in the Plasma Membrane (Hidehiko Takahashi, Takayoshi Murai and Toshi Sasaki), 1675
Plating Method (A Direct-), for the Assay of Radioactive Isotopes in Aqueous and Alcoholic Samples (H. Campbell, H. A. Glastonbury and Margaret D. Stevenson), 1100
Platt, Prof. Robert : Undergraduate Academic Record of Fellows of the Royal Society, 1178
Plaut, Prof. W. : Distribution of Newly Synthesized Deoxyribonucleic Acid in Mitotic Division, 399
Plumbohalides (Caesium) : Crystal Structure and Photoconductivity of (Chr. Kn. Møller), 1436
Plutonium : Calibration of a Calorimeter—a Minor Peaceful Use for (Lord Rothschild), 789
Plutonium for Bombs, 19
Plutonium from Civil Nuclear Power Stations (House of Commons Debate on), 292
Pneumococci : Effect of Monovalent Cations on Type Specificity Transformation in (M. Kohoutová), 188
Pogell, Dr. Burton M., and Koenig, Dr. Donald F. : Analysis of Mixtures of Glucosamine and Galactosamine with Bakers' Yeast, 127
Pogonophora : Abundance of (Dr. A. J. Southward), 272
Chitin in (P. C. J. Brunet and Dr. D. B. Carlisle), 1689
Poindexter, Dr. Edward : An Overhauser Effect in Natural Crude Oil, 1087
Poisoning (Di*iso*propyl Phosphonofluoridate) : Protection by Oximes of *bis*-Pyridinium Ions against Lethal (Dr. F. Hobbiger and Dr. P. W. Sadler), 1672
Poisons (Mitotic), and the Cancer Problem (Dr. John J. Biesele), *review* by Dr. C. Auerbach, 750
Poissons : Agnathes et (Traité de Zoologie, publié sous la direction de Prof. Pierre-P. Grassé, Tome 13), *review* by Prof. C. H. O'Donoghue, 1574
Poland : The Birds of (Ptaki Ziem Polskich), (Jan Sokolowski), Tom I, *review* by B. Nowosielski-Slepowron, 972
Polani, Dr. P. E., and others : Colour Vision Studies and the X-Chromosome Constitution of Patients with Klinefelter's Syndrome, 1092
Polanyi, Prof. Michael : Personal Knowledge—Towards a Post-Critical Philosphy, *review* by F. I. G. Rawlins, 757
Polar Regions : Arctic and Antarctic, a Prospect of the (Dr. Colin Bertram), new edition, *review* by L. M. Forbes, 620
Polar Tube : Construction of a (N. Sekiguchi and J. Matsumoto), 1643
Polar Wandering, a Random Walk Problem (R. Green), 382
Polarforschung : Silver Jubilee of, 1775
Polarimeter (New) : Verdet Constants of Rare-Earth Glasses measured with a (Niels O. Young), 333
Polarity of the Cerebral Cortex : Evidence for a Relation between Creatine Phosphate Level and (J. Křivánek, Dr. J. Bureš and O. Burešová), 1799
Polarization : Detection of, by Biological Organisms (Arthur N. Fankuchen and Prof. I. Fankuchen), 1372
Polarization of Light of the Comets Arend-Roland (1956*h*) and Mrkos (1957*d*), (M. Blaha, A. Hruška, Z. Svestka and V. Vanysek), 331
Polarization of Light from the Sky : A Simple Device for Observing the (Dr. Ulf Halldén), 333
Polarization Microscope : Submicroscopic Structure of Elastic Fibres as observed in the (Dr. G. Romhányi), 929
Polarized Light : Responses of Insects to, in the Presence of Dark Reflecting Surfaces (Dr. H. Kalmus), 1526
Polarizing Microscopes : Diffraction Anomaly in (Shinya Inoué and Prof. Hiroshi Kubota), 1725
Polarographic Conference : Czechoslovak–Hungarian, 633
Polarographic Research Institute, British : Full-time and Part-time Courses in Polarography, 1063
Polarographic Study of Acid-Base Reactions of the Tropylium Ion (P. Zuman, J. Chodkowski, H. Potešilová and F. Santavy), 1535
Polarographically Active Sulphydryl Groups in Rat Liver during Carcinogenesis : Intracellular Changes in Levels of (Dr. Silvio Fiala), 257
Polarography : Full-time and Part-time Courses in (British Polarographic Research Institute), 1063
Pole Tide : The Annual (Prof. Walter Munk and Richard Haubrich), 42
Poles, North and South, *review* by L. M. Forbes, 620
Polge, Dr. C. : Life at Low Temperatures, 912
Policy for University Expansion : Report on a (Association of University Teachers), 137
Policy, Purpose and Partnership in Education, 749
Polish Academy of Sciences (Institute of Plant Breeding) : Symposium on Fodder Plants, 702
Political History of the Atomic Scientists : Brighter than a Thousand Suns—the Moral and (Dr. Robert Jungk), translated into English by James Cleugh, *review* by Sir John Cockcroft, 547
Political Problems of the Atomic Age : Ethical and (Dr. C. F. von Weizsäcker), 156
Political and Economic Planning : Broadsheet No. 420, Television in Britain, 69
Pollard, D. G. (Davidson, G., and) : Effect of Simulated Field Deposits of Gamma-BHC and Dieldrin on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles, 739
Pollard, Dr. J. K. (Steward, Prof. F. C., and) : ^{14}C-Proline and Hydroxyproline in the Protein Metabolism of Plants—an Episode in the relation of Metabolism to Cell Growth and Morphogenesis, 828
Pollard, Dr. J. K., and others : New Hydroxyamino-Acids in Plants and their Identification—Hydroxyvaline in *Kalanchoe daigremontiana*, 1356
Pollen (Germinating Pine), *Pinus ponderosa* : Carbon Dioxide Fixation in (R. G. Stanley, L. C. T. Young and J. S. D. Graham), 1462
Pollen Grains : An Atlas of Airborne (H. A. Hyde and K. F. Adams), *review* by Dr. J. Hutchinson, 1117
Pollution : Aquatic and Air (R. W. Edwards), 1208
Effects of, on Living Material (Institute of Biology Symposium on), 1208
Water, 841
Pollution (Air) : Atmospheric Diffusion and (International Union of Theoretical and Applied Mechanics and the International Union of Geodesy and Geophysics International Symposium on), 22, 1134
Pollution (River), in Britain, 497
Polonsky, J., and others : Synthesis of 3,6-Dideoxy-D-*ribo*-hexose (3,6-Dideoxy-D-glucose) and its Identification with Paratose, 944
Polskich : Ptaki Ziem (The Birds of Poland), (Jan Sokolowski), Tom I, *review* by B. Nowosielski-Slepowron, 972
Poly-*β*-Hydroxybutyric Acid in Aerobic Gram-Negative Bacteria : Occurrence of (Dr. W. G. C. Forsyth, Dr. A. C. Hayward and J. B. Roberts), 800
Polyamide : Separation of Chalcones, Flavanones and Flavonols by Chromatography with (Dr. Richard Neu), 660
Polychaetes (Pelagic), in the South Atlantic Ocean : Distribution of (Norman Tebble), 166
Polycyclic Hydrocarbons : Oxidative Metabolism of, by Soil Pseudomonads (H. N. Fernley and Prof. W. C. Evans), 373
Polyelectrolytes: Size and Shape Changes of—Conversion of Chemical into Mechanical Energy (Seminar at University College, London, on), 762
Polyethylene Glycol : Substances in the Calf Alimentary Tract interfering in the Determination of (R. H. Smith), 260
Polymer Two-Phase Systems (Liquid Polymer–) : Partition of Proteins in (Dr. Per-Åke Albertsson), 709, *erratum*, 918
Polymer (Liquid)–Polymer Two-Phase Systems : Partition of Proteins in (Dr. Per-Åke Albertsson), 709, *erratum*, 918
Polymers : High (Prof. C. E. H. Bawn), 772
Polymers (Acidic) : Inhibition of Pancreatic Deoxyribonuclease by (Dr. Hans Heyman, Z. R. Gulick and R. L. Mayer), 1234
Polymers (Block and Graft) : Preparation of, in Systems where the Lifetime of the Kinetic Chain is Long (Dr. P. E. M. Allen, G. M. Burnett, J. M. Downer, R. Hardy and Sir Harry Melville), 245
Polymers (High) : A New Method of Fractionating (Dr. F. W. Peaker and Prof. J. C. Robb), 1591
Polymers (Metal Alkoxide) : A Structural Theory for (Dr. D. C. Bradley), 1211
Polymethyl Methacrylate : Fracture Markings in (Dr. D. C. Smith), 132
Polymorphic Transitions in Anhydrous Sodium Sulphate (R. J. Bird), 1797
Polymorphism (Alary), in the Gerroidea (Hemiptera Heteroptera), (Dr. R. O. Brinkhurst), 1461, *erratum*, 1644
Polymorphism (Geographical Colour), and Chromosome Constitution in Sympatric Species of Sawflies (Dr. F. L. Waterhouse and Dr. Ann R. Sanderson), 477
Polymorphism (*β*-Globulin), in British Cattle : Genetics of (Dr. G. C. Ashton), 370
Polymorphism (*β*-Globulin), in Cattle, Sheep and Goats (Dr. G. C. Ashton and E. I. McDougall), 945
Polymorphism ('Thread Protein'), in Cattle : A Genetic Mechanism for (Dr. G. C. Ashton), 65

Polynucleotide Phosphorylase: Inhibition and Activation of, through the Formation of Complexes between Acridine Orange and Polynucleotides (Dr. Roland F. Beers, jun., and Dr. Daniel D. Hendley, and Dr. Robert F. Steiner), 242
Polynucleotides: Inhibition and Activation of Polynucleotide Phosphorylase through the Formation of Complexes between Acridine Orange and (Dr. Roland F. Beers, jun., and Dr. Daniel D. Hendley, and Dr. Robert F. Steiner), 242
Polyoma Virus Infection (Mouse) : Observations on the Spread of (Dr. Wallace P. Rowe, Janet W. Hartley, Isadore Brodsky, Robert J. Heubner and Lloyd W. Law), 1617
Polypeptide Substitutes (Synthetic), for Gelatin in Photographic Emulsions and Observations on Gelation (Dr. H. W. Wood), 106
Polypeptides : Deuterium Exchange in (Dr. A. Elliott and W. E. Hanby), 654
Polypodiaceous Ferns : Induced Apospory in (P. R. Bell and B. M. Richards), 1748
Polyribonucleotide Structure : A Three-stranded (Dr. Geoffrey Zubay), 388
Polysaccharides : Biochemistry of Cellulose and related (Dr. B. A. Stone), 687
Polytypism : Cadmium Bromide—Growth Spirals and Possible (Richard S. Mitchell), 337
Polyzoa of the *Siboga* Expedition (the late Sir Sidney F. Harmer), Part 4, Cheilostomata Ascophora, II (Ascophora, except Reteporidae, with additions to Part 2, Anasca), *review*, 753
Ponder, Dr. Eric, and Ponder, Ruth V. : Lysins and Agglutinins in Normal and Lymphomatous Mouse Tissue, 1737
Ponder, Ruth V., (Ponder, Dr. Eric, and) : Lysins and Agglutinins in Normal and Lymphomatous Mouse Tissue, 1737
Pope, Dr. A. : Chemical Pathology of the Nervous System (Biochemistry of Mental Disease), 1647
Pople, Dr. J. A. : Appointed superintendent of the newly created Basic Physics Division at the National Physical Laboratory, 85 ; work of, 85
Population : Food and, *review* by Dr. J. R. Cooper, 71
Population under Random Mating : Change in Mean Viability at a Multi-allelic Locus in a (S. P. H. Mandel and I. M. Hughes), 63
Population Control : An Apparently Simple Case of (M. H. Williamson), 1108
Population Dynamics : Perfect and Imperfect Density Dependence in (Dr. A. Milne), 1251 ; (M. E. Solomon), 1252
Population Redistribution and Economic Growth, United States, 1870-1950, I, Methodological Considerations and Reference Tables (Everett S. Lee, Ann Ratner Miller, Carol P. Brainerd and Richard A. Easterlin), (prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), (Memoirs of the American Philosophical Society, Vol. 45), *review*, 420
Population Studies of the Common Earwig (P. F. Baker), 162
Population (Tiller), of Grass Swards : Changes in the (Dr. R. H. M. Langer), 1817
Population (World) : The Problems of (Sir Charles Darwin), 497
Populations of *Agrostis* spp. Tolerant of Heavy Metals (D. Jowett), 816
Populations (Associated) : Automatic Subdivision of (Prof. W. T. Williams and Dr. G. N. Lance), 1755
Populations (Diploid), of *Dactylis glomerata* in Israel : Different Frequencies of Supernumerary Chromosomes in (Dr. Daniel Zohary and Israel Ashkenazi), 477
Populations (Exploited Fish) : On the Dynamics of (R. J. H. Beverton and S. J. Holt), *review* by Dr. E. B. Worthington and J. G. Skellam, 686
Populations (Mixed Bacterial) : Counting of Sulphate-reducing Bacteria in (Prof. Y. Abd-El-Malek and S. G. Rizk), 538
Populations (Mosquito) : Relationship between certain Biological Constants and Trophic Condition in (Dr. Donald H. Colless), 951
Porai-Koshits, E. A., and Andreyev, N. S. : Low-Angle X-Ray Scattering by Glasses, 335
Porath, Dr. J., and others : Migration-elution of Zones in an Electrophoresis Column, 744
Porous Media : Evidence for Permeability Minima in Low-Pressure Gas Flow through (Dr. D. M. Grove and M. G. Ford), 999
Porphyrin (Manganese), in Man : Incorporation of Manganese into Erythrocytes as Evidence for a (Donald C. Borg and Dr. George C. Cotzias), 1677
Porsild, A. E. : Illustrated Flora of the Canadian Arctic Archipelago, 294
Porter, Prof. George : Free Radical Stabilization, 1496
  Abstracts of Papers given in the Session on Radiation Chemistry at the All-Union Conference on the Application of Radioactive and Stable Isotopes and Radiation in the National Economy and Science (Moscow 1957), *review*, 1588
  Symposium on Radiation Chemistry (Academy of Sciences of the U.S.S.R., Division of Chemical Science, Moscow 1955), (edited by Prof. N. A. Bakh), translated from the Russian, *review*, 1588
Porter, Prof. G. (Bridge, Dr. K., and) : Wavelength Effect in Flash Photolysis, 130
Porter, G. R., and others : Mechanism of Esterase Action—Nature of the Reactive Serine Residue in Enzymes inhibited by Organo-Phosphorus Compounds, 927
Porter, Dr. J. G., and others : Planetary Co-ordinates for the Years 1960-1980, *review* by Dr. R. H. Garstang, 1763
Porter, Dr. H. : Chemical Pathology of the Nervous System (Chemical Nature of Cerebrocuprein in Normal Brain and that obtained from the Brain of Individuals suffering from Wilson's Disease), 1646
Porter, Prof. G. : Free Radical Stabilization, 1497
Porter, Dr. R. R. : Separation and Isolation of Fractions of Rabbit Gamma-Globulin containing the Antibody and Antigenic Combining Sites, 670
Portrait of a Wilderness—the Story of the Coto Doñana Expeditions (Guy Mountfort), *review* by Dr. W. Rydzewski, 1044
Positive Cellulose Reaction : A Strain of *Acetobacter aceti* giving a (Dr. J. G. Carr), 265
Pospíšil, Dr. M., and Novák, Dr. L. : Effect of Thyroid Pre-treatment on the Mortality of X-Irradiated Mice, 1603
Possible Autosomal Linkage in Man (Dr. A. M. O. Veale), 409
Possible Causes of Geomagnetic Fluctuations having a Six-Second Period (Dr. Fred B. Daniels), 1439
Possible Extra-Terrestrial Sources : Rate of Accumulation of Nickel in Atlantic Equatorial Deep-Sea Sediments, and its Bearing on (Karl K. Turekian), 1728
Possible Mechanism of Action of Esterases inhibitable by Organo-Phosphorus Compounds, (Mechanism of Esterase Action), (Prof. H. N. Rydon), 928
Possible Mechanism for the Initial Transfer of the Genetic Code from Deoxyribonucleic Acid to Ribonucleic Acid (Dr. Geoffrey Zubay), 112
Possible Precursors of Tannins : Leuco-Anthocyanins as the (W. E. Hillis and Mrs. Gerda Urbach), 657
Possible Use of Synthetic Surface-Active Agents for the Preparation of Tumour Cell Nuclei (Prof. M. E. Hodes, Dr. C. G. Palmer and D. S. Williams), 529
Post, Dr. R. F. : Controlled Nuclear Fusion Reactions, 1052
Post-Critical Philosophy : Personal Knowledge—Towards a (Prof. Michael Polanyi), *review* by F. I. G. Rawlins, 757
Postdoctoral Fellowships : Senior (National Science Foundation Awards for 1958-59), 501
Postgraduate Medical School of London : Grant of up to £60,000 from the Wellcome Trust, for the cost of including a Wellcome Research Library in the proposed new buildings, 1203
Postgraduate Research Studentship (V. H. Blackman), awarded to M. G. Morris, 1063
Post-Heparin Esterase in Human Serum : Difference between Lipoprotein Lipase and (S. Novák and Dr. J. Skořepa), 117
Potassium in Rabbit Auricles : Movements of (D. A. Persoff), 605
Potassium Atractylate, a New Inhibitor of the Tricarboxylic Acid Cycle (Prof. R. Santi), 257
Potassium Blood Types : Haemoglobin and, in some Non-British Breeds of Sheep and in certain Rare British Breeds (J. V. Evans, Dr. H. Harris and Prof. F. L. Warren), 320
Potassium Concentration and Metabolism of Red Blood Cells of the Lamb : Changes in the (Prof. R. D. Wright, T. R. Bradley, J. F. Nelson and J. P. Coghlan), 1742
Potassium Hydrogen Fluoride : The Problem of Negative Anharmonicity and the Nature of the Hydrogen Bond in (R. Blinc), 1016
Potassium Uptake by Cation-Exchange Resins from Soils and Minerals (P. W. Arnold), 1594
Potassium and Sodium Ions : Effects of, on the Resting and Action Potentials of the Giant Axon of the Cockroach (T. Yamasaki and T. Narahashi), 1805
Potato Root Eelworm, *Heterodera rostochiensis* Wollenweber : Influence of certain Inorganic Ions on the Hatching of the (Dr. C. Ellenby and A. B. Gilbert), 925
Potato Tuber Extracts : Growth-promoting Activity of, in the Coleoptile Straight-Growth Test—Quantitative Aspects of Indoleacetic Acid Detection (A. Booth and Dr. P. F. Wareing), 406
Potatoes (Main-Crop) : Effect of Number of Sprouts per Set on Yield and Grading of (R. D. Toosey), 269
Potency (Biological), of Eta-Tocopherol (J. Bunyan), 1237
Potent Reactivators (New), of Acetocholinesterase inhibited by Tetraethyl Pyrophosphate (Dr. F. Hobbiger, Dr. D. G. O'Sullivan and Dr. P. W. Sadler), 1498
Potential : An Antibonding Morse (Robert W. Keyes), 1071
Potential (Action) : Purkinje and Ventricular Membrane Resistances during the Rising Phase of the (Dr. Edward A. Johnson, P. A. Robertson and J. J. Tille), 1161
Potential (Standard), at 25°C. of the Silver–Silver Chloride Electrode in Formamide (Dr. M. Mandel and P. Decroly), 794
Potential and Sedimentation Behaviour in Flocculated Cane Sugar Juice (Dr. M. C. Bennett), 1439
Potential Electrolysis (Controlled), of Aromatic Substances : Electron Potential Study of the Radicals produced by (D. E. G. Austen, Dr. P. H. Given, Dr. D. J. E. Ingram and M. E. Peover), 1784
Potential Function (Vibrational), of Nitryl Fluoride : Molecular Orbitals and (Louis Burnelle and Prof. Jules Duchesne), 653
Potential Variations (Corneo-Fundal), during Light and Dark Adaptation (Christine Kris), 1027
Potentialities of the North-West (Royal Society of Canada Symposium on), 701
Potentials (Half-Wave), of Aromatic Ketones (Jayanti Nag Chaudhuri and Dr. Sadhan Basu), 179
Potentials (Resting and Action), of the Giant Axon of the Cockroach : Effects of Potassium and Sodium Ions on the (T. Yamasaki and T. Narahashi), 1805
Potešilová, H., and others : Polarographic Study of Acid-Base Reactions of the Trophylium Ion, 1535
Potter, Dr. Edmund C. : Electrochemistry—Principles and Applications, *review* by Prof. H. T. S. Britton, 1185
Pover, Dr. W. F. R., and others : *In vitro* Incorporation of Serine labelled with Carbon-14 into Mitochondrial Phospholipids, 1806
Powder (Erythrocyte Stromata) : Applications of (Dr. Felix Milgrom and Dr. Miguel Layrisse), 189
Powders ('Active' Ceramic Oxide) : Effect of Heat Treatment on the Sintering of (D. T. Livey and Dr. P. Murray), 1362
Powell, Prof. C. F. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Powell, D. A. : Transformation of the α- and β-Forms of Calcium Sulphate Hemihydrate to Insoluble Anhydrite, 792
Powell, H. M. : Applications of Crystallography to Chemistry (How Molecules Fit Together), 915
Powell, H. T. : Occurrence of Forms of *Fucus distichus* L. emend. Powell on North Rona and Sula Sgeir, 1246
  At the Third International Seaweed Symposium (Species of *Fucus* to be accorded specific rank), 1780
Powell, Dr. R. W., and others : Measurements of Conduction at Low Temperatures (Electrical Conductivity and Galvanomagnetic Effects in Metals), 84
Power : Thermo-electric, *review* by Prof. G. F. J. Garlick, 72
Power in British Industry : Fuel and (Manchester Joint Research Council Conference on), 1063, 1713
Power, Ministry of : Reports of H.M. Inspectors of Mines under the Coal Mines Act (1911) for 1956, 637
  Reports of H.M. Inspectors of Mines and Quarries under the Mines and Quarries Act (1954) for 1957, 638
  Appointment of Sir Alexander Fleck as chairman of the Scientific Advisory Council, 918
Powerful Radio Transmissions : Health Hazards from (D. H. Shinn), 1792
Powers, H. E. C. : Sucrose Crystal Inclusions, 715

Pozsár, B. I., and Király, Z. : Effect of Rust Infection on Oxidative Phosphorylation of Wheat Leaves, 1686
Prabhu, K. A. (Shukla, J. P., and) : Effect of Ethylenediamine Tetraacetic Acid on the Enzyme System of Yeast Cells, 1316
Prabhu, N. U. (Gani, J., and) : Continuous Time Treatment of a Storage Problem, 39
Practical Aspects of Special Library Work (Northern Branch of Aslib Symposium on), 1063
Prader, Dr. A., and others : Colour Vision Studies and the X-Chromosome Constitution of Patients with Klinefelter's Syndrome, 1092
Prange, I., and others : Influence of Linoleic and Linolenic Acids on Symptoms of Vitamin E Deficiency in Chicks, 802
Prasad, U. (Mukherjee, Dr. B., and) : X-Ray Study of Rare Phosphate Minerals, 472
Prather (John M.) Lectures, 1956 (Prof. A. Frey-Wyssling), *review* by Prof. W. T. Astbury, 213
Pratt, D. B., and others : Utilization of Thiocyanate by *Thiobacillus thioparus* and *T. thiocyanoxidans*, 266
Pratt, G. : Antarctic Research (The Topography of the Sub-Glacial Continent), 287
Pratt, J. G. (Rhine, Prof. J. B., and) : Parapsychology—Frontier Science of the Mind, *review* by Dr. E. J. Dingwall, 143
Pratt, J. G. D. : The Tide at Shackleton, 1394
Pratt, L., snd others : Formation of a Transition Metal–Hydrogen Bond in Aqueous Solution, 466
Pratt, Dr. P. L. : Appointed to the University of London readership in physical metallurgy at the Imperial College of Science and Technology, 700
Precancerous Skin of the Lizard *Lacerta* agilis : Fluorescent Mast-Cell Reaction in (Prof. A. Stolk), 1177
Precancerous and Cancerous Rat Liver (Normal, Regenerating,) : Deoxyribonuclease Activity and Deoxyribonucleic Acid Synthesis in (Dr. Sam Brody), 1386
Precipitated Apatitic Phosphates : Structure of (Dr. Claudine Fabry), 523
Precipitates (Aluminium Nitride), in α-Iron (G. R. Booker and J. Norbury), 255
Precipitation in Alloys (X-Ray Analysis and Electron Microscopy Groups of the Institute of Physics Joint Conference on), 771
Precipitation for the World : Tables of Temperature, Relative Humidity and (Meteorological Office), 361
Precipitator Samples : Counting Error due to Overlapping Particles in Thermal (S. A. Roach), 134
Precorticotropin (Activation of Hormonal Secretions), (P. R. Dasgupta and Prof. F. G. Young), 32
Precursors of Tannins : Leuco-Anthocyanins as the possible (W. E. Hillis and Mrs. Gerda Urbach), 657
Predicting Academic Success (Sigvard Rubenowitz), 1421
Pregnancy in the Rabbit : Effect of the Synthetic Œstrogen Stilboestrol on (Dr. Branda M. Schofield), 58
Pregnanediol in the Urine of the Ewe (Dr. Hamish Robertson and W. F. Coulson), 1512
Pregnant Mares: Isolation of $\Delta^{5,7,9}$-Œstratrienol-3-one-17 from the Urine of (Dr. W. L. Glen, R. Barber and G. Papineau-Couture), 1308
Pregnant Women : Isolation of 16β-Hydroxyoestrone from the Urine of (D. S. Layne and Prof. G. F. Marrian), 50
Préhistoire Spéléologie Ariègeoises, 768
Prehistoric Southwestern United States : Cultivation and Weaving of Cotton in the (Kate Kent), 1775
Prehistory (British History and) : Mammals in (Mammal Society of the British Isles Symposium on), 1133
Prentice, Brice R. (edited by Dunning, John R., and) : Advances in Nuclear Engineering—Proceedings of the Second Nuclear Engineering and Science Conference held at Philadelphia, *review* by Dr. T. E. Allibone, 210
Preparation of Block and Graft Copolymers in Systems where the Life-time of the Kinetic Chain is Long (Dr. P. E. M. Allen, G. M. Burnett, J. M. Downer, R. Hardy and Sir Harry Melville), 245
Preparation of Crystalline *Pseudomonas* Cytochrome$_{551}$ from *Pseudomonas aeruginosa* (Takekazu Horio, Taneaki Higashi, Masashi Nakai, Kiyoshi Kusai and Prof. Kazuo Okunuki), 1307
Preparation of Kojibiose (Prof. K. Aso, K. Shibasaki and M. Nakamura), 1303
Preparation of Tumour Cell Nuclei : Possible Use of Synthetic Surface-active Agents for the (Prof. M. E. Hodes, Dr. C. G. Palmer and D. S. Williams), 529
Preparation of Virus Antisera from Strawberry (R. M. Lister), 1814
Preparation (Bacterial), of Orotidine-5'-phosphate and Uridine-5'-phosphate (R. E. Handschumacher), 1090
Preparative Electrophoresis : Application of Direct Photographic Photometry to (Dr. N. Ressler), 463
Preparative-Scale Gas Chromatography (Dr. D. E. M. Evans, W. E. Massingham, Prof. M. Stacey and Dr. J. C. Tatlow), 591
Preparing Scaly Alumina : A New Method for (Dr. Persio de Souza Santos), 525
Preparing Water of High Purity : Use of Ion Exchange Resins in (I. Raleigh), 1667 ; (Dr. J. A. Kitchener), 1667
Pre-requisites for Dextran Production by *Streptococcus bovis* (Dr. R. W. Bailey and Dr. A. E. Oxford), 185
Presence of 1,2,3,4-Dibenzopyrene in Cigarette Smoke (M. J. Lyons), 178, *erratum*, 363
Presence of 3:4-8:9-Dibenzpyrene in Coal-Tar (N. P. Buu-Hoï), 1158
Presence of a Factor Inhibiting Biting in *Aedes aegypti* (M. M. J. Lavoipierre), 1567
Presence of Fungal Spores : Relationship between the, and a Test for Hepatotoxic Grass (J. C. Percival and Dr. R. H. Thornton), 1095
Presence of 6707 A. Radiation in the Twilight Sky (M. Gadsden and K. Salmon), 1598
Presence in Root Tips of a Thermolabile Factor causing the Conversion of Protochlorophyll to a Leuco-Compound (Z. Hejnowicz), 1023
Preservation of Grass for Winter-feeding by Radiation Sterilization (Erna Grossbard, D. J. Minson, Dr. William Davies and T. Horne), 331
Preservation of Rural England, Council for the : Thirty-second Annual Report (1957-1958), 777
Nineteenth National Conference (Rural Problems of the Moment), 565
Preservation of Rural England, Council for the (Sheffield and Peak District Branch) : Twenty-seventh Annual Report, 156
Preservation Industry (Fruit and Vegetable), in India (Proceedings of the Symposium held at the Central Food Technological Research Institute, Mysore, 1954), *review* by Dr. R. G. Tomkins, 420
Preserving and Studying Insects : Collecting, (Harold Oldroyd), *review* by B. D. Moreton, 420
Press Censorship : Soviet International, 1774
Pressey, Dr. B. G. : Radio Aids to Navigation (Radio Aids for Marine Navigation), 978
Pressure : Effects of, on some Optical and Electrical Properties of Diamonds (Dr. F. C. Champion and J. R. Prior), 1079
An Oxidation Reaction highly Dependent on (N. J. M. Wilkins and J. N. Wanklyn), 653
Physico-Chemical Effects of (Dr. S. D. Hamann), *review* by K. E. Bett, 75
Professors under, 430
Pressure (Low-) Gas Flow through Porous Media : Evidence for Permeability Minima in (Dr. D. M. Grove and M. G. Ford), 999
Pressure (Sound) : Investigation of Extreme Values of (D. E. L. Shorter and W. I. Manson), (Analysis and Measurement of Programme Levels, Part I), 1490
Pressure Welding of Metals (Conference at the University of Birmingham), 638
Pressures in Magnetic Fields : Shifts of Arc Lines at various (Rev. R. A. Miller), 1295
Pressures (High) : Physical Chemistry at, *review* by K. E. Bett, 75
Preston, Prof. R. D. : Modern Microscopy, *review*, 1113
Electron Microscopy in Biology, 1402
At the Third International Seaweed Symposium (Physical Structure of the Cell-wall of Algae), 1779
Preston, Prof. R. D. (Probine, M. C., and) : Protoplasmic Streaming and Wall Structure in *Nitella*, 1657
Pre-treatment (Thyroid) : Effect of, on the Mortality of X-Irradiated Mice (Dr. L. Novák and Dr. M. Pospíšil), 1603
Prevention of Allergic Encephalomyelitis by Prior Injection of Adjuvants (Dr. Marian W. Kies and Dr. Ellsworth C. Alvord, jun.), 1106
Price, Dr. J. R. : Chemistry of Plant Products (Development of Phytochemistry in Australia), 299 ; (Chemistry of *Lunasia* Alkaloids), 300
Price, Llewellyn I., and others : Revision of the Gymnarthridae American Permian Microsaurs, *review* by Dr. W. E. Swinton, 1115
Price, P. B., and others : Mechanical Properties of Whiskers and Thin Films (Creep of Vapour-grown Zinc and Cadmium Whiskers), 296
Pridham, Dr. J. B. : Metabolism of Phenolic Compounds by the Broad Bean (*Vicia faba*), 795
Occurrence and Metabolism of Oligosaccharides in the Broad Bean (*Vicia faba*), 1687
Priestley, Sir Raymond : *Obituary* of Sir Douglas Mawson, 1273
Primitive Domestic Sheep and in Parchment : Follicle Arrangement in Skin from Wild Sheep, (Dr. M. L. Ryder), 781
Principles of Biological Microtechnique, a Study of Fixation and Dyeing (Dr. John R. Baker), *review* by Prof. J. Brachet, 1579
Principles of Engineering Heat Transfer (Prof. Warren H. Giedt), *review* by Dr. H. Cohen, 623
Principles of Noise (Dr. J. J. Freeman), *review* by R. A. King, 1471
Principles of Quantum Mechanics (Prof. P. A. M. Dirac), fourth edition, *review* by Prof. N. Kemmer, 755
Principles (The First), of Industrial Relations (Dr. A. E. C. Hare), *review* by T. H. Hawkins, 1697
Pringle, Dr. J. W. S. : Nerves and Muscles, *review*, 416
Prior, J. R. (Champion, Dr. F. C., and) : Effects of Pressure on some Optical and Electrical Properties of Diamonds, 1079
Prior Injection of Adjuvants : Prevention of Allergic Encephalomyelitis by (Dr. Marian W. Kies and Dr. Ellsworth C. Alvord, jun.), 1106
Pritchard, E. (Farendon, P. J., and) : Science in the Use of Coal (Physics and Chemistry of Coal), 25
Probability Theory and its Applications : An Introduction to (Prof. William Feller), Vol. I, second edition, *review* by Dr. L. S. Goddard, 489
Probine, M. C., and Preston, Prof. R. D. : Protoplasmic Streaming and Wall Structure in *Nitella*, 1657
Problem : Polar Wandering, a Random Walk (R. Green), 382
Problem of Man-power : Nuclear Energy Development as a, 343
Problem of Negative Anharmonicity and the Nature of the Hydrogen Bond in Potassium Hydrogen Fluoride (R. Blinc), 1016
Problem (Cancer) : Mitotic Poisons and the (Dr. John J. Biesele), *review* by Dr. C. Auerbach, 750
Problem (Storage) : Continuous Time Treatment of a (J. Gani and N. U. Prabhu), 39
Problems : Selected Combustion, 2, Transport Phenomena, Ignition, Altitude Behaviour and Scaling of Aeroengines (M. W. Thring, senior editor), AGARD Combustion Colloquium, Liège, 1955), *review* by Dr. J. H. Burgoyne, 622
Problems of Ageing, Nuffield Unit for Research into : Ageing and Human Skill—a Report centred on work by the (A. T. Welford), *review* by Prof. L. S. Hearnshaw, 826
Problems of Collective Motion (Physical Society Conference on), 1554
Problems of Colour Vision and Colour Blindness : Some (Prof. R. W. Pickford), 584
Problems of Controlled Thermonuclear Reactions : Plasma Physics and the (edited by Leontovitch), 1053
Problems in Euclidean Space—Application of Convexity (Dr. H. G. Eggleston), *review* by Prof. T. A. A. Broadbent, 1472
Problems of Growth and Form in Plants : Experimental Approaches to the (Experimental Plant Morphology Group of the Linnean Society Symposium on), 1416
Problems of High-Speed Flight, *review* by Dr. W. P. Jones, 1582
Problems in Mechanics, Mathematical Physics and Technology : Integral Equations and their Applications to certain (S. G. Mikhlin), translated from the Russian by A. H. Armstrong, *review* by Prof. T. A. A. Broadbent, 1259
Problems of Ticks and Tick-borne Diseases (United Nations Food and Agriculture Organization and the Office International des Epizooties Meeting to discuss), 1416
Problems of World Population (Sir Charles Darwin), 497
Problems and Remedies: Food and Farming, a Survey of (Association of Agriculture Conference on), 700
Problems (Big) : Small Firms with—a Short Account of an Experimental Technical Liaison Service run by the Scottish Council (Development and Industry), (Department of Scientific and Industrial Research), 1139

Problems (Contemporary), in Mathematical Teaching and Staffing (British Association for the Advancement of Science, Sections A (Mathematics and Physics) and L (Education), Joint Discussion on), 1064
Problems (Linguistic) : Mechanical Resolution of (Dr. Andrew D. Booth, L. Brandwood and Dr. J. P. Cleave), *review* by R. A. Brooker, 618
Problems (Modern), in Friction and Lubrication (British Association for the Advancement of Science, Sections A (Mathematics and Physics) and G (Engineering), Joint Discussion on), 980
Problems (Racial), in Britain, 1060
Problems (Rural), of the Moment (Council for the Preservation of Rural England National Conference on), 565
Problems (Salinity), in the Arid Zones (Unesco Symposium on), 158
Problems (Some), of Small Firms, 1139
Procedures for the Testing of Intentional Food Additives to establish their Safety for Use—Second Report of the Joint FAO/WHO Expert Committee on Food Additives (World Health Organization), 850
Process of Song Learning in the Chaffinch (*Fringilla coelebs gengleri*) : Further Studies on the (Dr. W. H. Thorpe), 554
Process of Synthesis of Deoxyribonucleic Acid : Mechanism of Radiation Effect on the (Studies in Synthesis of Deoxyribonucleic Acid), (L. G. Lajtha, R. Oliver, R. Berry and W. D. Noyes), 1788
Processes : Engineering Materials, Machine Tools and (W. Steeds), third edition, *review* by K. J. Pascoe, 8
  Relaxation (Faraday Society Discussion on), 1348
  Thermo-Nuclear (Institution of Electrical Engineers Convention on), 1488
Processes (Mechanical) : Entropy Production in Irreversible (D. H. Everett), 1084
Processes (Microbiological), in Soil Samples : Continuous-Flow Method for the Study of (Dr. J. Macura and Dr. I. Málek), 1796
Processes (Redox) : Observation of Transient Intermediates in, by variable Voltage Oscillo-polarography and Cyclic Voltammetry (Prof. W. Kemula and Z. Kublik), 793
Processes (Thought) : The Mechanization of (Symposium at the National Physical Laboratory), 1416
Processing (Information) : International Conference on (Unesco), 700
Proctor, Michael H., and Wilson, P. W. : Nitrogen Fixation by Gram-Negative Bacteria, 891
Product (Corrosion) : An Unusual Form of (G. Butler and H. C. K. Ison), 1229
Production of Compounds labelled with Carbon-14 from Carbon-14 Dioxide accelerated in an Electric Field (M. Guillaume), 1592
Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and Killed Tubercle Bacilli (Dr. Marian W. Kies, Dr. Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104
Production of Experimental Scurvy in a Bird Species (R. N. Roy and Prof. B. C. Guha), 1689
Production of Glucose by the Liver during Hyperglycaemia (Robert Steele and Paul A. Marks), 1444
Production of High Concentrations of Hydrogen Atoms (K. R. Jennings and Dr. J. W. Linnett), 597
Production of High-Titre Diphtheria Toxin in Baffled Shake Flasks (Dr. D. C. Edwards), 190
Production of Methane from Carbon (Dr. J. D. Blackwood), 1014
Production of Mutants of Tobacco Mosaic Virus by Chemical Alteration of its Ribonucleic Acid *in vitro* (Dr. Alfred Gierer and Dr. Karl-Wolfgang Mundry), 1457
Production (Antibody), by Single Cells (Dr. R. G. White), 1383
Production (Egg) : Flash Lighting for (S. Fox and T. R. Morris), 1752
Production (Entropy), in Irreversible Mechanical Processes (D. H. Everett), 1084
Production (Large-scale), of Tuberculin Purified Protein Derivative : Importatance of Zinc for the Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* and (T. Dekker and H. Huitema), 1387
Production, Properties and Application of Alloy and Special Steels (Publication of the papers contributed to the National Metallurigcal Research Laboratory Symposium on), 1777
Production Engineering Research Association (Dr. N. A. Dudley), 233
  Liaison and Advisory Service, 293
Productivity and Economic Incentives (J. P. Davison, Prof. P. Sargant Florence, Dr. Barbara Gray and Dr. N. S. Ross), *review* by T. H. Hawkins, 1697
Productivity and Social Organization—the Ahmedabad Experiment, Technical Innovation, Work Organization and Management (A. K. Rice), *review* by S. David M. King, 682
Professional Civil Servant : The Role of the (Sir Graham Sutton), 841
Professional Civil Servants, Institution of : Chairman's Address to the thirteenth Annual Delegate Conference (E. Hewlett), 86
Professional Mobility : Academic and, 413, *erratum*, 1133
Professors under Pressure, 430
Proflavin-induced Mutations in the Genetic Fine Structure : Distribution of (Dr. S. Brenner, Prof. S. Benzer and Mrs. L. Barnett), 983
Progesterone in the Blood of the Laying Hen (I. M. Lytle and Prof. F. W. Lorenz), 1681
19-nor-Progesterone and 19-nor-Ethinyltestosterone in the Liver of the Guinea Pig : Behaviour of (Silvia Girardi, Dusan Jadrijevič, Rigoberto Iglesias and Prof. Alexander Lipschutz), 1450
Programme and Control in Great Britain : Economic Planning by (Prof. Gilbert Walker), *review* by Norman Cuthbert, 418
Programme Levels : Analysis and Measurement of, Part 1, Investigation of Extreme Values of Sound Pressure (D. E. L. Shorter and W. I. Manson) ; Part 2, A Description of an Optical Instrument for Monitoring Sound Signals (E. R. Wigan), 1490
Programming : Dynamic (Richard Bellman), *review* by Dr. L. S. Goddard, 1187
Programming for an Automatic Digital Calculator (Dr. Kathleen H. V. Booth), *review* by R. A. Brooker, 618
Programming (Linear) : Reading in (Dr. S. Vajda), *review* by Dr. A. D. Booth, 1583
Programming (Linear), and Economic Analysis (Prof. Robert Dorfman, Prof. A. Samuelson and Prof. Robert M. Solow), *review* by Dr. L. S. Goddard, 1046
Progress in Biophysics and Biophysical Chemistry (edited by Prof. J. A. V. Butler and Prof. B. Katz), Vol. 8, *review* by Dr. P. A. Merton, 489
Progress in Cancer Research (Prof. H. N. Green), 364
Progress of Cancer Research, 1547
Progress in Chemical Engineering, *review*, 822
Progress in Geology (Prof. L. Hawkes), 1553
Progress of Rubber Technology : Annual Report on the (edited by Dr. T. J. Drakeley), 294
Progress of the Russian Earth Satellite *Sputnik* 3 (1958δ), (D. G. King-Hele), 1409
Projectiles : Vaporization of, on Impact (G. Larikov), 468
Proliferating Yeasts : Oxidation of Ethyl Alcohol to Acetic Acid by (Juan Santa María), 937
Prominences (Quiescent) : Temperature and Turbulence in, determined from Line-widths (Prof. P. ten Bruggencate and Dr. G. Elste), 1154
Promotion of Vegetable Research, British Society for the : Eighth Annual Report (1956-57), 1417
Propagation of a Ferromagnetic Domain Boundary in 'Perminvar' : Direct Measurement of the Velocity of (Dr. E. W. Lee and D. R. Callaby), 254
Propagation (Centimetre Wave Scatter), beyond the Horizon : Influence of the Semi-permanent Low-Level Ocean Duct on (F. A. Kitchen, W. R. R. Joy and E. G. Richards), 385
Properties of the Virus of Foot-and-Mouth Disease : Use of Two, in Studies of its Multiplication (Sheila F. Cartwright and H. V. Thorne), 717
Properties (Electrical), of Materials, *review*, 73
Properties (Magnetic), of Spin-Free Transition Series Complexes (Dr. B. N. Figgis), 1568
Properties (Mechanical), of Whiskers and Thin Films (J. E. Gordon and Dr. J. W. Menter), 296
Properties (Optical and Electrical), of Diamonds : Effects of Pressure on some (Dr. F. C. Champion and J. R. Prior), 1079
Properties (Surface), of Cancer Cells : Invasiveness and (Symposium at the Chester Beatty Research Institute), 1419
Properties and Application of Alloy and Special Steels : Production, (Publication of the papers contributed to the National Metallurgical Research Laboratory Symposium on), 1777
β-Propiolactone as a Toxoiding Agent (E. S. Orlans and V. E. Jones), 1216
Propionate (Testosterone), and 4-Chlorotestosterone Acetate : Action of, on Protein Synthesis *in vitro* (A. Bernelli-Zazzera, M. Bassi, R. Comolli and P. Lucchelli), 663
Prostaglandin *in vitro* : Formation of (Dr. R. Eliasson), 256
Protecting Agent against Irradication: Sodium Fluoroacetate as a (Prof. Z. M. Bacq and Dr. P. Fisher, Dr. A. Herve, and Prof. C. Liébecq and Dr. S. Liébecq-Hutter), 175
Protection of Antarctic Fauna, 430
Protection of Living Cells against Acid by certain Non-Ionic and Amphoteric Soaps (Dr. P. D'Arcy Hart and Dr. J. E. Lovelock), 304
Protection of Nature, Hellenic Society for the : Seventh Technical Meeting to be held jointly with the Sixth General Assembly of the International Union for the Conservation of Nature and Natural Resources, 89, 1405
Protection by Oximes of *bis*-Pyridinium Ions against Lethal Di*iso*propyl Phosphonofluoridate Poisoning (Dr. F. Hobbiger and Dr. P. W. Sadler), 1672
Protective Action of Venoms containing Phosphatidase-*A* against certain Bacterial Exotoxins (Dr. E. A. North and Hazel M. Doery), 1374
Protein in Alkaline Solution : Spectrophotometric Determination of (B. R. Hewitt), 246
Protein of Hair Follicles : Content of Citrulline and other Amino-Acids in a (G. E. Rogers and D. H. Simmonds), 186
Protein (Blood) : Synthesis of, by the Fat Body in the Silkworm, *Bombyx mori* L. (Hajime Shigematsu), 880
Protein (Dye-labelled) : Effect of Hyaluronidase on Capillary Permeability, Lymph Flow and Passage of, from Plasma to Lymph (Dr. G. Szabó and S. Magyar), 377
Protein (Serum) Variations in Horses (Dr. G. C. Ashton), 1029
Protein (Skeletal Muscle) : Development of (Dr. Yoshito Ogawa), 1312
Protein (Thyroxine-binding), in the Serum of Rabbit Foetuses (Carlos Osorio and N. B. Myant), 866
Protein Chemistry : Introduction to (Prof. Sidney W. Fox and Prof. Joseph F. Foster), *review* by Dr. E. Stedman, 144
Protein Composition (Plant) : Influence of Trace Elements upon (K. H. Schütte and H. E. Schendel), 958
Protein Content of Human Milk: Correlation between the Fat and the (Dr. O. A. Roels), 673
Protein Derivative (Tuberculin Purified) : Importance of Zinc for the Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* and Large-scale Production of (T. Dekker and H. Huitema), 1387
Protein Fractions : Distribution of Antistreptolysins in (Dr. L. Goreczky), 305
Protein Metabolism of Plants : ^{14}C-Proline and Hydroxyproline in the—an Episode in the relation of Metabolism to Cell Growth and Morphogenesis (Prof. F. C. Steward and Dr. J. K. Pollard), 828
Protein Molecule : Architecture of a (Dr. J. C. Kendrew), 764
Protein Requirements—Report of the F.A.O. Committee, Rome, 1955 (Food and Agriculture Organization of the United Nations, Nutritional Studies No. 16), 228
Protein Structure (International Union of Pure and Applied Chemistry Symposium on), (edited by Prof. Albert Neuberger), *review* by Dr. Kenneth Bailey, 1587
Protein Synthesis : A Rate-Governing Reaction of (Henry Borsook), 1006
Protein Synthesis *in vitro* : Action of Testosterone Propionate and 4-Chlorotestosterone Acetate on (A. Bernelli-Zazzera, M. Bassi, R. Comolli and P. Lucchelli), 663
Protein Synthesis as a Basis for Chloramphenicol-Resistance in *Staphyloccccus aureus* (H. H. Ramsey), 602
Protein Value (Net Dietary-) : A Correlation between Sulphur Content and (D. S. Miller and D. J. Naismith), 1786
Proteins : Diffusion of, through a Wedge-shaped Agar Gel (Dr. Ch. Wunderly, 1087
  Efficient Trace-Labelling of, with Iodine (Dr. A. S. McFarlane), 53
  Partition of, in Liquid Polymer–Polymer Two-Phase Systems (Dr. Per-Åke Albertsson), 709, *erratum*, 918
Proteins (Red Blood Cell) : Agar Electrophoretic Patterns of (Prof. K. V. Giri, G. J. Sathyanarayana Rao and S. Natarajan), 184
Proteins ('Slow-Alpha') : Lack of, in some Guernsey Cattle (Dr. G. C. Ashton), 193

Proteolytic Enzyme from Beef Pancreas : Pancrinogen, a New Zymogen of (Masami Soejima and Kensuke Shimura), 49
Proteus Group of Amoebae : Longevity of (Sister Monica Taylor), 1245
Proteus P18 Bacillus : Action of Beta Radiation on the (Prof. P. Mandel, M. Sensenbrenner and G. Vincendon), 674
Protheroe, J. B., and others : Thermal Decomposition of Hydrogen Peroxide Vapour, 654
Protochlorophyll to a Leuco-Compound : Presence in Root Tips of a Thermolabile Factor causing the Conversion of (Z. Hejnowicz), 1023
Proton Beam (The High-Energy), as a Neuro-surgical Tool (Börge Larsson, Lars Leksell, Prof. Bror Rexed, Patrick Sourander, William Mair and Bengt Andersson), 1222
Protons emitted from the Fusion Reaction in SCEPTRE III : Measurement of the Energy Spectrum of (W. M. Jones, A. C. L. Barnard, S. E. Hunt and D. R. Chick), 216
Protopine : Separation and Determination of the Dissociation Constants of Chelidonine and, by Paper Chromatography (Dr. Wanda Debska), 666
Protoplasmic Streaming and Wall Structure in *Nitella* (M. C. Probine and Prof. R. D. Preston), 1657
Protoplasts of Group A Beta-haemolytic Streptococci (H. Gooder and W. R. Maxted), 808
Protoplasts (*Escherichia coli* K-12) : Recombination Ability of (Dr. Atsuyoshi Hagiwara), 456
Protopterus (A Lungfish), from the Middle Zambezi (P. B. N. Jackson), 123
Protozoa (Oligotrich), from the Sheep Rumen : Maintenance of, *in vitro* (G. S. Coleman), 1104
Protozoologists, Society of : Election of Officers, 1205
Protozoology : Veterinary (U. F. Richardson and Dr. S. B. Kendall), second edition, *review* by Dr. C. A. Hoare, 758
Provasoli, Dr. L. : At the Third International Seaweed Symposium (Effects of Growth Substances on the Growth and Development of Marine Algae), 1780
Province of Logic, *review* by Prof. J. O. Urmson, 212
Pryce, Prof. M. H. L. : Ions of the Transition Elements (Special Features of the Electronic Structure of these Ions from the Physicist's Point of View), 1349
Pryce, Prof. M. H. L., and Runciman, W. A. : Ions of the Transition Elements (Absorption Spectra of Transition Metal Ions in Lattices of Al_2O_3—Trivalent Vanadium in Corundum), 1350
Przibram, Prof. K. : Fluorescence of Adsorbed Water, 520
Pseudomonads (Soil) : Oxidative Metabolism of Polycyclic Hydrocarbons by (H. N. Fernley and Prof. W. C. Evans), 373
Pseudomonas aeruginosa : Preparation of Crystalline *Pseudomonas* Cytochrome$_{551}$ from (Takekazu Horio, Taneaki Higashi, Masashi Nakai, Kiyoshi Kusai and Prof. Kazuo Okunuki), 1307
Pseudomonas ovalis Chester : Effect of Growth Substrates on Isocitratase Formation by (Dr. H. L. Kornberg, A. M. Gotto and Patricia Lund), 1430
Pseudomonas Cytochrome$_{551}$ (Crystalline) : Preparation of, from *Pseudomonas aeruginosa* (Takekazu Horio, Taneaki Higashi, Masashi Nakai, Kiyoshi Kusai and Prof. Kazuo Okunuki), 1307
Psychiatry : Travelling Fellowship and Student Prizes in (Mental Health Research Fund), 157
Psychiatry, Foundations' Fund for Research in : Fellowships, 363
Psychological Periodicals : New, 227
Psychological Study : The Human Hand—a (Prof. Géza Révész), translated by John Cohen, *review* by Prof. R. C. Oldfield, 1042
Psychology at Queen's University, Belfast, 429
Psychology : Occupational (British Association for the Advancement of Science, Section J (Psychology), Discussion on), 993
  Structural—De Humani Mentis Fabrica (D. and K. Stanley-Jones), *review*, 622
Psychology (Industrial), National Institute of : Courses and Seminars, 918
Psychotropic Drugs—Proceedings of the International Symposium on Psychotropic Drugs, Milan, 1957 (edited by S. Garattini and V. Ghetti), *review* by Prof. H. J. Eysenck, 823
Ptaki Ziem Polskich (The Birds of Poland), (Jan Sokolowski), Tom I, *review* by B. Nowosielski-Slepowron, 972
Public Accounts, Committee of : Third Report for the Session 1957-58, 1551
Public Affairs : Science and Technology in, 1
Public Education for England and Wales : Education in 1957, being the Report of the Ministry of Education and the Statistics of, 481
Public Health in Europe : The Teaching of Hygiene and (Prof. F. Grundy and Prof. J. M. Mackintosh), *review* by Prof. Thomas McKeown, 619
Public Health Services, United States (National Institutes of Health, Bethesda) : Travelling Fellowships in Medical Science (Medical Research Council Awards), 634
  Grant of 45,000 dollars for one year (renewable at the rate of 27,000 dollars for each of the four successive years), for the expansion of research on human genetics in the Department of Genetics in the University of Glasgow, under Prof. G. Pontecorvo, 1644
Public Service in Britain : Scientists in the, 991
Pudifoot, J. A. (Williams, D. R., and) : Science in the Use of Coal (Reactivity of Cokes and Chars), 26
Puffinus tenuirostris : The Tasmanian Mutton-Bird (D. L. Serventy), 1070
Pugh, Dr. G. : Space Medicine (Conditions under which a man works most happily and efficiently in a closed vehicle), 1645
Pugh, Dr. G. J. F., and Sewell, Dr. G. W. F. : Ecology of Soil Fungi, 1559
Pullman, A. : Progress in Cancer Research (Metabolism of Carcinogens), 364
Pulp and Paper Research Institute of Canada : New Laboratories (S. Lammie), 1556
Pulse Height Analyser *HS* 100 : The Marshall, 989
Pump (Titanium Getter) : A New Type of (L. Holland, L. Laurenson and J. T. Holden), 851
Pupil in the Dark : Dependence on Age of the Diameter of the (V. Kadlecová, M. Peleška and A. Vaško), 1520
Pupil Unrest, an Example of Noise in a Biological Servomechanism (Lawrence Stark, Fergus W. Campbell and John Atwood), 857
Pure Culture of *Monoblepharis* : Isolation and (Dr. Elizabeth Perrott), 1322
Pure Line : Transmission of Phenotypic Variability within a (Dr. H. R. Highkin), 1460
Pure Mathematics at Birmingham, 359
Pure and Applied Chemistry, International Union of : Symposium on Protein Structure, Paris 1957 (edited by Prof. Albert Neuberger), *review* by Dr. Kenneth Bailey, 1587
Pure and Applied Chemistry, International Union of (sponsored by) : International Conference on Co-ordination Chemistry (Chemical Society), 1710
Pure and Applied Chemistry, International Union of (organized by the Chemical Society, under the auspices of the Organic Chemistry Section of the) : Symposium on Theoretical Organic Chemistry, 22, 1340
Pure and Applied Physics, International Union of : Annual International Conference on High-Energy Nuclear Physics, 356
Purification and Serology of Cucumber Mosaic Virus (Dr. J. A. Tomlinson, Dr. R. J. Shepherd and Prof. J. C. Walker), 1616
Purified Bovine Xanthine Oxidase in *C3H* and *C* Mice : Anti-Tumour and Biochemical Effects of (Prof. A. Haddow, Dr. G. de Lamirande, Prof. F. Bergel, Dr. R. C. Bray and D. A. Gilbert), 1144
Purified Fraction : Separation of the Condensing Enzyme of *Aspergillus niger* from Acetyl Coenzyme A Deacylase and Citridesmolase and the Effect of Magnesium Ion on the (Prof. C. V. Ramakrishnan), 1601
Purified Protein Derivative (Tuberculin) : Importance of Zinc for the Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* and Large-scale Production of (T. Dekker and T. Huitema), 1387
'Purified' Spinal Cord and Bacillary Fractions : Experimental Allergic Encephalomyelitis induced with combined (Dr. J. Colover), 105
Purine Excretion by the Sheep Ked, *Melophagus ovinus* (L.), (W. A. Nelson), 115
Purine Supply : Dependence of Bone Marrow Cells on the Liver for (Dr. L. G. Lajtha and J. R. Vane), 191
Purity (High) : Use of Ion Exchange Resins in preparing Water of (I. Raleigh), 1667 ; (Dr. J. A. Kitchener), 1667
Purkinje and Ventricular Membrane Resistances during the Rising Phase of the Action Potential (Dr. Edward A. Johnson, P. A. Robertson and J. J. Tille), 1161
Purpose and Partnership in Education : Policy, 749
Purvis, Dr. J. L. : Forms of Pyridine Nucleotides in Rat-Liver Mitochondria, 711
Pusztai, A., and Morgan, Prof. W. T. J. : Degradation of Blood Group-Specific Mucopolysaccharides by Ficin and Papain, 648
Putley, Dr. E. H. : Measurements of Conduction at Low Temperatures (Electrical and Thermal Conduction in Semi-conductors), 83
  Solid State Physics, 568
Putnam, L. G. : Albinism in the Migratory Grasshopper, *Melanoplus bilituratus* (Wlk.), 1529
Pybus, Dr. Mary B., and others : New Plant Growth-Substances with Selective Herbicidal Activity, 1094
Pygmies : The African (Prof. R. Ruggles Gates), 88
Pyle, I. C., and Ziman, Dr. J. M. : Measurements of Conduction at Low Temperatures (Electrical and Thermal Conduction in-Semi-conductors), 84
Pyrethrins and to Pyrethrins–Piperonyl Butoxide : Resistance to, in a Wild Strain of *Musca domestica* L. in Sweden (Dr. M. Davies, Dr. J. Keiding and Dr. C. G. von Hofsten), 1816
Pyrethrins–Piperonyl Butoxide : Resistance to Pyrethrins and to, in a Wild Strain of *Musca domestica* L. in Sweden (Dr. M. Davies, Dr. J. Keiding and Dr. C. G. von Hofsten), 1816
Pyrethrum in East Africa : Nematoses of (A. G. Whitehead), 542
Pyridine-N-oxide-2-thiol and Sodium Dialkyldithiocarbamates, and their Copper Complexes : Fungitoxic Action of 8-Hydroxyquinoline, (A. Kaars Sijpesteijn and M. J. Janssen), 1313
Pyridine Nucleotides in Rat-Liver Mitochondria : Forms of (Dr. J. L. Purvis), 711
bis-Pyridinium Ions : Protection by Oximes of, against Lethal Diisopropyl Phosphonofluoridate Poisoning (Dr. F. Hobbiger and Dr. P. W. Sadler), 1672
Pyrimethamine in Chickens : Toxic Effects produced by, and their Antagonism by Folic Acid (J. M. S. Lucas), 1449
Pyroglutamic Acid : Carbon Dioxide Catalysis of the Formation of (A. Hubert, R. Buijle and Dr. B. Hargitay), 259
Pyrophosphate (Tetraethyl) : New Potent Reactivators of Acetocholinesterase inhibited by (Dr. F. Hobbiger, Dr. D. G. O'Sullivan and Dr. P. W. Sadler), 1498
Pyruvate in Aqueous Solution : Structure of (William P. Jencks and Joan Carriuolo), 598
Pythium in Soils : Establishment of (R. Barton), 1776

QUAGLIARIELLO, Prof. E., and others : Effect of Diphosphopyridine Nucleotide on the Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by 2-Acetylaminofluorene and N-2-Fluorenyldiacetamide, 1744
Qualifications in Mathematics, 1644
Quanta and Parity : Physics of (British Association for the Advancement of Science, Section A (Mathematics and Physics), Discussion on), 1119
Quantitative Aspects of Indoleacetic Acid Detection : Growth-promoting Activity of Potato Tuber Extracts in the Coleoptile Straight-Growth Test— (A. Booth and Dr. P. F. Wareing), 406
Quantitative Determination of Hydroxyproline : A Rapid Paper Chromatographic Procedure for the (Henry R. Roberts, Michael G. Kolor and Wesley Bucek), 1602
Quantitative Organic Analysis (James S. Fritz and George S. Hammond), *review* by Dr. A. D. Mitchell, 1187
Quantitative Plant Ecology (P. Greig-Smith), *review* by Prof. W. H. Pearsall, 347
Quantitative Separation of Nitrogenous Organic Bases using Ammonium Reineckate (Dr. Lee Kum-Tatt), 655
Quantum Electrodynamics : Experimental Tests of (Prof. W. E. Lamb), 160
Quantum Mechanics, *review* by Prof. N. Kemmer, 755
  The Principles of (Prof. P. A. M. Dirac), fourth edition, *review* by Prof. N. Kemmer, 755
Quarrington, J. E. : Spectroscopy of Solids (High-resolution Absorption Spectra), 159
Quartz (Fused) : Visualization of Mode Conversion of an Ultrasonic Beam in (V. J. Hammond and R. Carter), 790

- Queen Elizabeth College, London : Admittance of Sir John Atkins as the first Fellow, in recognition of his unique service, 1487
- Queen Mary College, London : Title of professor of pure mathematics in the University of London conferred on Dr. K. A. Hirsch, 158
  - Title of professor of zoology in the University of London conferred on Dr. G. E. Newell, 158
  - Title of professor emeritus of botany in the University of London conferred on Prof. F. M. Haines, 363
- Queen Victoria Museum and Art Gallery, Launceston : Report for 1956-57, 699
- Queen's University, Belfast : Appointment of Dr. G. Seth to the chair of psychology, 158, 429
  - Appointment of Dr. H. G. Heal to a lectureship in inorganic chemistry, 158
  - Appointment of T. K. Marshall to a lectureship in pathology (forensic medicine), 158
  - Election of Prof. Michael Grant as president and vice-chancellor, 1707
- Queensland : The Middle Cambrian Trilobite *Centropleura* in (Dr. A. A. Öpik), 204
- Quenouille, M. H. : The Analysis of Multiple Time-Series, *review* by Dr. N. L. Johnson, 1183
- Quiescent Prominences : Temperature and Turbulence in, determined from Line-widths (Prof. P. ten Bruggencate and Dr. G. Elste), 1154
- Quin, Dr. Louis D. : Separation of some Tobacco Alkaloids by Gas Chromatography, 865
- Quince, B. W., and others : Stabilization of Water Mists, 1724
- Quinton, K. C. : A V.H.F. Television Link for Outside Broadcasts, 1490

- RABBIT : Effect of the Synthetic Œstrogen Stilboestrol on Pregnancy in the (Dr. Brenda M. Schofield), 58
- Rabbit Auricles : Movements of Potassium in (D. A. Persoff), 605
- Rabbit Auricles (Isolated) : Influence of Hydrocortisone on the Action of Sodium on (Dr. T. H. Rindani), 1521
- Rabbit Foetuses : Thyroxine-binding Protein in the Serum of (Carlos Osorio and N. B. Myant), 866
- Rabbit Gamma-Globulin containing the Antibody and Antigenic Combining Sites : Separation and Isolation of Fractions of (Dr. R. R. Porter), 670
- Rabbit Kidney : A Rapid Method for Separating Glomeruli from (W. F. Cook and Sir George Pickering), 1103
- Rabbits : Conditions which eliminate Inflammation to Homografts in (Dr. Richard H. Andresen, Dr. Clarence W. Monroe, Dr. George M. Hass and Dr. Dorothy A. Madden), 1452
  - Hyperglycaemia produced in, by 5-Hydroxytryptophan (Prof. H. Konzett), 1168
- Rabi, Prof. I. I. : Appointed to serve on the Scientific Advisory Committee of the International Atomic Energy Agency, 1413
- Racemization (Thermal), of Ethylenediaminetetraacetatocobaltate (III) : Electron Transfer and (Yong Ae Im and Prof. Daryle H. Busch), 1368
- Racial Problems in Britain, 1060
- Radar : Migrational Drift of Birds Plotted by (Dr. David Lack), 221
  - Ruminations on, *review* by Dr. R. L. Smith-Rose, 415
- Radiation : Biological Effects of (Dr. J. F. Loutit), 1118
  - Changes in the Sensitivity of Enzymes in the Dry State to (Dr. Reinier Braams, Franklin Hutchinson and Dilip Ray), 1506
  - Degradation of DL-Methionine by (Jiřina Kopoldová, Jaroslav Koloušek, Arnošt Babicky and Jindřich Liebster), 1074
- Radiation in the National Economy and Science : Abstracts of Papers given in the Session on Radiation Chemistry at the All-Union Conference on the Application of Radioactive and Stable Isotopes and (Moscow, 1957), (translated from the Russian), *review* by Prof. G. Porter, 1588
- β-Radiation : Action of, on the *Proteus* P18 Bacillus (Prof. P. Mandel, M. Sensenbrenner and G. Vincendon), 674
- γ-Radiation : Effect of, on Ferriprotoporphyrin (Dr. Mary-Louise Rothschild, Laura Cosi and Lawrence S. Myers, jun.), 316
  - Lethal and Sterilizing Effects of Single and Fractionated Doses of, on *Calandra granaria* L. (D. J. Jefferies and P. B. Cornwell), 402
- Radiation (6707 A.) : Presence of, in the Twilight Sky (M. Gadsden and K. Salmon), 1598
- Radiation (Atomic) : Effects of (Dr. C. Auerbach), 1543
  - Effects of (Report of the United Nations Scientific Committee on the) 1543
- Radiation (Ionizing) : Alleged Susceptibility of Sulphydryl Enzymes to (Dr. A. Pihl, R. Lange and L. Eldjarn), 1732
  - A Highly Sensitive Chemical Dosimeter for (W. A. Armstrong and Dr. D. W. Grant), 747
- Radiation (Microwave) : Scattering of, by a Plasma Column (Forrest I. Boley), 790
- Radiation (Nuclear), in Food and Agriculture (edited by Prof. W. Ralph Singleton), *review* by Dr. Lorna J. Lilly, 758
- Radiation (X-) : Influence of Cysteamine on the Teratogenic Action of (Dr. D. H. M. Woollam and Dr. J. W. Millen), 1801
- Radiation Biology : Second Australasian Conference on (Cancer Institute, Melbourne), 22
- Radiation Census : An International Milk Teeth (Dr. Herman M. Kalckar), 283
- Radiation Chemistry : Reports on (compiled by R. W. Clarke), 88
  - Symposium on (Academy of Sciences of the U.S.S.R., Division of Chemical Science, Moscow, 1955), (edited by Prof. N. A. Bakh), translated from the Russian, *review* by Prof. G. Porter, 1588
- Radiation Damage in Lithium Fluoride : Etching of (Dr. D. A. Young), 375
- Radiation Damage (Chemical) : Thermal Annealing of (Dr. A. G. Maddock and S. R. Mohanty), 1797
- Radiation Dose-Rates (High) : Chromosome Breakage at (J. S. Kirby-Smith and G. W. Dolphin), 270
- Radiation Effect : Mechanism of, on the Process of Synthesis of Deoxyribonucleic Acid (Studies in Synthesis of Deoxyribonucleic Acid), (L. G. Lajtha, R. Oliver, R. Berry and W. D. Noyes), 1788
- Radiation Research, Association for (Dr. L. H. Gray and Dr. Tikvah Alper), 92
- Radiation Research Visiting Club : Seventh Meeting, 92
- Radiation Sterilization : Preservation of Grass for Winter-feeding by (Erna Grossbard, D. J. Minson, Dr. William Davies and T. Horne), 331
- Radiations (Ionizing) : Genetic Hazard of (Dr. T. C. Carter, Mary F. Lyon and Rita J. S. Phillips), 409
- Radical (Free) Stabilization (Faraday Society Discussion on), 89, 1496
- Radicals produced by Controlled Potential Electrolysis of Aromatic Substances : Electron Resonance Study of the (D. E. G. Austen, Dr. P. H. Given, Dr. D. J. E. Ingram and M. E. Peover), 1784
- Radio and Telecommunications : Electronics, 988
- Radio Aids to Navigation (British Association for the Advancement of Science, Section G (Engineering), Discussion on), 978
- Radio Communications : The Ionosphere—its Significance for Geophysics and (Dr. Karl Rawer), translated from the German by Ludwig Katz, *review* by T. W. Bennington, 1116
- Radio Echoes from the Aurora Australis and Aurora Borealis : A Comparison of (D. P. Harrison and C. D. Watkins), 43
- *Radio Engineering*, Vol. 12, No. 8, 1957, first English issue, 989
- *Radio Engineering and Electronics*, Vol. 2, No. 2, 1957, English edition, 989
- Radio Engineers, British Institution of : Clerk Maxwell Premium awarded to Dr. T. B. Tomlinson, 295
  - Election of Prof. E. E. Zepler as president, 1416
  - Formation of a Medical Electronics Group, 1644
- Radio Engineers, Institute of, and others : Annual Conference on Electrical Techniques in Medicine and Biology, 433, 771
- Radio Frequency Spectroscopy Group : Conference on Applications of Magnetic Resonance to Solid State Physics, 634
- Radio Observations of Hypersonic Shock Waves (Dr. J. S. Hey, J. T. Pinson and P. G. Smith), 1220
- Radio Propagation (Long-Distance), at Metre Wave-lengths : Role of Turbulent Scattering in (F. A. Kitchen and Dr. M. A. Johnson), 302
- Radio Research 1957—the Report of the Radio Research Board and the Report of the Director of Radio Research, 1558
- Radio Research Board : Report of the, and the Report of the Director of Radio Research (1957), (Department of Scientific and Industrial Research), 1558
- Radio Telescope, Jodrell Bank : Appeal, 1484
  - Evidence regarding the cost of construction, 1551
- Radio Transmissions (Powerful) : Health Hazards from (D. H. Shinn), 1792
- Radio Valve Manufacturers' Association, British : The Use of Semi-conductor Devices, 770
- Radio Research Station of the Department of Scientific and Industrial Research : World Data Centre for Rockets and Satellites, 988
- Radioactive Cloud from the Accident at Windscale : Long-range Travel of the (N. G. Stewart and R. N. Crooks), 627
- Radioactive Contamination of Foods : Nutritional Hazards caused by (Scotish Group of the Nutrition Society Symposium on), 700
- Radioactive Isotope Barium-140—Lanthanum-140 : Tracing the Movement of Pebbles marked with the (C. Kidson, A. P. Carr and D. B. Smith), 1347
- Radioactive Isotopes in Aqueous and Alcoholic Samples : A Direct-Plating Method for the Assay of (H. Campbell, H. A. Glastonbury and Margaret D. Stevenson), 1100
- Radioactive Phosphorus in Plants : Uptake and Translocation of (G. N. Thorne), 1775
- Radioactive Substances and X-Rays in Schools : Use of (Ministry of Education, Administrative Memorandum No. 577, on), 1203
- Radioactive Sulphur : Incorporation of, by *Thiobacillus thioparus* (Prof. B. Skarzynski and W. Ostrowski), 933
- Radioactive Tracer : Use of Iron–52 as a (Dr. P. E. Francois and Leon Szur), 1665
- Radioactive Tracers and Drugs circulating in the Blood : Concentration in the Human Ovarian Follicular Fluid of (Prof. Kurt N. von Kaulla, Jerry K. Aikawa and John D. Pettigrew), 1238
- Radioactive and Stable Isotopes and Radiation in the National Economy and Science : Abstracts of Papers given in the Session on Radiation Chemistry at the All-Union Conference on the Application of (Moscow, 1957), (translated from the Russian), *review* by Prof. G. Porter, 1588
- Radioactivity : Deposition of, in North-west England from the Accident at Windscale (A. C. Chamberlain and H. J. Dunster), 629
- Radioactivity cue to Fission Products in Biological Material (Prof. W. V. Mayneord, W. Anderson, R. E. Bentley, L. K. Burton, J. O. Crookall and N. G. Trott), 1473
- Radioactivity of Vapours : Scintillation Counter for measuring (A. E. Lowe and D. Moore), 133
- Radioactivity (Fall-out), in a Deer's Antlers (Dr. J. Hawthorn and R. B. Duckworth), 1294
- Radioassay of Carbon-14 in Aqueous Solutions using a Liquid Scintillation Spectrometer (Dr. Daniel Steinberg), 740
- Radiobiochemical Lesion in Animal Cells (Studies in Synthesis of Deoxyribonucleic Acid), (Margery G. Ord and Dr. L. A. Stocken), 1787
- Radiobiology : Contribution of, to General Biology, *review* by Prof. P. C. Koller and Dr. P. Alexander, 74
- Radiocarbon Profile in the Tasman Sea (D. M. Garner), 466
- Radiochromatography of Alkali Ions (Dr. H. J. Arnikar), 1230
- Radioisotopes : Advances in the Use of—Medical Uses (F. Ellis), 1407 ; General Uses (W. S. Eastwood), 1408
- Radio-isotopes in Industry : Course on (Isotope School, Atomic Energy Research Establishment, Harwell), 700
- Radiometric Estimation of Unsaturated Fatty Acids on Chromatograms (A. Z. Budzyński, Z. J. Zubrzycki and I. G. Campbell), 178
- Radiometric Titrations with Complexons (T. Braun, I. Maxim and I. Galateanu), 936
- Radioprotective Action of 5-Hydroxytryptamine (H. A. S. van den Brenk and Kathleen Elliott), 1506
- Radiosensitivity : Effect of Triiodothyronine on (Dr. Joseph A. Stein and Dr. Melvin L. Griem), 1681
- Radiosensitivity of Broad Bean Roots : Respiration and (B. A. Kihlman), 730
- Radiosensitivity of Mouse Ehrlich Ascites Tumour : Effect of Nitrous Oxide on the (Dr. Michael Ebert and Mrs. Shirley Hornsey), 1240
- Radiosensitivity of Tumour Cells : Effect of Nitric Oxide on the (Dr. L. H Gray, F. O. Green and C. A. Hawes), 952
- Radius : Dependence of the Nucleonic Component of Cosmic Ray Air Showers on (C. S. Wallace, Dr. M. M. Winn and Dr. K. S. Ogilvie), 1653
- Radley, Margaret : Gibberellic Acid-like Substances in Higher Plants, 1279
- Radley, Margaret, and Dear, Enid : Occurrence of Gibberellin-like Substances in the Coconut, 1098

Raettig, Dr. Hansjürgen : Bakteriophage 1917 bis 1956, *review* by Dr. C. H. Andrewes, 350
Raffel, Sidney, and Stanier, Roger Y. (edited by Clifton, Charles E., in association with) : Annual Review of Microbiology, Vol. 11, *review* by Dr. H. K. King, 823
Ragan, Prof. C. (Rose, Prof. H. M., and) : Awarded 5,000 dollars by the Gairdner Foundation, 1710
Ragge, Dr. David R. : European Orthoptera, *review*, 141
Rainey, Dr. R. C. : ". . . the East Wind Brought the Locusts", *review*, 1257
Rajagopal, E. S., and others : The Four Elastic Constants of Diamond, 518
Rajagopalan, K. V., and others : Biological Deamidation of Nicotinamide in Vertebrates, 51
Raleigh, I. : Use of Ion Exchange Resins in preparing Water of High Purity, 1667
Ramage, H. P. : Physiology as an Education and as a Career (Physiology in Schools), 1066
Ramakrishnan, Prof. C. V. : Separation of the Condensing Enzyme of *Aspergillus niger* from Acetyl Coenzyme A Deacylase and Citridesmolase and the Effect of Magnesium Ion on the Purified Fraction, 1601
Ramaswami, Dr. L. S., and Lakshman, A. B. : Spawning Catfish with Mammalian Hormones, 122
Ramsay, D. A., and others : Emission and Absorption Spectra of NCO and NCS, 336
Ramsay Memorial Fellowships Trustees : Award of Fellowships in Chemistry for 1958-59, 432
Ramsey, H. H. : Protein Synthesis as a Basis for Chloramphenicol-Resistance in *Staphylococcus aureus*, 602
Rana temporaria : Direct Absorption of Dissolved Strontium-90 and Yttrium-90 by Tadpoles of (J. W. Lucas and D. C. Pickering), 1242
Randall, T. (Staveley, Dr. L. A. K., and) : Ions of the Transition Elements (Measurements of the Heats of Formation of a large number of Complexes involving Ethylenediamine Tetraacetic Acid), 1350
Randhawa, Dr. M. S. : Agricultural Research in India—Institutes and Organizations, *review* by F. C. Bawden, 1628
Randles, Dr. J. E. B. : Charge Transfer Processes (Electrochemical Reductions other than those involving Hydrogen or Metal Deposition—Determination of Kinetic Parameters of Redox Reactions from Current–Potential Curves and by A. C. Impedance Methods), 1354
Random Mating : Change in Mean Viability at a Multiallelic Locus in a Population under (S. P. H. Mandel and I. M. Hughes), 63
Random Walk Problem : Polar Wandering, a (R. Green), 382
Ranganayaki, S., and others : Photosynthesis of Amino-Acids from Paraformaldehyde involving the Fixation of Nitrogen in the Presence of Colloidal Molybdenum Oxide as Catalyst, 1668
Ransom, P. : Solid State Physics, 568
Rao, Dr. B. Ramachandra, and Rao, Dr. H. S. Rama : A Method of Studying the Variation with Temperature of Ultrasonic Absorption in Liquids, 1794
Rao, G. J. Sathyanarayana, and others : Agar Electrophoretic Patterns of Red Blood Cell Proteins, 184
Rao, Dr. H. S. Rama (Rao, Dr. B. Ramachandra, and) : A Method of Studying the Variation with Temperature of Ultrasonic Absorption in Liquids, 1794
Rao, Dr. P. L. Narasimha, and Uma, Miss B. N. : Formation of Antifungal Antibiotics by a New *Streptomyces* Species, 115
Rao, Dr. V. K. R. V. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (The Establishment of New Universities), 1285
Rapacz, Dr. J., and Dubiski, Dr. S. : Serological Test for Determination of Parentage in Cattle, 1176
Raphael, Prof. R. A. : Chemistry of Fluorine Compounds, 1269
Rapid Fading-Rate of Ultra High-Frequency Signals reflected from the Moon : Comparison of Measured and Computed Values of the (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
Rapid Method for Separating Glomeruli from Rabbit Kidney (W. F. Cook and Sir George Pickering), 1103
Rapid Method (A Simple,), for Circular Paper Chromatography (Dr. A. J. Philippu), 1159
Rapid Method (A Simple and), for the Biological Assay of Glucocorticoids (B. P. Block and P. F. D'Arcy), 181
Rapid Paper Chromatographic Procedure for the Quantitative Determination of Hydroxyproline (Henry R. Roberts, Michael G. Kolor and Wesley Bucek), 1602
Rare British Breeds : Haemoglobin and Potassium Blood Types in some Non-British Breeds of Sheep and in certain (J. V. Evans, Dr. H. Harris and Prof. F. L. Warren), 320
Rare Phosphate Minerals : X-Ray Study of (Dr. B. Mukherjee and U. Prasad), 472
Rare-Earth Glasses : Verdet Constants of, measured with a New Polarimeter (Niels O. Young), 333
Raroia : Work and Life on—an Acculturation Study from the Tuamotu Group, French Oceania (Dr. Bengt Danielsson), *review* by Prof. Raymond Firth, 280
Rarotonga and Aitutaki : Social Change in the South Pacific— (Prof. Ernest Beaglehole), *review* by Prof. Raymond Firth, 280
Rasmont, Dr. R., and others : Ultra-structure of the Coxal Glands of the Scorpion, 328
Rasquin, Priscilla : Egg Rafts of Angler Fish, 21
  Colour Changes in Teleosts, 564
Rat : The, *review* by Prof. H. A. Harris, 419
  Anatomy of the (Eunice Chace Greene), *review* by Prof. H. A. Harris, 419
  Differential Demonstration of Acetylcholinesterase and Non-specific Cholinesterase in the Adrenal Medulla of the (Prof. O. Eränkö), 183
  Electroencephalograph Correlates of Ammonium Carbonate Intoxication in the (Dr. Robert Cohn and Comdr. Thomas R. Ulshafer), 1735
  Influence of the Thymus on the Reaction of the Adrenal to Adrenocorticotropic Hormone in the (Dr. J. Comsa), 57
  Influence of the Thymus upon the Reaction of the, to Anterior Pituitary Growth Hormone (Dr. J. Comsa), 728
  Phenylketonuria in the, associated with Decreased Temporal Discrimination Learning (Victor H. Auerbach, Prof. Harry A. Waisman and L. Benjamin Wyckoff, jun.), 871
  Replacement of Adrenaline and Noradrenaline in the Innervated and Denervated Adrenal Gland of the, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 1020
  Ribosyl Transfer between Ribose Nucleotides in the (Georg B. Gerber and Kurt I. Altman), 1513
  Vitamin B_{12} Activity in the Serum of the (Dr. G. H. Spray and Dr. K. B. Taylor), 1309
Rat in Tanganyika : Fleas of the (J. G. Halcrow), 817
Rat (Adrenalectomized) : Influence of Circulating Adrenocorticotrophin on the Pituitary Adrenocorticotrophic Response to Stress in the (Dr. J. R. Hughes and Joan Vernikos), 725
Rat (Gastrectomized) : Failure of Sorbitol to Replace Intrinsic Factor in the (Dr. Bernard A. Cooper), 647
Rat (Hyperthyroid): Selenium and Liver Necrosis in the (Dr. K. Aterman), 1514
Rat (Mole-), *Cryptomys hottentotus* Lesson, 1826 (Common or Hottentot) : Albinism in the (Peter St. J. Turnbull-Kemp), 63
Rat (White): Deoxyribonucleic Acid Content of the Nuclei in the Adrenal Cortex of the (H. Roels), 873
Rat Anaphylaxis : Mast Cell and Histamine in—the Effect of *Haemophilus pertussis* (I. Mota), 1021
Rat Brains : Tubule Formation in, by Monkey Kidney Cells previously grown *in vitro* (Prof. M. Michael Sigel, Thomas M. Scotti, Martha A. Wryk and Mantley Dorsey, jun.), 1034
Rat Hepatoma : Electron Spin Resonance Investigations of Rat Liver and (Frank K. Truby and Joseph W. Goldzieher), 1371
Rat Liver : Autoradiographic Analysis on Agar Plates of Labelled Antigens from (P. Perlmann and T. Hultin), 1530
  Distribution of Tissue-Specific Antigens in Centrifugal Fractions of (Dr. Peter Vogt), 1807
  Vanadium Inhibition of Phospholipid Synthesis and Sulphydryl Activity in (Fred Snyder and Prof. W. E. Cornatzer), 462
Rat Liver during Carcinogenesis : Intracellular Changes in Levels of Polarographically Active Sulphydryl Groups in (Dr. Silvio Fiala), 257
Rat Liver (Normal, Regenerating, Precancerous and Cancerous) : Deoxyribonuclease Activity and Deoxyribonucleic Acid Synthesis in (Dr. Sam Brody), 1386
Rat-Liver Homogenates : An Anticlumping Factor for Mitochondria in the Supernatant Fraction of (Dr. J. St. L. Philpot and Dr. J. E. Stanier), 1167
Rat Liver 3-Hydroxyanthranilic-Acid Oxidase : Effect of Diphosphopyridine Nucleotide on the Inhibition of, by 2-Acetylaminofluorene and N-2-Fluorenyldiacetamide (Prof. E. Quagliariello, S. Auricchio, E. Rinaldi and A. Rubino), 1744
Rat-Liver Mitochondria : Forms of Pyridine Nucleotides in (Dr. J. L. Purvis), 711
Rat Liver and Rat Hepatoma : Electron Spin Resonance Investigations of (Frank K. Truby and Joseph W. Goldzieher), 1371
Rat Livers : Effect of Nicotinic Acid on the Cholesterol Contents of (Dr. Harald Schön), 534
Rat Parabionts (Separated) : Tolerance of Skin Homografts related to Fatal Disease in (Dr. B. Nakič and V. Silobrčić), 264
Rat Pituitaries : Influence of a Crude Hypothalmic Extract on the Acid Phosphatase Activity of (Prof. J. Charvát, V. Schreiber and V. Kmentová), 62
Rat Serum : Effect of the Borate Ion in Buffers on the Electrophoresis of (C. F. Garbers and F. J. Joubert), 530
  Transport of Vitamin A Ester in (C. F. Garbers), 1018
Rat Skeleton : The Genesis of the (Donald G. Walker and Zolton T. Wirtschafter), *review* by Prof. H. A. Harris, 419
Rat Thyroid : Effect of Benzene on (Dr. Angelo Iannaccone and Dr. Gusieppe Cicchella), 669
Rat Tibiae (Isolated Embryonic) : Cultivation of, on a Chemically Defined Medium (Susan Heyner and Dr. J. D. Biggers), 810
Rat and Mouse Tumours (Transplanted) : Effect of Hydrogen Peroxide on (Dr. Kanematsu Sugiura), 1310
Rat's Denervated Adrenal Gland : Catechol Amine Depletion in the, following Chronic Administration of Reserpine (Dr. Bernard L. Mirkin), 113
Ratcliffe, J., and others : 3-Ethoxy-4-hydroxybenzoic Acid in Human Urine, 1160
Ratcliffe, J. A. : Science for Students of the Humanities, *review*, 348
Rate of Absorption of Supplementary Free Amino-Acids during Digestion (Dr. J. B. Longenecker and N. L. Hause), 1739
Rate of Accumulation of Nickel in Atlantic Equatorial Deep-Sea Sediments and its Bearing on Possible Extra-Terrestrial Sources (Karl K. Turekian), 1728
Rate of Growth of Animal Cells in Continuous Suspended Culture : Critical Effect of Oxygen Tension on (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Rate of Sorption in Paper Chromatography : Shape of Spot and (W. G. Kauman and Thor A. Bak), 743
Rate-Governing Reaction of Protein Synthesis (Henry Borsook), 1006
Rate and Steric Course of Enzymatic Reduction of Steroids : Effect of Thyroxin Administration on the (Dr. Joseph McGuire and Gordon Tomkins), 261
Rates (Time), of Wages and Hours of Labour (Ministry of Labour and National Service), twelfth edition, 770
Rathbone (Eleanor) Memorial Lecture (Sir Alexander Carr-Saunders), 561
Rathgeber, M. H., and others : Air Showers of Size Greater than 10^5 Particles, 3, Comparison between the Response of Geiger Counters and Scintillation Counters, 1053 ; 4, The Distribution of Nuclear-active Particles and of Mu-Mesons, 1699
Ratio (Adrenaline/Noradrenaline), in the Adrenal Glands of the Hedgehog during Summer Activity and Hibernation (Prof. Paavo Suomalainen and Dr. Veikko J. Uuspää), 1500
Ratio (Sex), in the Golden Hamster before Uterine Implantation (Prof. P. E. Lindahl and G. Sundell), 1392
Rats : Effect of Drugs on Emotional Behaviour in (R. W. Ryall), 1606
  Effect of Oxytocin Administration on Respiration of Lactating Mammary Gland Tissues in (K. Ôta and A. Yokoyama), 1509
  Experimental Suppression of Increased Capillary Permeability in Thermal Burns in (Dr. W. G. Spector and Dr. D. A. Willoughby), 949
  Hydrogen Peroxide Ingestion and the Growth of (Lester Hankin), 1453
  Hypoglycaemic Effect of Monoiodoacetic Acid and Iodoacetamide in (Gösta T. Hultquist), 318
  Inherited Hypertension in (Sir Horace Smirk and William H. Hall), 727

Rats made Hypertensive by the Goldblatt Method : Histochemical Changes in Kidneys and Adrenals of (Dr. Antonio Pasqualino and Prof. Geoffrey H. Bourne), 1426
Rats Irradiated with X-Rays and Treated with Parathyroid Extract : Increased Survival of (R. H. Rixon, J. F. Whitfield and T. Youdale), 1374
Rats (Albino), treated during the Embryonic Stage with Rous Virus : Sarcoma in (G. J. Svet-Moldavsky), 1452
Raub, Prof. E. : Study of Metals and Alloys above 1,200°C. (Relatively High Reactivity with Gases and Refractory Materials possessed by the Platinum Metals and Alloys at High Temperatures), 1418
Rautenbach, Dr. C. H. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy ?), 1284
Raven, Prof. Chr. P. : Morphogenesis, the Analysis of Molluscan Development, *review* by Prof. C. M. Yonge, 484
Ravin, H. A., and others : Biochemical Response to Physical Injury (The Bacterial Factor in Traumatic Shock), 1496
Rawer, Dr. Karl : The Ionosphere—its Significance for Geophysics and Radio Communications (translated from the German by Ludwig Katz), *review* by T. W. Bennington, 1116
Rawlins, F. I. G. : Detachment Relinquished, *review*, 757
  Fundamentals of Symbolic Form, *review*, 1586
  Combinatory Logic, *review*, 1590
Rawson, Prof. D. : At the seventy-sixth Annual Meeting of the Royal Society of Canada (Potentialities of the North-West—Biological Problems of the Region), 701
Rawson, Mrs. Dilys (Rigby, Joyce E., and) : A New Type of Early Cysticercoid Stage in a Cyclophyllidean Cestode, 121
Ray, Dilip, and others : Changes in the Sensitivity of Enzymes in the Dry State to Radiation, 1506
Ray, J. C., and others : Hexokinase Activity in Cell-free Extracts of *Leishmania donovani*, 109
Ray, Prof. J. N. : *Obituary* of Prof. Horace B. Dunnicliff, 1771
Ray, Dr. N. H. : Gas Chromatography, *review*, 1630
  Effect of the Carrier Gas on the Sensitivity of a Thermal Conductivity Detector in Gas Chromatography, 1663
Ray, W. D., and others : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Ray (Cosmic) Air Showers : Dependence of the Nucleonic Component of, on Radius (C. S. Wallace, Dr. M. M. Winn and Dr. K. S. Ogilvie), 1653
Raymond, J. C., and others : Effect of Gibberellic Acid on the Nodulation of White Clover (*Trifolium repens* L.), 1319
Raynaud, Prof. A. : Comparative Endocrinology (Endocrine Basis of Reproductive Adaptations), 774
Rayon Research Association, British : Open Days (L. A. Wiseman), 365
Rays : Cosmic (Physical Society Conference on), 433, 1281
γ-Rays (1·33 MeV.) : Coherent Scattering of, by Lead (Dr. K. G. Standing and J. V. Jovanovich), 521
Re-Absorption of Water in Renal Tubules : Role of Hyaluronidase in the—the Mechanism of Action of the Antidiuretic Hormone (A. G. Ginetzinsky), 1218
Reachtaire, M. O. : At the Third International Seaweed Symposium (Phycoerythrin and Phycocyanin), 1779 ; (Value of two New Zealand species, *Pachymenia himantophora* and *Durvillea antarctica*, as a Fertilizer), 1780
Reaction of the Adrenal to Adrenocorticotropic Hormone in the Rat : Influence of the Thymus on the (Dr. J. Comsa), 57
Reaction of Ethylene Diamine with Epinephrine and Norepinephrine : Fluorescent Derivatives obtained by the (Dr. Guy Nadeau and Louis-P. Joly), 180
Reaction of Protein Synthesis : A Rate-Governing (Henry Borsook), 1006
Reaction of the Rat to Anterior Pituitary Growth Hormone : Influence of the Thymus upon the (Dr. J. Comsa), 728
Reaction (Cellulose) : A Strain of *Acetobacter aceti* giving a Positive (Dr. J. G. Carr), 265
Reaction (Feeding), of Hydra : Effect of Analogues of Glutathione on the (E. E. Cliffe and Dr. S. G. Waley), 804
Reaction (Fluorescent Mast-Cell), in Precancerous Skin of the Lizard *Lacerta agilis* (Prof. A. Stolk), 1177
Reaction (Fusion), in SCEPTRE III : Measurement of the Energy Spectrum of Protons emitted from the (W. M. Jones, A. C. L. Barnard, S. E. Hunt and D. R. Chick), 216
Reaction (Initial Irradiation), in Mice (Dr. Harold Blondal), 1026
Reaction (Local), to Non-metastasizing and Metastasizing Transplantable Tumours (Dr. C. Maltoni), 1742
Reaction (An Oxidation), highly Dependent on Pressure (N. J .M. Wilkins and J. N. Wanklyn), 653
Reaction (Photoperiodic), in Rice : Inheritance of (Prof. P .K. Sen and G. N. Mitra), 119
Reaction (Salkowsky) : Determination of Indole Acetic Acid by the (Dr. A. M. Mayer), 1670
Reaction Mechanism of Cytochrome Oxidase : Reconstruction of the (Shigeki Takemori, Ichiro Sekuzu, Takashi Yonetani and Prof. Kazuo Okunuki), 1306
Reaction Rates (Thermonuclear) : Contribution of High-Energy Particles to (Dr. G. Eder and Dr. H. Motz), 1140
Reactions : Controlled Nuclear Fusion (Dr. R. S. Pease), 1051
  Isotopic Exchange (Faraday Society Discussion on), 295
  Photochemical, 231
Reactions of *Gammarus* sp. to Water Currents (P. R. M. Pattisson), 563
Reactions in Organic Chemistry : Structure and—the Kekulé Symposium (Prof. D. H. Hey and Dr. G. H. Williams), 1340
Reactions of Thiosulphate with Cysteine (Tadeusz W. Szczepkowski), 934
Reactions (Acid-Base), of the Tropylium Ion : Polarographic Study of (P. Zuman, J. Chodkowski, H. Potešilová and F. Santavy), 1535
Reactions (Anodic), of Mercury with Halide Ions in Dimethylformamide (Dr. P. H. Given and M. E. Peover), 1226
Reactions (Chemical), initiated by Ultrasonic Waves (Dr. Satish Chandra Srivastava), 47
Reactions (Controlled Thermonuclear) : Plasma Physics and the Problems of (edited by Leontovitch), 1053
Reactions (Immune) : 'Crossing' Paper Electrophoresis for the Detection of (Prof. S. Nakamura and T. Ueta), 875 ; *erratum*, 1063
Reactions (Plasma Foreign Surface) : Hageman Factor in (J. Margolis), 1102
Reactivators (New Potent), of Acetocholinesterase inhibited by Tetraethy Pyrophosphate (Dr. F. Hobbiger, Dr. D. G. O'Sullivan and Dr. P. W. Sadler), 1498
Reactive Serine Residue in Enzymes inhibited by Organo-Phosphorus Compounds : Nature of the, (Mechanism of Esterase Action), (G. R. Porter, Prof. H. N. Rydon and J. A. Schofield), 927
Reactivity of Sulphonyloxyl Groups with Halides in the Carbohydrate Series (Dr. N. F. Taylor), 660
Reactivity (Chemical), in Keratin Cuticle: Electron Microscope Studies o the (Dr. J. Sikor[illegible]ki and W. S. Simpson), 1235
Reactivity (Physical), of Liver and Brain Cortex Mitochondria (Prof. J. Gayet), 941
Reactivity (Serological) : Relationship of, to Antibody Molecular Weight (Harry S. Goodman), 1100
Reactor (Nuclear), for Winfrith Heath, 226
Reactor (Research) (ORR) at the United States Atomic Energy Commission's Oak Ridge National Laboratory, 19
Reactor Accident (Windscale) : Iodine-131 in Human Thyroids following the (G. Maycock and J. Vennart), 1545
Reactor Technology (Nuclear) : Analytical Chemistry in (Second Conference on), 22
Reactors : Course on the Control and Instrumentation of, at the Harwell Reactor School (Atomic Energy Research Establishment), 295
Reactors (Nuclear), at the Atomic Weapons Research Establishment, Aldermaston : Two, 19
Read, F. H. : Awarded a Research Fellowship in nuclear physics for 1958-59 by the Department of Scientific and Industrial Research, 1063
Reading in Linear Programming (Dr. S. Vajda), *review* by Dr. A. D. Booth, 1583
Rearing (Laboratory), of Locusts : An Artificial Diet for the (Dr. G. F. Howden and P. Hunter-Jones), 1527
Rearrangement of Epinephrine (Dr. J. H. Fellman), 311
Recaldin, D. A., and Heath, Prof. O. V. S. : Chelation or Complex-formation by Indoleacetic Acid *in vitro*, 539
Receptor (Tetanus Toxin) : Identity of the, in Nervous Tissue (Dr. W. E. van Heyningen), 1809
Recherche Scientifique, Centre National de la : Colloques Internationaux du, 64 (Lyon, 1955), Les Heterocycles Oxygenes, *review* by Dr. F. G. Mann, 1762
Recombination Ability of *Escherichia coli K*-12 Protoplasts (Dr. Atsuyoshi Hagiwara), 456
Reconstruction of the Reaction Mechanism of Cytochrome Oxidase (Shigeki Takemori, Ichiro Sekuzu, Takashi Yonetani and Prof. Kazuo Okunuki), 1306
Record 'Zoological Record' : A, *review* by Dr. Edward Hindle, 970
Recording from the Central Nervous System : A Simple Microelectrode for (J. D. Green), 962
Recording (Direct), of Fluorescence Excitation Spectra (Dr. C. A. Parker), 1002
Recovery from Irradiation : Failure to induce Immunological Tolerance during (G. J. V. Nossal and Lois Larkin), 1447
Rectangular Corner : Error at a, in Relaxation Methods (R. Butler and S. V. Fagg), 600
Red Beet : Nature of Betanin, the Pigment of (R. G. Peterson and Prof. M. A. Joslyn), 45 ; (Sir Robert Robinson), 46
Red Blood Cell Proteins : Agar Electrophoretic Patterns of (Prof. K. V. Giri, G. J. Sathyanarayana Rao and S. Natarajan), 184
Red Blood Cells of the Lamb : Changes in the Potassium Concentration and Metabolism of (Prof. R. D. Wright, T. R. Bradley, J. F. Nelson and J. P. Coghlan), 1742
Red Cells (Lyophilized Formol-treated) : Use of, in Blood-Group Serology (E. R. Gold, W. J. Lockyer and Dr. Geoffrey H. Tovey), 951
Red Clover (*Trifolium pratense*) Pastures : Reproductive Disturbances of Romney Ewe Lambs grazed on (T. S. Ch'ang), 1175
Reddi, K. K. : Action of Micrococcal Phosphodiesterase on Tobacco Mosaic Virus Nucleic Acid, 1308
Rede Lecture 1958 (Sir Charles Darwin), 497
Reder, F. H., and others : Comparison of Caesium Frequency Standards of Different Construction, 41
Redistribution (Population), and Economic Growth, United States, 1870-1950, 1, Methodological Considerations and Reference Tables (Everett S. Lee, Ann Ratner Miller, Carol P. Brainerd and Richard A. Easterlin), (prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), (Memoirs of the American Philosophical Society, Vol. 45), *review*, 420
Redman, Prof. R. O. : Russian Astrophysics, *review*, 548
Redox Processes : Observation of Transient Intermediates in, by variable Voltage Oscillo-polarography and Cyclic Voltammetry (Prof. W. Kemula and Z. Kublik), 793
Reduced Diphosphopyridine Nucleotide Oxidase in Lettuce Seeds (Dr. A. M. Mayer), 317
Reduction of Adrenochrome with Ascorbic Acid (Dr. R. A. Heacock and Miss B. D. Laidlaw), 526, *erratum*, 700
Reduction of Evaporation from Reservoirs (F. Grundy), 500
Reduction (Enzymatic), of Steroids : Effect of Thyroxin Administration on the Rate and Steric Course of (Dr. Joseph McGuire and Gordon Tomkins), 261
Reduction (Sulphate), in Paddy Soils : Inhibition of (R. Vámos), 1688
Reduction (Weight), in the Human Subject, *review* by Prof. Charles H. Gray, 685
Redundancy, a Survey of Problems and Practices (Action Society Trust), 895
Redundancy in Industry, 895
Reece, I. H. (Harris, C. M., and) : Formation of Higher Bromo-Complexes of Tervalent Gold in Non-Aqueous Solution, 1665
Rees, A. R. : Field Observations of Midday Closure of Stomata in the Oil Palm, *Elaeis guineensis* Jacq., 735
Rees, Dr. K. R., and others : Mechanism of Oxidative Phosphorylation, 875
Rees, Dr. W. J. : Marine Biology in South-East Africa, *review*, 1761
Reeves, C. G., and others : Density of Acetylene, 596
Reference Laboratory for Foot-and-Mouth Disease : World, 1417
Reflecting Surfaces (Dark) Responses of Insects to Polarized Light in the Presence of (Dr. H. Kalmus), 1526
Reflectivity of Lithium-6 Fluoride and Lithium-7 Fluoride Infra-Red Transmission Limits and (Dr. R. W. H. Stevenson and Dr. P. T. Nettley), 471

Refrigerating Machine (Philips Gas) : New development of (Research and Control Instruments, Ltd.), 228
Regenerating Mouse Liver : Biochemical Changes in Virus-infected and (David S. Nelson and Prof. P. M. de Burgh), 1617
Regenerating Single Nerve Cells : Incorporation of Orotic Acid-^{14}C and Lysine-^{14}C in (S. -O. Brattgard, H. Hydén and J. Sjöstrand), 801
Regenerating, Precancerous and Cancerous Rat Liver (Normal,) : Deoxyribonuclease Activity and Deoxyribonucleic Acid Synthesis in (Dr. Sam Brody), 1386
Regional European Seminar on the Universities and Adult Education, Bangor, 1956 : Report on the (Ministry of Education), 1627
Regional Research Laboratory, Hyderabad : Symposium on Cottonseed and its By-products, 433
Regions (Drier), of Uganda : A Revised Interpretation of the Causes of Loss of Crops of Cotton in the (J. Bowden and W. R. Ingram), 1750
Registrar General : Statistical Review of England and Wales, Supplement on Mental Health for 1952-53 ; Supplement on Cancer for 1953, 1061
Regula, W. : Das Spektrum des Wasserdampfes, 361
Reid, Dr. E., and Stevens, Barbara M. : Ribonucleic Acids in Liver Cytoplasm, 441
Reid, Dr. G. C. : Electric Field Theory of Aurorae, 1791
Reid, J. M. : Physics of Quanta and Parity (Disintegration of Nuclei under Irradiation by High-Energy Quanta), 1120
Reid, Leslie : Earth's Company, *review* by Prof. Alan R. Gemmell, 683
Reiman, Miss S. : Awarded a French Exchange Scholarship in Medical Science for 1958-59, 634
Reineckate (Ammonium) : Quantitative Separation of Nitrogenous Organic Bases using (Dr. Lee Kum-Tatt), 655
Reinforced Plastics Technical Conference (British Plastics Federation), 501
Reinhardt, Prof. W. O., and others : Labelling of Cells in Thoracic Duct Lymph of the Guinea Pig after Tritiated Thymidine, 1608
Reinhold, Leonora : Release of Ammonia by Plant Tissues treated with Indole-3-Acetic Acid, 1022
Reinouts van Haga, Dr. P. : Complex Forms of Cellulase, 1232
Reiss, Dr. M. : Chemical Pathology of the Nervous System (Importance of Hormone Studies in Mental Disease), 1647
Reith, Dr. W. S., and Thomas, M. J. : Isolation from Human Blood of a New Substance associated with Fat Transport Activity, 604
Reitsma, jun., L. J. (Eppelsheimer, Prof. D. S., and) : Tensile Strength of Indium, 339
Rejection of the Peroxide Accumulation Hypothesis of Isoniazid Action (Dr. Frank Winder), 565
Relation between Creatine Phosphate Level and Polarity of the Cerebral Cortex : Evidence for a (J. Křivánek, Dr. J. Bureš and O. Burešová), 1799
Relations (Human), in Industry : Final Report of the Joint Committee on (1954-57), and Report of the Joint Committee on Individual Efficiency in Industry (1953-57), (Department of Scientific and Industrial Research), 1539
Relations (Water), of Terrestrial Arthropods (Prof. E. B. Edney), *review* by Dr. Kenneth Mellanby, 72
Relationship between certain Biological Constants and Trophic Condition in Mosquito Populations (Dr. Donald H. Colless), 951
Relationship between Phytoalexin Output and the Number of Infections Involved (K. O. Müller), 167
Relationship between *pKa* and Uricosuric Activity in Phenylbutazone Analogues (J. J. Burns, T. F. Yü, Peter Dayton, Lawrence Berger, Alexander B. Gutman and Bernard B. Brodie), 1162
Relationship between the Presence of Fungal Spores and a Test for Hepatotoxic Grass (J. C. Percival and Dr. R. H. Thornton), 1095
Relationship of Serological Reactivity to Antibody Molecular Weight (Harold S. Goodman), 1100
Relationships : Host—Parasite (British Association for the Advancement of Science, Section M (Agriculture), Discussion on), 1352
    Man–Animal, *review* by Prof. Harold Burrow, 281
    Root–Shoot (E. C. Humphries), 563
Relationships between the Chloride and Iodide Uptake of Wheat Seedlings (Z. Böszörményi and Edith Cseh), 1811
Relationships of the Nitrogen-fixing Bacteria : Natural (Dr. K. A. Bisset), 405
Relationships (Stimulus-Response) : Information Gain in Tasks involving different (Dr. Stephen Griew), 1819
Relative Humidity and Precipitation for the World : Tables of Temperature, (Meteorological Office), 361
Relative Importance of the Phenolic and Unsaturated Acid Components in Toxicity towards certain Plant Pathogens : 'Karathane'—the (Dr. A. H. M. Kirby and E. L. Frick), 1445
Relative Intensities of the Oxygen Lines at 5577 A. and 6300 A. in the Night Sky (B. P. Sandford), 42
Relative Stability of Adrenaline, Noradrenaline and 5-Hydroxytryptamine subjected to various Simple Treatments (Daphne Joyce), 463
Relativity : Electromagnetism and, with particular reference to Moving Media and Electromagnetic Induction (Prof. E. G. Cullwick), *review* by Prof. V. C. A. Ferraro, 1045
Relaxation Methods : Error at a Rectangular Corner in (R. Butler and S. V. Fagg), 600
Relaxation Processes (Faraday Society Discussion on), 1348
Release of Ammonia by Plant Tissues treated with Indole-3-Acetic Acid (Leonora Reinhold), 1022
Release of Histamine : Self-depression of the Subcutaneous Absorption of Drugs due to (Jens Schou), 324
Release of Histamine from Mast Cells by Tissue Extracts (G. T. Archer), 726
Remedies : Food and Farming, a Survey of Problems and (Association of Agriculture Conference on), 700
Removal of Gases in High Vacuum Systems by Metal Abrasion (M. E. Haine, E. W. R. Francis and R. N. Bloomer), 931, *erratum*, 1348
Removal of Osmic Acid Stains (I. A. Carr and Dr. P. Bacsich), 1108
Renal Tubules : Role of Hyaluronidase in the Re-Absorption of Water in—the Mechanism of Action of the Antidiuretic Hormone (A. G. Ginetzinsky), 1218
Rennell of Rodd, Lord : Elected general treasurer on the British Association for the Advancement of Science, 631 ; work of, 631
Rennie Memorial Medal for 1957 of the Royal Australian Chemical Institute awarded to Dr. J. H. Bradbury, 89
Rennin Coagulation of Enzymatically Dephosphorylated Casein (Robert Y. H. Hsu, Prof. Laurens Anderson, R. L. Baldwin, C. A. Ernstrom and A. M. Swanson), 798
Reorganization of the Admiralty Material Departments, 988
Reorganization of the Meteorological Office (J. Paton), 1711
Replacement of Adrenaline and Noradrenaline in the Innervated and Denervated Adrenal Gland of the Rat, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 1020
Representation of the X Chromosome in Intermitotic Nuclei in Man (D. M. Serr, M. A. Ferguson-Smith, Dr. B. Lennox and J. Paul), 124
Reproduction (Chromosomal) : Effect of Colchicine on the Utilization of Labelled Thymidine during (L. F. La Cour and Dr. S. R. Felc), 506
Reproduction (Sexual): Cytoplasm in (Prof. Kenneth Mather and Dr. John L. Jinks), 1188
Reproductive Development of the Female with special reference to the Period of Adolescent Sterility (Prof. M. F. Ashley Montagu), *review* by Dr. Kenneth Walker, 1573
Reproductive Disturbances of Romney Ewe Lambs grazed on Red Clover (*Trifolium pratense*) Pastures (T. S. Ch'ang), 1175
Reproductive Physiology (Dr. A. V. Nalbandov), *review* by Dr. Kenneth Walker, 1573
Reptiles (Marine) : Salt Glands in (Knut Schmidt-Nielsen and Ragnar Fange), 783
Requirements (Salt), in the Tropics during Summer (Surg. Lieut.-Comdr. Mangal Sain Malhotra), 1036
Research (Scientific Advisory Board of) : Awards in the Waverley Gold Medal Essay Competition, 1060, 1348
Research in Alberta, 847
Research at American Academic Institutions : Support and Direction of (Dr. Lloyd V. Berkner), 848
Research in Britain : Allocation of Funds for, 1757
    The Structure of, 207 ; *erratum*, 433
Research : Agricultural, 86
    Antarctic (Dr. T. Hatherton), 285
    Bacteriophage—Second Royaumont Colloquium (Prof. Gunther S. Stent), 1769
    Building (Building Research Board of the Department of Scientific and Industrial Research), 1061
    Chemistry (1957)—the Report of the Chemistry Research Board with the Report of the Director of the Chemical Research Laboratory, (Department of Scientific and Industrial Research), 1206
    Engineering, 293
    Fire (1957)—Report of the Fire Research Board and the Report of the Director of Fire Research (Department of Scientific and Industrial Research and Fire Offices' Committee), 1651
    Grants for (Wellcome Trust), 1203
    Grants for Special, 20
    High-Altitude, 1414
    Industrial, in East Africa, 499
    Invention and, 275
    Josiah Wedgwood and (J. Leighton), 1130 ; (Dr. A. T. Green), 1708
    Libraries for, *review* by R. Brightman, 1698
    Mechanical Engineering (1957)—Report of the Mechanical Engineering Research Board, with the Report of the Director of Mechanical Engineering Research (Department of Scientific and Industrial Research), 1287
    Radio (1957)—the Report of the Radio Research Board and the Report of the Director of Radio Research (Department of Scientific and Industrial Research), 1558
    Road (A. N. Schofield), 1491
    Scientific and Industrial, in Government Departments, 1111
    Scientific and Industrial—the State and Industry, 1181
    Semiconductor (Dr. P. T. Landsberg), 1067
    Upper Atmosphere (United States Naval Research Laboratory, Report No. 32), 431
Research in Ageing : Awards for 1958 (Ciba Foundation), 19
    Awards in 1959 for (Ciba Foundation), 89
Research in the Aircraft Industry, 226
Research in Astronomy, Inc., Association of Universities for : Allocation of 4,000,000 dollars by the National Science Foundation, for the construction of a solar telescope for the United States National Astronomical Observatory, 1552
Research in the Biological Sciences : Awards for 1959 for (Lalor Foundation), 1063
Research in Chemistry : Grants for (Chemical Society), 363
Research in Dairying, National Institute for : Annual Report for 1957, 989
Research on Guiding Young Salmon at Two British Columbia Field Stations (J. R. Brett and D. F. Alderdice), 162
Research on High-Energy Nuclear Particles (Grant of 450,000 dollars from the United States National Science Foundation to the University of Chicago for), 916
Research for Industry, a Summary of Work done by the Industrial Research Associations in the Government Scheme, 1956-57 (Department of Scientific and Industrial Research), 93
Research in Infectious Diseases, Centre for (Portugal) : Grant of £12,850 from the Gulbenkian Foundation, Lisbon, for capital and running costs for three years, 1493
Research in Nutrition : Drummond Fellowship for, 1488
Research in Psychiatry, Foundations' Fund for : Fellowships, 363
Research into Problems of Ageing, Nuffield Unit for : Ageing and Human Skill—a Report centred on work by the (A. T. Welford), *review* by Prof. L. S. Hearnshaw, 826
Research for Teachers and Travelling Lectures (United States National Science Foundation), 1276
Research (Agricultural), in India—Institutes and Organizations (Dr. M. S. Randhawa), *review* by F. C. Bawden, 1628
Research (Agricultural), Indian Council of : Scientific Monograph No. 22, The Grassland and Fodder Resources of India (R. O. Whyte), *review* by Dr. J. P. Cooper, 71
Research (Biological) : The Interference Microscope in (Dr. Arthur J. Hale), *review* by Dr. R. Barer, 1630
    The Tools of (Symposium on, in the Physiology Theatre, Guy's Hospital, London), 918
Research (Cancer) : Progress in (Prof. H. N. Green), 364
    Progress of, 1547
Research (Fundamental), in Safety Glass, 1779

Research (Geophysical) : International Co-operation and, 428
Research (Hormonal) : Biochemical Contributions to Endocrinology—Experiments in (Sir Charles Dodds), *review* by Dr. A. E. Kellie, 484
Research (Medical), Jane Coffin Childs Memorial Fund for : Grants for the Year 1957-58, 1492
Research (Medical), Indian Council of : Technical Report of the Scientific Advisory Board for 1956, 708
    Progress made in Research Projects (1950-57), 708
Research (Medical), Institute for (Federation of Malaya) : Studies from the, No. 28, Malaysian Parasites, 16-34 (edited by J. R. Audy), *review* by P. J. Mattingly, 9
Research (Nuclear), European Organization for : Progress during 1958, 1708
Research (Nuclear Energy), Netherlands—Norwegian Joint Establishment for : Sixth Annual Report (1956-57), 1489
Research (Nuclear Energy), Centre for (Portugal) : Grant of £32,500 from the Gulbenkian Foundation, Lisbon, for equipment for its mass spectrometry and isotope section, 1493
Research (Operational) : Proceedings of the First International Conference on (Oxford, 1957), *review* by Dr. K. Pennycuick, 821
Research (Operational), in Advertising (J. Maitland), 846
Research (Radiation), Association for (Dr. L. H. Gray and Dr. Tikvah Alper), 92
Research (Scientific) : Commonwealth Co-operation in, 1551
    International Co-operation in, 1397
    Treasury Control and, 1467
Research (Scientific), Bento da Rocha Cabral Institute for : Grant of £14,375 from the Gulbenkian Foundation, Lisbon, for equipment and three years research expenses, 1493
Research (Scientific), and Development in East Africa, 703
Research (Soviet), in Fused Salts (1949-1955), (Chemistry Collection No. 1), *review* by Prof. A. R. Ubbelohde, 619
Research (Soviet), in Glass and Ceramics—Basic Science I ; Basic Science II ; Glass, Glazes and Enamels ; Cements, Limes and Plasters ; Refractories ; Miscellaneous, *review* by Prof. R. W. Douglas, 827
Research (Space), Committee on (Established by the International Council of Scientific Unions), 1552
Research (Space), and Technology (Lectures on, at the University of Maryland), 990
Research (Statistical), Centre for Economics and (Portugal) : Grant of £11,250 from the Gulbenkian Foundation, Lisbon, for seminars and training of future research workers, 1493
Research (Thermonuclear) : Some Aspects of (Dr. T. E. Allibone), 579
Research (Timber), in the United Kingdom : Future of, 1204
Research (Undergraduate) : Grants for (United States National Science Foundation), 1346
Research (Vegetable), British Society for the Promotion of : Eighth Annual Report (1956-57), 1417
Research (Virus) : Advances in (edited by Dr. Kenneth M. Smith and Max A. Lauffer), Vol. 4, *review* by Dr. M. R. J. Salton, 1576
Research (Water Pollution) : Notes on, No. 1 (Water Pollution Research Laboratory), 841
Research and Control Instruments, Ltd., London : New development of Philips Gas Refrigerating Machine, 228
Research and Development in the B.B.C., 1490
Research and Development in Government Establishments, 1485
Research and Development in India, 20
Research Association of British Rubber Manufacturers : Appointment of Dr. J. R. Scott to the newly created post of scientific adviser, 560
    Appointment of Dr. W. F. Watson as director of research, 560
Research Associations : Grant-aided (J. Wilson), 1133
Research Associations (Industrial), in the Government Scheme, 1956-57 : Research for Industry, a Summary of Work done by the (Department of Scientific and Industrial Research), 93
Research Awards for 1958 (Royal Commission for the Exhibition of 1851), 155
Research Council of Alberta : Thirty-eighth Annual Report (1957), 847
Research Council, Commonwealth Overseas : Establishment of a, 1413
Research Development Corporation : National, 1484
Research Development Corporation of India, National : Third Annual Report (1956-57), 20
Research Establishments : The Direction of—Proceedings of a Symposium held at the National Physical Laboratory (1956), 275
Research Fellowship : Granada Television (Granada TV Network, Ltd.), 228
Research Fellowships (Department of Scientific and Industrial Research Awards for 1958-59), 1062
    Carlsberg–Wellcome Travelling (Awards for 1958-59), 228
Research Foundation, Nova Scotia : Selected Bibliography on Algae, No. 4, 1131
Research Fund (Mental Health) : First Travelling Fellowship awarded to J. A. Baldwin, 157
    Prizes awarded to Dr. G. Sedman, J. D. Swales and A. P. K. John, 158
    Work of the, 301
Research Laboratory : Mechanical Engineering (R. J. F. Franklin), 436
Research Laboratory (Mechanical Engineering) : Research on Heat Transfer, 293
Research Laboratory (National Metallurigical), Jamshedpur : Publication of the papers contributed to the Symposium on Production, Properties and Application of Alloy and Special Steels, 1777
Research Laboratory (Regional), Hyderabad : Symposium on Cottonseed and its By-products, 433
Research Materials (Unpublished) : Guide to—Lectures delivered at a Vacation Course of the University of London School of Librarianship and Archives in April 1956 (edited by Ronald Staveley), *review* by R. Brightman, 902
Research Methods in Soil Zoology (Soil Zoology Committee of the International Society of Soil Science Colloquium on), 704
Research Programmes in the Department of Scientific and Industrial Research : Control of, 429
Research Reactor (ORR) at the United States Atomic Energy Commission's Oak Ridge National Laboratory, 19
Research Studentship (V. H. Blackman Postgraduate), awarded to M. G. Morris, 1063
Research Studentships in Ecology (Nature Conservancy Awards), 771
Research Training Scholarships for 1958-59 of the Animal Health Trust awarded to B. A. Baldwin, Dr. A. D. Care, A. R. Gray and R. F. Sturrock, 432
Research Work of benefit to Agriculture : Medal and Award for (Royal Agricultural Society of England), 1488
Researches on Tropical Vegetation, 1776
Reserpine : Catechol Amine Depletion in the Rat's Denervated Adrenal Gland following Chronic Administration of (Dr. Bernard L. Mirkin), 113
    Effects of, on Secretion from the Adrenal Medulla (Dr. L. Stjärne and Dr. S. Schapiro), 1450
    Replacement of Adrenaline and Noradrenaline in the Innervated and Denervated Adrenal Gland of the Rat, following Depletion with (B. A. Callingham and Dr. Monica Mann), 1020
Reservoirs : Reduction of Evaporation from (F. Grundy), 500
Residues (Food) : Retention of, in the Midgut by Nymphs of the Milkweed Bug, *Oncopeltus fasciatus* Dall. (P. W. Miles), 959
Resins (Cation-Exchange) : Potassium Uptake by, from Soils and Minerals (P. W. Arnold), 1594
Resins (Ion-exchange) : Contamination of Surfaces by Conductivity Water from (J. H. Schenkel and Dr. J. A. Kitchener), 131
    Use of, in preparing Water of High Purity (I. Raleigh), 1667 ; (Dr. J. A. Kitchener), 1667
Resistance to Cold : Sol-Gel Transitions in the Living Cells of Conifers and their relation to (Johnson Parker), 1815
Resistance to Flow in Vascular Beds (Prof. Alan C. Burton), 1456
Resistance in Living Organisms : Nature and Genetical Control of (British Association for the Advancement of Science, Sections D (Zoology) and K (Botany), Joint Discussion on), 921
Resistance to Pyrethrins and to Pyrethrins–Piperonyl Butoxide in a Wild Strain of *Musca domestica* L. in Sweden (Dr. M. Davies, Dr. J. Keiding and Dr. C. G. von Hofsten), 1816
Resistance (Chloramphenicol-), in *Staphylococcus aureus* : Protein Synthesis as a Basis for (H. H. Ramsey), 602
Resistance (Induced), of Mice to Infection with *Brucella abortus* 2308 through Vaccination with *BCG* (Dr. A. Bekierkunst and D. Sulitzeanu), 883
Resistances (Purkinje and Ventricular Membrane), during the Rising Phase of the Action Potential (Dr. Edward A. Johnson, P. A. Robertson and J. J. Tille), 1161
Resistant to DDT : Dosage–Mortality Curves for Houseflies Susceptible and (K. Wilson-Jones and G. Davidson), 403 ; (Dr. P. S. Hewlett), 404
Resistant Strains of *Anopheles gambiae*, Giles (Susceptible, Hybrid and) : Effect of Simulated Field Deposits of Gamma-BHC and Dieldrin on (G. Davidson and D. G. Pollard), 739
Resolution (High), of Human Plasma Components by Starch Gel Electrophoresis (Dr. J. M. Fine, J. Loeb and E. Waszczenko-z), 452
Resolution (Mechanical), of Linguistic Problems (Dr. Andrew D. Booth, L. Brandwood and Dr. J. P. Cleave), *review* by R. A. Brooker, 618
Resolving Amino-acids by Metabolism of Bacteria on Benzoyl Derivatives of DL-Amino acids : A New Method for (Prof. Yukio Kameda, Etsuko Toyoura, Katsuhiko Matsui, Yukio Kimura and Shizue Kitagawa), 453
Resonance (Electron) Study of the Radicals produced by Controlled Potential Electrolysis of Aromatic Substances (D. E. G. Austen, Dr. P. H. Given, Dr. D. J. E. Ingram and M. E. Peover), 1784
Resonance (Electron Spin), in Carbons—a New Oxygen Effect (C. Jackson, Dr. H. Harker and Prof. W. F. K. Wynne-Jones), 1154
Resonance (Magnetic) : Applications of, to Solid State Physics (Radio Frequency Spectroscopy Group Conference on), 634
Resonance (Nuclear Magnetic), in β-Brass (G. W. West), 1436
Resonance Investigations (Electron Spin), of Rat Liver and Rat Hepatoma (Frank K. Truby and Joseph W. Goldzieher), 1371
Resonance Spectra (Nuclear Magnetic), from a Crystal rotated at High Speed (Prof. E. R. Andrew, A. Bradbury and Dr. R. G. Eades), 1659
Resonance Spectrum (Electron Spin), of α,α'-Diphenyl-β-picrylhydrazyl : Effect of Oxygen on the (Dr. J. E. Bennett and E. J. H. Morgan), 199
Resources (Fodder), of India : The Grassland and (R. O. Whyte), *review* by Dr. J. P. Cooper, 71
Resources (Library), in the West Midlands : Guide to (edited by B. G. Staples), 633
Resources (Scientific), and Atomic Energy, 615
Resources (Water), and Water Needs in Scotland (British Association for the Advancement of Science, Section E (Geography), Symposium on), 1193
Respiration of Human Cancer Cells in Tissue Culture : Action of Hydrocortisone on (Henry Grossfeld), 35
Respiration of Lactating Mammary Gland Tissues in Rats : Effect of Oxytocin Administration on (K. Ôta and A. Yokoyama), 1509
Respiration of *Tubifex* and *Culex* sp. (A. M. Roberts), 563
Respiration and Radiosensitivity of Broad Bean Roots (B. A. Kihlman), 730
Respiration (Discontinuous), in Insects : An Experimental Solution to the Paradox of (Robert I. Levy and Dr. Howard A. Schneiderman), 491
Respiration (Impaired) : Biochemical Mutants in Bacteria with (Prof. G. F. Gause), 97
Respiratory Deficiency in Yeast : Induction of, by Manganese, Copper, Cobalt and Nickel (Prof. Carl C. Lindegren, Susumu Nagai and Hideko Nagai), 446
Respiratory Physiology : Standard Atmospheres in (Dr. R. H. Kay), 1032
Response of Cacao to Fertilizers (D. B. Murray), 1613
Response (Biochemical), to Physical Injury (Council for the Organization of Medical Sciences, with the assistance of the Wellcome Trust and the International Union of Biochemistry Symposium on), 1493
Response (Photoperiodic), of the House Sparrow, *Passer domesticus* (Dr. L. T. Threadgold), 407
Response (Pituitary Adrenocorticotrophic), to Stress in the Adrenalectomized Rat : Influence of Circulating Adrenocorticotrophin on the (Dr. J. R. Hodges and Joan Vernikos), 725
Responses of the Anterior Retractor Muscle of the Byssus of *Mytilus edulis* (J. A. Holgate and Dr. G. W. Cambridge), 34 ; (Dr. G. W. Cambridge), 35
Responses of Insects to Polarized Light in the Presence of Dark Reflecting Surfaces (Dr. H. Kalmus), 1526
Responses (Compensatory), of Fish and Crustacea to Horizontal Displacement of the Body : Analogies between the (D. H. A. Marr), 1621

Ressler, Dr. N. : Application of Direct Photographic Photometry to Preparative Electrophoresis, 463
Resting and Action Potentials of the Giant Axon of the Cockroach : Effects of Potassium and Sodium Ions on the (T. Yamasaki and T. Narahashi), 1805
Restoration by Complementation : Gene Control of Specificity and Activity—Loss by Mutation and (Prof. D. Lewis), 1620
Retention of Food Residues in the Midgut by Nymphs of the Milkweed Bug, *Oncopeltus fasciatus* Dall. (P. W. Miles), 959
Reticulocytes (Duck Erythrocytes and) : Incorporation of Carbon-14 Dioxide by, *in vitro* (G. Giustina and E. Lazzarini), 1311
Reticulo-Endothelial System : Effect of various Natural Steroids on the Phagocytic Activity of the (Dr. D. L. J. Bilbey and Prof. T. Nicol), 674
  Effect of Splenectomy on the Phagocytic Activity of the (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 534
  Elimination of the Macrophage Cells of the, by Way of the Bronchial Tree (Prof. T. Nicol and Dr. D. L. J. Bilbey), 192
  Substances depressing the Phagocytic Activity of the (Prof. T. Nicol and Dr. D. L. J. Bilbey), 606
Retractor Muscle (Anterior), of the Byssus of *Mytilus edulis* : Responses of the (J. A. Holgate and Dr. G. W. Cambridge), 34 ; (Dr. G. W. Cambridge), 35
Reuter, G. E. H. : Elementary Differential Equations and Operators, *review* by Prof. T. A. A. Broadbent, 827
Revelle, Dr. Roger : Appointed to the additional post of director of the University of California's new Institute of Technology and Engineering at La Jolla, 771
Reversal by Magnesium Ions of the Inhibition of Yeast Metabolism by a Cationic Detergent (Dr. W. McD. Armstrong), 326
Reversals of the Earth's Magnetic Field (Dr. D. W. Allan), 469
Reversion of a Tryptophan-requiring Strain of *Escherichia coli* : Effect of Tryptophan Analogues on (N. M. Schwartz and B. S. Strauss), 888
Révész, Prof. Géza : The Human Hand—a Psychological Study (translated by John Cohen), *review* by Prof. R. C. Oldfield, 1042
Review of the Parrotfishes (L. P. Schultz), 1415
Revised Interpretation of the Causes of Loss of Crops of Cotton in the Drier Regions of Uganda (J. Bowden and W. R. Ingram), 1750
Revision of the Australian Chafers (Coleoptera : Scarabaeidae : Melolonthinae), (E. B. Britton), Vol. 1, *review* by Dr. W. E. Hinton, 350
Revision of the Azulene Structure (Prof. J. Monteath Robertson, H. M. M. Shearer, G. A. Sim and D. G. Watson), 177
Revision of the Gymnarthridae American Permian Microsaurs (Joseph T. Gregory, Frank E. Peabody and Llewellyn I. Price), *review* by Dr. W. E. Swinton, 1115
Rexed, Prof. Bror, and others : The High-Energy Proton Beam as a Neurosurgical Tool, 1222
Rhenium : Some Complex Cyanides of (Dr. R. Colton, Prof. R. D. Peacock and Prof. G. Wilkinson), 393
Rheology—Theory and Applications (edited by Frederick R. Eirich), Vol. 2, *review* by Dr. G. W. Scott Blair, 685
  All About, *review* by Dr. G. W. Scott Blair, 685
Rheology, British Society of : Discussion on the Rheology of the Glassy State, 229
  Conference on Rheology of Road Materials, 363
  Rheology Abstracts, Vol. 1, No. 1, A Survey of World Literature, 1486
Rheology, British Society of (Institute of Petroleum and the) : Symposium on Accurate Measurement of the Viscosity of Liquids, 438
Rheology of the Glassy State (British Society of Rheology Discussion on), 229
Rheology of Road Materials (British Society of Rheology Conference on), 363
Rheology Abstracts : Vol. 1, No. 1, A Survey of World Literature (British Society of Rheology), 1486
Rhesus Monkeys : An Outbreak of Subcutaneous Tumours in (Dr. W. G. C. Bearcroft and Dr. Margaret F. Jamieson), 195
Rhine, Prof. J. B., and Pratt, J. G. : Parapsychology—Frontier Science of the Mind, *review* by Dr. E. J. Dingwall, 143
Rhinns of Galloway : Different Phases of Tectonic Deformation in the (Dr. Maurits Lindström), 48
Rhinoceros (*Ceratotherium simum*) : Epidermal Structures in a (Prof. A. J. E. Cave and D. B. Allbrook), 196
Rhizobium : Cytochromes of (C. A. Appleby and F. J. Bergersen), 1174
Rhizobium needs Magnesium, not Calcium (D. Norris), 734
Rhode Island Chicks : Inability of Epinephrine to protect, against the Lethal Action of X-Rays (Dr. M.-L. Beaumariage), 803
Rhodopsin Cycle : Chemistry of the (Tôru Yoshizawa and Yûji Kitô), 1604
Rhodospirillum rubrum (Photosynthetic Bacterium): Origin of the Methoxyl Groups in Spirilloxanthin—a Carotenoid synthesized by the (G. D. Braithwaite and Dr. T. W. Goodwin), 1304
Rhombohedral Sulphur : Crystal Structure of (Prof. Jerry Donohue, Aimery Caron and Elihu Goldish), 518
Rhythmusstörungen des Herzens (Prof. Konrad Spang), *review* by Dr. J. P. D. Mounsey, 1574
Riboflavin in Yellow Semen (Dr. I. G. White and G. J. Lincoln), 667
Ribonuclease and Deoxyribonuclease Activities during Normal and Neoplastic Growth (Dr. Sam Brody and Dr. M. Earl Balis), 940
Ribonucleic Acid : A Possible Mechanism for the Initial Transfer of the Genetic Code from Deoxyribonucleic Acid to (Dr. Geoffrey Zubay), 122
  Sulphydryl Groups and (Dr. L. G. E. Bell), 1088
Ribonucleic Acid *in vitro* : Production of Mutants of Tobacco Mosaic Virus by Chemical Alteration of its (Dr. Alfred Gierer and Dr. Karl-Wolfgang Mundry), 1457
Ribonucleic Acid from Deoxyribonucleic Acid : A Template Model for the Synthesis of (Dr. Geoffrey Zubay), 1290
Ribonucleic Acid from Mice and Tissue Culture infected with the Virus of Foot-and-Mouth Disease : Infectivity of (F. Brown, R. F. Sellers and Doreen L. Stewart), 535
'Ribonucleic Acid' Component : An Ineffective, from Tumour Cells infected with Encephalomyocarditis Virus (J. Huppert and F. K. Sanders), 515
Ribonucleic Acids in Liver Cytoplasm (Dr. E. Reid and Barbara M. Stevens), 441
Ribonucleic Acids (Deoxyribonucleic and) : A Correlation between the Compositions of (Prof. A. N. Belozersky and A. S. Spirin), 111
Ribonucleoprotein Particles from *Escherichia coli* (Dr. A. Tissières and Dr. J. D. Watson), 778
Ribose Nucleotides in the Rat : Ribosyl Transfer between (Georg B. Gerber and Kurt I. Altman), 1513
Ribosyl Transfer between Ribose Nucleotides in the Rat (Georg B. Gerber and Kurt I. Altman), 1513
Rice, A. K. : Productivity and Social Organization—The Ahmedabad Experiment, Technical Innovation, Work Organization and Management, *review* by S. David M. King, 682
Rice, F. O. : Free Radical Stabilization, 1497
Rice : Inheritance of Photoperiodic Reaction in (Prof. P. K. Sen and G. N. Mitra), 119
Rich, Dr. Alexander, and Blow, Dr. David M. : Formation of a Helical Steroid Complex, 423
Richards, B. M. (Bell, P. R., and) : Induced Apospory in Polypodiaceous Ferns, 1748
Richards, Denis : Offspring of the Vic—a History of Morley College, *review* by Prof. W. H. G. Armytage, 1585
Richards, E. G., and others : Influence of the Semi-Permanent Low-Level Ocean Duct on Centimetre Wave Scatter Propagation beyond the Horizon, 385
Richards, J. C. (Brown, R. L., and) : Two- and Three-Dimensional Flow of Grains through Apertures, 600
Richards, Dr. T. C. : Measurement of the Thickness of the Earth's Crust in the Albertan Plains of Western Canada, 384
Richardson, B. D. : Appointed lecturer in civil engineering at the University of Birmingham, 990
Richardson, U. F., and Kendall, Dr. S. B. : Veterinary Protozoology, second edition, *review* by Dr. C. A. Hoare, 758
Richardson, Dr. W. D. : At the Third International Seaweed Symposium (Occurrence and Utilization of Algae in the Caribbean), 1780
Richardson, Dr. W. D., and Dewar, Dr. E. T. : Third International Seaweed Symposium, 1779
Richmond, Dr. A. J. : The Diploma in Technology, 160
Richter, Dr. Derek : Chemical Pathology of the Nervous System (Relationship between Protein Metabolism and Mental Disease), 1647
Richter, Dr. Derek (edited by) : Metabolism of the Nervous System, *review* by Prof. J. H. Gaddum, 282
Rideal, Sir Eric : Emulsions, *review*, 550
Ridge, M. J. : Effect of Temperature on the Structure of Set Gypsum Plaster, 1224
Ridgway, J. A. (Zlatkis, Prof. Albert, and) : A Methane-Conversion Detector for Gas Chromatography, 130
Riedhart, Dr. Joseph M., and others : Role of Root Injury in Panama Disease Infections, 309
Ridley, Dr. Mark (Wildy, Dr. Peter, and) : Separation of Human Leucocytes from Blood, 1801
Rigby, Joyce E., and Rawson, Mrs. Dilys : A New Type of Early Cysticercoid Stage in a Cyclophyllidean Cestode, 121
Riggenbach, A. : *Fomes noxius*, a Thiamine-deficient Fungus, 1390
Rigsby, Dr. G. P. : Physics of Ice Movement (Recrystallization Structures of Ice), 1561
Riley, Dr. Ralph, and Chapman, Victor : Genetic Control of the Cytologically Diploid Behaviour of Hexaploid Wheat, 713
Rimington, Prof. C., and others : Formation of Non-Enzymatic Haem, 313
Rinaldi, E., and others : Effect of Diphosphopyridine Nucleotide on the Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by 2-Acetylaminofluorene and N-2-Fluorenyl-diacetamide, 1744
Rindani, Dr. T. H. : Influence of Hydrocortisone on the Action of Sodium on Isolated Rabbit Auricles, 1521
Ring-Spot-like Virus (Tobacco) : An Aphid-transmitted, isolated from *Begonia tuberhybrida* (J. Semal), 1688
Ringed Appearance of Lipid Spheres under the Phase-Contrast Microscope (Brij L. Gupta), 537
Ringworm (Experimental), in Guinea Pigs—Oral Treatment with Griseofulvin (J. C. Gentles), 476
Ripple Rock : Observations on the Explosion at (J. K. Wright, E. W. Carpenter, A. G. Hunt and B. Downhill), 1597
Rising Phase of the Action Potential : Purkinje and Ventricular Membrane Resistances during the (Dr. Edward A. Johnson, P. A. Robertson and J. J. Tille), 1161
Risö, the Research Establishment of the Danish Atomic Energy Commission, 840
Ritchie, Prof. James : *Obituary* by Prof. C. M. Yonge, 1483
River Crouch : Heavy Infestation by the Parasitic Copepod *Lernaeenicus* of Sprats in the (Dr. J. P. Harding and A. C. Wheeler), 542
River Erne : Movement of Salmon on the (P. A. Jackson), 543
River Pollution in Britain, 497
River Thames : Occurrence of an Exotic Oligochaete *Branchiura sowerbyi* Beddard, 1892, in the (Dr. K. H. Mann), 732
Rixon, R. H., and others : Increased Survival of Rats Irradiated with X-Rays and Treated with Parathyroid Extract, 1374
Rizk, S. G. (Abd-El-Malek, Prof. Y., and) : Counting of Sulphate-reducing Bacteria in Mixed Bacterial Populations, 538
Roach, S. A. : Counting Error due to Overlapping Particles in Thermal Precipitator Samples, 134
Road Materials : Rheology of (British Society of Rheology Conference on), 363
Road Research (A. N. Schofield), 1491
Road Research Board : Report for 1957 (Department of Scientific and Industrial Research), 1491
Road Research Laboratory : Open Days (Dr. T. Lonsdale), 23
Robb, Prof. J. C. (Holden, H. W., and) : Mass Spectrometry of Substances of Low Volatility, 340
Robb, Prof. J. C. (Peaker, Dr. F. W., and) : A New Method of Fractionating High Polymers, 1591
Robbrecht, G. G., and Verhaeghe, J. L. : Measurements of the Permeability Tensor for 'Ferroxcube' at 24,000 Mc./s., 1080
Roberts, A. L., and others : Science in the Use of Coal (Carbonization of Coal), 25
Roberts, A. M. : Respiration of *Tubifex* and *Culex* sp., 563
Roberts, Dr. E. : Chemical Pathology of the Nervous System (Chemistry of Convulsive States and Allied Disorders), 1647
Roberts, F. W. : Effects of Pollution on Living Material (Effects of Detergents on Aquatic Plants), 1209
Roberts, Henry R., and others : A Rapid Paper Chromatographic Procedure for the Quantitative Determination of Hydroxyproline, 1602

Roberts, J. B., and others : Occurrence of Poly-β-Hydroxybutyric Acid in Aerobic Gram-Negative Bacteria, 800
Roberts, Prof. J. D. : Theoretical Organic Chemistry (Kinetic Investigation into the Hydrolysis of Diaryliodonium Salts to Phenols and Aryl Iodides), 1341
Roberts, J. P. (Moulson, A. J., and) : Entry of Water into Silica Glass, 200
Roberts, M. Wyn : Stability of Evaporated Films, 1151, *erratum*, 1205
Roberts, V. : Spectroscopy of Solids (High-resolution Absorption Spectra), 159
Robertson, Dr. Hamish, and Coulson, W. F. : Pregnanediol in the Urine of the Ewe, 1512
Robertson, Dr. J. D. : Salt and Water Balance in Animals (Mechanism of Salt and Water Balance in the Lower Vertebrates), 1207
Robertson, Prof. J. K. : *Obituary* by Dr. W. A. Mackintosh, 291
Robertson, Prof. J. Monteath : Applications of Crystallography to Chemistry, 914
Robertson, Prof. J. Monteath, and others : A Revision of the Azulene Structure, 177
Robertson, P. A., and Rubin, Dana : An Indirect Action of Angiotensin I on Smooth Muscle, 867
Robertson, P. A., and others : Purkinje and Ventricular Membrane Resistances during the Rising Phase of the Action Potential, 1161
Robertson, Dr. R. M. : Appointed assistant director for mathematical, physical and engineering sciences, at the National Science Foundation, Washington, 292 ; work of, 292
Robin, Dr. G. de Q. : Antarctic Research (Future Research in the Antarctic), 289
Robins, Dr. E. : Chemical Pathology of the Nervous System (Biochemistry of Chromatolysis in Individual Anterior Horn Cells after Axonal Section), 1646
Robinson, E. E. : The Diploma in Technology, 160
Robinson, G. Wilse : Free Radical Stabilization, 1497
Robinson, J. B. D., and others : Zinc Deficiency induced by Mercury in *Coffea arabica*, 1607
Robinson, Kathleen, and others : Heat, Salt and Hormones in Panting and Sweating Animals, 672
Robinson, Dr. Pamela Lamplugh : Some New Vertebrate Fossils from the Panchet Series of West Bengal, 1722
Robinson, Sir Robert : Nature of Betanin, the Pigment of Red Beet, 46
Robinson, Dr. R., and Munro, Dr. A. F. : Adrenal Activity in Subjects with Complete Transverse Lesions of the Spinal Cord, 805
Roboz, Elizabeth, and others : Experimental Allergic Encephalomyelitis—Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and Killed Tubercle Bacilli, 104
Robson, Miss E. B., and others : β-Globulin Variants in Man, 452
    Atypical Segregation of Haptoglobin Types in Man, 1324
Robyns, W. : Conservation of Natural Resources, 1406
Rock Units in the Ross Sea Region, Antarctica : Nomenclature of (Dr. H. J. Harrington), 290
Rock (Ripple) : Observations on the Explosion at (J. K. Wright, E. W. Carpenter, A. G. Hunt and B. Downhill), 1597
Rockefeller Travelling Fellowships in Medicine (Medical Research Council Awards for 1958-59), 634
Röckert, Dr. H. (Hallén, Dr. O., and) : A New Method for obtaining Thin Plane Parallel Sections of Mineralized Specimens, 1225
Rocket Flight : Theory of, *review* by D. G. King-Hele, 821
Rocket Tracking : Moon, 1413
Rockets : Exterior Ballistics of (Prof. Leverett Davis, Jr., James W. Follin, Jr., and Prof. Leon Blitzer), *review* by D. G. King-Hele, 821
Rockets and Satellites : World Data Centre for (Slough), 988
Rocks (Wave-beaten) : Animal Life on (Dr. H. Gorvett), 1652
Rodda, J. C. : Awarded a research studentship in geography by the Nature Conservancy, 771
Rodney, W. S. (Djurle, E., and) : At the Ninth General Physics Conference of the Swedish National Committee for Physics (Instrumentation for Phase Contrast Measurements in the Near Infra-red), 698
Rodnight, Dr. R. : Chemical Pathology of the Nervous System (Phenylketonuria and Hartnup's Disease), 1646
Rodriguez, D. : Awarded a Spanish fellowship in chemistry (renewal) at the University of Sheffield by the Ramsay Memorial Fellowships Trustees, 432
Roels, H. : Deoxyribonucleic Acid Content of the Nuclei in the Adrenal Cortex of the White Rat, 873
Roels, Dr. O. A. : Correlation between the Fat and the Protein Content of Human Milk, 673
Rogers, A. W. : Appointed a lecturer in anatomy at the University of Birmingham, 990
Rogers, G. E., and Simmonds, D. H. : Content of Citrulline and other Amino-Acids in a Protein of Hair Follicles, 186
Rogers, Dr. H. J. (Lack, Dr. C. H., and) : Action of Plasmin on Cartilage, 948
Role of Cholinesterase in Insecticidal Action (H. S. Hopf and R. T. Taylor), 1381
Role of Hyaluronidase in the Re-Absorption of Water in Renal Tubules—the Mechanism of Action of the Antidiuretic Hormone (A. G. Ginetzinsky), 1218
Role of Hypersensitivity in Experimental Staphylococcal Infection (Dr. J. Johanovsky), 1454
Role of the Professional Civil Servant (Sir Graham Sutton), 841
Role of Root Injury in Panama Disease Infections (Dr. Luis Sequeira, Dr. Taylor A. Steeves, Margaret W. Steeves and Dr. Joseph M. Riedhart), 309
Role of Turbulent Scattering in Long-Distance Radio Propagation at Metre Wave-lengths (F. A. Kitchen and Dr. M. A. Johnson), 302
Rollason, Prof. E. C. : Pressure Welding of Metals, 638
Rollo, I. M. : Microbes and Drugs, *review*, 416
Roman Forum : Bones of a Vulture among the Remains of Animals sacrificed on the 'Burial of Romulus' below the *Niger lapis* in the (G. A. Blanc and Prof. A. C. Blanc), 66
Romhányi, Dr. G. : Submicroscopic Structure of Elastic Fibres as observed in the Polarization Microscope, 929
Romney Ewe Lambs grazed on Red Clover (*Trifolium pratense*) Pastures : Reproductive Disturbances of (T. S. Ch'ang), 1175
Ronan, C. A. : At the Meeting in the Yugoslav Embassy in London to celebrate the bicentenary of the publication of Boscovich's 'Theoria Philosophiae Naturalis' (Boscovich's Work in Optics), 230
Rookeries (Emperor Penguin), in Antarctica during 1954-57 : Australian Discoveries of (Dr. Richard L. Willing), 1393
Root Injury : Role of, in Panama Disease Infections (Dr. Luis Sequeira, Dr. Taylor A. Steeves, Margaret W. Steeves and Dr. Joseph M. Riedhart), 309
Root Nodules of *Coriaria* (Dr. G. Bond), 474 ; (Dr. Pedro Montserrat), 475
Root Nodules in *Discaria toumatou* Raoul Choix (T. M. Morrison and Dr. G. P. Harris), 1746
Root Tips : Presence in, of a Thermolabile Factor causing the Conversion of Protochlorophyll to a Leuco-Compound (Z. Hejnowicz), 1023
Root–Shoot Relationships (E. C. Humphries), 563
Roots (Broad Bean) : Respiration and Radiosensitivity of (B. A. Kihlman), 730
Rosa, J., and others : Different Heterogeneities of Mouse Haemoglobin according to Strains, 947
Roscoe, Dr. R. : Accurate Measurement of the Viscosity of Liquids (Determination of Viscosity by the Oscillating Vessel Method), 438
Rose, Dr. G. A. : Chemical Pathology of the Nervous System (Inborn Errors of Metabolism), 1646
Rose, Mrs. H. E. : Awarded the Wellcome Fellowship for 1958-59 of the Animal Health Trust, 432
Rose, Prof. H. M., and Ragan, Prof. C. : Awarded 5,000 dollars by the Gairdner Foundation, 1710
Rose, Irwin A. (Vishniac, Wolf, and) : Mechanism of Chlorophyll Action in Photosynthesis, 1089
Rose-Innes, A. C. (Hilsum, C., and) : A New Method of Measuring Susceptibility, 1082
Rosenberg, Dr. H. M.: Measurements of Conduction at Low Temperatures (Scattering by Impurities), 85
Rosenblum, Prof. S. : *Obituary* of Prof. J. F. Joliot, 1273
Rosenhaupt, Dr. Hans : Appointed national director of the Woodrow Wilson National Fellowship Foundation, 987
Rosenhead, Prof. L. : Contemporary Problems in Mathematical Teaching and Staffing, 1064
Rosenthal, S. M., and Tabor, H. : Biochemical Response to Physical Injury (Some Aspects of Therapy of Injury), 1496
Ross, I. M. : Microwave Physics, 1122
Ross, Dr. N. S., and others : Productivity and Economic Incentives, *review* by T. H. Hawkins, 1697
Ross Institute Industrial Advisory Committee : Report of the thirty-second Meeting, 1132
Ross Sea Region, Antarctica : Nomenclature of Rock Units in the (Dr. H. J. Harrington), 290
Rossiter, Prof. R. : Chemical Pathology of the Nervous System (Wallerian Degeneration), 1646
Rossiter, Prof. R. J. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Rostron, Frank : Fuel and Power in British Industry (Electricity), 1715
Rotating Spiral : After-Effect of Movement produced by a (Miss M. J. Pickersgill and M. A. Jeeves), 1820
Rotation : Galactic (M. W. Feast and A. D. Thackeray), 1347
Rotation of Artificial Earth Satellites (Prof. R. N. Bracewell and O. K. Garriott), 760
Rotation of Spiral Galaxies : Tilt Criteria and Direction of (G. de Vaucouleurs), 1287
Roth, G. K. : A Melanesian Urban Community, *review*, 6
Roth, I. L., and others : A Water-soluble, Diffusible Pigment produced by a Strain of *Serratia marcescens* (*Chromobacterium prodigiosum*), 1028
Rothamsted Experimental Station : Report for 1957, 1782
Rothschild, Lord : Calibration of a Calorimeter—a Minor Peaceful Use for Plutonium, 789
Rothschild, Dr. Mary-Louise, and Myers, Jun., Lawrence S. : The Spontaneous Change of Ferriprotoporphyrin in Alkaline Solution, 1671
Rothschild, Dr. Mary-Louise, and others : Effect of Gamma-Radiation on Ferriprotoporphyrin, 316
Rots (*Gloeosporium*), of Apple Fruits : Effect of Storage Conditions on the Incidence of (H. B. S. Montgomery), 737
Rough Water : Ships in (J. L. Kent), *review*, 1696
Round-the-World Telephone Cable : New, 917
Rous Virus : Sarcoma in Albino Rats treated during the Embryonic Stage with (G. J. Svet-Moldavsky), 1452
Roux, Dr. D. G., and Maihs, A. E. : Black Wattle Catechin, 1798
Rowe, Dr. Wallace P., and others : Observations on the Spread of Mouse Polyoma Virus Infection, 1617
Rowell, P. M. : Measurements of Conduction at Low Temperatures (Superconductors), 85
Rowett Research Institute : Collected Papers Vol. 14, 778
Rowlands, Dr. D. G. : At the eighth Plant Breeders' Conference (Cytological Irregularities of *Vicia faba*), 844
Rowson, L. E. A. (Moore, N. W., and) : Freemartins in Sheep, 1754
Roy, A. B. : A New Species of *Azotobacter* producing Heavy Slime and Acid, 120
Roy, Anil Bandhu (Biswas, Arun K., and) : Surface-Active Characteristics of Sodium Anacardate isolated from Cashew Nut Shell Oil, 1299
Roy, Dolly, and others : Arylaminopyrimidines as Growth-Inhibitors of *Streptococcus faecalis* and *Lactobacillus arabinosus*, 187
Roy, R. N., and Guha, Prof. B. C. : Species Difference in regard to the Biosynthesis of Ascorbic Acid, 319
    Production of Experimental Scurvy in a Bird Species, 1689
Roy, Prof. S. N. : Some Aspects of Multivariate Analysis, *review* by Dr. N. L. Johnson, 1183
Royal Aeronautical Society : Second Lanchester Memorial Lecture (Prof. A. R. Collar), 1643
Royal Aeronautical Society and the Society of Licensed Aircraft Engineers : Members to repair and maintain the Nash Collection of historic aircraft, 1131
Royal Agricultural Society of England : Medal and Award for research work of benefit to Agriculture, 1488
Royal Aircraft Establishment, Farnborough (Metallurgy Department) : Study of Metals and Alloys above 1,200°C. (Crystal Structure—Structures of Graphites deposited from Hydrocarbon Gases at various Temperatures and Pressures), 1419
Royal Australian Chemical Institute : Rennie Memorial Medal for 1957 awarded to Dr. J. H. Bradbury, 89
    H. G. Smith Memorial Medal awarded to Dr. K. L. Sutherland, 89
    Election of Officers for 1958-59, 1487

Royal Australian Chemical Institute (Western Australian Branch), and the University of Western Australia : Symposium on Plant Products, 299
Royal College of Science and Technology, Glasgow : Annual Report for 1956-57, 498
  New Engineering Block, 588
  W. H. Perkin and the Young Chair of Technical Chemistry in the (R. Brightman), 613
Royal Commission for the Exhibition of 1851 : Research Awards for 1958, 155
Royal Free Hospital School of Medicine : Title of professor of pharmacology in the University of London conferred on Dr. Eleanor J. Zaimis, 363
Royal Geographical Society : Acceptance of £1,200 from the Gulbenkian Foundation, Lisbon, for a pool of surveying instruments and equipment for loan to university expeditions, 1493
Royal Institute of Chemistry : Meldola Medal of the Society of Maccabaeans, 990
Royal Institution : Course of Christmas Lectures, 1416
  Proceedings to be published three times a year instead of annually, 565
  Scientific Apparatus in the (Sir Lawrence Bragg), 1541
Royal Institution and the Teaching of Science in the Nineteenth Century (E. E. Ironmonger), 80
Royal Jelly, *review* by Dr. H. Kalmus, 142
Royal Medals for 1958 of the Royal Society awarded to Prof. H. S. W. Massey and Prof. A. L. Hodgkin, 1412, 1632
Royal Meteorological Society : Election of Officers for 1958-59, 88
Royal Observatory, Cape of Good Hope : Report for 1957, 1204
Royal Ontario Museum (Division of Zoology and Palaeontology) : Observations on Birds of Southeastern Brazil (Margaret H. Mitchell), *review*, 215
Royal Photographic Society : Christmas Lectures (Picture Making in Photography), 1554
Royal Photographic Society (Scientific and Technical Group), and the Scientific Films Committee of the British Association : Presentation of Research Films at the Annual Meeting of the British Association, 1211
Royal Scottish Museum : Retirement of Dr. A. C. Stephen as keeeper of the Department of Natural History, 1641
  Appointment of A. Rodger Waterston as keeper of the Department of Natural History, 1641
Royal Society of Canada : Seventy-sixth Annual Meeting, 701
  Symposium on Potentialities of the North-West, 701
  Presidential Address, The Evolution of Evolution (Prof. Thomas W. M. Cameron), 701
  Symposium on Oceanography, 701
  Symposium on Physical Methods in Organic Chemistry, 701
  Election of Officers for 1958-59, 702
Royal Society of Edinburgh : Election of Officers, 1345
Royal Society of London : Appointment of Dr. R. C. Kumar as Rutherford Scholar at University College, London, 18
  Mr. and Mrs. John Jaffé Donation Studentships in original scientific research awarded to Dr. E. A. Magnusson and to Dr. Jennifer Wildy, 359
  Undergraduate Academic Record of Fellows of the (C. Gross and L. Hudson), 787, 1178 ; (Prof. Robert Platt), 1178 ; (L. Hudson), 1326
  Mathematical Tables, Vol. 4, Tables of Partitions (initiated and computed by Hansraj Gupta ; computed independently by C. E. Gwyther and J. C. P. Miller), *review* by Dr. J. A. Todd, 1046
  Gift of £1,500 to the Department of Inorganic and Structural Chemistry of the University of Leeds, for scientific investigations on high-resolution nuclear magnetic resonance spectroscopy, 1279
  Gift of £700 to the Department of Botany of the University of Leeds, to purchase special equipment, 1279
  Copley Medal awarded to Prof. J. E. Littlewood, 1344, 1631
  Rumford Medal awarded to Sir Thomas Merton, 1344, 1631
  Davy Medal awarded to Prof. R. G. W. Norrish, 1344, 1632
  Darwin Medal awarded to Sir Gavin de Beer, 1344, 1633
  Sylvester Medal awarded to Prof. M. H. A. Newman, 1344, 1633
  Hughes Medal awarded to Prof. E. N. da C. Andrade, 1344, 1633
  Royal Medals for 1958 awarded to Prof. H. S. W. Massey and Prof. A. L. Hodgkin, 1412, 1632
  Anniversary Address, Some Modern Scientific Themes (Sir Cyril Hinshelwood), 1634
  Election of Officers, 1641
Royal Society and the Armourers and Brasiers' Company: Appointment of Dr. T. E. Faber as Armourers and Brasiers' Company Research Fellow at the Cavendish Laboratory, Cambridge, 18
Royal Society, in conjunction with the Linnean and Geological Societies : Conversazione to mark the centenary of the reading before the Linnean Society of the paper 'On the Tendency of Species to form Varieites', by Charles Darwin and Alfred Russel Wallace, 86
Royal Society and the Nuffield Foundation Commonwealth Bursaries Scheme : Awards, 88, 1641
Royal Society and the University of Sheffield : Appointment of K. Dalziel as Sorby Research Fellow in the Biochemistry Department of the University of Sheffield, 18
Royal Society of Medicine (Section of Endocrinology), and the Society for Endocrinology : Joint Endocrine Meeting, 1279
Royal Veterinary College : Appointment of Dr. E. Cotchin to the University of London readership in veterinary pathology, 158
  Appointment of Dr. J. A. Laing to the Courtauld chair of animal husbandry and veterinary hygiene, 1777
Rubber Industry, Institution of the : Annual Report on the Progress of Rubber Technology (edited by Dr. T. J. Drakeley), 294
Rubber Manufacturers (British), Research Association of : Appointment of Dr. J. R. Scott to the newly created post of scientific adviser, 560
  Appointment of Dr. W. F. Watson as director of research, 560
Rubber Technology : Annual Report on the Progress of (edited by Dr. T. J. Drakeley), 294
Rubenowitz, Sigvard : Predicting Academic Success, 1421
Rubidium Depletion in Feldspars (Dr. S. R. Taylor and Dr. K. S. Heier), 202
Rubin, Dana (Robertson, P. A., and) : An Indirect Action of Angiotensin I on Smooth Muscle, 867
Rubino, A., and others : Effect of Diphosphopyridine Nucleotide on the Inhibition of Rat Liver 3-Hydroxyanthranilic-Acid Oxidase by 2-Acetylaminofluorene and N-2-Fluorenyldiacetamide, 1744
Rugby School Natural History Society : Report for 1957, 563
Rumen : Lipolysis in the (Dr. G. A. Garton, Dr. P. N. Hobson and Dr. A. K. Lough), 1511
Rumen (Sheep) : Maintenance of Oligotrich Protozoa from the, *in vitro* (G. S. Coleman), 1104
Rumford Medal for 1958 of the Royal Society awarded to Sir Thomas Merton, 1344, 1631
Ruminant : The Alimentary Tract of the (David Benzie and Dr. A. T. Phillipson), *review* by Prof. A. Graham, 622
  Digestion in the (Dr. D. P. Cuthbertson), 586
Ruminations on Radar, *review* by Dr. R. L. Smith-Rose, 415
Runciman, W. A. (Pryce, Prof. M. H. L., and) : Ions of the Transition Elements (Absorption Spectra of Transition Metal Ions in Lattices of Al_2O_3—Trivalent Vanadium in Corundum), 1350
Rural England, Council for the Preservation of : Thirty-second Annual Report (1957-1958), 777
  Nineteenth National Conference (Rural Problems of the Moment), 565
Rural England, Council for the Preservation of (Sheffield and Peak District Branch) : Twenty-seventh Annual Report, 156
Rural Life at Home and Overseas, Institute of : Course of Rural Studies, 158
Rural Problems of the Moment (Council for the Preservation of Rural England National Conference on), 565
Rural Studies (Institute of Rural Life at Home and Overseas Course on), 158
Rushton, Dr. W. A. H. : Visual Pigments in the Colour Blind, 690
Rushworth, Dr. F. A. (Lawrenson, I. J., and) : Molecular Structure of *cyclo*-Octatetraene, 391
Russell, Dr. F. S. : Salt Excretion in Marine Birds, 1755
Russell, Sir John : *Obituary* of Viscount Bledisloe of Lydney, 153
Russell, Dr. L. S. : Museums in the Commonwealth and Overseas with special reference to the Training of Curators, 503
Russell, Dr. R. Scott : Deposition of Strontium-90 and its Content in Vegetation and in Human Diet in the United Kingdom, 834
  Special Address to the sixth General Assembly of the International Union for the Conservation of Nature and Natural Resources (Influence of Atomic Radiations and Wastes on the Vegetation Cover), 1405
Russian Astrophysics, *review* by Prof. R. O. Redman, 548
Russian Earth Satellite 1957β : Motion of the Nodal Line of the Second, and Flattening of the Earth (Prof. E. Buchar), 198
Russian Earth Satellite *Sputnik* 3 (1958δ) : Progress of the (D. G. King-Hele), 1409
Russian Scientific Journals available in English (United States National Science Foundation), 632
Russian Scientific and Technological Literature (Department of Scientific and Industrial Research Lending Library Unit Translating Programme for), 917
Rust (Wheat Stem) : Effect of Metal Ions on the Development of (D. Wang, Dr. P. K. Isaac and Prof. E. R. Waygood), 268
Rust Infection : Effect of, on Oxidative Phosphorylation of Wheat Leaves (B. I. Pozsár and Z. Király), 1686
  Effects of, on the Carbohydrate Metabolism of Wheat Seedlings (A. C. Jain and Prof. R.-L. Pelletier), 882
Rusznyak, Prof. I. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Rutenberg, S. H., and others : Biochemical Response to Physical Injury (The Bacterial Factor in Traumatic Shock), 1496
Rutherford, Dr. P. P. : Accurate Measurement of the Viscosity of Liquids (Complexity of the Flow Behaviour of Solutions of some Polystyrenes at High Dilution), 439
Rutherglen, Dr. J. G. : Physics of Quanta and Parity (Techniques and Uses of Millimicrosecond Measurements), 1120
Ruttenberg, Stanley (edited by Odishaw, Hugh, and) : Geophysics and the IGY—Proceedings of the Symposium at the Opening of the International Geophysical Year, *review* by D. Taylor Smith, 1187
Ruwenzori : Glaciological Observations on (Prof. David L. Linton), 302
Ruwenzori Reconnaissance : Report of the Makerere College, 302
Ruzicka, Prof. L. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Ryall, R. W. : Effect of Drugs on Emotional Behaviour in Rats, 1606
Ryan, T. G. (Junge, Chr. E., and) : Sulphur Dioxide in Atmospheric Chemistry, 21
Ryder, Dr. M. L. : Follicle Arrangement in Skin from Wild Sheep, Primitive Domestic Sheep and in Parchment, 781
Rydon, Prof. H. N. : A Possible Mechanism of Action of Esterases inhibitable by Organo-Phosphorus Compounds, (Mechanism of Esterase Action), 928
Rydon, Prof. H. N., and others : Mechanism of Esterase Action—Nature of the Reactive Serine Residue in Enzymes inhibited by Organo-Phosphorus Compounds, 927
Rydzewski, Dr. W. : Birds in Spain, *review*, 1044

SACCHAROMYCES : Effects of Environment (Radiation, Substrate and Allelic Genes) on the Melezitose Gene in (Prof. Carl C. Lindegren and David D. Pittman), 271
Saccharomyces cerevisiae : Nuclear Changes occurring during Bud-formation in, as revealed by Ultra-thin Sectioning (T. Hashimoto, S. F. Conti and Prof. H. B. Naylor), 454
Sachs, L. : Progress in Cancer Research (Immunology and Immunogenetics), 365
Sadhukhan, P. (De, M. L., and) : Determination of the Mass Thickness of Cell Membranes from their Electron Micrographs, 1008
Sadler, Dr. P. W., and others : New Potent Reactivators of Acetocholinesterase inhibited by Tetraethyl Pyrophosphate, 1498
Sadler, Dr. P. W. (Hobbiger, Dr. F., and) : Protection by Oximes of *bis*-Pyridinium Ions against Lethal Di*iso*propyl Phosphonofluoridate Poisoning, 1672
Safety in the Field of Nuclear Energy : Health and (Dr. W. G. Marley), 1262
Safety in Mines in Great Britain (Prof. S. G. Ward), 637
Safety for Use : Procedures for the Testing of Intentional Food Additives to establish their—Second Report of the Joint FAO/WHO Expert Committee on Food Additives (World Health Organization), 850
Safety Advisory Committee (Nuclear) : Appointment of a, 1413
Safety Glass : Fundamental Research in, 1779

Sager, Dr. Ruth, and Zalokar, Dr. Marko : Pigments and Photosynthesis in a Carotenoid-deficient Mutant of *Chlamydomonas*, 98
Sagitta as a Host of Larval Nematodes, including a New and Unique Type of Cercaria (Dr. Ben Dawes), 960
Sahasrabudhe, Dr. M. B. : A New Approach to the Chemotherapy of Cancer, 163
Saito, Masahiro, and others : Composition of the Cell Wall of *Staphylococcus aureus* 209*P*, 959
Salam, Prof. A. : Awarded the Hopkins Prize of the Cambridge Philosophical Society, 1644
Salaries of Teachers in Technical Institutions, 1414
Salgado, Dr. M. L. M. : Appointed permanent director of the Coconut Research Institute of Ceylon, 1348
Salicylic Acid and related Substances : Stability of Metal Complexes with (D. D. Perrin), 741
Saline Lakes near Kingston, South Australia : Formation of Dolomite in (A. R. Alderman and H. C. W. Skinner), 21
Saline Waters (Inland) : Classification of Brackish and (International Association of Limnology and the International Union of Biological Sciences Conference on), 27
Salinity Problems in the Arid Zones (Unesco Symposium on), 158
Salivary Secretion of both Parotid Glands in a Sheep : Comparison of the (M. Somers), 400
Salkowsky Reaction : Determination of Indole Acetic Acid by the (Dr. A. M. Mayer), 1670
Salmon, K. (Gadsden, M., and) : Presence of 6707 A. Radiation in the Twilight Sky, 1598
Salmon on the River Erne : Movement of (P. A. Jackson), 543
Salmon (Chinook) : Effect of Diet on Imidazole Compounds and Creatine in (Dr. A. Lukton), 1019
Salmon (Metamorphosing) : Acid-Soluble Nucleotides from the Blood of (Per Olov Svärd), 1448
Salmon (Young), at Two British Columbia Field Stations : Research on Guiding (J. R. Brett and D. F. Alderdice), 162
Salmonella typhimurium : An Effect of Glucose on Bacteriophage Synthesis in (Nathan Entner and Ellis Engelsberg), 1808
Salmonellosis in Animals (Dr. A. Buxton), *review* by Dr. Joan Taylor, 1046
Salt, Dr. G. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Salt and Hormones in Panting and Sweating Animals : Heat, (Prof. W. V. Macfarlane, Kathleen Robinson, Beth Howard and Rosemary Kinne), 672
Salt and Water Balance in Animals (British Association for the Advancement of Science, Sections D (Zoology) and I (Physiology and Biochemistry), Symposium on), 1207
Salt Additions (Dietary) : Volume and Acidity of Urine of Sheep fed Hay Rich in Silica and Effect of (S. A. Forman, F. Sauer, D. H. Laughland and W. M. Davidson), 1385
Salt Excretion in Marine Birds (Dr. F. S. Russell), 1755
Salt Glands in Marine Reptiles (Knut Schmidt-Nielsen and Ragnăr Fange), 783
Salt Requirements in the Tropics during Summer (Surg. Lieut.-Comdr. Mangal Sain Malhotra), 1036
Salton, Dr. M. R. J. : Virus Structure and Function, *review*, 1576
Salts (Bile) : Effect of, upon the Activity of Antibiotics (Dr. S. Stanley Schneierson and Daniel Amsterdam), 56
  Moving Acid Boundary (*p*H Gradient) Paper Ionophoresis of (Thomas Briggs, Dr. Michael W. Whitehouse and Dr. Ezra Staple), 394
Salts (Fused) : Soviet Research in (1949-1955), (Chemistry Collection No. 1), *review* by Prof. A. R. Ubbelohde, 619
  Work on, *review* by Prof. A. R. Ubbelohde, 619
Samarawickrema, W. A. (Bertram, Prof. D. S., and) : Age Determination for Individual *Mansonioides* Mosquitoes, 444
Samec, Prof. M. : At the International Starch Conference (Degradation of Starch by γ-radiation), 231
Sample Introduction System (A Micro), for Gas Chromatography (Robert L. Bowman and Dr. Arthur Karmen), 1233
Sample (Soil), from Antarctica : Chemistry and Clay Minerology of a (L. C. Blakemore and L. D. Swindale), 47
Samples (Aqueous and Alcoholic) : A Direct-Plating Method for the Assay of Radioactive Isotopes in (H. Campbell, H. A. Glastonbury and Margaret D. Stevenson), 1100
Samples (Soil) : Continuous-Flow Method for the Study of Microbiological Processes in (Dr. J. Macura and Dr. I. Málek), 1796
Samuel, Viscount : Order of Merit conferred on, 1488
Samuel, Prof. Pierre (Zariski, Prof. Oscar, and), with the co-operation of Cohen, I. S. : Commutative Algebra, Vol. I, *review* by Dr. L. S. Goddard, 759
Samuelson, Prof. A., and others : Linear Programming and Economic Analysis, *review* by Dr. L. S. Goddard, 1046
Sandage, Dr. Allan : The Cosmic Distance Scale (Warner Lecture of the American Astronomical Society), 1132
Sanders, F. K. (Huppert, J., and) : An Ineffective 'Ribonucleic Acid' Component from Tumour Cells infected with Encephalomyocarditis Virus, 510
Sanderson, Dr. Ann R. (Waterhouse, Dr. F. L., and) : Geographical Colour Polymorphism and Chromosome Constitution in Sympatric Species of Sawflies, 477
Sandford, B. P. : Relative Intensities of the Oxygen Lines at 5577 A. and 6300 A. in the Night Sky, 42
Sándor, E., and Wooster, Dr. W. A. : Extra Streaks in the X-Ray Diffraction Pattern of Vanadium Single Crystals, 1435
'Sandwich' Layer : Bismuth–Tellurium Photo-voltaic *p–n* (Tomasz Piwkowski), 1793
Sanger, Dr. F. : Awarded the Nobel Prize for Chemistry for 1958, 1275 ; work of, 1275
Sanghi, Dr. Indra (Parthasarathy, N. V., and) : A Simple Technique for the Calibration of the Wave-length Scale of Spectrophotometers, 44
Sanita, Istituto di (Society for Applied Bacteriology and the) : Symposium on Cultural and Metabolic Aspects of Moulds, 1279
Santamaria, Prof. L., and others : Photosynthesis of Amino-Acids from Paraformaldehyde involving the Fixation of Nitrogen in the Presence of Colloidal Molybdenum Oxide as Catalyst, 1668
Santavy, F., and others : Polarographic Study of Acid-Base Reactions of the Tropylium Ion, 1535
Santi, Prof. R. : Potassium Atractylate, a New Inhibitor of the Tricarboxylic Acid Cycle, 257
Sap (Tracheal), in Apples : Nitrogenous Components of the (E. G. Bollard), 21
Sap Flow : Measurement of, by Heat Transfer (D. C. Marshall), 878
Saprophytic Ability (Competitive), of Soil Fungi : A Technique for the Investigation of the, by the Use of Easily Decomposed Substrates (S. T. Matturi and Dr. H. Stenton), 1248
Sarcoma in Albino Rats treated during the Embryonic Stage with Rous Virus (G. J. Svet-Moldavsky), 1452
Sarma, Prof. P. S., and others : Biological Deamidation of Nicotinamide in Vertebrates, 51
Sarma, Prof. P. S. (Sivarama Sastry, K., and) : Effect of Copper on Growth and Catalase Levels of *Corcyra cephalonica* St. in Zinc Toxicity, 533
Sasaki, Toshi, and others : Plateau Formation and Sulphydryl Groups in the Plasma Membrane, 1675
Satchell, Dr. J. E. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
Satellite (Circumpolar Earth) : Seasonal Illumination of a, at its Extreme-Latitude Orbit Point (Dr. W. N. Abbott), 651
Satellite 1957β (*Sputnik* 2) : Effect of Solar Flares on Earth (T. Nonweiler), 468
  Motion of the Nodal Line of the Second Russian Earth, and Flattening of the Earth (Prof. E. Buchar), 198
  The Last Minutes of (D. G. King-Hele and Mrs. D. M. C. Walker), 426
Satellite 1958δ (*Sputnik* 3) : Progress of the Russian Earth (D. G. King-Hele), 1409
Satellite (Earth) : Effect of Air Drag on the Orbit of an (D. G. Parkyn), 787 ; (D. G. King-Hele and Dr. D. C. M. Leslie), 788
Satellite Drag : Irregularities of, and Diurnal Variations in Density of the Air (G. V. Groves), 1533
Satellite Orbit : Change of Inclination of a (C. H. Bosanquet), 1533
Satellite Signals (Earth) : Faraday Fading of (Dr. Fred B. Daniels and Dr. Siegfried J. Bauer), 599
Satellites : A New Method of Tracking Artificial Earth (A. P. Willmore), 1008
  Investigation of the Ionosphere using Signals from Earth (Dr. E. Woyk) (E. Chvojková), 1362
  Rotation of Artificial Earth (Prof. R. N. Bracewell and O. K. Garriott), 760
  Use of Artificial, to Explore the Earth's Gravitational Field—Results of *Sputnik* 2 (1957β), (R. H. Merson and D. G. King-Hele), 640
  World Data Centre for Rockets and (Slough), 988
Satellites 1957α and 1957β : Orbital Data and Preliminary Analyses of (compiled by F. L. Whipple, L. G. Boyd, J. A. Hynek and G. F. Schilling), 1062
Satellites 1957β, 1958δ_1 and 1958δ_2 : An Irregularity in the Atmospheric Drag Effects on *Sputniks* 2 and 3 (D. G. King-Hele and Mrs. D. M. C. Walker), 860
Sauer, F., and others : Volume and Acidity of Urine of Sheep fed Hay Rich in Silica and Effect of Dietary Salt Additions, 1385
Saukov, A. A. : Migration of the Chemical Elements in the Earth's Crust during Geological Times, 362
Saunders, Dr. B. C. : Chemistry of Fluorine Compounds (Physiological Properties of Toxic Organic Compounds containing Fluorine), 1270
Saunders, Prof. O. A. : Heat and the Engineer (Presidential Address to Section G (Engineering) of the British Association for the Advancement of Science), 582
Saunders, W. L. A. : At the Library Association Conference at Brighton (Current Problems on University Libraries), 1716
Savić, Prof. P. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Saville, J., and others : Study of Metals and Alloys above 1,200°C. (High-temperature Techniques—Arc-Furnace Techniques), 1419
Savory, Theodore : The Living Invertebrate, *review*, 825
  Amber Spiders in European Collections, *review*, 1588
Savulescu, Prof. T. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Saw-Fish of Sierra Leone (J. C. D. Watts), 961
Sawflies : Geographical Colour Polymorphism and Chromosome Constitution in Sympatric Species of (Dr. F. L. Waterhouse and Dr. Ann R. Sanderson), 477
Sawhney, B. L. : Aluminium Interlayers in Soil Clay Minerals, Montmorillonite and Vermiculite, 1595
Sawyer, J. S. : Promoted to Deputy Chief Scientific Officer in the Scientific Civil Service, 991 ; work of, 991
Sawyers, David, and others : The Sources of Invention, 275
Scaife, J. F., and Campbell, D. H. : Toxicity of a Cholinesterase Inhibitor to the Hibernating Hamster, 1739
Scale (Standard), for Geomagnetochronology in Japan : Secular Variation in the Direction of Geomagnetism as the (Naotune Watanabe), 383
Scale Height of the Upper Atmosphere (C. H. Bosanquet), 1010
Scaly Alumina : A New Method for preparing (Dr. Persio de Souza Santos), 525
Scattering of Light by Small Particles, *review* by James Paton, 1470
Scattering of Microwave Radiation by a Plasma Column (Forrest I. Boley), 790
Scattering (Coherent), of 1·33 MeV. γ-Rays by Lead (Dr. K. G. Standing and J. V. Jovanovich), 521
Scattering (Light), by Small Particles (Dr. H. C. van de Hulst), *review* by James Paton, 1470
Scattering (Low-Angle X-Ray), by Glasses (E. A. Porai-Koshits and N. S. Andreyev), 335
Scattering (Small Angle X-Ray), from Metals (Midwest Research Institute, Kansas City, International Conference on), 634
Scattering (Turbulent) : Role of, in Long-Distance Radio Propagation at Metre Wave-lengths (F. A. Kitchen and Dr. M. A. Johnson), 302
SCEPTRE III : The Electron Temperature in (Dr. S. Kaufman and R. V. Williams), 557
  Measurement of the Energy Spectrum of Protons emitted from the Fusion Reaction in (W. M. Jones, A. C. L. Barnard, S. E. Hunt and D. R. Chick), 216
Schapira, G., and others : Different Heterogeneities of Mouse Haemoglobin according to Strains, 947

Schapiro, Dr. S. (Stjärne, Dr. L., and) : Effects of Reserpine on Secretion from the Adrenal Medulla, 1450
Scharrer, Profs. E. and B. : Comparative Endocrinology (Neurosecretion and its Role in Neuro-endocrine Integration), 775
Scheer, M. D. : Free Radical Stabilization, 1497
Schendel, H. E. (Schütte, K. H., and) : Influence of Trace Elements upon Plant Protein Composition, 958
Schenkel, J. H., and Kitchener, Dr. J. A. : Contamination of Surfaces by Conductivity Water from Ion-exchange Resins, 131
Scheraga, Dr. H. A., and others : Comparative Kinetic Behaviour of Thrombin, Plasmin and Trypsin toward Synthetic Substrates, 461
Scherz, Dr. Gustav (edited by) : Nicolaus Steno and his Indice, *review* by Dr. M. H. Hey, 278
Scheuer, P. A. G. : Awarded a Senior Studentship by the Royal Commission for the Exhibition of 1851, for research in radio astronomy, 155
Schiff, Leonard I. (edited by Beckerley, James G., in association with Hofstadter, Robert, and) : Annual Review of Nuclear Science, Vol. 7, *review* by Dr. F. Mandl, 489
Schilling, G. F., and others (compiled by) : Orbital Data and Preliminary Analyses of Satellites 1957α and 1957β, 1062
Schizogony (Parasite's), and its Transmission by the Mite *Dermanyssus gallinae* : Some Observations on the Life-Cycle of *Atoxoplasma*, with particular reference to the (Dr. R. Lainson), 1250
Schmaehl, Dr. : Modern Educational Treatment of Deafness, 920
Schmeising, H. N. (Morris, Dr. D. F. C., and) : The Electron Affinity of Atomic-Oxygen, 249
Schmidt-Nielsen, Knut, and Fange, Ragnär : Salt Glands in Marine Reptiles, 783
Schmitz, G., et Crisinel, P. : La Lutte contre *Stephanoderes hampei* Ferr., *review* by W. V. Harris, 215
Schneider, Dr. Rose G., and Haggard, Dr. Mary Ellen : Haemoglobin *P* (The 'Galveston' Type), 322, *erratum*, 771
Schneiderman, Dr. Howard A. (Levy, Robert I., and) : An Experimental Solution to the Paradox of Discontinuous Respiration in Insects, 491
Schneierson, Dr. S. Stanley, and Amsterdam, Daniel : Effect of Bile Salts upon the Activity of Antibiotics, 56
Schnellmann, G. A. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1137
Schnitzer, Robert J., and Grunberg, Emanuel : Drug Resistance of Microorganisms, *review* by I. M. Rollo, 416
Schnurmann, Dr. R. : Accurate Measurement of the Viscosity of Liquids (A Jet Viscometer in which Frictional Heating is practically eliminated), 438
Schoental, Dr. R. : Carcinogenic Activity and O-Alkylation, 719
Schofield, A. N. : Road Research, 1491
Schofield, Dr. Brenda M. : Effect of the Synthetic Œstrogen Stilboestrol on Pregnancy in the Rabbit, 58
Schofield, J. A., and others : Mechanism of Esterase Action—Nature of the Reactive Serine Residue in Enzymes inhibited by Organo-Phosphorus Compounds, 927
Schofield, Raymond (Thomason, Doreen, and) : Calcium Exchanges of Ehrlich Ascites Tumour Cells of Mice *in vitro*, 809
Scholarship in Marine Engineering : Parsons (Institution of Naval Architects), 1554
  Yarrow (Institution of Naval Architects), 1554
Scholarship in Naval Architecture : Denny (Institution of Naval Architects), 1554
Scholarship in Naval Engineering : Denny (Institution of Naval Architects), 1554
Scholarships for 1958-59 (National Research Council of Canada Awards), 228
Scholarships : Perkin Centenary, awarded to Brian Higginbottom and to W. K. McCourt, 295
  Transfer (Imperial Chemical Industries), 1554
Scholarships in Medical Science : French Exchange (Medical Research Council Awards for 1958-59), 634
Scholarships (Research Training) for 1958-59 of the Animal Health Trust awarded to B. A. Baldwin, Dr. A. D. Care, A. R. Gray and R. F. Sturrock, 432
Schön, Dr. Harald : Effect of Nicotinic Acid on the Cholesterol Contents of Rat Livers, 534
Schonbeck, Dr. F. : Ecology of Soil Fungi, 1559
Schonland, Dr. D., and others : Ions of the Transition Elements (Application of Paramagnetic Resonance Spectroscopy to Transition Metal Ions—Electron Resonance Measurements of Ferri-haemoglobin Derivatives), 1350
School : The American Business (O. S. Hiner), 841
School (Atom), for Business Men, 700
School (Comprehensive) : Inside the—a Symposium contributed by Heads of Comprehensive Schools in England and Wales (collected and edited by the National Union of Teachers), *review* by Robert W. Fenn, 1590
School (Summer), in Alpine Studies (Geographical Association), 1777
School (Summer), in Mediterranean Geography (Geographical Association), 1777
School (Training) : Foxboro-Yoxall's, 1278
School Science Teachers : Selected Lectures in Modern Physics for (edited by Prof. H. Messel), *review* by G. R. Noakes, 623
Schools : Broadcasting, Television and the, 1485
  Science in (Eric Walker), 922
  Science and Mathematics in, 1485
  Science Laboratories in, 768
  Secondary Modern (Prof. H. C. Dent), *review* by H. Raymond King, 1585
  Use of Radioactive Substances and X-Rays in (Ministry of Education, Administrative Memorandum No. 577, on), 1203
Schools (Grammar) : Laboratories in, 707
Schools (Secondary) : Science Teaching in, *review* by Dr. W. L. Sumner, 897
  The Teaching of Science in (compiled by a Joint Committee of the Incorporated Association of Assistant Masters and the Science Masters' Association), second edition, *review* by Dr. W. L. Sumner, 897
Schou, Jens : Self-depression of the Subcutaneous Absorption of Drugs due to Release of Histamine, 324
Schreiber, V., and others : Influence of a Crude Hypothalamic Extract on the Acid Phosphatase Activity of Rat Pituitaries, 62
Schrek, Robert : Cytotoxicity of Heterologous Sera to Normal and Leukaemic Human Lymphocytes, 724
Schubert, Dr. H. R. : History of the British Iron and Steel Industry from c. 450 B.C. to A.D. 1775, *review* by Prof. F. C. Thompson, 349
Schuldiner, Dr. S., and Hoare, Dr. J. P. : Charge Transfer Processes (Mechanism of Cathodic Electrochemical Reactions—Transport of Hydrogen through Palladium-clad Electrodes), 1354
Schulman, J. H. (edited by) : Proceedings of the Second International Congress of Surface Activity, Vol. 1, Gas/Liquid and Liquid/Liquid Interface ; Vol. 2, Solid/Gas Interface : Vol. 3, Electrical Phenomena and Solid/Liquid Interface ; Vol. 4, Solid/Liquid Interface (Washings, etc.), Cell/Water Interface, *review*, 972
Schultz, L. P. : Review of the Parrotfishes, 1415
Schütte, K. H., and Schendel, H. E. : Influence of Trace Elements upon Plant Protein Composition, 958
Schwartz, N. M., and Strauss, B. S. : Effect of Tryptophan Analogues on Reversion of a Tryptophan-requiring Strain of *Escherichia coli*, 888
Schwartz, Dr. J. : Human and Animal Ecology (*Histoplasma duboisii* and *H. capsulatum*), 1648
Schweinburg, F. B., and others : Biochemical Response to Physical Injury (The Bacterial Factor in Traumatic Shock), 1496
Schwerdt, Kurt R., and others : Interface Couples in Crystals, 652
Schwyzer, Dr. R., and Li, Prof. Choh Hao : A New Synthesis of the Pentapeptide-L-Histidyl-L-Phenylalanyl-L-Arginyl-L-Tryptophyl-Glycine and its Melanocyte-stimulating Activity, 1699
Science : Classification and Indexing in (B. C. Vickery), *review* by R. Brightman, 1698
  Development of, *review* by Dr. A. Armitage, 142
  Grants for (United States National Science Foundation), 362
  Histoire de la (publié sous la direction de Maurice Daumas), *review* by Dr. A. Armitage, 142
  The New Humanism of (Frank Greenaway), 1642
Science in Africa, *review* by Dr. Kenneth Mellanby, 1043
Science in Britain and the United States : Administration of, 819
Science in the Civil Service, 86
Science in the Development of Africa, a Review of the Contribution of Physical and Biological Knowledge South of the Sahara (Dr. E. B. Worthington), *review* by Dr. Kenneth Mellanby, 1043
Science in the Nineteenth Century : The Royal Institution and the Teaching of (E. E. Ironmonger), 80
Science of Photography (Dr. H. Baines), *review* by C. O. Harvey, 1599
Science in Schools (Eric Walker), 922
Science in Secondary Schools : The Teaching of (compiled by a Joint Committee of the Incorporated Association of Assistant Masters and the Science Masters' Association), second edition, *review* by Dr. W. K. Sumner, 897
Science in Six American States, 1347
Science at the Smithsonian : Adventures in (E. John Long and George Weiner), 561
Science for Students of the Humanities, *review* by J. A. Ratcliffe, 348
Science in the Use of Coal (Institute of Fuel Conference on), 24
Science (Agricultural), South African Journal of, Vol 1, No. 1, 431
Science (Corrosion) : Essay on (Education Panel of the Corrosion Group of the Society of Chemical Industry Prize for an), 1063
Science (Defence), Commonwealth Advisory Committee on : Meeting in Australia, 697
Science (Experimental) : Harvard Case Histories in (edited by James Bryant Conant and Leonard K. Nash), 2 vols., *review* by J. A. Ratcliffe, 348
Science (Medical) : French Exchange Scholarships in (Medical Research Council Awards for 1958-59), 634
  United States Public Health Services (National Institutes of Health, Bethesda) Travelling Fellowships in (Medical Research Council Awards), 634
Science (Modern) : Some Implications of (Sir Henry Self), 1349
  Theories of the Universe from Babylonian Myth to (edited by Milton K. Munitz), *review* by Dr. A. R. Hall, 277
Science (Modern), and Civilization (Rt. Hon. R. G. Menzies), 1557
Science (Natural), and Social Science (Sir Alexander Carr-Saunders), 561
Science (Nuclear) : Annual Review of (edited by James G. Beckerley, in association with Robert Hofstadter and Leonard I. Schiff), Vol. 7, *review* by Dr. F. Mandl, 489
Science (Social) : Laws in, 561
  Natural Science and (Sir Alexander Carr-Saunders), 561
Science (Soil), International Society of (Soil Zoology Committee) : Colloquium on Research Methods in Soil Zoology, 704
Science (Wood), Institute of : *Journal*, No. 1, 769
Science Centre Scheme, 429
Science Congress (Nuclear Engineering and) : Selected Papers from the 1st, held at Cleveland, Ohio (edited by D. J. Hughes, Stuart McLain and Clark Williams), Vol. 1, Problems in Nuclear Engineering ; Vol. 2, Reactor Operational Problems, *review* by B. Cutts and G. R. H. Geoghegan, 4
Science Education in South Africa, 89
Science Faculty Fellowships (National Science Foundation Awards for 1958-59), 501
Science Hall (International), at the Brussels Exhibition (Dr. D. C. Phillips), 284
Science Laboratories in Schools, 768
Science Laboratory (Nuclear) : Design and Management of a (Prof. A. J. Woodall, C. G. Wilson, Dr. A. L. Jones and D. K. Thomas), 367
Science Masters' Association : Annual Meeting, 1554
Science Masters' Association (compiled by a Joint Committee of the Incorporated Association of Assistant Masters and the) : The Teaching of Science in Secondary Schools, second edition, *review* by Dr. W. L. Sumner, 897
Science Museum, London : Christmas Lectures, 1710
  Exhibition on Controlled Nuclear Fusion, 1710
Science Teachers and Laboratories, 1345
Science Teachers (School) : Selected Lectures in Modern Physics for (edited by Prof. H. Messel), *review* by G. R. Noakes, 623
Science Teaching in Secondary Schools, *review* by Dr. W. L. Sumner, 897
Science and Business—a Balanced Partnership (Sir Alexander Fleck), 573
Science, Business and Education, 545
Science and Civilization, 1557
Science and Engineering : Physics for (Robert L. Weber, March W. White and Kenneth V. Manning), *review* by G. R. Noakes, 420

Science and History (Prof. Douglas McKie), 1774
Science and Mathematics in Schools, 1485
Science and Technology : The History and Philosophy of (Electricity Council), 1349
  International Co-operation in, 1329
  Lubrication (edited by John Boyd), Vol. I, No. I, *review* by Dr. D. Tabor, 1763
Science and Technology, Royal College of (Glasgow) : Annual Report for 1956-57, 498
  New Engineering Block, 588
  W. H. Perkin and the Young Chair of Technical Chemistry in the (R. Brightman), 613
Science and Technology in Public Affairs, 1
Sciences (Aeronautical) : First International Congress of (International Council of the Aeronautical Sciences), 89, 1562
Sciences (Aeronautical), International Council of the : First International Congress of Aeronautical Sciences, 89, 1562
Sciences (Atmospheric) : Programme for (United States National Science Foundation), 360
Sciences (Biological) : Awards for 1959 for Research in the (Lalor Foundation), 1063
Sciences (Biological), International Union of (International Association of Limnology and the) : Conference on the Classification of Brackish and Inland Saline Waters, 27
Sciences (Management), Institute of, and others : Proceedings of the First International Conference on Operational Research (Oxford, 1957), *review* by Dr. K. Pennycuick, 821
Sciences (Medical), Council for the Organization of, with the assistance of the Wellcome Trust and the International Union of Biochemistry : Symposium on Biochemical Response to Physical Injury, 1493
Scientific Activities in Six State Governments (United States National Science Foundation), 1347
Scientific Analysis of Fixation and Dyeing, *review* by Prof. J. Brachet, 1579
Scientific Apparatus in the Royal Institution (Sir Lawrence Bragg), 1541
Scientific Apparatus and Instruments : Import Duty on, 1708
Scientific Attaché (British), to the British Embassy in Moscow : Appointment of a, 292, 768
Scientific Civil Service : Special Promotions, 991
Scientific Development and the Universities, *review*, 1256
Scientific Encyclopedia (Van Nostrand's), third edition, *review* by Dr. L. S. Goddard, 1587
Scientific Film Association : Change of address, 700
  Sixth Annual Report of the Council, 770
Scientific Films at the British Association, 1211
Scientific Hydrology, International Association of (Commission for Snow and Ice) : Symposium on the Physics of Ice Movement, 1560
Scientific Information : Exchange of, 1345
Scientific Institutions in Egypt (Unesco Science Co-operation Office, Cairo), 562
Scientific Journals (Russian), available in English (United States National Science Foundation), 632
Scientific Manpower 1957—Papers of the Sixth Conference on Scientific Man-power (National Science Foundation, Washington), 819
Scientific Measurements : International Conference on (Dr. W. A. Wooster), 1781
Scientific Papers of Sir Geoffrey Ingram Taylor (edited by Dr. G. K. Batchelor), Vol. I, Mechanics of Solids, *review* by Prof. A. H. Cottrell, 546
Scientific Policy, Advisory Council on : Annual Report (1957-58), 1759
Scientific Research : International Co-operation in, 1397
  Treasury Control and, 1467
Scientific Research, Bento da Rocha Cabral Institute for : Grant of £14,375 from the Gulbenkian Foundation, Lisbon, for equipment and three years research expenses, 1493
Scientific Research and Development in East Africa, 703
Scientific Resources and Atomic Energy, 615
Scientific Themes : Some Modern (Sir Cyril Hinshelwood), 1634
Scientific Unions, International Council of : Year Book for 1958, 431
  Appointment of Sir Rudolph Peters as president, 990, 1205
Scientific and Industrial Research—the State and Industry, 1181
Scientific and Industrial Research in Government Departments, 1111
Scientific and Industrial Research, Council for : Research work to be undertaken at the Forest Products Research Laboratory, 498
  Appointment of Vice-Admiral Sir Frank Mason as a member, 990
  Steering Committee set up by, to look after the research programme of the Forest Products Research Laboratory, 1204
  Recommendation that all timber research should be concentrated at the Forest Products Research Laboratory, 1204
Scientific and Industrial Research, Department of : The National Physical Laboratory—Open Days (A. J. Garratt), 10
  The Road Research Laboratory—Open Days (Dr. T. Lonsdale), 23
  Appointment of Dr. J. A. Pople as superintendent of the newly created Basic Physics Division at the National Physical Laboratory, 85
  Research for Industry, a Summary of Work done by the Industrial Research Associations in the Government Scheme, 1956-57, 93
  Changes in the functions of the Chemical Research Laboratory, and the name changed to the National Chemical Laboratory, 156
  New laboratory at Stevenage to be called the Warren Spring Laboratory, 225
  Appointment of S. H. Clarke as director of the Warren Spring Laboratory, 225
  Proceedings of a Symposium on the Direction of Research Establishments, held at the National Physical Laboratory (1956), 275
  Appointment of D. I. Lawson as director of fire research of the Joint Fire Research Organization and the Fire Offices' Committee, 292
  Mechanical Engineering Research Laboratory—Research on Heat Transfer, 293
  Open Days at the National Chemical Laboratory, 295, 1778
  Control of Research Programmes in the, 429
  Steering Committees, 429
  The Mechanical Engineering Research Laboratory (R. J. F. Franklin), 436
  Research work to be undertaken at the Forest Products Research Laboratory, 498
  Appointment of a scientific attaché to the British Embassy in Moscow, 292, 768
  Short Guide to the Exhibits in the Geological Museum, 769
  Water Pollution Research Laboratory, Notes on Water Pollution Research No. 1, 841
  Lending Library Unit Translating Programme for Russian Scientific and Technological Literature, 917
  World Data Centre for Rockets and Satellites at the Radio Research Station of the, 988
  Building Research 1957—Report of the Building Research Board with the Report of the Director of Building Research, 1061
  Research Fellowship Awards for 1958-59, 1062
  Small Firms with Big Problems—a Short Account of an Experimental Technical Liaison Service run by the Scottish Council (Development and Industry), 1139
  Fifth Report from the Select Committee on Estimates together with part of the Minutes of the Evidence taken before Sub-Committee B and Appendices, Session 1957-58, 1111, 1181
  Chemistry Research 1957—the Report of the Chemistry Research Board with the Report of the Director of the Chemical Research Laboratory, 1206
  Gift of £2,175 to the Houldsworth School of Applied Science in the University of Leeds, for research on the brittle fracture of metals, 1279
  Mechanical Engineering Research 1957—Report of the Mechanical Engineering Research Board, with the Report of the Director of Mechanical Engineering Research, 1287
  Symposium at the National Physical Laboratory on the Mechanization of Thought Processes, 1416
  Gift of £6,300 to the Department of Physics, University of Bristol, towards the cost of Prof. C. F. Powell's research on heavy mesons and hyperons by the photographic method, 1487
  Gift of grants totalling £6,086 to the Department of Physics, University of Bristol, for salaries and equipment for research work under Prof. Powell, 1487
  Gift of £1,700 to the University of Bristol, for research assistants and equipment, 1487
  Road Research 1957—the Report of the Road Research Board with the Report of the Director of Road Research, 1491
  Final Report of the Joint Committee on Human Relations in Industry, 1954-57, and Report of the Joint Committee on Individual Efficiency in Industry, 1953-57, 1539
  Radio Research 1957—the Report of the Radio Research Board and the Report of the Director of Radio Research, 1558
  Report of the National Physical Laboratory for the Year 1957, 1650
Scientific and Industrial Research, Department of, and Fire Offices' Committee : Fire Research 1957—Report of Fire Research Board and the Report of the Director of Fire Research, 1651
Scientific and Industrial Research Organization (Commonwealth) : Appointment of N. A. Esserman as the first director of the National Standards Laboratory, Sydney, 291
  Retirement of Dr. G. H. Briggs as chief of the Division of Physics of the National Standards Laboratory, 291
  Appointment of Dr. R. G. Giovanelli as chief of the Division of Physics of the National Standards Laboratory, 292
  Work of the Divisions and Sections, 1555
  The Wool Textile Research Laboratories at Melbourne, Sydney and Geelong made Divisions of the Organization, and in future to be called the C.S.I.R.O. Wool Research Laboratories, 1777
Scientific and Technical Books : Recent, Supp. iv, July 26 ; Supp. xxx, August 30 ; Supp. viii, September 27 ; Supp. vi, October 25 ; Supp. vi, November 29 ; Supp. iv, December 27
Scientific and Technical Journals : Soviet, available in English Translation (United States National Science Foundation), 632
Scientific and Technological Literature : Russian (Department of Scientific and Industrial Research Lending Library Unit Translating Programme for), 917
Scientific Instrument Research Association, British : Retirement of R. J. Bracey as head of the Optical Department, 225
Scientific Research : Commonwealth Co-operation in, 1551
Scientific Unions, International Council of : Establishment of a Committee on Space Research, 1552
Scientists in the Public Service in Britain, 991
Scientists (Atomic) : Brighter than a Thousand Suns, the Moral and Political History of the (Dr. Robert Jungk), translated into English by James Cleugh, *review* by Sir John Cockcroft, 547
Scintillation Counter for Measuring Radioactivity of Vapours (A. E. Lowe and D. Moore), 133
Scintillation Spectrometer (Liquid) : Radioassay of Carbon-14 in Aqueous Solutions using a (Dr. Daniel Steinberg), 740
Sclerontinia homoeocarpa : Control of Dollar Spot Disease (Sports Turf Research Institute), 564
Scogings, Dr. D. A. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Scorer, Dr. R. S. : Natural Aerodynamics, *review* by Sir Graham Sutton, 1182
Scorpion : Ultra-structure of the Coxal Glands of the (Dr. R. Rasmont, G. Vandermeersche and P. Castiaux), 328
Scorpions, Centipedes and Mites : Spiders,—the Ecology and Natural History of Woodlice, 'Myriapods' and Arachnids (Dr. J. L. Cloudsley-Thompson), *review* by Theodore Savory, 825
Scothorne, Dr. R. J. : Histochemical Study of the Nasal (Supra-Orbital) Gland of the Duck, 732
Scotland : Water Resources and Water Needs in (British Association for the Advancement of Science, Section E (Geography), Symposium on), 1193
Scott, Mrs. E. : Nutrition and Teeth (Gross Caries in Young Children), 1705
Scott, C. W. : Report of H.M. Inspectors of Mines under the Coal Mines Act (1911) for 1956—North Eastern Division, 637
  Reports of H.M. Inspectors of Mines and Quarries under the Mines and Quarries Act (1954) for 1957—North Eastern Division, 638
Scott, Dr. David R. : Appointed head of the National College for Heating, Ventilating, Refrigeration and Fan Engineering, 700
Scott, Dr. J. F. : A History of Mathematics from Antiquity to the Beginning of the Nineteenth Century, *review* by Prof. T. A. A. Broadbent, 211
  At the Meeting in the Yugoslav Embassy in London to celebrate the bicentenary of the publication of Boscovich's 'Theoria Philosophiae Naturalis' (Boscovich's Contributions to Pure Mathematics), 230
Scott, Dr. John Paul : Aggression, *review* by Prof. J. Cohen, 1763

- Scott, Dr. J. R. : Appointed to the newly created post of scientific adviser to the Research Association of British Rubber Manufacturers, 560
- Scotti, Thomas M., and others : Tubule Formation in Rat Brains by Monkey Kidney Cells previously grown *in vitro*, 1034
- Scottish Council (Development and Industry) : Small Firms with Big Problems—a Short Account of an Experimental Technical Liaison Service run by the (Department of Scientific and Industrial Service), 1139
- Scottish Education Department (Ministry of Education and the) : Committee on Grants to Students, 20, 561
- Scottish Museum, Royal : Retirement of Dr. A. C. Stephen as keeper of the Department of Natural History, 1641
  - Appointment of A. Rodger Waterston as keeper of the Department of Natural History, 1641
- Scurvy (Experimental) : Production of, in a Bird Species (R. N. Roy and Prof. B. C. Guha), 1689
- Sea (Black) : Circulation in the (V. A. Vodyanitzky), 563
- Sea (Deep-) Sediments (Atlantic Equatorial) : Rate of Accumulation of Nickel in, and its Bearing on Possible Extra-Terrestrial Sources (Karl K. Turekian), 1728
- Sea (Tasman) : A Radiocarbon Profile in the (D. M. Garner), 466
- Sea Water : Oxidized Iodine in (Ken Sugawara and Kikuo Terada), 250 ; (J. K. Johannesson), 251 ; (T. I. Shaw and Dr. L. H. N. Cooper), 251
  - Perchlorate, an Important Constituent of (L. G. M. Baas Becking, A. D. Haldane and David Izard), 645
- Seal, Dr. M. : Graphitization and Plastic Deformation of Diamond, 1262
- Seal (Elephant), *Mirounga leonina* (L.) : Ecology of the Louse *Lepidophthirus macrorhini* Enderlein 1904 on the (M. D. Murray), 404
- Seal (Hooded), *Cystophora cristata* Erxl. : The Hood of the (Björn Berland), 408
- Seals and Nets, 561
- Seals (Grey) : Calving Time of (Dr. L. Harrison Matthews), 1325
- Sealy, J. Robert : Trees and Shrubs, *review*, 684
- Seaman, G. V. F., and others : An Apparatus for Microelectrophoresis of Small Particles, 642
- Seasonal Illumination of a Circumpolar Earth Satellite at its Extreme-Latitude Orbit Point (Dr. W. N. Abbott), 651
- Seaweed Symposium : Abstracts of the third International (University College, Galway), 1131
  - Third International (Dr. W. D. Richardson and Dr. E. T. Dewar), 1779
- Sebens, T., and others : Sheep Haemoglobins, 171
- Sebruyns, Prof. M., and others : Fine Structure of the Nuclear Envelope of Carcinoma Cells, 1030
- Second-Order Differential Equations : Eigenfunction Expansions associated with (Prof. E. C. Titchmarsh), Part 2, *review* by Prof. G. Temple, 1184
- Secondary Modern Schools (Prof. H. C. Dent), *review* by H. Raymond King, 1585
- Secondary Oscillations in an Equatorial Atlantic Deep-Sea Core (Dr. J. D. H. Wiseman), 1534
- Secondary Schools : Science Teaching in, *review* by Dr. W. L. Sumner, 897
  - The Teaching of Science in (compiled by a Joint Committee of the Incorporated Association of Assistant Masters and the Science Masters' Association), second edition, *review* by Dr. W. L. Sumner, 897
- Secret of Easter Island : Aku-Aku, the (Thor Heyerdahl), *review* by Prof. Raymond Firth, 487
- Secretion from the Adrenal Medulla : Effects of Reserpine on (Dr. L. Stjärne and Dr. S. Schapiro), 1450
- Secretion of Androgens by the Adrenal Cortex of the Mouse (Dr. Ruth Deanesly), 262
- Secretion of the Guinea Pig Coagulating Gland : Vascular Permeability Factors in the (Jules Freund, and Prof. A. A. Miles, P. J. Mill and D. L. Wilhelm), 174
- Secretion (Salivary), of both Parotid Glands in a Sheep : Comparison of the (M. Somers), 400
- Secretions (Hormonal) : Activation of—Precorticotropin (P. R. Dasgupta and Prof. F. G. Young), 32 ; A Crustacean Chromactivator (Dr. D. B. Carlisle), 33
- Sectioning (Ultra-thin) : Nuclear Changes occurring during Bud-formation in *Saccharomyces cerevisiae* as revealed by (T. Hashimoto, S. F. Conti and Prof. H. B. Naylor), 454
- Sections (Thin Plane Parallel), of Mineralized Specimens : A New Method for obtaining (Dr. O. Hallén and Dr. H. Röckert), 1225
- Secular Variation in the Direction of Geomagnetism as the Standard Scale for Geomagnetochronology in Japan (Naotune Watanabe), 383
- Sedimentation : Fifth International Congress of (Prof. J. H. Taylor), 91
- Sedimentation Behaviour in Flocculated Cane Sugar Juice : Zeta Potential and (Dr. M. C. Bennett), 1439
- Sedimentation and Orogeny (Prof. J. H. Taylor), 91
- Sedimentology, International Association of: Election of Dr. F. P. Shepard as president, 91
- Sediments (Atlantic Equatorial Deep-Sea) : Rate of Accumulation of Nickel in, and its Bearing on Possible Extra-Terrestrial Sources (Karl K. Turekian), 1728
- Sedlatschek, K., and others : Study of Metals and Alloys above 1,200°C. (Sintered High-melting Tungsten Alloys), 1418
- Sedman, Dr. G. : Awarded a Student Prize in Psychiatry by the Mental Health Research Fund, 158
- Seed (Herbage) : International Certification of (Organization for European Economic Co-operation), 157
- Seed Germination in the West African Oil Palm, *Elaeis guineensis* (Jacq.) : Factors controlling (G. Hussey), 699
- Seed Production : Herbage (National Institute of Agricultural Botany Conference on), 501
- Seed Transmission of Plant Virus Diseases (N. C. Crowley), 634
- Seedling Growth of Cowpea (*Vigna unguiculata*) : Effect of Fumigation and Moisture Content on the (G. H. Caswell and Dr. H. T. Clifford), 540
- Seedlings (Etiolated Sunflower) : Incorporation of Carbon-14 Dioxide into Sugars by Darkened Cotyledons from (Dr. Clive Bradbeer), 1429
- Seedlings (Oat) : Growth-promoting Effect of Ethanol on (Dr. C. L. Mer), 1812
- Seedlings (Oil Palm) : Symptoms of Calcium and Phosphorus Deficiency in (R. A. Bull), 1749
- Seedlings (Wheat) : A Colorimetric Test for Gibberellic Acid and Evidence from a Dwarf Pea Assay for the Occurrence of a Gibberellin-like Substance in (G. M. Simpson), 528
  - Effects of Rust Infection on the Carbohydrate Metabolism of (A. C. Jain and Prof. R. -L. Pelletier), 882
  - Relationships between the Chloride and Iodide Uptake of (Z. Böszörményi and Edith Cseh), 1811
- Seeds of *Viburnum trilobum* : Dormancy in the (R. H. Knowles and S. Zalik), 1415
- Seeds (Lettuce) : A Reduced Diphosphopyridine Nucleotide Oxidase in (Dr. A. M. Mayer), 317
- Seeliger, Dr. H. : Human and Animal Ecology (Serological Tests for Identification and Classification of Fungi), 1649
- Seevers, Prof. Charles H. : A Monograph on the Termitophilius Staphylinidae (Coleoptera), *review* by E. B. Britton, 144
- Segal, John R. : An Anodal Threshold Phenomenon in the Squid Giant Axon, 1370
- Segal, Dr. S. I. : Comparative Endocrinology (Endocrine Basis of Reproductive Adaptations), 775
- Segi, Prof. T. : At the Third International Seaweed Symposium (*Monostroma* Culture in Japan), 1780
- Segregation (Atypical), of Haptoglobin Types in Man (Dr. H. Harris, Miss E. B. Robson and Dr. M. Siniscalco), 1324
- Seiflow, G. H. F., and others : Density of Acetylene, 596
- Seismological Commission : The European (E. Tillotson), 26
  - Election of Officers, 27
- Sekiguchi, N., and Matsumoto, J. : Construction of a Polar Tube at Tokyo Observatory, 1643
- Sekuzu, Ichiro, and others : Reconstruction of the Reaction Mechanism of Cytochrome Oxidase, 1306
- Select Committee on Estimates : Fifth Report from the, together with part of the Minutes of the Evidence taken before Sub-Committee B and Appendices, Session 1957-58—The Department of Scientific and Industrial Research, 1111, 1181
  - Sixth Report, Session 1957-58, Treasury Control and Expenditure, 1467
- Selection of Cell Lines in Tissue Culture by the Use of Cytotoxic Antisera (Dr. V. Defendi, A. A. Kamrin and Dr. J. S. Colter), 1246
- Selection (Developmental) : A Hypothesis of (J. Langridge), 20
- Selection (Natural) : Evolution by (Charles Darwin and Alfred Russel Wallace), *review* by Dr. G. S. Carter, 1112
- Selective Herbicidal Activity : New Plant Growth-Substances with (Dr. Mary B. Pybus, Prof. R. L. Wain and Dr. F. Wightman), 1094
- Selective Toxicity : Chemical Aspects of (Prof. Adrien Albert), 421
- Selectivity (Solute), of Osmotic Membranes : A Method for Improving the (M. F. Vaughan), 1730
- Selenium (Grey) : Thermo-electric Observations on (J. I. Carasso and R. W. Pittman), 1011
- Selenium and Liver Necrosis in the Hyperthyroid Rat (Dr. K. Aterman), 1514
- Self-depression of the Subcutaneous Absorption of Drugs due to Release of Histamine (Jens Schou), 324
- Sellers, R. F., and others : Infectivity of Ribonucleic Acid from Mice and Tissue Culture infected with the Virus of Foot-and-Mouth Disease, 535
- Semal, J. : An Aphid-transmitted Tobacco Ring-Spot-like Virus isolated from *Begonia tuberhybrida*, 1688
- Semen (Dog) : Biochemical Characteristics of (D. J. Bartlett), 1605
- Semen (Yellow) : Riboflavin in (Dr. I. G. White and G. J. Lincoln), 667
- Semi-conductor Devices : The Use of (British Radio Valve Manufacturers' Association), 770
- Semiconductor Research (Dr. P. T. Landsberg), 1067
- Semiconductor Thermoelements and Thermoelectric Cooling (Prof. A. F, Ioffe), translated from the Russian, *review* by Prof. G. F. J. Garlick, 72
- Semiconductors : International Conference on (Dr. P. T. Landsberg), 1067
- Seminal Acid Phosphatase : Stable Test-Papers for (S. S. Kind), 1372
- Seminar on Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy (University College, London), 762
- Seminars : Courses and (National Institute of Industrial Psychology), 918
- Semi-Permanent Low-Level Ocean Duct : Influence of the, on Centimetre Wave Scatter Propagation beyond the Horizon (F. A. Kitchen, W. R. R. Joy and E. G. Richards), 385
- Semipermeability of the Nuclear Membrane (Clifford V. Harding and Carl Feldherr), 676
- Sen, Prof. P. K., and Mitra, G. N. : Inheritance of Photoperiodic Reaction in Rice, 119
- Sensenbrenner, M., and others : Action of Beta Radiation on the *Proteus P18* Bacillus, 674
- Sensitive Chemical Dosimeter : A Highly, for Ionizing Radiation (W. A. Armstrong and Dr. D. W. Grant), 747
- Sensitive Micro-Spectrophotometric Method for Succinate Analysis (Dr. M. B. Waitzman and E. Q. Adams), 129
- Sensitivity of Enzymes in the Dry State to Radiation : Changes in the (Dr. Reinier Braams, Franklin Hutchinson and Dilip Ray), 1506
- Sensitivity of a Thermal Conductivity Detector in Gas Chromatography : Effect of the Carrier Gas on the (Dr. N. H. Ray), 1663
- Sensitivity (Taste), in Man : Influence of Water Deprivation on (Roy Yensen), 677
- Separated Rat Parabionts : Tolerance of Skin Homografts related to Fatal Disease in (Dr. B. Nakič and V. Silobrčić), 264
- Separating Glomeruli from Rabbit Kidney : A Rapid Method for (W. F. Cook and Sir George Pickering), 1103
- Separation of Anthocyanin and Leucoanthocyanin in Flowers of *Camellia japonica* (Toru Endo), 801
- Separation of Chalcones, Flavanones and Flavonols by Chromatography with Polyamide (Dr. Richard Neu), 660
- Separation of the Condensing Enzyme of *Aspergillus niger* from Acetyl Coenzyme *A* Deacylase and Citridesmolase and the Effect of Magnesium Ion on the Purified Fraction (Prof. C. V. Ramakrishnan), 1601
- Separation of Glucose-1-Phosphate and Glucose-6-Phosphate by Paper Chromatography (F. E. G. Harrap), 876
- Separation of Human Leucocytes from Blood (Dr. Peter Wildy and Dr. Mark Ridley), 1801
- Separation of Light and Dark Phases in the Photosynthesis of Isolated Chloroplasts (Dr. Achim V. Trebst, Harry Y. Tsujimoto and Prof. Daniel I. Arnon), 351
- Separation of Mixtures of Œstrogens in Urinary Extracts using Gradient Elution Chromatography (Dr. Stanley Kushinsky, James A. Demetriou, Wilmonte Nasutavicus and Jane Wu), 874

Separation of some Tobacco Alkaloids by Gas Chromatography (Dr. Louis D. Quin), 865
Separation (Quantitative), of Nitrogenous Organic Bases using Ammonium Reineckate (Dr. Lee Kum-Tatt), 655
Separation and Characterization of Two Coeruloplasmins from Human Serum (Dr. Lars Broman), 1655
Separation and Determination of the Dissociation Constants of Chelidonine and Protopine by Paper Chromatography (Dr. Wanda Debska), 666
Separation and Determination of Millimicrogram Amounts of Cobalt and Microgram Amounts of Copper in Biological Material (Aleksandra Smoczkiewiczowa and Witold Mizgalski), 53
Separation and Isolation of Fractions of Rabbit Gamma-Globulin containing the Antibody and Antigenic Combining Sites (Dr. R. R. Porter), 670
Sequeira, Dr. Luis, and others : Role of Root Injury in Panama Disease Infections, 309
Sequences and Series (J. A. Green), *review* by Prof. T. A. A. Broadbent, 827
Sera (Heterologous) : Cytotoxicity of, to Normal and Leukaemic Human Lymphocytes (Robert Schrek), 724
Series : Sequences and (J. A. Green), *review* by Prof. T. A. A. Broadbent, 827
Series (A New), of Leishmanicides (Dr. E. Beveridge, Dr. L. G. Goodwin and L. P. Walls), 316
Serine : Interaction of Formaldehyde and Tetrahydrofolic Acid and its relation to the Enzymic Synthesis of (Dr. R. L. Blakley), 1719
Serine labelled with Carbon-14 : *In vitro* Incorporation of, into Mitochondrial Phospholipids (Dr. G. Hübscher, Dr. R. R. Dils and Dr. W. F. R. Pover), 1806
Serine (Phosphatidyl), and Blood Coagulation (Dr. P. Barkhan, Dr. M. J. Silver, Dr. P. B. da Costa and Dr. L. M. Tocantins), 1031
Serine Residue (Reactive), in Enzymes inhibited by Organo-Phosphorus Compounds : Nature of the, (Mechanism of Esterase Action), (G. R. Porter, Prof. H. N. Rydon and J. A. Schofield), 927
Serological Complexes of Ovalbumin and Haemoglobin : Dissociation of, using Aqueous Carbon Dioxide (Dr. B. T. Tozer, K. A. Cammack and Dr. H. Smith), 668, *erratum*, 842
Serological Detection of Fermentation Wastes (Robert L. Bunch and Edwin F. Barth, jun.), 1680
Serological Reactivity : Relationship of, to Antibody Molecular Weight (Harry S. Goodman), 1100
Serological Test for Determination of Parentage in Cattle (Dr. J. Rapacz and Dr. S. Dubiski), 1176
Serology of Cucumber Mosaic Virus : Purification and (Dr. J. A. Tomlinson, Dr. R. J. Shepherd and Prof. J. C. Walker), 1616
Serology (Blood-Group) : Use of Lyophilized Formol-treated Red Cells in (E. R. Gold, W. J. Lockyer and Dr. Geoffrey H. Tovey), 951
Serr, D. M., and others : Representation of the X Chromosome in Intermitotic Nuclei in Man, 124
Serratia marcescens (*Chromobacterium prodigiosum*) : A Water-soluble Diffusible Pigment produced by a Strain of (Prof. R. P. Williams, W. W. Taylor, D. Hawkins, Jr., and I. L. Roth), 1028
Serum : Chromatographic Detection of Minute Quantities of Thyroxine in (Dr. Viktor Stolc), 52
Serum of Rabbit Foetuses : Thyroxine-binding Protein in the (Carlos Osorio and N. B. Myant), 866
Serum of the Rat : Vitamin B_{12} Activity in the (Dr. G. H. Spray and Dr. K. B. Taylor), 1309
Serum (Human) : Difference between Lipoprotein Lipase and Post-Heparin Esterase in (S. Novák and Dr. J. Skořepa), 117
    Separation and Characterization of Two Coeruloplasmins from (Dr. Lars Broman), 1655
Serum (Human Blood) : Calcium and Magnesium Content of Normal (Dr. G. Hunter), 263
Serum (Rat) : Effect of the Borate Ion in Buffers on the Electrophoresis of (C. F. Garbers and F. J. Joubert), 530
    Transport of Vitamin A Ester in (C. F. Garbers), 1018
Serum Cholesterol in Obese Mice : Levels of (Claire Zomzely and Jean Mayer), 1738
Serum Lipoproteins and Blood Coagulation (R. B. Goldrick and H. M. Whyte), 1743
Serum Protein Variations in Horses (Dr. G. C. Ashton), 1029
Serventy, D. L. : The Tasmanian Mutton-Bird, *Puffinus tenuirostris*, 1070
Service of Pharmacy and Medicine : Modern Analytical Chemistry in the (Dr. G. E. Foster), 995
Service Medals of the Textile Institute awarded to J. Tankard and Dr. F. O. Howitt, 1279
Servomechanism (Biological) : Pupil Unrest, an Example of Noise in a (Lawrence Stark, Fergus W. Campbell and John Atwood), 857
Seshachar, Prof. B. R. : The Macronucleus of *Spirostomum*, 1614
Sesquioxide (Chromium) : Paper as a Carrier of (J. L. Corbett J. F. D., Greenhalgh and A. P. MacDonald), 1014
Set Gypsum Plaster : Effect of Temperature on the Structure of (M. J. Ridge), 1224
Set Theory (Felix Hausdorff), translated from the German by John R. Aumann *et al.*, *review* by Dr. R. G. Cooke, 1046
Seta Elongation in *Pellia epiphylla* : An Age Effect on (W. Mary Crombie and Jean A. Paton), 541
Setälä, Prof. K. : Progress in Cancer Research (Cancer-promoting Activities of 'Tween 60'), 365
    Invasiveness and Surface Properties of Cancer Cells (Cellular Transformation which gives rise to the altered Properties of Tumour Cells), 1420
Seth, Dr. George : Appointed to the newly created chair of psychology at Queen's University, Belfast, 158, 429 ; work of, 429
Setting Behaviour of *Spirorbis* : Use of Artificially Liberated Larvae in Experiments on the (P. H. D. H. de Silva), 1751
Seuntjens, Dr. H., and Braams, Dr. W. G. : An Electron-Microscopic Study of the Ciliature of the Trochophore Larva, 1611
Sewell, Dr. G. W. F. (Pugh, Dr. G. J. F., and) : Ecology of Soil Fungi, 1559
Sewell, P. H. (edited by, for the Library Association) : Five Years' Work in Librarianship, 1951-1955, *review* by R. Brightman, 1590
Sex Ratio in the Golden Hamster before Uterine Implantation (Prof. P. E. Lindahl and G. Sundell), 1392
Sexual Maturity in the Fowl : Artificial Light and (T. R. Morris and S. Fox), 1522
Sexual Reproduction : Cytoplasm in (Prof. Kenneth Mather and Dr. John L. Jinks), 1188
Sexuality in Plants : Pigmentation and (Dr. J. N. Hartshorne), 1382
Sexually Mature Individuals of *Xenopus laevis* from the Transplantation of Single Somatic Nuclei (J. B. Gurdon, T. R. Elsdale and Dr. M. Fischberg), 64
Shackleton : The Tide at (J. G. D. Pratt), 1394
Shade (Cocoa), and Manurial Experiment in Ghana (R. K. Cunningham and J. Lamb), 119
Shake Flasks (Baffled): Production of High-Titre Diphtheria Toxin in (Dr. D. C. Edwards), 190
Shape of Spot and Rate of Sorption in Paper Chromatography (W. G. Kauman and Thor A. Bak), 743
Shape Changes of Polyelectrolytes : Size and—Conversion of Chemical into Mechanical Energy (Seminar at University College, London, on), 762
Sharp, Prof. R. P., and Epstein, Prof. S. : Physics of Ice Movement (Ice Movement on Glaciers), 1561
Sharpe, Dr. H. Subak : Effect of Temperature on the Multiplication of Foot-and-Mouth Disease Virus in Suspensions of Kidney Cells of the Pig, 1803
Shaw, B. L., and others : Ions of the Transition Elements (Measurements using Infra-red Spectra of the N—H Vibration Frequencies in various Amine Complexes), 1350
Shaw, D. C., and others : Chemistry of Plant Products (Triterpenoid Constituents of the Myrtaceae), 300
Shaw, Dr. J. : Sodium Uptake by the Crayfish, 1105
    Salt and Water Balance in Animal Life, 1207
Shaw, K. N. F., and Trevarthen, J. : Effect of Atmospheric Contaminants on Paper Chromatography of Urinary Indole and Phenol Acids, 664
    Exogenous Sources of Urinary Phenol and Indole Acids, 797
Shaw, T. I., and Cooper, Dr. L. H. N. : Oxidized Iodine in Sea Water, 251
Shaw, T. I., and others : Bathyscaphoid Squid, 1810
Shay, H. : Progress in Cancer Research (Hormones), 364
Shea, Richard J. (edited by) : Transistor Circuit Engineering, *review* by D. D. Jones, 756
Shear, Dr. J. : Antarctic Research (Meteorology), 287
Shearer, H. M. M., and others : A Revision of the Azulene Structure, 177
Sheehan, J. J. : Awarded the Bronze Medal of the Worshipful Company of Founders, 1777
Sheep : Freemartins in (N. W. Moore and L. E. A. Rowson), 1754
    Further β-Globulin Phenotypes in (Dr. G. C. Ashton), 1101
    Haemoglobin and Potassium Blood Types in some Non-British Breeds of, and in certain Rare British Breeds (J. V. Evans, Dr. H. Harris and Prof. F. L. Warren), 320
    Comparison of the Salivary Secretion of both Parotid Glands in a (M. Somers), 400
    Toxicity of Urea to (J. B. Coombe and Dr. D. E. Tribe), 116
Sheep (Primitive Domestic), and in Parchment : Follicle Arrangement in Skin from Wild Sheep, (Dr. M. L. Ryder), 781
Sheep (Wild), Primitive Domestic Sheep and in Parchment : Follicle Arrangement in Skin from (Dr. M. L. Ryder), 781
Sheep fed Hay Rich in Silica and Effect of Dietary Salt Additions : Volume and Acidity of Urine of (S. A. Forman, F. Sauer, D. H. Laughland and W. M. Davidson), 1385
Sheep and Goats (Cattle,) : Beta-Globulin Polymorphism in (Dr. G. C. Ashton and E. I. McDougall), 945
Sheep Haemoglobins (Dr. T. H. J. Huisman, G. van Vliet and T. Sebens), 171
Sheep Ked, *Melophagus ovinus* (L.): Purine Excretion by the (W. A. Nelson), 115
Sheep Rumen : Maintenance of Oligotrich Protozoa from the, *in vitro* (G. S. Coleman), 1104
Shell Group of Oil Companies : Gift of £500 to the University of Leeds, for postgraduate research in chemical engineering, 1279
Shell Oil (Cashew Nut) : Surface-active Characteristics of Sodium Anacardate isolated from (Arun K. Biswas and Anil Bandhu Roy), 1299
Shell Theory of the Nucleus (Prof. Eugene Feenberg), second printing, *review* by Dr. A. M. Lane, 756
Shepard, Dr. F. P. : Elected president of the International Association of Sedimentology, 91
Shepherd, Dr. C. J., and others : Incorporation of Amino-Acids by Disrupted Staphylococcal Cells, 592
Shepherd, Dr. L. R. : Space Medicine, 1645
Shepherd, Dr. R. J., and others : Purification and Serology of Cucumber Mosaic Virus, 1616
Sheppard, Prof. P. A. : Elected president for 1958-59 of the Royal Meterorological Society, 88
Sheppard, P. M. : Natural Selection and Heredity, *review* by Prof. H. Graham Cannon, 490
Sherlock, Hon. P. M. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (The Establishment of New Universities), 1285
Shewan, Dr. J. M., and others : A National Type Culture Collection of Marine Bacteria, 1423
Shibasaki, K., and others : Preparation of Kojibiose, 1303
Shifts of Arc Lines at various Pressures in Magnetic Fields (Rev. R. A. Miller), 1295
Shigematsu, Hajime : Synthesis of Blood Protein by the Fat Body in the Silkworm, *Bombyx mori* L., 880
Shilov, E., and Weinstein, F. : Kinetic Isotope Effect in the Iodination of Aromatic Amines, 1300
Shimura, Kensuke (Soejima, Masami, and) : Pancrinogen, a New Zymogen of Proteolytic Enzyme from Beef Pancreas, 49
Shinn, D. H. : Health Hazards from Powerful Radio Transmissions, 1792
Shinnie, Prof. P. L. : Museums in the Commonwealth and Overseas with special reference to the Training of Curators, 503
Shipek, C. J. (Menard, Prof. H. W., and): Surface Concentrations of Manganese Nodules, 1156
Ships in Rough Water (J. L. Kent), *review*, 1696
Shliakhov, Dr. V. I. : Antarctic Research (Radiation), 287
Shock Waves (Hypersonic) : Radio Observations of (Dr. J. S. Hey, J. T. Pinson and P. G. Smith), 1220
Shoen, L. J. : Free Radical Stabilization, 1498
Shoot Apices : Application of Autoradiographic Techniques to Studies of (Carl R. Partanen and Ernest M. Gifford, jun.), 1747
Shoot Growth in Japanese Larch (*Larix leptolepis*, Murray) : Effect of Gravity on Flowering and, (Gravimorphism in Trees), (K. A. Longman and Dr. P. E. Wareing), 380

Shoppee, Dr. C. W., and others (edited by) : Current Trends in Heterocyclic Chemistry—Proceedings of a Symposium held at the John Curtin School of Medical Research, Australian National University, Canberra, 1957, under the auspices of the Chemical Society, *review* by Dr. F. G. Mann, 1762
Shorland, Dr. F. B. (Grimmett, R. E. R., and) : Occurrence of *α*-Picoline in Plants, 1734
Shorter, D. E. L., and Manson, W. I. : Analysis and Measurement of Programme Levels, Part 1, Investigation of Extreme Values of Sound Pressure, 1490
Shoumsky, Prof. P. A. : Antarctic Research (Special Investigations in Glaciology), 286 ; (Future Research in the Antarctic), 289
Showers (Air), of Size Greater than 10^5 Particles, 1, Core Location and Shower Size Determination (M. H. Brennan, Dr. D. D. Millar and C. S. Wallace), 905 ; 2, Cerenkov Radiation accompanying the Showers (M. H. Brennan, J. Malos, Dr. D. D. Millar and C. S. Wallace), 973 ; 3, Comparison between the Response of Geiger Counters and Scintillation Counters (M. H. Brennan, Dr. D. D. Millar, M. H. Rathgeber and C. S. Wallace), 1053 ; 4, The Distribution of Nuclear-active Particles and of Mu-Mesons (J. A. Lehane, Dr. D. D. Millar and M. H. Rathgeber), 1699
Showers (Cosmic Ray Air) : Dependence of the Nucleonic Component of, on Radius (C. S. Wallace, Dr. M. M. Winn and Dr. K. W. Ogilvie), 1653
Shrimp from Tunisia : A Thermophilous, *review* by Dr. Isabella Gordon, 1186
Shrubs : Trees and, *review* by J. Robert Sealy, 684
Shrubs (Flowering Trees and) : The Book of (Stanley B. Whitehead), *review* by J. Robert Sealy, 684
Shukla, J. P., and Prabhu, K. A. : Effect of Ethylenediamine Tetraacetic Acid on the Enzyme System of Yeast Cells, 1316
Shulgin, A. T., and Baker, A. W.: Determination of Hammett Sigma Constants by Intramolecular Hydrogen Bonding, 1299
Shumskiy, Prof. P. A. : Physics of Ice Movement (Recrystallization Structures of Ice), 1561
Shuster, Dr. Louis, and others : Significance of Induced *in vivo* Synthesis of Diphosphopyridine Nucleotide, 512
Shutter : Kerr Cell Electro-Optical (Avco Manufacturing Corporation), 362
Siberia (Eastern) : The Neolithic Age in (Henry N. Michael), 1061
Siboga Expedition : The Polyzoa of the (the late Sir Sidney F. Harmer), Part 4, Cheilostomata Ascophora, II (Ascophora, except Reteporidae, with additions to Part 2, Anasca), *review*, 753
Siddiqi, M. A. (Griffiths, E., and) : Microbial Antagonism of *Fusarium culmorum*, 956
Side-chains in a Phage Chromosome : A Genetic Test for (Myron Levine and Roy Curtiss, III), 126
Sidhanta, Prof. N. K. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy?), 1284
Sie, Dr. Hsien-Gieh, and Fishman, Prof. W. H. : Liver Glucosyl Oligosaccharides and Glycogen—Effects of Starvation, Glucose Feeding and Insulin, 240
Siegbahn, Prof. K. M. B. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Siemens Edison Swan Journal, No. 1, 1278
Sierra, G., and Veringa, H. A. : Effect of Oxy-chlororaphin on the Growth *in vitro* of *Streptomyces* Species and some Pathogenic Fungi, 265
Sierra Leone : The Saw-Fish of (J. C. D. Watts), 961
Sieves (Molecular), in Gas Chromatography for the Determination of the Normal Paraffins in Petroleum Fractions : Use of (B. T. Whitham), 391
Siewing, Dr. Rolf : Anatomie und Histologie von *Thermosbaena mirabilis*, *review* by Dr. Isabella Gordon, 1186
Sigel, Prof. M. Michael, and others : Tubule Formation in Rat Brains by Monkey Kidney Cells previously grown *in vitro*, 1034
σ-Constants (Hammett) : Determination of, by Intramolecular Hydrogen Bonding (A. T. Shulgin and A. W. Baker), 1299
Signal (Light), occurring after the Threshold Stimulus : Lowering of an Auditory Threshold produced by a (C. I. Howarth and M. Treisman), 1093
Signals from Earth Satellites : Investigation of the Ionosphere using (Dr. E. Woyk) (E. Chvojková), 1362
Signals (Earth Satellite) : Faraday Fading of (Dr. Fred B. Daniels and Dr. Siegfried J. Bauer), 599
Signals (Sound) : A Description of an Optical Instrument for Monitoring (E. R. Wigan), (Analysis and Measurement of Programme Levels, Part 2), 1490
Signals (Ultra High-Frequency), reflected from the Moon : Comparison of Measured and Computed Values of the Rapid Fading-Rate of (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
Signals Research and Development Establishment : Symposium on Batteries, 842
Significance for Geophysics and Radio Communications : The Ionosphere—its (Dr. Karl Rawer), translated from the German by Ludwig Katz, *review* by T. W. Bennington, 1116
Significance of Induced *in vivo* Synthesis of Diphosphopyridine Nucleotide (Dr. Louis Shuster, Thomas A. Langan, jun., Prof. Nathan O. Kaplan and Prof. Abraham Goldin), 512
Significance of Leaf Area in Pasture Growth (C. M. Donald and J. N. Black), 707
Significance of a Physiological Anticoagulating System : Existence and (Prof. B. A. Kudriashov and P. D. Ulytina), 397
Significance of Urinary Vanillic Acid (P. Smith), 1741
Sijpesteijn, A. Kaars, and Janssen, M. J. : Fungitoxic Action of 8-Hydroxyquinoline, Pyridine-N-oxide-2-thiol and Sodium Dialkyldithiocarbamates, and their Copper Complexes, 1313
Sikkim Himalayas : Common Medicinal Plants of Darjeeling and the (Dr. K. Biswas), *review* by N. L. Bor, 76
Sikorski, Dr. J., and Simpson, W. S. : Electron Microscope Studies of the Chemical Reactivity in Keratin Cuticle, 1235
Silberman, H. J., and others : Detection of Haemoglobin, Haemoglobin–Haptoglobin Complexes and other Substances with Peroxidase Activity after Zone Electrophoresis, 1373
Silene maritima and *S. vulgaris* : The Bladder Campions (E. M. Marsden-Jones and Dr. W. B. Turrill), *review* by Prof. T. G. Tutin, 970
Silica : Volume and Acidity of Urine of Sheep fed Hay Rich in, and Effect of Dietary Salt Additions (S. A. Forman, F. Sauer, D. H. Laughland and W. M. Davidson), 1385
Silica Glass : Entry of Water into (A. J. Moulson and J. P. Roberts), 200
Silicification of Branched Cells in the Leaves of *Nardus stricta* L. (D. Wynn Parry and Frank Smithson), 1460
Silk : Utilization of the Carboxyl Group of Glycine for the Synthesis of the Amino-Acids of, by *Bombyx mori* (Dr. S. Bricteux-Grégoire, W. G. Verly and Prof. M. Florkin), 1515
Silkworm, *Bombyx mori* L. : Effect of Larval Brain on the Imaginal Differentiation in the (Masatoshi Kobayashi), 110
  Synthesis of Blood Protein by the Fat Body in the (Hajime Shigematsu), 880
Silkworm Larvae (*Bombyx mori*) : Substances in Mulberry Leaves which attract (Tadao Watanabe), 325
Sillitto, R. M. : Awarded a grant of £1,000 from the Paul Instrument Fund, for the development of a thirty-channel pulse-height analyser, using transistors in place of thermionic valves, 1643
Silobrčić, V. (Nakič, Dr. B., and) : Tolerance of Skin Homografts related to Fatal Disease in Separated Rat Parabionts, 264
Silsbury, J. H. : Temperature and Germination in *Kennedya* Vent., 954
Silva, Gabriel M., and others : Glucose Catabolism in the American Cockroach, 102
Silver, Dr. M. J., and others : Phosphatidyl Serine and Blood Coagulation, 1031
Silver Jubilee of the Agricultural Meteorology Division of the India Meteorology Department : Special issue of the *Indian Journal of Meteorology and Geophysics* in honour of the, 360
Silver Medal of the Combustion Institute, Pittsburgh, awarded to Prof. Seiichiro Kumagai and Hiroshi Isoda, 771
Silver Medal of the V. von Heidenstams Foundation in Sweden awarded to Miss I. Phyllis Barclay-Smith, 229
Silver–Silver Chloride Electrode in Formamide : Standard Potential at 25°C. of the (Dr. M. Mandel and P. Decroly), 794
Silverman, Dr. : Modern Educational Treatment of Deafness, 920
Sim, G. A., and others : A Revision of the Azulene Structure, 177
Simey, Prof. T. S. : Techniques in Sociology, *review*, 1256
Simmonds, D. H. (Rogers, G. E., and) : Content of Citrulline and other Amino-Acids in a Protein of Hair Follicles, 186
Simon Memorial Prize of the Low Temperature Group of the Physical Society, 1644
Simonart, Prof. P. : Ecology of Soil Fungi, 1559
Simple Autoradiographic Method for Distinguishing Insects labelled with Phosphorus-32 and Sulphur-35 (Dr. M. T. Gillies), 1683
Simple Case (An Apparently), of Population Control (M. H. Williamson), 1108
Simple Device for Observing the Polarization of Light from the Sky (Dr. Ulf Halldén), 333
Simple Method for making Starch-gel Electrophoretic Strips Transparent (S. D. Vesselinovitch), 665
Simple Microelectrode for Recording from the Central Nervous System (J. D. Green), 962
Simple Technique for the Calibration of the Wave-length Scale of Spectrophotometers (N. V. Parthasarathy and Dr. Indra Sanghi), 44
Simple Technique for Inoculating Pathogenic Bacteria on Susceptible Plant Leaves (M. A. Nour and J. J. Nour), 96
Simple, Rapid Method for Circular Paper Chromatography (Dr. A. J. Philippu), 1159
Simple and Rapid Method for the Biological Assay of Glucocorticoids (B. P. Block and P. F. D'Arcy), 181
Simpler Societies : Social Change in, *review* by Prof. Raymond Firth, 280
Simpson, Dr. C. J. S. M. : Awarded a Research Fellowship in chemistry for 1958-59 by the Department of Scientific and Industrial Research, 1063
Simpson, G. M. : A Colorimetric Test for Gibberellic Acid and Evidence from a Dwarf Pea Assay for the Occurrence of a Gibberellin-like Substance in Wheat Seedlings, 528
Simpson, W. S. (Sikorski, Dr. J., and) : Electron Microscope Studies of the Chemical Reactivity in Keratin Cuticle, 1235
Simulated Field Deposits of Gamma-BHC and Dieldrin : Effect of, on Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles (G. Davidson and D. G. Pollard), 739
Sinclair, Dr. H. M. : Chemical Pathology of the Nervous System (Metabolic Disorders of Nutritional Origin), 1646
Sinclair, Lord : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (The Establishment of New Universities), 1285
Singer, Charles, and others (edited by) : A History of Technology, Vol. 3, From the Renaissance to the Industrial Revolution c. 1500–c. 1750, *review* by K. R. Gilbert, 3
Singer, Dr. Ronald, and Hooijer, Dick A. : A Stegolophodon from South Africa, 101
Single Cells : Antibody Production by (Dr. R. G. White), 1383
Single Crystals (Vanadium) : Extra Streaks in the X-Ray Diffraction Pattern of (E. Sándor and Dr. W. A. Wooster), 1435
Single Fibre in Mammalian Visual System : Synapse Discharge by (Prof. P. O. Bishop, Dr. W. Burke and Dr. R. Davis), 728
Single Nerve Cells (Regenerating) : Incorporation of Orotic Acid-^{14}C and Lysine-^{14}C in (S.-O. Brattgard, H. Hydén and J. Sjöstrand), 801
Single Somatic Nuclei : Sexually Mature Individuals of *Xenopus laevis* from the Transplantation of (J. B. Gurdon, T. R. Elsdale and Dr. M. Fischberg), 64
Singleton, Prof. W. Ralph (edited by) : Nuclear Radiation in Food and Agriculture, *review* by Dr. Lorna J. Lilly, 758
Siniscalco, Dr. M., and others : *β*-Globulin Variants in Man, 452
  Atypical Segregation of Haptoglobin Types in Man, 1324
Sintering of 'Active' Ceramic Oxide Powders : Effect of Heat Treatment on the (D. T. Livey and Dr. P. Murray), 1362
Sironval, C. : Day-length and Haematin Compounds in Plants, 1170
Sisefsky, Jan : A Method for Determination of Particle Penetration Depths in a Filter, 1437
β-Sitosterol : Fate of, in Housefly Larvae (Dr. Ernst D. Bergmann and Zwi H. Levinson), 723
Sivarama Sastry, K., and Sarma, Prof. P. S. : Effect of Copper on Growth and Catalase Levels of *Corcyra cephalonica* St. in Zinc Toxicity, 533

Size Greater than 10^5 Particles : Air Showers of, 1, Core Location and Shower Size Determination (M. H. Brennan, Dr. D. D. Millar and C. S. Wallace), 905 ; 2, Cerenkov Radiation accompanying the Showers (M. H. Brennan, J. Malos, Dr. D. D. Millar and C. S. Wallace), 973 ; 3, Comparison between the Response of Geiger Counters and Scintillation Counters (M. H. Brennan, Dr. D. D. Millar, M. H. Rathgeber and C. S. Wallace), 1053 ; 4, The Distribution of Nuclear-active Particles and of Mu-Mesons (J. A. Lehane, Dr. D. D. Millar and M. H. Rathgeber), 1699
Size (Crystal), in Evaporated Layers of Cadmium Sulphide : Photoconductivity and (J. M. Gilles and H. Van Cakenberghe), 862
Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy (Seminar at University College, London, on), 762
Sizing of Bacteria : Electronic Counting and (Herbert E. Kubitschek), 234
Sjöstrand, J., and others : Incorporation of Orotic Acid-^{14}C and Lysine-^{14}C in Regenerating Single Nerve Cells, 801
Skalka, Dr. M. : Anaemia and Liver Damage in X-irradiated Animals, 1602
Skarzynski, Prof. B., and Ostrowski, W. : Incorporation of Radioactive Sulphur by *Thiobacillus thioparus*, 933
Skeletal Muscle : Striations of (Irvine J. Hunter), 1107
Skeletal Muscle Protein : Development of (Dr. Yoshito Ogawa), 1312
Skeleton (Rat) : The Genesis of the (Donald G. Walker and Zolton T. Wirtschafter), *review* by Prof. H. A. Harris, 419
Skellam, J. G. : Research Methods in Soil Zoology (Methods of Sampling and Analysis), 704
Skellam, J. G. (Worthington, Dr. E. B., and) : Dynamics of Fish Populations, *review*, 686
Skill (Human) : Ageing and—a Report centred on work by the Nuffield Unit for Research into Problems of Ageing (A. T. Welford), *review* by Prof. L. S. Hearnshaw, 826
Skin of the Dehydrated Toad, *Bufa marinus* : Loss of Sodium from the (P. J. Bentley), 1810
Skin from Wild Sheep, Primitive Domestic Sheep and in Parchment : Follicle Arrangement in (Dr. M. L. Ryder), 781
Skin (Precancerous), of the Lizard *Lacerta agilis* : Fluorescent Mast-Cell Reaction in (Prof. A. Stolk), 1177
Skin Homografts : Tolerance of, related to Fatal Disease in Separated Rat Parabionts (Dr. B. Nakič and V. Silobrčić), 264
Skinner, H. C. W. (Alderman, A. R., and) : Formation of Dolomite in Saline Lakes near Kingston, South Australia, 21
Skinner, N. J., and others : Horizontal Drift Measurements in the Ionosphere near the Equator, 1363
Skoda, J., and others : Deoxycytidine in Urine as an Indicator of Changes after Irradiation, 721
Skořepa, Dr. J., and Novák, S. : Difference between Lipoprotein Lipase and Post-Heparin Esterase in Human Serum, 117
Skurski, A., and others : Phagocytosis and the Antigenic Structure of Bacteria, 1243
Sky : A Simple Device for Observing the Polarization of Light from the (Dr. Ulf Halldén), 333
    The Night, in August, 229 ; in September, 565 ; in October, 842 ; in November, 1205 ; in December, 1488
Sky (Night) : Relative Intensities of the Oxygen Lines at 5577 A. and 6300 A. in the (B. P. Sandford), 42
    Spectrum of the (Jean Dufay and Tcheng Mao-Lin), 361
Sky (Twilight) : Presence of 6707 A. Radiation in the (M. Gadsden and K. Salmon), 1598
Slack, G. L. : Nutrition and Teeth (Incidence of Dental Caries in Britain and other Countries), 1705
Slater, Dr. A. E. : Space Medicine (Hazards to Man of the Radiation Belt revealed by the *Explorer* Satellites), 1646
Slen, Dr. S. B. : Effect of Trauma on Wool Growth, 1322
Slijper, Prof. E. J. (Goudappel, J. R., and) : Microscopic Structure of the Lungs of the Bottlenose Whale, 479
Slime (Heavy), and Acid : A New Species of Azotobacter producing (A. B. Roy), 120
Slime Mould : Physarosterol, a New Sterol from a (Dr. C. F. Emanuel), 1234
Slimming Business : This (Prof. John Yudkin), *review* by Prof. Charles H. Gray, 685
Sloane Herbarium—an Annotated List of the *Horti Sicci* composing it, with Biographical Accounts of the Principal Contributors, based on Records compiled by the late James Britten, revised and edited by J. E. Dandy, *review* by Dr. W. B. Turrill, 752
Sloley, R. W. : *Obituary* by R. O. Faulkner, 1128
Slopek, Prof. S., and others : Phagocytosis and the Antigenic Structure of Bacteria, 1243
'Slow-Alpha' Proteins : Lack of, in some Guernsey Cattle (Dr. G. C. Ashton), 193
Small, Prof. J. : Modern Problems in Friction and Lubrication, 980
Small Amounts of Vasopressins and Oxytocins : Paper Chromatography of (Prof. H. Heller and K. Lederis), 1231
Small Angle X-Ray Scattering from Metals (Midwest Research Institute, Kansas City, International Conference on), 634
Small Firms with Big Problems—a Short Account of an Experimental Technical Liaison Service run by the Scottish Council (Development and Industry), (Department of Scientific and Industrial Research), 1139
Small Particles : An Apparatus for Microelectrophoresis of (Dr. A. D. Bangham, R. Flemans, Dr. Dorothy H. Heard and G. V. F. Seaman), 642
    Light Scattering by (Dr. H. C. van de Hulst), *review* by James Paton, 1470
    The Scattering of Light by, *review* by James Paton, 1470
Smallman, Dr. R. E. : Appointed lecturer in physical metallurgy at the University of Birmingham, 158
Smellie, Dr. R. M. S., and others : Synthesis of Deoxyribonucleic Acid in Extracts of Mammalian Cells, 589
Smirk, Sir Horace, and Hall, William H. : Inherited Hypertension in Rats, 727
Smith, Dr. A. C. : Appointed director of the Museum of Natural History of the United States National Museum, 916 ; work of, 916
Smith, A. H. V. (Fenton, G. W., and) : Science in the Use of Coal (Carbonization of Coal), 25
Smith, Dr. Audrey U. : Life at Low Temperatures, 911
Smith, Dr. Audrey U. (Parkes, Dr. A. S., and) : Space Medicine (Transport in Space of Life in the Dried or Frozen State), 1646
Smith, Dr. C. J. : Intermediate Physics, fourth edition, *review* by G. R. Noakes, 622
Smith, D. B., and others : Tracing the Movement of Pebbles marked with the Radioactive Isotope Barium-140—Lanthanum-140, 1347
Smith, Dr. D. C. : Fracture Markings in Polymethyl Methacrylate, 132
Smith, D. Taylor : Geophysics and the IGY, *review*, 1187
Smith, Sir Harold : Fuel and Power in British Industry (Gas), 1714
Smith, H. : Biochemical Response to Physical Injury (Biochemical Response to Bacterial Injury), 1495
Smith, Dr. H., and others : Dissociation of Serological Complexes of Ovalbumin and Haemoglobin using Aqueous Carbon Dioxide, 668, *erratum*, 842
Smith (H. G.) Memorial Medal of the Royal Australian Chemical Institute awarded to Dr. K. L. Sutherland, 89
Smith, Dr. Ivor : Chromatographic Techniques, *review* by Dr. R. Consden, 215
Smith, J. Roland (edited by) : Guide to U.K.A.E.A. Documents, 88
Smith, Dr. J. W. : Steric Effects in Conjugated Systems (Dipole Moment Evidence regarding Steric Effects in Aromatic Molecules), 570
Smith, Dr. Kenneth M., and Lauffer, Max A. (edited by) : Advances in Virus Research, Vol. 4, *review* by Dr. M. R. J. Salton, 1576
Smith, L. B. : The Bromeliaceae of Colombia, 295
Smith, Dr. Malcolm A. : *Obituary* by A. G. C. Grandison, 697
Smith, Nathan R., and others : Bergey's Manual of Determinative Bacteriology, seventh edition, *review* by Dr. S. T. Cowan, 553
Smith, P. : Significance of Urinary Vanillic Acid, 1741
Smith, P., and others : 3-Ethoxy-4-hydroxy-benzoic Acid in Human Urine, 1160
Smith, P. G., and others : Radio Observations of Hypersonic Shock Waves, 1220
Smith, Dr. R. A. : Spectroscopy of Solids, 159
Smith, R. H. : Substances in the Calf Alimentary Tract interfering in the Determination of Polyethylene Glycol, 260
Smith, R. S., and others : Heinz Bodies in Extravasated Erythrocytes, 455
Smith, Dr. S. L. : *Obituary* by Dr. D. G. Sopwith, 1772
Smith Kline and French Research Institute : Appointment of Prof. W. A. Bain as director, 1550
Smith-Rose, Dr. R. L. : Ruminations on Radar, *review*, 415
    Radio Aids to Navigation (Principles of the Determination of Position by the Use of Radio Waves), 978

Smythe, L. E. (de Bruin, H. J., and) : Determination of Traces of Oxygen in Sodium Metal by Infra-Red Spectrophotometry, 387
Snavely, Dr. E. S., and Hackerman, N. : Charge Transfer Processes (Anodic Processes—Analytical and Coulombic Studies on the Anodic Passivation of Iron), 1354
Sneath, Dr. P. H. A. : Awarded a Rockefeller Travelling Fellowship in Medicine for 1958-59, 634
Sneath, Dr. P. H. A. (Andrewes, Dr. C. H., and) : The Species Concept among Viruses, 12
Sneddon, Prof. Ian N. : Elements of Partial Differential Equations, *review* by Prof. T. A. A. Broadbent, 902
Snoad, Brian (McLeish, John, and) : Looking at Chromosomes, *review* by Prof. D. Lewis, 1401
Snyder, Fred, and Cornatzer, Prof. W. E. : Vanadium Inhibition of Phospholipid Synthesis and Sulphydryl Activity in Rat Liver, 462
Snyder, Dr. Laurence H. : Fifty Years of Medical Genetics (Presidential Address to the American Association for the Advancement of Science), 1416
Soaps (Non-ionic and Amphoteric) : Protection of Living Cells against Acid by certain (Dr. P. D'Arcy Hart and Dr. J. E. Lovelock), 304
Sobel, Dr. H. : Awarded a Ciba Foundation Award for 1958 for Research in Ageing, 19
Social Change : Technical Education and, 481
    Technical Education and (Dr. Stephen F. Cotgrove), 481
Social Change in Simpler Societies, *review* by Prof. Raymond Firth, 280
Social Change in the South Pacific—Rarotonga and Aitutaki (Prof. Ernest Beaglehole), *review* by Prof. Raymond Firth, 280
Social Conditions in England and Wales as illustrated by Statistics : A Survey of (Sir Alexander Carr-Saunders, D. Caradog Jones and C. A. Moser), third edition, *review* by Prof. E. Grebenik, 1330
Social Investigation : Survey Methods in (C. A. Moser), *review* by Prof. T. S. Simey, 1256
Social Medicine, *review* by Prof. Thomas McKeown, 619

Social Organization : Productivity and—the Ahmedabad Experiment, Technical Innovation, Work Organization and Management (A. K. Rice), *review* by S. David M. King, 682
Social Science : Laws in, 561
  Natural Science and (Sir Alexander Carr-Saunders), 561
Société de Chimie Biologique : Charles Leopold Meyer Award for 1958 awarded jointly to Dr. François Gros and to Prof. Jean Turchini, 1643
Société Française de Métallurgie : Journées Métallurgiques d'Automne, 990
Société Française de Phoniatrie, and others : International Colloquium on Communication and Language, 1644
Société Mycologique de France and the British Mycological Society : Joint Foray at Reading, 158
Société Préhistorique de l'Ariège : Bulletin No. 12, 768
Societies (Learned) : Tax Concessions on Subscriptions to, 294
Societies (Local) : The Cultural Value of (Lord Boyd-Orr), 586
Societies (Simpler) : Social Change in, *review* by Prof. Raymond Firth, 280
Society : Darwinism and the Study of (Social Sciences Research Centre of the University of Edinburgh Conference on, to mark the centenary of 'The Origin of Species'), 362
Society (Modern) : The Individual and the Organization in (Institute of Personnel Management Conference on), 700, 918
Sociology : Techniques in, *review* by Prof. T. S. Simey, 1256
Soddy Commemoration Plaque in the Chemistry Department of the University of Glasgow unveiled by Sir Alexander Fleck, 631
Soddy Memorial Lecture : Second (Dr. F. M. Brewer), 1203
Soddy Memorial Plaque in the new Soddy Senior Chemistry Laboratory at Eastbourne College unveiled by Dr. F. M. Brewer, 1203
Sodium : Loss of, from the Skin of the Dehydrated Toad, *Bufa marinus* (P. J. Bentley), 1810
Sodium on Isolated Rabbit Auricles : Influence of Hydrocortisone on the Action of (Dr. T. H. Rindani), 1521
Sodium-24 as an Indicator of the Blood Supply of Bone (Dr. P. G. Laing and Dr. Albert B. Ferguson, jun.), 1442
Sodium Anacardate isolated from Cashew Nut Shell Oil : Surface-active Characteristics of (Arun K. Biswas and Anil Bandhu Roy), 1299
Sodium Dialkyldithiocarbamates: Fungitoxic Action of 8-Hydroxyquinoline, Pyridine-N-oxide-2-thiol and, and their Copper Complexes (A. Kaars Sijpesteijn and M. J. Janssen), 1313
Sodium Fluoroacetate as a Protecting Agent against Irradiation (Prof. Z. M. Bacq and Dr. P. Fischer, Dr. A. Herve, and Prof. C. Liébecq and Dr. S. Liébecq-Hutter), 175
Sodium Hyaluronate : Crystalline (Prof. Frederick A. Bettelheim), 1301
Sodium Ions (Potassium and) : Effects of, on the Resting and Action Potentials of the Giant Axon of the Cockroach (T. Yamasaki and T. Narahashi), 1805
Sodium Metal : Determination of Traces of Oxygen in, by Infra-red Spectrophotometry (H. J. de Bruin and L. E. Smythe), 387
Sodium Sulphate (Anhydrous) : Polymorphic Transitions in (R. J. Bird), 1797
Sodium Tetraborate and Boric Acid : Effects of Electron Bombardment upon, in an Electron Microscope (Helena Lopes de Souza Santos), 1297
Sodium Uptake by the Crayfish (J. Shaw), 1105
Sodium-free Medium : Synaptic Transmission in a (Dr. K. Koketsu and S. Nishi), 887
Soejima, Masami, and Shimura, Kensuke : Pancrinogen, a New Zymogen of Proteolytic Enzyme from Beef Pancreas, 49
Sofer, Cyril, and Hutton, Geoffrey : New Ways in Management Training, *review* by T. H. Hawkins, 214
Sohn, Prof. Louis B. (Clark, Grenville, and) : World Peace through World Law, 966
Soil : Aerobic Transformation of Cysteine to Sulphate in (J. R. Freney), 1318
  Autoradiography of Fungi through a Layer of, and in Agar Culture (Dr. Erna Grossbard), 854
  Effects of Plant-Decomposition Products in the (Z. A. Patrick and L. W. Koch), 1717
  A Plate Method for Estimating the Numbers of Phosphate-dissolving and Acid-producing Bacteria in (H. A. Louw and Dr. D. M. Webley), 1317
Soil Clay Minerals, Montmorillonite and Vermiculate : Aluminium Interlayers in (B. L. Sawhney), 1595
Soil Fungi : Ecology of (Symposium on, at the University of Liverpool), 1559
  A Technique for the Investigation of the Competitive Saprophytic Ability of, by the Use of Easily Decomposed Substrates (S. T. Matturi and Dr. H. Stenton), 1248
Soil Fungus Trap (Dr. R. H. Thornton), 1690
Soil Mechanics : Alexandre Collin—a Pioneer in, *review* by K. L. Nash, 552
Soil Mixtures (Clay Mineral–) : Invertase Activity in (István Kiss), 203
Soil Pseudomonads : Oxidative Metabolism of Polycyclic Hydrocarbons by (H. N. Fernley and Prof. W. C. Evans), 373
Soil Sample from Antarctica : Chemistry and Clay Mineralogy of a (L. C. Blakemore and L. D. Swindale), 47
Soil Samples : Continuous-Flow Method for the Study of Microbiological Processes in (Dr. J. Macura and Dr. I. Málek), 1796
Soil Science, International Society of (Soil Zoology Committee) : Colloquium on Research Methods in Soil Zoology, 704
Soil Zoology : Research Methods in (Soil Zoology Committee of the International Society of Soil Science Colloquium on), 704
Soils : Chlorine Deficiency in (Peter G. Ozanne), 1172
  Establishment of *Pythium* in (R. Barton), 1776
Soils (British) : Occurrence of *Microsporum gypseum*, *Keratinomyces ajelloi* and *Trichophyton terrestre* in some (Phyllis M. Stockdale), 1754
Soils (Paddy) : Inhibition of Sulphate Reduction in (R. Vámos), 1688
Soils Discussion Group, Welsh : Formation of the, 1348
Soils and Minerals : Potassium Uptake by Cation-Exchange Resins from (P. W. Arnold), 1594
Sokolowski, Jan : Ptaki Ziem Polskich (The Birds of Poland), Tom I, *review* by B. Nowosielski-Slepowron, 972
Sol-Gel Transitions in the Living Cells of Conifers and their relation to Resistance to Cold (Johnson Parker), 1815
Solar Flare at 4·3-mm. Wave-length : Observation of a (R. J. Coates), 861
Solar Flares : Effect of, on Earth Satellite 1957β (T. Nonweiler), 468
Solar System : Molecules in the (A. McKellar), 564
Soldiers and Government (R. Blake), 89
Solid : The Bile. *review* by Prof. G. A. D. Haslewood, 1332
Solid Addition Compounds : Halogen-Molecule Bridges in (Prof. O. Hassel and Knut O. Strømme), 1155
'Solid-Image' Microscope (R. L. Gregory and P. E. K. Donaldson), 1434
Solid State : Physics of the (Physical Society Winter Conference on), 1133
Solid State Physics—Conference in Brussels (Dr. P. T. Landsberg), 567
  Applications of Magnetic Resonance to (Radio Frequency Spectroscopy Group Conference on), 634
Solidification : Macroscopic Surface Structures formed on Boron upon (Claude P. Talley), 1593
Solids : Sir Geoffrey Taylor's Work on the Mechanics of, *review* by Prof. A. H. Cottrell, 546
  Spectroscopy of (Physical Society Conference on), 159
Soliman, F. A., and others : Influence of Temperature and Light on Thyroid Function, 57
Solomon, M. E. : Perfect and Imperfect Density Dependence in Population Dynamics, 1252
Solow, Prof. Robert M., and others : Linear Programming and Economic Analysis, *review* by Dr. L. S. Goddard, 1046
Solubility Product : A Theoretical Expression for (Dr. K. Krishnamurti), 1227
'Solubilization' of a Cytochrome *b* Component from *Micrococcus lysodeikticus* (F. L. Jackson and Valerie D. Lawton), 799, *erratum*, 1279
Soluble Nucleotides and Nucleotide–Amino-Acid Compounds of Yeast (Dr. D. A. Gilbert and Prof. E. W. Yemm), 1745
Solute Selectivity of Osmotic Membranes : A Method for Improving the (M. F. Vaughan), 1730
Solution (Alkaline) : Spectrophotometric Determination of Protein in (B. R. Hewitt), 246
  The Spontaneous Change of Ferriprotoporphyrin in (Dr. Mary-Louise Rothschild and Lawrence S. Myers, jun.), 1671
Solution (Aqueous) : Formation of a Transition Metal–Hydrogen Bond in (W. P. Griffith, L. Pratt and Prof. G. Wilkinson), 466
  Oxidation of Ferrous Ion in, by Atomic Hydrogen (Gideon Czapski and Prof. Gabriel Stein), 598
  Structure of Pyruvate in (William P. Jencks and Joan Carriuolo), 598
Solution (Experimental), to the Paradox of Discontinuous Respiration in Insects (Robert I. Levy and Dr. Howard A. Schneiderman), 491
Solution (Non-Aqueous) : Formation of Higher Bromo-Complexes of Tervalent Gold in (C. M. Harris and I. H. Reece), 1665
Solutions (Aqueous) : Radioassay of Carbon-14 in, using a Liquid Scintillation Spectrometer (Dr. Daniel Steinberg), 740
Solutions (Electrolyte) : Temperature Dependence of the Conductivity of (N. van Meurs), 1532
Soma, K. (Furuya, M., and) : Auxins in the Development of Bean Embryos, 563
Somatic Chromosomes of *Leptaspis* and *Streptogyna* (Poaceae), (Dr. T. Tateoka), 1619
Somatic Nuclei (Single) : Sexually Mature Individuals of *Xenopus laevis* from the Transplantation of (J. B. Gurdon, T. R. Elsdale and Dr. M. Fischberg), 64
Somers, M. : Comparison of the Salivary Secretion of both Parotid Glands in a Sheep, 400
Somerville, T. : Applied Acoustics, *review*, 1258
Søndergaard, E., and others : Influence of Linoleic and Linolenic Acids on Symptoms of Vitamin E Deficiency in Chicks, 802
Sondheimer, Dr. E., and others : New Hydroxyamino-Acids in Plants and their Identification—Hydroxyvaline in *Kalanchoe daigremontiana*, 1356
Song Learning in the Chaffinch (*Fringilla coelebs gengleri*) : Further Studies on the Process of (Dr. W. H. Thorpe), 554
Soper, Dr. F. G. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Medical Education and its Place in the University), 1284
Sopwith, Dr. D. G. : *Obituary* of Dr. S. L. Smith, 1772
Sorbitol : Failure of, to Replace Intrinsic Factor in the Gastrectomized Rat (Dr. Bernard A. Cooper), 647
Sorbitol Dehydrogenase in Spermatozoa (Dr. Tsoo E. King and Dr. T. Mann), 868
Sorm, Prof. F. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Sosnovsky, H. M. C., and others : Catalytic Activity and Surface Structure after Ion Bombardment, 523
Sorption (Rate of), in Paper Chromatography : Shape of Spot and (W. G. Kauman and Thor A. Bak), 743
Sound Intensity : Diffraction of Light by Ultrasonic Waves, Oblique Incidence and (Dr. S. Parthasarathy and C. B. Tipnis), 1795
Sound Pressure : Investigation of Extreme Values of (D. E. L. Shorter and W. I. Manson), (Analysis and Measurement of Programme Levels, Part 1), 1490
Sound Signals : A Description of an Optical Instrument for Monitoring (E. R. Wigan), (Analysis and Measurement of Programme Levels, Part 2), 1490
Sourander, Patrick, and others : The High-Energy Proton Beam as a Neurosurgical Tool, 1222
Sources of Invention (Prof. John Jewkes, David Sawyers and Richard Stillerman), 275
Sources (Exogenous), of Urinary Phenol and Indole Acids (K. N. F. Shaw and J. Trevarthen), 797
Sourkes, Dr. T. L. : Chemical Pathology of the Nervous System (Urinary Excretion of Catecholamines by Psychotic Individuals), 1647
South Africa : Science Education in, 87
  A Stegolophodon from (Dr. Ronald Singer and Dick A. Hooijer), 101
South Africa, National Parks of the Union of (Board of Trustees of the) : *Koedoe*, No. 1, 227
South African Journal of Agricultural Science, Vol. 1, No. 1, 431
South African Museums Association : A List of Zoological and Botanical Types preserved in Collections in Southern and East Africa, Vol. 1, Zoology, Part 1, 431
South Atlantic Ocean : Distribution of Pelagic Polychaetes in the (Norman Tebble), 166
South Pacific : Social Change in the—Raratonga and Aitutaki (Prof. Ernest Beaglehole), *review* by Prof. Raymond Firth, 280
South and South-East Asia, Colombo Plan for Co-operative Economic Development in : Sixth Annual Report of the Consultative Committee (1957), 1718
South-East Africa : Marine Biology in, *review* by Dr. W. J. Rees, 1761

South-East Asia (South and), Colombo Plan for Co-operative Economic Development in : Sixth Annual Report of the Consultative Committee (1957), 1718
South-East England : Archaeology of (Dr. Gordon J. Copley), *review* by M. C. Burkitt, 971
Southeastern Brazil : Observations on Birds of (Margaret H. Mitchell), *review*, 215
Southern and East Africa : A List of Zoological and Botanical Types preserved in Collections in (South African Museums Association), Vol. I, Zoology, Part I, 431
Southern Stars of High Velocity (compiled by William Buscombe and Pamela M. Morris), 923
Southgate, Dr. B. A. : Effects of Pollution on Living Material (Estuarine Pollution), 1209
Southgate, P. D. : Solid State Physics, 568
Southward, Dr. A. J. : Abundance of Pogonophora, 272
Southwestern United States (Prehistoric) : Cultivation and Weaving of Cotton in the (Kate Kent), 1775
Souza Santos, Helena Lopes de : Effects of Electron Bombardment upon Sodium Tetraborate and Boric Acid in an Electron Microscope, 1297
Souza Santos, Dr. Persio de : A New Method for Preparing Scaly Alumina, 525
Soviet Crystallographic Meeting, 157
Soviet International Press Censorship, 1774
Soviet Research in Fused Salts (1949-1955), (Chemistry Collection No. 1), *review* by Prof. A. R. Ubbelohde, 619
Soviet Research in Glass and Ceramics—Basic Science I ; Basic Science II ; Glass, Glazes and Enamels ; Cements, Limes and Plasters : Refractories ; Miscellaneous, *review* by Prof. R. W. Douglas, 827
Soviet Scientific and Technical Journals available in English Translation (United States National Science Foundation), 632
Space (Euclidean) : Problems in—Application of Convexity (Dr. H. G. Eggleston), *review* by Prof. T. A. A. Broadbent, 1472
Space (Function-) : Numerical Methods in, *review* by Prof. D. N. de G. Allen, 1695
Space-Charge Limited Current in Insulating Materials (Dr. G. T. Wright), 1296
Space-Group Theory (N. V. Belov), translated by V. Balashov, 432
Space Medicine (British Interplanetary Society Symposium on), 1645
Space Research, Committee on (Established by the International Council of Scientific Unions), 1552
Space Research and Technology (Lectures on, at the University of Maryland), 990
Space Science Board (Formation of a, by the United States National Academy of Sciences), 497
Spain : Birds in, *review* by Dr. W. Rydzewski, 1044
Spalding, Dr. D. B. : Science in the Use of Coal (Combustion and Gasification), 25
  Appointed to the new University of London chair of heat transfer in the Imperial College of Science and Technology, 155 ; work of, 155
Spang, Prof. Konrad : Rhythmusstörungen des Herzens, *review* by Dr. J. P. D. Mounsey, 1574
Spar, I. L. : Progress in Cancer Research (Immunology and Immunogenetics), 365
Spark Gaps (Overvolted Uniform Field) : Observations on (K. R. Allen and K. Phillips), 1083
Sparnaay, M. J. : Solid State Physics, 567
Sparrow (House), *Passer domesticus* : Photoperiodic Response of the (Dr. L. T. Threadgold), 407
Spatial Summation for Heat-Pain (Prof. K. R. L. Hall), 307, 876
Spawning Catfish with Mammalian Hormones (Dr. L. S. Ramaswami and A. B. Lakshman), 122
Special Library Work : Practical Aspects of (Northern Branch of Aslib Symposium on), 1063
Special Research : Grants for, 20
Special Steels (Alloy and) : Production, Properties and Application of (Publication of the papers contributed to the National Metallurgical Research Laboratory Symposium on), 1777
Specialist Technological Education : The Background to (Dr. M. L. R. Pettersson), 503
Species Concept among Viruses (Dr. C. H. Andrewes and Dr. P. H. A. Sneath), 12
Species Difference in regard to the Biosynthesis of Ascorbic Acid (R. N. Roy and Prof. B. C. Guha), 319
Species (Bird) : Production of Experimental Scurvy in a (R. N. Roy and Prof. B. C. Guha), 1689
Species (A New), of *Azotobacter* producing Heavy Slime and Acid (A. B. Roy), 120
Species (Summer), of Dragonfly : Emergence of a (Dr. Philip S. Corbet and Sarah A. Corbet), 194
Specificity of Agglutinins in Milk (J. McPhillips), 869
Specificity and Activity : Gene Control of—Loss by Mutation and Restoration by Complementation (Prof. D. Lewis), 1620
Specificity (Host), in *Xanthomonas* (D. W. Dye), 1813
Specificity (Type) Transformation in Pneumococci : Effect of Monovalent Cations on (M. Kohoutová), 188
Specimens (Mineralized) : A New Method for obtaining Thin Plane Parallel Sections of (Dr. O. Hallén and Dr. H. Röckert), 1225
Speck, Prof. Marvin L., and others : Dairy Microbiology, *review* by Dr. L. F. L. Clegg, 141
Spector, Dr. W. G., and Willoughby, Dr. D. A. : Experimental Suppression of Increased Capillary Permeability in Thermal Burns in Rats, 949
Spectra : Cometary, 564
Spectra (Absorption) : Emission and, of NCO and NCS (R. Holland, Prof. D. W. G. Style, R. N. Dixon and D. A. Ramsay), 366
Spectra (Emission), of N_2O^+ (B. Brocklehurst), 1366
Spectra (Fluorescence Excitation) : Direct Recording of (Dr. C. A. Parker), 1002
Spectra (Infra-Red), of a Coalification Series from Cellulose and Lignin to Anthracite (Prof. C. R. Kinney and E. I. Doucette), 785
Spectra (Nuclear Magnetic Resonance), from a Crystal rotated at High Speed (Prof. E. R. Andrew, A. Bradbury and Dr. R. G. Eades), 1659
Spectra (Ultra-Violet Absorption), of Deoxyribonucleic Acid : Changes in, by Treatment with Bromine (Hiroshi Ishihara, Naohiko Suzuki and Hanako Yokoi), 1302
Spectrometer (Liquid Scintillation) : Radioassay of Carbon-14 in Aqueous Solutions using a (Dr. Daniel Steinberg), 740
Spectrometry (Mass), of Substances of Low Volatility (H. W. Holden and Prof. J. C. Robb), 340
Spectrophotometer (Flame) : Estimation of Strontium in Biological Materials by means of a (Dr. G. E. Harrison), 792
Spectrophotometers : A Simple Technique for the Calibration of the Wave-length Scale of (N. V. Parthasarathy and Dr. Indra Sanghi), 44
Spectrophotometric Determination of Protein in Alkaline Solution (B. R. Hewitt), 246
Spectrophotometric Determination of Total Carbohydrate (B. R. Hewitt), 246
Spectrophotometry (Infra-red) : Determination of Traces of Oxygen in Sodium Metal by (H. J. de Bruin and L. E. Smythe), 387
Spectropolarimetry (Photoelectric Spectrometry Group Meeting on), 700
Spectroscopy : Mass, *review* by Dr. G. Dearnaley, 1579
Spectroscopy of Solids (Physical Society Conference on), 159
Spectrum of the Night Sky (Jean Dufay and Tcheng Mao-Lin), 361
Spectrum (Absorption), of Water Vapour, 361
Spectrum (Electron Spin Resonance), of α,α'-Diphenyl-β-picrylhydrazyl : Effect of Oxygen on the (Dr. J. E. Bennett and E. J. H. Morgan), 199
Spectrum (Energy), of Particles Bombarding the Earth (B. J. O'Brien), 521
Spectrum (Energy), of Protons emitted from the Fusion Reaction in SCEPTRE III : Measurement of the (W. M. Jones, A. C. L. Barnard, S. E. Hunt and D. R. Chick), 216
Speed (High) : Nuclear Magnetic Resonance Spectra from a Crystal rotated at (Prof. E. R. Andrew, A. Bradbury and Dr. R. G. Eades), 1659
Speed (High-) Aerodynamics (Compressible Flow), (Prof. Elie Carafoli), *review* by Dr. W. P. Jones, 755
  A Compressible Flow in, *review* by Dr. W. P. Jones, 755
Speed (High-) Flight (British Association for the Advancement of Science, Sections A (Mathematics and Physics) and G (Engineering), Discussion on), 695
  The Human Operator and (A. Cadman Clinton), 1562
  Problems of, *review* by Dr. W. P. Jones, 1582
Speeds (High) : Aerodynamic Components of Aircraft at (edited by A. F. Donovan and H. R. Lawrence), *review* by Dr. W. P. Jones, 1582
Spektrum des Wasserdampfes (W. Regula), 361
Speleology : Second International Congress of, 363
Spencer, M., and others : A New Configuration of Deoxyribonucleic Acid, 387
Sperm Flagellum : Motility of the (Dr. David W. Bishop), 1638
Sperm Whale (Pigmy) (*Kogia breviceps*), in Borneo (Tom Harrisson and George Jamuh), 543
Spermatogenesis (*Lumbricus*) : Origin and Connexions of the Central Nutrient Mass in (Prof. J. Brontë Gatenby and Dr. A. J. Dalton), 886
Spermatozoa : Sorbitol Dehydrogenase in (Dr. Tsoo E. King and Dr. T. Mann), 868
Spermatozoa (Cock) : Carbohydrate Metabolism of (Prof. F. W. Lorenz), 397
Spheres : Tables of Angular Distribution Coefficients for Light-Scattering by (Chiao-Min Chu, George C. Clark and Stuart W. Churchill), *review* by Dr. B. J. Mason, 1117
Spheres (Lipid), under the Phase-Contrast Microscope : Ringed Appearance of (Brij L. Gupta), 537
Spiders (Amber), in European Collections (Alexander Petrunkevitch), *review* by T. H. Savory, 1588
Spiders, Scorpions, Centipedes and Mites—the Ecology and Natural History of Woodlice, 'Myriapods' and Arachnids (Dr. J. L. Cloudsley-Thompson), *review* by Theodore Savory, 825
Spiller, Dr. D. : Variations in the Insecticide Tolerance of Insects, 1177
Spin-Free Transition Series Complexes : Magnetic Properties of (Dr. B. N. Figgis), 1568
Spinach Chloroplasts : Conversion of Carbon-14 Dioxide to Starch Glucose during Photosynthesis by (Prof. Martin Gibbs and Morris A. Cynkin), 1241
Spinal Cord : Adrenal Activity in Subjects with Complete Transverse Lesions of the (Dr. R. Robinson and Dr. A. F. Munro), 805
Spinal Cord (Bovine), and Killed Tubercle Bacilli : Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from (Dr. Marian W. Kies, Dr. Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104
Spinal Cord ('Purified'), and Bacillary Fractions : Experimental Allergic Encephalomyelitis induced with combined (Dr. J. Colover), 105
Spinal Synaptic Transmission : Gamma-Amino-*n*-Butyric Acid and (Dr. D. R. Curtis and J. W. Phillis), 323
Spink, W. W. : Biochemical Response to Physical Injury (Brucellosis as a Model for Metabolic Studies on Bacterial Shock and Inflammation), 1496
Spiral (Rotating) : After-Effect of Movement produced by a (Miss M. J. Pickersgill and M. A. Jeeves), 1820
Spiral Galaxies : Tilt Criteria and Direction of Rotation of (G. de Vaucouleurs), 1287
Spirals (Growth), and Possible Polytypism : Cadmium Bromide— (Richard S. Mitchell), 337
Spirilloxanthin : Origin of the Methoxyl Groups in—a Carotenoid synthesized by the Photosynthetic Bacterium *Rhodospirillum rubrum* (G. D. Braithwaite and Dr. T. W. Goodwin), 1304
Spirin, A. S. (Belozersky, Prof. A. N., and) : A Correlation between the Compositions of Deoxyribonucleic and Ribonucleic Acids, 111
Spiritual Values and World Order, 965
Spirorbis : Use of Artificially Liberated Larvae in Experiments on the Setting Behaviour of (P. H. D. H. de Silva), 1751
Spirostomum : The Macronucleus of (Prof. B. R. Seshachar), 1614
Spitzer, Prof. L. : Controlled Nuclear Fusion Reactions, 1052
Spleen Cells : Migration of, from Subcutaneous Implantation Sites (Dr. V. Hašková and Dr. N. A. Mitchison), 410
Splenectomy : Effect of, on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 534
Spontaneous Change of Ferriprotoporphyrin in Alkaline Solution (Dr. Mary-Louise Rothschild and Lawrence S. Myers, jun.), 1671
Spontaneous Electrical Activity in the Denervated Muscles of the Cockroach *Periplaneta americana* (Dr. R. Beránek and Dr. I. Novotny), 957
Spontaneous Temperature Fluctuations : Observability of (T. P. Gill), 239
Spores of *Penicillium roqueforti* : Formation of Ketones from Fatty Acids by (R. F. Gehrig and Prof. S. G. Knight), 1237

Spores (Dried Bacterial) : An Observed 'Oxygen Effect' during Gamma-Irradiation of (Alan Tallentire), 1024
Sporers (Fungal): Relationship between the Presence of, and a Test for Hepatotoxic Grass (J. C. Percival and Dr. R. H. Thornton), 1095
Sports Turf Research Institute : Control of Dollar Spot Disease (*Sclerontinia homoeocarpa*), 564
Spot : Shape of, and Rate of Sorption in Paper Chromatography (W. G. Kauman and Thor A. Bak), 743
Spot Tests in Inorganic Analysis (Prof. Fritz Feigl), fifth English edition (translated by Prof. Ralph E. Oesper), *review* by C. O. Harvey, 1588
Spragg, Dr. S. P. : Chromatography of Thiol Compounds, 1314
Sprague, Dr. T. A. : *Obituary* by Dr. W. B. Turrill, 1483
Sprats in the River Crouch : Heavy Infestation by the Parasitic Copepod *Lernaeenicus* of (Dr. J. P. Harding and A. C. Wheeler), 542
Spray, Dr. G. H., and Taylor, Dr. K. B. : Vitamin B_{12} Activity in the Serum of the Rat, 1309
Spray-collecting Areas of Locusts and their Susceptibility to Insecticides (R. D. MacCuaig), 478
Spread of Mouse Polyoma Virus Infection : Observations on the (Dr. Wallace P. Rowe, Janet W. Hartley, Isadore Brodsky, Robert J. Heubner and Lloyd W. Law), 1617
Sprent, J. I., and others : Gibberellic Acid and the Physiological Genetics of Flowering in Peas, 1321
Spriggs, A. I., and others : Heinz Bodies in Extravasated Erythrocytes, 455
Sproson, W. N. : New Equipment and Methods for the Evaluation of the Performances of Lenses for Television, 1490
Sproson, W. N., and others : The B.B.C. Colour Television Tests—an Appraisal of Results, 1490
Sprouts per Set : Effect of Number of, on Yield and Grading of Main-Crop Potatoes (R. D. Toosey), 269
Sputniks 1 and 2, 1062
Sputnik 2: Effect of Solar Flares on Earth Satellite 1957β (T. Nonweiler), 468
  The Last Minutes of Satellite 1957β (D. G. King-Hele and Mrs. D. M. C. Walker), 426
  Motion of the Nodal Line of the Second Russian Earth Satellite 1957β, and Flattening of the Earth (Prof. E. Buchar), 198
  Use of Artificial Satellites to Explore the Earth's Gravitational Field—Results from (R. H. Merson and D. G. King-Hele), 640
Sputniks 2 and 3 (Satellites 1957β, 1958δ_1 and 1958δ_2) : An Irregularity in the Atmospheric Drag Effects on (D. G. King-Hele and Mrs. D. M. C. Walker), 860
Sputnik 3 (1958δ) : Progress of the Russian Earth Satellite (D. G. King-Hele), 1409
Squid : Bathyscaphoid (E. J. Denton, T. I. Shaw and J. B. Gilpin-Brown), 1810
Squid Giant Axon : An Anodal Threshold Phenomenon in the (John R. Segal), 1370
Srinivasan, Dr. R. : Dispersion of the Stress Optical Coefficient of the Alkali Halides, 1660
Srivastava, Dr. Satish Chandra : Chemical Reactions initiated by Ultrasonic Waves, 47
Ssu-Kwang, Prof. Lee : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
St. Bartholomew's Hospital Medical College : Title of professor emeritus of physiology in the University of London conferred on Prof. K. J. Franklin, 363
  Appointment of M. de Burgh Daly to the University of London chair of physiology, 700, 1130
  Retirement of Prof. K. J. Franklin from the University of London chair of physiology, 1129
St. Mary's Hospital, Lisbon : Grant of £3,750 from the Gulbenkian Foundation, Lisbon, to the Egas Moniz Research Centre, for fellowships, 1493
St. Thomas's Hospital Medical School : Title of professor of pharmacology and therapeutics in the University of London conferred on Dr. R. S. Stacey, 363
  Appointment of Dr. R. C. Curran to the University of London chair of pathology, 700
Stability of Evaporated Films (M. Wyn Roberts), 1151, *erratum*, 1205
Stability of Metal Complexes with Salicylic Acid and related Substances (D. D. Perrin), 741
Stability of Non-Linear Systems, *review* by Prof. T. A. A. Broadbent, 1332
Stability of the Visual World : Eye Movements and the (R. L. Gregory), 1214
Stability (Relative), of Adrenaline, Noradrenaline and 5-Hydroxytryptamine subjected to various Simple Treatments (Daphne Joyce), 463
Stabilization : Free Radical (Faraday Society Discussion on), 89
Stabilization of Water Mists (H. S. Elsner, F. R. Brookes and B. W. Quince), 1724
Stable Graticules, 699
Stable Isotopes and Radiation in the National Economy and Science : Abstracts of Papers given in the Session on Radiation Chemistry at the All-Union Conference on the Application of Radioactive and (Moscow, 1957), (translated from the Russian), *review* by Prof. G. Porter, 1588
Stable Test-Papers for Seminal Acid Phosphatase (S. S. Kind, 1372
Stacey, Prof. M., and others : Preparative-Scale Gas Chromatography, 591
Stacey, Dr. R. S. : Title of professor of pharmacology and therapeutics in the University of London (at St. Thomas's Hospital Medical School) conferred on, 363
Staffing (Mathematical Teaching and) : Contemporary Problems in (British Association for the Advancement of Science (Sections A (Mathematics and Physics) and L (Education), Joint Discussion on), 1064
Stafford, Dr. G. H. : High Energy Nuclear Physics, 356
Staffordshire (North) Field Club : Presidential Address (J. Leighton), 1130
Stahl, F. W. : Bacteriophage Research, 1769
Staining : Electron (Electron Microscopy Group of the Institute of Physics Symposium on), 771
Stains (Osmic Acid) : Removal of (I. A. Carr and Dr. P. Bacsich), 1108
Stainsby, Dr. G. : At the fifteenth meeting of the Research Panel of the British Gelatine and Glue Research Association (Biuret Method for estimating Gelatine Concentrations), 440
Stamm, G. W. : Veterinary Guide for Farmers (edited by Dallas S. Burch), third edition, *review* by Dr. J. O. L. King, 551
Stamp, Prof. L. Dudley : Title of professor emeritus of social geography in the University of London (at the London School of Economics and Political Science) conferred on, 363
  The Land of Australia, *review*, 1400
Standard (Internal) : Neutron Activation Analysis using an (G. Leliaert J. Hoste and Z. Eeckhaut), 600
Standard Atmospheres in Respiratory Physiology (Dr. R. H. Kay), 1032
Standard Potential at 25°C. of the Silver–Silver Chloride Electrode in Formamide (Dr. M. Mandel and P. Decroly), 794
Standard Scale for Geomagnetochronology in Japan : Secular Variation in the Direction of Geomagnetism as the (Naotune Watanabe), 383
Standards (British) : Inch–Metric Conversions in (F. A. Gould), 1767
Standards Laboratory (National), Sydney : Appointment of N. A. Esserman as the first director, 291
  Retirement of Dr. G. H. Briggs as chief of the Division of Physics, 291
  Appointment of Dr. R. G. Giovanelli as chief of the Division of Physics, 292
Standing, Dr. K. G., and Jovanovich, J. V. : Coherent Scattering of 1·33 MeV. γ-Rays by Lead, 521
Stanhill, Dr. G. : Evapo-transpiration from Different Crops exposed to the Same Weather, 125
Stanier, Dr. J. E. (Philpot, Dr. J. St. L., and) : An Anticlumping Factor for Mitochondria in the Supernatant Fraction of Rat-Liver Homogenates, 1167
Stanier, Roger Y. (edited by Clifton, Charles E., in association with Raffel, Sidney, and) : Annual Review of Microbiology, Vol. 11, *review* by Dr. H. K. King, 823
Stanley, Robert G. : Terpene Formation in Pine from Mevalonic Acid, 738
Stanley, Robert G., and others : Carbon Dioxide Fixation in Germinating Pine Pollen (*Pinus ponderosa*), 1462
Stanley-Jones, D. and K. : Structural Psychology—De Humani Mentis Fabrica, *review*, 622
Stantan, J. E. (Jolley, L. J., and) : Science in the Use of Coal (Reactivity of Cokes and Chars), 26
Staphylinidae (Termitophilous) (Coleoptera) : A Monograph on the (Prof. Charles H. Seevers), *review* by E. B. Britton, 144
Staphylococcal Cells : Incorporation of Amino-Acids by Disrupted (Dr. E. F. Gale, Dr. C. J. Shepherd and Joan P. Folkes), 592
Staphylococcal Infection (Experimental) : Role of Hypersensitivity in (Dr. J. Johanovsky), 1454
Staphylococcus aureus : Protein Synthesis as a Basis for Chloramphenicol-Resistance in (H. H. Ramsey), 602
Staphylococcus aureus 209P : Composition of the Cell Wall of (Nobutoshi Ishimoto, Masahiro Saito and Eiji Ito), 959
Staple, Dr. Ezra, and others : Moving Acid Boundary (*p*H Gradient) Paper Ionophoresis of Bile Salts, 394
Staple, Dr. P. H. : The Flow of Blood in relation to the Vessel Wall, 90
Staples, B. G. (edited by) : Guide to Library Resources in the West Midlands (West Midlands Group of the Reference and Special Libraries Section of the Library Association), 633
Starch Convention, 1958 : The German (Dr. E. Dux), 231
Starch Gel : Isolation of the α_2-Globulin Pattern on (S. Baar), 259
Starch Gel Electrophoresis : High Resolution of Human Plasma Components by (Dr. J. M. Fine, J. Loeb and E. Waszczenko-z), 452
Starch-Gel Electrophoretic Strips Transparent : A Simple Method for making (S. D. Vesselinovitch), 665
Starch Glucose : Conversion of Carbon-14 Dioxide to, during Photosynthesis by Spinach Chloroplasts (Prof. Martin Gibbs and Morris A. Cynkin), 1241
Stark, Lawrence, and others : Pupil Unrest, an Example of Noise in a Biological Servomechanism, 857
Starkowsky, N. A., and others : Isolation of Marmesin from the Fruits of *Ammi majus* Linn., 54
Starr, K. W., and others : Calcium and Phosphorus Metabolism after Surgery, 1505
Stars (Southern), of High Velocity (compiled by William Buscombe and Pamela M. Morris), 923
Starvation, Glucose Feeding and Insulin : Liver Glucosyl Oligosaccharides and Glycogen—Effects of (Dr. Hsien-Gieh Sie and Prof. W. H. Fishman), 240
State : Changes of—a Mathematical-Physical Assessment (H. N. V. Temperley), *review* by Prof. E. C. Stoner, 547
State and Industry : Scientific and Industrial Research—the, 1181
State Governments : Scientific Activities in Six (United States National Science Foundation), 1347
States (American) : Science in Six, 1347
Statistica : Encyclopaedia, *review* by Dr. D. J. Finney, 1470
Statistical Analysis (Multivariate) : An Introduction to (Prof. T. W. Anderson), *review* by Dr. N. L. Johnson, 1183
Statistical Classification (International), of Diseases, Injuries and Causes of Death : Manual of the (World Health Organization), *review*, 417
Statistical Description of Vegetation, *review* by Prof. W. H. Pearsall, 347
Statistical Research : Centre for Economics and (Portugal) : Grant of £11,250 from the Gulbenkian Foundation, Lisbon, for seminars and training of future research workers, 1493
Statistical Review of England and Wales, Supplement on Mental Health for 1952-53 ; Supplement on Cancer for 1953 (Registrar General), 1061
Statistics : The Advanced Theory of (Prof. Maurice G. Kendall and Alan Stuart), Vol. I, Distribution Theory, *review* by Dr. D. J. Finney, 1470
  Annual Epidemiological and Vital (1954), Bilingual edition (French and English), (United Nations World Health Organization), *review* by S. J. Kilpatrick, 9
  Awards for Study in (University of Chicago), 771
  Medical, *review*, 417
  A Survey of Social Conditions in England and Wales as illustrated by (Sir Alexander Carr-Saunders, D. Caradog Jones and C. A. Moser), third edition, *review* by Prof. E. Grebenik, 1330
Statistics of Public Education for England and Wales : Education in 1957, being the Report of the Ministry of Education and the, 481
Statistics (Genetic) : An Introduction to (Prof. Oscar Kempthorne), *review* by Prof. Kenneth Mather, 899
Status (Acclimatization), of Temperate-zone Man (R. K. Macpherson), 1240
Statz, H. : Solid State Physics, 567
Staveley, Dr. L. A. K., and Randall, T. : Ions of the Transition Elements (Measurements of the Heats of Formation of a large number of Complexes involving Ethylenediamine Tetraacetic Acid), 1350
Staveley, Ronald (edited by) : Guide to Unpublished Research Materials—Lectures delivered at a Vacation Course of the University of London School of Librarianship and Archives in April 1956, *review* by R. Brightman, 902

Steacie, Prof. E. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Stedman, Dr. E. : Introduction to Protein Chemistry, *review*, 144
Stedman's Medical Dictionary (edited by Norman Burke Taylor in collaboration with Lieut.-Colonel Allen Ellsworth Taylor), nineteenth edition, *review* by Dr. F. G. J. Hayhoe, 215
Steeds, W. : Engineering Materials, Machine Tools and Processes, third edition, *review* by K. J. Pascoe, 8
Steel, Miss E. A. : Awarded a research studentship in zoology by the Nature Conservancy, 771
Steel, J. L. S. : A Hundred Years of Chemical Industry, *review*, 347
Steel, Prof. Robert W. : The World Land Use Survey, 1285
Steel (Complex Alloy) : A New Phase in a (G. T. Brown, R. T. Allsop and D. Wilkinson), 1437
Steel Industry (British Iron and) : History of the, from *c.* 450 B.C. to A.D. 1775 (Dr. H. R. Schubert), *review* by Prof. F. C. Thompson, 349
Steele, Robert, and Marks, Paul A. : Production of Glucose by the Liver during Hyperglycaemia, 1444
Steels (Alloy and Special) : Production, Properties and Application of (Publication of the papers contributed to the National Metallurgical Research Laboratory Symposium on), 1777
Steels (Nickel Alloy) : Transformation Characteristics of Direct Hardening (Mond Nickel Co., Ltd.), 1643
Steeves, Margaret W., and others : Role of Root Injury in Panama Disease Infections, 309
Steeves, Dr. Taylor A., and others : Role of Root Injury in Panama Disease Infections, 309
Steffensen, Dale : Chromosome Aberrations in Calcium-deficient *Tradescantia* produced by Irradiation, 1750
Stegolophodon from South Africa (Dr. Ronald Singer and Dick A. Hooijer), 101
Stein, Prof. Gabriel (Czapski, Gideon, and) : Oxidation of Ferrous Ion in Aqueous Solution by Atomic Hydrogen, 598
Stein, Dr. Joseph A., and Griem, Dr. Melvin L. : Effect of Triiodothyronine on Radiosensitivity, 1681
Steinberg, C. : Bacteriophage Research, 1770
Steinberg, Dr. Daniel : Radioassay of Carbon-14 in Aqueous Solutions using a Liquid Scintillation Spectrometer, 740
Steinemann, Dr. S. : Physics of Ice Movement (Tests on Polycrystalline Ice), 1560 ; (Recrystallization Structures of Ice), 1561
Steiner, L. A. : Accurate Measurement of the Viscosity of Liquids (Variation of the Coefficient *B* under different conditions of Experiment), 439
Steiner, Dr. Robert F., and others : Inhibition and Activation of Polynucleotide Phosphorylase through the Formation of Complexes between Acridine Orange and Polynucleotides, 242
Stem (Pea) : Effect of Gibberellin on the Extensibility of the (S. Yoda and J. Ashida), 879
Steno, Nicolaus, and his Indice (edited by Dr. Gustav Scherz), *review* by Dr. M. H. Hey, 278
Stent, Prof. Gunther S. : Bacteriophage Research—Second Royaumont Colloquium, 1769
Stenton, Dr. H. (Matturi, S. T., and) : A Technique for the Investigation of the Competitive Saprophytic Ability of Soil Fungi by the Use of Easily Decomposed Substrates, 1248
Stephanoderes hampei Ferr. : La Lutte contre (G. Schmitz et P. Crisinel), *review* by W. V. Harris, 215
Stephen, Dr. A. C. : Retirement as keeper of the Department of Natural History in the Royal Scottish Museum, 1641 ; work of, 1641
Stephens, B. M. : Awarded a research studentship in botany by the Nature Conservancy, 771
Stephens, Marie N. : The Natural History of the Otter, *review* by Richard Morse, 825
Stephenson, B. J., and others : Vitamin B_{12} and Cobalt Concentrations in Livers from Healthy and Cobalt-deficient Lambs, 869
Steps to Victory : Three (Sir Robert Watson-Watt), *review* by Dr. R. L. Smith-Rose, 415
Stereochemistry of Complex Halides of the Transition Metals (Dr. Naida S. Gill, Prof. Ronald S. Nyholm and Peter Pauling), 168
Steric Course of Enzymatic Reduction of Steroids : Effect of Thyroxin Administration on the Rate and (Dr. Joseph McGuire and Gordon Tomkins), 261
Steric Effects in Conjugated Systems (Chemical Society Symposium on), 568
Sterility (Male), in *Brassica* (Dr. A. G. Johnson), 1523
Sterility and Fertility : Human, *review* by Dr. Kenneth Walker, 1573
Sterilization (Radiation) : Preservation of Grass for Winter-feeding by (Erna Grossbard, D. J. Minson, Dr. William Davies and T. Horne), 331
Sterilizing Effects (Lethal and), of Single and Fractionated Doses of Gamma Radiation on *Calandra granaria* L. (D. J. Jefferies and P. B. Cornwell), 402
Steroid Complex (Helical) : Formation of a (Prof. Alexander Rich and Dr. David M. Blow), 423
Steroids : Effect of Thyroxin Administration on the Rate and Steric Course of Enzymatic Reduction of (Dr. Joseph McGuire and Gordon Tomkins), 261
Steroids (Natural) : Effect of various, on the Phagocytic Activity of the Reticulo-Endothelial System (Dr. D. L. J. Bilbey and Prof. T. Nicol), 674
Steroids (Oxo-) : Isolation of, under Neutral Conditions (Dr. W. Taylor), 1735
Sterol (New), from a Slime Mould : Physarosterol, a (Dr. C. F. Emanuel), 1234
Stevens, Barbara M. (Reid, Dr. E., and) : Ribonucleic Acids in Liver Cytoplasm, 441
Stevens, Dr. K. S. H. : Appointed to the chair of theoretical physics in the University of Nottingham, 155 ; work of, 155
  Microwave Physics, 1121
Stevens, R. A. : Future Policy of the British Association with regard to the Junior B.A., 922
Stevenson, Greta : Nitrogen Fixation by Non-nodulated Plants, and by Nodulated *Coriaria arborea*, 1523
Stevenson, Margaret D., and others : A Direct-Plating Method for the Assay of Radioactive Isotopes in Aqueous and Alcoholic Samples, 1100
Stevenson, Dr. R. W. H., and Nettley, Dr. P. T. : Infra-Red Transmission Limits and Reflectivity of Lithium-6 Fluoride and Lithium-7 Fluoride, 471
Steward, Prof. F. C. : *Obituary* of Prof. Lewis Knudson, 1640
Steward, Prof. F. C., and others : New Hydroxyamino-Acids in Plants and their Identification—Hydroxyvaline in *Kalanchoe daigremontiana*, 1356
Steward, Prof. F. C., and Pollard, Dr. J. K. : ^{14}C-Proline and Hydroxyproline in the Protein Metabolism of Plants—an Episode in the relation of Metabolism to Cell Growth and Morphogenesis, 828
Steward, Prof. F. C. (Grobbelaar, Dr. N., and) : New Hydroxyamino-Acids in Plants and their Identification—O-acetylhomoserine in *Pisum*, 1358
Stewart, Doreen E., and others : Infectivity of Ribonucleic Acid from Mice and Tissue Culture infected with the Virus of Foot-and-Mouth Disease, 535
Stewart, Dr. H. C., and others : Lenticular Effect in Mice of some Morphine-like Drugs, 1519
Stewart, Dr. J. S. S., and others : Colour Vision Studies and the X-Chromosome Constitution of Patients with Klinefelter's Syndrome, 1092
Stewart, N. G., and Crooks, R. N. : Long-range Travel of the Radioactive Cloud from the Accident at Windscale, 627
Stilboestrol (Synthetic Œstrogen) : Effect of the, on Pregnancy in the Rabbit (Dr. Brenda M. Schofield), 58
Stiles, Prof. W. : An Introduction to Physiology, *review*, 1577
Stiles, Dr. W. S. : Promoted to Deputy Chief Scientific Officer in the Scientific Civil Service, 991 ; work of, 991
Stillerman, Richard : The Sources of Invention, 275
Stimuli (Arousal), in Animals : Effect of Drugs on Conditioning and Habituation to (Dr. B. J. Key and Dr. P. B. Bradley), 1517
Stimulus : Dependence of Latent Period in Muscle on Strength of (M. C. Goodall), 1736
Stimulus (Threshold) : Lowering of an Auditory Threshold produced by a Light Signal occurring after the (C. I. Howarth and M. Treisman), 1093
Stimulus-Response Relationships : Information Gain in Tasks involving different (Dr. Stephen Griew), 1819
Stjärne, Dr. L., and Schapiro, Dr. S. : Effects of Reserpine on Secretion from the Adrenal Medulla, 1450
Stockdale, Phyllis M. : Occurrence of *Microsporum gypseum*, *Keratinomyces ajelloi* and *Trichophyton terrestre* in some British Soils, 1754
Stocken, Dr. L. A. (Ord, Margery G., and) : Studies in Synthesis of Deoxyribonucleic Acid—Radiobiochemical Lesion in Animal Cells, 1787
Stocker, B. A. D. : Bacteriophage Research, 1769
Stoeckly, Robert E., and others : Interface Couples in Crystals, 652
Stoffregen, W. : At the Ninth General Physics Conference of the Swedish National Committee for Physics (The Uppsala Ionosphere Observatory), 698
Stoker, Prof. J. J. : Water-Waves, the Mathematical Theory with Applications, *review* by Dr. M. S. Longuet-Higgins, 967
Stoker, Dr. M. G. P. : Mode of Intercellular Transfer of Herpes Virus, 1525
Stokes, Prof. R. H. : Bourke Lectures of the Faraday Society, 1205
Stolc, Dr. Viktor : Chromatographic Detection of Minute Quantities of Thyroxine in Serum, 52
Stolk, Prof. A. : Fluorescent Mast-Cell Reaction in Precancerous Skin of the Lizard *Lacerta agilis*, 1177
  Extra-Regional Oocytes in Teleosts, 1241
Stomata in the Oil Palm, *Elaeis guineensis* Jacq. : Field Observations of Midday Closure of (A. R. Rees), 735
Stomoxys sp. on Cattle in Uganda (T. H. Coaker and R. G. Passmore), 606
Stone, Dr. B. A. : Biochemistry of Cellulose and related Polysaccharides, 687
Stone, Dr. J. F. S. : Wessex Before the Celts, *review* by M. C. Burkitt, 1628
Stone, M. L., and others : Comparison of Measured and Computed Values of the Rapid Fading-Rate of Ultra High-Frequency Signals reflected from the Moon, 1438
Stone-Age Civilization of the Pacific : Easter Island, a (Dr. Alfred Metraux), translated from the French by Michael Bullock, *review* by Prof. Raymond Firth, 280
Stoner, Prof. E. C. : Co-operative Phenomena, *review*, 547
Stoner, H. B., and Threlfall, C. J. : Biochemical Response to Physical Injury (The Effect of Limb Ischaemia on Carbohydrate Distribution and Energy Transformation), 1494
Stopes, Dr. Marie C. : *Obituary* by D. W. Brett, 1201
Stopford, Sir John : Created a Baron under the Life Peerages Act, 295
Storage Conditions : Effect of, on the Incidence of *Gloeosporium* Rots of Apple Fruits (H. B. S. Montgomery), 737
Storage Problem : Continuous Time Treatment of a (J. Gani and N. U. Prabhu), 39
Story of Evolution (Sir Julian Huxley), *review* by T. H. Hawkins, 1763
Stoves, Dr. J. L. : Fibre Microscopy, *review* by Prof. W. T. Astbury, 350
Strachan, E. E. : Free Radical Stabilization, 1497
Straight-Growth Inhibitors in Glucose (R. F. M. Van Steveninck), 950
Straight-Growth Test (Coleoptile) : Growth-promoting Activity of Potato Tuber Extracts in the—Quantitative Aspects of Indoleacetic Acid Detection (A. Booth and Dr. P. F. Wareing), 406
Strain of *Acetobacter aceti* giving a Positive Cellulose Reaction (Dr. J. G. Carr), 265
Strain of *Serratia marcescens* (*Chromobacterium prodigiosum*) : A Water-soluble, Diffusible Pigment produced by a (Prof. R. P. Williams, W. W. Taylor, D. Hawkins, Jr., and I. L. Roth), 1028
Strain (Pathogenic), of *Fusarium oxysporum* f. *lycopersici* : Absence of Pectolytic Enzymes in a (Dr. K. McDonnell), 1025
Strain (Tryptophan-requiring), of *Escherichia coli* : Effect of Tryptophan Analogues on Reversion of a (N. M. Schwartz and B. S. Strauss), 888
Strain (Wild), of *Musca domestica* L. in Sweden : Resistance to Pyrethrins and to Pyrethrins–Piperonyl Butoxide in a (Dr. M. Davies, Dr. J. Keiding and Dr. C. G. von Hofstein), 1816
Strains : Different Heterogeneities of Mouse Haemoglobin according to (J. Rosa, G. Schapira, J. C. Dreyfus, J. de Grouchy, G. Mathé and J. Bernard), 947
Strains (Two), of Mice : Different Types of Haemoglobin in (W. Welling and Dr. D. W. van Bekkum), 946
Strategic Studies, Ltd., Institute for : Formation of the, 1551
Stratton, G. Burder (edited by) : The Zoological Record, Vol. 92, Being the Records of Zoological Literature relating chiefly to the Year 1955, *review* by Dr. Edward Hindle, 970
Stratton, R. : Solid State Physics, 567
Strauss, B. S. (Schwartz, N. M., and) : Effect of Tryptophan Analogues on Reversion of a Tryptophan-requiring Strain of *Escherichia coli*, 888

Strawberry : Preparation of Virus Antisera from (R. M. Lister), 1814
Streak Camera : Continuous-writing (Beckman and Whitley), 564
Streaks (Extra), in the X-Ray Diffraction Pattern of Vanadium Single Crystals (E. Sándor and Dr. W. A. Wooster), 1435
Streaming (Protoplasmic), and Wall Structure in *Nitella* (M. C. Probine and Prof. R. D. Preston), 1657
Street, Prof. H. E., and others : Auxins and their Effect on the Growth of Unicellular Algae—Ethanol as a Carbon Source for the Growth of *Chlorella vulgaris*, 1360
Streisinger, G. : Bacteriophage Research, 1769
Strength of Stimulus : Dependence of Latent Period in Muscle on (M. C. Goodall), 1736
Strength (Tensile), of Indium (Prof. D. S. Eppelsheimer and L. J. Reitsma, jun.), 339 ; (B. Fullman), 862
Strengths (Abnormally High Fatigue), in Aluminium Alloy Extruded Bar (J. M. Finney and J. Y. Mann), 1366
Strenzke, Dr. K. : Research Methods in Soil Zoology (Systematics and the Ecologist), 705
Streptococci (Group *A* Beta-haemolytic) : Protoplasts of (H. Gooder and W. R. Maxted), 808
Streptococcus bovis : Pre-requisites for Dextran Production by (Dr. R. W. Bailey and Dr. A. E. Oxford), 185
Streptococcus faecalis and *Lactobacillus arabinosus* : Arylaminopyrimidines as Growth-Inhibitors of (Dr. Sudhamoy Ghosh, Dolly Roy and Prof. B. C. Guha), 187
Streptogyna (Poaceae) : Somatic Chromosomes of *Leptaspis* and (Dr. T. Tateoka), 1619
Streptomyces Species : Formation of Antifungal Antibiotics by a New (Dr. P. L. Narasimha Rao and Miss B. N. Uma), 115
Streptomyces Species and some Pathogenic Fungi : Effect of Oxy-chlororaphin on the Growth *in vitro* of (G. Sierra and H. A. Veringa), 265
Stress in the Adrenalectomized Rat : Influence of Circulating Adrenocorticotrophin on the Pituitary Adrenocorticotrophic Response to (Dr. J. R. Hodges and Joan Vernikos), 725
Stress Optical Coefficient of the Alkali Halides : Dispersion of the (Dr. R. Srinivasan), 1660
Stress (Thermal), in the Central Nervous System of Man : Biochemical Basis of Disturbances caused by (M. Krause), 1376
Striations of Skeletal Muscle (Irvine J. Hunter), 1107
Stromata Powder (Erythrocyte) : Applications of (Dr. Felix Milgrom and Dr. Miguel Layrisse), 189
Strømme, Knut O. (Hassel, Prof. O., and) : Halogen-Molecule Bridges in Solid Addition Compounds, 1155
Strontium in Biological Materials : Estimation of, by means of a Flame Spectrophotometer (Dr. G. E. Harrison), 792
Strontium-90 : Accumulation of, in Dental Tissues (W. Holgate, R. H. Mole and Janet Vaughan), 1294
  Deposition of, and its Content in Vegetation and in Human Diet in the United Kingdom (Dr. R. Scott Russell), 834
Strontium-90 and Yttrium-90 (Dissolved) : Direct Absorption of, by Tadpoles of *Rana temporaria* (J. W. Lucas and D. C. Pickering,) 1242
Structural Characteristics of Myelinated Nerve Fibres : Some (Dr. C. P. Wendell-Smith and Dr. P. L. Williams), 1608
Structural Psychology—De Humani Mentis Fabrica (D. and K. Stanley-Jones), *review*, 622
Structural Theory for Metal Alkoxide Polymers (Dr. D. C. Bradley), 1211
Structure : Protein (International Union of Pure and Applied Chemistry Symposium on), (edited by Prof. Albert Neuberger), *review* by Dr. Kenneth Bailey, 1587
Structure of Atomic Nuclei, *review* by Dr. E. Bretscher, 1333
Structure of Brain Ganglioside (Dr. Samuel Bogoch), 229
Structure of Cardiolipin (Marjorie G. Macfarlane), 946
Structure of Cupric Mono-, Di and Tri-bromoacetates (Ryutaro Tsuchida and Shoichiro Yamada), 1230
Structure of 2,6-Dihalo-Benzenone-Indophenylacetate and Benzenone-Indo-3′,5′-Dihalo-Phenylacetate : Synthesis and (C. de Borst, F. N. Hooge and G. J. Arkenbout), 1017
Structure of Precipitated Apatitic Phosphates (Dr. Claudine Fabry), 523
Structure of Pyruvate in Aqueous Solution (William P. Jencks and Joan Carriuolo), 598
Structure of Research in Britain, 207 ; *erratum*, 433
Structure of Set Gypsum Plaster : Effect of Temperature on the (M. J. Ridge), 1224
Structure and Function : Virus, *review* by Dr. M. R. J. Salton, 1576
Structure and Reactions in Organic Chemistry—the Kekulé Symposium (Prof. D. H. Hey and Dr. G. H. Williams), 1340
Structure (Age), in the Engineering Industry (K. F. H. Murrell and S. Grew), 430
Structure (Antigenic), of Bacteria : Phagocytosis and the (Prof. S. Slopek, A. Skurski, E. Michalska and L. Dabrowski), 1243
Structure (Azulene) : A Revision of the (Prof. J. Monteath Robertson, H. M. M. Shearer, G. A. Sim and D. G. Watson), 177
Structure (Cell) : Macromolecules in (Prof. A. Frey-Wyssling), *review* by Prof. W. T. Astbury, 213
Structure (Crystal), of Rhombohedral Sulphur (Prof. Jerry Donohue, Aimery Caron and Elihu Goldish), 518
Structure (Crystal), of β-Wollastonite (Miss Joan Tolliday), 1012
Structure (Crystal), and Photoconductivity of Caesium Plumbohalides, (Chr. Kn. Møller), 1436
Structure (Fine), of the Nuclear Envelope of Carcinoma Cells (M. De Groodt, Prof. F. Derom, A. Lagasse, Prof. M. Sebruyns and Dr. M. Thiery), 1030
Structure (The Finer), of the Galeal Lamella in Adult Mosquitoes (G. Surtees), 812
Structure (Genetic Fine) : Distribution of Proflavin-induced Mutations in the (Dr. S. Brenner, Prof. S. Benzer and Mrs. L. Barnett), 983
Structure (Intimate), of Human Albumin : Immuno-chemical Observations on the (Peggy B. Houghton and Prof. N. H. Martin), 329
Structure (Microscopic), of the Lungs of the Bottlenose Whale (J. R. Goudappel and Prof. E. J. Slijper), 479
Structure (Molecular), of *cyclo*-Octatetraene (I. J. Lawrenson and Dr. F. A. Rushworth), 391
Structure (Mosaic), of Photographic Emulsion Crystals (J. F. C. Boardman, Dr. R. H. Herz and G. C. Terry), 1726
Structure (Submicroscopic), of Elastic Fibres as observed in the Polarization Microscope (Dr. G. Romhányi), 929
Structure (Surface), after Ion Bombardment : Catalytic Activity and (H. M. C. Sosnovsky, G. J. Ogilvie and E. Gilham), 523
Structure (Wall), in *Nitella* : Protoplasmic Streaming and (M. C. Probine and Prof. R. D. Preston), 1657
Structure Reports (edited by A. J. C. Wilson), Vol. 8 (1940-1941) ; Vol. 9 (1942-1944) ; Vol. 15 (1951), *review* by Dr. H. J. Grenville-Wells, 282
Structures : Crystal, *review* by Dr. H. J. Grenville-Wells, 282
Structures (Epidermal), in a Rhinoceros (*Ceratotherium simum*), (Prof. A. J. E. Cave and D. B. Allbrook), 196
Structures (Macroscopic Surface), formed on Boron upon Solidification (Claude P. Talley), 1593
Structures and Machinery : Engineering Vibrations with Applications to (Prof. Lydik S. Jacobsen and Prof. Robert S. Ayre), *review* by Prof. R. E. D. Bishop, 1581
Strychnine in Nux Vomica : Determination of, by Paper Chromatography (G. P. Briner), 742
Stuart, Alan : Appointed to the University of London readership in statistics at the London School of Economics and Political Science, 158
Stuart, Alan (Kendall, Prof. Maurice G., and) : The Advanced Theory of Statistics, Vol. 1, Distribution Theory, *review* by Dr. D. J. Finney, 1470
Student Apprentices in Electrical Engineering : The Education and Training of (Institution of Electrical Engineers), 1649
Student Apprenticeship in Electrical Engineering (Prof. J. Greig), 1649
Student Prizes : Travelling Fellowship and, in Psychiatry (Mental Health Research Fund), 157
Students : Grants to (Ministry of Education and the Scottish Education Department Committee on), 20, 561
Students of the Humanities : Science for, *review* by J. A. Ratcliffe, 348
Studentship (V. H. Blackman Postgraduate Research), awarded to M. G. Morris, 1063
Studentships (Mr. and Mrs. John Jaffé Donation), in original scientific research, awarded by the Royal Society to Dr. E. A. Magnusson and to Dr. Jennifer Wildy, 359
Studentships (Research), in Ecology (Nature Conservancy Awards), 771
Studies in Business Organization, *review* by L. G. Jaeger, 971
Studies of its Multiplication : Use of Two Properties of the Virus of Foot-and-Mouth Disease in (Sheila F. Cartwright and H. V. Thorne), 717
Studies of Shoot Apices : Application of Autoradiographic Techniques to (Carl R. Partanen and Ernest M. Gifford, jun.), 1747
Studies in Synthesis of Deoxyribonucleic Acid—Radiobiochemical Lesion in Animals Cells (Margery G. Ord and Dr. L. A. Stocken), 1787 ; Mechanism of Radiation Effect on the Process of Synthesis of Deoxyribonucleic Acid (L. G. Lajtha, R. Oliver, R. Berry and W. D. Noyes), 1788
Studies (Colour Vision), and the X-Chromosome Constitution of Patients with Klinefelter's Syndrome (Dr. P. E. Polani, Dr. P. M. F. Bishop, Dr. B. Lennox, Dr. M. A. Ferguson-Smith, Dr. J. S. S. Stewart and Dr. A. Prader), 1092
Studies (Electron Microscope), of the Chemical Reactivity in Keratin Cuticle (Dr. J. Sikorski and W. S. Simpson), 1235
Studies (Management), and Commerce : Special Courses in Higher Technology, including (1958-59), Part I, Autumn Term (London and Home Counties Regional Advisory Council for Higher Technological Education Bulletin of), 842
Studies (Taxonomic), on Gallinaceous Birds : Immunology and Chromatography in (Danilo Mainardi), 1388
Study of Folk Life and its part in the Defence of Civilization (Dr. Iorwerth C. Peate), 583
Study of Metals and Alloys above 1,200°C. (Symposium at the University of Oxford), 1418
Study of Microbiological Processes in Soil Samples : Continuous-Flow Method for the (Dr. J. Macura and Dr. I. Málek), 1796
Study of Society : Darwinism and the (Social Sciences Research Centre of the University of Edinburgh Conference on, to mark the centenary of 'The Origin of Species'), 362
Study in Statistics : Awards for (University of Chicago), 771
Study of Tropical Vegetation (Unesco), 1776
Study (Acculturation), from the Tuamotu Group, French Oceania : Work and Life on Raroia, an (Dr. Bengt Danielsson), *review* by Prof. Raymond Firth, 280
Study (Canadian), for a Full-Scale Nuclear Power Plant (J. E. Woolston), 847
Study (An Electron-Microscopic), of the Ciliature of the Trochophore Larva (Dr. H. Seuntjens and Dr. W. G. Braams), 1611
Study (Electron Resonance), of the Radicals produced by Controlled Potential Electrolysis of Aromatic Substances (D. E. G. Austen, Dr. P. H. Given, Dr. D. J. E. Ingram and M. E. Peover), 1784
Study (Histochemical), of the Nasal (Supra-Orbital) Gland of the Duck (Dr. R. J. Scothorne), 732
Study (Polarographic), of Acid-Base Reactions of the Tropylium Ion (P. Zuman, J. Chodkowski, H. Potešilová and F. Santavy), 1535
Study (X-Ray), of Rare Phosphate Minerals (Dr. B. Mukherjee and U. Prasad), 472
Studying Insects : Collecting, Preserving and (Harold Oldroyd), *review* by B. D. Moreton, 420
Studying the Variation with Temperature of Ultrasonic Absorption in Liquids : A Method of (Dr. B. Ramachandra Rao and Dr. H. S. Rama Rao), 1794
Sturrock, R. F. : Awarded a Research Training Scholarship for 1958-59 by the Animal Health Trust, 432
Style, Prof. D. W. G., and others : Emission and Absorption Spectra of NCO and NCS, 336
Su, Dr. J. C. : At the Third International Seaweed Symposium (6-0-Methyl-D-galactose in *Porphyra crispata*), 1779
Subcutaneous Absorption of Drugs : Self-depression of the, due to Release of Histamine (Jens Schou), 324
Subcutaneous Implanation Sites : Migration of Spleen Cells from (Dr. V. Hašková and Dr. N. A. Mitchison), 410
Subcutaneous Tumours in Rhesus Monkeys : An Outbreak of (Dr. W. G. C. Bearcroft and Dr. Margaret F. Jamieson), 195
Subdivision (Automatic), of Associated Populations (Prof. W. T. Williams and Dr. G. N. Lance), 1755
Subjects with Complete Transverse Lesions of the Spinal Cord : Adrenal Activity in (Dr. R. Robinson and Dr. A. F. Munro), 805

Submarine Volcano (Y. Y. Gakkel), 633
Submicroscopic Morphology, *review* by Prof. W. T. Astbury, 213
Submicroscopic Structure of Elastic Fibres as observed in the Polarization Microscope (Dr. G. Romhányi), 929
Suboxide (Carbon) : Formation of Carbon by Decomposition of, at 750-780°C. (R. L. Bond and F. J. Pinchin), 129
Subramanian, G. B. Venkata : Awarded an Overseas Scholarship by the Royal Commission for the Exhibition of 1851, for research in organic chemistry, 156
Subscriptions to Learned Societies : Tax Concessions on, 294
Substance (New), associated with Fat Transport Activity : Isolation from Human Blood of a (Dr. W. S. Reith and M. J. Thomas), 604
Substances in the Calf Alimentary Tract interfering in the Determination of Polyethylene Glycol (R. H. Smith), 260
Substances of Low Volatility : Mass Spectrometry of (H. W. Holden and Prof. J. C. Robb), 340
Substances in Mulberry Leaves which attract Silkworm Larvae (*Bombyx mori*), (Tadao Watanabe), 325
Substances with Peroxidase Activity : Detection of Haemoglobin, Haemoglobin–Haptoglobin Complexes and other, after Zone Electrophoresis (Dr. J. A. Owen, H. J. Silberman and C. Got), 1373
Substances depressing the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol and Dr. D. L. J. Bilbey), 606
Substitutes (Synthetic Polypeptide), for Gelatin in Photographic Emulsions and Observations on Gelation (Dr. H. W. Wood), 106
Substrate for the Assay of Amylase : *α*-(*p*-Nitrophenyl) Maltoside as a (A. P. Jansen and P. G. A. B. Wydeveld), 525
Substrate (Excess) : Inhibition of Dextransucrase by (W. Brock Neely), 1007
Substrate Surface : Control of Lecithinase Activity by the Electrophoretic Charge on its (Dr. A. D. Bangham and Dr. R. M. C. Dawson), 1292
Substrates (Easily Decomposed) : A Technique for the Investigation of the Competitive Saprophytic Ability of Soil Fungi by the Use of (S. T. Matturi and Dr. H. Stenton), 1248
Substrates (Growth) : Effect of, on Isocitratase Formation by *Pseudomonas ovalis* Chester (Dr. H. L. Kornberg, A. M. Gotto and Patricia Lund), 1430
Substrates (Oxidizable) : Dependence of Mitochondrial Swelling on (J. B. Chappell and G. D. Greville), 813
Substrates (Synthetic) : Comparative Kinetic Behaviour of Thrombin, Plasmin and Trypsin toward (Dr. H. A. Scheraga, S. Ehrenpreis and E. Sullivan), 461
Success : Predicting Academic (Sigvard Rubenowitz), 1421
Successful Development and Birth of Mice cultivated *in vitro* as Early Embryos (Dr. Anne McLaren and Dr. J. D. Biggers), 877
Succinate Analysis : A Sensitive Micro-Spectrophotometric Method for (Dr. M. B. Waltzman and E. Q. Adams), 129
Sucrose Crystal Inclusions (H. E. C. Powers), 715
Sudan : *Eichornia crassipes* in the Nile of the (Dr. Peter A. Gay), 538
Sudan Gezira : Effect of the Cotton Plant in the, on certain Leaf-feeding Insect Pests (R. J. V. Joyce), 1463
Sugano, Dr. S., and Tanabe, Dr. Y. : Ions of the Transition Elements (Absorption Spectra of Transition Metal Ions in Lattices of Al_2O_3—Trivalent Chromium in Ruby), 1350
Sugar (Cane) Juice : Zeta Potential and Sedimentation Behaviour in Flocculated (Dr. M. C. Bennett), 1439
Sugars : Incorporation of Carbon-14 Dioxide into, by Darkened Cotyledons from Etiolated Sunflower Seedlings (Dr. Clive Bradbeer), 1429
Sugawara, Ken, and Terada, Kikuo : Oxidized Iodine in Sea Water, 250
Sugiura, Dr. Kanematsu : Effect of Hydrogen Peroxide on Transplanted Rat and Mouse Tumours, 1310
Suhrmann, R. : Solid State Physics, 568
Sular Sgeir : Glasgow University Expedition to North Rona and (T. B. Bagenal and H. T. Howell), 775
  Occurrence of Forms of *Focus distichus* L. emend. Powell on North Rona and (H. T. Powell), 1246
Sulitzeanu, D. (Bekierkunst, Dr. A., and) : Induced Resistance of Mice to Infection with *Brucella abortus* 2308 through Vaccination with *BCG*, 883
Sullivan, E., and others : Comparative Kinetic Behaviour of Thrombin, Plasmin and Trypsin toward Synthetic Substrates, 461
Sullivan, R. M. E. : Awarded a Research Fellowship in engineering for 1958-59 by the Department of Scientific and Industrial Research, 1063
Sulphate in Soil : Aerobic Transformation of Cysteine to (J. R. Freney), 1318
Sulphate (Anhydrous Sodium) : Polymorphic Transitions in (R. J. Bird), 1797
Sulphate (Ferrous) : Photo-reduction of Methylene Blue and Thionine by, using Flash Irradiation (Dr. C. A. Parker), 245
Sulphate-reducing Bacteria in Mixed Bacterial Populations : Counting of (Prof. Y. Abd-El-Malek and S. G. Rizk), 538
Sulphate Reduction in Paddy Soils : Inhibition of (R. Vámos), 1688
Sulphide (Cadmium) : Photoconductivity and Crystal Size in Evaporated Layers of (J. M. Gilles and J. Van Cakenberghe), 862
Sulphonyloxyl Groups : Reactivity of, with Halides in the Carbohydrate Series (Dr. N. F. Taylor), 660
Sulphur (Radioactive) : Incorporation of, by *Thiobacillus thioparus* (Prof. B. Skarzynski and W. Ostrowski), 933
Sulphur (Rhombohedral) : Crystal Structure of (Prof. Jerry Donohue, Aimery Caron and Elihu Goldish), 518
Sulphur-35 : A Simple Autoradiographic Method for Distinguishing Insects labelled with Phosphorus-32 and (Dr. M. T. Gillies), 1683
Sulphur Content and Net Dietary-Protein Value : A Correlation between (D. S. Miller and D. J. Naismith), 1786
Sulphur Dioxide in Atmospheric Chemistry (Chr. E. Junge and T. G. Ryan), 21
Sulphydryl Activity in Rat Liver : Vanadium Inhibition of Phospholipid Synthesis and (Fred Snyder and Prof. W. E. Cornatzer), 462
Sulphydryl Enzymes : Alleged Susceptibility of, to Ionizing Radiation (Dr. A. Pihl, R. Lange and L. Eldjarn), 1732
Sulphydryl Groups in the Plasma Membrane : Plateau Formation and (Hidehiko Takahashi, Takayoshi Murai and Toshi Sasaki), 1675
Sulphydryl Groups and Ribonucleic Acid (Dr. L. G. E. Bell), 1088
Sulphydryl Groups (Polarographically Active), in Rat Liver during Carcinogenesis : Intracellular Changes in Levels of (Dr. Silvio Fiala), 257
Summation for Heat-Pain : Spatial (Prof. K. R. L. Hall), 307, 876
Summer : Salt Requirements in the Tropics during (Surg. Lieut.-Comdr. Mangal Sain Malhotra), 1036
Summer Activity and Hibernation : Adrenaline/Noradrenaline Ratio in the Adrenal Glands of the Hedgehog during (Prof. Paavo Suomalainen and Dr. Veikko J. Uuspää), 1500
Summer School (Universities Federation for Animal Welfare), 158
Summer School in Alpine Studies (Geographical Association), 1777
Summer School in Mediterranean Geography (Geographical Association), 1777
Summer Species of Dragonfly : Emergence of a (Dr. Philip S. Corbet and Sarah A. Corbet), 194
Sumner, Dr. W. L. : Science Teaching in Secondary Schools, *review*, 897
Sundaram, T. K., and others : Biological Deamidation of Nicotinamide in Vertebrates, 51
Sundell, G. (Lindahl, Prof. P. E., and) : Sex Ratio in the Golden Hamster before Uterine Implantation, 1392
Sunflower Seedlings (Etiolated) : Incorporation of Carbon-14 Dioxide into Sugars by Darkened Cotyledons from (Dr. Clive Bradbeer), 1429
Sunflower Tissue Culture : Effect of Gibberellin on (James H. M. Henderson), 880
Suns (Thousand) : Brighter than a—the Moral and Political History of the Atomic Scientists (Dr. Robert Jungk), translated into English by James Cleugh, *review* by Sir John Cockcroft, 547
Sunspot Cycle : Behaviour of the Present (Prof. S. W. Visser), 253, 1600 ; (C. M. Minnis), 1599
Suomalainen, Prof. Paavo, and Uuspää, Dr. Veikko J. : Adrenaline-Noradrenaline Ratio in the Adrenal Glands of the Hedgehog during Summer Activity and Hibernation, 1500
Supek, Prof. Ivan : At the Meeting in the Yugoslav Embassy in London to celebrate the bicentenary of the publication of Boscovich's 'Theoria Philosophiae Naturalis' (Greetings from the Yugoslav Scientific Societies and an Outline of the work of the Boscovich Institute at Zagreb), 230
  Rudjer Bošković Institute, Zagreb, 558
Supercluster (The Local), of Galaxies (Gerard de Vaucouleurs), 1478
Supernatant Fraction of Rat-Liver Homogenates : An Anticlumping Factor for Mitochondria in the (Dr. J. St. L. Philpot and Dr. J. E. Stanier), 1167
Supernumerary Chromosomes in Diploid Populations of *Dactylis glomerata* in Israel : Different Frequencies of (Dr. Daniel Zohary and Israel Ashkenazi), 477
Supersonic Phenomena : New (Dr. Wladimir Philippoff), 1011
Supplementary Free Amino-Acids : Rate of Absorption of, during Digestion (Dr. J. B. Longenecker and N. L. Hause), 1739
Supply, Ministry of : Appointment of R. G. Friend as director of Electronics Research and Development (telecommunications), 224
  Appointment of Dr. D. H. Black as director of the Armament Research and Development Establishment, 225
  Appointment of Dr. J. S. McPetrie as director-general of Electronics Research and Development, 634, 768
  Promotion of Dr. E. V. D. Glazier (director of Scientific Research—Electronics and Guided Weapons) to Deputy Chief Scientific Officer, 768
  Gift of £1,315 to the Department of Aeronautical Engineering, University of Bristol, for research on the prevention of flutter by damping, 1487
Supply of Teachers in the 1960's—Correspondence between the Chairman of the National Advisory Council on the Training and Supply of Teachers and the Minister of Education, July 1958, 1039
Supply and Distribution of Chemical Engineers in Britain (Prof. H. E. Watson), 1712
Support and Direction of Research a American Academic Institutions (Dr. Lloyd V. Berkner), 848
Suppression (Experimental), of Increased Capillary Permeability in Thermal Burns in Rats (Dr. W. G. Spector and Dr. D. A. Willoughby), 949
Supreme Headquarters Allied Powers Europe : Dr. John W. Abrams (of Ottawa) loaned to SHAPE to undertake important duties in connexion with the scientific analysis and planning of Western European air defences, 916
Surface (Substrate) : Control of Lecithinase Activity by the Electrophoretic Charge on its (Dr. A. D. Bangham and Dr. R. M. C. Dawson), 1292
Surface-active Agents (Synthetic) : Possible Use of, for the Preparation of Tumour Cell Nuclei (Prof. M. E. Hodes, Dr. C. G. Palmer and D. S. Williams), 529
Surface-active Characteristics of Sodium Anacardate Isolated from Cashew Nut Shell Oil (Arun K. Biswas and Anil Bandhu Roy), 1299
Surface Activity : Proceedings of the Second International Congress of (edited by J. H. Schulman), Vol. 1, Gas/Liquid and Liquid/Liquid Interface ; Vol. 2, Solid/Gas Interface ; Vol. 3, Electrical Phenomena and Solid/Liquid Interface ; Vol. 4, Solid/Liquid Interface (Washings, etc.), Cell-Water Interface, *review*, 972
Surface Concentrations of Manganese Nodules (Prof. H. W. Menard and C. J. Shipek), 1156
Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* : Importance of Zinc for the Growth of, and Large-scale Production of Tuberculin Purified Protein Derivative (T. Dekker and H. Huitema), 1387
Surface Oxide Films and the Breakaway Corrosion of Uranium (J. S. Llewelyn Leach), 1085
Surface Properties of Cancer Cells : Invasiveness and (Symposium at the Chester Beatty Research Institute), 1419
Surface Structure after Ion Bombardment : Catalytic Activity and (H. M. C. Sosnovsky, G. J. Ogilvie and E. Gilham), 523
Surface Structures (Macroscopic), formed on Boron upon Solidification (Claude P. Talley), 1593
Surface Tension of the Blood and Atherogenesis (P. De Somer, J. Van den Bosch and J. V. Joossens), 59
Surfaces : Contamination of, by Conductivity Water from Ion-exchange Resins (J. H. Schenkel and Dr. J. A. Kitchener), 131
Surfaces (Carbon) : Physics and Chemistry of (Fourth Biennial Conference on Carbon, at the University of Buffalo), 1488
Surfaces (Dark Reflecting) : Responses of Insects to Polarized Light in the Presence of (Dr. H. Kalmus), 1526
Surgery : Calcium and Phosphorus Metabolism after (K. W. Starr, K. N. Wynne and S. H. Chorlton), 1505
Surtees, G. : The Finer Structure of the Galeal Lamella in Adult Mosquitoes, 812

Survey of Land Use in Hong Kong and the New Territories (Dr. Thomas R. Tregear), 1285
Survey of Social Conditions in England and Wales as illustrated by Statistics (Sir Alexander Carr-Saunders, D. Caradog Jones and C. A. Moser), third edition, *review* by Prof. E. Grebenik, 1330
Survey Methods in Social Investigation (C. A. Moser), *review* by Prof. T. S. Simey, 1256
Survival of Cartilage Homografts : Antigenicity and (M. B. L. Craigmyle), 1248
Survival of Intact Insects immersed in Liquid Oxygen without any Antifreeze Agent (Eizo Asahina and Kiyoshi Aoki), 327
Survival (Increased), of Rats irradiated with X-Rays and Treated with Parathyroid Extract (R. H. Rixon, J. F. Whitfield and T. Youdale), 1374
Susceptibility : A New Method of Measuring (C. Hilsum and A. C. Rose-Innes), 1082
Susceptibility to Insecticides : Spray-collecting Areas of Locusts and their (R. D. MacCuaig), 478
Susceptibility (Alleged), of Sulphydryl Enzymes to Ionizing Radiation (Dr. A. Pihl, R. Lange and L. Eldjarn), 1732
Susceptible Plant Leaves : A Simple Technique for Inoculating Pathogenic Bacteria on (M. A. Nour and J. J. Nour), 96
Susceptible, Hybrid and Resistant Strains of *Anopheles gambiae*, Giles : Effect of Simulated Field Deposits of Gamma-BHC and Dieldrin on (G. Davidson and D. G. Pollard), 739
Susceptible and Resistant to DDT : Dosage–Mortality Curves for Houseflies (K. Wilson-Jones and G. Davidson), 403 ; (Dr. P. S. Hewlett), 404
Suspect Documents, their Scientific Examination (Dr. Wilson R. Harrison), *review* by Dr. L. C. Nickolls, 1399
Suspended Culture (Continuous) : Critical Effect of Oxygen Tension on Rate of Growth of Animal Cells in (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Suspensions of Kidney Cells of the Pig : Effect of Temperature on the Multiplication of Foot-and-Mouth Disease Virus in (Dr. H. Subak Sharpe), 1803
Susskind, Alfred K. (edited by) : Notes on Analog–Digital Conversion Techniques, *review* by Dr. A. D. Booth, 1583
Sutcliffe, Dr. R. C. : Introduction to Meteorology, *review*, 1599
Sutherland, Dr. K. L. : Awarded the H. G. Smith Memorial Medal of the Royal Australian Chemical Institute, 89
Sutton, E. P. : Gas Dynamics, *review*, 76
Sutton, Sir Graham : The Role of the Professional Civil Servant, 841
  Fluid Motion in Nature, *review*, 1182
Sutton, Dr. John : Appointed to the University of London chair of geology at the Imperial College of Science and Technology, 363, 560 ; work of, 560
Suzuki, Naohiko, and others : Changes in Ultra-Violet Absorption Spectra of Deoxyribonucleic Acid by Treatment with Bromine, 1302
Svärd, Per Olov : Acid-Soluble Nucleotides from the Blood of Metamorphosing Salmon, 1448
Svestka, Z., and others : Polarization of Light of the Comets Arend-Roland (1956*h*) and Mrkos (1957*d*), 331
Svet-Moldavsky, G. J. : Sarcoma in Albino Rats treated during the Embryonic Stage with Rous Virus, 1452
Swales, J. D. : Awarded a Student Prize in Psychiatry by the Mental Health Research Fund, 158
Swaminathan, Dr. M. S., and Ganesan, A. T. : Kinetics of Mitosis in Yeasts, 610
Swann, Prof. M. : Invasiveness and Surface Properties of Cancer Cells (Observations on the Growth of Soil Amoebae), 1420
Swanson, A. M., and others : Rennin Coagulation of Enzymatically Dephosphorylated Casein, 798
Swanton, E. W. : *Obituary* by John Clegg, 1412
Swarming (Induced), of a Nematode as a Means of Isolation (Prof. John P. Hollis), 956
Sweating Animals (Panting and) : Heat, Salt and Hormones in (Prof. W. V. Macfarlane, Kathleen Robinson, Beth Howard and Rosemary Kinne), 672
Sweden : Resistance to Pyrethrins and to Pyrethrins–Piperonyl Butoxide in a Wild Strain of *Musca domestica* L. in (Dr. M. Davies, Dr. J. Keiding and Dr. C. G. von Hofsten), 1816
Swedish National Committee for Physics : Ninth General Physics Conference, 698
Sweet Cherry : A Minot Anthocyanin Pigment of (Dr. Kuang C. Li and Dr. A. C. Wagenknecht), 657
Sweeting, Dr. Marjorie : Tropical Karst, 1415
Swelling (Mitochondrial) : Dependence of, on Oxidizable Substrates (J. B. Chappell and G. D. Greville), 813
Swift, Prof. Ernest H. : Appointed chairman of the Division of Chemistry and Chemical Engineering at the California Institute of Technology, 428 ; work of, 428
Swift Combustion of Organic Compounds for Analysis (Dr. Irmgard K. H. Otter), 393
Swift Dumas Nitrogen Estimation (Dr. Irmgard K. H. Otter), 656
Swim-Bladder : The Teleostean (Prof. C. Adrian M. Hogben), 1622
Swindale, L. D. (Blakemore, L. C., and) : Chemistry and Clay Mineralogy of a Soil Sample from Antarctica, 47
Swinnerton, Prof. H. H. : *Obituary* of Dr. Felix Oswald, 1549
Swinton, Dr. W. E. : Elected president of the Museums Association, 503
  Microsaur Relationships, *review*, 1115
Sykes, J. B. (Davison, B., with the collaboration of) : Neutron Transport Theory, *review* by Dr. R. Englman, 620
Sylvén, Dr. B. : Invasiveness and Surface Properties of Cancer Cells (Histological Studies of Growing Tumours), 1420
Sylvester Medal for 1958 of the Royal Society awarded to Prof. M. H. A. Newman, 1344, 1633
Symbolic Form : Fundamentals of, *review* by F. I. G. Rawlins, 1586
Symbolic Forms : The Philosophy of (Ernst Cassirer), translated by Ralph Manheim, Vol. 1, Language ; Vol. 2, Mythical Thought ; Vol. 3, The Phenomenology of Knowledge, *review* by F. I. G. Rawlins, 1586
Symons, M. C. R. : Free Radical Stabilization, 1497
Sympatric Species of Sawflies : Geographical Colour Polymorphism and Chromosome Constitution in (Dr. F. L. Waterhouse and Dr. Ann R. Sanderson), 477
Symptoms of Calcium and Phosphorus Deficiency in Oil Palm Seedlings (R. A. Bull), 1749
Symptoms of Vitamin E Deficiency in Chicks : Influence of Linoleic and Linolenic Acids on (Prof. H. Dam, G. Kofoed Nielsen, I. Prange and E. Søndergaard), 802
Synapse Discharge by Single Fibre in Mammalian Visual System (Prof. P. O. Bishop, Dr. W. Burke and Dr. R. Davis), 728
Synaptic Transmission in the Cockroach (T. Yamasaki and T. Narahashi), 1805
Synaptic Transmission in a Sodium-free Medium (Dr. K. Koketsu and S. Nishi), 887
Synaptic Transmission (Spinal) : Gamma-Amino-*n*-Butyric Acid and (Dr. D. R. Curtis and J. W. Phillis), 323
Syndrome (Klinefelter's) : Colour Vision Studies and the X-Chromosome Constitution of Patients with (Dr. P. E. Polani, Dr. P. M. F. Bishop, Dr. B. Lennox, Dr. M. A. Ferguson-Smith, Dr. J. S. S. Stewart and Dr. A. Prader), 1092
Synge, Prof. J. L. : The Hypercircle in Mathematical Physics, *review* by Prof. D. N. de G. Allen, 1695
Synoptic Climatology, 505
Synthesis of the Amino-Acids of Silk by *Bombyx mori* : Utilization of the Carboxyl Group of Glycin for the (Dr. S. Bricteux-Grégoire, W. G. Verly and Prof. M. Florkin), 1515
Synthesis of Blood Protein by the Fat Body in the Silkworm, *Bombyx mori* L. (Hajime Shigematsu), 880
Synthesis of Deoxyribonucleic Acid : Mechanism of Radiation Effect on the Process of, (Studies in Synthesis of Deoxyribonucleic Acid), (L. G. Lajtha, R. Oliver, R. Berry and W. D. Noyes), 1788
  Studies in—Radiobiochemical Lesion in Animal Cells (Margery G. Ord, and Dr. L. A. Stocken), 1787 ; Mechanism of Radiation Effect on the Process of Synthesis of Deoxyribonucleic Acid (L. G. Lajtha, R. Oliver, R. Berry and W. D. Noyes), 1788
Synthesis of Deoxyribonucleic Acid in Extracts of Mammalian Cells (Prof. J. N. Davidson, Dr. R. M. S. Smellie, Dr. H. M. Keir and A. Hope McArdle), 589
Synthesis of 3,6-Dideoxy-D-*ribo*-hexose (3,6-Dideoxy-D-glucose) and its Identification with Paratose (C. Fouquey, J. Polonsky, Dr. E. Lederer, O. Westphal and O. Lüderitz), 944
Synthesis of Haem : Effect of Copper Deficiency on (R. L. Anderson and Prof. S. B. Tove), 315
Synthesis of Ribonucleic Acid from Deoxyribonucleic Acid : A Template Model for the (Dr. Geoffrey Zubay), 1290
Synthesis (Acetylcholine] : Myasthenic-like Features of Neuromuscular Transmission after Administration of an Inhibitor of (Dr. J. E. Desmedt), 1673
Synthesis (Antibody), *in vitro* : Effect of 8-Azaguanine on (Dr. R. W. Dutton, Anne H. Dutton and Mariam George), 1377
Synthesis (Bacteriophage), in *Salmonella typhimurium* : An Effect of Glucose on (Nathan Entner and Ellis Engelsberg), 1808
Synthesis (Deoxyribonucleic Acid), in Normal, Regenerating, Precancerous and Cancerous Rat Liver : Deoxyribonuclease Activity and (Dr. Sam Brody), 1386
Synthesis (Enzymic), of Serine : Interaction of Formaldehyde and Tetrahydrofolic Acid and its relation to the (Dr. R. L. Blakley), 1719
Synthesis (Induced *in vivo*), of Diphosphopyridine Nucleotide : Significance of (Dr. Louis Shuster, Thomas A. Langan, jun., Prof. Nathan O. Kaplan and Prof. Abraham Goldin), 512
Synthesis (A New), of the Pentapeptide-L-Histidyl-L-Phenylalanyl-L-Arginyl-L-Tryptophyl-Glycine and its Melanocyte-stimulating Activity (Dr. R. Schwyzer and Prof. Choh Hao Li), 1669
Synthesis (Phospholipid) : Vanadium Inhibition of, and Sulphydryl Activity in Rat Liver (Fred Snyder and Prof. W. E. Cornatzer), 462
Synthesis (Protein) : A Rate-Governing Reaction of (Henry Borsook), 1006
Synthesis (Protein), as a Basis for Chloramphenicol-Resistance in *Staphylococcus aureus* (H. H. Ramsey), 602
Synthesis (Protein) *in vitro* : Action of Testosterone Propionate and 4-Chlorotestosterone Acetate on (A. Bernelli-Zazzera, M. Bassi, R. Comolli and P. Lucchelli), 663
Synthesis and Structure of 2,6-Dihalo-Benzenone-Indophenylacetate and Benzenone-Indo-3',5'-Dihalo-Phenylacetate (C. de Borst, F. N. Hooge and G. J. Arkenbout), 1017
Synthesized (Newly), Deoxyribonucleic Acid in Mitotic Division : Distribution of (Prof. W. Plaut), 399 ; (Prof. Henri Firket), 399
Synthetic Activities in a Wheat Chromosome : Correlated Failure of (H. K. Jain), 1458
Synthetic Œstrogen Stilboestrol : Effect of the, on Pregnancy in the Rabbit (Dr. Brenda M. Schofield), 58
Synthetic Polypeptide Substitutes for Gelatin in Photographic Emulsions and Observations on Gelation (Dr. H. W. Wood), 106
Synthetic Substrates : Comparative Kinetic Behaviour of Thrombin, Plasmin and Trypsin toward (Dr. H. A. Scherage, S. Ehrenpreis and E. Sullivan), 461
Synthetic Surface-active Agents : Possible Use of, for the Preparation of Tumour Cell Nuclei (Prof. M. E. Hodes, Dr. C. G. Palmer and D. S. Williams), 529
Synthetic Taxonomy, *review* by Prof. T. G. Tutin, 970
Syrett, P. J. : Fermentation of Glucose by *Chlorella vulgaris*, 1734
Systematics of Parrot-Fishes, 1415
Systems where the Life-time of the Kinetic Chain is Long : Preparation of Block and Graft Copolymers in (Dr. P. E. M. Allen, G. M. Burnett, J. M. Downer, R. Hardy and Sir Harry Melville), 245
Szabó, Prof. G., and Magyar, S. : Effect of Hyaluronidase on Capillary Permeability, Lymph Flow and Passage of Dye-labelled Protein from Plasma to Lymph, 377
Szabó, Prof. G., and others : Effect of Total Body Irradiation on Capillary Permeability, 885
Szczepkowski, Tadeusz W. : Reactions of Thiosulphate with Cysteine, 934
Szego, G. C. : Free Radical Stabilization, 1498
Szent-Györgyi, Prof. Albert : Transfer of Light Energy and Photosensitization, 231
  Bioenergetics, *review* by Prof. J. D. Bernal, 345
Szur, Leon (Francois, Dr. P. E., and) : Use of Iron-52 as a Radioactive Tracer, 1665
Szwarc, Prof. M. : Theoretical Organic Chemistry (Measurements of the Methyl (Alkyl) Affinities of various Aromatic Compounds and Olefins), 1342
Szweda, Z., and others : Experimental Chemotherapy of Tumours with Hydrogen Peroxide, 395

TABACHNICK, Dr. I. I. A., and Grelis, M. E. : Inhibition of Cholinesterase Hydrolysis of Dihydromurexine by Lysergic Acid Diethylamide and its 2-Bromo Derivative—a Selective Relationship, 935
Tables : Climatic, 361
Tables of Angular Distribution Coefficients for Light-Scattering by Spheres (Chiao-Min Chu, George C. Clark and Stuart W. Churchill), *review* by Dr. B. J. Mason, 1117
Tables of Light-Scattering Functions (R. H. Boll, J. A. Leacock, G. C. Clark and S. W. Churchill), *review* by Dr. B. J. Mason, 1117
Tables of Partitions (initiated and computed by Hansraj Gupta ; computed independently by C. E. Gwyther and J. C. P. Miller), *review* by Dr. J. A. Todd, 1046
Tables of Temperature, Relative Humidity and Precipitation for the World (Meteorological Office), 361
Tabor, Dr. D. : Modern Problems in Friction and Lubrication, 980
  Lubrication Science and Technology, *review*, 1763
Tabor, H. (Rosenthal, S. M., and) : Biochemical Response to Physical Injury (Some Aspects of Therapy of Injury), 1496
Tabulating Machine Co., Ltd., British : Bradenham Manor leased from the National Trust for use as a Hollerith Computer Training Centre, 563
Tadpoles of *Rana temporaria* : Direct Absorption of Dissolved Strontium-90 and Yttrium-90 by (J. W. Lucas and D. C. Pickering), 1242
Tager, Dr. J. M. : Isolation of Active Mitochondria from Apples, 1521
Tai, Prof. Chen To : Maxwell Fish-eye treated by Maxwell Equations, 1600
Tait, T. : Awarded a Mond Nickel Fellowship for 1958, 1415
Takahashi, Hidehiko, and others : Effect of γ-Aminobutyryl-Choline upon the Electrical Activity of the Cerebral Cortex, 1443
  Plateau Formation and Sulphydryl Groups in the Plasma Membrane, 1675
Takemori, Shigeki, and others : Reconstruction of the Reaction Mechanism of Cytochrome Oxidase, 1306
Talanta, a Journal of Analytical Chemistry, Vol. 1, Nos. 1 and 2, 1346
Tallentire, Alan : An Observed 'Oxygen Effect' during Gamma-Irradiation of Dried Bacterial Spores, 1024
Talley, Claude P. : Macroscopic Surface Structures formed on Boron upon Solidification, 1593
Tamm, Dr. I. (Cerenkov, Dr. P. A., Frank, Dr. I. M., and) : Awarded the Nobel Prize for Physics for 1958, 1275 ; work of, 1275
Tanabe, Dr. Y. (Sugano, Dr. S., and) : Ions of the Transition Elements (Absorption Spectra of Transition Metal Ions in Lattices of Al_2O_3—Trivalent Chromium in Ruby), 1350
Tanganyika : Fleas of the Rat in (J. G. Halcrow), 817
Tankard, J. : Awarded the Service Medal of the Textile Institute, 1279
Tannins : Leuco-Anthocyanins as the Possible Precursors of (W. E. Hillis and Mrs. Gerda Urbach), 657
Tannins (Condensed) : Chemistry of (Plant Phenolics Group Discussion on), 1488
Tannins (Condensed), in Plants : Formation of (W. E. Hillis), 1371
Tar (Coal-) : Presence of 3:4-8:9-Dibenzpyrene in (N. P. Buu-Hoï), 1158
Tarlo, L. B. : Awarded a Research Fellowship in palaeontology for 1958-59 by the Department of Scientific and Industrial Research, 1062
(+)-Tartrate : Phylogenetic Distribution of Acid Phosphatase inhibited by (Dr. Grace S. Kilsheimer and Prof. B. Axelrod), 1733
Tasks involving Different Stimulus-Response Relationships : Information Gain in (Dr. Stephen Griew), 1819
Tasman Sea : A Radiocarbon Profile in the (D. M. Garner), 466
Tasmanian Mutton-Bird, *Puffinus tenuirostris* (D. L. Serventy), 1070
Taste Sensitivity in Man : Influence of Water Deprivation on (Roy Yensen), 677
Tate, Dr. P. : *Obituary* of Cecil Warburton, 1771
Tateoka, Dr. T. : Somatic Chromosomes of *Leptaspis* and *Streptogyna* (Poaceae), 1619
Tatlow, Dr. J. C. : Fluorine Compounds, 1269
Tatlow, Dr. J. C., and others : Preparative-Scale Gas Chromatography, 591
Tatum, Dr. E. L. (Lederberg, Prof. J., and jointly to Beadle, Prof. G. W., and) : Nobel Prize for Medicine and Physiology for 1958 awarded to, 1344 ; work of, 1344
Taube, Dr. H. : Charge Transfer Processes (Homogeneous Processes—Bridging and Simple Ligand Effects in Electron Transfer Reactions), 1354
Taussig, Dr. Helen B. (Blalock, Dr. Alfred, and) : Awarded jointly the Gairdner Foundation Award of Merit of 25,000 dollars, 1710
Tax Concessions on Subscriptions to Learned Societies, 294
Taxonomic Studies on Gallinaceous Birds : Immunology and Chromatography in (Danilo Mainardi), 1388
Taxonomy : Synthetic, *review* by Prof. T. G. Tutin, 970
Taxonomy in Biological Investigations : Importance of (Irvine J. Hunter), 1818
Taxonomy of Vascular Plants, *review* by Prof. T. G. Tutin, 824
Taylor, Lieut.-Colonel Allen Ellsworth (edited by Taylor, Norman Burke, in collaboration with) : Stedman's Medical Dictionary, nineteenth edition, *review* by Dr. F. G. J. Hayhoe, 215
Taylor, Dr. E. P., and others : Some New Neuromuscular Blocking Agents, 1424
Taylor, Sir Geoffrey Ingram : The Scientific Papers of (edited by Dr. G. K. Batchelor), Vol. 1, Mechanics of Solids, *review* by Prof. A. H. Cottrell, 546
Taylor, Sir Hugh : Appointed first president of the Woodrow Wilson National Fellowship Foundation, 987
Taylor, Dr. Ian : Modern Educational Treatment of Deafness, 920
Taylor, Dr. Joan : Salmonellosis in Animals, *review*, 1046
Taylor, James A., and Yates, R. A. : British Weather in Maps, *review* by Prof. Gordon Manley, 1696
Taylor, Prof. J. H. : Sedimentation and Orogeny, 91
Taylor, J. T. : At the fifteenth meeting of the Research Panel of the British Gelatine and Glue Research Association (Kodak Test for the Setting Time of a Gelatine Solution), 440
Taylor, Dr. K. B. (Spray, Dr. G. H., and) : Vitamin B_{12} Activity in the Serum of the Rat, 1309
Taylor, Sister Monica : Longevity of *Proteus* Group of Amoebae, 1245
Taylor, Norman Burke (edited by, in collaboration with Taylor, Lieut.-Colonel Allen Ellsworth) : Stedman's Medical Dictionary, nineteenth edition, *review* by Dr. F. G. J. Hayhoe, 215
Taylor, Dr. N. F. : Reactivity of Sulphonyloxyl Groups with Halides in the Carbohydrate Series, 660
Taylor, R. : Antarctic Research (Meteorology), 287 ; (Future Research in the Antarctic), 289
Taylor, R. C., and Cluff, C. L. : Vibrational Frequency associated with the Boron–Nitrogen Dative Bond in Amine Boranes, 390
Taylor, R. T. (Hopf, H. S., and) : Role of Cholinesterase in Insecticidal Action, 1381
Taylor, Dr. S. R., and Heier, Dr. K. S. : Rubidium Depletion in Feldspars, 202
Taylor, Dr. W. : Isolation of Oxo-Steroids under Neutral Conditions, 1735
Taylor, Dr. W. K. : Visual Organization, 29
Taylor, W. W., and others : A Water-soluble Diffusible Pigment produced by a Strain of *Serratia marcescens* (*Chromobacterium prodigiosum*), 1028
Tea (Dr. T. Eden), *review* by Dr. F. N. Howes, 1577
Teachers in the 1960's : The Supply of—Correspondence between the Chairman of the National Advisory Council on the Training and Supply of Teachers and the Minister of Education, July, 1958, 1039
Teachers in Technical Institutions : Salaries of, 1414
Teachers, National Union of (collected and edited by the) : Inside the Comprehensive School—a Symposium contributed by Heads of Comprehensive Schools in England and Wales, *review* by Robert W. Fenn, 1590
Teachers (School Science) : Selected Lectures in Modern Physics for (edited by Prof. H. Messel), *review* by G. R. Noakes, 623
Teachers (Science), and Laboratories, 1345
Teachers (University), Association of : Report on a Policy for University Expansion, 137
Teachers and Travelling Lectures : Research for (United States National Science Foundation), 1276
Teaching of Hygiene and Public Health in Europe (Prof. F. Grundy and Prof. J. M. Mackintosh), *review* by Prof. Thomas McKeown, 619
Teaching of Science in the Nineteenth Century : The Royal Institution and the (E. E. Ironmonger), 80
Teaching of Science in Secondary Schools (compiled by a Joint Committee of the Incorporated Association of Assistant Masters and the Science Masters' Association), second edition, *review* by Dr. W. L. Sumner, 897
Teaching and Staffing (Mathematical) : Contemporary Problems in (British Association for the Advancement of Science Sections A (Mathematics and Physics) and L (Education), Joint Discussion on), 1064
Teaching (Science), in Secondary Schools, *review* by Dr. W. L. Sumner, 897
Tebble, Norman : Distribution of Pelagic Polychaetes in the South Atlantic Ocean, 166
Technical Age : Administration and Defence in a, 89
Technical Authorship (City and Guilds of London Institute), 699
Technical Books : Recent Scientific and, Supp. iv, July 26 ; Supp. xxx, August 30 ; Supp. viii, September 27 ; Supp. vi, October 25 ; Supp. vi, November 29 ; Supp. iv, December 27
Technical Careers in the Medical Research Council, 698
Technical Chemistry in the Royal College of Science and Technology, Glasgow ; W. H. Perkin and the Young Chair of (R. Brightman), 613
Technical Education and Social Change, 481
Technical Education and Social Change (Dr. Stephen F. Cotgrove), 481
Technical Information Systems in Current Use : Non-Conventional (Office of Scientific Information of the National Science Foundation, Washington), 562
Technical Institute (Higher), Lisbon : Grant of £1,250 from the Gulbenkian Foundation, Lisbon, to the Organic Chemistry Laboratory, for equipment, 1493
Technical Institutions : Salaries of Teachers in, 1414
Technical Journals (Scientific and) : Soviet, available in English Translation (United States National Science Foundation), 632
Technical Liaison Service (Experimental), run by the Scottish Council (Development and Industry) : Small Firms with Big Problems—a Short Account of an (Department of Scientific and Industrial Research), 1139
Technique for the Investigation of the Competitive Saprophytic Ability of Soil Fungi by the Use of Easily Decomposed Substrates (S. T. Matturi and Dr. H. Stenton), 1248
Technique (A Simple), for the Calibration of the Wave-length Scale of Spectrophotometers (N. V. Parthasarathy and Dr. Indra Sanghi), 44
Technique (A Simple), for Inoculating Pathogenic Bacteria on Susceptible Plant Leaves (M. A. Nour and J. J. Nour), 96
Techniques : Chromatographic (Dr. Ivor Smith), *review* by Dr. R. Consden, 215
Techniques in Sociology, *review* by Prof. T. S. Simey, 1256
Techniques for Testing Insecticides : A Critical Review of the (Dr. J. R. Busvine), *review* by Dr. A. H. McIntosh, 486
Techniques (Analog–Digital Conversion) : Notes on (edited by Alfred K. Susskind), *review* by Dr. A. D. Booth, 1583
Techniques (Autoradiographic) : Application of, to Studies of Shoot Apices (Carl R. Partanen and Ernest M. Gifford, jun), 1747
Techniques (Electrical), in Medicine and Biology (Institute of Radio Engineers, the American Institute of Electrical Engineers and the Instrument Society of America Annual Conference on), 433, 771
Technological Award : A New Higher (National Council for Technological Awards), 1345
Technological Awards, National Council for : To create a higher award, 1345
Technological Education (Higher), London and Home Counties Regional Advisory Council for : Bulletin of Special Courses in Higher Technology, including Management Studies and Commerce, 1958-59, Part 1, Autumn Term, 842
Technological Education (Specialist) : The Background to (Dr. M. L. R. Pettersson), 503
Technological Literature : Russian Scientific and (Department of Scientific and Industrial Research Lending Library Unit Translating Programme for), 917
Technology, 1500-1750, *review* by K. R. Gilbert, 3
Technology : Colleges of, in Britain, 157
  Diploma in (Brunel Staff Association National Conference on the new), 160
  A History of (edited by Charles Singer, E. J. Holmyard, A. R. Hall and Trevor I. Williams), Vol. 3, From the Renaissance to the Industrial Revolution *c.* 1500-*c.* 1750, *review* by K. R. Gilbert, 3
  The History and Philosophy of Science and (Electricity Council), 1349

  Integral Equations and their Applications to certain Problems in Mechanics, Mathematical Physics and (S. G. Mikhlin), translated from the Russian by A. H. Armstrong, *review* by Prof. T. A. A. Broadbent, 1259
  International Co-operation in Science and, 1329
  Lubrication Science and (edited by John Boyd), Vol. 1, No. 1, *review* by Dr. D. Tabor, 1763
  Origins and Philosophy of (Prof. W. H. G. Armytage), 1349
  Space Research and (Lectures on, at the University of Maryland), 990
Technology and the Academics (Sir Eric Ashby), *review*, 1256
Technology of Naphthalene Compounds : The Chemistry and (Norman Donaldson), *review* by Dr. G. Baddeley. 751
Technology in Public Affairs : Science and, 1
Technology (Chemical) : Advance of, *review* by Sir Alfred Egerton, 549
  Encyclopedia of (edited by Raymond E. Kirk and Donald F. Othmer), First Supplement Volume, *review* by Sir Alfred Egerton, 549
Technology (Higher), including Management and Commerce : Special Courses in, (1958-59), Part 1, Autumn Term (London and Home Counties Regional Advisory Council for Higher Technological Education Bulletin of), 842
Technology (Nuclear Reactor) : Analytical Chemistry in (Second Conference on), 22
Technology (Rubber) : Annual Report on the Progress of (edited by Dr. T. J. Drakeley), 294
Tectonic Deformation in the Rhinns of Galloway : Different Phases of (Dr. Maurits Lindström), 48
Teeth : Nutrition and (Nutrition Society Symposium on), 1704
Teeth (Milk) Radiation Census : An International (Dr. Herman M. Kalckar), 283
Teisseyre, Dr. R. : At the fourth General Assembly of the European Seismological Commission (The Mechanism of Earthquakes in Terms of Dislocation Theory), 27
Tektites : Origin of (Prof. Harold C. Urey), 1078 ; (G. A. Eiby), 1298
Tektites Extra-Solar-System Meteorites ? ; Are (Dr. Truman P. Kohman), 252
Telecommunication Engineers, Indian Institution of : Second Technical Convention, 842
Telecommunications, No. 1, 1957, first English issue, 988
  Electronics, Radio and, 988
Teleostean Swim-Bladder (Prof. C. Adrian M. Hogben), 1622
Teleosts : Colour Changes in (Priscilla Rasquin), 564
  Extra-Regional Oocytes in (Prof. A. Stolk), 1241
Telephone Cable : New Round-the-World, 917
Television : B.B.C.—a British Engineering Achievement (British Broadcasting Corporation), 988
  Broadcasting and, 69
  New Equipment and Methods for the Evaluation of the Performances of Lenses for (W. N. Sproson), 1490
Television in Britain (Political and Economic Planning, Broadsheet No. 420), 69
Television Link for Outside Broadcasts : A V.H.F. (K. C. Quinton), 1490
Television Research Fellowship : Granada (Granada TV Network, Ltd.), 228
Television Tests : The B.B.C. Colour—an Appraisal of Results (W. N. Sproson, S. N. Watson and M. Campbell), 1490
Television and the Schools : Broadcasting, 1485
Teller, Dr. E. : Controlled Nuclear Fusion Reactions, 1051
Temperate-zone Man : Acclimatization Status of (R. K. Macpherson), 1240
Temperature : Effect of, on the Multiplication of Foot-and-Mouth Disease Virus in Suspensions of Kidney Cells of the Pig (Dr. H. Subak Sharpe), 1803
  Effect of, on the Structure of Set Gypsum Plaster (M. J. Ridge), 1224
  A Method of Studying the Variation with, of Ultrasonic Absorption in Liquids (Dr. B. Ramachandra Rao and Dr. H. S. Rama Rao), 1794
  Neutron Production and, in ZETA (K. A. George), 745
Temperature Dependence of the Conductivity of Electrolyte Solutions (N. van Meurs), 1532
Temperature Fluctuations : Observability of Spontaneous (T. P. Gill), 239
Temperature Measurements : A Story of (Negretti and Zambra), 1487
Temperature Variations in Male Cones of *Encephalartos* (Amy Jacot-Guillarmod), 474
Temperature and Turbulence in Quiescent Prominences determined from Line-widths (Prof. P. ten Bruggencate and Dr. G. Elste), 1154
Temperature (Electron), in SCEPTRE III (Dr. S. Kaufman and R. V. Williams), 557
Temperature (Environmental) : Change in Oxygen Consumption of the New-Born Pig with a Fall in (Dr. L. E. Mount), 536
Temperature (Low) : Effect of, on the Vertical Distribution of Two Wood-boring Crustaceans (Dr. N. Balakrishnan Nair and H. Leivestad), 814
Temperature (Low-) Thermometer (J. E. Kunzler, T. H. Geballe and G. W. Hull), 770
Temperature and Germination in *Kennedya* Vent. (J. H. Silsbury), 954
Temperature and Light : Influence of, on Thyroid Function (F. A. Soliman, H. M. Badawi and Y. S. Ghanem), 57
Temperature, Relative Humidity and Precipitation for the World : Tables of (Meteorological Office), 361
Temperatures (Electronic), of Planetary Nebulae, 431
Temperatures (Low) : Some Biological Effects of (Dr. A. S. Parkes), 581
  Life at (British Association for the Advancement of Science, Sections D (Zoology) and I (Physiology and Biochemistry), Joint Discussion on), 911
  Measurements of Conduction at (Low Temperature Group of the Physical Society Symposium on), 83
  Thermal Contact at (Dr. R. Berman and C. F. Mate), 1661
Températures électroniques des nébuleuses planétaires (Henri Andrillat), 431
Temperley, H. N. V. : Changes of State, a Mathematical-Physical Assessment, *review* by Prof. E. C. Stoner, 547
Template Model for the Synthesis of Ribonucleic Acid from Deoxyribonucleic Acid (Dr. Geoffrey Zubay), 1290
Temple, Prof. G. : Eigenfunctions, *review*, 1184
Templeton, W. L. : Effects of Pollution on Living Material (Pollution by Radioactive Wastes), 1210
Temporal Discrimination Learning : Phenylketonuria in the Rat associated with Decreased (Victor H. Auerbach, Prof. Harry A. Waisman and L. Benjamin Wyckoff, jun.), 871
Ten Cate, Dr. R. : Nutrition and Teeth (Embryology of Teeth, with particular reference to the Histochemistry), 1704
Ten Steps Forward—World Health 1948-58 (Ritchie Calder), 1132
Tendency to cling to Glass and Haemagglutination produced in Erythrocyte Suspensions by Ferric Chloride and by Influenza Virus : Comparison of the (William R. Chesbro and Prof. Leslie R. Hedrick), 1164
Tensile Strength of Indium (Prof. D. S. Eppelsheimer and L. J. Reitsma, jun.), 339 ; (B. Fullman), 862
Tension (Oxygen) : Critical Effect of, on Rate of Growth of Animal Cells in Continuous Suspended Culture (Dr. P. D. Cooper, A. M. Burt and J. N. Wilson), 1508
Tension (Surface), of the Blood and Atherogenesis (P. De Somer, J. Van den Bosch and J. V. Joossens), 59
Tensor (Permeability), for 'Ferroxcube' at 24,000 Mc./s. : Measurements of the (G. C. Robbrecht and J. L. Verhaeghe), 1080
Teoh, Dr. T. B. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Terada, Kikuo (Sugawara, Ken, and) : Oxidized Iodine in Sea Water, 250
Teratogenic Action of X-Radiation : Influence of Cysteamine on the (Dr. D. H. M. Woollam and Dr. J. W. Millen), 1801
Teratogenic Activity of Hypervitaminosis A : Effect of Vitamin B Complex on the (Dr. J. W. Millen and Dr. D. H. M. Woollam), 940
Termitophilous Staphylinidae (Coleoptera) : A Monograph on the (Prof. Charles H. Seevers), *review* by E. B. Britton, 144
Terms used in Wood Anatomy : International Glossary of (International Association of Wood Anatomists), 1709
Terms and Definitions : Gas Chromatographic (Marcel J. E. Golay), 1146
Terpene Formation in Pine from Mevalonic Acid (Robert G. Stanley), 738
Terrestrial Arthropods : The Water Relations of (Prof. E. B. Edney), *review* by Dr. Kenneth Mellanby, 72
Terry, D. A. (Broadbent, A., and) : Effect of Chloramphenicol on a Fungus, 1107
Terry, G. C., and others : Mosaic Structure of Photographic Emulsion Crystals, 1726
Tervalent Gold : Formation of Higher Bromo-Complexes of, in Non-Aqueous Solution (C. M. Harris and I. H. Reece), 1665
Test for Hepatotoxic Grass : Relationship between the Presence of Fungal Spores and a (J. C. Percival and Dr. R. H. Thornton), 1095
Test (Colorimetric), for Gibberellic Acid and Evidence from a Dwarf Pea Assay for the Occurrence of a Gibberellin-like Substance in Wheat Seedlings (G. M. Simpson), 528
Test (A Genetic), for Side-chains in a Phage Chromosome (Myron Levine and Roy Curtiss, III), 126
Test (Serological), for Determination of Parentage in Cattle (Dr. J. Rapacz and Dr. S. Dubiski), 1176
Test-Papers (Stable), for Seminal Acid Phosphatase (S. S. Kind), 1372
Testing of Explosives : The Impact (Dr. Paul W. Levy), 37
Testing Insecticides : A Critical Review of the Techniques for (Dr. J. R. Busvine), *review* by Dr. A. H. McIntosh, 486
Testing of Intentional Food Additives to establish their Safety for Use : Procedures for the—Second Report of the Joint FAO/WHO Expert Committee on Food Additives (World Health Organization), 850
Testing (Biological), of Insecticides in the Laboratory, *review* by Dr. A. H. McIntosh, 486
Testosterone Propionate and 4-Chlorotestosterone Acetate : Action of, on Protein Synthesis *in vitro* (A. Bernelli-Zazzera, M. Bassi, R. Comolli and P. Lucchelli), 663
Tests (Experimental), of Quantum Electrodynamics (Prof. W. E. Lamb), 160
Tests (Spot), in Inorganic Analysis (Prof. Fritz Feigl), fifth English edition (translated by Prof. Ralph E. Oesper), *review* by C. O. Harvey, 1588
Tetanus Toxin Receptor : Identity of the, in Nervous Tissue (Dr. W. E. van Heyningen), 1809
Tetraacetatocobaltate (III) (Ethylene Diamine) : Electron Transfer and Thermal Racemization of (Yong Ae Im and Prof. Daryle H. Busch), 1368
Tetraacetic Acid (Ethylenediamine) : Effect of, on the Enzyme System of Yeast Cells (J. P. Shukla and K. A. Prabhu), 1316
  The Analytical Uses of (Prof. Frank J. Welcher), *review* by C. O. Harvey, 1471
  Ingestion of, and the Effect on Life Span of Irradiated and Control *Habrobracon* Females (Leo E. LaChance), 870
Tetraborate (Sodium), and Boric Acid : Effects of Electron Bombardment upon, in an Electron Microscope (Helena Lopes de Souza Santos), 1297
Tetrad Analysis : Use of Loosely Linked Genes to estimate Chromatid Interference by (Dr. H. L. K. Whitehouse), 1173
Tetrads (Megaspore), in a Coenopterid Fern (W. G. Chaloner), 771
Tetraethyl Pyrophosphate : New Potent Reactivators of Acetocholinesterase inhibited by (Dr. F. Hobbiger, Dr. D. G. O'Sullivan and Dr. P. W. Sadler), 1498
Tetrahedral Co-ordination in Ni (II), (Dr. Leonard I. Katzin), 1013
Tetrahedral Co-ordination of Nickel (II), (Prof. E. C. Lingafelter), 1730
Tetrahydrofolic Acid : Interaction of Formaldehyde and, and its relation to the Enzymic Synthesis of Serine (Dr. R. L. Blakley), 1719
Tetrazines and Pentazines: The 1,2,3- and 1,2,4-Triazines, (John G. Erickson, Paul F. Wiley and V. P. Wystrach), *review* by Dr. F. G. Mann, 1762
Textile Institute : Election of F. L. Barrett to honorary membership, 229
  Warner Medal awarded to E. Lord, 771
  Institute Medal awarded to W. A. Dutton and H. Marsden, 1205
  Service Medals awarded to J. Tankard and Dr. F. O. Howitt, 1279
Thackeray, A. D. (Feast, M. W., and) : Galactic Rotation, 1347
Thallium (25-35 Atomic per cent) : Ordering in Liquid Mercury–Thallium Alloys containing (R. G. Ward and J. R. Wilson), 334
Thallium Alloys (Liquid Mercury–) containing 25-35 Atomic per cent Thallium : Ordering in (R. G. Ward and J. R. Wilson), 334
Thames (River) : Occurrence of an Exotic Oligochaete *Branchiura sowerbyi* Beddard, 1892, in the (Dr. K. H. Mann), 732
Theorems derived from Analogues : Localization of Interaction Sites in Multi-Component Transfer Systems— (Prof. Britton Chance, William Holmes and Joseph Higgins, and Dr. C. M. Connelly), 1190
Theoretical Astrophysics (edited by V. A. Ambartsumyan), translated from the Russian by J. B. Sykes, *review* by Prof. R. O. Redman, 548
Theoretical Expression for Solubility Product (Dr. K. Krishnamurti), 1227
Theoretical Genetics, *review* by Prof. Kenneth Mather, 899
Theoretical Optics, *review* by G. R. Noakes, 348

Theoretical Organic Chemistry (Symposium on, organized by the Chemical Society, under the auspices of the Organic Chemistry Section of the International Union of Pure and Applied Chemistry), 22, 1340
Theoretical Physics at Nottingham, 155
Theoretical and Applied Mechanics (Indian Society of Theoretical and Applied Mechanics fourth Congress on), 1133
Theoretical and Applied Mechanics, Indian Society of: Fourth Congress on Theoretical and Applied Mechanics, 1133
Theoretical and Applied Mechanics, International Union of, and the International Union of Geodesy and Geophysics: International Symposium on Atmospheric Diffusion and Air Pollution, 22, 1134
Theories of Nuclear Moments (R. J. Blin-Stoyle), *review* by J. S. Bell, 8
Theories of the Universe from Babylonian Myth to Modern Science (edited by Milton K. Munitz), *review* by Dr. A. R. Hall, 277
Theory: Neutron Transport (B. Davison, with the collaboration of J. B. Sykes), *review* by Dr. R. Englman, 620
  Nuclear, *review* by Dr. A. M. Lane, 756
  Set (Felix Hausdorff), translated from the German by John R. Aumann *et al.*, *review* by Dr. R. G. Cooke, 1046
  Space-Group (N. V. Belov), translated by V. Balashov, 432
Theory of Determinants and Matrices: Introduction to the (Edward T. Browne), *review* by Dr. W. L. Ferrar, 1599
Theory of Dielectrics (Prof. H. Fröhlich), second edition, *review* by Dr. A. F. Devonshire, 972
Theory of Epidemics: The Mathematical (Norman T. J. Bailey), *review* by S. J. Kilpatrick, 9
Theory of Rocket Flight, *review* by D. G. King-Hele, 821
Theory of Water Waves: Contributions to the, *review* by Dr. M. S. Longuet-Higgins, 967
Theory (The Advanced), of Statistics (Prof. Maurice G. Kendall and Alan Stuart), Vol. 1, Distribution Theory, *review* by Dr. D. J. Finney, 1470
Theory (Electric Field), of Aurorae (Dr. G. C. Reid), 1791
Theory (Immunological), of Cancer: Further Observations on Tumour-enhancing Factors—their Bearing on the (Prof. H. N. Green and R. Wilson), 1054
Theory (Junction Transistor): An Introduction to (Dr. R. D. Middlebrook), *review* by D. D. Jones, 756
Theory (Probability): An Introduction to, and its Applications (Prof. William Feller), Vol. 1, second edition, *review* by Dr. L. S. Goddard, 489
Theory (Shell), of the Nucleus (Prof. Eugene Feenberg), second printing, *review* by Dr. A. M. Lane, 756
Theory (A Structural), for Metal Alkoxide Polymers (Dr. D. C. Bradley), 1211
Theory and Application of Integral Equations, *review* by Prof. T. A. A. Broadbent, 1259
Thermal Annealing of Chemical Radiation Damage (Dr. A. G. Maddock and S. R. Mohanty), 1797
Thermal Burns in Rats: Experimental Suppression of Increased Capillary Permeability in (Dr. W. G. Spector and Dr. D. A. Willoughby), 949
Thermal Conductivity Detector in Gas Chromatography: Effect of the Carrier Gas on the Sensitivity of a (Dr. N. H. Ray), 1663
Thermal Contact at Low Temperatures (Dr. R. Berman and C. F. Mate), 1661
Thermal Decomposition of Antibiotics (Prof. Wesley W. Wendlandt and Morris Zief), 665
Thermal Decomposition of Hydrogen Peroxide Vapour (Dr. D. E. Hoare, J. B. Protheroe and Prof. A. D. Walsh), 654
Thermal Dehydration of Kaolinite: Kinetics of the (T. Jacobs), 1086
Thermal Precipitator Samples: Counting Error due to Overlapping Particles in (S. A. Roach), 134
Thermal Racemization of Ethylenediaminetetraacetatocobaltate (III): Electron Transfer and (Yong Ae Im and Prof. Daryle H. Busch), 1368
Thermal Stress in the Central Nervous System of Man: Biochemical Basis of Disturbances caused by (M. Krause), 1376
Thermodynamics and Fluids, *review* by Prof. J. M. Coulson, 822
Thermoelectric Cooling: Semiconductor Thermoelements and (Prof. A. F. Ioffe), translated from the Russian, *review* by Prof. G. F. J. Garlick, 72
Thermo-electric Observations on Grey Selenium (J. I. Carasso and R. W. Pittman), 1011
Thermo-electric Power, *review* by Prof. G. F. J. Garlick, 72
Thermoelements and Thermoelectric Cooling: Semiconductor (Prof. A. F. Ioffe), translated from the Russian, *review* by Prof. G. F. J. Garlick, 72
Thermogravimetric Investigations of Peat (J. A. Waddams and P. S. Gray), 1729
Thermolabile Factor causing the Conversion of Protochlorophyll to a Leuco-Compound: Presence in Root Tips of a (Z. Hejnowicz), 1023
Thermometer: Low-Temperature (J. E. Kunzler, T. H. Geballe and G. W. Hull), 770
Thermometry: History of, 1487
Thermo-Nuclear Processes (Institution of Electrical Engineers Convention on), 1488
Thermonuclear Project (Controlled): Transfer from Harwell to Winfrith Heath, Dorset, 697
Thermonuclear Reaction Rates: Contribution of High-Energy Particles to (Dr. G. Eder and Dr. H. Motz), 1140
Thermonuclear Reactions (Controlled): Plasma Physics and the Problems of (edited by Leontovitch), 1053
Thermonuclear Research: Some Aspects of (Dr. T. E. Allibone), 579
Thermophilous Shrimp from Tunisia, *review* by Dr. Isabella Gordon, 1186
Thermosbaena mirabilis: Anatomie und Histologie von (Dr. Rolf Siewing), *review* by Dr. Isabella Gordon, 1186
Theses: University, 562
Thetford Heath Nature Reserve, 161
Thiamine-deficient Fungus: *Fomes noxius*, a (A. Riggenbach), 1390
Thickness of the Earth's Crust in the Albertan Plains of Western Canada: Measurement of the (Dr. T. C. Richards), 384
Thickness (Film): Errors in the Measurement of, by Multiple-Beam Interferometry (C. Weaver and P. Beniamin), 1149
Thickness (Mass), of Cell Membranes: Determination of the, from their Electron Micrographs (M. J. De and P. Sadhukhan), 1008
Thiery, Dr. M., and others: Fine Structure of the Nuclear Envelope of Carcinoma Cells, 1030
Thimann, Prof. Kenneth V. (edited by, with the assistance o (Critchfield, William B., and Zimmermann, Martin H.): The Physiology of Forest Trees—a Symposium held at the Harvard Forest, 1957, *review* by Dr. L. Leyton, 1698
Thin Films: Mechanical Properties of Whiskers and (J. E. Gordon and Dr. J. W. Menter), 296
Thin Mercury Films: A New Phenomenon of Electron Emission from (Dr. H. von Bertele), 1148
Thin Metal Films: Calculation of Absorption Peaks in (Robert M. Hill), 1150
Thin Plane Parallel Sections of Mineralized Specimens: A New Method for obtaining (Dr. O. Hallén and Dr. H. Röckert), 1225
Thio-Thiophthen, an Unusual New Type of Aromatic System (Prof. S. Bezzi, M. Mammi and C. Garbuglio), 247
Thiobacillus thioparus: Incorporation of Radioactive Sulphur by (Prof. B. Skarzynski and W. Ostrowski), 933
Thiobacillus thioparus and *T. thiocyanoxidans*: Utilization of Thiocyanate by (Prof. F. C. Happold, G. L. Jones and D. B. Pratt), 266
Thiocyanate: Utilization of, by *Thiobacillus thioparus* and *T. thiocyanoxidans* (Prof. F. C. Happold, G. L. Jones and D. B. Pratt), 266
Thiol Compounds: Chromatography of (Dr. S. P. Spragg), 1314
Thionine: Photo-reduction of Methylene Blue and, by Ferrous Sulphate using Flash Irradiation (Dr. C. A. Parker), 245
Thiosulphate: Reactions of, with Cysteine (Tadeusz W. Szczepkowski), 934
Thom, Dr. H. B.: At the Eighth Quinquennial Congress of the Universities of the Commonwealth (Who should Govern University Policy?), 1284
Thomas, D. K., and others: Design and Management of a Nuclear Science Laboratory, 367
Thomas, G.: Mechanical Properties of Whiskers and Thin Films (Precipitation Phenomena and Dislocation Structures in Thin Foils of Aluminium/Magnesium/Zinc Alloys), 298
Thomas, H. H. B. M.: Promoted to Senior Principal Scientific Officer in the Scientific Civil Service, 992; work of, 992
Thomas, Prof. J. André (publiés sous la direction de): Les Facteurs de la Croissance cellulaire, *review* by Prof. W. S. Bullough, 551
Thomas, M. J. (Reith, Dr. W. S., and): Isolation from Human Blood of a New Substance associated with Fat Transport Activity, 604
Thomas, -.: Modern Educational Treatment of Deafness, 920
Thomason, Doreen, and Schofield, Raymond: Calcium Exchanges of Ehrlich Ascites Tumour Cells of Mice *in vitro*, 809
Thompson, D'Arcy Wentworth, the Scholar-Naturalist, 1860-1948 (Ruth D'Arcy Thompson), *review* by Prof. C. M. Yonge, 552
Thompson, Prof. F. C.: *Obituary* of Prof. C. H. Desch, 223
  History of Iron in Britain, *review*, 349
  The Institute of Metals, 981
  Fuel and Power in British Industry, 1713
Thompson, M. W.: Measurements of Conduction at Low Temperatures (Scattering by Impurities), 85
Thompson, Philip G.: Awarded a United States fellowship in chemistry at the University of Cambridge by the Ramsay Memorial Fellowships Trustees, 432
Thompson, Ruth D'Arcy: D'Arcy Wentworth Thompson, the Scholar-Naturalist, 1860-1948, *review* by Prof. C. M. Yonge, 552
Thompson, Prof. R. H. S.: Appointed a member of the Medical Research Council, 771
Thomson, Sir George: Elected president of the Institute of Physics, 88, 777
Thomson, Sir Landsborough: The Hawfinch, *review*, 419
  The Birds of the British Isles, *review*, 490
  Georgia Birds, *review*, 759
Thonemann, Dr. Peter: Granted study leave from the Atomic Energy Research Establishment, Harwell, to go to the Institute of Advanced Studies in the University of Princeton, 1129
Thoracic Duct Lymph of the Guinea Pig: Labelling of Cells in, after Tritiated Thymidine (Prof. J. M. Yoffey, Prof. N. B. Everett and Prof. W. O. Reinhardt), 1608
Thorium IV Acetylacetonate: Co-ordination in (Prof. D. Grdenić and B. Matković), 465
Thorne, G. N.: Uptake and Translocation of Radioactive Phosphorus in Plants, 1775
Thorne, H. V. (Cartwright, Sheila F., and): Use of Two Properties of the Virus of Foot-and-Mouth Disease in Studies of its Multiplication, 717
Thornhill, C. K.: Promoted to Deputy Chief Scientific Officer in the Scientific Civil Service, 992; work of, 992
Thornton, John L.: Classics of Librarianship, *review* by R. Brightman, 1117
Thornton, Dr. R. H.: Ecology of Soil Fungi, 1559
  A Soil Fungus Trap, 1690
Thornton, Dr. R. H. (Percival, J. C., and): Relationship between the Presence of Fungal Spores and a Test for Hepatotoxic Grass, 1095
Thoroughbred Mares: Coat-Colour and Longevity in (Dr. Alex Comfort), 1531
Thorpe, Dr. W. H.: General Entomology, *review*, 486
  Further Studies on the Process of Song Learning in the Chaffinch (*Fringilla coelebs gengleri*), 554
Thought (The Philosophy of Symbolic Forms, by Ernst Cassiser, Vol. 1), translated by Ralph Manheim, *review* by F. I. G. Rawlins, 1586
Thought: Mythical (The Philosophy of Symbolic Forms, by Ernst Cassirer, Vol. 2), translated by Ralph Manheim, *review* by F. I. G. Rawlins, 1586
Thought Processes: The Mechanization of (Symposium at the National Physical Laboratory), 1416
Thousand Suns: Brighter than a—the Moral and Political History of the Atomic Scientists (Dr. Robert Jungk), translated into English by James Cleugh, *review* by Sir John Cockcroft, 547
Thrall, Prof. Robert M., and Tornheim, Leonard: Vector Spaces and Matrices, *review* by Dr. R. G. Cooke, 1117
'Thread Protein' Polymorphism in Cattle: A Genetic Mechanism for (Dr. G. C. Ashton), 65
Threadgold, Dr. L. T.: Photoperiodic Response of the House Sparrow, *Passer domesticus*, 407
Three-Dimensional Flow (Two- and), of Grains through Apertures (R. L. Brown and J. C. Richards), 600
Three Steps to Victory (Sir Robert Watson-Watt), *review* by Dr. R. L. Smith-Rose, 415
Three-stranded Polyribonucleotide Structure (Dr. Geoffrey Zubay), 388
Threlfall, C. J. (Stoner, H. B., and): Biochemical Response to Physical Injury (The Effect of Limb Ischaemia on Carbohydrate Distribution and Energy Transformation), 1494
Thresher, C. L., and others: Auxins and their Effect on the Growth of Unicellular Algae—Ethanol as a Carbon Source for the Growth of *Chlorella vulgaris*, 1360

Threshold (Auditory) : Lowering of an, produced by a Light Signal occurring after the Threshold Stimulus (C. I. Howarth and M. Treisman), 1093
Threshold Phenomenon (An Anodal), in the Squid Giant Axon (John R. Segal), 1370
Threshold Stimulus : Lowering of an Auditory Threshold produced by a Light Signal occurring after the (C. I. Howarth and M. Treisman), 1093
Thring, M. W. (senior editor) : Selected Combustion Problems, 2, Transport Phenomena, Ignition, Altitude Behaviour and Scaling of Aero-engines (AGARD Combustion Colloquium, Liège, 1955), *review* by Dr. J. H. Burgoyne, 622
Thring, M. W., and others : Science in the Use of Coal (Carbonization of Coal), 25
Thring, M. W. (Essenhigh, R. H., and) : Science in the Use of Coal (Combustion and Gasification), 25
Thring, M. W. (Hardcastle, J. W., and) : Science in the Use of Coal (Combustion and Gasification), 26
Thring, M. W. (Underwood, G., and) : Science in the Use of Coal (Combustion and Gasification), 26
Thrombin, Plasmin and Trypsin : Comparative Kinetic Behaviour of, toward Synthetic Substrates (Dr. H. A. Scheraga, S. Ehrenpreis and E. Sullivan), 461
Thymidine (Labelled) : Effect of Colchicine on the Utilization of, during Chromosomal Reproduction (L. F. La Cour and Dr. S. R. Pelc), 506
Thymidine (Tritiated) : Labelling of Cells of Thoracic Duct Lymph of the Guinea Pig after (Prof. J. M. Yoffey, Prof. N. B. Everett and Prof. W. O. Reinhardt), 1608
Thymus : Influence of the, on the Reaction of the Adrenal to Adrenocorticotropic Hormone in the Rat (Dr. J. Comsa), 57
  Influence of the, upon the Reaction of the Rat to Anterior Pituitary Growth Hormone (Dr. J. Comsa), 728
Thyroid (Rat) : Effect of Benzene on (Dr. Angelo Iannaccone and Dr. Giuseppe Cicchella), 669
Thyroid Function : Influence of Temperature and Light on (F. A. Soliman, H. M. Badawi and Y. S. Ghanem), 57
Thyroid Pre-treatment : Effect of, on the Mortality of X-irradiated Mice (Dr. L. Novák and Dr. M. Pospíšil), 1603
Thyroidal Iodide Transport : Cardiac Glycosides and (Dr. J. Wolff and J. R. Maurey), 957
Thyroids (Human) : Iodine-131 in, following the Windscale Reactor Accident (G. Maycock and J. Vennart), 1545
Thyrotropic Hormone and Triiodothyronine : Differences between the Early Metabolic Effects of (Dr. B. S. Hetzel, J. S. Charnock and B. F. Good), 1166
Thyroxin Administration : Effect of, on the Rate and Steric Course of Enzymatic Reduction of Steroids (Dr. Joseph McGuire and Gordon Tomkins), 261
Thyroxine in Serum : Chromatographic Detection of Minute Quantities of (Dr. Viktor Stolc), 52
Thyroxine-binding Protein in the Serum of Rabbit Foetuses (Carlos Osorio and N. B. Myant), 866
Tibiae (Isolated Embryonic Rat) : Cultivation of, on a Chemically Defined Medium (Susan Heyner and Dr. J. D. Biggers), 810
Ticks and Tick-borne Diseases : Problems of (United Nations Food and Agriculture Organization and the Office International des Epizooties Meeting to discuss), 1416
Tide : The Annual Pole (Prof. Walter Munk and Richard Haubrich), 42
Tide at Shackleton (J. G. D. Pratt), 1394
Tiffen, Dr. R. W. : Appointed to the University of London readership in applied mathematics at Birkbeck College, 1554
Tille, J. J., and others : Purkinje and Ventricular Membrane Resistances during the Rising Phase of the Action Potential, 1161
Tiller Population of Grass Swards : Changes in the (Dr. R. H. M. Langer), 1817
Tilley, Prof. C. E. : Elected president of the Mineralogical Society, 1348
Tillotson, E. : The European Seismological Commission, 26
Tilt Criteria and Direction of Rotation of Spiral Galaxies (G. de Vaucouleurs), 1287
Timber Research in the United Kingdom : Future of, 1204
Time-dependent Organization in a Micelle Series : Origin of (T. Nash), 1536
Time Measurements (Astronomical) : Comparison of, with Atomic Frequency Standards (J. -P. Blaser and J. De Prins), 859
Time Rates of Wages and Hours of Labour (Ministry of Labour and National Service), twelfth edition, 770
Time-Series (Multiple) : The Analysis of (M. H. Quenouille), *review* by Dr. N. L. Johnson, 1183
Time-Span of Discretion in Job Analysis (J. M. M. Hill), 998
Time Treatment (Continuous), of a Storage Problem (J. Gani and N. U. Prabhu), 39
Timmis, G. M., and others : Tumour-inhibiting Action of 1:6-Dimethanesulphonyl-D-mannitol, 1164
Tipnis, C. B. (Parthasarathy, Dr. S., and) : Diffraction of Light by Ultrasonic Waves—Oblique Incidences, 1083
  Diffraction of Light by Ultrasonic Waves, Oblique Incidence and Sound Intensity, 1795
Tipula oleracea, L. : Desiccation of Eggs of the Crane Fly (Roger Laughlin) 613
Tissières, Dr. A., and Watson, Dr. J. D. : Ribonucleoprotein Particles from *Escherichia coli*, 778
Tissue (Adipose) : Heparin Content of (H. G. Hind and S. M. McGinn), 117
Tissue (Apple-fruit) : Cultivation of, *in vitro* (Dr. D. S. Letham), 473
Tissue (Equine Liver) : Molybdenum Content of (P. A. Moore), 1175
Tissue (Insect Conductive) : Distribution of Choline Acetylase in (E. H. Colhoun), 1378
Tissue (Nervous) : Identity of the Tetanus Toxin Receptor in (Dr. W. E. van Heyningen), 1809
Tissue (Normal and Lymphomatous Mouse) : Lysins and Agglutinins in (Dr. Eric Ponder and Ruth V. Ponder), 1737
Tissue Amines : Adrenalectomy and (R. Hicks and Dr. G. B. West), 401
Tissue Culture : Action of Hydrocortisone on Respiration of Human Cancer Cells in (Henry Grossfeld), 35
  Effect of Adrenaline on Neurofibril Formation in Adult Mammalian Cortical Neurones in (R. S. Geiger), 1674
  Selection of Cell Lines in, by the Use of Cytotoxic Antisera (Dr. V. Defendi, A. A. Kamrin and Dr. J. S. Colter), 1246
Tissue Culture infected with the Virus of Foot-and-Mouth Disease : Infectivity of Ribonucleic Acid from Mice and (F. Brown, R. F. Sellers and Doreen L. Stewart), 535
Tissue Culture (Sunflower) : Effect of Gibberellin on (James H. M. Henderson), 880
Tissue Extracts : Release of Histamine from Mast Cells by (G. T. Archer), 726
Tissue-Specific Antigens : Distribution of, in Centrifugal Fractions of Rat Liver (Dr. Peter Vogt), 1807
Tissues : Indole-3-aldehyde from (Prof. R. A. Morton and N. I. Fahmy), 939
Tissues (Dental) : Accumulation of Strontium-90 in (W. Holgate, R. H. Mole and Janet Vaughan), 1294
Tissues (Lactating Mammary Gland), in Rats : Effect of Oxytocin Administration on Respiration of (K. Ōta and A. Yokoyama), 1509
Tissues (Mammalian) : Water Activity of (Dr. LeRoy H. Maffly and Dr. Alexander Leaf), 60
Tissues (Plant) : Occurrence of Gentisic Acid in (Dr. L. A. Griffiths), 733
Tissues (Plant), treated with Indole-3-Acetic Acid : Release of Ammonia by (Leonora Reinhold), 1022
Titanium Getter Pump : A New Type of (L. Holland, L. Laurenson and J. T. Holden), 851
Titchmarsh, Prof. E. C. : Eigenfunction Expansions associated with Second-Order Differential Equations, Part 2, *review* by Prof. G. Temple, 1184
Titrations (Radiometric), with Complexons (T. Braun, I. Maxim and I. Galateanu), 936
Tivy, Dr. Joy (edited by Miller, Prof. Ronald, and) : The Glasgow Region, a General Survey, *review*, 587
Toad (Dehydrated), *Bufa marinus* : Loss of Sodium from the Skin of the (P. J. Bentley), 1810
Tobacco Alkaloids : Separation of some, by Gas Chromatography (Dr. Louis D. Quin), 865
Tobacco Mosaic Virus : Production of Mutants of, by Chemical Alteration of its Ribonucleic Acid *in vitro* (Dr. Alfred Gierer and Dr. Karl-Wolfgang Mundry), 1457
Tobacco Mosaic Virus Nucleic Acid : Action of Micrococcal Phosphodiesterase on (K. K. Reddi), 1308
Tobacco Ring-Spot-like Virus : An Aphid-transmitted, isolated from *Begonia tuberhybrida* (J. Semal), 1688
Tobias, Cornelius A. (edited by Lawrence, John H., and) : Advances in Biological and Medical Physics, Vol. 5, *review* by Prof. J. A. V. Butler, 827
Tocantins, Dr. L. M., and others : Phosphatidyl Serine and Blood Coagulation, 1031
η-Tocopherol : Biological Potency of (J. Bunyan), 1237
Todd, Dr. J. A. : Tables of Partitions, *review*, 1046
Tokyo Observatory : Construction of a Polar Tube at (N. Sekiguchi and J. Matsumoto), 1643
Tolerance of Skin Homografts related to Fatal Disease in Separated Rat Parabionts (Dr. B. Nakič and V. Silobrčić), 264
Tolerance (Immunological) : Failure to induce, during Recovery from Irradiation (G. J. V. Nossal and Lois Larkin), 1447
Tolerance (Insecticide), of Insects : Variations in the (Dr. D. Spiller), 1177
Tolerant of Heavy Metals : Populations of *Agrostis* spp. (D. Jowett), 816
Tolliday, Miss Joan : Crystal Structure of β-Wollastonite, 1012
Tomkins, Gordon (McGuire, Dr. Joseph, and) : Effect of Thyroxin Administration on the Rate and Steric Course of Enzymatic Reduction of Steroids, 261
Tomlinson, Dr. J. A., and others : Purification and Serology of Cucumber Mosaic Virus, 1616
Tomlinson, Dr. T. B. : Awarded the Clerk Maxwell Premium of the British Institution of Radio Engineers, 295
Tompkins, Dr. C. K. (Los, Dr. J. M., and) : Charge Transfer Processes (Adsorption of Methylene Blue at Mercury), 1355
Tonge, C. H., and Boult, E. H. : Collagen in Human Cementum as shown by Electron Microscopy, 459
Tonini, Prof. D. : Physics of Ice Movement (Glacier Theory), 1561
Tool (Neurosurgical) : The High-Energy Proton Beam as a (Börje Larsson, Lars Leksell, Prof. Bror Rexed, Patrick Sourander, William Mair and Bengt Andersson), 1222
Tools of Biological Research (Symposium on, in the Physiology Theatre, Guy's Hospital, London), 918
Tools (Machine), and Processes : Engineering Materials, (W. Steeds), third edition, *review* by K. J. Pascoe, 8
Toosey, R. D. : Effect of Number of Sprouts per Set on Yield and Grading of Main-Crop Potatoes, 269
Topography : Lunar—Gift to the University of Manchester, 1552
Topping, Dr. J. : The Diploma in Technology, 160
Tornheim, Leonard (Thrall, Prof. Robert M., and) : Vector Spaces and Matrices, *review* by Dr. R. G. Cooke, 1117
Torry Research Station : Responsibility for the research programme, 1133
Torz, E., and others : A Biological Action of Injected Deoxyribonucleic Acid, 1679
Torz, R., and others : A Biological Action of Injected Deoxyribonucleic Acid, 1679
Total Body Irradiation : Effect of, on Capillary Permeability (Prof. G. Szabó, S. Magyar, P. Kertai and E. Zádory), 885
Total Carbohydrate : Spectrophotometric Determination of (B. R. Hewitt), 246
Toughness in Cold-stored Fish : Measurement of (Dr. R. M. Love), 108
Toulmin, Prof. Stephen Edelston : The Uses of Argument, *review* by Prof. J. O. Urmson, 212
Tourky, Prof. A. R. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Tove, Prof. S. B. (Anderson, R. L., and) : Effect of Copper Deficiency on Synthesis of Haem, 315
Tovey, Dr. Geoffrey H., and others : Use of Lyophilized Formol-treated Red Cells in Blood-Group Serology, 951
Towler, J. H., and others : Science in the Use of Coal (Carbonization of Coal), 25
Townsend, Harry (Edwards, Prof. Ronald S., and) : Business Enterprise, its Growth and Organization, *review* by L. G. Jaeger, 971
Toxic Effects produced by Pyrimethamine in Chickens and their Antagonism by Folic Acid (J. M. S. Lucas), 1449
Toxicity of a Cholinesterase Inhibitor to the Hibernating Hamster (J. F. Scaife and D. H. Campbell), 1739

Toxicity towards certain Plant Pathogens : 'Karathane'—the Relative Importance of the Phenolic and Unsaturated Acid Components in (Dr. A. H. M. Kirby and E. L. Frick), 1445
Toxicity of Urea to Sheep (J. B. Coombe and Dr. D. E. Tribe), 116
Toxicity (Selective) : Chemical Aspects of (Prof. Adrien Albert), 421
Toxicity (Zinc) : Effect of Copper on Growth and Catalase Levels of *Corcyra cephalonica* St. in (K. Sivarama Sastry and Prof. P. S. Sarma), 533
Toxin (High-Titre Diphtheria) : Production of, in Baffled Shake Flasks (Dr. D. C. Edwards), 190
Toxin Receptor (Tetanus) : Identity of the, in Nervous Tissue (Dr. W. E. van Heyningen), 1809
Toxoiding Agent : Beta-Propiolactone as a (E. S. Orlans and V. E. Jones), 1216
Toyoura, Etsuko, and others : A New Method for Resolving Amino-Acids by Metabolism of Bacteria on Benzoyl Derivatives of DL-Amino-acids, 453
Tozer, Dr. B. T., and others : Dissociation of Serological Complexes of Ovalbumin and Haemoglobin using Aqueous Carbon Dioxide, 668, *erratum*, 842
Trace Elements : Influence of, upon Plant Protein Composition (K. H. Schütte and H. E. Schendel), 958
Trace-Labelling of Proteins with Iodine : Efficient (Dr. A. S. McFarlane), 53
Tracer (Radioactive) : Use of Iron-52 as a (Dr. P. E. Francois and Leon Szur), 1665
Tracers and Drugs (Radioactive), circulating in the Blood : Concentration in the Human Ovarian Follicular Fluid of (Prof. Kurt N. von Kaulla, Jerry K. Aikawa and John D. Pettigrew), 1238
Traces of Oxygen in Sodium Metal : Determination of, by Infra-red Spectrophotometry (H. J. de Bruin and L. E. Smythe), 387
Tracheal Sap in Apples : Nitrogenous Components of the (E. G. Bollard), 21
Tracing the Movement of Pebbles marked with the Radioactive Isotope Barium-140—Lanthanum-140 (C. Kidson, A. P. Carr and D. B. Smith), 1347
Tracking Artificial Earth Satellites : A New Method of (A. P. Willmore), 1008
Trade and Economic Conference, Commonwealth : Report of the, 1693
Trade Effluents Sub-Committee: First Report to the Central Advisory Water Committee, 497
Tradescantia (Calcium-deficient) : Chromosome Aberrations in, produced by Irradiation (Dale Steffensen), 1750
Tradition (The Utopist), in English Education (Prof. W. H. G. Armytage), 985
Train, Dr. David : Pharmacopoeias and Formularies, *review*, 279
Training of Curators : Museums in the Commonwealth and Overseas with special reference to the (Museums Association Discussion on), 503
Training of Designers for Industry (Federation of British Industries), 360
Training of Student Apprentices in Electrical Engineering : The Education and (Institution of Electrical Engineers), 1649
Training (Graduate), in Chemical Engineering, 1061
Training (Management) : New Ways in (Cyril Sofer and Geoffrey Hutton), *review* by T. H. Hawkins, 214
Training Centre (Nuclear) : Baghdad Pact, 430
Training Council, Industrial : Functions of the, 1060
Training Managers, *review* by T. H. Hawkins, 214
Training School : Foxboro-Yoxall's, 1278
Transfer of Light Energy and Photosensitization (Society of Physical Chemists of France Symposium on), 231
Transfer (Electron), and Thermal Racemization of Ethylenediaminetetraacetatocobaltate (III), (Yong Ae Im and Prof. Daryle H. Busch), 1368
Transfer (Heat) : Measurement of Sap Flow by (D. C. Marshall), 878
Transfer (Initial), of the Genetic Code from Deoxyribonucleic Acid to Ribonucleic Acid : A Possible Mechanism for the (Dr. Geoffrey Zubay), 112
Transfer (Intercellular), of Herpes Virus : Mode of (Dr. M. G. P. Stoker), 1525
Transfer (Ribosyl), between Ribose Nucleotides in the Rat (Georg B. Gerber and Kurt I. Altman), 1513
Transfer Processes : Charge (Chemical Institute of Canada Symposium on), 1353
Transfer Scholarships : Imperial Chemical Industries, 1554
Transfer Systems (Multi-Component) : Localization of Interaction Sites in—Theorems derived from Analogues (Prof. Britton Chance, William Holmes and Joseph Higgins, and Dr. C. M. Connelly), 1190
Transformation of the α- and β-Forms of Calcium Sulphate Hemihydrate to Insoluble Anhydrite (D. A. Powell), 792
Transformation of a Monochlamydius into a Dichlamydius Chimaera by X-Ray Treatment (Dr. H. W. Howard), 1620
Transformation Characteristics of Direct Hardening Nickel Alloy Steels (Mond Nickel Co., Ltd.), 1643
Transformation (Aerobic), of Cysteine to Sulphate in Soil (J. R. Freney), 1318
Transformation (Type Specificity), in Pneumococci : Effect of Monovalent Cations on (M. Kohoutová), 188
Transformations (Conformal), in Electrical Engineering (Dr. W. J. Gibbs), *review* by Dr. L. S. Goddard, 1630
Transformations (Oriented), during the Heat Treatment of Kaolinite : Evidence of Lattice Defects preceding (Dr. G. B. Mitra), 1794
Transient Intermediates in Redox Processes : Observation of, by variable Voltage Oscillo-polarography and Cyclic Voltammetry (Prof. W. Kemula and Z. Kublik), 793
Transistor Circuit Engineering (edited by Richard F. Shea), *review* by D. D. Jones, 756
Transistor Circuits : An Introduction to (E. H. Cooke-Yarborough), *review* by D. D. Jones, 756
Transistor Theory (Junction) : An Introduction to (Dr. R. D. Middlebrook), *review* by D. D. Jones, 756
Transistors, *review* by D. D. Jones, 756
Transition Elements : Ions of the (Faraday Society General Discussion on), 158, 1349
Transition Metal–Hydrogen Bond in Aqueous Solution : Formation of a (W. P. Griffith, L. Pratt and Prof. G. Wilkinson), 466
Transition Metals : Stereochemistry of Complex Halides of the (Dr. Naida S. Gill, Prof. Ronald S. Nyholm and Peter Pauling), 168
Transition Series Complexes (Spin-Free) : Magnetic Properties of (Dr. B. N. Figgis), 1568
Transitions (Polymorphic), in Anhydrous Sodium Sulphate (R. J. Bird), 1797
Transitions (Sol-Gel), in the Living Cells of Conifers and their relation to Resistance to Cold (Johnson Parker), 1815
Translation : Mechanical, *review* by R. A. Brooker, 618
Translocation of ^{14}C-labelled 2,4-Dichlorophenoxyacetic Acid in Barley and Oats (H. Ingv. Petersen), 1685
Translocation of Radioactive Phosphorus in Plants : Uptake and (G. N. Thorne), 1775
Transmission by the Mite *Dermanyssus gallinae* : Some Observations on the Life-Cycle of *Atoxoplasma*, with particular reference to the Parasite's Schizogony and its (Dr. R. Lainson), 1250
Transmission of Phenotypic Variability within a Pure Line (Dr. H. R. Highkin), 1460
Transmission of Plant Virus Diseases : Seed (N. C. Crowley), 634
Transmission (Mammalian Neuromuscular) : Acetylcholine in (K. Krnjević and R. Miledi), 805
Transmission (Neuromuscular) : Myasthenic-like Features of, after Administration of an Inhibitor of Acetylcholine Synthesis (Dr. J. E. Desmedt), 1673
Transmission (Spinal Synaptic) : Gamma-Amino-*n*-Butyric Acid and (Dr. D. R. Curtis and J. W. Phillis), 323
Transmission (Synaptic), in the Cockroach (T. Yamasaki and T. Narahashi), 1805
Transmission (Synaptic), in a Sodium-free Medium (Dr. K. Koketsu and S. Nishi), 887
Transmission Electron Microscopy of Beryllium (J. D. Baird, O. P. Hartree and R. Phillips), 1660
Transmission Limits (Infra-Red), and Reflectivity of Lithium-6 Fluoride and Lithium-7 Fluoride (Dr. R. W. H. Stevenson and Dr. P. T. Nettley), 471
Transmissions (Powerful Radio) : Health Hazards from (D. H. Shinn), 1792
Transparent : A Simple Method for making Starch-gel Electrophoretic Strips (S. D. Vesselinovitch), 665
Transplantable Tumours : Local Reaction to Non-metastasizing and Metastasizing (Dr. C. Maltoni), 1742
Transplantation of the Forebrain Region of Bird Embryos before the Establishment of a Circulation—Homoplastic Transplants (Dr. Petar N. Martinovitch and Miroslava R. Pavlović), 571 ; Heteroplastic Transplants (Dr. Petar N. Martinovitch), 572
Transplantation of Single Somatic Nuclei : Sexually Mature Individuals of *Xenopus laevis* from the (J. B. Gurdon, T. R. Elsdale and Dr. M. Fischberg), 64
Transplantation Immunity : Part played by Deoxyribonucleic Acid in (Vera Hašková and Miroslava Hrubešova), 61 ; (Prof. P. B. Medawar), 62
Transplanted Rat and Mouse Tumours : Effect of Hydrogen Peroxide on (Dr. Kanematsu Sugiura), 1310
Transport across Cell Membranes : Metabolic Aspects of (edited by Q. R. Murphy), *review*, 1575
Transport of Vitamin A Ester in Rat Serum (C. F. Garbers), 1018
Transport Theory : Neutron (B. Davison, with the collaboration of J. B. Sykes), *review* by Dr. R. Englman, 620
Transport (Thyroidal Iodide) : Cardiac Glycosides and (Dr. J. Wolff and J. R. Maurey), 957
Transuranic Elements : The Chemistry of the (Prof. H. J. Emeléus), 579
Transverse Lesions (Complete), of the Spinal Cord : Adrenal Activity in Subjects with (Dr. R. Robinson and Dr. A. F. Munro), 805
Trap : A Soil Fungus (Dr. R. H. Thornton), 1690
Trauma : Effect of, on Wool Growth (Dr. S. B. Slen), 1322
Travel (Long-range), of the Radioactive Cloud from the Accident at Windscale (N. G. Stewart and R. N. Crooks), 627
Travel Grants under the Fulbright Programme, 1488
Travelling Fellowship in Medicine : Lederle (Medical Research Council Award for 1958-59), 634
Travelling Fellowship in Ophthalmology and Otology : Alexander Piggott Wernher Memorial (Medical Research Council Award for 1958-59), 634
Travelling Fellowship and Student Prizes in Psychiatry (Mental Health Research Fund), 157
Travelling Fellowships in Medical Science : United States Public Health Services (National Institutes of Health, Bethesda), (Medical Research Council Awards), 634
Travelling Fellowships in Medicine : Lilly (Medical Research Council Awards), 634
  Rockefeller (Medical Research Council Awards for 1958-59), 634
Travelling Lectures : Research for Teachers and (United States National Science Foundation), 1276
Travelling Research Fellowships : Carlsberg–Wellcome (Awards for 1958-59), 228
Treasury Control and Expenditure (Sixth Report from the Select Committee on Estimates, Session 1957-58), 1467
Treasury Control and Scientific Research, 1467
Treatment with Bromine : Changes in Ultra-Violet Absorption Spectra of Deoxyribonucleic Acid by (Hiroshi Ishihara, Naohiko Suzuki and Hanako Yokoi), 1302
Treatment (Heat) : Effect of, on the Sintering of 'Active' Ceramic Oxide Powders (D. T. Livey and Dr. P. Murray), 1362
Treatment (Heat), of Kaolinite : Evidence of Lattice Defects preceding Oriented Transformations during the (Dr. G. B. Mitra), 1794
Treatment (Modern Educational), of Deafness : International Congress on the, 89, 919
Treatment (Modern Educational), of Deafness : International Congress on the (Prof. A. W. G. Ewing), 919
Treatment (Oral), with Griseofulvin : Experimental Ringworm in Guinea Pigs— (J. C. Gentles), 476
Treatment (X-Ray) : Transformation of a Monochlamydius into a Dichlamydius Chimaera by (Dr. H. W. Howard), 1620
Trebst, Dr. Achim V., and others : Separation of Light and Dark Phases in the Photosynthesis of Isolated Chloroplasts, 351
Tree Crop Experiments : Yield Variations in, with specific reference to Cacao (T. A. Jones and G. K. Maliphant), 1613
Tree Physiology, *review* by Dr. L. Leyton, 1698
Trees : Gravimorphism in—Effects of Gravity on Growth, Apical Dominance and Flowering in Fruit Trees (Dr. P. F. Wareing and T. Nasr), 379 ; Effect of Gravity on Flowering and Shoot Growth in Japanese Larch (*Larix leptolepis*, Murray), (K. A. Longman and Dr. P. F. Wareing), 380

Trees (Forest) : The Physiology of—a Symposium held at the Harvard Forest, 1957 (edited by Prof. Kenneth V. Thimann, with the assistance of William B. Critchfield and Martin H. Zimmermann), *review* by Dr. L. Leyton, 1698
Trees (Fruit) : Effects of Gravity on Growth, Apical Dominance and Flowering in, (Gravimorphism in Trees), (Dr. P. F. Wareing and T. Nasr), 379
Trees and Shrubs, *review* by J. Robert Sealy, 684
Trees and Shrubs (Flowering) : The Book of (Stanley B. Whitehead), *review* by J. Robert Sealy, 684
Tregear, Dr. Thomas R. : A Survey of Land Use in Hong Kong and the New Territories, 1285
Treisman, M. (Howarth, C. I., and) : Lowering of an Auditory Threshold produced by a Light Signal occurring after the Threshold Stimulus, 1093
Trematode '*Dictyocotyle coeliaca*' : The Enigmatical (Dr. Ben Dawes and Dr. Ivor Griffiths), 1033
Trémolières, J., and Derache, R. : Biochemical Response to Physical Injury (Metabolism of Nucleotides and Phosphate in Injured Tissue), 1494
Trenaman, Dr. J. : At the Library Association Conference at Brighton (Libraries as a Social Force), 1717
Trends (Current), in Heterocyclic Chemistry—Proceedings of a Symposium held at the John Curtin School of Medical Research, Australian National University, Canberra, 1957, under the auspices of the Chemical Society (edited by A. Albert, Dr. G. M. Badger and Dr. C. W. Shoppee), *review* by Dr. F. G. Mann, 1762
Trends (Some Recent), in Metallurgy (British Association for the Advancement of Science, Section B (Chemistry), Discussion on), 1123
Trevarthen, J. (Shaw, K. N. F., and) : Effect of Atmospheric Contaminants on Paper Chromatography of Urinary Indole and Phenol Acids, 664
    Exogenous Sources of Urinary Phenol and Indole Acids, 797
Triazines (The 1,2,3- and 1,2,4-), Tetrazines and Pentazines (John G. Erickson, Paul F. Wiley and V. P. Wystrach), *review* by Dr. F. G. Mann, 1762
Tribe, Dr. D. E. (Coombe, J. B., and) : Toxicity of Urea to Sheep, 116
Tribe, Dr. H. : Ecology of Soil Fungi, 1559
Tri-bromoacetates (Cupric Mono-, Di and) : Structure of (Ryutaro Tsuchida and Shoichiro Yamada), 1230
Tricalcium Phosphate : A New Form of (Dr. R. W. Nurse, J. H. Welch and W. Gutt), 1230
Tricarboxylic Acid Cycle : Potassium Atractylate, a New Inhibitor of the (Prof. R. Santi), 257
Trichophyton terrestre in some British Soils : Occurrence of *Microsporum gypseum*, *Keratinomyces ajelloi* and (Phyllis M. Stockdale), 1754
Tricomi, Prof. F. G. : Integral Equations, *review* by Prof. T. A. A. Broadbent, 1259
Trifolium pratense Pastures (Red Clover) : Reproductive Disturbances of Romney Ewe Lambs grazed on (T. S. Ch'ang), 1175
Trifolium repens L. : Effect of Gibberellic Acid on the Nodulation of White Clover (Dr. Wm. W. Fletcher, J. W. S. Alcorn and J. C. Raymond), 1319
Triiodothyronine : Differences between the Early Metabolic Effects of Thyrotropic Hormone and (Dr. B. S. Hetzel, J. S. Charnock and B. F. Good), 1166
    Effect of, on Radiosensitivity (Dr. Joseph A. Stein and Dr. Melvin L. Griem), 1681
Trilobite *Centropleura* in Queensland : The Middle Cambrian (Dr. A. A. Öpik), 204
Trinity College, Cambridge : Entrance Exhibitions, 1205
Triphosphate (Adenosine) : Colorimetric Determination of Inorganic Phosphorus in the Presence of Glucose-l-phosphate and (Michinori Nakamura and Kenji Mori), 1441
Triplex Safety Glass Company : 'At Home' of the Fundamental Research Laboratory, 1779
Trisaccharides of *Lolium* and *Festuca* (Dr. Anna M. MacLeod and Dr. H. McCorquodale), 815
Tritiated Thymidine : Labelling of Cells in Thoracic Duct Lymph of the Guinea Pig after (Prof. J. M. Yoffey, Prof. N. B. Everett and Prof. W. O. Reinhardt), 1608
Tritium : Molecular Changes in Exchange Labelling with (P. H. Jellinck and D. G. Smyth), 46
Tritium and Paper Chromatography (Dr. A. T. Wilson), 524
Trochophore Larva : An Electron-Microscopic Study of the Ciliature of the (Dr. H. Seuntjens and Dr. W. G. Braams), 1611
Troll, H. -J. : Fodder Plants (Producing Sweet Forms of *Lupinus luteus* and *L. angustifolius* which Ripen uniformly and do not Shed their Seeds), 703
Trophic Condition in Mosquito Populations : Relationship between certain Biological Constants and (Dr. Donald H. Colless), 951
Tropical Forest Archaeology, *review* by Dr. G. H. S. Bushnell, 1044
Tropical Karst (Dr. Marjorie Sweeting), 1415
Tropical Pacific (North-East) : Nitrite Accumulation in the (Wilhelm Brandhorst), 679
Tropical Vegetation : Study of (Unesco), 1776
Tropical Woods, No. 107, International Glossary of Terms used in Wood Anatomy, 1709
Tropics : Health in the, 1132
Tropics during Summer : Salt Requirements in the (Surg. Lieut.-Comdr. Mangal Sain Malhotra), 1036
Tropylium Ion : Polarographic Study of Acid-Base Reactions of the (P. Zuman, J. Chodkowski, H. Potešilová and F. Santavy), 1535
Trotman-Dickenson, A. F. (Kerr, J. A., and) : Absorbents for Aldehydes and Olefins, 466
Trott, N. G., and others : Radioactivity due to Fission Products in Biological Material, 1473
Trounson, J. H. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1137
Truby, Frank K., and Goldzieher, Joseph W. : Electron Spin Resonance Investigations of Rat Liver and Rat Hepatoma, 1371
Trypanocidal Drug : Metamidium, a New (W. R. Wragg, K. Washbourn, K. N. Brown and J. Hill), 1005
Trypsin (Thrombin, Plasmin and) : Comparative Kinetic Behaviour of, toward Synthetic Substrates (Dr. H. A. Scheraga, S. Ehrenpreis and E. Sullivan), 461
Tryptophan Analogues : Effect of, on Reversion of a Tryptophan-requiring Strain of *Escherichia coli* (N. M. Schwartz and B. S. Strauss), 888
Tryptophan-requiring Strain of *Escherichia coli* : Effect of Tryptophan Analogues on Reversion of a (N. M. Schwartz and B. S. Strauss), 888
Tsuchida, Ryutaro, and Yamada, Shoichiro : Structure of Cupric Mono-, Di and Tri-bromoacetates, 1230
Tsuchiya, Dr. T. : Human and Animal Ecology (Serological Tests for Identification and Classification of Fungi), 1649
Tsujimoto, Harry Y., and others : Separation of Light and Dark Phases in the Photosynthesis of Isolated Chloroplasts, 351
Tuamotu Group, French Oceania : Work and Life on Raroia, an Acculturation Study from the (Dr. Bengt Danielsson), *review* by Prof. Raymond Firth, 280
Tuber (Potato) Extracts : Growth-promoting Activity of, in the Coleoptile Straight-Growth Test—Quantitative Aspects of Indoleacetic Acid Detection (A. Booth and Dr. P. F. Wareing), 406
Tubercle Bacilli (Intracellular) : Inhibitory Action of Ethyl Mercaptan on (G. E. Davies and G. W. Driver), 664
Tubercle Bacilli (Killed) : Production of Experimental Allergic Encephalomyelitis in Guinea Pigs with Fractions isolated from Bovine Spinal Cord and (Dr. Marian W. Kies, Dr. Ellsworth C. Alvord, jun., and Elizabeth Roboz), 104
Tuberculin Purified Protein Derivative : Importance of Zinc for the Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* and Large-scale Production of (T. Dekker and H. Huitema), 1387
Tuberculosis in Animals and Man (Prof. John Francis), *review* by Prof. Harold Burrow, 281
Tubifex and *Culex* sp. : Respiration of (A. M. Roberts), 563
Tubule Formation in Rat Brains by Monkey Kidney Cells previously grown *in vitro* (Prof. M. Michael Sigel, Thomas M. Scotti, Martha A. Wryk and Mantley Dorsey, jun.), 1034
Tubules (Renal) : Role of Hyaluronidase in the Re-Absorption of Water in —the Mechanism of Action of the Antidiuretic Hormone (A. G. Ginetzinsky), 1218
Tulley, W. J. : Appointed to the University of London readership in orthodontics at Guy's Hospital Medical School, 1554
Tumour (Mouse Ehrlich Ascites) : Effect of Nitrous Oxide on the Radiosensitivity of (Dr. Michael Ebert and Mrs. Shirley Hornsey), 1240
Tumour Cell Nuclei : Possible Use of Synthetic Surface-active Agents for the Preparation of (Prof. M. E. Hodes, Dr. C. G. Palmer and D. S. Williams), 529
Tumour Cells : Effect of Nitric Oxide on the Radiosensitivity of (Dr. L. H. Gray, F. O. Green and C. A. Hawes), 952
Tumour Cells infected with Encephalomyocarditis Virus : An Ineffective 'Ribonucleic Acid' Component from (J. Huppert and F. K. Sanders), 515
Tumour Cells (Ascites) : Amoeboid Motility of Fresh (Dr. Iwao Hirono), 809
Tumour Cells (Ehrlich Ascites), of Mice *in vitro* : Calcium Exchanges of (Doreen Thomason and Raymond Schofield), 809
Tumour Growth : Plasma Cells and (Prof. B. D. Baruah), 1455
Tumour Growth in Homologous and Heterologous Hosts : Effect of Viral Infection and Cortisone upon (Dr. T. Kuwata, Y. Yasumura and M. Kanisawa), 1678
Tumour-enhancing Factors : Further Observations on—their Bearing on the Immunological Theory of Cancer (Prof. H. N. Green and R. Wilson), 1054
Tumour-inhibiting Action of 1:6-Dimethanesulphonyl-D-mannitol (Prof. A. Haddow, G. M. Timmis and S. S. Brown), 1164
Tumours : Experimental Chemotherapy of, with Hydrogen Peroxide (Dr. M. Chorazy, A. Gettlich, L. Góral, B. Koloczek, E. Molawka, B. Penar and Z. Szweda), 395
Tumours (Subcutaneous), in Rhesus Monkeys : An Outbreak of (Dr. W. G. C. Bearcroft and Dr. Margaret F. Jamieson), 195
Tumours (Transplantable) : Local Reaction to Non-metastasizing and Metastasizing (Dr. C. Maltoni), 1742
Tumours (Transplanted Rat and Mouse) : Effect of Hydrogen Peroxide on (Dr. Kanematsu Suguira), 1310
Tungsten Cathodes : Vacuum Arcs on (H. Wroe), 338
Tunisia : A Thermophilous Shrimp from, *review* by Dr. Isabella Gordon, 1186
Turbulence in Quiescent Prominences determined from Line-widths : Temperature and (Prof. P. ten Bruggencate and Dr. G. Elste), 1154
Turbulent Scattering : Role of, in Long-Distance Radio Propagation at Metre Wave-lengths (F. A. Kitchen and Dr. M. A. Johnson), 302
Turchini, Prof. Jean (Gros, Dr. François, and) : Awarded jointly the Charles Leopold Meyer Award for 1958 of the Société de Chimie Biologique, 1643 ; work of, 1643
Turekian, Karl K. : Rate of Accumulation of Nickel in Atlantic Equatorial Deep-Sea Sediments and its Bearing on Possible Extra-Terrestrial Sources, 1728
Turnbull, D. : Mechanical Properties of Whiskers and Thin Films (Mechanisms of Whisker Growth), 296
Turnbull-Kemp, Peter St.J. : Albinism in the Common or Hottentot Mole-Rat, *Cryptomys hottentotus* Lesson, 1826, 63
Turner, jun., Dr. Almon G., and Clifford, Alan F. : Electronic Configuration d^4 in a Complex Ion, 1369
Turner, Dr. D. B. : At the seventy-sixth Annual Meeting of the Royal Society of Canada (Potentialities of the North-West—Possibilities of Northern British Columbia, the Yukon and the Mackenzie Valley), 701
Turner, Prof. E. E. : Steric Effects in Conjugated Systems (Steric Effects in Diphenyl), 568
Turner, Prof. R. B. : Theoretical Organic Chemistry (Quantum-mechanical Calculations on Conjugated Systems by Kistiakowsky's Classic Method of Measurement of Heats of Hydrogenation), 1341
Turrill, Dr. W. B. : An Important Herbarium, *review*, 752
    British Herbaria, *review*, 759
    Obituary of Dr. T. A. Sprague, 1483
Turrill, Dr. W. B. (Marsden-Jones, E. M., and) : The Bladder Campions (*Silene maritima* and *S. vulgaris*), *review* by Prof. T. G. Tutin, 970
Turvey, Dr. J. R. : At the Third International Seaweed Symposium (Polysaccharides of *Porphyra umbilicalis*), 1779
Tutin, Prof. T. G. : Taxonomy of Vascular Plants, *review*, 824
    Synthetic Taxonomy, *review*, 970

Twice-Born : The—a Study of a Community of High-Caste Hindus (Dr. G. Morris Carstairs), *review* by Prof. K. de B. Codrington, 76
Twilight Sky : Presence of 6707 A. Radiation in the (M. Gadsden and K. Salmon), 1598
Two Properties of the Virus of Foot-and-Mouth Disease : Use of, in Studies of its Multiplication (Sheila F. Cartwright and H. V. Thorne), 717
Two Strains of Mice : Different Types of Haemoglobin in (W. Welling and Dr. D. W. van Bekkum), 946
Two- and Three-Dimensional Flow of Grains through Apertures (R. L. Brown and J. C. Richards), 600
Tye, R. P., and others : Measurements of Conduction at Low Temperatures (Electrical Conductivity and Galvanomagnetic Effects in Metals), 84
Tyler, Dr. Jean M. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1642
Type (A New), of Early Cysticercoid Stage in a Cyclophyllidean Cestode (Joyce E. Rigby and Mrs. Dilys Rawson), 121
Type (A New), of Insecticide (Zenichi Ogita), 1529
Type (A New), of Titanium Getter Pump (L. Holland, L. Laurenson and J. T. Holden), 851
Type (New and Unique), of Cercaria : Sagitta as a Host of Larval Nematodes, including a (Dr. Ben Dawes), 960
Type (A Novel), of Metal-Protein Compounds (Prof. K. H. Gustavson), 1125
Type (Unusual New), of Aromatic System : Thio-Thiophthen, an (Prof. S. Bezzi, M. Mammi and C. Garbuglio), 247
Type Culture Collection of Marine Bacteria : A National (Dr. J. M. Shewan, G. D. Floodgate and P. R. Hayes), 1423
Type Specificity Transformation in Pneumococci : Effect of Monovalent Cations on (M. Kohoutová), 188
Types (Different), of Haemoglobin in Two Strains of Mice (W. Welling and Dr. D. W. van Bekkum), 946
Typhoid (Fowl) : New Vaccine for (Animal Health Trust), 1062
Typhoon Effects at Jaluit Atoll in the Marshall Islands (Dr. David I. Blumenstock), 1267

UBBELOHDE, Prof. A. R. : Work on Fused Salts, *review*, 619
Ubiquinone (Prof. R. A. Morton), 1764
Ueta, T. (Nakamura, Prof. S., and) : 'Crossing' Paper Electrophoresis for the Detection of Immune Reactions, 875 ; *erratum*, 1063
UFAW Handbook on the Care and Management of Laboratory Animals (edited by Alastair N. Worden and W. Lane-Petter), second edition, *review* by Dr. J. O. L. King, 281
Uganda : A Revised Interpretation of the Causes of Loss of Crops of Cotton in the Drier Regions of (J. Bowden and W. R. Ingram), 1750
  Stomoxys sp. on Cattle in (T. H. Coaker and R. G. Passmore), 606
Ulam, S. : Marian Smoluchowski, 301
Ulrich, Dr. H. M. : At the Third International Seaweed Symposium (Alginic Acid and its Derivatives), 1779
Ulshafer, Comdr. Thomas R. (Cohn, Dr. Robert, and) : Electroencephalograph Correlates of Ammonium Carbonate Intoxication in the Rat, 1735
Ulster : Forestry in, 989
Ultimate *p*H (Abnormally Low), in Pig Muscle (R. A. Lawrie, D. P. Gatherum and H. P. Hale), 807
Ultra High-Frequency Signals reflected from the Moon : Comparison of Measured and Computed Values of the Rapid Fading-Rate of (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
Ultrasonic Absorption in Liquids : A Method of Studying the Variation with Temperature of (Dr. B. Ramachandra Rao and Dr. H. S. Rama Rao), 1794
Ultrasonic Beam in Fused Quartz : Visualization of Mode Conversion of an (V. J. Hammond and R. Carter), 790
Ultrasonic Waves : Chemical Reactions initiated by (Dr. Satish Chandra Srivastava), 47
  Diffraction of Light by—Oblique Incidences (Dr. S. Parthasarathy and C. B. Tipnis), 1083
Ultrasonic Waves, Oblique Incidence and Sound Intensity : Diffraction of Light by (Dr. S. Parthasarathy and C. B. Tipnis), 1795
Ultra-structure of the Coxal Glands of the Scorpion (Dr. R. Rasmont, G. Vandermeersche and P. Castiaux), 328
Ultra-thin Sectioning : Nuclear Changes occurring during Bud-formation in *Saccharomyces cerevisiae* as revealed by (T. Hashimoto, S. F. Conti and Prof. H. B. Naylor), 454
Ultra-Violet Absorption Spectra of Deoxyribonucleic Acid : Changes in, by Treatment with Bromine (Hiroshi Ishihara, Naohiko Suzuki and Hanako Yokoi), 1302
Ultra-Violet Light : Condensation produced by (Dr. A. J. Barnard and W. L. Mouton), 1001
Ultra-Violet-induced Mutant of *Aspergillus terreus* : Itaconicoxidase, an Enzyme from an (Dr. Ján Arpai), 661
Ultra-violet and X-Rays : Comparison of the Effect of, on the Capillaries of the Frog's Web (Horst Bücker and Wilfried Hanke), 1375
Ulytina, P. D. (Kudrjashov, Prof. B. A., and) : Existence and Significance of a Physiological Anticoagulating System, 397
Uma, Miss B. N. (Rao, Dr. P. L. Narasimha, and) : Formation of Antifungal Antibiotics by a New *Streptomyces* Species, 115
Umbellula : The Pennatularian Genus (Prof. Hjalmar Broch), 267
Undercurrent (Pacific Equatorial) : Observations of the (John A. Knauss and Joseph E. King), 601
Undergraduate Academic Record of Fellows of the Royal Society (C. Gross and L. Hudson), 787, 1178 ; (Prof. Robert Platt), 1178 ; (L. Hudson), 1326
Undergraduate Research : Grants for (United States National Science Foundation), 1346
Underwood, G., and Thring, M. W. : Science in the Use of Coal (Combustion and Gasification), 26
Underwood Fellowship awarded to Dr. Lewis E. Lloyd by the Agricultural Research Council, 990
Unemployment among Women over Forty Years of Age (Miss A. F. Young), 923
Unesco : Symposium on Salinity Problems in the Arid Zones, 158
  International Conference on Information Processing, 700
  Proposal for an International Research Ship, 1276
  Information Manual 3, Programme for Arid Lands, 1414
  Election of Dr. Vittorino Veronese as director-general for a period of six years, 1488
  Study of Tropical Vegetation, 1776
Unesco House, Paris, 1260
Unesco Science Co-operation Office, Cairo : Scientific Institutions in Egypt, 562
Unicellular Algae : Auxins and their Effect on the Growth of—Effect of Ethanol and Auxins on the Growth of Unicellular Algae (Dr. M. K. Bach and J. Fellig), 1359 ; Ethanol as a Carbon Source for the Growth of *Chlorella vulgaris* (Prof. H. E. Street, D. J. Griffiths, C. L. Thresher and M. Owens), 1360
Uniform Field Spark Gaps : Observations on Overvolted (K. R. Allen and K. Phillips), 1083
Unilever, Ltd. : Address by Lord Heyworth at the Annual General Meeting, 227
Union of South Africa, National Parks of the (Board of Trustees of the) : *Koedoe*, No. 1, 227
Unique Type of Cercaria (New and) : *Sagitta* as a Host of Larval Nematodes, including a (Dr. Ben Dawes), 960
United Kingdom : Deposition of Strontium-90 and its Content in Vegetation and in Human Diet in the (Dr. R. Scott Russell), 834
  Future of Timber Research in the, 1204
  Higher Education in the (British Council and the Association of Universities of the British Commonwealth), revised edition, 1277
United Kingdom, Universities of the : Report of the Proceedings of the Conference of the (London, 1957), 413, *erratum*, 1133
United Kingdom Atomic Energy Authority : Guide to U.K.A.E.A. Documents (edited by J. Roland Smith), 88
  Reports on Radiation Chemistry (compiled by R. W. Clarke), 88
  Appointment of Dr. Nyman Levin as a deputy director of the Atomic Weapons Research Establishment, 155
  Windscale Pile No. 1 not to be repaired, 156
  Fourth Annual Report (1957-1958), 615
  Atom 1958, 633
  Transfer of the Controlled Thermonuclear Project from the Atomic Energy Research Establishment, Harwell, to Winfrith Heath, Dorset, 697
  Special Promotion, 993
  Staff changes at the Atomic Energy Research Establishment, Harwell, 1129
  Not to restart Windscale Pile No. 2, 1203
  Appointment of J. A. Gay as patents exploitation officer, 1276
United Kingdom National Committee of the British Commonwealth Collections of Micro-organisms : Preparation of a new edition of the Directory of Collections and List of Species maintained in the United Kingdom and Crown Colonies, 1277
United Kingdom Operational Research Society, and others : Proceedings of the First International Conference on Operational Research (Oxford, 1957), *review* by Dr. K. Pennycuick, 821
United Nations : Second International Conference on the Peaceful Uses of Atomic Energy (Sir John Cockcroft), 903 ; (Dr. R. S. Pease), 1051
  Second International Conference on the Peaceful Uses of Atomic Energy—Sessions on Isotopes and Biology, 1118
  Second International Conference on the Peaceful Uses of Atomic Energy—Session on Health and Safety in the Field of Nuclear Energy, 1262
  Extension of the pre-publication period for the Proceedings of the Second International Conference on the Peaceful Uses of Atomic Energy, 1416
  Report of the Scientific Committee on the Effects of Atomic Radiation, 1543
United Nations (Food and Agriculture Organization) : Nutritional Studies No. 16, Protein Requirements—Report of the F.A.O. Committee (Rome, 1955), 228
  World Forest Products Statistics—a Ten Year Summary, 1946-1955, 1553
  Yearbook for 1957, 1553
United Nations (Food and Agriculture Organization), and the Office International dex Epizooties : Meeting to discuss Problems of Ticks and Tick-borne Diseases, 1416
United Nations (World Health Organization) : Annual Epidemiological and Vital Statistics, 1954, Bilingual edition (French and English), *review* by S. J. Kilpatrick, 9
  Manual of the International Statistical Classification of Diseases, Injuries and Causes of Death, *review*, 417
  Monograph Series No. 34, The Teaching of Hygiene and Public Health in Europe (Prof. F. Grundy and Prof. J. M. Mackintosh), *review* by Prof. Thomas McKeown, 619
  Technical Report Series No. 144, Procedures for the Testing of Intentional Food Additives to establish their Safety for Use (Second Report of the Joint FAO/WHO Expert Committee on Food Additives), 850
  Monograph Series No. 36, An International Nomenclature of Yaws Lesions (Dr. C. J. Hackett), 1132
  The First Ten Years of the, 1132
  Technical Report Series No. 146, Expert Committee on Water Fluoridation—First Report, 1352
United States : Administration of Science in Britain and the, 819
United States, 1870-1950 : Population Redistribution and Economic Growth, 1, Methodology Considerations and Reference Tables (Everett S. Lee, Ann Ratner Miller, Carol P. Brainerd and Richard A. Easterlin), (prepared under the direction of Prof. Simon Kuznets and Prof. Dorothy Swaine Thomas), (Memoirs of the American Philosophical Society, Vol. 45), *review*, 420
United States of America, Government of the (Government of the United Kingdom of Great Britain and Northern Ireland and the) : Agreement for Co-operation on the Uses of Atomic Energy for Mutual Defence Purposes (Washington, 1958), 635
United States (Prehistoric Southwestern) : Cultivation and Weaving of Cotton in the (Kate Kent), 1775
United States and Euratom : Agreement for co-operation in the Civil Uses of Atomic Energy, 1551
United States Air Force, Cambridge Research Center (Geophysics Research Directorate) : Contractual arrangement with the University of Manchester to support in its Department of Astronomy an extended programme of topographic studies of the Moon, 1552

United States Atomic Energy Commission : New Research Reactor (ORR) at Oak Ridge National Laboratory, 19
    Appointment of Dr. Frank K. Pittman as director of the Division of Reactor Development, 1550
United States International Co-operation Administration : Visit to Africa, 1276
United States National Academy of Sciences : Formation of a Space Science Board, 497
United States National Academy of Sciences (National Research Council) : Seminar on the Atomic Mechanisms of Fracture, 1348
United States National Astronomical Observatory : Allocation of 4,000,000 dollars by the National Science Foundation to the Association of Universities for Research in Astronomy, Inc., for the construction of a solar telescope for the, 1552
United States National Museum : Appointment of Dr. A. C. Smith as director of the Museum of Natural History, 916
    Bulletin 214, Review of the Parrotfishes, Family Scaridae (L. P. Schultz), 1415
United States National Research Council (National Academy of Sciences) : Seminar on the Atomic Mechanisms of Fracture, 1348
United States National Science Foundation : Appointment of Dr. R. M. Robertson as assistant director for mathematical, physical and engineering sciences, 292
    Atmospheric Sciences Programme, 360
    Grants for Science, 362
    Award of Science Faculty Fellowships for 1958-59, 501
    Award of Senior Postdoctoral Fellowships for 1958 59, 501
    List of Soviet Scientific and Technical Journals available in English Translation, 632
    Scientific Manpowar 1957—Papers of the Sixth Conference on Scientific Manpower, 819
    Appointment of Dr. Henry S. Odbert as programme director for psychobiology, Division of Biological and Medical Sciences, 842
    Grant of 450,000 dollars to the University of Chicago, for high-energy nuclear particle research with balloons, 916
    Research for Teachers and Travelling Lectures, 1276
    Grants for Undergraduate Research, 1346
    Scientific Activities in Six State Governments, 1347
    Co-operative Graduate Fellowships, 1486
    Allocation of 4,000,000 dollars to the Association of Universities for Research in Astronomy, Inc., for the construction of a solar telescope at the United States National Astronomical Observatory, 1552
United States National Science Foundation (Office of Scientific Information): Report on Non-Conventional Technical Information Systems in Current Use, 562
United States Naval Research Laboratory : Upper Atmosphere Research Report No. 32, 431
United States Programme in Controlled Fusion (Project Sherwood), (A. S. Bishop), 1053
United States Public Health Services (National Institutes of Health, Bethesda) : Travelling Fellowships in Medical Science (Medical Research Council Awards), 634
    Grant of 45,000 dollars for one year (renewable at the rate of 27,000 dollars for each of the four successive years), for the expansion of research on human genetics in the Department of Genetics in the University of Glasgow, under Prof. G. Pontecorvo, 1644
    Travelling Fellowships in Medical Science (Medical Research Council Awards), 634
Universal and International Exhibition (Brussels) : The International Science Hall at the (Dr. D. C. Phillips), 284
Universe from Babylonian Myth to Modern Science : Theories of the (edited by Milton K. Munitz), *review* by Dr. A. R. Hall, 277
Université de Paris, and others : International Colloquium on Communication and Language, 1644
Universities : The Function of, 1625
    Scientific Development and the, *review*, 1256
Universities of the British Commonwealth, Association of : Commonwealth Universities Yearbook (1958), *review*, 553
Universities of the British Commonwealth, Association of (British Council and the) : Higher Education in the United Kingdom, revised edition, 1277
Universities of the Commonwealth : Eighth Quinquennial Congress, 433, 1283
Universities of the United Kingdom : Report of the Proceedings of the Conference of the (London, 1957), 413, *erratum*, 1135
Universities for Research in Astronomy, Inc., Association of : Allocation of 4,000,000 dollars by the National Science Foundation, for the construction of a solar telescope at the United States National Astronomical Observatory, 1552
Universities Council for Adult Education : Report on the Year 1956-1957, 924
Universities Federation for Animal Welfare : Summer School, 158
    The UFAW Handbook on the Care and Management of Laboratory Animals (edited by Alastair N. Worden and W. Lane-Petter), second edition, *review* by Dr. J. O. L. King, 281
Universities Yearbook, 1958 : Commonwealth (Association of Universities of the British Commonwealth), *review*, 553
Universities and Adult. Education : Report on the Regional European Seminar on the (Bangor, 1956), (Ministry of Education), 1627
University of Aberdeen : Resignation of Prof. E. W. H. Cruickshank from the regius chair of physiology, 1773
    Appointment of Prof. J. Laurence Malcolm to the regius chair of physiology, 1773
University of Belfast : Appointment of Dr. C. L. Wilson to a personal chair in analytical chemistry, 1554
    Appointment of Dr. R. B. Welbourn to a personal chair in surgical science, 1554
    Appointment of Dr. P. J. B. Clarricoats to a lectureship in light electrical engineering, 1554
    Appointment of Dr. P. C. Elmes to a lectureship in therapeutics and pharmacology, 1554
University of Birmingham : Appointment of Prof. David L. Linton to the chair of geography, 158, 497
    Appointment of Dr. P. J. Hilton to the Mason chair of pure mathematics, 158, 359
    Appointment of I. T. S. Essery as senior lecturer in civil engineering, 158
    Appointment of D. M. G. Wishart as lecturer in statistics, 158
    Appointment of Dr. J. D. Young as lecturer in physics, 158
    Appointment of Dr. K. J. Morgan, Dr. R. S. Lehrle and Dr. J. D. Hobson as lecturers in chemistry, 158
    Appointment of Dr. R. E. Smallman as lecturer in physical metallurgy, 158
    Appointment of G. R. Coope as lecturer in geology, 158
    Appointment of N. Dennis as lecturer in sociology, 158
    Title of reader in mathematical physics conferred on Dr. G. E. Brown, 158
    Retirement of Prof. R. H. Kinvig from the chair of geography, 496
    Conference on the Pressure Welding of Metals, 638
    Appointment of Dr. Janet S. D. Graham as lecturer in botany, 990
    Appointment of D. P. Howson as lecturer in elctrical engineering, 990
    Appointment of B. D. Richardson as lecturer in civil engineering, 990
    Appointment of Sir Francis G. W. Knowles and A. W. Rogers as lecturers in anatomy, 990
    Appointment of H. A. Ellis and D. J. Parish as lecturers in pathology, 990
    Appointment of J. D. Cumming as lecturer in physiology, 990
    Grant of up to £36,500 from the Wellcome Trust to the Department of Anatomy, to extend the research laboratories and animal accommodation, 1204
    Title of reader in physics conferred on Dr. J. H. Fremlin, 1487
    Title of reader in comparative neurology conferred on Dr. J. T. Eayrs, 1487
    Approval for the establishment of a chair of organic chemistry, 1487
    Appointment of Dr. G. V. Chester as lecturer in mathematical physics, 1487
    Appointment of Dr. M. H. Cardew and Dr. M. B. King as lecturers in chemical engineering, 1487
University of Bristol : Appointment of J. M. Cook to a chair of ancient history and classical archaeology, 158
    Appointment of Dr. J. F. W. McOmie to a readership in organic chemistry, 158
    Appointment of R. W. Marsh to a readership in plant pathology, 158
    Appointment of Dr. Suzanne K. R. Clarke to a lectureship in bacteriology, 158
    Appointment of Miss Dorothy J. Cooper as lecturer in education, 1487
    Appointment of Dr. A. J. Forty as lecturer in physics, 1487
    Legacy of £10,084 from the residuary estate of Mrs. Hilda Grace Pickard, upon trust for the purpose of research into the alleviation of cancer, to be called the Pembery Research Trust, 1487
    Gift of £6,300 from the Department of Scientific and Industrial Research to the Department of Physics, towards the cost of Prof. C. F. Powell's research on heavy mesons and hyperons by the photographic method, 1487
    Gift of grants totalling £6,086 from the Department of Scientific and Industrial Research, to the Department of Physics, for salaries and equipment for research work under Prof. Powell, 1487
    Gift of £1,100 from the National Coal Board to the Department of Physical and Inorganic Chemistry, for a continuation of the study of reactivity of carbon surfaces with oxygen, 1487
    Gift of £1,700 from the Department of Scientific and Industrial Research, for research assistants and equipment, 1487
    Gift of £1,315 from the Ministry of Supply to the Department of Aeronautical Engineering, for research on the prevention of flutter by damping, 1487
    Gift of £1,000 from the Agricultural Research Council to the Department of Veterinary Medicine, for research on the nutrition of the baby pig, 1487
    Gift of £1,000 from the Nuffield Foundation to the Department of Veterinary Anatomy, for research on age changes in the vertebral disk of the cat, 1487
    Grant of £700 from the Gulbenkian Foundation, Lisbon, to the Department of Economics, for a study of the 'employability' of workers who have suffered long-term unemployment due to ill-health, 1493
University of Buffalo : Fourth Biennial Conference on Carbon (The Physics and Chemistry of Carbon Surfaces), 1488
University of California : Appointment of Dr. Roger Revelle to the additional post of director of the University's new Institute of Technology and Engineering at La Jolla, 771
University of Cambridge : Appointment of Dr. T. E. Faber as Armourers and Brasiers' Company Research Fellow at the Cavendish Laboratory, 18
    Offer of Entrance Exhibitions by Trinity College, 1205
    The University Chemical Laboratory (Dr. F. G. Mann), 1280
    Adams Prize Essay (Dr. H. G. Eggleston), *review* by Prof. T. A. A. Broadbent, 1472
    Grant of £50,000 from the Gulbenkian Foundation, Lisbon, to Churchill College, to endow three Gulbenkian studentships for graduates of universities outside the United Kingdom, 1493
University of Chicago : Awards for Study in Statistics, 771
    Grant of 450,000 dollars from the National Science Foundation, for high-energy nuclear particle research with balloons, 916
University of Coimbra : Grants of £12,430 from the Gulbenkian Foundation, Lisbon, to the Chemical Laboratory, for a spectrophotometer and expensive books ; of £6,200 to the Physics Laboratory, for analyser and other equipment for atomic energy research ; of £3,020 to the Galenic School of Pharmacy, for apparatus for electrophoresis and chromatography ; of £1,750 to the Institute of Geophysics, for scientific equipment, 1493
    Grant of up to £3,750 from the Gulbenkian Foundation, Lisbon, to the Institute of Archaeology and other bodies, 1493
University of Columbia : Symposium on Comparative Endocrinology, 774
University of Durham : Lectures of the Bedson Club, King's College, Newcastle-upon-Tyne, during 1958-59, 1063
University of Edinburgh : Appointment of Dr. Robert Brown to the regius chair of botany, 1130
    Grant of up to £25,000 from the Wellcome Trust to the Department of Zoology, to provide additional research accommodation, 1203
University of Edinburgh (Social Sciences Research Centre) : Conference to mark the centenary of 'The Origin of Species' (Darwinism and the Study of Society), 362
University of Florence (Medical Clinic) : Third Congress of the Italian Society of Nuclear Biology and Medicine, 229

University of Geneva (Clinique Thérapeutique) : An International Symposium on Aldosterone (edited by Alex F. Muller and Cecilia M. O'Connor), *review* by Prof. D. C. Harrison, 902
University of Glasgow : Annual Report for 1956-57 of the Royal College of Science and Technology, 498
  The Royal College of Science and Technology—New Engineering Block, 588
  W. H. Perkin and the Young Chair of Technical Chemistry in the Royal College of Science and Technology (R. Brightman), 613
  Soddy Commemoration Plaque in the Chemistry Department unveiled by Sir Alexander Fleck, 631
  Expedition to North Rona and Sula Sgeir (T. B. Bagenal and H. T. Howell), 775
  Grant of 45,000 dollars for one year (renewable at the rate of 27,000 dollars for each of four successive years) from the United States National Institutes of Health, for the expansion of research on human genetics in the Department of Genetics, under Prof. G. Pontecorvo, 1644
  Establishment (with the installation of the English Electric DEUCE computer) of the Computing Laboratory under the direction of Dr. D. C. Gilles, 1644
  Appointment of D. C. Williams as lecturer in the Computing Laboratory, 1644
  Occupation of the new engineering building, 1644
  Appointment of A. F. Munro as senior lecturer in veterinary physiology, 1644
  Appointment of C. G. Elliot to a lectureship in agricultural botany, 1644
  Appointment of Matthew Holmes to a lectureship in physiology. 1644
  Appointment of Ian S. Hughes to a lectureship in natural philosophy, 1644
University of Hull : Appointment of H. R. Wilkinson to the chair of geography, 1774
University of Khartoum : Appointment of Dr. Joseph Miller to the chair of chemistry, 85
University of Leeds : Title of reader in civil engineering conferred on E. Lightfoot, 22
  Appointment of Dr. D. C. Munro as lecturer in the Department of Inorganic and Structural Chemistry, 22
  Offer of £30,000 from Granada TV Network, Ltd., for a Granada Television Research Fellowship, 228
  Gift of £1,500 from the Royal Society to the Department of Inorganic and Structural Chemistry, for scientific investigations on high-resolution nuclear magnetic resonance spectroscopy, 1279
  Gift of £700 from the Royal Society to the Department of Botany, to purchase special equipment, 1279
  Gift of £1,000 from the Cement and Concrete Association to the Department of Civil Engineering, towards the postgraduate course in concrete technology, 1279
  Gift of £2,715 from the Department of Scientific and Industrial Research to the Houldsworth School of Applied Science, for research on the brittle fracture of metals, 1279
  Gift of £500 from the Shell Group of Oil Companies, for postgraduate research in chemical engineering, 1279
  Gift of £700 a year for three years from the Wellcome Trust to the Department of Biochemistry, for the salary and expenses of a research assistant, 1279
  Appointment of Dr. P. B. Ayscough as lecturer in the Department of Physical Chemistry, 1279
  Appointment of Dr. R. G. Burwell as lecturer in anatomy, 1279
  Appointment of Dr. A. J. Kenny as lecturer in biochemistry, 1279
  Title of reader in textile physics conferred on H. J. Woods, 1279
  Retirement of Prof. D. Burton from the chair of leather industries, 1707
  Appointment of A. G. Ward to the chair of leather industries, 1707
University of Lisbon : Grant of £2,000 from the Gulbenkian Foundation, Lisbon, to the Botanical Garden and Laboratory, for micro-film reader, microscopes and transport for field-work, 1493
University of Liverpool : Retirement of Prof. W. J. Kearton from the Harrison chair of mechanical engineering, 18
  Appointment of Dr. J. H. Horlock to the Harrison chair of mechanical engineering, 18
  Appointment of Dr. H. Edels as reader in electric power engineering, 22
  Appointment of A. Young as senior lecturer in applied mathematics, 22
  Appointment of Dr. J. C. Willmott as senior lecturer in physics, 22
  Appointment of Dr. R. Huby as senior lecturer in theoretical physics, 22
  Appointment of Dr. H. B. N. Hynes as senior lecturer in zoology, 22
  Appointment of Dr. K. McCarthy and Dr. K. R. Dumbell as senior lecturers in bacteriology, 22
  Appointment of Dr. J. L. Braithwaite and Dr. E. W. Macmillan as senior lecturers in anatomy, 22
  Appointment of Dr. J. Glover and Dr. H. K. King as senior lecturers in biochemistry, 22
  Resignation of Prof. R. M. Gordon from the Dutton and Walter Myers chair of entomology and parasitology, 358
  Appointment of Dr. W. E. Kershaw to the Dutton and Walter Myers chair of entomology and parasitology, 358
  Symposium on the Ecology of Soil Fungi, 1559
University of London : Appointment of Dr. R. C. Kumar as Rutherford Scholar at University College, 18
  Appointment of William Blackwood to the University chair of neuropathology at the Institute of Neurology, 22
  Appointment of Dr. J. N. Cumings to the University chair of chemical pathology at the Institute of Neurology, 22
  Appointment of Dr. D. B. Spalding to the new University chair of heat transfer in the Imperial College of Science and Technology, 155
  Title of professor of pure mathematics in the University (at Queen Mary College) conferred on Dr. K. A. Hirsch, 158
  Title of professor of zoology in the University (at Queen Mary College) conferred on Dr. G. E. Newell, 158
  Appointment of A. Stuart to the University readership in statistics at the London School of Economic and Political Science, 158
  Appointment of Dr. E. Cotchin to the University readership in veterinary pathology at the Royal Veterinary College, 158
  Annual Report of University College for 1956-57, 360
  Appointment of Dr. D. Gabor to the University chair of applied electron physics at the Imperial College of Science anf Technology, 363, 496
  Appointment of Prof. L. J. Lewis to the University chair of education, with special reference to education in tropical areas, at the Institute of Education, 363
  Appointment of Dr. J. Sutton to the University chair of geology at the Imperial College of Science and Technology, 363, 560
  Appointment of Dr. R. D'A. Hoyle to the University readership in mechanical engineering at the Imperial College of Science and Technology, 363
  Appointment of Dr. W. J. H. Butterfield to the University chair of experimental medicine at Guy's Hospital Medical School, 363
  Title of professor of pharmacology and therapeutics in the University (at St. Thomas's Hospital Medical School) conferred on Dr. R. S. Stacey, 363
  Title of professor of pharmacology in the University (at the Royal Free Hospital School of Medicine) conferred on Dr. Eleanor J. Zaimis, 363
  Title of reader in sociology of education in the University (at the Institute of Education) conferred on Mrs. J. E. Floud, 363
  Title of reader in geography in the University (at the London School of Economics and Political Science) conferred on Dr. R. J. Harrison-Church, 363
  Title of reader in social institutions in the University (at Bedford College) conferred on O. R. McGregor, 363
  Title of professor emeritus of mathematics in the University (at Bedford College) conferred on Prof. W. N. Bailey, 363
  Title of professor emeritus of physiology in the University (at St. Bartholomew's Hospital Medical College) conferred on Prof. K. J. Franklin, 363
  Title of professor emeritus of botany in the University (at Queen Mary College) conferred on Prof. F. M. Haines, 363
  Title of professor emeritus of social geography in the University (at the London School of Economics and Political Science) conferred on Prof. L. Dudley Stamp, 363
  Appointment of Dr. A. R. Fairbairn to the General Motors Corporation of Detroit postdoctoral fellowship in flame spectroscopy at the Imperial College of Science and Technology, 363
  Appointment of Dr. R. C. Curran to the University chair of pathology at St. Thomas's Hospital Medical School, 700
  Appointment of M. de Burgh Daly to the University chair of physiology at St. Bartholomew's Hospital Medical College, 700, 1130
  Appointment of Dr. P. L. Pratt to the University readership in physical metallurgy at the Imperial College of Science and Technology, 700
  Appointment of Dr. A. M. Cook to the University readership in pharmaceutics at the School of Pharmacy, 700
  Seminar at University College on Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy, 762
  Appointment of Dr. W. O. James to the University chair of botany and headship of the Department at the Imperial College of Science and Technology, 916, 990
  Appointment of H. Charnock as reader in physical oceanography at the Imperial College of Science and Technology, 990
  Appointment of Dr. Karl Wilson as reader in botany at Birkbeck College, 990
  Title of Henry Mark Pease (Standard) professor of telecommunications in the University (at the Imperial College of Science and Technology) conferred on Dr. E. C. Cherry, 990
  Retirement of Prof. K. J. Franklin from the University chair of physiology at St. Bartholomew's Hospital Medical College, 1129
  Grant of up to £60,000 from the Wellcome Trust to the Postgraduate Medical School of London, for the cost of including a Wellcome Research Library in the proposed new buildings, 1203
  Grant of up to £37,000 from the Wellcome Trust to the Institute of Psychiatry, Maudsley Hospital, to provide laboratories in which integrated research by the Departments of Neuro-endocrinology and Neuropathology may be carried out, 1204
  Indefinite loan from the Wellcome Trust of an electron microscope to the Biophysics Research Unit of the Medical Research Council at King's College, 1204
  Indefinite loan from the Wellcome Trust of an electron microscope to the London School of Hygiene and Tropical Medicine, 1204
  Appointment of F. H. Ludlam to the readership in meteorology at the Imperial College of Science and Technology, 1279
  Title of reader in aerodynamics in the University (at the Imperial College of Science and Technology) conferred on L. E. Fraenkel, 1279
  Title of reader in biology in the University (at University College) conferred on Dr. H. Kalmus, 1279
  Admittance of Sir John Atkins as the first Fellow of Queen Elizabeth College, in recognition of his unique service, 1487
  Appointment of J. R. D. Francis to the University readership in fluid mechanics at the Imperial College of Science and Technology, 1554
  Appointment of Dr. R. W. Tiffen to the University readership in applied mathematics at Birkbeck College, 1554
  Appointment of W. J. Tulley to the University readership in orthodontics at Guy's Hospital Medical School, 1554
  Appointment of Dr. Emrys Jones to the University readership in social geography at the London School of Economics and Political Science, 1554
  Appointment of Dr. J. A. Laing to the Courtauld chair of animal husbandry and veterinary hygiene at the Royal Veterinary College, 1777
  Title of professor emeritus of plant physiology in the University (at the Imperial College of Science and Technology) conferred on Prof. F. G. Gregory, 1777
University of London (Department of Extra-Mural Studies), and the Association of Agriculture : Course of lectures on Britain's Food Supplies, 1644
University of London Institute of Education : Appointment of Prof. L. J. Lewis to the University chair of education, with special reference to education in tropical areas, 363
  Title of reader in sociology of education in the University conferred on Mrs. J. E. Floud, 363
University of London Institute of Neurology : Appointment of William Blackwood to the University chair of neuropathology, 22
  Appointment of Dr. J. N. Cumings to the University chair of chemical pathology, 22
University of London School of Librarianship and Archives : Guide to Unpublished Research Materials—Lectures delivered at a Vacation Course in April 1956 (edited by Ronald Staveley), *review* by R. Brightman, 902

University of London School of Pharmacy : Appointment of Dr. A. M. Cook to the University readership in pharmacy, 700
University of Malaya : Congress to celebrate the centenary of the publication of the Theory of Evolution by Charles Darwin and Alfred Russel Wallace, and the bi-centenary of the publication of the tenth edition of 'Systema Naturae' by Linnaeus, 501
University of Manchester : Retirement of Prof. T. K. Walker from the chair of biochemistry in the Faculty of Technology at the Manchester College of Science and Technology, 1202
  Appointment of Dr. Alan A. Eddy to the chair of biochemistry in the Faculty of Technology at the Manchester College of Science and Technology, 1202
  Appeal for subscriptions to a fund for the Radio Telescope at Jodrell Bank, 1484
  Evidence regarding the cost of construction of the Jodrell Bank Radio Telescope, 1551
  Contractual arrangement made with the Geophysics Research Directorate of the United Stated Air Force, Cambridge Research Center, to support the Department of Astronomy in an extended programme of topographic studies of the Moon, 1552
University of Maryland : Lectures on Space Research and Technology, 990
University of Nottingham : Appointment of Dr. K. S. H. Stevens to the chair of theoretical physics, 155
  Appointment of Dr. J. D. Ivins to the chair of agriculture, 155
  International Conference on High Polymers, 772
University of Oregon : Appointment of Dr. A. Novick as director of the Institute of Molecular Biology, 1708
University of Oxford : Indefinite loan from the Wellcome Trust of an electron microscope to the Sir William Dunn School of Pathology, 1204
  Symposium on the Study of Metals and Alloys above 1,200°C., 1418
University of Reading : Annual Report for 1957 of the National Institute for Research in Dairying, 989
University of Sheffield : Appointment of K. Dalziel as Sorby Research Fellow in the Biochemistry Department, 18
  Appointment of Dr. C. B. Wilby as lecturer in civil engineering, 22
  Appointment of I. Fells as lecturer in fuel technology and chemical engineering, 22
  Title of emeritus professor of zoology conferred on Prof. L. E. S. Eastham, 1279
  Appointment of P. R. Becker as lecturer in the Electronic Computation Laboratory, 1279
  Appointment of Dr. P. E. Brown as lecturer in geology, 1279
University of Sheffield (Royal Society and the) : Appointment of K. Dalziel as Sorby Research Fellow in the Biochemistry Department of the University of Sheffield, 18
University of Southampton : Appointment of Dr. F. Hodson to the newly created chair of geology, 358
University of Toronto : Appointment of Dr. B. Cinader as associate professor in the Department of Medical Biophysics, 842
University of Wageningen, Agricultural : International Conference on Enzymes and their Action, 1710
University of Wales : Appointment of Prof. T. V. Davies to the chair of applied mathematics at University College, Aberystwyth, 359
  Appointment of Dr. S. K. Zaremba as lecturer in the Department of Pure Mathematics, University College of Swansea, 363
  Appointment of Dr. E. G. Brown as lecturer in the Department of Botany, University College of Swansea, 363
  Appointment of J. D. Davies as lecturer in the Department of Engineering, University College of Swansea, 363
  Resignation of Prof. Lily Newton from the chair of botany at University College, Aberystwyth, 428
  Appointment of Dr. P. F. Wareing to the chair of botany at University College, Aberystwyth, 429
  Appointment of Dr. W. J. G. Beynon to the chair of physics at University College of Wales, Aberystwyth, 632
University of Western Australia: Grant of up to £50,000 from the Wellcome Trust, to endow a Wellcome Research Department of Pharmacology, 1204
University of Western Australia (Western Australian Branch of the Royal Australian Chemical Institute and the) : Symposium on Plant Products, 299
University, Australian National : Annual Report for 1957 of Mount Stromlo Observatory, 95
  The John Curtin School of Medical Research, 355
  Proceedings of a Symposium on Current Trends in Heterocyclic Chemistry held in the John Curtin School of Medical Research, 1957, under the auspices of the Chemical Society (edited by A. Albert, Dr. G. M. Badger and Dr. C. W. Shoppee), *review* by Dr. F. G. Mann, 1762
University Chemical Laboratory, Cambridge (Dr. F. G. Mann), 1280
University College, Aberystwyth : Appointment of Prof. T. V. Davies to the chair of applied mathematics, 359
  Resignation of Prof. Lily Newton from the chair of botany, 428
  Appointment of Dr. P. F. Wareing to the chair of botany, 429
  Appointment of Dr. W. J. G. Beynon to the chair of physics, 632
University College of East Africa : Report of the Makerere College Ruwenzori Reconnaissance, 302
University College, Galway : Abstracts of the third International Seaweed Symposium, 1131
University College, London : Appointment of Dr. R. C. Kumar as Rutherford Scholar, 18
  Annual Report for 1956-57, 360
  Seminar on Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy, 762
  Title of reader in biology in the University of London conferred on Dr. H. Kalmus, 1279
University College, Swansea : Appointment of Dr. S. K. Zaremba as lecturer in the Department of Pure Mathematics, 363
  Appointment of Dr. E. G. Brown as lecturer in the Department of Botany, 363
  Appointment of J. D. Davies as lecturer in the Department of Engineering, 363
University College of the West Indies : Scheme for a degree course in agriculture, 841
University Development, 1952-1957 (University Grants Committee), 1625
University Development in Britain (Sir Eric Ashby), 1199
University Education in Britain : Expansion of, 137
University Expansion : Report on a Policy for (Association of University Teachers), 137
University Grants Committee : Returns from Universities and University Colleges in receipt of Treasury Grant, Academic Year 1956-57, 1210
  University Development (1952-1957), 1625
University Grants Committee (Australian) : Appointment of Sir Leslie Martin as first chairman, 1202
University Teachers, Association of : Report on a Policy for University Expansion, 137
University Theses, 562
Unpublished Research Materials : Guide to—Lectures delivered at a Vacation Course of the University of London School of Librarianship and Archives in April, 1956 (edited by Ronald Staveley), *review* by R. Brightman, 902
Unrest : Pupil—an Example of Noise in a Biological Servomechanism (Lawrence Stark, Fergus W. Campbell and John Atwood), 857
Unsaturated Acid Components : 'Karathane'—the Relative Importance of the Phenolic and, in Toxicity towards certain Plant Pathogens (Dr. A. H. M. Kirby and E. L. Frick), 1445
Unsaturated Fatty Acids on Chromatograms : Radiometric Estimation of (A. Z. Budzyński, Z. J. Zubrzycki and I. G. Campbell), 178
Unsolvability : Computability and (Prof. Martin Davis), *review* by Dr. A. D. Booth, 1583
Unstable Genes in *Escherichia coli* : Heat as an Agent producing High Frequency of Mutations and (Prof. Stephen Zamenhof and Dr. Sheldon Greer), 611
Unusual Form of Corrosion Product (G. Butler and H. C. K. Ison), 1229
Unusual New Type of Aromatic System : Thio-Thiophthen, an (Prof. S. Bezzi, M. Mammi and C. Garbuglio), 247
Upper Atmosphere : The (Prof. H. S. W. Massey and Dr. R. L. F. Boyd), *review* by Prof. D. R. Bates, 1629
  Scale Height of the (C. H. Bosanquet), 1010
Upper Atmosphere Research (United States Naval Research Laboratory, Report No. 32), 431
Uptake of Molecular Oxygen by Ferrous Complexes (J. F. Drake and Dr. R. J. P. Williams), 1084
Uptake (Chloride and Iodide), of Wheat Seedlings : Relationships between the (Z. Böszörményi and Edith Cseh), 1811
Uptake (Potassium), by Cation-Exchange Resins from Soils and Minerals (P. W. Arnold), 1594
Uptake (Sodium), by the Crayfish (J. Shaw), 1105
Uptake and Translocation of Radioactive Phosphorus in Plants (G. N. Thorne), 1775
Uptake and Utilization of DL-[2-^{14}C] Mevalonic Acid by *Hevea brasiliensis* (G. B. Barlow and Dr. A. D. Patrick), 662
Uranium : Surface Oxide Films and the Breakaway Corrosion of (J. S. Llewelyn Leach), 1085
Urbach, Mrs. Gerda (Hillis, W. E., and) : Leuco-Anthocyanins as the Possible Precursors of Tannins, 657
Urban Community : A Melanesian, *review* by G. K. Roth, 6
Urea : Toxicity of, to Sheep (J. B. Coombe and Dr. D. E. Tribe), 116
Urey, Prof. Harold C. : Origin of Tektites, 1078
Uri, Dr. J., and others : Desertomycin, a New Crystalline Antibiotic with Antibacterial and Cytostatic Action, 401
Uricosuric Activity (*pKa* and) : Relationship between, in Phenylbutazone Analogues (J. J. Burns, T. F. Yü, Peter Dayton, Lawrence Berger, Alexander B. Gutman and Bernard B. Brodie), 1162
Uridine Diphosphate Glucose : Biosynthesis of Plant Glycosides from (Dr. C. E. Cardini and Dr. Tsutomu Yamaha), 1446
Uridine-5'-phosphate : Bacterial Preparation of Orotidine-5'-phosphate and (R. E. Handschumacher), 1090
Urinary Extracts : Separation of Mixtures of Œstrogens in, using Gradient Elution Chromatography (Dr. Stanley Kushinsky, James A. Demetriou, Wilmonte Nasutavicus and Jane Wu), 874
Urinary Gonadotrophins (Human) : Differences between Duplicate Assays of (F. J. Cunningham and P. S. Brown), 1238
Urinary Indole and Phenol Acids : Effect of Atmospheric Contaminants on Paper Chromatography of (K. N. F. Shaw and J. Trevarthen), 664
Urinary Phenol and Indole Acids : Exogenous Sources of (K. N. F. Shaw and J. Trevarthen), 797
Urinary Vanillic Acid : Significance of (P. Smith), 1741
Urine : Deoxycytidine in, as an Indicator of Changes after Irradiation (Dr. J. Pařízek, M. Arient, Z. Dienstbier and J. Skoda), 721
Urine of the Ewe : Pregnanediol in the (Dr. Hamish Robertson and W. F. Coulson), 1512
Urine of Pregnant Mares : Isolation of $\Delta^{5,7,9}$-Œstratrienol-3-one-17 from the (Dr. W. L. Glen, R. Barber and G. Papineau-Couture), 1308
Urine of Pregnant Women : Isolation of 16β-Hydroxyoestrone from the (D. S. Layne and Prof. G. F. Marrian), 50
Urine of Sheep fed Hay Rich in Silica and Effect of Dietary Salt Additions : Volume and Acidity of (S. A. Forman, F. Sauer, D. H. Laughland and W. M. Davidson), 1385
Urine (Human) : 3-Ethoxy-4-hydroxybenzoic Acid in (G. A. Hill, J. Ratcliffe and P. Smith), 1160
Urmson, Prof. J. O. : The Province of Logic, *review*, 212
Use : Procedures for the Testing of Intentional Food Additives to establish their Safety for—Second Report of the Joint FAO/WHO Expert Committee on Food Additives (World Health Organization), 850
Use of Artificial Satellites to Explore the Earth's Gravitational Field—Results from *Sputnik* 2 (1957β), (R. H. Merson and D. G. King-Hele), 640
Use of Artificially Liberated Larvae in Experiments on the Setting Behaviour of *Spirorbis* (P. H. D. H. de Silva), 1751
Use of Coal : Science in the (Institute of Fuel Conference on), 24
Use of Cytotoxic Antisera : Selection of Cell Lines in Tissue Culture by the (Dr. V. Defendi, A. A. Kamrin and Dr. J. S. Colter), 1246
Use of Easily Decomposed Substrates : A Technique for the Investigation of the Competitive Saprophytic Ability of Soil Fungi by the (S. T. Matturi and Dr. H. Stenton), 1248
Use of Glucose labelled with Carbon-14 to determine the Amino-Acids essential for an Insect (R. Kasting and A. J. McGinnis), 1380
Use of Ion Exchange Resins in preparing Water of High Purity (I. Raleigh), 1667 ; (Dr. J. A. Kitchener), 1667

Use of Iron-52 as a Radioactive Tracer (Dr. P. E. Francois and León Szur), 1665
Use of Loosely Linked Genes to estimate Chromatid Interference by Tetrad Analysis (Dr. H. L. K. Whitehouse), 1173
Use of Lyophilized Formol-treated Red Cells in Blood-Group Serology (E. R. Gold, W. J. Lockyer and Dr. Geoffrey H. Tovey), 951
Use of Molecular Sieves in Gas Chromatography for the Determination of the Normal Paraffins in Petroleum Fractions (B. T. Whitham), 391
Use of Radioactive Substances and X-Rays in Schools (Ministry of Education, Administrative Memorandum No. 577, on), 1203
Use of Radioisotopes : Advances in the—Medical Uses (F. Ellis), 1407 ; General Uses (W. S. Eastwood), 1408
Use of Semi-conductor Devices (British Radio Valve Manufacturers' Association), 770
Use of Two Properties of the Virus of Foot-and-Mouth Disease in Studies of its Multiplication (Sheila F. Cartwright and H. V. Thorne), 717
Use (Possible), of Synthetic Surface-active Agents for the Preparation of Tumour Cell Nuclei (Prof. M. E. Hodes, Dr. C. C. Palmer and D. S. Williams), 529
Uses of Argument (Prof. Stephen Edelston Toulmin), *review* by Prof. J. O. Urmson, 212
Uses of Atomic Energy for Mutual Defence Purposes : Agreement between the Government of the United Kingdom of Great Britain and Northern Ireland and the Government of the United States of America for Co-operation on the (Washington, 1958), 635
Uses (The Analytical), of Ethylenediamine Tetraacetic Acid (Prof. Frank J. Welcher), *review* by C. O. Harvey, 1471
U.S.S.R. Electric Technology, No. 1, 1709
Uterine Implantation : Sex Ratio in the Golden Hamster before (Prof. P. E. Lindahl and G. Sundell), 1392
Utilization of the Carboxyl Group of Glycine for the Synthesis of the Amino-Acids of Silk by *Bombyx mori* (Dr. S. Bricteux-Grégoire, W. G. Verly and Prof. M. Florkin), 1515
Utilization of Formate for the Biosynthesis of Glycine Carbon-1 and -2 in *Bombyx mori* (Dr. S. Bricteux-Grégoire and W. G. Verly), 1515
Utilization of Inorganic Nitrogen Sources by Plants (British Association for the Advancement of Science, Section K (Botany), Discussion on), 1197
Utilization of Labelled Thymidine during Chromosomal Reproduction : Effect of Colchicine on the (L. F. La Cour and Dr. S. R. Felc), 506
Utilization of DL-[2-^{14}C] Mevalonic Acid by *Hevea brasiliensis* : Uptake and (G. B. Barlow and Dr. A. D. Patrick), 662
Utilization of Nitrogen and its Compounds by Plants (Society for Experimental Biology Symposium on), 229
Utilization of Thiocyanate by *Thiobacillus thioparus* and *T. thiocyanoxidans* (Prof. F. C. Happold, G. L. Jones and D. B. Pratt), 266
Utilization (Land), in Australia (Samuel Wadham and the late Gordon L. Wood), third edition by Sir Samuel Wadham, R. Kent Wilson and Joyce Wood, *review* by Prof. L. Dudley Stamp, 1400
Utopian Education, 985
Utopist Tradition in English Education (Prof. W. H. G. Armytage), 985
Uuspää, Dr. Veikko J. (Suomalainen, Prof. Paavo, and) : Adrenaline/Noradrenaline Ratio in the Adrenal Glands of the Hedgehog during Summer Activity and Hibernation, 1500

VACCINATION with *BCG* : Induced Resistance of Mice to Infection with *Brucella abortus* 2308 through (Dr. A. Bekierkunst and D. Sulitzeanu), 883
Vaccine for Fowl Typhoid : New (Animal Health Trust), 1062
Vacuum Arcs on Tungsten Cathodes (H. Wroe), 338
Vacuum (High) Systems : Removal of Gases in, by Metal Abrasion (M. E. Haine, E. W. R. Francis and R. N. Bloomer), 931, *erratum*, 1348
Vaidyanath, L. R., and others : Pressure Welding of Metals, 638
Vaizey, John : The Costs of Education, 1040
Vajda, Dr. S. : Reading in Linear Programming, *review* by Dr. A. D. Booth, 1583
Valley : Survey of Vegetation of a (R. G. Pembrey), 500
Value (Cultural), of Local Societies (Lord Boyd-Orr), 586
Value (Dietary-Protein) : A Correlation between Sulphur Content and Net (D. S. Miller and D. J. Naismith), 1786
Values (Extreme), of Sound Pressure : Investigation of (D. E. L. Shorter and W. I. Manson), (Analysis and Measurement of Programme Levels, Part 1), 1490
Values (Measured and Computed), of the Rapid Fading-Rate of Ultra High-Frequency Signals reflected from the Moon : Comparison of (S. J. Fricker, R. P. Ingalls, W. C. Mason and M. L. Stone), 1438
Values (Spiritual), and World Order, 965
Valzelli, G., and others : Permeabilizing Effects of Heparin and Heparin-like Substances, 603
Vámos, R. : Inhibition of Sulphate Reduction in Paddy Soils, 1688
van Bekkum, Dr. D. W. (Welling, W., and) : Different Types of Haemoglobin in Two Strains of Mice, 946
Van Cakenberghe, J. (Gilles, J. M., and) : Photoconductivity and Crystal Size in Evaporated Layers of Cadmium Sulphide, 862
Van Dieman's Land Company, 1825-1842 (A. L. Meston), 699
van Heyningen, Dr. W. E. : Identity of the Tetanus Toxin Receptor in Nervous Tissue, 1809
van Loon, Dr. H. : Antarctic Research (Meteorology), 287
van Meurs, N. : Temperature Dependence of the Conductivity of Electrolyte Solutions, 1532
Van Nostrand's Scientific Encyclopedia, third edition, *review* by Dr. L. S. Goddard, 1587
van Rooy, M. P. (edited by) : Meteorology of the Antarctic, *review* by Dr. G. E. R. Deacon, 900
Van Steveninck, R. F. M. : Straight-Growth Inhibitors in Glucose, 950
van Tiggelen, Prof. A. (Deckers, J., and) : Identity of Ions in some Flames, 863
van Uden, Father : Modern Educational Treatment of Deafness, 920
Van Uden, Dr. N. : Human and Animal Ecology (Intestinal Yeast Flora of Man and Domestic Animals), 1648
Van Vleck, Prof. J. H. : Ions of the Transition Elements (Magnetic Properties—Magnetic Anisotropy of Crystals and the occurrence of Inverted Crystalline Energy-levels), 1350
van Vliet, G., and others : Sheep Haemoglobins, 171
van de Hulst, Prof. H. C. : Light Scattering by Small Particles, *review* by James Paton, 1470
  Elected president of the Committee on Space Research, 1552
Van den Bosch, J., and others : Surface Tension of the Blood and Atherogenesis, 59
van den Brenk, H. A. S., and Elliott, Kathleen : Radioprotective Action of 5-Hydroxytryptamine, 1506
Van der Lande, M. F. : At the Third International Seaweed Symposium (Methods for determining Alginic Acid), 1780
Vanadium Inhibition of Phospholipid Synthesis and Sulphydryl Activity in Rat Liver (Fred Snyder and Prof. W. E. Cornatzer), 462
Vanadium Single Crystals : Extra Streaks in the X-Ray Diffraction Pattern of (E. Sándor and Dr. W. A. Wooster), 1435
Vandermeersche, G., and others : Ultra-structure of the Coxal Glands of the Scorpion, 328
Vane, J. R. (Lajtha, Dr. L. G., and) : Dependence of Bone Marrow Cells on the Liver for Purine Supply, 191
Vanhuyse, Dr. V. J. : Anomalous Attenuation in Linear Electron Accelerators, 1081
Vanillic Acid (Urinary) : Significance of (P. Smith), 1741
Vanishing Birds of the World : Extinct and (James C. Greenway, Jr.), *review* by Dr. A. J. Marshall, 758
Vann, Leon S., and Hill, Robert : Activation of an Ascorbic Acid Concentrating Mechanism by some Corticosteroids *in vitro*, 458
Vanysek, V., and others : Polarization of Light of the Comets Arend-Roland (1956*h*) and Mrkos (1957*d*), 331
Vaporization of Projectiles on Impact (G. Larikov), 468
Vapour (Hydrogen Peroxide) : Thermal Decomposition of (Dr. D. E. Hoare, J. B. Protheroe and Prof. A. D. Walsh), 654
Vapour (Water) : Absorption Spectrum of, 361
Vapours : Scintillation Counter for Measuring Radioactivity of (A. E. Lowe and D. Moore), 133
Varga, B., and others : Desertomycin, a New Crystalline Antibiotic with Antibacterial and Cytostatic Action, 401
Variability (Phenotypic) : Transmission of, within a Pure Line (Dr. H. R. Highkin), 1460
Variable Voltage Oscillo-polarography and Cyclic Voltammetry : Observation of Transient Intermediates in Redox Processes by (Prof. W. Kemula and Z. Kublik), 793
Variance Control in the Animal House (Dr. J. D. Biggers, Dr. Anne McLaren and Dr. Donald Michie), 77
Variants (β-Globulin), in Man (Dr. H. Harris, Miss E. B. Robson and Dr. M. Siniscalco), 452
Variation with Temperature of Ultrasonic Absorption in Liquids : A Method of Studying the (Dr. R. Ramachandra Rao and Dr. H. S. Rama Rao), 1794
Variation (Secular), in the Direction of Geomagnetism as the Standard Scale for Geomagnetochronology in Japan (Naotune Watanabe), 383
Variations in the Insecticide Tolerance of Insects (Dr. D. Spiller), 1177
Variations (Corneo-Fundal Potential), during Light and Dark Adapatation (Christine Kris), 1027
Variations (Diurnal), in Density of the Air : Irregularities of Satellite Drag and (G. V. Groves), 1533
Variations (Serum Protein), in Horses (Dr. G. C. Ashton), 1029
Variations (Temperature), in Male Cones of *Encephalartos* (Amy Jacot-Guillarmod), 474
Variations (Yield), in Tree Crop Experiments with specific reference to Cacao (T. A. Jones and G. K. Maliphant), 1613
Varieties (Three), of Human Haemoglobin *D* (S. Benzer and Dr. V. M. Ingram, and Dr. H. Lehmann), 852
Varshni, Dr. Yatendra Pal : Neutron–Proton Interaction, 1726
Varwill, W. W. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1137
Vascular Beds : Resistance to Flow in (Prof. Alan C. Burton), 1456
Vascular Permeability Factors in the Secretion of the Guinea Pig Coagulating Gland (Jules Freund, and Prof. A. A. Miles, P. J. Mill and D. L. Wilhelm), 174
Vascular Plants : Taxonomy of, *review* by Prof. T. G. Tutin, 824
Vaško, A., and others : Dependence on Age of the Diameter of the Pupil in the Dark, 1520
Vasopressins and Oxytocins : Paper Chromatography of Small Amounts of (Prof. H. Heller and K. Lederis), 1231
Vaughan, J. (Packer, Prof. J., and) : A Modern Approach to Organic Chemistry, *review* by Dr. W. A. Waters, 1114
Vaughan, Janet, and others : Accumulation of Strontium-90 in Dental Tissues, 1294
Vaughan, M. F. : A Method for Improving the Solute Selectivity of Osmotic Membranes, 1730
Vaughan Memorial Lecture (Prof. W. H. G. Armytage), 985
Veale, Dr. A. M. O. : Possible Autosomal Linkage in Man, 409
Vear, K. C. (Gill, Dr. N. T., and) : Agricultural Botany, *review* by Prof. A. H. Bunting, 1257
Vector Spaces and Matrices (Prof. Robert M. Thrall and Leonard Tornheim), *review* by Dr. R. G. Cooke, 1117
Vegetable : Virus and, *review* by Dr. J. H. Hitchborn, 752
Vegetable Preservation Industry in India : Fruit and (Proceedings of the Symposium held at the Central Food Technological Research Institute, Mysore, 1954), *review* by Dr. R. G. Tomkins, 420
Vegetable Research, British Society for the Promotion of : Eighth Annual Report (1956-57), 1417
Vegetable Research Station, National : Members' Day (J. A. Nelder), 435
  Annual Report for 1956-57, 1417
Vegetation : Deposition of Strontium-90 and its Content in, and in Human Diet in the United Kingdom (Dr. R. Scott Russell), 834
  The Statistical Description of, *review* by Prof. W. H. Pearsall, 347
Vegetation of a Valley : Survey of (R. G. Pembrey), 500
Vegetation (Tropical) : Study of (Unesco), 1776
Vegetative Growth of *Pinus elliottii* : Interaction of Gibberellic Acid and Photoperiod on the (Prof. Philippe F. Bourdeau), 118
Vella, F., and others : An Abnormal Haemoglobin in a Chinese—Haemoglobin *G*, 460
Velocity of Propagation of a Ferromagnetic Domain Boundary in 'Perminvar' : Direct Measurement of the (Dr. E. W. Lee and D. R. Callaby), 254

Velocity (High) : Southern Stars of (compiled by William Buscombe and Pamella M. Morris), 923
Venables, J., and others : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Venanzi, L. M., and others : Ions of the Transition Elements (Measurements using Infra-red Spectra of the N—H Vibration Frequencies in various Amine Complexes), 1350
Vennart, J. (Maycock, G., and) : Iodine-131 in Human Thyroids following the Windscale Reactor Accident, 1545
Venoms containing Phosphatidase-*A* : Protective Action of, against certain Bacterial Exotoxins (Dr. E. A. North and Hazel M. Doery), 1374
Ventricular Membrane Resistances (Purkinje and), during the Rising Phase of the Action Potential (Dr. Edward A. Johnson, P. A. Robertson and J. J. Tille), 1161
Verdet Constants of Rare-Earth Glasses measured with a New Polarimeter (Niels O. Young), 333
Verhaeghe, J. L. (Robbrecht, G. G., and) : Measurements of the Permeability Tensor for 'Ferroxcube' at 24,000 Mc./s., 1080
Veringa, H. A. (Sierra, G., and) : Effect of Oxy-chlororaphin on the Growth *in vitro* of *Streptomyces* Species and some Pathogenic Fungi, 265
Verly, W. G. (Bricteux-Grégoire, Dr. S., and) : Utilization of Formate for the Biosynthesis of Glycine Carbon-1 and -2 in *Bombyx mori*, 1515
Verly, W. G., and others : Utilization of the Carboxyl Group of Glycine for the Synthesis of the Amino-Acids of Silk by *Bombyx mori*, 1515
Vermiculite : Aluminium Interlayers in Soil Clay Minerals, Montmorillonite and (B. L. Sawhney), 1595
Vermilyea, Dr. D. A. : Mechanical Properties of Whiskers and Thin Films (Surface Characteristics of Copper Whiskers), 296
  Charge Transfer Processes (Mechanism of Cathodic Electrochemical Reactions—Mechanism of Growth of Electrolytic Metal Whiskers), 1354
Vernalization : Gibberellic Acid and (Prof. S. C. Chakravarti), 1612
Vernikos, Joan (Hodges, Dr. J. R., and) : Influence of Circulating Adrenocorticotrophin on the Pituitary Adrenocorticotrophic Response to Stress in the Adrenalectomized Rat, 725
Vernon, C. A. : Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy (The Concept of Phosphate Bond Energy), 764
Veronese, Dr. Vittorino : Elected director-general of Unesco for six years, 1488
Vertebrate Fossils (Some New), from the Panchet Series of West Bengal (Dr. Pamela Lamplugh Robinson), 1722
Vertebrates : Biological Deamidation of Nicotinamide in (K. V. Rajagopalan, T. K. Sundaram and Prof. P. S. Sarma), 51
Vertebrates (Fossil) : Studies on—Essays presented to David Meredith Seares Watson (edited by Prof. T. Stanley Westoll), *review* by Dr. Tor Ørvig, 485
Vertex of Asia : Ancient (V. T. Mordovsky), 563
Vertical Distribution of Two Wood-boring Crustaceans : Effect of Low Temperature on the (Dr. N. Balakrishnan Nairand H. Leivestad), 814
V.H.F. Television Link for Outside Broadcasts (K. C. Quinton), 1490
Vessel Wall : The Flow of Blood in relation to the (Discussion at Charing Cross Hospital Medical School), 90
Vesselinovitch, S. D. : A Simple Method for making Starch-gel Electrophoretic Strips Transparent, 665
Veterinary College, Royal : Appointment of Dr. E. Cotchin to the University of London readership in veterinary pathology, 158
  Appointment of Dr. J. A. Laing to the Courtauld chair of animal husbandry and veterinary hygiene, 1777
Veterinary Guide for Farmers (G. W. Stamm), edited by Dallas S. Burch, third edition, *review* by Dr. J. O. L. King, 551
Veterinary Handbook, *review* by Prof. J. G. Wright, 75
Veterinary Manual : The Merck, second printing, *review* by Prof. J. G. Wright, 75
Veterinary Protozoology (U. F. Richardson and Dr. S. B. Kendall), second edition, *review* by Dr. C. A. Hoare, 758
Viability (Mean), at a Multiallelic Locus : Change in, in a Population under Random Mating (S. P. H. Mandel and I. M. Hughes), 63
Vibration : Mechanical, *review* by Prof. R. E. D. Bishop, 1581
Vibrational Frequency associated with the Boron–Nitrogen Dative Bond in Amine Boranes (R. C. Taylor and C. L. Cluff), 390
Vibrational Potential Function of Nitryl Fluoride : Molecular Orbitals and (Louis Burnelle and Prof. Jules Duchesne), 653
Vibrations (Engineering), with Applications to Structures and Machinery (Prof. Lydik S. Jacobsen and Prof. Robert S. Ayre), *review* by Prof. R. E. D. Bishop, 1581
Viburnum trilobum : Dormancy in the Seeds of (R. H. Knowles and S. Zalik), 1415
Vic : Offspring of the—a History of Morley College (Denis Richards), *review* by Prof. W. H. G. Armytage, 1585
Vicia faba : Metabolism of Phenolic Compounds by the Broad Bean (Dr. J. B. Pridham), 795
  Occurrence and Metabolism of Oligosaccharides in the Broad Bean (Dr. J. B. Pridham), 1687
Vickers, Dr. T. : Salt and Water Balance in Animals (Cells Responsible for Salt Secretion in the Teleost Fish), 1207
Vickery, B. C. : Classification and Indexing in Science, *review* by R. Brightman, 1698
Victoria (Lake) : Lunar Periodicity of Aquatic Insects in (Dr. Philip S. Corbet), 330
Victoria (Queen) Museum and Art Gallery, Launceston: Report for 1956-57, 699
Victory : Three Steps to (Sir Robert Watson-Watt), *review* by Dr. R. L. Smith-Rose, 415
Vigna unguiculata : Effect of Fumigation and Moisture Content on the Seedling Growth of Cowpea (G. H. Caswell and Dr. H. T. Clifford), 540
Village : The Great—the Economic and Social Welfare of Hanuabada, an Urban Community in Papua (Prof. Cyril S. Belshaw), *review* by G. K. Roth, 6
Vincendon, G., and others : Action of Beta Radiation on the *Proteus P*18 Bacillus, 674
Vincent, Dr. J. M. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 1642
Vican, P. G. L. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1137
Viral Infection and Cortisone : Effect of, upon Tumour Growth in Homologous and Heterologous Hosts (Dr. T. Kuwata, Y. Yasumura and M. Kanisawa), 1678
Virus : Metabolic Alteration in Leukaemia induced by a (Hilton B. Levy and Isadore Brodsky), 1379
Virus (Cucumber Mosaic) : Purification and Serology of (Dr. J. A. Tomlinson, Dr. R. J. Shepherd and Prof. J. C. Walker), 1616
Virus (Encephalomyocarditis) : An Ineffective 'Ribonucleic Acid' Component from Tumour Cells infected with (J. Huppert and F. K. Sanders), 515
Virus (Foot-and-Mouth Disease), in Suspensions of Kidney Cells of the Pig : Effect of Temperature on the Multiplication of (Dr. H. Subak Sharpe), 1803
Virus (Herpes) : Mode of Intercellular Transfer of (Dr. M. G. P. Stoker), 1525
Virus (Influenza) : Comparison of the Tendency to cling to Glass and Haemagglutination produced in Erythrocyte Suspensions by Ferric Chloride and by (William R. Chesbro and Prof. Leslie R. Hedrick), 1164
Virus (Rous) : Sarcoma in Albino Rats treated during the Embryonic Stage with (G. J. Svet-Moldavsky), 1452
Virus (Tobacco Mosaic) : Production of Mutants of, by Chemical Alteration of its Ribonucleic Acid *in vitro* (Dr. Alfred Gierer and Dr. Karl-Wolfgang Mundry), 1457
Virus (Tobacco Ring-Spot-like) : An Aphid-transmitted, isolated from *Begonia tuberhybrida* (J. Semal), 1688
Virus of Foot-and-Mouth Disease : Infectivity of Ribonucleic Acid from Mice and Tissue Culture infected with the (F. Brown, R. F. Sellers and Doreen L. Stewart), 535
  Use of Two Properties of the, in Studies of its Multiplication (Sheila F. Cartwright and H. V. Thorne), 717
Virus Antisera : Preparation of, from Strawberry (R. M. Lister), 1814
Virus Diseases of Brassica Crops : Investigation of (Dr. L. Broadbent), *review* by Dr. J. H. Hitchborn, 752
Virus Diseases (Plant) : Seed Transmission of (N. C. Crowley), 634
Virus Infection (Mouse Polyoma) : Observations on the Spread of (Dr. Wallace P. Rowe, Janet W. Hartley, Isadore Brodsky, Robert J. Heubner and Lloyd W. Law), 1617
Virus Nucleic Acid (Tobacco Mosaic) : Action of Micrococcal Phosphodiesterase on (K. K. Reddi), 1308
Virus Research : Advances in (edited by Dr. Kenneth M. Smith and Max A. Lauffer), Vol. 4, *review* by Dr. M. R. J. Salton, 1576
Virus Structure and Function, *review* by Dr. M. R. J. Salton, 1576
Virus and Vegetbale, *review* by Dr. J. H. Hitchborn, 752
Virus-infected and Regenerating Mouse Liver : Biochemical Changes in (David S. Nelson and Prof. P. M. de Burgh), 1617
Viruses : International Code of Nomenclature of Bacteria and (edited by the Editorial Board of the International Committee on Bacteriological Nomenclature), *review* by Dr. K. A. Bisset, 1760
  The Species Concept among (Dr. C. H. Andrewes and Dr. P. H. A. Sneath), 12
Viruses (Entero-) in the Pig (P. H. Lamont and Dr. A. O. Betts), 608
Viscometry (Capillary-tube), with Negligible Kinetic Energy Effects (W. A. Caw and R. G. Wylie), 1153
Viscosity of Liquids : Accurate Measurement of the (Institute of Petroleum and the British Society of Rheology Symposium on), 438
Vishniac, Wolf, and Rose, Irwin A. : Mechanism of Chlorophyll Action in Photosynthesis, 1089
Vision : Some Aspects of the Physiology of (Photobiology Group Meeting on), 634
Vision (Colour), and Colour Blindness : Some Problems of (Prof. R. W. Pickford), 584
Vision Studies (Colour), and the X-Chromosome Constitution of Patients with Klinefelter's Syndrome (Dr. P. E. Polani, Dr. P. M. F. Bishop, Dr. B. Lennox, Dr. M. A. Ferguson-Smith, Dr. J. S. S. Stewart and Dr. A. Prader), 1092
Visser, Prof. S. W. : Behaviour of the Present Sunspot Cycle, 253, 1600
Visual Aids Centre (Overseas), London, 497
Visual Observation (Direct Aural and) : Correlation of Whistlers and Lightning Flashes by (Prof. M. G. Morgan), 332
Visual Organization (Dr. W. K. Taylor), 29
Visual Pigments in the Colour Blind (Dr. W. A. H. Rushton), 690
Visual Pigments of the Octopus and Cuttlefish (Paul K. Brown and Mrs. Patricia S. Brown), 1288
Visual System (Mammalian) : Synapse Discharge by Single Fibre in (Prof. P. O. Bishop, Dr. W. Burke and Dr. R. Davis), 728
Visual World : Eye Movements and the Stability of the (R. L. Gregory), 1214
Visualization of Mode Conversion of an Ultrasonic Beam in Fused Quartz (V. J. Hammond and R. Carter), 790
Vita Humana (International Journal of Human Development), Vol. 1, No. 2, 227
Vital Statistics (1954) : Annual Epidemiological and, Bilingual edition (French and English), (United Nations World Health Organization), *review* by S. J. Kilpatrick, 9
Vitamin A Ester in Rat Serum : Transport of (C. F. Garbers), 1018
Vitamin B Complex : Effect of, on the Teratogenic Activity of Hypervitaminosis A (Dr. J. W. Millen and Dr. D. H. M. Woollam), 940
Vitamin B_{12} in Marine Fish (Olaf R. Braekkan), 1386
Vitamin B_{12} Activity in the Serum of the Rat (Dr. G. H. Spray and Dr. K. B. Taylor), 1309
Vitamin B_{12} and Cobalt Concentrations in Livers from Healthy and Cobalt-deficient Lambs (E. D. Andrews, L. I. Hart and B. J. Stephenson), 869
Vitamin E Deficiency in Chicks : Influence of Linoleic and Linolenic Acids on Symptoms of (Prof. H. Dam, G. Kofoed Nielsen, I. Prange and E. Søndergaard), 802
Vivo-Acrivos, J. L. : Free Radical Stabilization, 1497
Vlcek, Dr. A. A. : Ions of the Transition Elements (Polarographic Half-wave Potentials of a series of Complexes), 1350
Vodyanitzky, V. A. : Circulation in the Black Sea, 563
Voevodsky, V. V. : Free Radical Stabilization, 1497
Vogt, Dr. Peter : Distribution of Tissue-Specific Antigens in Centrifugal Fractions of Rat Liver, 1807
Void Nucleation Sites in Creep of Metals (P. W. Davies and Dr. J. P. Dennison), 131

Volatility (Low) : Mass Spectrometry of Substances of (H. W. Holden and Prof. J. C. Robb), 340
Volcanic Eruptions in Kamchatka, 500
Volcanics (Napak), Karamoja, Uganda : Miocene Mammalia from the (Dr. W. W. Bishop), 1480
Volcano : A Submarine (Y. Y. Gakkel), 633
Volcano Bezymyannyi : Eruptions of the (G. S. Gorshkov), 500
Volkin, E. : Bacteriophage Research, 1769
Volmer, Prof. M. : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Voltage (Variable) Oscillo-polarography and Cyclic Voltammetry : Observation of Transient Intermediates in Redox Processes by (Prof. W. Kemula and Z. Kublik), 793
Voltammetry (Cyclic) : Observation of Transient Intermediates in Redox Processes by variable Voltage Oscillo-polarography and (Prof. W. Kemula and Z. Kublik), 793
Volume and Acidity of Urine of Sheep fed Hay Rich in Silica and Effect of Dietary Salt Additions (S. A. Forman, F. Sauer, D. H. Laughland and W. M. Davidson), 1385
von Bertele, Dr. H. : A New Phenomenon of Electron Emission from Thin Mercury Films, 1148
von Ehrenstein, G., and Zacharias, B. : Effect of Calcium Ions on the Binding of Chromium-51 to Erythrocytes *in vitro*, 1384
von Friesen, S. : At the Ninth General Physics Conference of the Swedish National Committee for Physics (Present-day Knowledge of the Elementary Particles and of their Transformations), 698
von Hofsten, Dr. C. G., and others : Resistance to Pyrethrins and to Pyrethrins–Piperonyl Butoxide in a Wild Strain of *Musca domestica* L. in Sweden, 1816
von Kaulla, Prof. Kurt N., and others : Concentration in the Human Ovarian Follicular Fluid of Radioactive Tracers and Drugs circulating in the Blood, 1238
von Stosch, Prof. H. A. : At the Third International Seaweed Symposium (Similarities between the Leucosin of Diatoms and Chrysomonads and the Laminarin of Phaeophyta), 1781
von Weizsäcker, Dr. C. F. : Ethical and Political Problems of the Atomic Age (Burge Memorial Lecture), 156
Vrba, Dr. R., and Folberger, Jaroslava : Endogenous Metabolism in Brain Cortex Slices, 237
Vulture : Bones of a, among the Remains of Animals sacrificed on the 'Burial of Romulus' below the *Niger lapis* in the Roman Forum (G. A. Blanc and Prof. A. C. Blanc), 66
Vyalov, Prof. S. S. : Physics of Ice Movement (Tests on Polycrystalline Ice), 1560

WADDAMS, J. A., and Gray, P. S. : Thermogravimetric Investigations of Peat, 1729
Waddington, C. J. (Fowler, P. H., and) : An Artificial Aurora, 1728
Wadham, Samuel, and Wood, the late Gordon L. : Land Utilization in Australia, third edition by Sir Samuel Wadham, R. Kent Wilson and Joyce Wood, *review* by Prof. L. Dudley Stamp, 1400
Waelsch, Prof. H. : Chemical Pathology of the Nervous System (*In vitro* certain Liver Protein Fractions can take up Amines labelled with Carbon-14 in Covalent Linkage), 1647
Wagenknecht, Dr. A. C. (Li, Dr. Kuang C., and) : A Minor Anthocyanin Pigment of Sweet Cherry, 657
Wager, Prof. L. R. : Beneath the Earth's Crust (Presidential Address to Section C (Geology) of the British Association for the Advancement of Science), 580
    Geology and Oil, 832
Wages : Time Rates of, and Hours of Labour (Ministry of Labour and National Service), twelfth edition, 770
Waid, J. S. : Ecology of Soil Fungi, 1559
Waight, Dr. E. S. : Steric Effects in Conjugated Systems (Ultra-violet Absorption Spectra of Conjugated Carbonyl Compounds), 569
Wain, Prof. R. L., and others : New Plant Growth-Substances with Selective Herbicidal Activity, 1094
Waisman, Prof. Harry A., and others : Phenylketonuria in the Rat associated with Decreased Temporal Discrimination Learning, 871
Waitzman, Dr. M. B., and Adams, E. Q. : A Sensitive Micro-Spectrophotometric Method for Succinate Analysis, 129
Wakefield, J. : Solid State Physics, 568
Waksman, Dr. Selman A. (edited by) : Neomycin—its Nature and Practical Application, *review* by Prof. J. H. Birkinshaw, 1185
Wales : Adult Education in, 924
Wales (England and) : Alkali, etc., Works in (Ninety-fourth Annual Report on), 499
    Education in 1957, being the Report of the Ministry of Education and the Statistics of Public Education for, 481
    A Survey of Social Conditions in, as illustrated by Statistics (Sir Alexander Carr-Saunders, D. Caradog Jones and C. A. Moser), third edition, *review* by Prof. E. Grebenik, 1330
Waley, Dr. S. G. (Cliffe, E. E., and) : Effect of Analogues of Glutathione on the Feeding Reaction of Hydra, 804
Walker, Donald G., and Wirtschafter, Zolton T. : The Genesis of the Rat Skeleton, *review* by Prof. H. A. Harris, 419
Walker, Mrs. D. M. C. (King-Hele, D. G., and) : The Last Minutes of Satellite 1957β (*Sputnik* 2), 426
    An Irregularity in the Atmospheric Drag Effects on *Sputniks* 2 and 3 (Satellites 1957β, 1958δ_1 and 1958δ_2), 860
Walker, Eric : Science in Schools, 922
Walker, F. T. : At the Third International Seaweed Symposium (Statistical Analysis of a number of *Laminaria cloustoni*), 1780
Walker, Prof. Gilbert : Economic Planning by Programme and Control in Great Britain, *review* by Norman Cuthbert, 418
Walker, Sir Gilbert : *Obituary* by Sir Charles Normand, 1706
Walker, Prof. J. C., and others : Purification and Serology of Cucumber Mosaic Virus, 1616
Walker, Dr. Kenneth : Human Sterility and Fertility, *review*, 1573
Walker, Prof. T. K. : Retirement from the chair of biochemistry in the Faculty of Technology at the Manchester College of Science and Technology, 1202 ; work of, 1202
Wall, E. T. (Davies, D. Roy, and) : Artificial Mutagenesis in Plant Breeding, 955
Wall, L. A. : Free Radical Stabilization, 1497
Wall Structure in *Nitella* : Protoplasmic Streaming and (M. C. Probine and Prof. R. D. Preston), 1657
Wallace, Alfred Russel (Darwin, Charles and) : Evolution by Natural Selection, *review* by Dr. G. S. Carter, 1112
Wallace, C. S., and others : Air Showers of Size Greater than 10^5 Particles, 1, Core Location and Shower Size Determination, 905 ; 2, Cerenkov Radiation accompanying the Showers, 973 ; 3, Comparison between the Response of Geiger Counters and Scintillation Counters, 1053
    Dependence of the Nucleonic Component of Cosmic Ray Air Showers on Radius, 1653
Wallis, Dr. F. S. : *Obituary* of H. E. Balch, 224
Wallis, P. R. : Promoted to Senior Principal Scientific Officer in the Scientific Civil Service, 992 ; work of, 992
Walls, L. P., and others : A New Series of Leishmanicides, 316
Walpole, Dr. A. L. (Paget, Dr. G. E., and) : Some Cytological Effects of Griseofulvin, 1320
Walsh, Prof. A. D., and others : Thermal Decomposition of Hydrogen Peroxide Vapour, 654
Walter, A. J. P. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1137
Walter, Dr. K. : Awarded a Ciba Foundation Award for 1958 for Research in Ageing, 19
Walton, Prof. John (edited by) : The Border (National Forest Park Guides), 1131
Wandless, A. M. : Science in the Use of Coal (Physics and Chemistry of Coal), 24
    Fuel and Power in British Industry (Britain's Resources of Coal), 1714
Wang, Dr. C. H., and others : Glucose Catabolism in the American Cockroach, 102
Wang, D., and others : Effect of Metal Ions on the Development of Wheat Stem Rust, 268
Wanklyn, J. N. (Wilkins, N. J. M., and) : An Oxidation Reaction highly Dependent on Pressure, 653
Warburton, Cecil : *Obituary* of Dr. P. Tate, 1771
Warcup, Dr. J. H. : Ecology of Soil Fungi, 1559
Ward, A. G. : The British Gelatine and Glue Research Association, 439
    Appointed to the chair of leather industries in the University of Leeds, 1707 ; work of, 1707
Ward, E. W. : Study of Metals and Alloys above 1,200°C. (High-temperature Mechanical Working of Molybdenum), 1419
Ward, R. G., and Wilson, J. R. : Ordering in Liquid Mercury–Thallium Alloys containing 25-35 Atomic per cent Thallium, 334
Ward, Prof. S. G. : Safety in Mines in Great Britain, 637
Ware, C. C., and others : Effect of Splenectomy on the Phagocytic Activity of the Reticulo-Endolethial System, 534
Wareing, Dr. P. F. : Appointed to the chair of botany at University College, Aberystwyth, 429 ; work of, 429
Wareing, Dr. P. F. (Booth, A., and) : Growth-promoting Activity of Potato Tuber Extracts in the Coleoptile Straight-Growth Test—Quantitative Aspects of Indoleacetic Acid Detection, 406
Wareing, Dr. P. F. (Nasr, T., and) : Photoperiodic Induction of Flowering in Black-Currant, 269
Warner Lecture of the American Astronomical Society (Dr. Allan Sandage), 1132
Warner Medal of the Textile Institute awarded to E. Lord, 771
Warren, Prof. F. L., and others : Haemoglobin and Potassium Blood Types in some Non-British Breeds of Sheep and in certain Rare British Breeds, 320
Warren Spring Laboratory, Stevenage : Work of the, 225
    Appointment of S. H. Clarke as director, 225
    Steering Committee, 429
Washbourn, K., and others : Metamidium, a New Trypanocidal Drug, 1005
Wasserdampfes : Das Spektrum des (W. Regula), 361
Wastes (Fermentation) : Serological Detection of (Robert L. Bunch and Edwin F. Barth, jun.), 1680
Waszczenko-z, E., and others : High Resolution of Human Plasma Components by Starch Gel Electrophoresis, 452
Watanabe, Naotune : Secular Variation in the Direction of Geomagnetism as the Standard Scale for Geomagnetochronology in Japan, 383
Watanabe, Tadao : Substances in Mulberry Leaves which attract Silkworm Larvae (*Bombyx mori*), 325
Water : Entry of, into Silica Glass (A. J. Moulson and J. P. Roberts), 200
    Influence of, on the Photolytic Decomposition of Ozone (W. D. McGrath and Prof. R. G. W. Norrish), 235
Water of High Purity : Use of Ion Exchange Resins in preparing (I. Raleigh), 1667 ; (Dr. J. A. Kitchener), 1667
Water in Renal Tubules : Role of Hyaluronidase in the Re-Absorption of—the Mechanism of Action of the Antidiuretic Hormone (A. G. Ginetzinsky), 1218
Water (Adsorbed) : Fluorescence of (Prof. K. Przibram), 520
Water (Conductivity), from Ion-exchange Resins : Contamination of Surfaces by (J. H. Schenkel and Dr. J. A. Kitchener), 131
Water (Heavy) : Kinetics of Muscular Contraction in (M. C. Goodall), 677
Water (Rough) : Ships in (J. L. Kent), *review*, 1696
Water (Sea) : Oxidized Iodine in (Ken Sugawara and Kikuo Terada), 250 ; (J. K. Johannesson), 251 ; (T. I. Shaw and Dr. L. H. N. Cooper), 251
    Perchlorate, an Important Constituent of (L. G. M. Baas Becking, A. D. Haldane and David Izard), 645
Water Activity of Mammalian Tissues (Dr. LeRoy H. Maffly and Dr. Alexander Leaf), 60
Water Balance (Salt and), in Animals (British Association for the Advancement of Science, Sections D (Zoology) and I (Physiology and Biochemistry), Symposium on), 1207
Water Committee, Central Advisory : First Report of the Trade Effluents Sub-Committee, 497
Water Currents : Reactions of *Gammarus* sp. to (P. R. M. Pattisson), 563
Water Deprivation : Influence of, on Taste Sensitivity in Man (Roy Yensen), 677
Water Fluoridation (World Health Organization, Technical Report Series No. 146, First Report of the Expert Committee on), 1352
Water Fluoridation and Dental Caries (Dr. G. Lapage), 1351

Water Mists : Stabilization of (H. S. Eisner, F. R. Brookes and B. W. Quince), 1724
Water Needs in Scotland : Water Resources and (British Association for the Advancement of Science, Section E (Geography), Symposium on), 1193
Water Pollution Research : Notes on, No. 1 (Water Pollution Research Laboratory), 841
Water Pollution Research Laboratory : Notes on Water Pollution Research, No. 1 (Department of Scientific and Industrial Research), 841
Water Relations of Terrestrial Arthropods (Prof. E. B. Edney), *review* by Dr. Kenneth Mellanby, 72
Water Resources and Water Needs in Scotland (British Association for the Advancement of Science, Section E (Geography), Symposium on), 1193
Water-Strain : Effects of, on the Minimum Intercellular Space Carbon Dioxide Concentration T in Wheat Leaves (Prof. O. V. S. Heath and Dr. H. Meidner), 1524
Water Vapour : Absorption Spectrum of, 361
Water-Waves, the Mathematical Theory with Applications (Prof. J. J. Stoker), *review* by Dr. M. S. Longuet-Higgins, 967
Water Waves : Contributions to the Theory of, *review* by Dr. M. S. Longuet-Higgins, 967
Water-soluble, Diffusible Pigment produced by a Strain of *Serratia marcescens* (*Chromobacterium prodigiosum*), (Prof. R. P. Williams, W. W. Taylor, D. Hawkins, Jr., and I. L. Roth), 1028
Waterhouse, Dr. F. L., and Sanderson, Dr. Ann R. : Geographical Colour Polymorphism and Chromosome Constitution in Sympatric Species of Sawflies, 477
Waters, Dr. W. A. : An Approach to Organic Chemistry, *review*, 1114
Waters (Brackish and Inland Saline) : Classification of (International Association of Limnology and the International Union of Biological Sciences Conference on), 27
Waterston, A. Rodger : Appointed keeper of the Department of Natural History in the Royal Scottish Museum, 1641 ; work of, 1641
Watkins, C. D. (Harrison, D. P., and) : A Comprison of Radio Echoes from the Aurora Australis and Aurora Borealis, 43
Watson, D. G., and others : A Revision of the Azulene Structure, 177
Watson, David Meredith Seares : Studies on Fossil Vertebrates—Essays presented to (edited by Prof. T. Stanley Westoll), *review* by Dr. Tor Ørvig, 485
Watson, Prof. H. E. : Supply and Distribution of Chemical Engineers in Britain, 1712
Watson, Dr. J. D. : Bacteriophage Research, 1770
Watson, Dr. J. D. (Tissières, Dr. A., and) : Ribonucleoprotein Particles from *Escherichia coli*, 778
Watson, S. N., and others : The B.B.C. Colour Television Tests—an Appraisal of Results, 1490
Watson, Dr. W. F. : Appointed director of research of the Research Association of British Rubber Manufacturers, 560 ; work of, 560
Watson, Dr. : Modern Educational Treatment of Deafness, 919
Watson-Munro, C. N. (Baxter, Prof. J. P., and) : Peaceful Uses of Atomic Energy—Symposium in Australia (1958), 217
Watson-Watt, Sir Robert : Three Steps to Victory, *review* by Dr. R. L. Smith-Rose, 415
Wattle (Black) Catechin (Dr. D. G. Roux and A. E. Maihs), 1798
Watts, J. C. D. : The Saw-Fish of Sierra Leone, 961
Wave-beaten Rocks : Animal Life on (Dr. H. Gorvett), 1652
Wave-length (4·3-mm.) : Observation of a Solar Flare at (R. J. Coates), 861
Wave-length Effect in Flash Photolysis (Dr. C. A. Parker), 130 ; (Dr. K. Bridge and Prof. G. Porter), 130
Wave-length Scale of Spectrophotometers : A Simple Technique for the Calibration of the (N. V. Parthasarathy and Dr. Indra Sanghi), 44
Wave-lengths (Metre) : Role of Turbulent Scattering in Long-Distance Radio Propagation at (F. A. Kitchen and Dr. M. A. Johnson), 302
Wave Scatter Propagation (Centimetre), beyond the Horizon : Influence of the Semi-Permanent Low-Level Ocean Duct on (F. A. Kitchen, W. R. R. Joy and E. G. Richards), 385
Waverley Gold Medal Essay Competition : Awards in the (Scientific Advisory Board of *Research*), 1060, 1348
Waves (Hypersonic Shock) : Radio Observations of (Dr. J. S. Hey, J. T. Pinson and P. G. Smith), 1220
Waves (Ultrasonic) : Chemical Reactions initiated by (Dr. Satish Chandra Srivastava), 47
  Diffraction of Light by—Oblique Incidences (Dr. S. Parthasarathy and C. B. Tipnis), 1083
Waves (Ultrasonic), Oblique Incidence and Sound Intensity: Diffraction of Light by (Dr. S. Parthasarathy and C. B. Tipnis), 1795
Waves (Water-), the Mathematical Theory with Applications (Prof. J. J. Stoker), *review* by Dr. M. S. Longuet-Higgins, 967
Waves (Water) : Contributions to the Theory of, *review* by Dr. M. S. Longuet-Higgins, 967
Waygood, Prof. E. R., and others : Effect of Metal Ions on the Development of Wheat Stem Rust, 268
Wayne, Prof. E. J. : Appointed a member of the Medical Research Council, 771
Ways in Management Training : New (Cyril Sofer and Geoffrey Hutton), *review* by T. H. Hawkins, 214
Weapons Research Establishment of the Australian Commonwealth Department of Supply (communicated by W. A. S. Butement), 145
Weather : Effects of, on Plant Behaviour (Prof. J. P. Hudson), 1337
  Evapo-transpiration from Different Crops exposed to the same (Dr. G. Stanhill), 125
Weather (British) : Geographical Analysis of, *review* by Prof. Gordon Manley, 1696
Weather (British), in Maps (James A. Taylor and R. A. Yates), *review* by Prof. Gordon Manley, 1696
Weather Forecasting : Numerical, 440
Weaver, C., and Benjamin, P. : Errors in the Measurement of Film Thickness by Multiple-Beam Interferometry, 1149
Weaver, L. E. : The Design of a Linear Phase-Shift Low-Pass Filter, 1490
Weaving of Cotton in the Prehistoric Southwestern United States : Cultivation and (Kate Kent), 1775
Web (Frog's) : Comparison of the Effect of Ultra-violet and X-Rays on the Capillaries of the (Horst Bücker and Wilfried Hanke), 1375
Webb, Dr. Edwin C. : Enzymes and related Topics, *review*, 897
Webb, Dr. Edwin C. (Dixon, Dr. Malcolm, and) : Enzymes, *review* by Prof. Britton Chance, 969
Webb, J. S. : The Future of Non-Ferrous Mining in Great Britain and Ireland, 1137
Webber, R. B. : The Book of *p*H, *review* by Prof. H. T. S. Britton, 1258
Webber, Dr. R. T. : Measurements of Conduction at Low Temperatures (Galvanomagnetic Effects of Metals), 84
Weber, Dr. Johanna : Promoted to Senior Principal Scientific Officer in the Scientific Civi lService, 992 ; work of, 992
Weber, Robert L., and others : Physicsf or Science and Engineering, *review* by G. R. Noakes, 420
Webley, Dr. D. M. (Louw, H. A., and) : A Plate Method for Estimating the Numbers of Phosphate-dissolving and Acid-producing Bacteria in Soil, 1317
Webster, Dr. G. C. (Bernlehr, R. W., and) : Formation of Activated Amino-Acids by Intact Cells of *Azotobacter vinelandii*, 531
Wedge-shaped Agar Gel : Diffusion of Proteins through a (Dr. Ch. Wunderly), 1087
Wedgwood, Josiah, and Research (J. Leighton), 1130 ; (Dr. A. T. Green), 1708
Weed Control Council, British (Society of Chemical Industry and the) : 1958 Conference to be held at Brighton, 501
Weeds : The Biology of (British Ecological Society Symposium on), 1710
Weeds (Aquatic), and Algae : The Control of (Aylwin P. Chancellor), 361
Weertman, Dr. J. : Physics of Ice Movement (Propagation of Surges through Glaciers), 1561
Weeting Heath Nature Reserve, 161
Weickhardt, L. W. : Elected president for 1958-59 of the Royal Australian Chemical Institute, 1487
Weight Reduction in the Human Subject, *review* by Prof. Charles H. Gray, 685
Weil-Malherbe, Dr. H. : Chemical Pathology of the Nervous System(Urinary Excretion of Catecholamines by Psychotic Individuals), 1647
Weiler, E. : Progress in Cancer Research (Immunology and Immunogenetics), 365
Weinberger, A. : Free Radical Stabilization, 1497
Weiner, George (Long, E. John, and) : Adventures in Science at the Smithsonian, 561
Weinstein, F. (Shilov, E., and) : Kinetic Isotope Effect in the Iodination of Aromatic Amines, 1300
Weinstock, Marta, and others : Lenticular Effect in Mice of some Morphine-like Drugs, 1519
Weintroub, S. : Fritz London Award, 92
  The Institute of Physics, 776
  The Physical Society, 850
  The National Physical Laboratory—Report for 1957, 1650
Weissenberg, Prof. K. : The Flow of Blood in relation to the Vessel Wall, 90
Weizmann Institute of Science, Rehovoth, Israel : Institute of Nuclear Science of the (Dr. M. A. Hirshfeld), 494
Welbourn, D. B. : Mechanical Engineering Research Laboratory—Report for 1957, 1287
Welbourn, Dr. R. B. : Appointed to a personal chair in surgical science in the University of Belfast, 1554
Welch, J. H., and others : A New Form of Tricalcium Phosphate, 1230
Welcher, Prof. Frank J.: The Analytical Uses of Ethylenediamine Tetra-acetic Acid, *review* by C. O. Harvey, 1471
Welding (Pressure), of Metals (Conference at the University of Birmingham), 638
Welford, A. T. : Ageing and Human Skill—a Report centred on work by the Nuffield Unit for Research into Problems of Ageing, *review* by Prof. L. S. Hearnshaw, 826
Wellcome Fellowship for 1958-59 of the Animal Health Trust awarded to Mrs. H. E. Rose, 432
Wellcome Museum of Medical Science, 1415
Wellcome Trust : Grant of up to £60,000 to the Postgraduate Medical School of London, for the cost of including a Wellcome Research Library in the proposed new buildings, 1203
  Grant of up to £37,000 to the Institute of Psychiatry, Maudsley Hospital, to provide laboratories in which integrated research by the Departments of Neuro-endocrinology and Neuropathology may be carried out, 1203
  Grant of up to £36,500 to the Department of Anatomy, University of Birmingham, to extend the research laboratories and animal accommodation, 1203
  Grant of up to £25,000 to the Department of Zoology, University of Edinburgh, to provide additional research accommodation, 1203
  Grant of £50,000 to the University of Western Australia, to endow a Wellcome Research Department of Pharmacology, 1203
  Grant of up to £17,000 to the Institute of Medical Research, North Shore Hospital of Sydney, to build and equip laboratories for experimental medicine and surgery, 1203
  Indefinite loan of electron microscopes to the Biophysics Research Unit of the Medical Research Council, King's College, London, the Sir William Dunn School of Pathology, University of Oxford, and the London School of Hygiene and Tropical Medicine, 1203
  Gift of £700 a year for three years to the Department of Biochemistry of the University of Leeds, for the salary and expenses of a research assistant, 1279
Wellcome Trust and the International Union of Biochemistry (Council for the Organization of Medical Sciences, with the assistance of the) : Symposium on Biochemical Response to Physical Injury, 1493
Welling, W., and van Bekkum, Dr. D. W. : Different Types of Haemoglobin in Two Strains of Mice, 946
Wellings, F. E. : Geology and Oil (Contribution of Geology to the Oil Industry), 832
Wells, Prof. G. P. : Movements of Lugworms, 1107
  Giant Nerve Cells and Fibres in *Arenicola claparedii* (Polychaeta), 1609
Wells, Prof. L. J. : Comparative Endocrinology (Endocrine Basis of Reproductive Adaptations), 774
Wells, R. A. : Promoted to Deputy Chief Scientific Officer in the Scientific Civil Service, 992 ; work of, 992
Welman, D. P. : Fuel and Power in British Industry (Transformation of the existing Gas Industry into a truly Chemical One), 1715

Welsh Folk Museum : Grant of £1,500 from the Gulbenkian Foundation, Lisbon, for recording equipment for a survey of Welsh oral traditions of the countryside, 1493
Welsh Plant Breeding Station : Eighth Plant Breeders' Conference, 843
Welsh Soils Discussion Group : Formation of the, 1348
Wendell-Smith, Dr. C. P., and Williams, Dr. P. L. : Some Structural Characteristics of Myelinated Nerve Fibres, 1608
Wendlandt, Prof. Wesley W., and Zief, Morris : Thermal Decomposition of Antibiotics, 665
Wepster, Dr. B. M. : Steric Effects in Conjugated Systems (Interpretation of Electronic Absorption Spectra), 570
Wernher (Alexander Pigott) Memorial Travelling Fellowship in Oththalmology and Otology (Medical Research Council Award for 1958-59), 634
Wernher (Sir Julius) Memorial Lecture of the Institution of Mining and Metallurgy (Anton Gray), 1136
Wertz, Prof. J. E., and others : Ions of the Transition Elements (Application of Paramagnetic Resonance Spectroscopy to Transition Metal Ions—Single Crystals of Magnesium Oxide which contain Iron Group Impurities), 1350
Wessex Before the Celts (Dr. J. F. S. Stone), *review* by M. C. Burkitt, 1628
Wessex Long Ago, *review* by M. C. Burkitt, 1628
West, Dr. G. B. : 5-Hydroxytryptamine and Hyperglycaemia, 182
West, Dr. G. B. (Hicks, R., and) : Adrenalectomy and Tissue Amines, 401
West, G. W. : Nuclear Magnetic Resonance in β-Brass, 1436
West African Oil Palm, *Elaeis guineensis* (Jacq.) : Factors controlling Seed Germination in the (G. Hussey), 699
West Bengal : Some New Vertebrate Fossils from the Panchet Series of (Dr. Pamela Lamplugh Robinson), 1722
West Indian Immigration into Britain (Colin Bertram), 1060
West Midlands : Guide to Library Resources in the (edited by B. G. Staples), 633
Western, Dr. J. H. : Rothamsted Experimental Station—Report for 1957, 1782
Western Australian Wildflowers (with annotations by C. A. Gardner), *review* by Dr. R. Melville, 1587
Western Canada : Measurement of the Thickness of the Earth's Crust in the Albertan Plains of (Dr. T. C. Richards), 384
Westlake, D. F. : Effects of Pollution on Living Material (Effects which Plants and Invertebrates have on Stream Conditions), 1209
Westoll, Prof. T. Stanley (edited by) : Studies on Fossil Vertebrates—Essays presented to David Meredith Seares Watson, *review* by Dr. Tor Ørvig, 485
Westphal, O., and others : Synthesis of 3,6-Dideoxy-D-*ribo*-hexose (3,6-Dideoxy-D-glucose) and its Identification with Paratose, 944
Wetmore, Prof. F. E. W. (Antoniu, A., and) : Charge Transfer Processes (Mechanism of Cathodic Electrochemical Reactions—Hydrogen Evolution Reaction at Silver), 1354
Wetter and Drier Habitats : Further Inherent Characters of Plant Species of (Dr. M. L. R. Pettersson and G. E. J. Gray), 450
Wetting : A Calorimeter for Determination of Heats of (A. J. Groszek), 1152
Whale (Bottlenose) : Microscopic Structure of the Lungs of the (J. R. Goudappel and Prof. E. J. Slijper), 479
Whale (Pigmy Sperm) (*Kogia breviceps*), in Borneo (Tom Harrisson and George Jamuh), 543
Whatmough, P. : Gas Chromatograph as a Methanometer in the Coal Industry, 863
Wheat (Hexaploid) : Genetic Control of the Cytologically Diploid Behaviour of (Dr. Ralph Riley and Victor Chapman), 713
Wheat Chromosome : Correlated Failure of Synthetic Activities in a (H. K. Jain), 1458
Wheat Leaves : Effect of Rust Infection on Oxidative Phosphorylation of (B. I. Pozsár and Z. Király), 1686
  Effects of Water-Strain on the Minimum Intercellular Space Carbon Dioxide Concentration Γ in (Prof. O. V. S. Heath and Dr. H. Meidner), 1524
Wheat Seedlings : A Colorimetric Test for Gibberellic Acid and Evidence from a Dwarf Pea Assay for the Occurrence of a Gibberellin-like Substance in (G. M. Simpson), 528
  Effects of Rust Infection on the Carbohydrate Metabolism of (A. C. Jain and Prof. R.-L. Pelletier), 882
  Relationships between the Chloride and Iodide Uptake of (Z. Böszörményi and Edith Cseh), 1811
Wheat Stem Rust : Effect of Metal Ions on the Development of (D. Wang, Dr. P. K. Isaac and Prof. E. R. Waygood), 268
Wheatland, A. B. : Effects of Pollution on Living Material (Aspects of the Carbon, Nitrogen and Sulphur Cycles in the Thames Estuary), 1209
Wheeler, A. C. (Harding, Dr. J. P., and) : Heavy Infestation by the Parasitic Copepod *Lernaeenicus* of Sprats in the River Crouch, 542
Whelan, M. J. (Hirsch, P. B., and) : Mechanical Properties of Whiskers and Thin Films (Strength of Thin Metal Foils with Free Surfaces), 298
Whiffen, D. H. : Free Radical Stabilization, 1497
Whipple, F. L., and others (compiled by) : Orbital Data and Preliminary Analyses of Satellites 1957α and 1957β, 1062
Whiskers and Thin Films : Mechanical Properties of (J. E. Gordon and Dr. J. W. Menter), 296
Whistlers and Lightning Flashes : Correlation of, by Direct Aural and Visual Observation (Prof. M. G. Morgan), 332
White, A. H. : Appointed a director of research at Bell Telephone Laboratories, Murray Hill, N.J., 1550
White, Dr. D. E. : Chemistry of Plant Products, 299
White, Dr. D. E., and Dougall, D. K. : Chemistry of Plant Products ('Primary' Tars obtained by Distillation of Jarrah and Karri Sawdust *in vacuo*), 299
White, Dr. D. E., and others : Chemistry of Plant Products (Constitution of the Sesquiterpene Alcohol Globulol), 299 ; (Triterpenoid Constituents of the Myrtaceae), 300
White, Dr. I. G., and Lincoln, G. J. : Riboflavin in Yellow Semen, 667
White, Dr. Laurens P. : Melanin, a Naturally Occurring Cation Exchange Material, 1427
White, Marsh W., and others : Physics for Science and Engineering, *review* by G. R. Noakes, 420
White, Dr. R. G. : Antibody Production by Single Cells, 1383
White Clover (*Trifolium repens* L.) : Effect of Gibberellic Acid on the Nodulation of (Dr. Wm. W. Fletcher, J. W. S. Alcorn and J. C. Raymond), 1319
White Paper on the Agreement between the Government of the United Kingdom of Great Britain and Northern Ireland and the Government of the United States of America for co-operation on the Uses of Atomic Energy for Mutual Defence Purposes, Washington, 1958, 635
White Paper on Capital Investment in the Coal, Gas and Electricity Industries, 343
White Rat : Deoxyribonucleic Acid Content of the Nuclei in the Adrenal Cortex of the (H. Roels), 873
White-eyed Mutant Form of the American Cockroach, *Periplaneta americana* (L.), (G. T. Jefferson), 892
Whitehead, A. G. : Nematoses of Pyrethrum in East Africa, 542
Whitehead, Stanley B. : The Book of Flowering Trees and Shrubs, *review* by J. Robert Sealy, 684
Whitehouse, Dr. H. L. K. : Use of Loosely Linked Genes to estimate Chromatid Interference by Tetrad Analysis, 1173
Whitehouse, Dr. Michael W., and others : Moving Acid Boundary (*p*H Gradient) Paper Ionophoresis of Bile Salts, 394
Whiteside, Sqn. Leader T. C. D. : Space Medicine (Importance of the Oculogravic and Oculogyric Reflexes), 1645
Whitfield, J. F., and others : Increased Survival of Rats irradiated with X-Rays and Treated with Parathyroid Extract, 1374
Whitham, B. T. : Use of Molecular Sieves in Gas Chromatography for the Determination of the Normal Paraffins in Petroleum Fractions, 391
Whitman, Dr. J. G. : Promoted to Senior Principal Scientific Officer in the Scientific Civil Service, 992 ; work of, 992
Whitmore, R. L. (Fidleris, V., and) : Science in the Use of Coal (Preparation and Breakage of Coal), 25
Whittaker, Sir Edmund : Work of, 562
Whyte, H. M. (Goldrick, R. B., and) : Serum Lipoproteins and Blood Coagulation, 1743
Whyte, L. L. : Chirality, 198
  At the Meeting in the Yugoslav Embassy in London to celebrate the bicentenary of the publication of Boscovich's 'Theoria Philosophiae Naturalis' (Boscovich's Theory of Fundamental Particles), 230
Whyte, R. O. : The Grassland and Fodder Resources of India, *review* by Dr. J. P. Cooper, 71
Wickberg, B. : At the Third International Seaweed Symposium (Low Molecular Compounds of the Red Algae), 1779
Widdas, W. : Reports of H.M. Inspectors of Mines under the Coal Mines Act (1911) for 1956—Scottish Division, 637
  Reports of H.M. Inspectors of Mines and Quarries under the Mines and Quarries Act (1954) for 1957—Scottish Division, 638
Wigan, E. E. : Analysis and Measurement of Programme Levels, Part 2, A Description of an Optical Instrument for Monitoring Sound Signals, 1490
Wightman, Dr. F., and others : New Plant Growth-Substances with Selective Herbicidal Activity, 1094
Wilby, Dr. C. B. : Appointed lecturer in civil engineering at the University of Sheffield, 22
Wildflowers : Western Australian (with annotations by C. A. Gardner), *review* by Dr. R. Melville, 1587
Wild-Fowl Trust : Ninth Annual Report, 769
Wild Life Protection, American Committee for International : Special Publication No. 13, Extinct and Vanishing Birds of the World (James C. Greenway, Jr.), *review* by Dr. A. J. Marshall, 758
Wild Oats (*Avena fatua* L.) : Light and Dormancy in (Bruce G. Cumming and James R. Hay), 609
Wild Sheep, Primitive Domestic Sheep and in Parchment : Follicle Arrangement in Skin from (Dr. M. L. Ryder), 781
Wild Strain of *Musca domestica* L. in Sweden : Resistance to Pyrethrins and to Pyrethrins–Piperonyl Butoxide in a (Dr. M. Davies, Dr. J. Keiding and Dr. C. G. von Hofsten), 1816
Wilderness : Portrait of a—the Story of the Coto Doñana Expeditions (Guy Mountfort), *review* by Dr. W. Rydzewski, 1044
Wildy, Dr. Jennifer : Awarded a Mr. and Mrs. John Jaffé Donation Studentship in original scientific research by the Royal Society, 359
Wildy, Dr. Peter, and Ridley, Dr. Mark : Separation of Human Leucocytes from Blood, 1801
Wiles, Dr. D. McK. : Awarded a Canadian fellowship in chemistry (renewal) at the University of Leeds by the Ramsay Memorial Fellowships Trustees, 432
Wiley, Paul F., and others : The 1,2,3- and 1,2,4-Triazines, Tetrazines and Pentazines, *review* by Dr. F. G. Mann, 1762
Wilhelm, D. L. : Biochemical Response to Physical Injury (The Endogenous Substances inducing Pathological Increases in Capillary Permeability—The Evaluation of the Role of Endogenous Permeability), 1494
Wilhelm, D. L., and others : Vascular Permeability Factors in the Secretion of the Guinea Pig Coagulating Gland, 174
Wilkie, Dr. D. R. : Size and Shape Changes of Polyelectrolytes—Conversion of Chemical into Mechanical Energy (Relationship between Thermodynamics and the Interpretation of Muscle Heat Measurements), 764
Wilkins, Dr. E. T. : Effects of Pollution on Living Material (Methods of Measurement of Deposited Matter), 1209
Wilkins, Dr. G. A., and others : Planetary Co-ordinates for the Years 1960-1980, *review* by Dr. R. H. Garstang, 1763
Wilkins, Dr. M. F. H., and others : A New Configuration of Deoxyribonucleic Acid, 387
Wilkins, N. J. M., and Wanklyn, J. N. : An Oxidation Reaction highly Dependent on Pressure, 653
Wilkinson, D., and others : A New Phase in a Complex Alloy Steel, 1437
Wilkinson, Prof. F. C. : Nutrition and Teeth, 1704
Wilkinson, Prof. G., and others : Some Complex Cyanides of Rhenium, 393
  Formation of a Transition Metal–Hydrogen Bond in Aqueous Solution, 466
Wilkinson, H. R. : Appointed to the chair of geography in the University of Hull, 1774 ; work of, 1774
Williams, Caradoc : Radio Aids to Navigation (Radio Aids for Aeronautical Navigation), 978
Williams, Clark, and others (edited by) : Selected Papers from the 1st Nuclear Engineering and Science Congress, held at Cleveland, Ohio, Vol. 1, Problems in Nuclear Engineering ; Vol. 2, Reactor Operational Problems, *review* by B. Cutts and G. R. H. Geoghegan, 4

Williams, Dr. C. B. : Insect Migration, *review* by Dr. R. C. Rainey, 1257
Williams, Dr. C. G. : Modern Problems in Friction and Lubrication (Lubrication in the Nuclear Age), 980
Williams, Prof. David : The Geologists' Association—a Centenary, 1271
Williams, D. C. : Appointed lecturer in the Computing Laboratory in the University of Glasgow, 1644
Williams, D. R., and Pudifoot, J. A. : Science in the Use of Coal (Reactivity of Cokes and Chars), 26
Williams, D. S., and others : Possible Use of Synthetic Surface-active Agents for the Preparation of Tumour Cell Nuclei, 529
Williams, Dr. G. H. (Hey, Prof. D. H., and) : Structure and Reactions in Organic Chemistry—the Kekulé Symposium, 1340
Williams, Dr. P. L. (Wendell-Smith, Dr. C. P., and) : Some Structural Characteristics of Myelinated Nerve Fibres, 1608
Williams, Dr. R. J. P. : Ions of the Transition Elements (Stabilities of Complexes cannot always be correlated with the Ligand Field-splitting Factor), 1350
Williams, Dr. R. J. P. (Drake, J. F., and) : Uptake of Molecular Oxygen by Ferrous Complexes, 1084
Williams, Prof. R. P., and others : A Water-soluble, Diffusible Pigment produced by a Strain of *Serratia marcescens* (*Chromobacterium prodigiosum*), 1028
Williams, R. V. (Kaufman, Dr. S., and) : The Electron Temperature in SCEPTRE III, 557
Williams, Trevor I., and others (edited by) : A History of Technology, Vol. 3, From the Renaissance to the Industrial Revolution *c.* 1500–*c.* 1750, *review* by K. R. Gilbert, 3
Williams, Prof. W. T., and Lance, Dr. G. N. : Automatic Subdivision of Associated Populations, 1755
Williamson, G. K. (Murray, J. R., and) : Study of Metals and Alloys above 1,200°C. (High-temperature Techniques—Application of Arc-Melting and other Melting Techniques in Alloy Investigations at Temperatures above 1,200°C.), 1418
Williamson, M. H. : An Apparently Simple Case of Population Control, 1108
Willing, Dr. Richard L. : Feeding Habits of Emperor Penguins, 194
  Australian Discoveries of Emperor Penguin Rookeries in Antarctica during 1954-57, 1393
Willis, Dr. H. F. : *Obituary* of Stephen Butterworth, 1706
Willmer, Dr. E. N. : Some Aspects of Cellular Differentiation (Presidential Address to Section I (Physiology) of the British Association for the Advancement of Science), 583
Willmore, A. P. : A New Method of Tracking Artificial Earth Satellites, 1008
Willmott, Dr. J. C. : Appointed senior lecturer in physics at the University of Liverpool, 22
Willmott, Peter (Young, Michael, and) : Family and Kinship in East London, *review* by Prof. E. Grebenik, 9
Willoughby, Dr. D. A. (Spector, Dr. W. G., and) : Experimental Suppression of Increased Capillary Permeability in Thermal Burns in Rats, 949
Willoughby, Dr. L. G. : Ecology of Soil Fungi, 1559
Willow (Cricket Bat) : Cultivation of the (Forestry Commission, Bulletin No. 17), 361
Wilman, W. G. (Wood, L. J., and) : Science in the Use of Coal (Carbonization of Coal), 25
Wilson, A. J. C. (edited by) : Structure Reports, Vol. 8 (1940-1941) ; Vol. 9 (1942-1944) ; Vol. 15 (1951), *review* by Dr. H. J. Grenville-Wells, 282
Wilson, Dr. A. T. : Tritium and Paper Chromatography, 524
Wilson, C. G., and others : Design and Management of a Nuclear Science Laboratory, 367
Wilson, Dr. C. H. : At the Eighth Quinquennial Congress of the Universities of the Commonwealth (The Establishment of New Universities), 1285
Wilson, Dr. C. L. : Appointed to a personal chair in analytical chemistry in the University of Belfast, 1554
Wilson, Dr. C. W. M. : Awarded a Lilly Travelling Fellowship in Medicine, 634
Wilson, G., and others : Study of Metals and Alloys above 1,200°C. (High-temperature Equilibria—Methods for Determining the Thermodynamic Activities of Alloy Constituents at High Temperatures), 1419
Wilson, J.: Awarded the Hinchley Medal for 1957 of the British Association of Chemists, 1133
  Grant-aided Research Associations (Hinchley Memorial Address of the British Association of Chemists), 1133
Wilson, J. N., and others : Critical Effect of Oxygen Tension on Rate of Growth of Animal Cells in Continuous Suspended Culture, 1508
Wilson, J. R. (Ward, R. G., and) : Ordering in Liquid Mercury–Thallium Alloys containing 25-35 Atomic per cent Thallium, 334
Wilson, Dr. Karl : Appointed reader in botany in Birkbeck College, 990
Wilson, P. W. (Proctor, Michael H., and) : Nitrogen Fixation by Gram-Negative Bacteria, 891
Wilson R. (Green, Prof. H. N., and) : Further Observations on Tumour-enhancing Factors—their Bearing on the Immunological Theory of Cancer, 1054
Wilson; R. B. (Kipling, J. J., and) : Science in the Use of Coal (Carbonization of Coal), 25
Wilson, Prof. W. : Collected Works of Max Planck, *review*, 820
Wilson (Woodrow) National Fellowship Foundation : Appointment of Sir Hugh Taylor as first president, 987
  Appointment of Dr. Hans Rosenhaupt as national director, 987
Wilson-Jones, K., and Davidson, G. : Dosage–Mortality Curves for House-flies Susceptible and Resistant to DDT, 403
Winder, Dr. Frank : Rejection of the Peroxide Accumulation Hypothesis of Isoniazid Action, 565
Windeyer, Prof. B. W. : Appointed a member of the Medical Research Council, 771
Windscale : Accident at, on October 10, 1957, 635
  Deposition of Radioactivity in North-west England from the Accident at (A. C. Chamberlain and H. J. Dunster), 629
  Long-range Travel of the Radioactive Cloud from the Accident at (N. G. Stewart and R. N. Crooks), 627
Windscale Pile No. 1 (Decision by the United Kingdom Atomic Energy Authority not to repair it), 156
Windscale Pile No. 2 (United Kingdom Atomic Energy Authority decision not to restart the), 1203
Windscale Reactor Accident : Iodine-131 in Human Thyroids following the (G. Maycock and J. Vennart), 1545
Winfrith Heath : Nuclear Reactor for, 226
Wingstrand, Dr. K. G. : Comparative Endocrinology (Neuro-endocrine Reflex and Co-ordinating Mechanisms), 775
Winkler, G. M. R., and others : Comparison of Caesium Frequency Standards of Different Construction, 41
Winn, Dr. M. M., and others : Dependence of the Nucleonic Component of Cosmic Ray Air Showers on Radius, 1653
Winter, Dr. A. G. : Ecology of Soil Fungi, 1559
Winter-feeding : Preservation of Grass for, by Radiation Sterilization (Erna Grossbard, D. J. Minson, Dr. William Davies and T. Horne), 331
Wirtschafter, Zolton T. (Walker, Donald G., and) : The Genesis of the Rat Skeleton, *review* by Prof. H. A. Harris, 419
Wiseman, Dr. J. D. H. : Secondary Oscillations in an Equatorial Atlantic Deep-Sea Core, 1534
Wiseman, L. A. : British Rayon Research Association—Open Days, 365
Wishart, D. M. G. : Appointed lecturer in statistics at the University of Birmingham, 158
Wishart, Prof. G. M. : *Obituary* by Prof. R. C. Garry, 427
Witschi, Prof. E. : Comparative Endocrinology (Neuro-endocrine Reflex and Co-ordinating Mechanisms), 775
Witterungsklimatologischer Beitrag : Zur Klimatologie der Grosswetterlagen, ein (Dr. Kurt Bürger), 505
Witwatersrand : Helium in Natural Gas in the (S. H. U. Bowie), 1082
Wohlfarth, E. P. : Solid State Physics, 568

β-Wollastonite : Crystal Structure of (Miss Joan Tolliday), 1012
Wollman, E.-L. : Bacteriophage Research, 1770
Wolstenholme, G. E. W., and Millar, Elaine C. P. (edited by) : Ciba Foundation Colloquia on Endocrinology, Vol. 11, Hormones in Blood, *review* by Prof. F. G. Young, 901
Wolstenholme, G. E. W., and O'Connor, Cecilia M. (edited by) : Ciba Foundation Symposium on Drug Resistance in Micro-organisms—Mechanisms of Development, *review* by I. M. Rollo, 416
Women over Forty Years of Age : Unemployment among (Miss A. F. Young), 923
Women (Pregnant) : Isolation of 16β-Hydroxyoestrone from the Urine of (D. S. Layne and Prof. G. F. Marrian), 50
Wonders, Prof. W. C. : At the seventy-sixth Annual Meeting of the Royal Society of Canada (Potentialities of the North-West—Geographical Problems), 701
Wood, the late Gordon L. (Wadham, Samuel, and) : Land Utilization in Australia, third edition by Sir Samuel Wadham, R. Kent Wilson and Joyce Wood, *review* by Prof. L. Dudley Stamp, 1400
Wood, Dr. H. W. : Synthetic Polypeptide Substitutes for Gelatin in Photographic Emulsions and Observations on Gelation, 106
Wood, Prof. J. G. : Elected president of the Australian Society of Plant Physiology, 1204
Wood, L. J., and Wilman, W. G. : Science in the Use of Coal (Carbonization of Coal), 25
Wood Anatomists, International Association of : International Glossary of Terms used in Wood Anatomy, 1709
Wood Anatomy : International Glossary of Terms used in (International Association of Wood Anatomists), 1709
Wood Science, Institute of : *Journal*, No. 1, 769
Wood-boring Crustaceans : Effect of Low Temperature on the Vertical Distribution of Two (Dr. N. Balakrishnan Nair and H. Leivestad), 814
Woodall, Prof. A. J., and others : Design and Management of a Nuclear Science Laboratory, 367
Woodlice, 'Myriapods' and Arachnids : Spiders, Scorpions, Centipedes and Mites—the Ecology and Natural History of (Dr. J. L. Cloudsley-Thompson), *review* by Theodore Savory, 825
Woods, H. J. : Title of reader in textile physics in the University of Leeds conferred on, 1279
Wool Growth : Effect of Trauma on (Dr. S. B. Slen), 1322
Wool Industries Research Association : Report of the Director of Research for 1957-58, 232
Woollam, Dr. D. H. M., and Millen, Dr. J. W.: Influence of Cysteamine on the Teratogenic Action of X-Radiation, 1801
Woollam, Dr. D. H. M. (Millen, Dr. J. W., and) : Effect of Vitamin B Complex on the Teratogenic Activity of Hypervitaminosis A, 940
Woolston, J. E. : The Canadian Study for a Full-Scale Nuclear Power Plant, 847
Woomera : British 'Black Knight' Ballistic Missile fired from, 698
Wooster, Dr. W. A. : International Conference on Scientific Measurements, 1781
Wooster, Dr. W. A., and Joel. N. : Elastic Constants of Diamond, 1149
Wooster, Dr. W. A. (Joel, N., and) : Number of Elastic Constants required in Crystal Elasticity, 1078
Wooster, Dr. W. A. (Sándor, E., and) : Extra Streaks in the X-Ray Diffraction Pattern of Vanadium Single Crystals, 1435
Worden, Alastair N., and Lane-Petter, W. (edited by) : The UFAW Handbook on the Care and Management of Laboratory Animals, second edition, *review* by Dr. J. O. L. King, 281
Work of Adhesion : Contact Angles and (Prof. N. K. Adam and Dr. H. K. Livingston), 128
Work and Life on Raroia, an Acculturation Study from the Tuamotu Group, French Oceania (Dr. Bengt Danielsson), *review* by Prof. Raymond Firth, 280
Worker : Industry and the, *review* by T. H. Hawkins, 1697
World : Extinct and Vanishing Birds of the (James C. Greenway, Jr.), *review* by Dr. A. J. Marshall, 758
  Geological Map of the, 502

  National Libraries of the (Dr. Arundell Esdaile), second edition, *review* by R. Brightman, 758
  Tables of Temperature, Relative Humidity and Precipitation for the (Meteorological Office), 361
World (Visual): Eye Movements and the Stability of the (R. L. Gregory), 1214
World Data Centre for Rockets and Satellites, Slough, 988
World Forest Products Statistics—a Ten-Year Summary, 1946-1955 (Food and Agriculture Organization of the United Nations), 1553
World Health 1948-58 : Ten Steps Forward— (Ritchie Calder), 1132
World Health Organization (United Nations) : Annual Epidemiological and Vital Statistics (1954), Bilingual edition (French and English), *review* by S. J. Kilpatrick, 9
  Manual of the International Statistical Classification of Diseases, Injuries and Causes of Death, *review*, 417
  Monograph Series No. 34, The Teaching of Hygiene and Public Health in Europe (Prof. F. Grundy and Prof. J. M. Mackintosh), *review* by Prof. Thomas McKeown, 619
  Technical Report Series No. 144, Procedures for the Testing of Intentional Food Additives to establish their Safety for Use (Second Report of the Joint FAO/WHO Expert Committee on Food Additives), 850
  Monograph Series No. 36, An International Nomenclature of Yaws Lesions (Dr. C. J. Hackett), 1132
  The First Ten Years of the, 1132
  Technical Report Series No. 146, Expert Committee on Water Fluoridation—First Report, 1352
World Land Use Survey (Prof. Robert W. Steel), 1285
World Land Use Survey : Monograph 1, A Survey of Land Use in Hong Kong and the New Territories (Dr. Thomas R. Tregear), 1285
World Law : World Peace through (Grenville Clark and Prof. Louis B. Sohn), 966
World Meteorological Organization : International Meteorological Organization Prize for 1958 awarded to E. Gold, 18
World Order : Spiritual Values and, 965
World Peace through World Law (Grenville Clark and Prof. Louis B. Sohn), 966
World Population : The Problems of (Sir Charles Darwin), 497
World Reference Laboratory for Foot-and-Mouth Disease, 1417
Worms (Lug-) : Movements of (Prof. G. P. Wells), 1107
Worshipful Company of Founders : Awards of Bronze Medals, 1777
Worsley, S. J. : Completion of term of office as secretary of the Inter-University Council for Higher Education Overseas, 1774
Worth (R. H.) Prizes of the Geological Society of London awarded to E. W. J. Moore and to C. W. Wright, 1348
Worthington, Dr. E. B. : Science in the Development of Africa—a Review of the Contribution of Physical and Biological Knowledge South of the Sahara, *review* by Dr. Kenneth Mellanby, 1043
Worthington, Dr. E. B., and Skellam, J. G. : Dynamics of Fish Populations, *review*, 686
Woyk, Dr. E. (E. Chvojková) : Investigation of the Ionosphere using Signals from Earth Satellites, 1362
Wragg, W. R., and others : Metamidium, a New Trypanocidal Drug, 1005
Wright, Dr. C. E. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Wright, C. H. : At the Library Association Conference at Brighton (Current Problems of Special Libraries), 1716
Wright, C. W. : Awarded a R. H. Worth Prize of the Geological Society of London, 1348
Wright, Dr. G. T. : Space-Charge Limited Currents in Insulating Materials, 1296
Wright, Prof. J. G. : Veterinary Handbook, *review*, 75
Wright, J. K., and others : Observations on the Explosion at Ripple Rock, 1597
Wright, Dr. Norman : Elected biological general secretary of the British Association for the Advancement of Science, 631 ; work of, 631
Wright, Prof. R. D., and others : Changes in the Potassium Concentration and Metabolism of Red Blood Cells of the Lamb, 1742
Wright, R. W., and others : Horizontal Drift Measurements in the Ionosphere near the Equator, 1363
Writing (Early), in Greece (R. M. Cook), 152
Wroe, H. : Vacuum Arcs on Tungsten Cathodes, 338
Wryk, Martha A., and others : Tubule Formation in Rat Brains by Monkey Kidney Cells previously grown *in vitro*, 1034
Wu, Jane, and others : Separation of Mixtures of Œstrogens in Urinary Extracts using Gradient Elution Chromatography, 874
Wuhrmann, Prof. Ferdinand, und Wunderly, Dr. Ch. : Die Bluteiweisskörper des Menschen, dritte Auflage, *review* by Dr. R. Consden, 623
Wul, B. M. : Solid State Physics, 567
Wunderly, Dr. Ch. : Diffusion of Proteins through a Wedge-shaped Agar Gel, 1087
Wunderly, Dr. Ch. (Wuhrmann, Prof. Ferdinand, und) : Die Bluteiweisskörper des Menschen, dritte Auflage, *review* by Dr. R. Consden, 623
Wyckoff, jun., L. Benjamin, and others : Phenylketonuria in the Rat associated with Decreased Temporal Discrimination Learning, 871
Wydeveld, P. G. A. B. (Jansen, A. P., and) : α-(*p*-Nitrophenyl) Maltoside as a Substrate for the Assay of Amylase, 525
Wylie, R. G. (Caw, W. A., and) : Capillary-tube Viscometry with Negligible Kinetic Energy Effects, 1153
Wyman, Jeffries (Edsall, John T., and) : Biophysical Chemistry, Vol 1, Thermodynamics, Electrostatics and the Biological Significance of the Properties of Matter, *review* by Prof. J. A. V. Butler, 5
Wynn, V. : Biochemical Response to Physical Injury (Some Problems of Water Metabolism following Surgery), 1495
Wynne, K. N., and others : Calcium and Phosphorus Metabolism after Surgery, 1505
Wynne-Jones, Prof. W. F. K., and others : Electron Spin Resonance in Carbons—a New Oxygen Effect, 1154
Wystrach, V. P., and others : The 1,2,3- and 1,2,4-Triazines, Tetrazines and Pentamines, *review* by Dr. F. G. Mann, 1762

X-IRRADIATED Animals : Anaemia and Liver Damage in (Dr. M. Skalka), 1602
X-Irradiated Mice : Effect of Thyroid Pre-treatment on the Mortality of (Dr. L. Novák and Dr. M. Pospíšil), 1603
X-Radiation : Influence of Cysteamine on the Teratogenic Action of (Dr. D. H. M. Woollam and Dr. J. W. Millen), 1801
X-Ray Analysis and Electron Microscopy of Metals, 771
X-Ray Diffraction : Examination of Metals by (X-Ray Diffraction Group of the Institute of Physics Discussion on), 771
X-Ray Diffraction Pattern of Vanadium Single Crystals : Extra Streaks in the (E. Sándor and Dr. W. A. Wooster), 1435
X-Ray Microscopy and Microradiography—Proceedings of a Symposium held at the Cavendish Laboratory, Cambridge, 1956, *review* by Prof. R. D. Preston, 1113
X-Ray Scattering (Low-Angle), by Glasses (E. A. Porai-Koshits and N. S. Andreyev), 335
X-Ray Scattering (Small Angle), from Metals (Midwest Research Institute, Kansas City, International Conference on), 634
X-Ray Study of Rare Phosphate Minerals (Dr. B. Mukherjee and U. Prasad), 472
X-Ray Treatment : Transformation of a Monochlamydius into a Dichlamydius Chimaera by (Dr. H. W. Howard), 1620
X-Rays : Inability of Epinephrine to protect Rhode Island Chicks against the Lethal Action of (Dr. M.-L. Beaumariage), 803
  Increased Survival of Rats irradiated with, and Treated with Parathyroid Extract (R. H. Rixon, J. F. Whitfield and T. Youdale), 1374
  Use of Radioactive Substances and, in Schools (Ministry of Education, Administrative Memorandum No. 577, on), 1203
X-Rays (Ultra-violet and) : Comparison of the Effect of, on the Capillaries of the Frog's Web (Horst Bücker and Wilfried Hanke), 1375
Xanthine Oxidase (Purified Bovine), in *C3H* and *C* Mice : Anti-Tumour and Biochemical Effects of (Prof. A. Haddow, Dr. G. de Lamirande, Prof. F. Bergel, Dr. R. C. Bray and D. A. Gilbert), 1144
Xanthomonas : Host Specificity in (D. W. Dye), 1813
Xenopus laevis : Sexually Mature Individuals of, from the Transplantation of Single Somatic Nuclei (J. B. Gurdon, T. R. Elsdale and Dr. M. Fischberg), 64

YAGI, Kunio, and others : Effects of Flavin Monosulphate and Flavin Adenine Dinucleotide on the Electroencephalogram, 457
Yale Medical Library : Annual Report for 1956-57, 498
Yale University : Annual Report for 1956-57 of the Yale Medical Library, 498
Yale University (Peabody Museum of Natural History) : Bulletin 10 : Revision of the Gymnarthridae American Permian Microsaurs (Joseph T. Gregory, Frank E. Peabody and Llewellyn I. Price), *review* by Dr. W. E. Swinton, 1115
Yamada, Shoichiro (Tsuchida, Ryutaro, and) : Structure of Cupric Mono-, Di and Tri-bromoacetates, 1230
Yamaha, Dr. Tsutomu (Cardini, Dr. C. E., and) : Biosynthesis of Plant Glycosides from Uridine Diphosphate Glucose, 1446
Yamasaki, T., and Narahashi, T. : Effects of Potassium and Sodium Ions on the Resting and Action Potentials of the Giant Axon of the Cockroach, 1805
  Synaptic Transmission in the Cockroach, 1805
Yamato, Dr. H. : Human and Animal Ecology (Histoplasmosis in Japan), 1648
Yarrow Scholarship in Marine Engineering (Institution of Naval Architects), 1554
Yasumura, Y., and others : Effect of Viral Infection and Cortisone upon Tumour Growth in Homologous and Heterologous Hosts, 1678
Yates, R. A. (Taylor, James A., and) : British Weather in Maps, *review* by Prof. Gordon Manley, 1696
Yaws Lesions : An International Nomenclature of (Dr. C. J. Hackett), 1132
Years (5,000) : Carbon-14 Activity during the past (Dr. C. Crowe), 470 ; (Dr. K. O. Munnich, H. G. Ostlund and Hl. de Vries), 1432 ; (H. Barker), 1433
Yeast : Antibiotic Substances from (Werner Motzel and Dr. Elton S. Cook), 455
  Induction of Respiratory Deficiency in, by Manganese, Copper, Cobalt and Nickel (Prof. Carl C. Lindegren, Susumu Nagai and Hideko Nagai), 446
  Soluble Nucleotides and Nucleotide–Amino-Acid Compounds of (Dr. D. A. Gilbert and Prof. E. W. Yemm), 1745
Yeast (Bakers') : Analysis of Mixtures of Glucosamine and Galactosamine with (Dr. Donald M. Pogell and Dr. Donald F. Koenig), 127
Yeast (Brewers') : Nucleotide Pool of, during Growth and Fermentation (G. Harris, J. W. Davies and R. Parsons), 1565
Yeast Cells : Effect of Ethylenediamine Tetraacetic Acid on the Enzyme System of (J. P. Shukla and K. A. Prabhu), 1316
Yeast Cells (Disintegrated) : Liberation of Invertase from (M. Burger, E. Elizabeth Bacon and Dr. J. S. D. Bacon), 1508
Yeast Metabolism : Reversal of Magnesium Ions of the Inhibition of, by a Cationic Detergent (Dr. W. McD. Armstrong), 326
Yeasts : The, *review* by R. B. Gilliland, 488
  The Chemistry and Biology of (edited by A. H. Cook), *review* by R. B. Gilliland, 488
  Kinetics of Mitosis in (Dr. M. S. Swaminathan and A. T. Ganesan), 610
Yeasts (Proliferating) : Oxidation of Ethyl Alcohol to Acetic Acid by (Juan Santa María), 937
Yellow Fluorescent Pigment in Elastin (Dr. F. J. Loomeijer), 182
Yellow Semen : Riboflavin in (Dr. I. G. White and G. J. Lincoln), 667
Yemm, Prof. E. W. (Gilbert, Dr. D. A., and) : Soluble Nucleotides and Nucleotide–Amino-Acid Compounds of Yeast, 1745
Yensen, Roy : Influence of Water Deprivation on Taste Sensitivity in Man, 677
Yield and Grading of Main-Crop Potatoes : Effect of Number of Sprouts per Set on (R. D. Toosey), 269
Yield Variations in Tree Crop Experiments with specific reference to Cacao (T. A. Jones and G. K. Maliphant), 1613
Yoda, S., and Ashida, J. : Effect of Gibberellin on the Extensibility of the Pea Stem, 879
Yoffey, Prof. J. M., and others : Labelling of Cells in Thoracic Duct Lymph of the Guinea Pig after Tritiated Thymidine, 1608

Yokoi, Hanako, and others : Changes in Ultra-Violet Absorption Spectra of Deoxyribonucleic Acid by Treatment with Bromine, 1302
Yokoyama, A. (Ôta, K., and) : Effect of Oxytocin Administration on Respiration of Lactating Mammary Gland Tissues in Rats, 1509
Yolks (Egg-) : Nature of the Carcinogenic Substance in (Jan Hradec), 52
Yonetani, Takashi, and others : Reconstruction of the Reaction Mechanism of Cytochrome Oxidase, 1306
Yonge, Prof. C. M. : Molluscan Development, *review*, 484
  D'Arcy Wentworth Thompson, *review*, 552
  Form and Function in the Mollusca, 996
  Obituary of Prof. James Ritchie, 1483
Yoshizawa, Tôru, and Kitô, Yûji : Chemistry of the Rhodopsin Cycle, 1604
Youdale, T., and others : Increased Survival of Rats irradiated with X-Rays and Treated with Parathyroid Extract, 1374
Young, A. : Appointed senior lecturer in applied mathematics at the University of Liverpool, 22
Young, Miss A. F. : Unemployment among Women over Forty Years of Age, 923
Young, Dr. D. A. : Etching of Radiation Damage in Lithium Fluoride, 375
Young, Dr. E. G. : At the Third International Seaweed Symposium (The Amino-Acids, Peptides and Proteins of *Chondrus crispus*), 1779
Young, Prof. F. G. : Hormones in Blood, *review*, 901
Young, Prof. F. G. (Dasgupta, P. R., and) : Activation of Hormonal Secretions—Precorticotropin, 32
Young, Dr. J. D. : Appointed lecturer in physics at the University of Birmingham, 158
Young, Dr. L. : Charge Transfer Processes (Anodic Processes—Mechanism of Growth of Anodic Oxide Films), 1354
Young, L. C. T., and others : Carbon Dioxide Fixation in Germinating Pine Pollen (*Pinus ponderosa*), 1462
Young, Michael, and Willmott, Peter : Family and Kinship in East London, *review* by Prof. E. Grebenik, 9
Young, Niels O. : Verdet Constants of Rare-Earth Glasses measured with a New Polarimeter, 333
Young Chair of Technical Chemistry in the Royal College of Science and Technology, Glasgow : W. H. Perkin and the (R. Brightman), 613
Young Salmon at Two British Columbia Field Stations : Research on Guiding (J. R. Brett and D. F. Alderdice), 162
Yttrium-90 (Dissolved Strontium-90 and) : Direct Absorption of, by Tadpoles of *Rana temporaria* (J. W. Lucas and D. C. Pickering), 1242
Yu, Prof. Pek Nam : Elected a Foreign Member of the Academy of Sciences of the U.S.S.R., 359
Yü, T. F., and others : Relationship between *pKa* and Uricosuric Activity in Phenylbutazone Analogues, 1162
Yudkin, Prof. John : This Slimming Business, *review* by Prof. Charles H. Gray, 685
Yugoslav Embassy in London : Meeting to celebrate the Bicentenary of the publication of the 'Theoria Philosophiae Naturalis' of Roger Joseph Boscovich, 230
Yulengor—Nomads of Arnhem Land (Wilbur S. Chaseling), *review* by Prof. Raymond Firth, 280

ZACHARIAS, B. (von Ehrenstein, G., and) : Effect of Calcium Ions on the Binding of Chromium-51 to Erythrocytes *in vitro*, 1384
Zádory, E., and others : Effect of Total Body Irradiation on Capillary Permeability, 885
Zahn, G., and others : A Biological Action of Injected Deoxyribonucleic Acid, 1679
Zahn, Dr. Rudolf K., and others : A Biological Action of Injected Deoxyribonucleic Acid, 1679
Zaimis, Prof. Eleanor : Title of professor of pharmacology in the University of London (at the Royal Free Hospital School of Medicine) conferred on, 363
Zaimis, Prof. Eleanor (Paton, Prof. W. D. M., and) : Awarded 5,000 dollars by the Gairdner Foundation, 1710
Zalik, S. (Knowles, R. H., and) : Dormancy in the Seeds of *Viburnum trilobum*, 1415
Zalokar, Dr. Marko (Sager, Dr. Ruth, and) : Pigments and Photosynthesis in a Carotenoid-deficient Mutant of *Chlamydomonas*, 98
Zambezi (Middle) : A Lungfish (*Protopterus*) from the (P. B. N. Jackson), 123
Zamenhof, Prof. Stephen, and Greer, Dr. Sheldon : Heat as an Agent producing High Frequency of Mutations and Unstable Genes in *Escherichia coli*, 611
Zaremba, Dr. S. K. : Appointed lecturer in the Department of Pure Mathematics, University College of Swansea, 363
Zariski, Prof. Oscar, and Samuel, Prof. Pierre, with the co-operation of Cohen, I. S. : Commutative Algebra, Vol. I, *review* by Dr. L. S. Goddard, 759
Zelazna, Irena (Lorkiewicz, Zb., and) : Mutations in L-Forms, 1619
Zeldes, H. : Free Radical Stabilization, 1497
Zeller, Dr. E. A. : Chemical Pathology of the Nervous System (Metabolism of Amines in Mental Disease), 1647
Zemel, Dr. B. (Elving, Dr. H., and) : Charge Transfer Processes (Electrochemical Reductions other than those involving Hydrogen or Metal Deposition—Mechanism of Reduction of Chloraquo–Chromium-III Ions in Acid Media, studied at the Dropping Mercury Electrode), 1354
Zepler, Prof. E. E. : Elected president of the British Institution of Radio Engineers, 1416
ZETA : Neutron Production and Temperature in (K. A. George), 745
Zeta Potential and Sedimentation Behaviour in Flocculated Cane Sugar Juice (Dr. M. C. Bennett), 1439
Zief, Morris (Wendlandt, Prof. Wesley W., and) : Thermal Decomposition of Antibiotics, 665
Ziegler, W., and others : A Biological Action of Injected Deoxyribonucleic Acid, 1679
Ziemiecka, Prof. J. : Ecology of Soil Fungi, 1559
Zilber, C. A. : Progress in Cancer Research (Immunology and Immunogenetics), 365
Ziman, Dr. J. M. (Pyle, I. C., and) : Measurements of Conduction at Low Temperatures (Electrical and Thermal Conduction in Semiconductors), 84
Zimmermann, Martin H. (edited by Thimann, Prof. Kenneth V., with the assistance of Critchfield, William B., and) : The Physiology of Forest Trees—a Symposium held at the Harvard Forest, 1957, *review* by Dr. L. Leyton, 1698
Zinc : Importance of, for the Growth of Surface-Culture of *Mycobacterium tuberculosis* var. *bovis* and Large-scale Production of Tuberculin Purified Protein Derivative (T. Dekker and H. Huitema), 1387
Zinc in Gallium Arsenide : Diffusion of (J. W. Allen and F. A. Cunnell), 1158
Zinc Deficiency induced by Mercury in *Coffea arabica* (K. R. Bock, J. B. D. Robinson and G. T. Chamberlain), 1607
Zinc Toxicity : Effect of Copper on Growth and Catalase Levels of *Corcyra cephalonica* St. in (K. Sivarama Sastry and Prof. P. S. Sarma), 533
Zlatkis, Prof. Albert, and Ridgway, J. A. : A Methane-Conversion Detector for Gas Chromatography, 130
Zohary, Dr. Daniel, and Ashkenazi, Israel : Different Frequencies of Supernumerary Chromosomes in Diploid Populations of *Dactylis glomerata* in Israel, 477
Zomzely, Claire, and Mayer, Jean : Levels of Serum Cholesterol in Obese Mice, 1738
Zone Electrophoresis : Detection of Haemoglobin, Haemoglobin–Haptoglobin Complexes and other Substances with Peroxidase Activity after (Dr. J. A. Owen, H. J. Silberman and C. Got), 1373
Zones in an Electrophoresis Column : Migration-elution of (Dr. J. Porath, Miss E. B. Lindner and S. Jerstedt), 744
Zoogeography, the Geographical Distribution of Animals (Dr. Philip J. Darlington, Jr.), *review* by Charles S. Elton, 140
Zoological Congress : International, 86
Zoological Nomenclature, 362
Zoological Nomenclature, International Trust for : Resignation of Francis Hemming as a member of the Trust and as managing director and secretary, 842
  Appointment of Lieut.-Colonel F. J. Griffin as managing director and secretary, 842
  Appointment of R. V. Melville as scientific controller (with responsibility for the scientific and editorial work), 842
Zoological Record : Vol. 92, Being the Records of Zoological Literature relating chiefly to the Year 1955 (edited by G. Burder Stratton), *review* by Dr. Edward Hindle, 970
Zoological Society of India : First All-India Congress of Zoology, 88
Zoological Society of London : Appointment of Dr. D. Morris as curator of mammals, 1345
Zoological Types : African, 431
Zoological and Botanical Types preserved in Collections in Southern and East Africa : A List of (South African Museums Association), Vol. I, Zoology, Part I, 431
Zoologie : Traité de (publié sous la direction de Prof. Pierre-P. Grassé), Tome 13, Agnathes et Poissons, *review* by Prof. C. H. O'Donoghue, 1574
Zoology : First All-India Congress of (Zoological Society of India), 88
  The Fifteenth International Congress of (Dr. Edward Hindle), 434
  Treatise of, *review* by Prof. C. H. O.Donoghue, 1574
Zoology (Soil) : Research Methods in (Soil Zoology Committee of the International Society of Soil Science Colloquium on), 704
Zubay, Dr. Geoffrey : A Possible Mechanism for the Initial Transfer of the Genetic Code from Deoxyribonucleic Acid to Ribonucleic Acid, 112
  A Three-stranded Polyribonucleotide Structure, 388
  A Template Model for the Synthesis of Ribonucleic Acid from Deoxyribonucleic Acid, 1290
Zubrzycki, Z. J., and others : Radiometric Estimation of Unsaturated Fatty Acids on Chromatograms, 178
Zuman, P., and others : Polarographic Study of the Acid-Base Reactions of the Tropylium Ion, 1535
Zumberge, Dr. J. H. : Antarctic Research (Special Investigations in Glaciology), 286
  Physics of Ice Movement (Glacier Flow), 1562
Zvegintzov, M. : Fuel and Power in British Industry (Nuclear Power), 1715
Zwerdling, S. : Spectroscopy of Solids (Effect of Strong Magnetic Fields on the Absorption Spectrum of Germanium and other Semiconductors), 159
Zymogen (New), of Proteolytic Enzyme from Beef Pancreas : Pancrinogen, a (Masami Soejima and Kensuke Shimura), 49

Subscriptions

The charges for direct postal subscriptions to "NATURE" are

12 months	... ...	£7	15	0
6 months (26 issues)	...	£3	17	6
3 months (13 issues)	...	£1	18	9

Postage paid, to any part of the world

★

All subscriptions are payable in advance

★

Volumes begin in January and July of each year, but subscriptions may commence with any issue

★

Payment from abroad should be made by International Money Order or by Cheque payable at a London Bank to Macmillan & Co., Ltd.

★

Water Activity of Mammalian Tissues.—Dr. LeRoy H. Maffly and Dr. Alexander Leaf . . . 60
Part played by Deoxyribonucleic Acid in Transplantation Immunity.—Vera Hašková and Miroslava Hrubešová ; Prof. P. B. Medawar, F.R.S. . . . 61
Influence of a Crude Hypothalamic Extract on the Acid Phosphatase Activity of Rat Pituitaries.—Prof. J. Charvát, V. Schreiber and V. Kmentová . . . 62
Albinism in the Common or Hottentot Mole-Rat, *Cryptomys hottentotus* Lesson, 1826.—Peter St. J. Turnbull-Kemp . . . 63
Change in Mean Viability at a Multi-allelic Locus in a Population under Random Mating.—S. P. H. Mandel and I. M. Hughes . . . 63
Sexually Mature Individuals of *Xenopus laevis* from the Transplantation of Single Somatic Nuclei.—J. B. Gurdon, T. R. Elsdale and Dr. M. Fischberg . . . 64
A Genetic Mechanism for 'Thread Protein' Polymorphism in Cattle.—G. C. Ashton . . . 65
Bones of a Vulture among the Remains of Animals sacrificed on the "Burial of Romulus" below the *Niger lapis* in the Roman Forum.—G. A. Blanc and Prof. A. C. Blanc . . . 66

PHOTOGRAPHY AT WORK

•

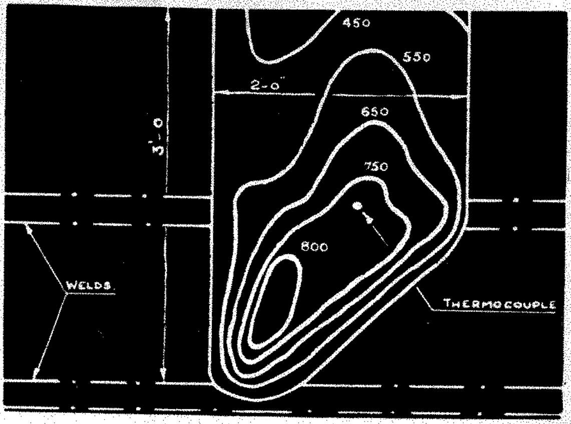
removing the danger from hot spots

Excessive heat on any part of the walls of a catalytic cracker generator in an oil refinery can become a major nuisance. It may, in extreme cases, lead to a temporary closing down of the plant.

At Shell's Stanlow refinery, where the catalytic cracker generator is the largest single vessel, firm steps are taken to ensure that no 'hot-spot' is allowed to develop. Constant checks are made by infra-red photography.

The infra-red plates show the size and shape of hot-spot areas and indicate the points of maximum temperature. They also serve as a record for later reference.

'Kodak' IR.ER Infra-Red Extra-Rapid Plates are used exclusively for these very important checks.



A temperature contour diagram prepared from prints made from infra-red plates, showing the lines of equal temperature in hot-spot areas. (Courtesy of the Shell Petroleum Company Ltd)

SCIENCE AND TECHNOLOGY IN PUBLIC AFFAIRS

ALTHOUGH the seventh annual report of the National Science Foundation covers the year ended June 30, 1957 (see *Nature*, June 21, p. 1710), the expanded programmes for the Foundation announced by President Eisenhower in his message on education to Congress on January 27, 1958, gives especial interest to the report, apart altogether from the steps to improve and expand Anglo-American co-operation in research and development indicated by the President and Mr. Macmillan in their joint statement on their talks last October. In his budget message of January 13, President Eisenhower had proposed appropriations of 140 million dollars for the Foundation in 1959, compared with 40 million dollars in 1957 (apart from some 32 million dollars on account of the International Geophysical Year). Of this 40 million dollars, 664,561 dollars was allocated to national science policy studies, nearly 7,500,000 dollars to research grants in the biological and medical sciences, just over 7,500,000 dollars to research grants in the mathematical, physical and engineering sciences, and 289,100 dollars to the social sciences. Grants in support of research facilities totalled, in biological and medical sciences, 884,800 dollars, and in the mathematical, physical and engineering sciences, 4,496,899 dollars. Graduate fellowships received 3,353,605 dollars, education in the sciences 10,947,711 dollars, the President's Committee on Scientists and Engineers 117,517 dollars, the review of research and training 1,020,143 dollars, and the dissemination of scientific information 994,736 dollars, with 122,069 dollars for attendance at international scientific meetings.

It is expenditure of this order that is now to be increased to 58 million dollars on research grants and 82 million dollars (including 3 million dollars on administration) for the improvement and extension of education in science. The current annual report of the Foundation enables the British reader to judge more accurately the scale and character of the new efforts of the United States in this field, and to assess to some extent the new need for modifications and developments in our own effort, both to eliminate waste and inefficiency and to improve its balance and facilitate smooth co-operation with the United States. It is not so much the scale of the British effort in comparison with that of the United States that is in question as the character of the institutions by which it is operated, and the spirit and outlook in which they are administered; on this the present report of the National Science Foundation and the statement of its director, Dr. A. T. Waterman, in particular, throw a flood of light.

No one institution in Britain carries quite the responsibility and concern for scientific endeavour that the National Science Foundation bears in the United States. The closest approach is probably the office of the Lord President of the Council; but even so, responsibility is dispersed between him, the Advisory Council for Scientific Policy, the Defence Research Policy Committee, the University Grants Committee and various other bodies the concerns and efforts of which it could scarcely be said, as Dr. D. W. Bronk, chairman of the National Science Board, writes in this annual report, that they are "permeated by devotion to the belief that the furtherance of science enriches the intellectual and spiritual life of the people of our country, broadens and deepens the quality of our culture and ennobles our national ideals". Indeed, any consideration of incidents over the past few years suggests that the nearer we approach to ministerial level in Britain the less that is likely to be true. So far as the Government and its institutions are concerned, science is regarded as serving practical ends, rather than as a great adventure of the human mind.

That may be a primary reason why we lack an effective institution in Britain comparable to the National Science Foundation with its statutory responsibility "to develop and encourage the pursuit of a national policy for the promotion of basic research and education in the sciences". Much turns on the place which science and the scientist hold in the public esteem. One lesson which should have been impressed upon both the Government and the public by the shortage of technologists and of scientists, and especially of teachers of science and mathematics, is the dependence of the attractiveness of a career to the school-leaver or graduate on the esteem its practitioners enjoy in the public mind.

In this context, Dr. Waterman's exposition of his understanding of a national policy for science and its implications is of profound interest. Taking as science the accumulated knowledge concerning the world we live in and how it operates, which is steadily increased by active research, based on observation and experiment, Dr. Waterman emphasizes, first, that such exploration depends on an individual's choice of where and how to explore, and that the importance and flexibility of his project or programme and the significance of his final results can only be properly appraised and evaluated by his scientific colleagues in the same field. From that follows the fundamental importance of free communications and a national policy for fundamental research, at least; though no government or other agency can rationally attempt to formulate programmes for individual scientists, still less prescribe the methods of attack. Those must be left to the individual scientist: a national policy in science, at least as distinct from technology, must be limited to discovering the objectives which scientists regard as important and seeing that the scientists are provided with adequate means for the attack.

This implies, as Dr. Waterman indicates, whole-hearted support for competent basic research where needed; in particular, it implies provision of the capital facilities required in such fields as nuclear research, radio astronomy, and the scientific exploration of outer space, as well as proper attention to such auxiliary matters as the dissemination of research results, opportunity for conferences and travel to scientific meetings, and communications with other scientists at home and abroad. How far successive British post-war governments have been from such an approach can be demonstrated by referring to their treatment of recommendations of the Advisory Council for Scientific Policy regarding the National Lending and Reference Libraries for Science and Technology, the shelving of the whole project for a Science Centre, and the futilities which in the name of economy have recently interrupted work on the Isaac Newton Telescope and the appointment of an administrator with no scientific, technological or legal training to the comptrollership of the Patent Office. Even the admitted shortage of scientists and technologists has not brought the Government to appreciate what is wrong, or to take the steps that would avoid the present wastage of man-power and lead to greater efficiency, and real and not imaginary economies.

On the question of priorities of effort as between one science and another, Dr. Waterman observes that no field of science should be excluded from encouragement and support. We simply do not know where the next capital discoveries may occur. The only distinctions that can be made as to relative values are in terms of contributions to understanding of our world, generality of findings, techniques available, current rates of progress, available skilled man-power, and occasionally neglected or over-emphasized special areas when so identified by the scientists themselves. The question of what way science can best serve the nation and all mankind is completely different, and involves an appraisal of national and human needs and the matching to them of progress in the several fields of science. It is almost exclusively a practical matter, concerning the applications that can be made from scientific discoveries and principles; and it may be remarked in passing that a main theme of the report of Prof. C. F. Carter and Prof. B. R. Williams on "Industry and Technical Progress" was that in certain sectors of British industry much more needs to be done to extend the application of existing knowledge.

National needs, Dr. Waterman points out, can be described in terms of broad essentials such as food, health, defence, transport, housing, communication, power and water, and in these the policy of the Federal Government of the United States is at present to place on its own agencies the responsibility for technology related to its own mission. Each agency, however, is also encouraged to conduct and support basic research in fields of science related to its work. Besides this work in its own laboratories, the Federal Government supports basic research in universities, research institutes and laboratories throughout the country, and the National Science Foundation was established in 1950 to further the support of basic research comprehensively and actively on all fronts.

The Foundation attempts to do this in various ways and by a wide range of institutions, seeking the diversity and flexibility that are essential to secure the conditions in which scientific effort is most vigorous and fruitful. By keeping the different agencies informed of each other's interests, the proposals received and any action taken, the Federal Government is enabled to follow the lead of the scientists in determining the research to be supported, giving a truly national policy for the encouragement of science. That policy does not indeed provide unrestricted research funds for institutions or their departments, and although support by scientific project is criticized in some academic circles, the balance of scientific opinion regards it as satisfactory, though Dr. Waterman suggests the question should remain open. There are some exceptions, such as agriculture, where the policy is more in line with that adopted for industrial research associations in Great Britain, and, more recently, in the assistance given to some institutions for medical research. Dr. Waterman stresses the traditional policy of avoiding Federal aid to education, which in an important field has now been substantially modified in the President's message on education, as Dr. Waterman indeed forecast in his own statement. There are other questions, too, which he suggests need attention: the direction and the degree in which the Federal Government should extend its support for science, including the increase of research activity in its own laboratories; the advisability of establishing federally operated general research laboratories; and the way in which any necessary further support for training in science should be given.

Dr. Waterman stresses the over-riding urgency of prompt, effective and permanent measures in these matters; but no less clearly he points to the utmost importance of new measures or modification of existing measures and policy having the understanding and support of the people. Effective measures to strengthen education in science and technology and to increase the national research effort cannot be taken in a democracy without the full support of its citizens. While one outcome of an expansion of technical and technological education and of the development of a broad general education should be increased public understanding of its value and importance, we have to seek to promote that understanding simultaneously in order to secure the support and continuity which will permit those developments. The impact of society on science can be as important as the impact of science on society.

This latest annual report of the National Science Foundation does indeed emphasize the neglected truth to which Prof. E. W. R. Steacie directed attention in his Purvis Memorial Lecture last November, namely, that society ultimately controls technological innovation, and the vital question is whether the organization of government in Britain to-day is appropriate for the exercise of such control. Without, in fact, some understanding of science or particular technologies on the part of the administrator or statesman, it is improbable that he will appreciate the opportunities which potential technological developments offer, still less that he will face the awkward questions and difficult decisions that may be involved, and embark on the task of public education which is essential if support is to be forthcoming for the necessary decisions and policy.

In this influence that society exercises on the direction of technological advance lies the great danger of party politics, particularly under the influence of mass media of communication. As Prof. Steacie remarks, science has the major influence on what is possible, but only a minor influence on what is in fact done. An increasing proportion of the work of the National Science Foundation appears to be directed towards increasing the influence of science; and the development of Anglo-American co-operation in research and development, in the field of defence and elsewhere, depends ultimately on the extent to which, not only in the United States but also in Britain and in her partners in the North Atlantic Treaty Organization, the influence of science and technology on practical affairs and policy can be extended. We have to promote the will to use science and technology aright; and it is frightening that when the elements of control over our environment are within our grasp, we do not choose to use them.

Prof. Steacie's lecture does more than direct attention to some of the implications for the structure of government to-day. He sets science in the right context in relation to the technology of defence and to the question of education for this technological age. He rejects the idea that all scientists should be classed as second-rate citizens, and he pleads for a sane attitude towards specialization and discounts the pursuit of the argument of science versus the humanities. Somehow we must give the future leaders of society a general idea of the aims and methods of science, the lack of which is often a dangerous factor in our situation. He condemns the tendency, illustrated, for example, over the launching of artificial Earth satellites, to treat scientific advance as a race, with emphasis on nationalism, and, no less forthrightly, the consequent major importance attached to the keeping of secrets, with grossly exaggerated security measures.

The Purvis Memorial Lecture and the National Science Foundation's report both demonstrate how much common thought there is in Canada, in Britain and in the United States. While, however, each country may have much to learn from the other, the essential conditions of scientific and technical advance are independent of national boundaries; the establishment of those conditions and the administrative structure required to create and nurture them are problems for each national administration, and indeed for all those citizens, whether scientists or technologists or not, who are concerned with their country's economic and industrial future, its social welfare or its security. Both Prof. Steacie and Dr. Waterman, however, in challenging further thought as to the adequacy of Britain's present institutions, seem to point to the opportunity which a body such as the Parliamentary and Scientific Committee has of playing an increasing part in directing attention to problems and stimulating fresh thought about methods and needs.

There is welcome evidence that this is being done. The Committee has already taken action regarding the recent appointment of the comptroller-general of the Patent Office and on the payment of rates by scientific societies. The discontinuance of the Isaac Newton telescope and the question of scientific libraries are matters that fall well within its scope of action within recent years, particularly in relation to scientific and industrial research. The Committee this year heard authoritative addresses on space satellites and relevant matters, and on the use of thermonuclear energy at power stations. Such addresses might well suggest a re-assessment of national power policy in terms of the increase in capacity of the nuclear power station in relation to capital cost. The implications of these developments for both the man-power and capital invested in research and development require consideration from a wide national point of view, and especially with reference to the resources in capital and man-power already collected in industrial groups.

It is not suggested that the Parliamentary and Scientific Committee could do all that is required; but if it enjoyed strong support from scientific and professional institutions, with that of members of Parliament alive to the issues involved, it should be able to insist on public discussion at a level high enough to be embarrassing to any Government which sought to ignore the facts. With that, however, must go a continuing task of public education to create understanding which will support the policies required. Of the opportunities and responsibilities which confront the individual scientist and technologist, as a professional man and a citizen, the Purvis Memorial Lecture and the National Science Foundation report, like the recent annual report of the Parliamentary and Scientific Committee, give clear indications.

TECHNOLOGY: 1500–1750

A History of Technology

Edited by Charles Singer, E. J. Holmyard, A. R. Hall, and Trevor I. Williams. Vol. 3: From the Renaissance to the Industrial Revolution *c.* 1500–*c.* 1750. Pp. xxxvii+766+32 plates. (Oxford: Clarendon Press; London: Oxford University Press, 1957.) 168*s.* net.

THE third volume of this monumental work, produced under the same editors with the continued assistance of Imperial Chemical Industries, Ltd., carries the story from the Renaissance to the dawn of the Industrial Revolution, and maintains the high standard of the earlier volumes already commended in *Nature* (176, 182; 1955: and 179, 709; 1957).

As before, the matter is not strictly confined to the dates given, and indeed the treatment of cartography, the calendar, town planning, and precision instruments extends back two thousand years or more.

The most important event of the period was the invention of printing in the second half of the fifteenth century, which is admirably described in a chapter by Michael Clapham. The resulting flood of printed books accelerated technological progress by bringing about the rapid diffusion of knowledge. It also led to the attempt to re-discover ancient techniques and thus led to new knowledge. An additional consequence is that historians are able to draw on the new technical literature, and the wealth of material available in such writers as Biringuccio and Agricola and in the "Books of Trades" culminating in the great French "Encyclopaedia" both reduces the relative importance of archæological evidence and faces the editors and authors with difficult tasks of selection.

Corresponding with the expansion of the general knowledge of the educated man occurred the expansion of the Western world with the voyages of exploration made possible by the development of the full-rigged ship described in the chapter by G. P. B. Naish. This raised problems of navigation which could only be solved by the successful application of science. It was in the field of navigation, surveying, and time measurement that scientific solutions were first required, and the art of instrument-making which arose was later of great service to science itself in making possible the provision of optical instruments and other physical apparatus such as thermometers, vacuum pumps, and electrostatic machines. These topics are extensively treated in two chapters on cartography, survey and navigation by Charles Singer, D. J. Price, and E. G. R. Taylor; in two chapters on precision instruments by D. J. Price; and by H. Alan Lloyd on mechanical timekeepers.

The increased consumption of wood for shipbuilding and also in the extraction of metals led to the increased use of coal and made the problem of mine drainage more urgent, with the ultimate consequence of giving rise to Newcomen's invention of the steam engine. Although its advent thus falls within the period of this volume the steam engine is not discussed, since its main impact on society came later. Coal mining is treated by J. U. Nef, and Cyril Stanley Smith and R. J. Forbes write on metallurgy and assaying. Pumps are described by A. P. Usher in his chapter on machines and mechanisms.

In the period under review the northern European countries with their access to the ocean and their abundant sources of coal and metalliferous ores came to the fore and thus the centre of technological advance was displaced from the Mediterranean region where it had been since antiquity. North-west Europe was the region where the majority of the land drainage and reclamation works, described by L. E. Harris, and the canal construction, described by A. W. Skempton, were carried out.

The scientific approach was of value in the chemical industry as is shown by F. W. Gibbs, but it did not by any means always succeed in transforming craft methods. Thus dynamics was of no assistance in gunnery without the requisite precision-made equipment to profit from it, though much experimentation to improve gun construction took place, as is described by A. R. Hall in his chapter on military technology.

R. Patterson continues his account of the textile industry in which attempts to achieve mechanization fell short of success except in the ribbon loom and the knitting machine. The chapter on figured fabrics by the late J. F. Flanagan seems to be somewhat outside the scope of the book since the subject is more a matter of art than of technology. The same may be said of town planning by Martin S. Briggs, who has also contributed a chapter on building construction. A branch of the latter subject is given detailed treatment by S. B. Hamilton in his chapter on bridges.

R. A. Salaman writes of tradesmen's tools and their specialization and, with J. Geraint Jenkins, gives a detailed account of the trades of the wheelwright and the cooper. The latter author, with Olga Beaumont, contributes a chapter on farm tools, vehicles, and harness. Other contributions are on food and drink by R. J. Forbes, windmills by Rex Wailes, glass by R. J. Charleston and L. M. Angus-Butterworth, and the calendar by Sir Harold Spencer Jones.

The volume is well provided with text figures, many of which are, as before, drawn by D. E. Woodall.

K. R. GILBERT

NUCLEAR ENGINEERING

Selected Papers from the 1st Nuclear Engineering and Science Congress

Held at Cleveland, Ohio. Edited by D. J. Hughes, Stuart McLain and Clark Williams. Vol. 1: Problems in Nuclear Engineering. Pp. vi+365. Vol. 2: Reactor Operational Problems. Pp. ix+278. (London and New York: Pergamon Press, 1957.) £6 each volume or £10 the set.

THESE two volumes contain a selection of the papers presented at the first Nuclear Engineering and Science Congress held at Cleveland, Ohio, during December 12–16, 1955. This Congress was organized by the Engineers' Joint Council in order to present to American engineers and scientists information made available earlier at the International Congress on the Peaceful Uses of Atomic Energy at Geneva and additional information on engineering subjects. The delay between presentation and publication of papers in such a rapidly growing subject is regrettable.

Binding and printing are good apart from a few typographical slips. Some of the illustrations are unsuitable for reproduction but this is presumably the fault of the authors rather than the editors.

Each of the two volumes is divided into four sections, Volume 1 being devoted to site selection, materials, design and heat transfer, while Volume 2 covers waste disposal and radiation hazards, chemical processing, reactor physics and control and instrumentation. Almost all the authors of the eighty-eight papers are from the United States but there are one or two papers from the United Kingdom and Canada. The title of the first volume, "Problems in Nuclear Engineering", appears to be reasonably representative of the contents but that of the second, "Reactor Operational Problems", is ill-chosen since only about one-eighth of the book is devoted to reactor operation, the remainder being mostly concerned with chemical problems.

As is to be expected in a collection of conference papers, each of which must stand alone, there is much repetition of introductory and background material. For example, at least half the papers devoted to site selection, safety and economics in Volume 1 tell us that humans must be protected from the radiations emitted by nuclear reactors. One paper uses well over two hundred words to prove arithmetically that no generalization can be made about the number of people who might be involved in a reactor incident. This could be more easily tolerated if the arithmetic were correct. Perhaps the most interesting paper in this section gives an account of a logical method of site selection by Topping, although one is struck by the apparent absence of objections by bodies concerned with the preservation of amenities.

The nineteen papers on materials form a reasonable discussion of the problems involved in selecting, making and fabricating suitable reactor materials. Some of these papers have a wealth of data in them although there are also some surprising omissions. For example, a paper by Johnson on ceramic fuel for nuclear reactors includes a table describing the change in thermal conductivity of a wide range of ceramic materials after irradiation by neutrons, but all information about uranium and thorium ceramics is omitted. The paper by Huddle on the oxidation behaviour of reactor materials is the most readable in the whole of Volume 1 and is the only paper which is an outcome of work on gas-cooled reactors.

Of the eleven papers included in the section on design, two are merely reviews of nuclear engineering and technology literature. The remaining nine include one by Kasschou describing generally the U.S. Army Package Power Reactor, while the other papers confine themselves to particular aspects of reactor design ; but there is none directly relating to gas-cooled reactors.

The heat transfer section of Volume 1 is short, having only five papers, but two of these, one by Carbon, Gilbert, McNutt and Neider on steam generation in a reactor and the other by Miller, Byrnes and Benforado on heat transfer to water flowing parallel to a rod bundle, contain many useful experimental results. A paper by Alexander describes how the amount of heat produced in the fuel, cans, moderator and other reactor materials may be estimated. It is unusual to find this subject discussed in such detail at a conference and it is a great pity that the author did not include a worked example for illustration.

The first section of Volume 2 contains eleven papers under the heading of waste disposal and radiation hazards, among which those by Hatch and Regan and by Warde and McVay deal with the disposal of radioactive wastes by fixation on baked clay or sintered aluminium oxide. In spite of these and other discussions of sophisticated methods of disposal, the storage of solutions in tanks appears to be the only method in large-scale use, and Wilson discusses its economics. Monitoring and decontamination of water are discussed by Setter and Goldin and by Morton and Straub, respectively, and Eisenbud describes the stations of the monitoring network for fall-out in the United States.

In the second section there are papers on aqueous and organic liquid processing of spent fuel. There are also discussions of dry systems using the distillation of volatile fluorides, by Hyman, Sheft and Katz, by Page, Raseman, Scarlett and Goodman, and by others. Dwyer writes on fused-salt extraction of uranium-bismuth liquid fuel, and pyrometallurgical processing is discussed by the Argonne Laboratory staff. The engineering design of an aqueous plant which can be decontaminated to permit direct maintenance is described by Kennedy and Reid.

The third section contains nine papers devoted to experimental and critical assemblies and reactor physics. The use of a travelling ion chamber connected to a recorder to obtain the exponential flux distribution in a heavy-water system is described by Towler and Wade. Another paper describes an exponential facility in which small samples of particular lattice systems can be tested in a cavity enclosed by a standard lattice array. Two papers mention work on the EBR1. Kato, Kirn and Redman measured conversion ratios by activating foils of uranium-235 and uranium-238, and Crouthamel and Turk estimated fission and conversion rates by chemical analysis of suitable fission and neutron capture products.

The final section contains two papers on instrument developments by Pearson and by Bryant, Carlson, Curtis and Kaufmann, and one on reactor instrumentation experience at Chalk River by Siddall. It also includes a paper on design experience of pressurized water-cooled reactors at Westinghouse by Hamilton, Grace, Meyer and Wilson. Theoretical papers on the reactivity value of multiple control rods and on power reactor control are contributed by Murray and by Van Rennes, Simons and Gray respectively.

SOME ASPECTS OF BIOPHYSICAL CHEMISTRY

Biophysical Chemistry

By John T. Edsall and Jeffries Wyman. Vol. 1: Thermodynamics, Electrostatics, and the Biological Significance of the Properties of Matter. Pp. xv+700. (New York: Academic Press, Inc., 1958.) 14 dollars.

IT is unfair to the cooks to give a final judgment on a meal half-way through, and for this reason impressions of the present volume may be modified when the second volume appears. The book is based on a course of lectures on the physical chemistry of biochemical systems which the authors have given at Harvard, and is clearly intended for students who are going to be concerned with studies of biological materials. It assumes little or no prior knowledge of physical chemistry—in any event, it deals with thermodynamics from first principles and has chapters on electrical conduction of aqueous solutions, and on acid-base equilibra, all of which are normally taught as simple physical chemistry. On the other hand, there is nothing about the kinetics of simple reactions, although the rate of dehydration of carbonic acid is discussed.

It seems to me that the aims of the authors are rather confused. Certainly in Great Britain it would be better to assume that all students who are going to concern themselves with the physical chemistry of proteins will have had an elementary course in physical chemistry, which would normally include elementary thermodynamics and its application to aqueous solutions as well as the basic studies of kinetics. If these were omitted, the present volume would not only be much shorter (and cheaper) but, by concentrating on biological applications of physical chemistry, it would avoid repeating the ground covered in numerous other works.

One can understand the difficulty of deciding where to begin but, surely, in starting with first principles, the authors have gone too far. They are postulating the existence of students who have decided to study 'biophysical chemistry' at the very start of their physical chemical education. I find it difficult to believe that this *avis mirabilis* exists.

If one can judge the contents of the whole work from this volume, together with the announced tentative contents of Volume 2, it might be fair to suggest that the title should be "Chapters in Biophysical Chemistry". Although some subjects (those in which the authors are particularly interested) are discussed in detail, others are scarcely mentioned. Enzyme processes are only briefly mentioned under the binding of molecules to proteins. Diffusion is not included in the elementary theory, suggesting that the authors think that diffusion processes are of no importance in biological systems. Under polybasic acids one might have expected at least some account of the titration of nucleic acids, and although hydrogen bonds get fourteen entries in the index, there is no mention of hydrogen bonding in deoxyribonucleic acid.

Nevertheless, many libraries will be glad to have this volume on their shelves for the accounts of specialized topics such as the dissociation and dielectric properties of amino-acids, peptides and proteins, and for the excellent account of protein – ion interactions. J. A. V. BUTLER

HOMAGE TO THE HERRING

The Herring and its Fishery

By Dr. W. C. Hodgson. Pp. xiv+197+9 plates. (London: Routledge and Kegan Paul, Ltd., 1957.) 25*s*. net.

STATES have arisen and fallen, fortunes been made and lost, scientific reputations built up and humbled, through this lowly fish. Beauty is framed in pearls from its scales, art created from its dead body, heroism fashioned in the men who catch it.

It is fitting that the herring should have honour done to it; and in this book Dr. Hodgson—than whom there is no one better qualified—does just this in full and honest measure, and in a refreshing manner.

When M. Graham's "Sea Fisheries" (London, Arnold, 1956) appeared marine biologists were quick to note that the herring—although it had been so intensively studied—had no special chapter. It was perhaps natural then to hope that Dr. Hodgson would make good this deficiency, and that his treatment would make it an acceptable companion for that of his former director and colleague of long standing. This it is not. It has no bibliography, few references, and gives little help to the reader who wants to inquire further. But it remains a good book.

Two statements have recently come from the Lowestoft Fisheries Laboratory: one is in this book (p. 73), and is "Life to-day is ruled by science"; the other, on the dust-wrapper of "On the Dynamics of Exploited Fish Populations" (R. J. H. Beverton and S. J. Holt. H.M. Stationery Office, 1957), is "Science is prediction". These two statements and the logical consequences which flow from them are no more true to-day than they have ever been; but they seem to have determined much of Dr. Hodgson's attitude to his subject, and shaped the course of his researches.

He paints a clear picture of his methods of age determination, of the assessment, composition, and recruitment of stocks, of the possible origins and migrations of the shoals providing the major fisheries, and leads up by closely argued reasons to the basis of his predictions, ending in an admission of failure. It is hard to see how all this could be written without even a mention of Ford, Storrow, Farran, Holt, Cushing, Burd, and many others who have studied these problems so extensively.

In conclusion, he decides (p. 177) that only in "natural causes and fishing" is the responsibility for the "collapse of the East Anglian fishery" to be sought. He rejects the first, and accepts that it is the growing exploitation of the immature fish on the "Dogger nursery" for conversion to meal for animal feeding which is the principal agency in this collapse. Many agree with him; but others, who also accept that fishing activity is the responsible agent for the decline, have different views. There is, moreover, the insidious menace of pollution, the danger of which to sea fisheries in contained areas such as the North Sea remains almost wholly unsuspected even in the most enlightened quarters, and which he apparently has not considered. H. O. BULL

A MELANESIAN URBAN COMMUNITY

The Great Village

The Economic and Social Welfare of Hanuabada, an Urban Community in Papua. By Prof. Cyril S. Belshaw. Pp. xviii+302+8 plates. (London: Routledge and Kegan Paul, Ltd., 1957.) 30*s*. net.

IN immediate contact with Europeans in Port Moresby, capital town of Papua—which is administered by Australia—there lives a community of indigenous Papuans. This interesting account describes something of the social and economic life of these Melanesians, and discusses certain administrar tive problems that have arisen as a result of thei- living in an introduced environment. Their own culture has been severely affected by Western custom, and it has not always been possible for the Administration to find an acceptable substitute for the loss of a traditional practice. For example, living accommodation for the people of Hanuabada, "the Great Village", became an acute issue after the Second World War when the village, having been evacuated, was re-established. Thatched houses are not, however, satisfactorily replaced by buildings with an unceiled, corrugated iron roof and wooden walls (but has any Pacific administration found the solution to the modern housing problem ?).

The picture presented of this community to-day is a complex one. The villagers are Christians; yet they continue to practise sorcery and to worship the spirits of their ancestors. They have retained an urgent sense of the importance of ceremonial, as practised in the exchange of goods and in feasting; but whereas craft products like arm-shells constituted an essential element in exchange, these are now in part—though only in part—replaced by cash; and the monetary substitute has come to be accepted. Cash is now habitually used also for purchasing some of the articles required for presentation on social occasions, such as weddings and deaths; and cash itself is similarly used as a gift. This demand for cash urges those in need of it for these purposes to go out and work for monetary reward. But the point to note is that cash has only partially replaced the ceremonial products customarily used. Again, the traditional dancing ceremonies—frowned on by mission supporters as being against the Christian moral code—are performed less frequently now than hitherto, and contemporaneously there has been a decline in agricultural production; the nexus here being that feasting was and is an essential accompaniment of the dance series held in honour of some person or to celebrate some local occasion. Clearly additional food must be forthcoming for such events. It could not be bought with cash in earlier times : it had to be produced, and this encouraged and increased agricultural activity. But with the decrease in dancing has come a decrease in agricultural production. At the same time the villagers' assessment of the value of cash appears to be immature. They are prone to spend it on social requirements, such as ceremonial payments, to the detriment of their nutritional needs ; and the Administration's effort to improve their health conditions has met with a resistance backed by generations of conservatism towards change.

These few specimens from the descriptions in the survey can be summarized in a sentence : where the people have assimilated an element of Western culture they have not assimilated also its associated characteristics and institutions (F. C. Bartlett, "Psychology and Primitive Culture," Cambridge, 1923). This accounts to some extent for their present pattern of culture being made up of indigenous and European elements side by side. Where this close association of cultures exists it is to be expected that the entity of the less dominant one will suffer. That has happened in Hanuabada, and its people are not now enjoying the best of either.

But there are some signs of a brighter future. They seem to realize that a complete acceptance of Western custom is beyond competition. This may be a good feature in their mental attitude if it does not altogether stifle their ambition. They have shown themselves competent to administer co-operative societies on modern lines ; and administrative ability—and integrity—should stand them in good stead for any job requiring responsibility. Despite their comparatively low income they do, in fact, save money for specific purposes, even though the original incentive to save may be conveniently overlooked if an unexpected call for money arises for some quite different purpose. On the moral side, the people appear to have been attracted by the Scout movement and this, apart from its other intrinsic merits, has contributed towards good race relations with Europeans.

From an anthropological point of view the amount of detail that Prof. Belshaw has given is not consistent with its importance under the various headings of his subject. More could profitably have been included on women's customs (pp. 162 *ff.*)—very rightly collected by his wife—since absence of such knowledge hampers any administration in its ability to guide their advancement compared with the guidance for menfolk, of whose customs a far greater knowledge is available ; and the women's position in a society at any given time is often a criterion of its development towards an enhanced level of living. Another criterion of welfare in its widest sense is the rate of infant mortality over a period. The figure is high for the year when the survey was done, but it would have been helpful to know the trend of the infant mortality-rate. It is a pity that more material for the survey was not obtained in the vernacular and that so much reliance was—apparently—placed on the opinions of the three Papuan officials "without whose services the research could not have been completed in its present form" (p. ix). Comment by Hanuabadans on their own welfare as they see it now and in the future would have added to the value of the survey. If Prof. Belshaw had had longer experience in the British Colonial Service he would probably have appreciated the substantial difficulties of the Administration in Papua in its endeavours to improve the lot of the Hanuabadans. His advice to the Administration and criticism of its decisions might have been more appropriately confined wholly to a final chapter instead of being scattered throughout the book. The sixteen photographs could have been clearer and more illustrative of the text.

"The Great Village" is the first account of its kind to deal with this part of the Pacific. Coming from a trained anthropologist, the Administration will no doubt welcome it as a painstaking and independent survey of modern conditions, and it is a book that should well repay close study by all whose interests take them to work in Papua, particularly those with administrative interests. It has the added advantage of being a factual, first-hand record of the 'welfare anthropology' of the Hanuabadans at a time when they are constantly subject to changes imposed from outside.

G. K. Roth

GALILEO AND THE HOLY OFFICE

The Crime of Galileo

By Prof. Giorgio de Santillana. Pp. xvi + 339 + 8 plates. (London: William Heinemann, Ltd., 1958.) 30*s*. net.

THE literature on the process of the Holy Office against Galileo is enriched in this book with a most noteworthy contribution. Prof. G. de Santillana, a scholar who has earned an international reputation by his books and articles on the history of science, has reconsidered the whole much-debated issue, making use of all the well-known documents and of numerous little-known ones, which are brought here into the discussion for the first time. By studying all these with the utmost care and acumen he has succeeded in throwing fresh light on several dark places and in solving various enigmas in the course of the affair. He will be the first to acknowledge that a great number of questions may still be asked which are probably destined to remain unanswered for ever. This, however, does not detract in any way from the great merit of having presented us with a wholly original view on one of the most important and interesting conflicts that has ever arisen in science. No one who wants to build up for himself a really justifiable opinion on this conflict can afford to leave the book unread.

Prof. de Santillana is a man of remarkable erudition, not only in the field of science and its history, but also in those of general history, literature, art and philosophy. With all these attainments merged into a general culture, one need not wonder that they appear in his writings again and again in the form of reminiscences and allusions which enhance the attractiveness of the story. However, I am sometimes afraid that the author tends to over-rate the intellectual capacities of the average reader.

The same remark applies to the numerous comparisons between certain aspects of Galileo's case and analogous situations in our own time. There are several allusions to contemporary American issues which the foreign reader may not always be able to appreciate. In so far as he is able to do so, however, he will admire the author's broad point of view, which allows him to present the process against Galileo as a particular case of a perennial conflict of scientific endeavour and social authority.

E. J. Dijksterhuis

A Guide to the Literature of Chemistry

By E. J. Crane, Austin M. Patterson and Prof. Eleanor B. Marr. Second edition. Pp. xv+397. (New York: John Wiley and Sons, Inc.; London: Chapman and Hall, Ltd., 1957.) 74*s*. net.

WHEN the first edition of "Crane and Patterson" was published in 1927, it was, with the exception of the much slighter "Introduction to the Literature of Chemistry" of Dr. F. A. Mason, published three years earlier, essentially a pioneer work. It quickly met a recognized need and for a decade or more was unchallenged. If there are now other works that may meet the needs of British chemists more effectively, though probably not within two covers, that first edition also has given the names Crane and Patterson an honoured place in the literature of chemistry. It is no disparagement of the work that Prof. Marr and Dr. Crane have put into the preparation of what is virtually a new book to suggest that for British readers the second edition is unlikely to have the same appeal as the first: the changes arise out of the immense expansion of chemical literature, and considerations of space alone may well have dictated an appeal to the American chemist rather than to his British colleague.

The plan of the book is essentially unchanged and the chapter headings are unaltered, with the addition of new chapters on government publications and trade literature, but it is, as has been said, virtually a new book. Omission of the "Select List of Chemical Books" is the main change responsible for the reduction from 438 to 397 pages, and although it would have been impossible, within the limits of a single volume, to bring that list up to date, the book loses something of its appeal in consequence, and the first edition will retain some permanent value, particularly since in the treatment of historical literature the book is relatively weak. Criticism might be made on a few points of detail: for example, under biographical works, some help could have been given in tracing obituary notices, the indexing of which, to say the least, is often fortuitous. Nevertheless, this second edition, like the first, displays the full scope of chemical literature and affords sound guidance to British and American chemists alike in handling a literature search. R. BRIGHTMAN

Engineering Materials, Machine Tools and Processes

By W. Steeds. Third edition. Pp. xi+426. (London and New York: Longmans, Green and Co., Ltd., 1957.) 35*s*. net.

FOURTEEN years have elapsed since the publication of the second edition of this useful handbook of workshop practice. Various additions and alterations have been made to deal with newer processes and methods that have proved themselves during those years, and have increased the size of the book by twenty-five per cent. The pattern of the book is unchanged, except for a new chapter added at the end. This is entitled "Transfer Machines and Automation" and in only twenty-four pages deals with some of the ways in which mass production in machining processes can be made more automatic and handling-time saved. Almost all of the other chapters have had changes; some are merely minor changes of order and others are additions. In the chapter on ferrous materials reference is now made to isothermal transformation diagrams and hardenability, but the reference is probably too brief for the average reader to grasp fully the meaning of these topics. There are various additions to the non-ferrous alloys, including a page on titanium. This review is not the place to catalogue all the additions, but notable ones are the Merchant theory of chip formation and air gauging systems. A thorough revision of references has brought the book up to date and there are many improvements in the photographic illustrations.

K. J. PASCOE

Theories of Nuclear Moments

By R. J. Blin-Stoyle. (Oxford Library of the Physical Sciences, Vol. 1.) Pp. vi+89. (London: Oxford University Press, 1957.) 8*s*. 6*d*. net.

THIS work is essentially a reprint of the valuable article by the author in *Reviews of Modern Physics* of January 1956, augmented by a chapter sketching the experimental sources of information on nuclear moments, and an appendix on angular momentum states in quantum mechanics. To explain electromagnetic moments we should in principle start from the nuclear Hamiltonian and the form of the electromagnetic interaction. In fact, we have only rough ideas as to what these are, and even if they were known, accurate calculation would be very formidable. Thus the theory is at present at the stage of using obviously over-simplified models wherever they will work, the different models required being linked in only a very qualitative way. Anyone desiring a quick survey of this surprisingly successful process cannot do better than read the volume under review. The accounts of the various models and their applications are very brief, but an extensive bibliography allows details to be pursued in the original papers.

The reviewer would have welcomed some discussion of centre-of-mass effects. These appear explicitly only in connexion with the quadrupole moment of an odd-neutron nucleus on the single-particle model. The formula given corresponds to a classical treatment of core recoil, and the dubious nature of such a treatment is not mentioned.

It is to be hoped, of course, that the progress of research will in a few years render this first edition obsolete. For this reason the use of paper covers, and the associated low price, are all the more commendable. J. S. BELL

The BBC Naturalist

Edited by Desmond Hawkins. Pp. 96. (London: Rathbone Books, 1957.) 8*s*. 6*d*. net.

THE valuable part played by the B.B.C. in fostering the widespread and growing interest in British wild life is undoubtedly an important factor in helping to build up a large body of public opinion favourable to the idea of nature conservation. In such features as "The Naturalist", "Birds in Britain", and "Look", the B.B.C. has brought many naturalists of repute to the microphone or the television camera, and the popularity of such programmes is something of a phenomenon in this technically minded age. The reviewer may be thought slightly cynical if he comments that many people quite incapable of recognizing a chaffinch on their doorstep may be perfectly familiar with the private life of a family of great black woodpeckers inside a tree-trunk in Germany, through the medium of television. Such an anomaly may be an unavoidable result of bringing natural history into the sphere of mass entertainment or mass education. However, recognition of the ephemeral nature of the spoken word has led to this excellent

600 journals . . . *read each month!*

Impossible for one man ? . . . a routine achievement for Iota.
Every issue of every technical journal published in Britain is read by the
Iota panel of experts. Articles are annotated, classified
and listed in the monthly **'Index of Technical Articles.'**
Iota can put any article from the Index
right onto a subscriber's desk. Journal back issues,
or photocopies, are always available.
No fuss, no bother. Iota eliminates that
growing in-tray of journals . . . makes
your professional reading much more selective.

Take out *your own* subscription to Iota.
It's only 8 guineas for 12 issues.

PICKSTONE'S NEW 'MAGNETIC SPEED' STIRRER

incorporating an entirely new principle of control which gives any desired speed between 100 rpm and 2,600 rpm.

This new Pickstone 'Magnetic Speed' Stirrer will be welcomed by laboratories needing a low-cost Stirrer functioning over a wide range of speeds. The variation, from 100 rpm to 2,600 rpm, is obtained—smoothly at all levels—by a slight axial movement of the rotor, operated by a nylon control knob. Resistances and contacts are eliminated ; the motor is spark-free, is of the shaded-pole Induction type and, being designed for hot running, can be stalled at full current.

costs only
£3·9·6
including packing and postage in U.K.

Pickstone **R. E. PICKSTONE LTD.**
[Specialists in Laboratory Equipment
56/60 ISLINGTON PARK ST., LONDON N.1 CAN 6190

publication, in which twenty-three broadcasting naturalists have written in their own personal styles of those aspects of Nature in Britain with which they are most at home. Peter Scott on painting waterfowl, Maxwell Knight on reptiles, James Fisher on tits and milk bottles, and Bruce Campbell on nest-boxes, with a score of others, are all here in print, helping us to enjoy and appreciate with fresh interest the wild life around us.

This book is well illustrated in colour and black-and-white, and at its moderate price deserves a wide circulation. R. W. HAYMAN

Malaysian Parasites, 16–34

Edited by J. R. Audy. (Studies from the Institute for Medical Research, Federation of Malaya, No. 28.) Pp. vii+471. (Kuala Lumpur: Institute for Medical Research; London: Crown Agents for Oversea Governments and Administrations, 1957.) 42*s*.

THIS book comprises a set of papers on arthropod ectoparasites together with two on the known hosts of Malayan parasites generally and a useful review of the literature. The first paper is an interim review of the non-anopheline mosquitoes. (The propriety of treating these as parasites rather than predators is discussed by the editor elsewhere in the book.) Most of the book deals with mites but there is a paper on fleas and one on ticks. The papers on mites cover a certain number of non-Malayan species. The whole is an impressive tribute to the very active researches which have been pursued in this area since the War. The editor and contributors deserve every congratulation. The work is well and attractively illustrated and produced, although it is clear from the method of presentation that its stiff covers are not intended to disguise the interim nature of much of the contents. The taxonomist's road is a long one and the end is not yet. Most of the groups considered are at the beginning of the period of emergent order which follows on primeval chaos. As an example, it has been estimated that at least fifteen years will be required to raise the taxonomy of the Malayan culicine mosquitoes to the level prevailing in better-known parts of the tropics. The further stages of recognition and analysis of species complexes and, still later, the infra-specific analysis of individual species have been reached in only a very few small groups. Nevertheless, this is a heartening record of work in progress and a valuable reference book which no medical entomologist (or student of the vertebrate hosts) should be without. P. F. MATTINGLY

Annual Epidemiological and Vital Statistics, 1954

Bilingual edition (French and English). Pp. 617. (Geneva: World Health Organization; London: H.M. Stationery Office, 1957.) 30 Swiss francs; 50*s*.; 10 dollars; 2,400 French francs.

THIS volume presents vital statistics for forty countries. Deaths by cause (International Abridged List, 1948) and the seasonal distribution of twenty-three major notifiable diseases are given in detail. A new section records the size and diversity of each country's medical services.

The proportion of all deaths due to senility and ill-defined causes is tabulated for the first time. Of the twenty countries listed Ceylon has the highest overall proportion, just under 20 per cent. France and Belgium have consistently higher proportions than England and Wales in each age and sex group.

The public health worker will find that this book raises some interesting queries. Why, for example, is mortality from accidental deaths (p. 378) higher in female than male infants in Northern Ireland, Finland, New Zealand, Japan and Ceylon, and lower in all others, and how can the high accidental male infant mortality-rate in Scotland be reduced?

Considering the complexity of the data the tables are well set out. It is, however, sometimes difficult to find the definition of a symbol. A few misprints occur, for example, 'explication' for explanation in footnote 6 (p. 53) and a transposition of the initial figures for the total and male population of the United States aged 65–69 (p. 27).

The most efficient use of the volume will be made by using it in conjunction with earlier numbers of this series. S. J. KILPATRICK

The Mathematical Theory of Epidemics

By Norman T. J. Bailey. Pp. viii+194. (London: Charles Griffin and Co., Ltd., 1957.) 36*s*. net.

IN the theoretical development of each subject a stage is reached where research is hampered by the lack of a unified and logical presentation of past work. This book meets that need for epidemiology. It presents the mathematical analysis of epidemics based on deterministic and stochastic models. The older deterministic approach to the subject, though less realistic, is shown to be a useful precursor to the more difficult probability methods. Chain binomial theory (first used by Greenwood and more recently by the author) gives encouraging results in the analysis of household outbreaks. Earlier models predict the damping of recurrent epidemics. These are now more accurately described by stochastic processes. A full bibliography is given.

The book stresses the need for suitable stochastic models of endemics and for the proper collection of data to evaluate the assumptions and results of the theory. To this end formulae are given for the estimation of the parameters used in each model. The practical difficulties of estimating such necessary constants as β, the infection-rate, are not considered.

While this book contains much of interest to public health workers such information is generally difficult to find in non-mathematical language. It is accordingly more suitable for biometricians. S. J. KILPATRICK

Family and Kinship in East London

By Michael Young and Peter Willmott. (Reports of the Institute of Community Studies.) Pp. xix+232. (London: Routledge and Kegan Paul, Ltd., 1957.) 25*s*. net.

THIS is the first of a series of reports issued by the Institute of Community Studies. It is based on interviews with 1,000 individuals living in Bethnal Green, London, a more intensive interview with forty-five married couples in that borough, and a study of forty-seven families originally living in Bethnal Green, but re-housed on the London County Council housing estate in Greenleigh. The first part of the study is concerned with kinship structure, and stresses in particular the important role of the wife's mother in the domestic life of the growing household. In the second part the authors study the reactions of families re-housed in Greenleigh and discuss the implications of their findings for future housing policy. The report is extremely readable, and combines the advantages of an anthropological field study with more rigorous statistical analysis. It is particularly welcome as an addition to the all too rare studies of normal family life in Britain to-day. E. GREBENIK

THE NATIONAL PHYSICAL LABORATORY

THE National Physical Laboratory held two open days, on May 14 and 15. One hundred and eighty exhibits were on view to 3,250 guests of the Laboratory, who came from industry, the universities and Government departments. It was the first time that the Laboratory had been on show since the divisional reorganization, announced last February. This year, as an experiment, the range of exhibits was somewhat restricted, because the items chosen were selected to display work in certain chosen topics. For example, the exhibits shown by the Light Division all fell into three topics: optical instruments and methods; standards and measurements of radiation, light and colour; and research on vision. Work which did not fit into the topics selected was, therefore, not on display, but arrangements were made so that it could be discussed with the responsible officers of the Laboratory.

The Aerodynamics Division is investigating the problems of hypersonic flow, that is, at speeds in excess of Mach 5. Several new aerodynamic problems arise at such speeds, including intense aerodynamic heating resulting in dissociation of the working gases and, if the temperature is high enough, their ionization. For this investigation, shock-tubes are being developed which operate for about half a millisecond; these obviate the problems of overheating the equipment. Surface temperatures and pressures are measured with rapid-response instruments and a schlieren optical system has been developed which records flow-density patterns around the test bodies using a camera of the Cranz-Schardin type (see Fig. 1). In addition to the shock-tube being used for the main programme of research, two small tubes have been constructed for work of a more fundamental nature on the properties of gases at high temperatures. One of these will be used to study the visible radiation spectroscopically in order to evaluate the gas temperature, the other to investigate the electron concentrations by means of micro-wave techniques. Some of the non-aeronautical work of the Division was displayed in the form of a small exhibition of models which had been tested in low-speed wind tunnels. There is a considerable demand for accurate information on the effects of wind on structures such as the B.B.C. television transmitting tower, suspension bridges, chimney stacks, blocks of houses and the aerial system of the University of Manchester radio telescope at Jodrell Bank. Similar work is carried out on the airflow around ships and buildings to ensure that the effluent from funnels and chimneys causes neither annoyance nor damage.

The Control Mechanisms and Electronics Division displayed a conditional probability computer. This is a form of 'learning machine'. It has five input channels and thirty-one units to store statistical information of the patterns presented by the inputs. When some statistical data have been accumulated in the storage units and one or more of the input channels is activated, the computer determines from the data whether such activation is usually accompanied by activity in one or more of the other input channels. If it is, the computer 'infers' that this activity is again present. The units which store the statistical information are counters which function by charging capacitors. These capacitors have deliberate slow leaks in parallel with them so that the computer's inferences are based more on later events than earlier ones. The demonstration showed the computer controlling a small mobile carriage which followed the boundary between black and white areas painted on the surface on which the carriage ran. The black and white areas could be effectively interchanged by reversing the steering mechanism, so making the computer learn the new conditions. It is hoped to develop the computer to a stage when it can function as an industrial control mechanism which will select optimum conditions by a trial-and-error learning process.

The Light Division has made significant advances in the techniques necessary to produce cheap, metrologically accurate diffraction gratings used for automatic machine-tool control. Gratings several feet long are being made by a photographic printing method of reproduction using the fine-grain emulsions already available in the Laboratory. Photographic techniques also open up the possibility of producing gratings directly from an interference pattern, so removing many of the possible sources of error in manufacture. The regularity of spacing would then depend entirely on the accuracy of the interferometer mirrors and the stability of the photographic emulsion during processing. This quite old idea, due originally to Michelson, has been made practicable by the development of both fine-grain emulsions and isotope discharge tubes used as monochromatic sources.

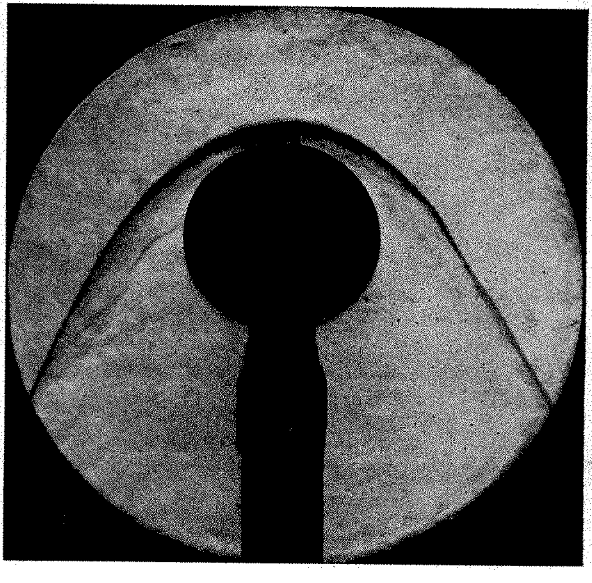

Fig. 1. Shock wave of flow around a sphere in the National Physical Laboratory hypersonic shock tube. Conditions (approximate): Mach 9 for equivalent altitude of 150,000 ft. and stagnation temperature of 6,000° K. *(Crown copyright reserved)*

Gratings 3 in. square with 30,000 lines per inch have been produced. Two gratings made in this, or a more conventional, way can then be arranged to produce moiré fringes while one of them, mounted on a carriage, moves over the other. The moiré pattern then controls the recording of a third grating mounted on the same carriage. This new grating is therefore smoothed by the integration produced by the moiré system over its effective aperture. Two such gratings are then used in the same system to produce another improved generation. In this way, the quality of the gratings can be improved until a limit is set by emulsion creep and considerations of mechanical and thermal stability.

In addition to these linear gratings, the Division demonstrated radial gratings with a moiré system to interpret angular movements. Eventually these gratings will be reproduced photographically, so providing the engineer with a simple accurate method of obtaining digitized information about both radial and linear movement.

The Mathematics Division exhibited DEUCE, its high-speed digital computer. The machine has solved some varied problems during the year, including work on cancer research, the examination of certain vibrational modes of molecules and the stability of aircraft in conditions of flutter.

The Metallurgy Division showed some work on the mechanism of brittle fracture. It has been found that brittle fracture occurs either by separation along grain boundaries or through crystals along cleavage planes. In the former case, two surfaces are formed from one previous interface, and the extra energy, corresponding to the difference between the new surfaces and the original interface, must be supplied for the fracture to occur. This energy difference is often a significant term; hence materials with low-surface and grain-boundary energies will have a greater tendency to fracture along the boundary than those with high energies. Experiments have been carried out with copper to which increasing amounts of antimony had been added. It was found that the addition of antimony reduced the interfacial energies of the copper—1½ per cent by weight lowers the energy by more than 80 per cent. It is thought, therefore, that the weakness at the grain boundaries can be associated with the effect of the antimony in lowering the interfacial energies of copper and, therefore, the energy requirements for fracture.

Niobium, with its high melting point, good strength at high temperatures and excellent ductility, is an attractive metal. It suffers, however, from the disadvantage that it easily absorbs gases at high temperatures, particularly hydrogen, with subsequent embrittlement. X-ray diffraction photographs of samples of niobium with known hydrogen contents have been taken. At low temperatures, some hydrogen is absorbed in niobium, and the rest is in the form of a hydride with a structure derived from the cubic lattice of niobium by a simple distortion. On heating, the degree of distortion diminishes and the hydride progressively dissolves in the niobium. At 300° C. a simple cubic solution of hydrogen in niobium remains. These changes may well have significant effects on the mechanical properties of the metal and on the amount of hydrogen contamination that can be tolerated.

The work of the two Divisions, Applied Physics and Basic Physics, was displayed under the common heading 'Physics'. There have been some advances in bomb calorimetry. The original National Physical Laboratory bomb calorimeter is unnecessarily precise for the determination of the calorific value of fuels, and the experiments conducted in it take considerable time. Hence, the Laboratory has built a copper aneroid bomb which dispenses with water as a thermal reference (Fig. 2). It needs only four temperature measurements in each determination and its lower thermal capacity enables experiments to be conducted more quickly. The aneroid principle is capable of high accuracy, and a third calorimeter with a silver bomb has been constructed to check the heat of combustion of benzoic acid, the common standard of all such determinations. The original calorimeter was recently used to measure the stored energy in graphite samples taken from the Windscale atomic pile by comparing the heats of combustion of irradiated and unirradiated samples.

An elegant multi-channel pulse-height analyser was displayed. This instrument, when fed with amplified pulses originating, for example, from a proportional counter, will produce a pulse-amplitude spectrum. It was built in collaboration with the Control Mechanisms and Electronics Division concurrently with a similar instrument made by the Admiralty Research Laboratory, Teddington. The analyser operates by converting amplitude to time and then passing the signals of different duration into different channels. It will also provide the difference between two inputs or subtract the background signal measured over the same time interval as the total signal.

Among other exhibits was a demonstration of a possible technique for measuring absolute temperature by determining the Johnson noise generated in a resistor. Such a 'noise thermometer' is theoretically capable of operating over a wide range of temperatures and pressures. Its accuracy is limited by the internal noise of the input valves of the amplifier. It appears that a comparison of noise voltages to 0·05 per cent may be possible, and a resistor has been built with a low enough leakage at 1,100° C. to exploit this accuracy.

Marine engineers need accurate methods of determining the actual power absorbed by propellers. The Ship Division showed a new torsionmeter which can be attached to propeller shafts of 2–6 in. diameter without having to unship the shaft. The instrument uses strain gauges arranged in a four-arm bridge attached by adhesive to the propeller shaft. The arrangement is such that it responds to torsional strains but not to bending strains. The signals are taken off the rotating shaft through silver-plated slip-rings and silver-graphite brushes. They are amplified and recorded on a null-balance strain meter. The ring assembly incorporates a revolution counter so that the rate of rotation of the shaft can be measured at the same time as the torque. The accuracy of the instrument is ± 1 per cent for torque determination and ± 0·2 per cent for speed of rotation.

The Standards Division incorporates the old Metrology Division and parts of the Physics and Electricity Divisions. It had a number of displays showing the value of interferometry, both optical and micro-wave, to science and industry. In 1960, the platinum–iridium bar which is the metric standard will probably be superseded by an 'intangible metre' defined as 1 650 763·73 times the wave-length *in vacuo* of the orange radiation of krypton-86. This standard will be not only reproducible in any laboratory, but also it is likely to be about a hundred times as precise as the present line standard. Interferometric methods used in conjunction with this new standard were demonstrated. The Laboratory announces the results of a new determination of the velocity of electromagnetic radiation—in this case not light but 4-mm. micro-waves. The velocity in free space *in vacuo* is 299 792·50 km. per sec., with a standard deviation of 3 parts in 10^7. The determination was made with a micro-wave interferometer which measured the wave-length of the radiation. The product of this and the frequency of the source, determined by comparing it with a quartz crystal standard clock, gives the velocity of the radiation. The actual distance over which the velocity was determined was only two metres. The result, with its applications to geodetic surveying, is a contribution to the International Geophysical Year.

To supplement the cæsium atomic standard of frequency, more accurate quartz clocks are required for long-term periods. Investigations have been carried out on the stability of a quartz Essen-ring operating at 4° K. Preliminary results suggest the damping is much reduced at this temperature and the temperature coefficient between 2° K. and 4° K. is less than 1×10^{-8}. The ring was immersed in liquid helium and the temperature was controlled to ± 0·001° K. by regulating the pressure. The stability of the oscillator may approach 1 part in 10^{11}. A problem to be solved is the replenishment of liquid helium without mechanical disturbance, and special liquid helium containers designed for this purpose were shown.

A. J. GARRATT

THE SPECIES CONCEPT AMONG VIRUSES

By Dr. C. H. ANDREWES, F.R.S., and Dr. P. H. A. SNEATH

National Institute for Medical Research, Mill Hill, London, N.W.7

THE term 'species' has been used to describe at least four different ideas:

(1) Linnæus's concept was close to the meaning 'a distinct kind of creature', that is, a group of organisms clearly separate from other groups of organisms, with no intermediates in between, and not itself divisible into distinct sub-groups.

(2) Geneticists consider a species as a 'genetic isolate' (with minor details of difference in definition) since—in organisms reproducing sexually—distinctness usually depends on absence of interbreeding with neighbouring forms.

(3) Palæontologists use the word in sense (1) extended in time, realizing that although obviously the species is continuous in time, with intermediate, ancestral and descendant forms, yet at any one instant the stock is distinct from others, no intermediates being extant.

(4) Systematists commonly use 'species' frankly as 'the most important rank in taxonomy below genus', and this must depend on subjective ideas as to what constitutes a genus, which (like the criteria for all higher ranks) are based mainly on intuitive estimates of degrees of similarity. Methods are, however, now being evolved for expressing this matter of similarity in a quantitative way[1,2].

There is as yet no general agreement as to which use of the term 'species' is best for general adoption. For viruses, however, only usage (1) can be seriously considered at the moment. Genetic recombination, a form of sexual reproduction, certainly occurs among viruses, but we simply do not know how common it is; we cannot therefore use the concept of genetic isolate at present in attempting to delimit species of virus. Many viruses are probably mutating and evolving more rapidly than higher organisms; at the same time, our knowledge of their past evolution is negligible; so usage (3) cannot apply. Ideas as to virus taxonomy are at present in an embryonic state, so we can as yet derive little help from usage (4).

Virus Nomenclature

At the last two International Congresses of Microbiology (Rio de Janeiro, 1950; Rome, 1953)[3,4], consideration has been given to virus classification and to the usefulness for viruses of a binomial system of nomenclature. As a compromise between two widely divergent views, a plan was put forward in Rome for a 'non-Linnæan' binomial system, provisional and less rigid than the orthodox system. Group names were proposed for some animal viruses and descriptions published: Myxovirus (Andrewes, Bang and Burnet[5]), Poliovirus (von Magnus, Gear and Paul[6]), Poxvirus (Fenner and Burnet[7]). Similar descriptions for a Herpesvirus group and for insect pathogenic viruses are in preparation.

Since their proposal in 1953 and the further publication in 1955, the names Myxovirus and Poliovirus have been widely used, but the 'specific' names have been practically ignored, almost as completely as have various comprehensive proposals for Linnæan nomenclature of viruses. It would appear that at the level of the 'group', which may be tentatively regarded as equivalent to 'genus', agreed names may be useful, but that there is little enthusiasm or demand for Latin names for individual animal viruses.

'New' Viruses

There are other cogent reasons for re-examining the matter. Since 1953, exploitation of tissue culture and other techniques has resulted in the discovery of very large numbers of 'new' viruses.

(1) *The Coxsackie viruses.* Small viruses pathogenic for suckling mice, and isolated most frequently from human fæces. These are classified into group *A* with nineteen serotypes and group *B* with five serotypes.

(2) *Echoviruses.* This term originally denoted 'enteric cytopathogenic human orphan' viruses, but this meaning is already almost forgotten. They are related to Coxsackie viruses but tend rather to be cytopathogenic in monkey kidney tissue cultures and innocuous to baby mice. Twenty serological types are already known, but the group is probably not a homogeneous one. One (Echo 9) has properties shared by both the Echo and Coxsackie groups. A recent tendency is to group Echo, Coxsackie and poliomyelitis viruses together under the name of *Enteroviruses*[8]. Similar viruses have been recovered from fæces of cattle, monkeys and pigs.

(3) *Adenoviruses,* with eighteen serotypes, have been mainly isolated from the respiratory tract of man; they share a common complement-fixing antigen and some have been depicted in orderly array within the cell nucleus.

(4) *Arborviruses.* This term covers the ARthropod BORne viruses. Dr. J. Casals and Dr. M. Theiler have in their collection about seventy-seven different ones. Rather less than half of them can be put into one or other of three sub-groups, *A*, *B* and *C*, mainly on the basis of antigenic relationships. The remainder comprise a very heterogeneous assortment.

In none of these three or four virus groups is it possible at present to see that it would be rational to make divisions into species. Let us consider Casals and Brown's *B* group of arborviruses[9]. All are related by tests involving hæmagglutinin inhibition. The group includes the yellow fever, West Nile, St. Louis, Japanese *B*, Murray Valley, Zika, dengue I, dengue II viruses and numerous others. Yellow fever virus would be considered by most people to stand apart on the basis of its pathogenicity for the primate liver, but there appear no other good grounds why it should do so. Murray Valley fever has been given a separate name largely because of its geographical distribution, but it differs no more from some strains of Japanese *B* virus than those do from each other. Dengue viruses are divided into two serological types, but these have almost as much right to specific names as have Zika, Ilheus and others of the *B* group. The inter-relationships within the group are, in fact, of all degrees of magnitude. To call each isolate by a separate geographical or other name could lead to as much confusion as happened in the genus *Salmonella,* particularly if there were any implication that such names indicated specific rank.

A few groups such as Myxovirus and Poxvirus have proved amenable to an attempt at binomial nomenclature, though even with them the matter is not straightforward. After five years, however, it does not appear that any other group of viruses suitable for similar treatment is in sight. We have made a very preliminary attempt to compare, and if possible group, twenty-five viruses by means of an objective quantitative method[1]. This tries to group organisms by expressing their similarities quantitatively; each virus is compared against each other virus and given a percentage score on the basis of the proportion of characters common to the two. We compared twenty-five viruses and made use of forty-nine characters, choosing for convenience—and despite minor logical objections—those in which we expected a reasonably even distribution of + and − answers: such characters were none too easy to find. There proved to be so many gaps in our knowledge that for most viruses we could score only about twenty-five of the forty-nine characters. Some of the viruses we chose were expected to fall together; for example, three poxviruses, three myxoviruses and four arborviruses; the others were rather heterogeneous.

The analysis was scarcely very revealing. Those viruses which we expected to fall close together mostly did so. The three myxoviruses lay close to each other; so did the four arborviruses, and along with them, not unexpectedly, that of lymphocytic choriomeningitis; herpes simplex and pseudorabies proved to be very similar. The only surprise was that the three pox viruses chosen, vaccinia, fowl-pox and myxoma, failed to show evidence of very close relationships. No significant groupings appeared where none had been perceived beforehand. The analysis would doubtless have been more valuable if we had included more viruses and particularly if we had had full information concerning many more properties suitable for comparison. Further studies in comparative virology would be very helpful, but as things stand it seems difficult to make further headway at the moment along the lines put forward at the Rome International Congress on Microbiology. We do not feel competent to discuss how far the same situation exists with regard to plant viruses, but we suspect that it is not very different. Bawden[10] favours Mayr's term 'collective species' to mean a collection of clones having many features in common; but this may in fact not be very different from the 'group' in animal viruses. He feels that to attempt to classify plant viruses on a phylogenetic basis is at present quite impracticable. No worker on bacteriophages, so far as we are aware, has felt that our knowledge is sufficient to justify an attempt at comprehensive classification in this field.

To return to animal viruses, a fundamental difficulty is this: some viruses, such as measles and mumps, seem to be clearly distinct stable entities, but among the welter of other viruses, largely newly discovered, and often of doubtful pathogenic importance, they appear to be exceptional. One would expect on several grounds that viruses are evolving rather rapidly[11]; when one finds that most viruses do not fit tidily into species one's suspicions are strengthened. When factors leading to evolutionary change have long been stable, species are revealed as discrete mountain peaks; the equivalent of subaerial denudation has worn away deep valleys between them by eliminating poorly adapted clones. Where evolution within a group is still highly active we can see only ill-defined pimples and corrugations on a plateau.

If virologists use the term 'species' for viruses they should be clear in which sense they are using it: at present, usages other than the Linnæan seem to us quite unrealistic. We go further and suggest that at the present time the species concept should not be applied to viruses at all; further knowledge may, of course, change our ideas. Bacteriologists nowadays are becoming equally doubtful as to the proper application of the word 'species' in their field. Many botanists regard Linnæan names as having a usefulness only in a limited sphere; in the field of experimental taxonomy other parallel terms are required[12].

What, then, can be done to name and identify viruses? Some method of escape is needed from the confusion which results when authors use unrelated series of initials such as *YSK, CA, CCA, JH, EMC*. Perhaps virologists should continue with the Rome proposals for group names: names such as Adenovirus, proposed by *ad hoc* committees, fit in with these very well. We may, however, be wise to cease to force upon viruses latinized 'specific' names; numbered serotypes do well enough at present for adenoviruses and echoviruses; other systems of naming may have to be devised for other groups. Perhaps we should hasten slowly, concentrating on defining and naming 'groups'; but, below the group-level, only making such improvizations as seem wise in our efforts to clarify and codify this rapidly expanding field of knowledge.

CONTROL OF EVOLUTION IN MAN*

By Prof. C. D. DARLINGTON, F.R.S.
Botany School, Oxford

WHEN Darwin published his "Descent of Man" in 1871 he thought it better to discuss what had happened in the past, with results that could be seen, rather than venture into discussing the future. This task he left to Francis Galton.

Galton began with a point of view on human evolution formed by his medical training, his African travels and his study of Darwin's work[1,2]. On the basis of the cell theory he took a view contrasted with Darwin's, both on the inheritance of acquired characters, and on the distinction between one-egg and two-egg twins[3].

He noticed that like mates with like in man and thereby creates self-sustaining breeding groups. He also studied the genetic component of fertility and intelligence, and applied this principle to the study of natural and sexual selection in different social classes. His method has been effectively developed to show that the decline of governing classes is hastened by their choice for wives of infertile heiresses[4,5]. Similarly, he discussed migration and its effects, always assuming that men have to make culture before culture can be said to make men. He concluded that "the human race has a large control over its future forms of activity . . . for it can gradually modify its own nature". Galton thus foreshadowed a genetic interpretation of the structure and also of the history of society.

To-day, a number of advances may be traced to Galton's work. Intelligence tests[6] have indicated that the less intelligent individuals and populations can now propagate their like faster than the more intelligent[7,8]. This has not happened before in history or, we may say, in evolution[9]. In Holland, the United States, Tasmania and England[10,11] they have shown that migration modifies the intelligence of a community. The most active farmers move on to the best land. They exercise discrimination. They select their environment. Similarly, the migration from country to town and, as Galton pointed out, from the provinces to the metropolis, is reflected in the educability of the children.

Another application of Galton's views is to fertility. On one hand, consider the Hutterites. By selection for fertility together with inbreeding they have raised their average from 9·2 to 10·9 children per family[12]. On the other hand, consider Ireland. In 1847 the population reached more than 8 million with a density equal to that of England and Wales. It had multiplied six-fold in less than 140 years. Following a loss by emigration in 10 years of 1½ million, the population of Ireland has been almost stable for fifty years at half its peak number. Emigration, it seems, has selectively lowered the fertility of the people who remained and thus has led to the uniquely low and stable birth-rate in Ireland to-day.

Classical Genetics

To a student of genetics to-day, Galton's theories seem to be well founded. But at the time they rested on a basis of incalculable heredity. The rediscovery of Mendel in 1900 might thus have been expected to strengthen Galtonian and Darwinian theory. It did not do so.

For Bateson, to be sure, Mendelism at once clarified certain primary issues[13]. For the first time it showed that hereditary variation was largely invisible. A man might suffer from too little pigment in the skin or too much pigment in the urine through heredity although no known ancestor had suffered from it[14]. Heredity could be seen as responsible for the unlikeness of brothers as well as their likeness. In disclosing these primary paradoxes suddenly Mendelism had magnified the genetic, at the expense of the environmental, component in all variation. Not only the cards but also the process of shuffling was a manifestation of heredity.

---

* Substance of the Woodhull Lecture delivered at the Royal Institution on March 21.

Owing to the disputes between Bateson and the followers of Galton, however, the evolutionary aspects of the new advance were pushed into the background. The Mendelian design of experiment required pure lines and gene mutations of gross effect. Pure lines and gene mutations were therefore taken by Bateson, and later by Morgan, as the raw materials of natural variation. The model systems that resulted were easy to handle in theory but they gave an unconvincing account of natural variation, above all in man.

It was in this period that environmentalist explanations of human variation gained ground in the social sciences. Mendelism, unhappily using the word 'character' instead of 'variable', was too crude and naïve to explain the subtleties of human variation: they came to be left to the operation of spontaneous causes subsumed under the word 'culture'. It has even been argued that because culture can sometimes be socially *transmitted* it can never be racially or individually or genetically *created*[15].

Genetic Systems

Genetics has grown out of Mendelism in the past thirty years, by spreading down into the cell and up into the population. This growth has developed the paradoxes as well as the laws of heredity. In the breeding experiment we see the direct reaction of heredity with environment. In a fixed population we see what is there after the environment has selected the heredity. In a mobile population we see what is there after heredity has also, in its turn, selected the environment. The opposed agents are not independent: they interact in sequence; and the sequence with men and animals begins with a variable heredity.

Again, to the experimental breeder the unit of variation is the gene mutation. To the cytologist it may be an inversion or an interchange of a piece of chromosome; and to the naturalist it may appear as a polymorphism, a floating 'variety'[13].

The bringing together of these three methods of inquiry has now established that the bulk of natural variation is due to the mutually adaptive combining of mutations and structural changes; that the mutations themselves are of different orders of size; that in most of their activities they are the individually undetectable parts of multiple or polygenic systems; that genes expand or contract according to the size of the breeding group within which they are being exchanged. Not only this, but also polygenic systems are adapted to the range of variation of the breeding group within which they subsist. Their evolution is therefore itself subject to changes in the size and character of the breeding group. Genes and genotypes are therefore related to breeding groups and have to be considered together with them in examining the evolution of any species[17,18].

This transformation may be illustrated in the most successful field of human genetics. For fifty years the study of blood group antigens has proceeded on Mendelian lines. It has led to the most detailed account of geographical variation known in any organism[19]. Gradually, however, the structural complexity of some of the genes or super-genes concerned has been predicted by Fisher, and demonstrated by Race[20]. Independently, their physiological complexity has been predicted by Ford[21] on the analogy of polymorphisms in other animals. This complexity has now been demonstrated with selective and evolutionary implications by statistical studies of their relations with susceptibility to disease[22].

Lately the hæmoglobin genes have shown how malarial diseases have forced whole races of men to modify the composition of their hæmoglobin as a means of avoiding extinction. To do so they have had to introduce an adaptive polymorphism more drastic than that known in any other animal[23,24]; comparable indeed only with that of hybrid species of plants.

These relations, paradoxical or dialectical as they may be, mean that we have to begin our study of evolution in any organism farther back than we had thought necessary. In man we first have to examine the history of his breeding groups. Fortunately, however, they are better understood than those of any other organism.

Human Breeding Systems

For some thousands of generations until recently, man has been spreading over the Earth as, by his own evolution, larger areas became profitably occupiable by him. He still exists in simple societies the breeding habits of which, since they are found in all continents, are assumed to correspond with those of his common ancestors. Mating is limited not by his immediate fertility but by self-imposed rules rejecting at once close inbreeding and wide outbreeding[25].

The repugnance for outbreeding is, of course, common to all life. It has merely become more discriminating in man. The repugnance for inbreeding, on the other hand, is new. It has demanded more than discrimination. It must have arisen either from the experience (which is universally true) that unusual inbreeding yields an unusual proportion of defective recessive types in the offspring; or from the selection of races in which an instinctive reaction took the place of such an intelligent inference.

The combination of outbreeding and inbreeding must have always had, as it has to-day, a precise effect on the mating groups in which man exists. The effect is comparable only with what arises from the incompatibility of plant systems[26]. It means that within these groups three special properties will be favoured: hybridity, recombination and uniformity. We expect, and we seem to find, that where the group is small and stable these properties are soon established.

All these properties, it would seem, favour the immediate welfare of the group. They have, however, one important consequence for the future of the group: it is to discourage any genetic cleavage within it so long as its members live within range of one another. The group is homogeneous and its homogeneity is preserved by the outbreeding rules. Differentiation in social function, in occupation, will arise between the sexes and between young and old; but it will not arise spontaneously between genetic sections within the mating group. Pairs of such societies in Australia may even fuse and combine their marriage rules to allow of a new uniformity in the enlarged group[27].

In advanced societies we have parallels with the endogamy and exogamy rules of primitive societies. Neither, to be sure, is so rigorously maintained; and the breeding groups established can be shown, over thousands of years, to be of varying stability. But they are fundamentally contrasted with those of primitive societies in one respect. They are horizontally stratified in groups or classes which meet but do not mingle. These classes, which come to work and think and speak[28] differently, co-operate by virtue of genetic differences which they preserve by not interbreeding.

To the rule that social classes cannot be preserved if they freely inter-marry there is one legendary exception, the Natchez Indian tribe. But the four classes described could not, in fact, have maintained themselves even in numerical balance if they had followed the rules attributed to them[29].

The development of social classes, beginning at the neolithic stage, has followed different lines in the main areas of civilization. Hinduism, Judaism, Islam and Christianity have diverged in their effects on the breeding system. Most striking is the contrast between India and the Middle East. In India a unity of religion prescribes a diversity of 'breed' or 'caste'. In the Middle East, since the triumph of a tolerant Islam, a multiplicity of religions guarantees a multiplicity of professional breeding groups. Underneath this contrast, however, the genetic principle is uniform. It is also quite distinct from the automatic systems of genetic caste distinction in the Hymenoptera[30]. Inter-fertile classes which work together without breeding together uniquely distinguish advanced human societies from all other forms of animal life.

If the breeding systems of primitive societies always favour uniformity or homogeneity in their genetic structure, how has stratification come about in advanced societies ? One source is to be found in the nomadic communities of the Middle East. Tribes where sheikhly and slave castes are undeveloped have become different in their genetic character. Their differences are shown first in their mental and emotional character, and by derivation in the kind of work they do and the skill they acquire in it. From this differentiation of tribes their co-operation and commerce arise by agreement[31].

Such co-operation of racially different people has evidently been one of the bases of class differentiation wherever craftsmen and sailors, merchants and missionaries have wandered and settled[15]. But the foundations of class structure have been laid as much by conflict as by friendship. Governing classes owe their origins largely to conquest. Agriculture owes its development largely to slavery, and slavery also largely arises from conquest or piracy. "Bondmen" shall be "heathen" and "strangers" (*Leviticus*, xxv, 44–46).

On this view, introduced genetic differences, whether racial or tribal, have sown the seeds of social differentiation and the co-operation of dissimilar individuals out of which the richness of human cultural development has arisen. How have these seeds germinated ? All stratified societies that have survived have permitted a limited inter-breeding between the groups : slaves could be freed, freemen ennobled and the Brahmin's offspring might sink to a lower social level. By legislation and by direct action, Roman emperors and Indian kings have controlled these processes with the intention of controlling evolutionary change. The development of class society has depended on the mixture of the materials brought together in this way, mixture subject to processes of mating, promotion and migration, all of them socially selective, and selecting differently in different societies.

In India, after some mixture leading to the formation of new hybrid castes, inter-breeding has often ceased. The genetic processes of diversification of a society have thus fossilized at a stage not far removed from racial mixture. In the U.S.S.R. and America strictly racial classes can exist together with a theory of classlessness ; and old classes can dissolve side by side with a crystallization of a new class structure which predictably reconstitutes itself.

In these changes we know how valuable the mixture of groups must be in providing the recombination which releases variability. Conversely, how valuable a restriction of mixture must be, follows from the Mendelian principle that one act of crossing can undo the work of a hundred generations of faithful inbreeding. A steady release of variability, therefore, demands a restriction of crossing. If a small group like the Greek merchants of Chios[32], the Quakers in England or the Hutterites in Alberta were to preserve their character they had to inbreed. Thereby they reinforced the homogeneity of that character, their consciousness of it, and often their desire to preserve it.

On this genetic view our advanced societies are more complicated than anything envisaged by Galton. They are not races in an animal or plant sense. They are differentiated nations. Their differentiation may be appropriate or inappropriate to the needs of the time and in this we may see the genetic component in the rise and fall of empires. The differentiated classes may begin by differing on the surface ; but they end by differing more under the surface like the cryptic species of plants and animals. Their ability to keep apart maintains civilization while their ability to mix allows evolution and promises survival.

Control of our Evolution

Man throughout his history seems to have been interfering with his evolution by most of his political acts and his social habits. What has been unconscious is bound now to become conscious. As we study the consequences of our actions we shall correct them ; and as we introduce new actions we shall already be aware of their consequences.

How much do we know ? We know that change in our breeding system has the effect of creating visible diversity of form. We know little of its effect on the invisible variables : intelligence and fertility, viability and resistance to disease. In our own population, I find, a change from outbreeding to inbreeding leads, as in other organisms, to depression, especially affecting the invisible variables. But it provides the means of rapid improvement, if we want improvement.

On the simpler Galtonian selective level the development of medical science has upset the world's population in quantity and also in quality. The qualitative changes affect race as compared with race, class as compared with class, and individual as compared with individual. Medical treatment of most genetic disabilities, except lack of intelligence, enables those who have been treated to survive and to reproduce when they would not otherwise do so. Those who were saved as children return to the same hospital with their children to be saved[33]. In consequence, each generation of a stable society will become more dependent on medical treatment for its ability to survive and reproduce.

Thus our control is changing the direction of evolution. We have to weigh its advantages and its disadvantages. Meanwhile, let us note a larger principle: every branch of government in its own field controls the evolution of the people it administers. The punishment of crime affects the reproduction of the criminal class. Education affects the mating groups of those who pass through the system. Taxation and subsidies affect the relative numbers of children born in the different social classes and can be adjusted to vary the results over a wide range.

The governments of Augustus and Claudius seem to have been aware of the effects of regulating genetic diffusion between classes. Modern authorities with their more drastic actions are unaware of such effects. They are unaware because the actions themselves are directed, not to breeding, but to the present life of the individual and the present economy of the State. New processes, however, which are directed to breeding, are now attracting attention. Such are ionizing radiation, sterilization and artificial insemination.

The classical geneticist is much impressed by the consequences of ionizing radiation in inducing mutations. When induced in the ripe sperm of *Drosophila*, and followed by two generations of brother–sister mating, these mutations lead to dire results. On man, living and mating at large, however, we do not yet know what the lasting genetic effects of such radiation may be[34]. So far as we can foresee, they would be like the effects of an increased frequency of cousin marriage in an unaffected population.

The inverse of this problem is shown us by the introduction of the practical measure of the sterilization of genetically, usually mentally, defective individuals. This kind of evolutionary control has been used for sixty years in the United States and for thirty years in Scandinavia. Here is one way, a negative way, in which governments are assisting in the propagation of intelligence. The practice is increasing[35].

A positive means of propagating intelligence is provided by artificial insemination[36]. When this technique was first introduced, pedigree cattle breeders foresaw great dangers to their own interests, and their foresight has been vindicated. The new method has undermined the value of the old criteria in cattle breeding. Now man, as we have seen, has a self-maintaining breeding system of a uniquely complex kind. It cannot be reduced to the steady formulæ of a cattle-breeding system. Artificial insemination from a donor (AID) is therefore likely to have more diverse consequences for man than for a domestic animal.

What are these consequences ? A third party is introduced into the control of the breeding process. If he is aware of its genetic consequences he may, like the Russian landowner who bred his serfs for beauty[37], be able to render a service to society. Moreover, since his activities are likely to be limited to the remedying of sterile marriages, we shall have time to judge their results before any danger arises from them. But if his results are secret there will never be any possibility of assessing or correcting them.

There is one respect in which assessment would be useful. In the past, the rigidity of human breeding systems has been mitigated by illegitimacy. From William the Conqueror to Abraham Lincoln, illegitimate class-crosses, such as rarely arise through marriage, have produced men out of the common run[38]. In advanced societies illegitimacy is declining; but through artificial insemination the laws of legitimate, that is, assortative, mating might be evaded with advantage to the community. For single individuals can alter the course of history or of human evolution.

The Future

Man controls his own evolution by two general methods. One is through the selection which changes the character of the world's population in every generation. The other is through the processes of inbreeding or outbreeding by which variability is preserved or released for selection to act upon. We now know we are interfering with both. It is a question of how we ought to interfere so as to do good and not do harm.

Most of the effects, good and bad, of any genetic policy can be felt only after the lapse of a generation. Moreover, the human breeding system is unique in its class basis, its elaborate discrimination, and its repugnance for outbreeding. Oppressed by closer fears, modern governments take less care for posterity than did their predecessors in antiquity. Governments which provide us with education have forgotten that only our parents can provide us with the ability to profit by it. There is indeed much evidence of a genetic component in the survival of nations. The nation which takes thought for its own genetical future is, therefore, most likely to have a future.

NEWS and VIEWS

International Meteorological Organization Prize: Mr. E. Gold, C.B., F.R.S.

MR. E. GOLD, former deputy director of the Meteorological Office, has been awarded the International Meteorological Organization Prize for 1958 by the Executive Committee of the World Meteorological Organization, in recognition of his furtherance of the science of the atmosphere, his memorable contributions to the technology of weather forecasting, and his long and distinguished service to international collaboration in meteorology. The presentation was made by the president of the World Meteorological Organization, M. André Viaut, at the Royal Society's rooms on June 30.

Mr. Gold has been a leader in international meteorological work for many years, notably as president of the Synoptic Weather Commission of the International Meteorological Organization during 1919–47 and of the Meteorological Sub-Commission of the International Commission for Aeronautical Navigation during 1919–46. He also represented the Meteorological Office on three other Commissions of the International Meteorological Organization. The Synoptic Weather Commission, responsible for international uniformity in observing practice and for constructing the codes used for the international exchange of reports and forecasts, met on ten occasions and passed some 400 resolutions under Mr. Gold's presidency. This was a period of great increase in both the depth and breadth of meteorological practice as it was improved to use new knowledge of the atmosphere and to meet the requirements of users, notably aviators. In the more purely scientific field, Mr. Gold is well known for his pioneer investigation into the radiative equilibrium of the stratosphere, his work on the relation between barometric gradient and wind force, and his invention of the barometer correction slide and the visibility meter which bear his name.

The Prize consists of a gold medal bearing on one side the badge of the World Meteorological Organization and on the other the inscription: "*Societas Gentium Meteorologica. Pro singulari erga scientiam meteorologicam merito*", a diploma, and a sum of money. It is paid for from part of the interest on the balance of the funds of the International Meteorological Organization on the replacement of that organization by the World Meteorological Organization in 1950. The award is made annually by the Executive Committee from names proposed by member countries, and it is laid down that in the selection of the recipient both scientific eminence and the record of work in the field of international meteorological organizations are to be considered.

Mechanical Engineering at Liverpool: Prof. W. J. Kearton

PROF. W. J. KEARTON, who is retiring from the Harrison chair of mechanical engineering in the University of Liverpool, served his apprenticeship in the Naval Construction Works of Vickers, Sons and Maxim at Barrow-in-Furness and was awarded in 1913 a Vickers scholarship to the University of Liverpool. After completing his studies at that University, he returned to Vickers, but in 1919 was appointed lecturer in mechanical engineering at Liverpool. He was promoted to a senior lectureship in 1937, a position which he occupied until 1947, when he succeeded Prof. G. E. Scholes as Harrison professor. While with Vickers, Kearton formed an attachment to heavy mechanical engineering which has remained one of his chief interests and to which he has made considerable contributions. His papers have been mostly concerned with steam-turbine design and he was at one time closely associated with the development of the mercury vapour–steam cycle. His books on steam turbines and on turbo-blowers and compressors are highly esteemed both by industrialists and by teachers of engineering, and his book on turbo-blowers has appeared in a German edition. During his long and distinguished career at Liverpool, Kearton never sought the limelight, but his qualities as an engineer and as a teacher have won the respect of colleagues and students alike. His students, in particular, have often paid tribute to the sympathetic and kindly help and guidance which he freely gave on so many occasions. He was chairman of the North-Western Branch of the Institution of Mechanical Engineers during 1948–50, and also served on the Council of the Institution during that period.

Prof. J. H. Horlock

DR. J. H. HORLOCK, who has been appointed to succeed Prof. Kearton, was a scholar of St. John's College, Cambridge, during 1946–49 and took first-class honours in the Mechanical Sciences Tripos in 1949. He then joined the staff of Rolls Royce, where he spent two years on aero-engine design and development. In 1952 he returned to Cambridge to read for a Ph.D. degree, and joined the staff of the Engineering Department as a University demonstrator, being promoted to University lecturer in 1956. During 1954–57 he was a Research Fellow of St. John's College, and in 1956 went to the Massachusetts Institute of Technology for a year as a visiting assistant professor in the Mechanical Engineering Department. Dr. Horlock's research work has been connected with the fluid mechanics of turbomachinery and he has specialized on the theory of flow in compressors and turbines, making a number of contributions to the theory which have been published in the Aeronautical Research Council Reports and Memoranda series, and Current Papers. He published some experiments and theory on the secondary flow in pipe bends in the *Proceedings of the Royal Society* and he has also published papers on properties of steam and on the Field cycle. Dr. Horlock is at present engaged on a book on the fluid mechanics of axial flow compressors, which will be published shortly.

The Royal Society: Research Fellowships

THE Committee representing the Royal Society and the University of Sheffield has appointed Mr. K. Dalziel as Sorby Research Fellow from October 1, to work in the Biochemistry Department of the University of Sheffield on biological kinetics. The Committee representing the Royal Society and the Armourers and Brasiers' Company has appointed Dr. T. E. Faber, of Corpus Christi College, Cambridge, as Armourers and Brasiers' Company Research Fellow from October 1, to work at the Cavendish Laboratory, Cambridge, on the electronic properties of liquid metals. Under the terms of the scheme to commemorate the late Lord Rutherford of Nelson, the Council of the Royal Society has appointed Dr. R. C.

Kumar, now working at the National Research Council of Canada, to be Rutherford Scholar for three years from next November, to carry out studies on elementary particles at University College, London.

Ciba Foundation Awards

An advisory panel of the Ciba Foundation has considered sixty-two papers from nineteen countries for the Ciba Foundation's Awards for 1958 for research relevant to the problems of ageing, and the following have received awards (the names of leading authors only are given): Dr. R. J. Boucek (Miami), Dr. D. S. McLaren (Mwanza, Tanganyika), Dr. A. Comfort (London), Dr. L. O. Pilgeram (Minneapolis), Dr. H. Sobel (Los Angeles), Dr. Z. Hruza jointly with Dr. E. Holečková (both of Prague), Dr. K. Walter (Giessen, Germany), Dr. A. A. Hürlimann (Bern), Dr. M. Murakami (Maebashi City, Japan). These awards are being offered for a fifth and final time in 1959, the closing date for entries being January 10, 1959, and further information may be obtained from the Ciba Foundation, London.

Darwin-Wallace Centenary

At a meeting of the Linnean Society on July 1, attended by members of the Darwin and Wallace families, representatives of other societies and institutions and members of the Linnean Society, the president, Dr. C. F. A. Pantin, unveiled a plaque in the meeting room commemorating the centenary of the reading before the Society on July 1, 1858, of the joint communication by Charles Darwin and Alfred Wallace on their theory of evolution by natural selection. At the meeting a hundred years ago neither Darwin nor Wallace was present: Darwin because of family bereavement and illness, and Wallace was still in Ternate. The papers were communicated by Sir Charles Lyell and Dr. (later Sir) J. D. Hooker, and as was the custom were read by the secretary. Hooker, writing to Francis Darwin at a later date giving an account of the meeting, said, "I was present . . . said something impressing the necessity of profound attention to the papers and their bearing on the future of Nat. Hist., etc., etc., but there was no semblance of discussion. The interest excited was intense, but the subject too novel and too ominous for the old School to enter the lists before armouring. It was talked over after the meeting, 'with bated breath'. . . ."

The papers were received by the secretary of the Society on the day before the meeting with a covering letter from Lyell and Hooker, and no prior notice of their title or contents was known to the Fellows before the meeting. They contained the first and quite independent statements of the great principle of natural selection. In both cases the discovery was the fruit of their profound experience of tropical nature while they were still young men. In further commemoration of this centenary the Society held a dinner in the Drapers' Hall on the evening of July 1, and on July 15, at a special meeting to be held at the Royal Geographical Society, some twenty Silver Darwin Medals will be presented to British and foreign biologists in recognition of their outstanding contributions to our knowledge of evolution.

Two Nuclear Reactors at the Atomic Weapons Research Establishment

HORACE, a zero energy reactor, is now operating at the Atomic Weapons Research Establishment at Aldermaston, Berkshire. It is being used for the study of the nuclear characteristics of a light-water research reactor, and consists of an arrangement of enriched reactor fuel in ordinary water. It will be used to investigate different types of reactor core arrangements and the use of different materials as 'reflectors' (to reflect neutrons back into the core). Work with it should enable the time taken for full commissioning of a second Weapons Group reactor of the same class to be materially shortened, since it will provide data relating to the control, safety and core arrangements of this type of reactor. This second reactor at Aldermaston, named HERALD, is being built by A. E. I.–John Thompson, Ltd., and should be completed by the autumn of this year. This will also have ordinary water as a moderator and coolant, will operate at power-levels up to five megawatts and will be used for research with neutrons and for the production of special isotopes. There are now thirty-five reactors either in operation or under construction in the United Kingdom for research, testing and power production.

Oak Ridge Research Reactor

A new research reactor at the U.S. Atomic Energy Commission's Oak Ridge National Laboratory has been successfully operated at its design power-level of 20,000 kW. of heat. The reactor, called the Oak Ridge Research Reactor (ORR), was brought to design power on May 29 after the power-level was raised in incremental steps over a period of several days while various operational tests were carried out. Operational testing is continuing. The reactor was designed to operate normally at 20,000 kilowatts, but may be operated at 30,000 kilowatts during some periods to meet the needs of the experimental programmes. The ORR will be used for fundamental research and engineering studies. The research programmes to be carried out in connexion with the reactor will include engineering studies on the effects of nuclear radiations, basic studies on the properties of metals, alloys and ceramics, and experiments involving neutron spectroscopy. The reactor also will be used for limited production of both short- and long-lived radioisotopes, many of greater specific activity than is now possible through other reactors available at the Laboratory. The ORR is a heterogeneous reactor, moderated and cooled with demineralized water. It has an average flux greater than 1×10^{14} neutrons per square centimetre per second, and has a beryllium-reflector core which utilizes fuel elements of uranium–aluminium alloy clad with aluminium.

Plutonium for Bombs

In the House of Commons on June 24, the Paymaster-General, Mr. R. Maudling, said that at the request of the Government, the Central Electricity Generating Board had agreed to a small modification in the design of Hinkley Point and of the next two stations in its programme so as to enable plutonium suitable for military purposes to be extracted should the need arise. The modifications would not in any way impair the efficiency of the stations, and as the initial capital cost and the additional operating costs would be borne by the Government, the price of electricity would not be affected. The country would thus be provided, at comparatively small cost, with an insurance against possible future defence requirements.

British Cotton Industry Research Association

In replying to a question in the House of Commons on June 24 as to whether he was satisfied that the British Cotton Industry Research Association was adequate to the present needs of the cotton industry, Mr. H. Nicholls, Parliamentary Secretary to the Ministry of Works, representing the Lord President of the Council, said that the Association provided an excellent example of progressive development and had achieved the confidence of the industry and a high international reputation. The Lord President had recently visited the Institute and was confident that the Council and Director of the Institute would continue to direct their programme of research effectively to those problems the solution of which would be of the greatest benefit to the cotton industry. Last year's grant to the Institute exceeded £84,000, and if the industry contributed more, the Government would increase its grant by £50 for every £100 extra from the industry.

Grants for Special Research

In reply to a question in the House of Commons on June 24, Mr. H. Nicholls, Parliamentary Secretary to the Ministry of Works, representing the Lord President of the Council, said that the Department of Scientific and Industrial Research was advised on grants for special researches by the Research Grants Committee of the Council, though the Committee may seek the advice of outside referees on any application. The chairman of the Committee is Prof. P. M. S. Blackett, and the chairman of the University Grants Committee and the Physical and Biological Secretaries of the Royal Society sit as assessors. Grants for nuclear physics this year amounted to £330,000 compared with £192,000 last year, and grants for other research has grown from £80,000 two years ago to £155,000 last year and to £320,000 this year.

Committee on Awards to Students

On June 25, the Minister of Education, Mr. Geoffrey Lloyd, in a written answer, announced that he and the Secretary of State for Scotland had decided to set up a Committee "to consider the present system of awards from public funds to students attending first degree courses at universities and comparable courses at other institutions and to make recommendations". The Committee would therefore consider the kind of awards to be made from public funds, the method of selecting students for such awards, and the principle of the hardship test required by the law as it now stands. Sir Colin Anderson has accepted the Government's invitation to act as chairman, and the other members of the Committee are: Mrs. Gladys Buxton, Mrs. Margaret Cooke, Mr. McL. Dewar, Miss J. A. Evans, Mr. W. W. Finlay, Mr. Norman Fisher, Alderman J. W. F. Hill, Mr. H. D. P. Lee, Dr. D. W. Logan, Mr. Ron Smith, Dr. L. S. Sutherland, Prof. Brinley Thomas, Dr. J. Topping, Mr. A. H. Wilson and Prof. E. M. Wright.

Research and Development in India

The third annual report and statement of accounts of the National Research Development Corporation of India, covering the year ended March 31, 1957 (pp. 17. New Delhi, 1957), records a steady expansion in activity. Seven new licences, including one development licence agreement, were negotiated and four new development projects involving an expenditure of Rs. 2.21 lakhs were sanctioned. A pilot plant was designed for de-ionization of cane juice, and experiments to determine the most suitable resins were expected to be complete by the end of the 1956–57 sugar season. Encouraging results were obtained in preliminary experiments on the production of copper chlorophyll from spinach leaves, and pilot-plant trials on the production of synthetic pine oil were conducted at the Shri Ram Institute for Industrial Research, Delhi. Encouraging preliminary reports have been received on the experimental infant food produced from buffalo milk at Kaira District Milk Producers' Union, Ltd., Anand, and a pilot-plant project for the production of phthalic anhydride by the fluidized-bed oxidation of coal-tar oil has been approved at an estimated cost of Rs. 2 lakhs.

Historical Documents

The library of the American Philosophical Society has acquired from time to time a number of interesting documents. Some of these are described in its *Proceedings* (**101**, No. 6; December 1957). The chapter on some newly obtained botanical papers is largely factual, but an illustrated account of sketches by T. R. Peale (1799–1885) is delightful. Another illustrated chapter deals with Augustin Dupré's sketches for medals, while yet another describes the so-called 'waggon affair' in which Benjamin Franklin took part in 1755. This "Wagon Broadside", the rarest of Franklin publications, was only acquired by the library last year. Another chapter describes a hoax on Dr. Franklin. The volume concludes with an account of Halliday Jackson's journal. Naturally, much of the material in this number is mainly of concern to Americans, but none the less there is much good reading of general interest to everyone.

A Hypothesis of Developmental Selection

From a study of lethal and semi-lethal mutants of the cruciferous plant *Arabidopsis thaliana*, J. Langridge has been able to advance a hypothesis of developmental selection (*Australian J. Biol. Sci.*, **11**, 58; 1958). Attention is directed to internal factors of selection and to barriers imposed by ontogenetic development as they may affect the degree of survival of newly arisen harmful mutations. The hypothesis states that "the survival of such mutant genes to the stage of germination depends on the diffusibility of the metabolite required by the mutants and the ontogenetic stage at which it is required. As a corollary of the hypothesis, those lethal mutants of flowering plants that appear after germination should, with certain predictable exceptions, have requirements for low molecular weight substances which may be supplied from external sources". In an experimental test of the hypothesis, the requirements for normal growth of eleven lethal or semi-lethal mutants were examined. The author reports that the six 'reparable' mutants require the following: (1) thiamine; (2) choline; (3) coconut milk; (4) sucrose or glucose; (5) a high osmotic pressure; (6) an alternation of temperatures for flowering. Of the five 'irreparable' mutants, (1) has decreased embryo growth; (2) lacks cotyledons; (3) lacks chlorophyll; (4) and (5) lack chloroplasts. The author considers that the behaviour of these mutants is generally in accord with the hypothesis.

Nitrogenous Components of Tracheal Sap

E. G. Bollard has investigated the composition of the nitrogen fraction of the tracheal sap in apples with the following results (*Austral. J. Biol. Sci.*, 10, 279; 1957). Organic nitrogenous compounds accounted for most of the nitrogen present. Aspartic acid, asparagine and glutamine were quantitatively the most important compounds; glutamic acid and other amino-acids were also present as well as a peptide-like substance. While apple variety, rootstock or manurial treatment may have had effects on the level of nitrogen in tracheal sap, they seem to have had little effect on the proportions of the nitrogenous compounds present. Through the growing season, however, there was a definite change in the proportions of some of the constituents. The composition of the soluble nitrogen fraction of leaves and fruits showed distinct differences from the composition of tracheal sap.

Egg Rafts of Angler Fish

The common European angler fish, *Lophius*, lays its eggs in long mucoid rafts which float on the surface of the sea as ribbons 2-3 ft. wide and 25–30 ft. long. In all the related species of which anything is known of the breeding, similar rafts appear to be formed, always with scrolled ends characteristic for the species. This is true of the various batfish, frogfish, goosefish and monkfish of American waters. In a recent paper (*Bull. Amer. Mus. Nat. Hist.*, 114, 333; 1958) Miss P. Rasquin has described the structures which produce these egg rafts, the rafts themselves, and the embryology of two species, *Antennarius* and *Histrio*, from the Sargasso Sea. In these species the two ovaries are fused in the mid-dorsal line and form together a single tightly scrolled ribbon, with double curvature. There is a single lumen, while the germinal epithelium is only present on the inside surface of the scroll. Tufts project into the lumen, terminating in each branch, during the breeding season, in a ripening ovum. At the time of ovulation the whole epithelium lining the lumen secretes rapidly, during the course of a single day, a mass of mucoid material; then the ova are ovulated into this mass, coming to lie in the spaces in the mass formerly occupied by the tufts. Peristaltic movements of the ovarian wall force the mass out through the cloaca, centre first. There is a rapid intake of water through the pores which represent the spaces occupied in the ovary by the bases of the tufts. In the presence of a courting male the sperm is carried into the raft in this intake of water and fertilization takes place inside the raft. Each egg thus lies free in a separate compartment within the raft in communication with the outside sea-water. The raft itself is an enlarged replica of the internal surfaces of the ovarian lumen. Rafts can be produced with great rapidity, as many as twenty-five being produced in the course of a three-month breeding season. The early embryology as described in this paper seems very strange and requires further elucidation.

Contemporary Formation of Dolomite

One of the most intriguing problems of sedimentary geology is the mechanism by which the mineral dolomite (the double carbonate, $Ca.Mg(CO_3)_2$, as opposed to mixtures or solid solutions of calcium carbonate and magnesium carbonate) is formed in Nature. Dolomite has been an important rock-forming mineral, and with it there are often found types of fossils which suggest that it was formed in warm, shallow, marine waters. On the other hand, true dolomite has only been found in modern marine sediments in very minor quantities; also, attempts to synthesize the mineral in the laboratory at ordinary temperatures and pressures have so far been unsuccessful. Some fresh light has recently been shed on the problem by A. R. Alderman and H. C. W. Skinner, who describe, in the *American Journal of Science* (255, 561) of October 1957, sediments containing appreciable amounts of dolomite which are being formed to-day in saline lakes in the coastal region near Kingston, South Australia. The occurrence of dolomite in saltpans has been reported before; the particular significance of the present report is that it has been shown that the composition of the lake-water is essentially that of sea-water in various degrees of dilution and concentration, and that the precipitation of crystalline dolomite has been clearly related with elevation of *p*H at seasons when plant-growth is especially active. Similar deposits are said to be forming in the Coorong, an attenuated gulf linked to the sea at the mouth of the Murray River. The authors suggest that the region would repay a more intensive study.

Sulphur Dioxide in Atmospheric Chemistry

Sulphuric acid is a major destructive constituent of smoky fog. It has long been believed that it was produced by oxidation of sulphur dioxide in the atmosphere, but little evidence on the reality of the oxidation was available. The matter has now been clarified by experiments carried out by Chr. E. Junge and T. G. Ryan of the U.S. Air Force Cambridge Research Center, Bedford, Mass. (*Quart. J. Roy. Meteor. Soc.*, 84, 46; 1958). They found that oxidation of sulphur dioxide can occur in dilute solutions in the presence of ammonia. Other substances, for example ferrous chloride, can also act as catalysts but are not found naturally in the atmosphere. The process stops after the *p*H value in the solution falls to about 2·2. Reference is also made to unpublished work by E. R. Gerhard showing that sulphur dioxide can be oxidized in the air to sulphur trioxide in strong sunlight without presence of water droplets and ammonia, but no general conclusion can yet be made as to the relative importance of the two processes.

Gairdner Foundation: International Awards

The Gairdner Charitable Foundation (Ontario), Canada, which was founded in 1957 and derived its funds from personal gifts of Mr. J. A. Gairdner, a Canadian industrialist and financier, and members of his family, has established two international awards, to be made for the first time in 1958: *The Gairdner Foundation Award of Merit*, a prize of 25,000 dollars to be awarded not more than once every four years to the individual or group of individuals who has made the most outstanding discovery or contribution in the fields of the arthritic, rheumatic and cardio-vascular diseases; and *The Gairdner Foundation Annual Awards*, comprising a series of prizes of 5,000 dollars each to be awarded in any one year to not more than five individuals who have made outstanding discoveries or contributions in the same field. Awards will be made at the discretion of the Foundation and will not be open to application on the part of potential

R 313

candidates. The purpose of these awards is to confer signal and substantial recognition upon individuals whose recent work constitutes tangible achievement in the fields of the arthritic, rheumatic and cardiovascular diseases. Winners will be free to make personal use of their prizes in any manner of their choice. Awards may be made without restriction as to nationality and will be payable in Canadian funds. Recipients who accept an invitation from the Foundation to participate in scientific meetings in Toronto or to visit professional colleagues at research or academic institutions in other countries and as a result incur travelling expenses may have the amount of their award increased appropriately.

Second International Conference for Analogue Computations

THE Second International Conference for Analogue Computations will be held at Strasbourg during September 1–9. There will be four sections: theoretical, mathematical or physical problems; analogue computation materials; diverse and similar applications; connexion between analogue computers and arithmetical calculators. Further information can be obtained from M. F. H. Raymond, Secrétaire Délégué Général de l'Association Internationale pour le Calcul Analogique, c/o S.E.A., 138 Boulevard de Verdun, Courbevoie (Seine), France.

University News:

Leeds

THE title of reader in civil engineering has been conferred upon Mr. E. Lightfoot. Dr. D. C. Munro has been appointed as lecturer in the Department of Inorganic and Structural Chemistry.

Liverpool

THE following appointments have recently been made in the University of Liverpool: Dr. H. Edels, to be reader in electric power engineering; A. Young, to be senior lecturer in applied mathematics; Dr. J. C. Willmott, to be senior lecturer in physics; Dr. R. Huby, to be senior lecturer in theoretical physics; Dr. H. B. N. Hynes, to be senior lecturer in zoology; Dr. K. McCarthy and Dr. K. R. Dumbell, to be senior lecturers in bacteriology; Dr. J. L. Braithwaite and Dr. E. W. Macmillan, to be senior lecturers in anatomy; Dr. J. Glover and Dr. H. K. King, to be senior lecturers in biochemistry.

London

THE following appointments have recently been made in the University of London: Mr. William Blackwood, pathologist at the National Hospital, Queen Square, to the University chair of neuropathology tenable at the Institute of Neurology; Dr. J. N. Cumings, clinical pathologist to the National Hospital, Queen Square, to the University chair of chemical pathology tenable at the Institute of Neurology.

Sheffield

THE following appointments have been made: Dr. C. B. Wilby (lecturer in civil engineering); I. Fells (lecturer in fuel technology and chemical engineering).

Announcements

PROF. B. C. P. JANSEN, lately director of the Nederlands Instituut voor Volksvoeding, has recently been made an honorary member of the Nutrition Society, in recognition of his distinguished contributions to nutritional science.

AN exhibition on "Palæontology and Evolution", sponsored by the Palæontological Association in conjunction with the Geological Survey and Museum, will be opened at the Geological Museum, Exhibition Road, South Kensington, London, S.W.7, on July 9. The exhibition will remain open for several weeks, from 10 a.m. to 6 p.m. on weekdays and from 2.30 p.m. to 6 p.m. on Sundays.

THE second Conference on Analytical Chemistry in Nuclear Reactor Technology will be held at Gatlinburg, Tennessee, during September 29–October 1. Further information can be obtained from C. D. Susano, Oak Ridge National Laboratory, P.O. Box Y, Oak Ridge, Tennessee.

THE second Australasian Conference on Radiation Biology will be held at the Cancer Institute, Melbourne, Australia, during December 15–18. Papers on relevant subjects are invited, and titles and a 250-word abstract should be in the hands of the Convener by July 31. Registration forms and other information can be obtained from the Convener, Dr. J. H. Martin, Physics Department, Cancer Institute Board, 483 Lt. Lonsdale Street, Melbourne, Victoria, Australia.

A SYMPOSIUM on Microchemistry will be held at the University of Birmingham during August 20–27. It is organized by the Midlands Section and the Microchemistry Group of the Society for Analytical Chemistry, under the patronage of the International Union of Pure and Applied Chemistry. Further information can be obtained from W. T. Elwell, I.C.I. (Metals Division), Ltd., P.O. Box No. 216, Research Department, Kynock Works, Witton, Birmingham 6. Envelopes should be marked 'Symposium'.

AN International Symposium on Atmospheric Diffusion and Air Pollution, sponsored jointly by the International Unions of Theoretical and Applied Mechanics and of Geodesy and Geophysics, will be held in Oxford during August 24–29. Participation is by invitation and some international unions and agencies will be represented by observers. The co-secretaries for the symposium are: Dr. F. N. Frenkiel, Applied Physics Laboratory, The Johns Hopkins University, Silver Spring, Maryland, and Prof. P. A. Sheppard, Department of Meteorology, Imperial College of Science and Technology, London, S.W.7, to whom any inquiries about the symposium should be addressed.

A SYMPOSIUM on Theoretical Organic Chemistry, arranged by the Chemical Society under the auspices of the Section of Organic Chemistry of the International Union of Pure and Applied Chemistry, will be held in London during September 15–17. The meeting commemorates the centenary of Kekulé's celebrated paper "On the Constitution and Metamorphoses of Chemical Compounds and on the Chemical Nature of Carbon" (*Annalen*, 106, 129; 1858), in which Kekulé developed ideas which first came to him during his stay in London. The discussion will be arranged under three main headings, "Chemical Binding and Structure", "Nucleophilic Reactions" and "Electrophilic and Homolytic Reactions".

THE ROAD RESEARCH LABORATORY

OPEN DAYS

OPEN days were held at the Road Research Laboratory on May 15 and 16, when the work of the Materials and Construction Division at Harmondsworth and that of the Traffic and Safety Division at Langley were visited by some 2,000 highway engineers, manufacturers of contractors' plant, police, road-safety officials and others in a position to make use of the results of the Laboratory's investigations.

Among the exhibits were methods devised at the Laboratory for testing motor-cycle crash helmets for protecting the wearer against fracture of the skull or concussion, and for ensuring that the peak of the helmet is not so flexible that it will flap in a fast-moving airstream nor so stiff as to present a hazard in the event of a crash. The British Standards Institution uses these tests to maintain the high quality of helmets bearing the 'kite' mark. Another display showed the technique for investigating injuries due to 'crashes'. With the co-operation of the police forces in the areas of Slough, Windsor and Staines, a team from the Laboratory proceeds to the scene of each accident and collects data on the circumstances, and on damage to the vehicles and injuries to their occupants or to other road users. The data may include pairs of stereo-photographs from which an accurate record to scale of skid marks and other visible evidence of events immediately prior to a collision can be obtained with plotting equipment. The many photographs shown illustrated the importance of the failure of vehicle seats or fixtures in aggravating injuries sustained by occupants of a car, and the importance of a yielding rather than a rigid design of steering wheel and column if a driver is to escape serious chest injuries in a collision.

Another group of exhibits consisting simply of defective parts taken from cars was frightening in its implications on safety—it included a steering-wheel assembly in which the play was a quarter of the movement from lock to lock. During the open days, visitors were invited to have their cars tested by the Laboratory's equipment; a common defect found was misaligned headlamps. Of exhibits concerned with vehicles, that which attracted most attention was a short film showing how loss of control can occur when braking and how it can be overcome by using the Maxaret anti-skid device; this releases the pressure in the hydraulic braking system of any wheel of a car as soon as it begins to skid during emergency braking. The car in the film was braked heavily from 65 miles per hour and was manœuvred successfully around obstacles without loss of control. Another striking set of exhibits was a series of toughened glass windscreens which had been caused to crack into the characteristic mosaic by hitting them with a centre punch; a screen made a few years ago which had cracked into a mosaic of forty or more particles per square inch was difficult to see through, but one made to the present British Standard of twenty particles per square inch would provide a fairly clear view of the road ahead.

There were a number of exhibits illustrating the use of statistics (reported by the police and others) in revealing the importance of the various factors—road, vehicle and human—which affect the problem of accidents. For example, these statistics show that one type of accident to which young children are particularly prone could be reduced by fitting an ingenious safety device which consists of a strip of mirror fixed in front of the cab of a battery-driven electric vehicle of the type used for 'milk rounds'. A glance in the mirror before he moves off will enable the driver to detect the presence of a very small child playing on the road immediately in front of his vehicle.

Another group of exhibits was concerned with making roads and air-strips more resistant to skidding. This comprised a car equipped with a 'fifth wheel' for routine tests at normal speeds, a car and 'braking-force' trailer for testing wet airfield runways at speeds up to 100 miles per hour, and the Laboratory's portable 'skid-resistance' tester: this is a simple pendulum device under development for use by highway authorities for detecting slippery roads.

The Laboratory's apparatus for measuring the reflecting power of a road surface was also on show: this constant is needed by illuminating engineers in determining the capacity of the road surface to form the bright patches on which the lighting engineer relies for effective lighting of streets. Pedestrians are mainly seen in silhouette against the bright background of road surface and not by direct illumination.

The traffic exhibit was notable as showing the large amount of data on the way Great Britain's roads are handling traffic. Examples were included of apparatus now available commercially for use by highway authorities for recording the flow and speed of the traffic on their roads. A new feature was the inclusion of teleprinter devices for recording traffic speeds automatically.

A model road was used to illustrate the Laboratory's work in making road signs easier to read; it showed that for signs of the same area and cost, taking the distance at which the British-type sign with 4-in. letters could be read as unity, this distance was half as much again for the Continental 'map'-type sign with 5-in. letters and was doubled for the United States 'list'-type sign with 6-in. letters.

Several of the exhibits were concerned with the development of machinery in road construction; thus in one large hangar type of building covering a number of pits filled with different soils, measurements were in progress of the depth of the compacted layer and the density of compaction achieved by vibrating rollers and vibrating plate devices: this investigation is designed to supplement the information on soil compaction given in the Laboratory's text-book, "Soil Mechanics for Road Engineers". In another hangar, experiments were in progress with a machine which was pulverizing a heavy clay with an action resembling a milling cutter as it moved over it. The problem here was to shred the soil very finely so that it would mix satisfactorily with cement, the resulting 'soil cement' being compacted to give a road base of high bearing power. Another exhibit, dealing with the problem of laying a concrete road free from undulations so that vehicles could ride over it very smoothly, used a working model to demonstrate the advantage of having a long wheel-base to the machine carrying the finishing screed.

In another exhibit samples of road-stones set in cement mortar and forming the tyre of a large wheel were being polished by the rubbing action of the tread of a smooth rubber tyre of another wheel, water and a fine abrasive being pumped on to the tyre. The degree of roughness remaining on the stones after polishing was then assessed in terms of the energy abstracted from a pendulum used to sweep a rubber pad over the samples of wetted stones. Use of this test would ensure that road-stones that polish easily are not used on sites, such as roundabouts on main roads, where it is desirable to maintain a high degree of resistance to skidding for safety in wet weather.

Another group of exhibits gave details of the Laboratory's full-scale road experiments concerned with 'pavement design', that is, the determination of the most economical type and thickness of road construction for use in a particular locality bearing in mind the road-stones and sands available, the bearing power of the subsoils over which the roads are built and the weight and intensity of the traffic to be met with ; here a large-scale plan gave details of the 'step' experiment at Alconbury on road *A*1, where a two-mile stretch consists of sections of different road materials, each laid to a range of thicknesses. Instruments have been installed in each section and these record the pressures and deformations in the road structure and in the subsoil : from these and other studies it should be possible to assess the relative suitability of the various materials involved. In connexion with this type of experiment it is vital to know the weights of the different vehicles using the road ; these are determined by a device which, for the purpose of the exhibition, was shown weighing the fast-moving traffic on the Colnbrook By-pass outside the Harmondsworth Laboratory. The device consists of a steel table, let flush into the road and carrying resistance strain gauges on the four legs : the system causes a spot of light to be deflected across a row of photo-sensitive elements actuating counters, the number of counters triggered off by each vehicle being a measure of the load. Another piece of work being done on this problem of 'pavement design' was exemplified by equipment adjacent to a test-track in the Laboratory grounds at Harmondsworth. Here a heavy vehicle was run over a group of sections of road of different compositions, and piezo-electric gauges in the underlying soil recorded the pressure exerted through each material, thus enabling its ability to spread the traffic loads to be determined.

Several exhibits were concerned with laboratory investigations. Thus a Thoma blood-count slide, modified to act as a micro-viscometer, was being used to determine the viscosity of the bitumen in the extreme surface layers of asphalts. This viscosity increases due to oxidation of the bitumen, but is decreased by the absorption of oil dropped from vehicles. To maintain a high resistance to skidding, an increased viscosity of the bitumen is desirable so that any bitumen in the surface is worn away by traffic so as to expose the sand or other fine aggregate texture.

One problem of immediate practical importance was concerned with determining the best surfacing for the roadway of the new Forth and Severn bridges. Trials on actual sections of the proposed bridge decks have suggested that 1½ in. of mastic asphalt sealed at the edges with rubber/bitumen will hold well to the steel decking and give long service under heavy traffic.

A pictorial display showed something of the work of the Colonial Section.

T. LONSDALE

SCIENCE IN THE USE OF COAL

A CONFERENCE on "Science in the Use of Coal" was convened at the University of Sheffield during April 15–17 by the Institute of Fuel to provide an opportunity for coal scientists to discuss their work with industrialists. Each session began with an authoritative survey of work already published and an appreciation of current industrial problems.

Physics and Chemistry of Coal

In reviewing the properties of British coal seams, A. M. Wandless laid emphasis on the heterogeneity of coal and the great commercial importance of coals of low rank. In the second paper, L. Horton surveyed the chemical constitution of coal, with particular reference to oxidation, functional groups and solvent extraction. I. G. C. Dryden extended this discussion, referring, *inter alia*, to statistical structural analysis and physical structure. These valuable summaries not only provided a foundation for the subsequent proceedings, but also focused attention on what remains to be done and the most likely fields of application. For example, Dryden said that carbonization offers the most immediate application for coal science, while Wandless made clear that further work applicable to the use of small coal of low rank and on sulphur and other mineral constituents is particularly necessary.

During the session it became clear that there is now available sufficient information about the aromatic skeleton in coal and the nature of non-aromatic and oxygen groups to limit closely the possible views on the structure of coal. P. B. Hirsch interpreted the X-ray evidence for vitrains containing up to 90 per cent carbon in terms of ordered layers containing a few condensed aromatic rings, the layers being cross-linked to form larger units. This view conforms with the chemical evidence. P. H. Given and M. E. Peover provided evidence from controlled potential electrolysis for the presence of carbonyl groups conjugated with the ring system, previously suggested from consideration of the behaviour of the 1,600-cm.$^{-1}$ band in infra-red spectra. Attempts to reduce the aromatic systems led P. H. Given, V. Lupton and M. E. Peover to suggest that this process is resisted in coals of low rank owing to a high degree of cross-linkage. J. K. Brown *et al.* demonstrated by purely chemical means the presence of aliphatic groups, showing also that halogenation and nitration may prove efficient in introducing desired functional groups into coals. Photochemical studies by R. Bent and J. K. Brown showed that solid coals are not photo-oxidized readily; but oxidation occurs when solutions of extracts of coal are irradiated by means of a mercury arc; similarly, chlorination of fine coal suspended in carbon tetrachloride also occurs. D. E. G. Austen and D. J. E. Ingram reported on the effect of carbonization and chemical treatment on the concentration of free radicals, concluding that the unpaired electrons are little influenced by the particular edge-groups present, but are closely associated with the aromatic skeleton.

P. J. Farenden and E. Pritchard reported a laboratory process giving good yields of highly fluorinated oils, without tar, in a single-stage reaction between coal of low rank at moderate temperatures and chlorine trifluoride. This empirical development may well find direct application in the fluorocarbon market.

N. Desai and S. J. Gregg showed that only when a compact swells as a result of sorption of vapours is it mechanically weakened thereby. From his studies of the sorption of methane by anthracite, A. S. Joy suggested for the latter a physical structure resembling that of a slightly elastic zeolite system.

These nine papers, since they represented current work only, did not cover the whole of present-day coal science; and physical structure had been covered at other recent conferences. It is a sign of the advances that have been made that the papers were followed by a lively and informed discussion, from which it was evident that the next few years will see a rapid clarification of what can, and what cannot, be done with coal.

Preparation and Breakage of Coal

In the second session, V. Fidleris and R. L. Whitmore described an electromagnetic method for measuring the falling speed of small foreign particles through stable suspensions, while G. F. Eveson and J. E. Gresham reported on the initial stages of a study of the factors governing the settling of floccules. The gap between these papers and the practical problems to which W. R. Chapman directed attention in his introductory survey was large, showing that the scientist's contribution to coal washing (in contrast to the maturity of fundamental studies) is only beginning. However, P. J. Beckett, A. D. Cummings and R. L. Whitmore showed the practical benefits that can accrue: their account of the disintegration of shales in water suggests that control of the pH of washery water might usefully reduce the slaking of shales. J. C. Macrae's data on the bulk density of crushed coal in relation to handling are applicable in carbonization, where charges of controlled bulk density are required.

The mathematics of breakage of coal is well advanced. I. Evans proposed a modification of Gaudin's law of size distribution in which account is taken of the dependence upon size of the probability of survival of the particles. T. G. Callcott extended the matrix representation of breakage processes to cover a second characteristic (such as ash content), showing that the selectivity or otherwise of a breakage process can be tested only by careful experiments. J. E. Ellis, W. D. Ray and J. Venables reported the experimental determination of a breakage matrix, which indicated the occurrence of interaction between particles differing in size. These papers provide a valuable tool for practical studies and show why much *ad hoc* work in the past has been inconclusive.

Carbonization of Coal

The ten papers that followed J. E. Davis's admirably compact survey of current knowledge gave ample testimony that science has made, and is now making, substantial contributions to this traditional use of coal. G. W. Fenton and A. H. V. Smith showed how petrological analysis assists in the selection of coals. J. J. Kipling and R. B. Wilson carbonized synthetic polymers and concluded that the properties of the carbon produced depend on the degree of cross-linking present in the original material or developed during its primary decomposition. Use of infra-red spectroscopy by A. L. Roberts, J. H. Towler and B. H. Holland in the analysis of carbonization gases showed the presence of a wide range of gaseous hydrocarbons and sulphur compounds, suggesting that these gases may be a potentially useful source of chemicals. Studying the chemical nature of coal-tar pitch, L. J. Wood and W. G. Wilman concluded that the largest molecules have branched chains of fused benzene and heterocyclic rings.

P. C. Finlayson and J. C. Macrae had made a preliminary study of the fluidity of a coal in the initial stages of thermal softening and suggested the presence of disk-shaped units in a solid/liquid system.

Another group of papers covered the cokes and chars produced by carbonization. J. G. O'Connor, M. W. Thring, C. Hulse and M. G. Perry showed that high volatile coal could be partially carbonized by a high rate of convective heating, lasting only one hour, to give a reactive and smokeless char, strong enough for the domestic market; the laboratory work was supported by studies at the pre-pilot stage and calculations for plant design. J. Owen described plant studies on the production of char in a fluidized bed. If these two processes should prove economical on further development, they could contribute to the availability of reactive smokeless fuels.

On the nature of cokes, A. D. Dainton and J. W. Phillips showed that cracking of briquettes is probably due to differential shrinking rather than evolution of gas and could be reduced by keeping the rate of heating below a critical value. M. S. Iyengar and R. S. Ghosh indicated that the strength of lignite briquettes is influenced by the presence of polar molecules and is increased by replacing much of the moisture by other polar compounds such as methyl alcohol or formic acid. A straightforward examination of the resistance of coke to breakage on impact led R. A. Mott to the important statement that it would be advantageous to use a smaller size of coke than is customary in blast furnaces.

Combustion and Gasification

In their introductory survey, R. H. Essenhigh and M. G. Perry directed attention to the relative importance of physical processes of diffusion and of rates of chemical reaction. This question is not fully resolved. D. B. Spalding described an ingenious model technique for studying the combustion of pulverized fuel. Then J. H. Burgoyne and V. D. Long reported some measurements of the burning (flame) velocity of suspensions of powdered coal in air, indicating, *inter alia*, a reduction in velocity when sodium chloride was added. R. H. Essenhigh and M. W. Thring measured the burning time of single particles of coal, relating it to the particle size and rank of the coal.

G. Underwood and M. W. Thring showed that over the temperature-range 650–850° C., coal smoke burns more readily than methane and unsaturated hydrocarbons. J. W. Hardcastle and M. W. Thring described apparatus for measuring luminous radiation from the flame over an over-feed coal bed and related it to the rate of feed of the coal and the percentage of secondary air. P. H. Crumley and W. McCamley discussed the behaviour of chlorine in coal during combustion, which is important in boiler firing, and suggested that the extent of vaporization of alkali is best related to the ratio of chlorine to ash-content.

The urgent need for further work was emphasized in the discussion, particularly in regard to the combustion of pulverized fuel.

Reactivity of Cokes and Chars

H. E. Blayden's survey of the kinetics of the reactivity of cokes and chars was supplemented by F. A. Burden's comparison of different methods of measurement. From analyses of the gases produced from pre-dried briquettes when burnt in air at a series of constant temperatures, D. R. Williams and J. A. Pudifoot proposed an index of chemical reactivity; comparisons with performance on open grates confirmed that (owing to the formation of surface oxide) the rate of loss of weight is not a sufficient measure of relative reactivity; but values of chemical reactivity at zero and at 1 per cent burn-off appeared to be well correlated with various practical characteristics of the fuels. L. J. Jolley and J. E. Stantan found that their measurements of reaction-rates of cokes with steam at 900° C. and with air at 475° C. were not correlated with specific surface areas of the cokes, suggesting the relevance of other factors such as ash constituents. Approaching the problem in a different way, F. D. Moles determined the minimum rate of burning at which a practicable bed of coke can be kept alight.

These papers and the discussion showed that there is still much to be learned about the physical and chemical factors determining the reactivity of coke, especially in regard to the relative importance of these, and other factors, in practice.

The discussions in each session added materially to the content of the papers. This is a sign that the number of established facts about coal now provides the scientist with a sure foundation for his work and will progressively simplify further work, although perhaps with coals of low rank new problems will arise. There is little doubt that the minerals associated with coal—only occasionally referred to at this conference—require much more consideration.

In every use of coal a diversity of mechanisms operates and the inter-relation between these is not yet on a quantitative basis. However, enough has been done to point the way and to show the potential benefit. When the investigations have proceeded further with a wide enough range of coals and associated minerals, the technologist also will have a sure foundation for his work. To achieve this end, the skills of every type of scientist and engineer must be blended. A philosophy of this most difficult field of industrial research emerged in some of the interchanges with industrialists, although the serious problem of communication, namely, the need for common language, was also evident.

The proceedings of the conference are to be published later this year. R. L. Brown

THE EUROPEAN SEISMOLOGICAL COMMISSION

THE fourth general assembly of the European Seismological Commission was held in Utrecht during April 8–12, by invitation of the University and the Royal Netherlands Meteorological Institute, and with the support of Unesco.

The plenary meetings were held in the University building. The assembly was exceptionally well attended, there being fifty-nine representatives from twenty-four European and circum-Mediterranean countries in addition to several occasional visitors. The main discussions centred on the Earth's crust; seismological apparatus; the European earthquake catalogue; dynamical interpretation of earthquakes; and canalized waves in Europe.

After the session had been opened by the president, Prof. P. Caloi (Rome), the delegates were welcomed by Dr. C. J. Warners, director of the Royal Netherlands Meteorological Institute, on behalf of the Minister of Transport and Waterways, and by Mr. C. J. A. de Ranitz, burgomaster of Utrecht.

The outer layers of the Earth above the Mohorovičić discontinuity (usually called the crust) are now being studied extensively by means of great explosions. Such explosions have already been made in the French Alps during August and September 1956, in Germany and in the U.S.S.R. These investigations have shown that the Mohorovičić discontinuity is depressed under great mountains. Further experiments are being planned.

The catalogue of European earthquakes, to include instrumentally determined epicentres, depth of foci and initial times, as well as magnitude and macroseismic data, is being compiled, and a seismic map of Europe is being drawn. A general discussion was held on the definition and representation of seismicity, and on the determination of the 'magnitude' of an earthquake from macroseismic (non-instrumental) observations. It will be remembered that the 'magnitude' of an earthquake is now defined precisely in terms of instrumental data, and that this is different from the 'intensity' of the earthquake determined macroseismically. Recent earthquakes in many parts of Europe were also discussed as additions to the catalogue. It is envisaged, considering the progress already made with the seismic map of Europe, that the time will soon come when it will be fruitful for seismologists and geologists to meet again to discuss seismotectonic problems, and to attempt the construction of a seismotectonic map of Europe.

The construction of instruments for the better registration of earthquakes in general and for the recording of particular data in connexion with problems of the theory of elastic waves is being continued. A fruitful method has been, first, to construct a shaking table to simulate the earth-movements, and then to determine the response of the seismograph to the known movements of the table. A great deal of ingenuity has gone into the construction of both tables and seismographs at Zurich, Stuttgart and elsewhere, and reports on the progress of the work, which is continuing, were given. For the general registration of earthquakes modern requirements are at least three components (north–south, east–west and vertical (Z)), and it was emphasized that for the study of particular waves it is preferable to have all three components giving identical response (that is to say, with the same frequency characteristics).

It would be invidious to attempt to assess the importance of the papers presented at the meetings, but perhaps summaries of two may be given.

The first, by Dr. R. Teisseyre, of the Geophysical Institute of the Polish Academy of Sciences, described the mechanism of earthquakes in terms of dislocation theory. The basic assumptions are the existence of the non-hydrostatic part of the stresses in the medium (Py 2) and the supposed distribution of the inhomogeneities (in the largest sense). This distribution includes some plane and its neighbourhood as the plane of active dislocation processes (slip plane, $y = 0$). It has been shown by Dr. R. Teisseyre and Sophia Droste that the inhomogeneities can be represented by the loop dislocations in the presence of the field Py 2. The loop dislocations increase under the influence of the field Py 2, and by interaction between themselves (synthesis of loops). The slip area increases. Finally, when the dislocation reaches the Earth's surface its energy is discharged. The calculated energy of discharge is in good agreement with observational data.

In the second paper, Dr. H. Berckhemer (Stuttgart) discussed the influence of the movement at the focus of an earthquake on the seismic wave spectrum. Dr. Berckhemer first stated his method of separating the influence of happenings at the focus from the influences of the wave-path and the seismograph on the wave spectrum. It appears that when the magnitude of an earthquake increases, the long-period wave spectrum is stimulated. Dr. Berckhemer explained this by theory and observation as being caused by extensive fault-breaks at the focus. His thesis is that it is possible to establish a connexion between the spread of the broken surface and the earthquake magnitude. This would make an important basis for the calculation of earthquake energy.

General impressions of the conference were, first, the intense interest of all present and the cut and thrust of very pointed discussion on all topics raised; secondly, the shift of emphasis on problems being tackled—for example, the present interest in very great explosions for seismological purposes and the return of 'La Géologie Sismologique' as introduced by the late Comte de Montessus de Ballore—and thirdly, the tendency to specialization within seismology.

It is expected that a second series of great explosions will take place during the summer of 1958 in the French Alps, and also that an explosion of 30–40 tons of explosive will be arranged to take place at a depth of some 300 metres in Belgium in September 1958. The elastic waves from these explosions will be recorded on seismograms and further knowledge obtained of the deeper structure of the Earth's crust. It is recommended that seismological stations obtain as soon as possible homogeneous sets of apparatus (recording three components having the same frequency characteristics) so as to be able to tackle seismological problems the more readily by direct comparison of the three components of vibration.

It is anticipated that the next meeting of the Commission will be held in Alicante during October 1959, when it is hoped that a symposium in collaboration with geologists will be held on seismotectonic problems, and another on the dynamical study of surface-wave problems.

The following were elected to office in the European Seismological Commission: *President*, Prof. P. Caloi (Rome); *Vice-Presidents*, Dr. J. Bonelli-Rubio (Madrid) and Prof. E. T. Savarensky (Moscow); *Secretary*, Mr. E. Peterschmitt (Strasbourg).

E. TILLOTSON

CLASSIFICATION OF BRACKISH AND INLAND SALINE WATERS

AT the International Congress of Limnology in Helsinki in August 1956, problems of brackish water were discussed and, at the suggestion of Prof. S. Segerstråle, it was planned that a small group of specialists should be invited to attend a conference with the view of recommending a scheme of classification of brackish and inland saline waters which could be generally acceptable.

This conference was held during April 8–14 of this year at Venice under the joint auspices of the International Association of Limnology and the International Union of Biological Sciences. The place of meeting was the Centro di Studi Talassografici, the director of which, Prof. U. D'Ancona, is also president of the International Association. Papers were read by S. Segerstråle (Finland), A. Remane (Germany), B. Havinga (Holland), M. Băcescu (Roumania—*in absentia*), G. Petit and D. Schachter (France), U. D'Ancona (Italy), J. W. Hedgpeth (United States), L. C. Beadle (Uganda), H. Caspers (Germany), D. J. Rochford (Australia—*in absentia*), W. Schmitz (Germany) and E. Dahl (Sweden). The conference was also attended by J. Dill, M. Girard and P. Job (Food and Agriculture Organization, Rome), by T. T. Macan (secretary of the International Association of Limnology), and by some Italian biologists (A. Marcello, B. Battaglia, A. Vatova and A. Giordani Soika).

The papers were concerned with the history of the subject, and with the ecology of brackish waters in the Baltic, Elbe estuary, Black Sea, the lagoons of southern France and the Adriatic, some Australian estuaries and of intertidal zones of the Scandinavian coasts. Inland saline waters in the southern United States of America, Germany and in North and East Africa were also discussed, and the physiological mechanisms for adaptation to brackish and saline waters were reviewed.

The conference was very successful as a stimulating exchange of views and information on a subject, accounts of which have been very diffusely published and are thus difficult to collate.

At the final session a basic scheme was proposed for the classification of brackish waters which, in the opinion of the conference, would provide a useful framework of general application. It is based on zones of salinity of known biological significance and owes much to the earlier classifications of Redeke and Välikangas. Into this scheme more detailed sub-categories could be fitted to suit local conditions.

The proposed scheme is as follows :

Zone	Salinity-range (°/₀₀)
Hyperhaline	$> \sim 40$
Euhaline	~ 40 to ~ 30
Mixohaline	$(\sim 40) \sim 30$ to $\sim 0{\cdot}5$
Mixoeuhaline	$> \sim 30$ but less than adjacent euhaline sea
(Mixo)polyhaline	~ 30 to ~ 18
(Mixo)mesohaline	~ 18 to ~ 5
(Mixo)oligohaline	~ 5 to $\sim 0{\cdot}5$
Limnetic (freshwater)	$< \sim 0{\cdot}5$

For inland saline waters, it was agreed that no useful purpose could be served at present in devising a scheme of classification based on salinity zones. They are extremely variable in composition and several factors other than salinity are of great ecological significance. Moreover, our knowledge of them is as yet comparatively slight.

Venice is obviously a very suitable as well as delightful environment for a conference on this subject and, in spite of most unfavourable weather, excursions were made in and around the Venetian Lagoon. Here the technique of fish culture known as *vallicoltura* has been practised for many centuries and it involves some interesting problems in brackish water biology.

Through the generosity and hospitality of the Mayor of Venice, of the Venetian Tourist Association, of the Consorzio Vallicoltori, of Prof. D'Ancona and Prof. Alessandro Marcello, the members of the conference were able to enjoy much more than the biology of the Lagoon and were permitted to see many things of historic and artistic interest under expert guidance.

The proceedings of the conference will be published in Venice by the Centro di Studi Talassografici.

L. C. BEADLE

THE CARNEGIE TRUST

THE fifty-sixth annual report* of the Carnegie Trust for the Universities of Scotland, covering the year 1956–57, includes the report of the Executive Committee with a summary of grants for the ninth quinquennium, October 1, 1952–September 30, 1957, the abstract of accounts for the year ended September 30, 1957, and the report upon the work of investigators, with lists of publications by scholars and recipients of grants and assisted papers. No new research scheme was introduced during the year, but those in operation have yielded satisfactory results. The block grants to universities to assist staff whose research involves travel are regarded as invaluable, and also the scheme enabling ten members of the staffs of universities to study abroad for up to twelve months, under which, in 1956–57, a geologist worked in Greenland, an archæologist in Asia Minor, a philologist in Ethiopia, a physiologist, zoologist, philosopher and surgeon in America, a biochemist and botanist in Canada and a historian in France. Assistance was given in the publication of seven manuscripts submitted by Scottish graduates or members of the staffs of Scottish universities. No fellowships were awarded, but, besides four senior scholarships, 36 scholarships were renewed and 23 awarded in June 1957. The Executive Committee is concerned to remove anomalies which have been created between Department of Scientific and Industrial Research grants and those obtainable from the Scottish Education Department on one hand and Carnegie Scholarships on the other. Repayments by former beneficiaries totalled £2,884.

The report upon the work of investigators under the research scheme during the year refers particularly to J. Y. Thomson's continued work on the numerical evaluation of the boundary layer flow past a flat plate placed lengthwise to the stream ; A. V. Gold on the de Haas–van Alphen effect in conductors at high magnetic fields ; Dennis Mackay on the interdiffusion of the ions Na^+, H^+ and Cl^-, and also water across an ion exchange membrane ; Donald Mackay on the decomposition of the peroxides of the organic acids ; and Iain M. T. Davidson on the dissociation of dibenzyl, in which he determined the kinetics of the decomposition and the bond-strength of the central C—C bond. A. E. Scott in his study of the acid-base and thermal racemization of the ketols has shown that the activation energy of the former is approximately half that of the latter. I. D. R. Stevens continued work on the addition of dinitrogen tetroxide and nitryl chloride to substituted olefines and on the effects of substituents adjacent to the double bond on *cis-* and *trans-* additions, while J. F. McKellar has identified the CHO, CH and OH radicals in the flash photolysis of acetaldehyde and formaldehyde both in absence and in presence of oxygen and is now studying the kinetics of their formation.

R. Logan has studied the influence of cytoplasm on the multiplication of ribonucleic and deoxyribonucleic acids in nuclear processes, using compounds labelled with carbon-14, and also the action of ultraviolet light and X-rays, using nuclei from normal and regenerating rat-liver cells and from calf thymus. M. Los's attempts to find a general synthetic route for the β-quinindines and the β-pyrindines failed, but gave some interesting new compounds. Janet Buchanan's work on the herbarium material on the genus *Luzula* in Kew and Edinburgh is nearing completion, and Isobel C. Gardner's work on nitrogen fixation in root nodules of non-leguminous plants has shown that the American *Myrica cerifora* can be inoculated from *M. gale* and that nitrogen fixation is carried on by nodules so induced. G. K. Wallace's work on visual responses in locusts is a useful contribution to our knowledge of locust behaviour. Beatrice M. Blance's work on the origin and development of the Iberian Bronze Age and Elizabeth Burley's study on the archæological evidence for Scottish–Irish connexions in the Dark Ages are specially commended.

VISUAL ORGANIZATION

By Dr. W. K. TAYLOR

Department of Anatomy, University College, London

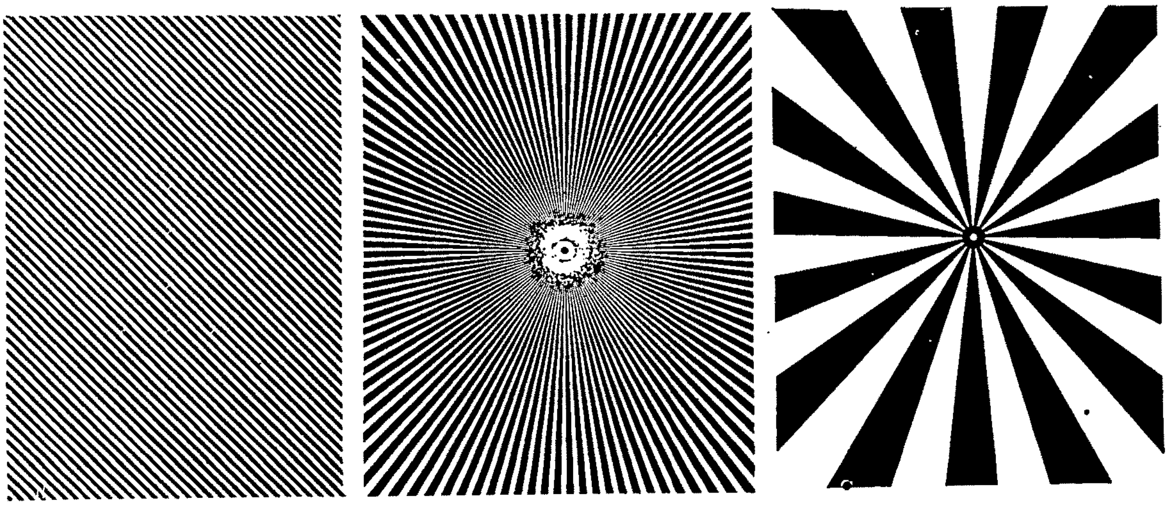
IN the functional theory of the mammalian retina which I proposed in 1955[1], the discharge frequency of the ganglion cells in response to distribution of light intensity on the retina was represented by an equation of the form:

$$f(m,n) = c_1\, d(m,n) - c_2 \sum_R f(p,q) \qquad (1)$$

This equation was based on the physiological experiments of Kuffler[2] in which ganglion cells in the cat retina lying beneath a small spot of light were found to discharge nerve impulses at an increased rate in response to the illumination, whereas surrounding ganglion cells within a small distance of the spot were silenced.

In equation (1) the spread of this inhibitory influence is denoted by a radius R and the retina is assumed to be divided into a matrix of small squares. Within any small square situated at the junction of row m and column n the average frequency of ganglion cell discharge is denoted by $f(m,n)$. The constant c_1 represents the potential increase in ganglion cell frequency that would be caused by unit increase in the depolarization of the cell in the absence of inhibition, that is when c_2 is zero. The depolarization or driving function $d(m,n)$ is assumed to be the result, through photochemical action, of the average light intensity over square m,n, and it is suggested that a reduced and decaying value of this function also represents the driving signal of the ganglion cell during after-image phenomena. The constant c_2 represents the potential decrease in ganglion cell frequency that may be caused by unit change in the summated inhibition or hyperpolarization associated with the discharge of ganglion cells within a radius R of the square m,n.

Graham and Granit suggested in 1931[3] that the lateral inhibitory signals could be carried by amacrine cells, but there is also a possibility that the inhibition may be transmitted between the rods and cones through horizontal cells. The theory, as formulated by equation (1), predicts responses to visual stimulus patterns that can be correlated with the visual phenomena of contour formation and simultaneous brightness contrast. There is, however, no component of output that can be related to the phenomenal movements in response to certain types of stationary stimulus patterns reported by observers in the experiments conducted by Erb and Dallenbach[4] and MacKay[5]. The earlier experimenters showed to a number of observers the Luckiesh–Moss[6] stimulus pattern (Fig. 1*a*), which consists of rows of equally spaced white lines on a black background. After a 1-min. presentation with adjacent white lines subtending a visual angle of 14·5′ all the observers reported having seen a "streaming movement" like "the drift of very fine snow" at right angles to the lines and proceeding in one direction or the other at various speeds from a slow drift to rapid streaming. The origin and explanation of this phenomenon are still unknown and the object of the present article is to suggest an explanation in terms of an extended form of my original theory[1] with two additional physiological features. These features are adaptation and post-inhibitory rebound, and since they take effect only after a period of fixation on a stimulus pattern their effects were neglected in the original



(*a*) (*b*) (*c*)

Fig.

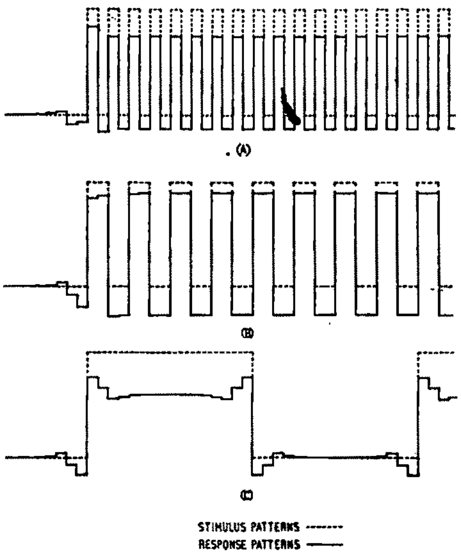


Fig. 2

theory, which was only intended to cover the initial response. The effects of eye movements during fixation are neglected in this theory since they are known to be small compared with the visual angles subtended by the relevant details of the patterns considered.

Adaptation and post-inhibitory rebound may be defined respectively as the decrease in firing frequency of a single excited ganglion cell with time when the stimulus is constant, and the burst of impulses generated by an inhibited cell when the inhibition is removed. Both effects can be seen in Kuffler's Fig. 8 (ref. 2).

The ganglion-cell firing pattern in response to the Luckiesh–Moss type of stimulus pattern predicted by the original theory is only similar in shape to the stimulus pattern if the line separation is of the same order of magnitude as, or less than, $2R$ when both are measured in terms of visual angle. This can be seen from Figs. 2*A*, *B* and *C*, in which the full lines respectively show cross-sections of the predicted firing pattern for parallel line stimulus patterns in which adjacent white lines, equal in width to the black lines, subtend visual angles of R, $2R$ and $16R$ degrees. The dash lines show the corresponding stimulus patterns to an arbitrary scale and also the predicted ganglion-cell firing patterns in the absence of lateral inhibition, that is when c_2 in equation (1) is zero. When the line spacing is large compared with $2R$ the theory predicts higher firing rates at the edges of the white lines than at their centres; in other words, the formation of contours or edges as shown in Fig. 2*C*. By investigating a complete series of patterns with different line spacings it is possible to show that the maximum inhibition of the neurones corresponding to the dark lines of the patterns occurs when the distance between the centres of adjacent white lines is equal to $2R$ as in Fig. 2*B*. The maximum inhibitory effect can thus be said to occur when the line pattern is matched in size to the inhibitory spread parameter of the theoretical model.

The parts played by adaptation and post-inhibitory rebound in the extended theory will now be considered by assuming that the stimulus pattern of Fig. 2*B* is fixated at time $t = 0$ on a part of the retina for which $2R$ is approximately equal to the separation of the white lines in the image, as required for matching. During the first fraction of a second the predicted response will be as shown in Fig. 2*B*, the activity in areas under the white lines inhibiting the activity under the black lines to a point well below the resting level corresponding to black except for the edge effect on the left. According to the extended theory, the neurones beneath the white lines begin to adapt and in doing so their inhibitory influence over the neurones beneath the black lines will be reduced until the latter eventually fire at higher rates according to the post-inhibitory rebound effect. In doing so they will inhibit the adapting neurones, thereby accelerating the reduction of their firing frequencies. If the magnitudes of these effects are sufficient, there is clearly a possibility that the rebounding neurones may become more active than the adapting neurones and it is suggested that this does in fact happen to a randomly distributed proportion of neurones during the apparent streaming-movement phenomena. A much larger rebound can be expected if the stimulus pattern is suddenly replaced by a plain surface since the adapting neurones will then lose the powerful drive by the white lines, this being replaced by the smaller after-discharge of the receptors.

In Kuffler's experiment the stimuli were spots of light for which equation 1 predicts a small inhibitory effect. With the parallel lines of Fig. 2*B* the predicted inhibition is much greater, and it is suggested that the rebound produced by this pattern can be large enough to cause appreciable inhibition of a proportion of neurones under the white lines or the neurones which were under the white lines if the pattern has been removed. The rebound is known to be transient, however, and when it decays the neurones under the white lines that have been transiently inhibited should tend to rebound and hence to restore the original pattern of activity. If the rebounds are sufficiently large the complete cycle may be repeated an unlimited number of times if the pattern is still present or a finite number of times at decreasing amplitude if the pattern is removed. The repeated cycles, assuming that they can occur, might be called rebound oscillations.

An optic nerve discharge pattern corresponding to a partial oscillatory after discharge following a period of fixation on the matched pattern could be expected to resemble the discharge pattern actually produced by interchanging the positions of the black and white lines of the stimulus pattern, except for the blurring of the former due to the random distribution of the oscillating neurones. It is suggested that in either case the observer can interpret the discharge pattern as a continuous movement in either direction at right angles to the lines of the inducing pattern. According to this theory the apparent movements can be regarded as analogous to the special case of the apparent movements created by projecting a cinematograph film of a set of lines such as a white fence or the spokes of a carriage wheel in which the change of image position between successive frames is equal to half the spacing of the lines. It is then impossible to decide for certain which way the lines are moving and the fence or carriage wheel may appear to move in either direction.

The extended theory leads to the following predictions. The apparent movements should increase in intensity as the contrast between the illumination of the white and black lines increases and as the width and separation of the lines are adjusted to match the inhibitory spread of the area of retina used for viewing the lines. If the white lines are very narrow relative to the black their inhibitory effect will be small, and if they are too wide the inhibitory effect will be small. In either case the oscillation should be absent or short-lived and of low intensity. For a given ratio of widths the apparent movements would be most obvious when the line separation is of the same order as the width of the inhibitory field surrounding each element of retina.

Beitel's[7] curves for two-spot interaction indicate that the spread ranges from approximately 17′ visual angle in the central region to more than 2° in the periphery. It is therefore interesting to observe that the radial-lines stimulus pattern employed by MacKay[5] (Fig. 1*b*) was viewed at a distance of 1 metre and that at this distance the visual angle subtended by the centres of adjacent white lines at a radius of half the average distance from the centre to the edge of the pattern is also approximately 17′. It is obvious that with very small line spacing the pattern will not be resolved, but the theory predicts that the movements should also disappear for spacings that are large compared with 17′ in the foveal region or 2° in the periphery. With such wide lines the inhibition only extends a relatively short distance into the black region from the white boundary as shown in Fig. 2*C*, and the rebound can then only give rise to border or edge oscillations on the black–white boundaries. There is no apparent reason why the corresponding neural discharge pattern should give an illusion of continuous streaming movement since there is no tendency for the central parts of the black lines to give rebound impulses.

This prediction has been confirmed by experiments in which the stimulus pattern shown in Fig. 1*c* was employed. This pattern is based on Fig. 1*b* but the separation of the lines at any given radius is increased by a factor of eight to correspond with the eightfold increase in separation from Fig. 2*B* to Fig. 2*C*. In the experiments observers looked at enlargements of the patterns shown in Figs. 1*b* and 1*c* for 1 min. on different occasions but with the same illumination. Out of 30 observers tested, none reported having seen the circular streaming movement while viewing a 30 cm. × 40 cm. enlargement of Fig. 1*c* at 1 m., but all reported the effect with a similar presentation of the pattern employed by MacKay. The interpretation of this result in terms of the theory is that the inhibition within retinal areas beneath the central portions of the black areas of the image produced by Fig. 1*c* is insufficient to cause any appreciable rebound and that the illusion of a continuous smooth streaming movement is thereby lost.

In addition to the foregoing predictions concerning the magnitude of the movement phenomena the extended theory also predicts that the apparent velocity of the streaming movement with parallel line patterns or the angular velocity with radial line patterns, measured in lines crossed per second, should be equal to the frequency of the rebound oscillations measured in cycles per second. It is difficult to see how this could be tested experimentally since the nerve impulses generated by a single ganglion cell would have to be recorded and compared with the observer's estimate of the streaming velocity. It is possible to predict an upper bound to the velocity, however, since the highest frequency of oscillation could only be attained with one nerve impulse per cycle. The duration of an impulse is approximately one millisecond, and if the theory is correct it should be impossible to have an impression of a velocity in excess of 500 lines/sec. A velocity of 10 lines/sec. would seem more reasonable from Kuffler's recordings while my estimate of the velocity is approximately 30 lines/sec.

MacKay has suggested[5] that the moving visual images might occur in response to informational redundancy or regularity in the visual field. The present theory, however, predicts that although regularity is a necessary condition it is by no means sufficient, and that only a very restricted range of sizes and shapes of regular pattern should produce the phenomena. An example of a highly regular visual field that shows no sign of inducing the phenomena is a plain surface of any intensity for which the same signal is repeated at all points and which is therefore extremely rich in redundant information. More complex fields having the same degree of regularity may or may not give rise to apparent movements depending on the visual angle subtended by the elements. If, in particular, a circle is divided into $2n$ equal sectors which are alternately black and white ($n = 120$ for MacKay's pattern, Fig. 1*b*), the patterns so formed could be said to be equally regular irrespective of the value of the integer n. Since the streaming movement does not occur for plain surfaces it is evidence that for a fixed viewing distance it must disappear as n tends to infinity or zero. It appears when $n = 120$, but not when $n = 15$, and it is therefore apparent that the actual dimensions of the stimulus pattern image on the retina as well as the regularity of the pattern is an important factor, as predicted by the theory. The general criteria for the appearance of the streaming novement appear to be that there should be a number of equidistant lines separated by a visual angle that matches the inhibitory spread in the area of retina on which the lines are projected. It should be noted that, so far as a small element of area is concerned, radial, concentric or wavy lines that only change direction slightly within the area can be approximated by parallel lines within the area for the purpose of evaluating equation 1. The theory predicts oscillations and apparent movements for any pattern that gives an image of a sufficiently large number of roughly equidistant light and dark alternating lines of suitable separation and width on the retina.

There is, of course, the possibility that interaction of the type described by equation 1 may occur at higher levels of the pathway, and in particular the stellate cells of the visual cortex described by Sholl[8] may transmit inhibition between the pyramidal cells, just as the Renshaw interneurones of the spinal cord transmit inhibitory signals between motoneurones. Unfortunately, it is difficult to imagine an experiment that would locate the origin of the movement phenomena, but the available evidence at the moment appears to be in favour of the retina as a possible source, if not the only source.

The helpful suggestions made by Prof. J. Z. Young and Dr. J. A. B. Gray are gratefully acknowledged. The work was supported by research grants from the Nuffield Foundation.

ACTIVATION OF HORMONAL SECRETIONS

Precorticotropin

In a number of communications from this laboratory[1–4], evidence has been published for the presence in certain anterior pituitary preparations of material which is ineffective in rapidly reducing the ascorbic acid content of the adrenal gland of the hypophysectomized rat when administered intravenously[5] (Sayers test), but which can elicit an increase in weight of the adrenal glands of the hypophysectomized rat when injected intraperitoneally over a period of some days (adrenal weight test). Other investigators have also found discrepancies between the results of the Sayers test and the adrenal weight test with different pituitary preparations (see Stack-Dunne and Young[6] for a review of these publications). Although the administration of growth hormone can bring about an increase in the weight of the adrenal glands of the hypophysectomized rat largely through stimulation of mitotic activity[7–11], it is most unlikely that growth hormone is the only substance in the crude pituitary extracts we have used[1,4] responsible for the increase in weight of the adrenals. We have used[1–4], among other pituitary preparations, a crude sterile alkaline extract of ox anterior pituitary prepared by a method described by Young[12] which contains little or no corticotropin as measured by the Sayers assay, but which is active in increasing adrenal weight. The virtual or complete absence from this crude ox pituitary extract of activity in the Sayers test was puzzling[13], particularly since fresh ox anterior pituitary tissue contains much corticotropin extractable by acid-acetone.

We have now found that our crude sterile alkaline extract of ox anterior pituitary (*FGS*), which is devoid of activity detectable in the Sayers test, acquires this activity after extraction with acid-acetone according to the method of Lyons[14]. Moreover, this activity rapidly appears in the extract if its *p*H is brought to the acid side, maximum activity being attained at *p*H 3 (Table 1 and Fig. 1). Activity is obtained if the *p*H of the injected material is left at *p*H 3 or brought back to *p*H 8 immediately before injection, and whether or not any precipitate formed in adjusting the *p*H to 3 is spun off before the biological test is carried out. Furthermore, we have found that activity in the Sayers test also appears when the crude extract is treated with urea (3–8 *M*). It is convenient to refer to the material which gives rise to activity in the Sayers test as the result of these mild treatments as 'precorticotropin'.

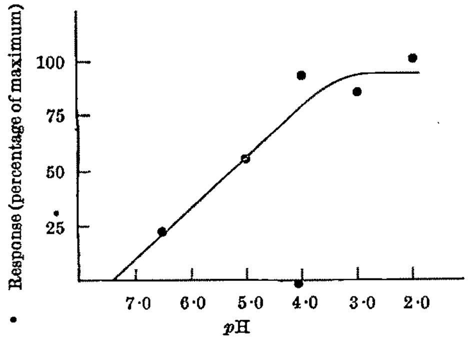

Fig. 1. Effect on the activity of *FGS* in the Sayers test of lowering the *p*H for approximately 30 min.

Table 1. ACTIVITY OF A CRUDE ALKALINE OX ANTERIOR PITUITARY EXTRACT (*FGS*) IN THE SAYERS TEST

Change in adrenal ascorbic acid content (μgm./100 mgm. adrenal) with:		
Untreated extract	Extract adjusted to *p*H 3	Extract treated with urea
+ 8 ± 5 (23)	– 55 ± 4 (31)	– 83 ± 8 (24)

0·25 ml. of extract injected/100 gm. body weight. The number of animals used in each test is given in parentheses

Table 2. ADRENAL WEIGHT-INCREASING ACTIVITY OF CRUDE ALKALINE OX PITUITARY EXTRACT (*FGS*) BEFORE AND AFTER ADJUSTMENT OF THE *p*H TO 3·0

Weight of the two adrenal glands of hypophysectomized rats:		
Control values (mgm.)	Values (mgm.) after 3 days treatment with:	
	FGS untreated	*FGS* brought to *p*H 3·0
10·1 ± 0·5 (5)	16·6 ± 1·0 (4)	13·5 ± 1·0 (5)

0·25 ml./100 gm. body weight of extract injected daily for three days. The number of animals in each group is given in parentheses

When the *p*H of the crude extract (*FGS*) is brought to 3 by the addition of dilute hydrochloric acid, the adrenal weight-increasing activity tends to fall rather than rise (Table 2). In these tests the rats were hypophysectomized two weeks previously and were given three intraperitoneal injections of pituitary extract (or 0·9 per cent sodium chloride in control animals) for three days, the animals being killed on the fourth day.

These results have led us to ascertain whether our postulated precorticotropin is present in the supernatant fluid of a homogenate of ox anterior pituitary tissue prepared without adjustment of *p*H. The results in Table 3 were obtained with homogenates prepared in 0·9 per cent sodium chloride of such volume that 1 ml. of homogenate was equivalent to 20 mgm. of tissue. The homogenate was spun in the high-speed centrifuge (approximately 18,000*g*) and the supernatant fluid diluted 20–50-fold with 0·9 per cent sodium chloride for biological testing.

The supernatant fluid prepared from the homogenate exhibits no activity in the Sayers test until the *p*H is adjusted to *p*H 3, when a significant appearance of such activity takes place (Table 3). The addition of urea to make a 6 *M* solution has a similar activating effect.

A whole homogenate of ox anterior pituitary tissue prepared by us does possess Sayers test activity, as also does the residue spun out in the preparation of the homogenate supernatant. It appears, therefore, that in the ox pituitary glands as we collect them only a portion of the total potential Sayers-active material is present as precorticotropin.

We have found, in agreement with others, that a dilute solution of corticotropin is very unstable in slightly alkaline medium. Thus, of a solution initially containing 40 μgm./ml., all may be lost in 2 hr. at

Table 3. ACTIVITY OF THE SUPERNATANT FLUID FROM AN OX ANTERIOR PITUITARY TISSUE HOMOGENATE IN THE SAYERS TEST

Change in adrenal ascorbic acid (μgm./100 mgm. adrenal weight)		
Supernatant diluted	Supernatant adjusted to *p*H 3·0 before dilution	Supernatant with 6 *M* urea before dilution
+ 11·5 ± 8 (17)	– 84 ± 8 (19)	– 61 ± 15 (4)

1 ml. of homogenate equivalent to 10 mgm. tissue; supernatant diluted 20–50 fold for biological test. The number of animals used in each test is given in parentheses

*p*H 7·4 at room temperature under the conditions of our experiments. It is very probable that any Sayers-active corticotropin initially present in our sterile crude alkaline pituitary extract will rapidly disappear. Nevertheless, since that extract may retain indefinitely its ability to acquire Sayers-test activity by suitable treatment, our precorticotropin appears to be stable in alkaline medium (*p*H 7–9).

Hall[15], Meites and Turner[16], and Carlisle[17] have all found little or no lactogenic activity, tested in rabbits, in crude anterior pituitary extracts, but have obtained from these crude extracts preparations of prolactin (luteotropin) which are highly lactogenic in their test animals. Carlisle[17] discusses the "artifactual nature of luteotropin" and writes: "it seems certain that luteotropin, as we know it in the extracted form, is an artifact which our methods of extraction have prepared from the inactive material of the primary extract. It is likely to be a different configuration of the same molecule, or of a fragment or multiple of it, for the only processes to which we have submitted it are unlikely to alter a protein to a greater extent than this". It should be noted that the galactopoietic activity of a crude ox pituitary extract (*FGS*) is very much greater than that of the prolactin which can be prepared from it[18], but growth hormone is largely responsible for this effect on milk secretion[19]. Dr. D. B. Carlisle has obtained results with corticotropin comparable with those he has seen with prolactin.

Since our precorticotropin is rendered active in the Sayers test by such mild treatments as adjustment of the *p*H of the solution to 3, or addition of urea (which might be expected to break hydrogen bonds) the change is unlikely to involve the fission of a covalent bond; that is, it is more likely to be a physical or a physico-chemical change than a chemical one. The nature of the change and its possible catalysis under biologically significant conditions, such as under the influence of enzymes, is under investigation. The question of the possible effect of our precorticotropin on the secretion of adrenal steroids also merits attention.

In the fresh homogenate of anterior pituitary tissue prepared by us, only a portion of the total corticotropin content is present as precorticotropin and is ineffective in the Sayers test. It is possible that the conditions of killing the animals from which the pituitary glands are obtained, or the time which elapses between the death of the animal and the preparation of the homogenate, may affect the proportion of the total corticotropin which may be obtained, in a form active in the Sayers test, in an alkaline extract. This is a subject for further investigation. What is clear at present is that the sterile crude alkaline extract of ox anterior pituitary tissue (*FGS*) which we have prepared and used in previous investigations[1–4] can possess no activity in the Sayers test but, nevertheless, can acquire such activity after mild treatment. That precorticotropin is itself responsible in part for the adrenal weight-increasing activity of crude anterior pituitary extracts is probable but not certain. It is, nevertheless, very likely that the presence of such precorticotropin in a crude alkaline extract of ox pituitary tissue accounts for the striking discrepancies between the results of tests for Sayers activity and for adrenal weight-increasing activity of such extracts, previously observed in this laboratory[1–4,6]. Moruzzi *et al.*[20] have described the presence in blood of two forms of corticotropin. One called 'active' corticotropin is a labile and ultrafilterable fraction found in the blood of normal subjects. The other, named 'activable' corticotropin, is detectable (by a Sayers type of test) only after treatment with oxycellulose. This form of corticotropin, according to Moruzzi *et al.*[20], occurs in the blood of human subjects with Addison's disease and other conditions in which adrenal function is deficient. More recently, Jailer *et al.*[21] have found activity in the adrenal weight test with plasma from patients with Cushing's syndrome due to bilateral adrenal hyperplasia and from pregnant women. No Sayers-test activity was found with plasma from the two patients with Cushing's syndrome whose plasma was tested in this respect. A relationship of these factors to our precorticotropin and also to that described by Golla and Reiss[22] in the serum of pregnant mares is possible but by no means certain.

One of us (P. R. D.) held a Colombo Plan Scholarship from the Government of India during the period that this work was carried out. The expenses of this investigation were partly defrayed from an expense grant from the Medical Research Council to one of us (F. G. Y.).

A Crustacean Chromactivator

IT is an old observation that colour change of Crustacea is brought about by the action of certain chromactivating substances, the best known of which are released into the blood by the sinus gland of the eye-stalk. In 1955, Knowles, Carlisle and Dupont-Raabe[1], working on *Leander serratus*, showed that the material stored in the sinus gland, substance *A*, was the precursor of three or more blood-borne substances, the α-substances, which themselves acted upon the chromatophores, while substance *A* was never apparently released from the gland. The evidence suggested that the conversion of the large molecule of substance *A* into the smaller dialysable molecules of the α-substances was enzymatic. The sum of the activities of the α-substances was about equal to the activity of the parent substance *A*.

It has repeatedly been observed that the total chromactivity of an eye-stalk extract is increased twofold or more by boiling. But in this laboratory we have found that boiling an extract of a sinus gland does not affect the total activity (it does, however, prevent the conversion of the native substance *A* into the α-substances). A fresh extract of the remainder of the eye-stalk, after removal of the sinus gland, contains little or no chromactivity; but if such an extract is boiled, it gains an activity about equal to that of the sinus gland extract.

It is generally accepted that the greater part of the hormonal material found in the sinus gland is not actually produced there, but is first formed in the neurosecretory cells of the medulla terminalis ganglionic *X*-organ and of other ganglionic *X*-organs within the eyestalk. In fact, when boiled extracts are prepared from various fractions of the eyestalk, almost the total chromactivity is found in the sinus gland and the medulla terminalis ganglion *X*-organ. Unboiled extracts of the latter organ show no chromactivity. Electrophoretic examination of the boiled extracts of the organ reveal that they contain substance *A*, with no trace of the α-substances. When I dissected out the nerve connecting the organ with the sinus gland, I found that the proximal part, near the organ, yielded extracts which were inactive until boiled, while the distal part yielded extracts which were active when fresh. It is noteworthy that the staining reactions of the *X*-organ and sinus gland differ from one another, and that the proximal part of the connecting nerve tract stains like the *X*-organ while the distal part stains like the sinus gland. The substance present in the *X*-organ is apparently the precursor of substance *A*, and becomes converted into substance *A* during its passage along the nerve tract.

It is of interest to examine the range of treatments which will activate the inactive chromactivator of the *X*-organs. Besides boiling, this can be brought about by the action of acetone (especially if this is slightly acidified), alcohol, trichloracetic acid, formalin and urea. From this it would appear that it is sufficient to break hydrogen bonds to activate the material; the change involved is rather physicochemical than chemical.

The effect of mild treatment in activating a previously inactive storage substance is comparable to the observations I have previously made[2] upon the effect of similar agents in producing a prolactational or a corticotropic activity from inactive crude pituitary extracts. It may also be compared with the observations presented by Dasgupta and Young (preceding communication).

The earliest of the series of experiments on which this communication is based were noticed briefly by Knowles[3], who also reproduces a colour photograph taken in this Laboratory of the colour changes involved.

RESPONSES OF THE ANTERIOR RETRACTOR MUSCLE OF THE BYSSUS OF *MYTILUS EDULIS*

In a recent study of muscle from *Mytilus edulis*, Hoyle and Lowy[1] have discussed the action of 5-hydroxytryptamine in producing relaxation of the tonically contracted anterior retractor muscle of the byssus. They comment on the fact that the muscle may fail to recover its ability to respond to d.c. stimulation by tonic contraction for several hours after exposure to 5-hydroxytryptamine; in some examples up to 40 hr. were required for recovery. They infer from this that 5-hydroxytryptamine is unlikely to be the substance normally responsible for relaxation in the intact animal (cf. Twarog[2]). The concentrations of 5-hydroxytryptamine used by Hoyle and Lowy were, however, of the order 1–10 μgm./ml. and it is of interest that relaxation can be obtained using concentrations as low as 10–0·5 mμgm./ml. This action is best shown when a tonic contraction has been induced by acetylcholine 1 μgm./ml. The effect of 5-hydroxytryptamine applied at the peak of contraction is to increase the initial rate of relaxation. Using concentrations as stated, repeatedly reproducible responses can be shown (Fig. 1).

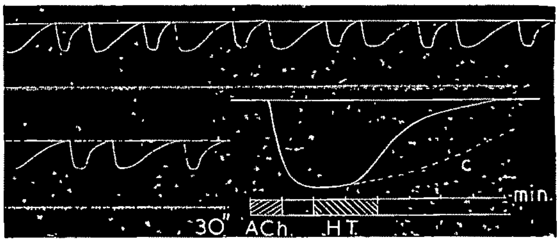

Fig. 1. Record of the isometric responses of the anterior retractor muscle of the byssus (contraction downwards). Contraction induced by acetylcholine (1 μgm./ml.) and alternate records show the relaxation under sea water control and following 5-hydroxytryptamine (10 mμgm./ml.). Inset, diagram showing the time of application of the drugs. Dotted line (*c*) indicates the course of control relaxation

As reported previously[3], this relaxing effect of 5-hydroxytryptamine can be demonstrated on a muscle in a state of tonic contraction induced by electrical stimulation alone, or by the combined effects of electrical stimulation and noradrenaline, or by the application of acetylcholine, the latter giving the most consistent results.

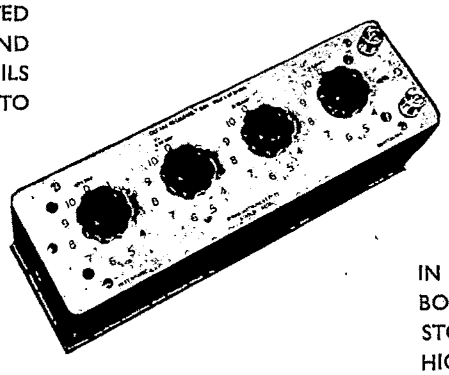
Hoyle and Lowy state further that since the anterior retractor muscle of the byssus is unable to destroy 5-hydroxytryptamine the effects produced by the drug are of pharmacological interest only. Blaschko[4] has reported the presence of amine oxidase in the muscle. That amine oxidase is an enzyme capable of destroying 5-hydroxytryptamine is now well known.

Although the findings reported above do not serve to prove that 5-hydroxytryptamine is the naturally

DORAN

DECADE RESISTANCE BOXES

THE INSTRUMENT ILLUSTRATED IS A 4 DIAL DECADE BOX AND MAY BE SUPPLIED WITH COILS HAVING VALUES OF 0·01 TO 10,000 OHMS



IN ADDITION TO RESISTANCE BOXES WE ALSO SUPPLY WHEATSTONE BRIDGES—PORTABLE AND HIGH PRECISION TYPES—AS WELL AS STANDARDS OF RESISTANCE

THE WINDINGS ARE BIFILAR AND HAVE LOW RESIDUAL INDUCTANCES BUT FOR AUDIO FREQUENCY WORK ALTERNATIVE WINDINGS CAN BE PROVIDED

ACADEMIC PRESS SERIAL PUBLICATIONS: NEW VOLUMES

"The great flood of publications, good, bad and indifferent, in any single branch of science is almost beyond the capacity of any one individual to read, let alone to digest and assimilate if he wishes to do any research and teaching himself at the same time. The solution to this dilemma seems to be the regular publication of critical reviews by specialists of advances in their own fields at the level that can be readily followed by non-specialists and with comprehensive bibliographies to assist in the more specialized reading.

"The series of volumes published by Academic Press, the titles of which all begin with the words: *Advances in*, admirably fulfil this requirement and they cover several fields."

MACMILLAN BOOKS

An Atlas of Airborne Pollen Grains

H. A. HYDE and K. F. ADAMS

This atlas is intended primarily as an aid to the identification of pollen grains in the fresh condition. The ninety-two species described are those which can be observed at a magnification of about 1,000 diameters. The book should be of value in studies of airborne pollen in general and in relation to hayfever, and, to a lesser degree, the pollen loads of bees, and pollen in honey and in peat. *Illustrated* 36*s*

The Economics of International Migration

EDITED BY *BRINLEY THOMAS*

Trends in international migration have been profoundly changed in the last thirty years by the American Restriction Act of 1924, the great depression of the early 1930's and the Second World War. Twenty-four papers on the subject by leading experts, and a record of the discussions of the seventh conference of the International Economic Association. 45*s*

The Man-made Fibres Industry

R. ROBSON

author of *The Cotton Industry in Britain*

The first book to tell of the development and structure of the industry, its economic and scientific basis, in England and overseas. The history of the industry is traced from the experimental period of the early 1900s through the 1930s, when staple fibre and high tenacity rayon were developed, to the subsequent discovery of the synthetic fibres at the present time. 21*s*

Textbook of Economic Analysis

EDWARD NEVIN, M.A., PH.D.

An introduction to the groundwork of contemporary economic and monetary theory. Assuming no previous knowledge on the part of the reader, it sets out to explain the nature and scope of economic analysis, and then proceeds to an exposition of the modern theories of demand, supply, value and income distribution. Finally, the book deals with the issues arising from international transactions. 'With this book Dr. Nevin will earn the gratitude of many teachers, to say nothing of their students. It undoubtedly fills a gap in first-year reading lists.'—*Accountancy.*

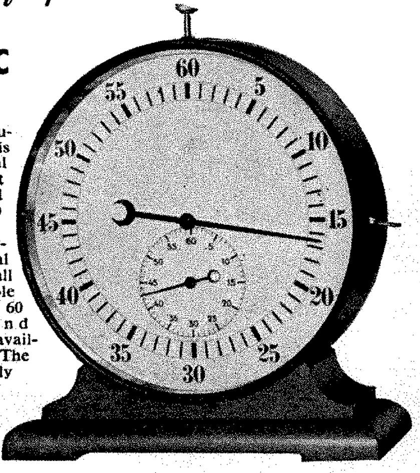
Timing Equipment
FOR SCIENTIFIC USE

This 8″ diameter accumulative stop clock is ideal for general laboratory use. It combines a 1/3 second escapement with a 60 minute recorder. The latest models incorporate decimal minute dial calibration. Wall models are available with both 10 and 60 minute recorders, and luminous dials are available for all models. The clocks are individually timed before despatch to obtain the optimum performance with dial vertical at normal room temperature.



Repair service. Our skilled repair staff deals with all types of watches, clocks and associated equipment. "Crash" service—ring MUSeum 2255. **Sectional catalogues and leaflets available.** Watches, stop watches and chronographs. Clocks: aircraft, domestic, industrial, architectural and turret. Revolution counters, tachographs and associated equipment. Process timers and time interval meters. Electronic instruments. Marine chronometers. Electrically controlled stopwatches and kymographs.

An Important

PRICE REDUCTION

The Nivoc Automatic Aperiodic Balance is now priced at **£135**

The **Nivoc Automatic Aperiodic Balance,** capacity 200 g, sensitivity 0·1 mg, not only incorporates an entirely new principle of weight pre-selection but, in addition, has a wide range scale 0–300 mg which indicates directly to 0·1 mg by means of an auxiliary scale. This, combined with an average 'period' of 10 seconds, will surely commend the Balance to discerning users requiring an extremely rapid and accurate instrument.

- **Eliminates weights below 300 mg**
- **Weight errors negligible**

We will willingly demonstrate its capabilities on request

Clinical biochemical methods

by A. L. TARNOKY

This is essentially a bench book, based on routine practice at the Royal Berkshire Hospital, Reading, where the author is biochemist. It selects, for the tests in most regular demand in clinical laboratories, methods that give results in a reasonable time, are accurate enough for clinical purposes, and do not require highly specialized apparatus. Instructions are detailed, simple, and straightforward, and are set out in clear steps for easy reference at the work bench; they reflect the author's experience in industry and hospitals. Just published. **Price 50s. net**

HILGER & WATTS LTD
98 ST PANCRAS WAY, LONDON, NW1

IMPORTANT ANNOUNCEMENT

Facilities are now available for the typing of complex engineering, electronic, nuclear physics, and other scientific and technical material, from original manuscripts or rough-typed drafts.

An appreciation of scientific subjects and the manner in which they must be set out for presentation are valuable assets of this new service.

Greek characters, mathematical and other symbols present no problems.

Every commercial (and other) security requirement fully complied with.

TECHNICAL DESIGNS LTD.

Recently, Evans and Schild[1] have examined the effects of electrical stimulation and drugs on vertebrate smooth muscle which had been depolarized by the external application of potassium ions. The conducted response to electrical stimulation was abolished under these conditions but the contraction in response to drugs, presumed to be due to local excitation of smooth muscle cells, was maintained. Experiments on invertebrate smooth muscle, the anterior retractor muscle of the byssus of *Mytilus edulis*, have given results which differ from these. This muscle can be depolarized by exposure to 0·56 *M* potassium chloride and this produces, under isometric conditions, a prompt development of tension which is maximal in about 10 sec., and relaxation occurs over a period of 30–40 sec. The muscle is then inexcitable by electrical stimulation (either d.c. which normally produces a tonic contraction or 2-m.sec. pulses 4/sec. which normally produce a phasic contraction), and it also fails to respond to acetylcholine in concentrations up to 2 μgm./ml. The course of depolarization of the muscle by potassium chloride was determined by Twarog[2], who found the maximum potential on depolarization was obtained 20–25 min. after the potassium chloride contraction, and in the experiments reported above the responses to electrical stimulation and drugs were examined within this period. Soaking in sea water restored the excitability to electrical stimulation and to drugs.

Owen[3] reported that lamellibranchs could be narcotized and caused to relax by exposure to propylene glycol monophenyl ether ('Propylene phenoxetol'), and preliminary experiments indicate that the anterior retractor muscle of the byssus may be rendered insensitive to electrical stimulation and to acetylcholine by soaking in a 0·25 per cent solution of this compound in sea water. Furthermore the contraction produced by 0·56 *M* potassium chloride is abolished under these conditions ; the effect of phenoxetol is reversible on soaking the muscle in sea water.

A further agent which may be of value in differentiating the mode of action of drugs and electrical stimulation on the membrane is the toxin from *Gymnodinium veneficum*[4] which is presumed to render nerve and muscle, including the anterior retractor muscle of the byssus, inexcitable by increasing the permeability of the membrane to sodium ions. So far, experiments I have made with the impure toxin have not yielded clear-cut results, a marked change in threshold occurring rather than an absolute failure of response to stimulation.

Details of this investigation, including the effects of other ions on the response of the muscle to drugs, will be reported elsewhere.

I wish to thank the Director of the Marine Biological Association Laboratory for the facilities placed at my disposal at Plymouth, and to acknowledge a personal grant from the Browne Research Fund of the Royal Society which enabled me to undertake this work.

ACTION OF HYDROCORTISONE ON RESPIRATION OF HUMAN CANCER CELLS IN TISSUE CULTURE

By HENRY GROSSFELD

Departments of Medicine and Orthopædic Surgery, Columbia University College of Physicians and Surgeons, and the Edward Daniels Faulkner Arthritis Clinic of the Presbyterian Hospital, New York

A PRIMARY human epidermoid cancer of the larynx, *H.Ep.*2(Toolan), was transplanted into X-irradiated and cortisone-treated rats[1], and, after two generations in rats, has been grown in tissue culture since September 1952 [2]. The tissue culture cells when re-implanted into an irradiated, cortisone-treated rat form a typical epidermoid cancer. In tissue culture these cells, growing on the glass surface of T-60 flasks[3], form dense epithelial sheets very much like the original epidermoid cancer. Their rate of growth is relatively high, and their number doubles in about three days[2]. In the following experiments the culture medium consisted of 10 per cent of half-diluted embryo extract, 40 per cent horse serum, and 50 per cent Earle's balanced salt solution containing 0·22 per cent sodium bicarbonate and phenol red as *p*H indicator. Cultures of several flasks were thoroughly scraped from the glass surface, the cell suspensions pooled, and 5 ml. were put in each of four T-60 flasks. 0·5 ml. of the pooled cell suspension was used for enumeration of cell nuclei in the hæmocytometer[5], after trypsinization. Except for enumeration of cell nuclei, no trypsinization was used. Approximately equal distribution of cells in the four T-60 flasks was achieved by continuous mixing of the stock suspension with a pipette. 5 ml. of fresh medium were then added to each of the four flasks, and to two of them hydrocortisone in a final concentration of 0·62–1·25 γ per ml. Since the hydrocortisone stock solution contained 50 per cent ethanol, ethanol in the same dilution was added to the control flasks. Hydrocortisone was added to the cultures 3–4 times at intervals of about three days, and also to the Warburg vessels before they were attached to the manometers.

The medium of the four T-60 flasks was completely removed with a Pasteur pipette, and to each flask 3 ml. of fresh medium were added. The cells of the

two hydrocortisone-treated *T*-60 flasks were thoroughly scraped from the glass surface and the 6 ml. of cell suspension pooled in a large tube. The cultures of the two control flasks were treated in a similar manner. 3 ml. of the hydrocortisone pre-treated cell suspension were put in a Warburg vessel, the centre well of which contained 0·2 ml. of 15 per cent potassium hydroxide, for measurement of oxygen uptake, and the remaining 3 ml. of the cell suspension were put in a Warburg vessel with 0·2 ml. saline in the centre well for measurement of carbon dioxide evolved. The pooled 6 ml. of cell suspension from the control *T*-60 flasks was equally divided and put in two Warburg vessels, one for the measurement of oxygen consumption and one for measurement of carbon dioxide production. 0·5 ml. of Earle's saline containing hydrocortisone was added to each of the two Warburg vessels containing the cell suspensions pretreated with hydrocortisone, and 0·5 ml. of Earle's saline without hydrocortisone was added to each of the control vessels.

Measurements of respiration and aerobic glycolysis of strain *L* cells derived from a fibroblast of normal subcutaneous tissue of the mouse were carried out in the same way, and the results compared with those obtained from human cancer cells of the larynx. Strain *L* was producing tumours in 1942 in 68 per cent, but in 1946 the incidence of sarcomas produced by strain *L* dropped to 1 per cent. Strain *L* has been carried in this laboratory since 1954. Growth-rate of both strain *H.Ep.*2 and strain *L* was estimated by nuclear counts. Inocula of about equal size were put into six flasks and on three consecutive days nuclear counts of two flasks were carried out.

In Table 1 the rates of respiration and of carbon dioxide production are compared with those of strain *L*. The Q_{O_2} and $Q^{O_2}_{CO_2}$ represent average values obtained over a period of 3 hr. With the strain *L* line, respiration is 100 per cent higher than with cancer cells. This applies to cells treated with hydrocortisone as well as to the control cultures. In control cultures, aerobic glycolysis is 67 per cent higher in cancer cells than in the strain *L* fibroblasts. In hydrocortisone-treated cultures, aerobic glycolysis is only 6 per cent higher in cancer cells than in strain *L* fibroblasts.

It is noteworthy that the ratio of aerobic glycolysis to respiration in strain *L* fibroblasts is 0·64 (46 : 71), while in human cancer cells the ratio is 2·3 (76 : 33).

With regard to the effects of hydrocortisone, aerobic glycolysis was more than doubled with strain *L* cells and increased only by 33 per cent with the human cancer cells. Hydrocortisone increased respiration in the two cell strains by 66 and 57 per cent respectively.

The ratio of aerobic glycolysis to respiration was increased by hydrocortisone from 0·64 to 0·81 with strain *L* cells and was decreased from 2·3 to 1·8 with the human cancer cells (Table 1).

Figs. 1 and 2 depict the respiration and carbon dioxide production of the human cancer and strain *L* cells, with and without hydrocortisone over a period of 4 hr. It is evident that the effects of hydrocortisone are consistent throughout the period of observation.

Fig. 3 shows the comparative rates of growth of the two cell types in tissue culture.

Respiration and glycolysis of fibroblasts in tissue culture have been studied by a number of investigators[6–19]. Most authors have found high anaerobic as well as aerobic glycolysis and a rather low ratio of aerobic glycolysis to respiration. Some, however, have reported that the ratio of aerobic glycolysis to respiration is as high in normal tissue cultures as in

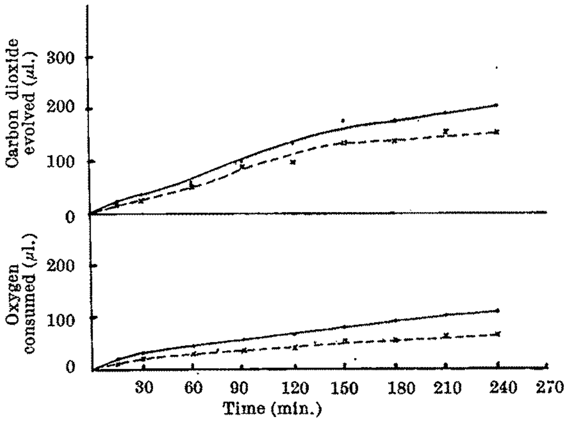

Fig. 1. Respiration and glycolysis of human cancer cells. Average of four experiments. ——, with hydrocortisone ; – – –, control

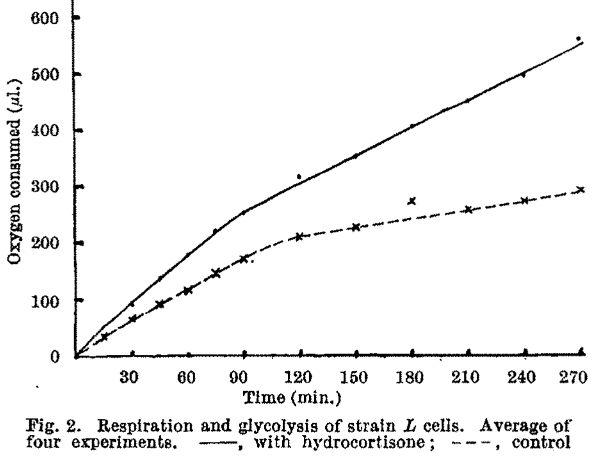

Fig. 2. Respiration and glycolysis of strain *L* cells. Average of four experiments. ——, with hydrocortisone ; – – –, control

malignant tumours[15]. The present results show a fairly high aerobic glycolysis of strain *L*, but a low ratio of aerobic glycolysis to respiration.

Early investigators postulated a fundamental relationship between glycolysis and growth, and even a dependence of growth on glycolysis. (The decline of growth with the age of the embryo was at one time related to the decline of the intensity of glycolysis.) In later work any fundamental relationship between growth and glycolysis has been denied[16,17]. The present results likewise demonstrate that high glycolysis in tissue culture is not related to rapid growth. The high aerobic glycolysis of cancer cells in tissue culture is not associated with a higher rate of growth, for the cancer cells in the present study actually grow at a rate considerably less than that of the strain *L* (Fig. 3). The high aerobic glycolysis of *H.Ep.*2 cells appears thus to be due to a specific feature of malignancy, but may be here in part secondary in nature, resulting from a depression of respiration.

It has been reported[18] that 2,4-dinitrophenol stimulates the respiration of both malignant and non-malignant cells, and that under the influence of dinitrophenol the respiration of the malignant cells approaches that of normal cells. This was considered as inconsistent with the theory of irreversibility of the respiratory defect of cancer cells.

In the present studies hydrocortisone increased the respiration of human cancer cells and of strain *L* cells to a similar degree. Thus even the improved respiration of human cancer cells remains well below that of strain *L*.

I wish to thank Drs. John V. Taggard and LaRoy S. Dietrich for helpful discussions. This work was aided in part by U.S. Public Health Service Grant *A*-21.

THE IMPACT TESTING OF EXPLOSIVES

By Dr. PAUL W. LEVY

Physics Department, Brookhaven National Laboratory, Upton, Long Island, New York

FOR many years the sensitivity of explosives has been measured by one form or another of impact test. This test is usually arranged so that a weight is dropped, from a series of heights, on many individual samples of the explosive under study, to determine whether or not each sample explodes. The range of height is chosen, by trial and error, so that the lowest height rarely, and the greatest height almost always, initiates an explosion. In this way one obtains a curve showing percentage initiation (fractional fires) as a function of drop-height. Powdered explosive is almost always used. The sample struck by the falling weight may be heaped in a conical pile upon a flat surface, or confined to varying degrees in a metal or plastic container. When the sample is completely contained, the impact of the falling weight is transmitted through the container wall either by compression or shearing through it. In some tests the falling weight strikes the exposed or confined explosive directly, and in this case the weight is usually a metal sphere. Often the energy of the weight is transmitted to the powder or its container by striking a flat, rounded or pointed pin. Here we employ data obtained with the Picatinny Arsenal impact machine, which is a typical version of these devices. In this machine the powder is contained in a shallow dish-like indentation cut in one end of a flat steel cylinder. A controlled amount of sample, filling the hollow, is confined by a thin brass cap which is pressed over the indentation. A flat steel disk with a slot cut along one diameter is placed, slot side down, directly in the centre of the brass cap over the powder. The falling weight then strikes this cylindrical pin, which transmits the energy of impact to the container and its powder.

When one attempts to use a curve of percentage fires against drop-height, obtained with any of these machines, to derive information about the explosive properties of the samples being tested, one is faced by what appear to be very complex analyses. Two examples of the kind of information one would like to obtain from these analyses are: How is the impact energy divided between sample and container, and what is the maximum instantaneous temperature reached by any part of the explosive ? Even with

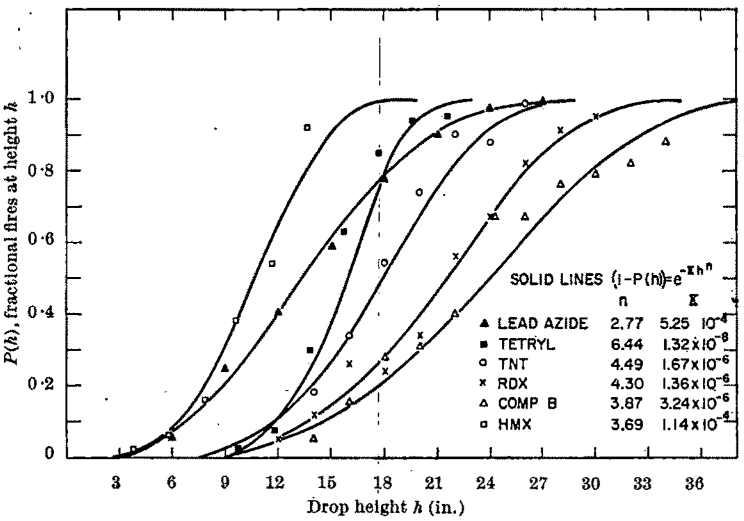

Fig. 1. Fractional fires versus drop-height for various explosives obtained with a Picatinny Arsenal-type machine. The equation $\{1 - P(h)\} = \exp(-Kh^n)$ has been fitted to the data using the constants tabulated

the simplest impact machines, in which the powder is compressed between flat plates, calculation of any mechanical property of the explosive under impact is practically impossible. However, an equation may be derived from which one may obtain information about some of the properties of the explosive under study, and in addition, information on the mechanical properties of the impact machine. This equation will be derived for an explicit set of assumptions, but it must be emphasized that the same result may be obtained with similar but different assumptions.

First, consider that in an impact machine the energy imparted to the explosive is a function of drop-height. Also, assume that the explosion will be initiated if energy in excess of a fixed critical amount is imparted to a region of the powder, or a region of a crystal in the powder, that contains at least one 'site' possessing the requisite properties for initiating the detonation. These sites may be, for example, hot spots[1], bubbles, crystals in the correct juxtaposition to detonate when pushed together, or some crystalline or molecular arrangement the relation of which to detonation is not yet understood. Let the volume of explosive energized in excess of the critical energy necessary to activate a site, by a weight falling from height h, be $V(h)$, where h is in inches. Assume that the density of sites, C per unit volume, is small and that they occur at random so that they are distributed according to Poisson statistics among the numerous crystallites. A detonation will occur if the volume $V(h)$ contains at least one site; likewise, a detonation will not occur if $V(h)$ is devoid of sites. From Poisson statistics the probability that the volume $V(h)$ contains *no* sites is $\exp\{-CV(h)\}$. Let the probability that a drop from height h produces a fire be $P(h)$. (Actually $P(h)$ will be the fraction of fires occurring for height h.) Then:

$$\begin{aligned} P(h) &= 1 - \text{probability of no fires} \quad (1)\\ &= 1 - \exp\{-CV(h)\} \end{aligned}$$

Given data showing $P(h)$ versus h, such as those used to construct Fig. 1, we see that by writing (1) as

$$CV(h) = -\ln\{1 - P(h)\} \qquad (2)$$

a plot of $-\ln\{1 - P(h)\}$ versus h will give a curve proportional to $V(h)$. Incidentally, if we had an independent way of determining $V(h)$ we could determine the concentration of sites, C, from this equation. A plot of this type, Fig. 2, was constructed from all the data shown in Fig. 1, which were obtained with impact machines of the Picatinny Arsenal type, and from one additional set of data, the points shown for copper chlorotetrazole. These additional points, obtained with a machine in which the explosive is pressed into an open cylinder and the impact of the falling ball is transmitted to the explosive with a pointed pin that is in contact with it, are included to indicate that the $V(h)$ functions for the two machines are somewhat different. The lead azide data are from unpublished work by J. E. Abel, R. W. Dreyfus, J. V. R. Kaufman and P. W. Levy. The results for copper chlorotetrazole were obtained especially for this article by A. Forsyth. All other data are from A. Bullfinch, Picatinny Arsenal Technical Report 2282 (unpublished).

The points obtained with the Picatinny Arsenal machine suggest that the function $V(h)$ is the same for all the materials listed and has the form kh^n. Considering the complex nature of the explosive container, this is a reasonable expression. Putting $V(h) = kh^n$ into (1) we obtain:

$$P(h) = 1 - \exp(-Ckh^n) = 1 - \exp(-Kh^n) \qquad (3)$$

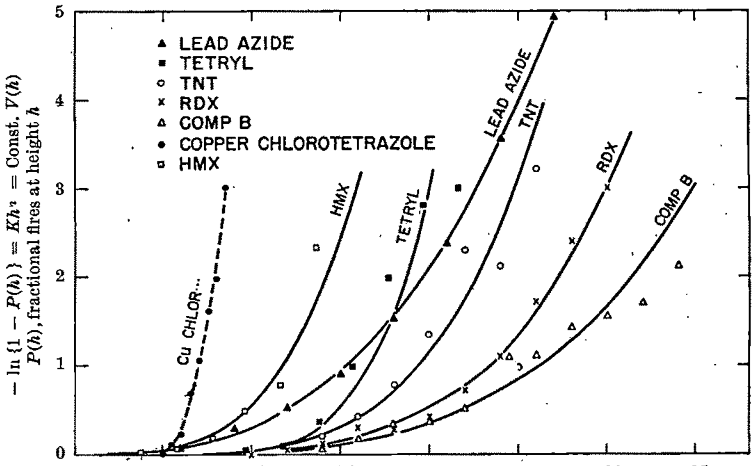

Fig. 2. The $V(h)$ function, which can be determined to within a scale factor from impact data, for results obtained with the Picatinny Arsenal-type impact machine, with one curve (copper chlorotetrazole) for a different type of impact machine; the $V(h)$ functions for the two machines are somewhat different. For the Picatinny Arsenal-type machine $CV(h)$ is of the form : const. × $kh^n = Kh^n$. The solid lines represent this expression computed with the constants shown on Fig. 1

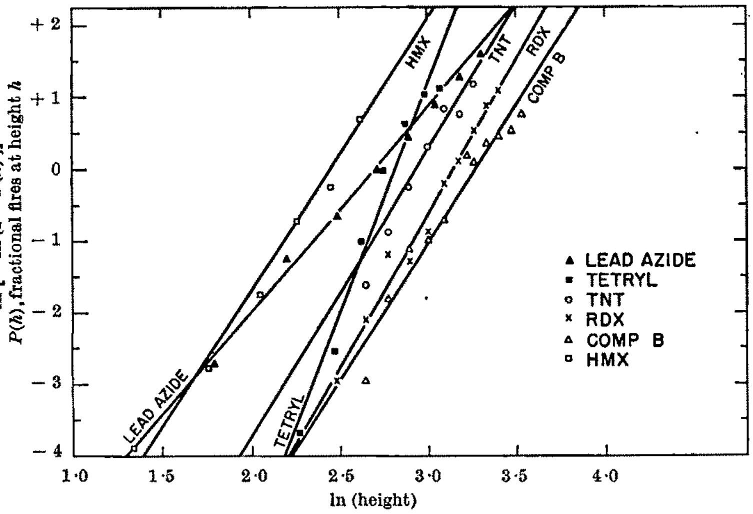

Fig. 3. ln [− ln {1 − $P(h)$}] versus ln h should be a straight line if equation (3) applies to the data. Because of the well-known inadequacies of log–log plots this cannot be considered a good test. However, these plots are a convenient device for determining n and K and the parameters tabulated in Fig. 1 were obtained from them

which emphasizes that K is the product of two constants. By writing this as:

$$\ln K + n \ln h = \ln [- \ln \{1 - P(h)\}]$$

we can test, subject to the usual inadequacies of log–log plots, the applicability of (3), since a plot of ln [− ln {1 − $P(h)$ }] versus ln h should be a straight line of slope n. Fig. 3 is such a plot, for the data represented on Fig. 1, and it appears to be in reasonable agreement with these ideas. Furthermore, these plots are a convenient device for determining the parameters n and K. In order to determine n and K in a consistent manner, the lines shown in Fig. 3 were fitted by the method of least squares even though the data do not warrant this. The values of n and K so obtained are shown in Fig. 1 and the solid lines in Figs. 1 and 2 were computed from them. The dashed curve in Fig. 2 is drawn through the copper chlorotetrazole data to indicate the difference between it and the other curves. Note that n depends only on the mechanical properties of the explosive and its container, whereas K depends on both the mechanical properties and on the concentration of initiation sites. Thus, if one changes the number of sites in an explosive while leaving the mechanical properties unchanged, this would be reflected by a change in K, but n would remain unchanged.

Once the validity of equation 1 in the form that applies to a given impact machine and explosive has been established, it is no longer necessary to determine the entire fractional fire versus drop-height curve to characterize a sample. It is necessary to measure only enough points on this curve to determine the parameters in the equation; for example, only two points are necessary to determine equation (3) for the Picatinny Arsenal machine. Even though this treatment may give some insight into the results obtained with impact machines, a great deal of additional work must be done before these machines will be really useful tools for investigating the initiation process. For example, one possibility is a detailed study of impact machines by static and dynamic photoelastic analogues.

I wish to acknowledge the encouragement of Dr. J. V. R. Kaufman, of Picatinny Arsenal, and I am also indebted to two other members of the Picatinny staff, Mr. J. E. Abel for preparing the figures and for computations, and Mr. A. Forsyth for the results obtained with copper chlorotetrazole. This work was supported jointly by the U.S. Atomic Energy Commission and Picatinny Arsenal.

CONTINUOUS TIME TREATMENT OF A STORAGE PROBLEM

By J. GANI and N. U. PRABHU

Department of Mathematics, University of Western Australia, Nedlands

IN the storage problem considered initially by Moran[1] for discrete time, the content $Z_t(0 \leqslant Z_t \leqslant K - M)$ of a finite dam of capacity K is specified at the discrete times t ($t = 1,2, \ldots$) by the equation

$$Z_t = \mathrm{Min}\,(Z_{t-1} + X_{t-1}, K) - \mathrm{Min}(Z_{t-1} + X_{t-1}, M) \qquad (M < K)$$

where, during $(t - 1, t)$, (1) independently distributed inputs X_{t-1}, each with probability distribution function $dG(x)$, $(0 \leqslant x < \infty)$, flow into the dam; (2) $\mathrm{Min}(Z_{t-1} + X_{t-1}, K)$ indicates that any excess of $Z_{t-1} + X_{t-1}$ over K overflows; and lastly (3) a release $\mathrm{Min}(Z_{t-1} + X_{t-1}, M)$ is made just before the time t.

For Z_t, X_t, M, K discrete, $\{Z_t\}$ is known to be a Markov chain, and equations may be framed for its stationary probability distribution in terms of the discrete input distribution $dG(x)$. By using limiting methods on this model, Moran[2,3] and Gani[4] have obtained some stationary solutions of the storage problem in continuous time. In these cases the procedure has proved cumbersome and, at least in the process described below, has obscured the simplicity of the underlying model. For this Poisson-type process, it has been possible to obtain directly the forward Kolmogorov equation which can be solved by straightforward methods.

Consider the dam of finite capacity K, the content $Z(t)$ of which is defined in continuous time $t(0 \leqslant t < \infty)$ by the equation:

$$Z(t + \delta t) = \mathrm{Min}\,\{Z(t) + \delta X(t), K\} - \mathrm{Min}\,\{Z(t), \delta t\}$$

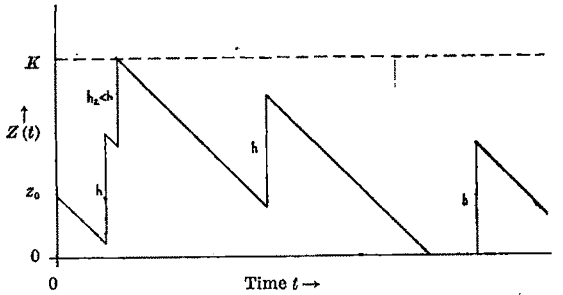

Fig. 1

$X(t)$ is a Poisson process with parameter λ such that in time δt, the input $\delta X(t)$ of either h or no units flows into the dam; the release is continuous, occurring at a constant rate when $Z(t) > 0$, and any excess of $Z(t)$ over K overflows. It is easily seen that $\{Z(t)\}$ is a time-homogeneous Markov process, of which Fig. 1 will illustrate a realization. In this particular case, the second input is effectively less than h owing to the overflow rule, and the dam remains empty for a while after the third input.

This is actually the basic model used by both Moran[2] and Gani[4]; in Moran's model, however, the content is equal to our $K - Z(t)$, the input to our steady release and the release to our input h. In the discrete form, owing to the different formulations of the problem, the identity of the model was not recognized, and slightly different expressions for the stationary distribution of the dam content were obtained, which are in effect identical.

Let us denote by $\mathrm{F}(z,t)$ the transition probability function $\mathrm{F}(z_0, \tau; z, \tau + t)$ of the process $\{Z(t)\}$; the forward Kolmogorov relation is the differential-difference equation:

$$\frac{\partial F}{\partial t} - \frac{\partial F}{\partial z} = -\lambda\{F(z,t) - F(z-h,t)\} \quad (0 \leqslant t < \infty) \qquad (1)$$

a special form of Takacs's[5] more general equation, which is valid in every part of the range $0 \leqslant z \leqslant K$, including its end points. In addition, $\mathrm{F}(z,t) = 0$ for $z < 0$, and $\mathrm{F}(K,t) = 1$, for all t. When $K \to \infty$, the equation continues to hold.

To find the stationary distribution $\Phi(z) = \lim_{t \to \infty} F(z,t)$, $\frac{\partial \mathrm{F}}{\partial t}$ is put equal to zero in (1) and $\Phi(z)$ then satisfies the equation:

$$\frac{\partial \Phi}{\partial z} = \lambda\{\Phi(z) - \Phi(z-h)\} \quad (0 \leqslant z \leqslant K) \qquad (2)$$

where $\Phi(z) = 0$ if $z < 0$, and $\Phi(K) = 1$; this leads to the results already obtained by the two different approaches mentioned. When K is infinite, a stationary solution exists if the condition $\lambda h < 1$ is satisfied, and it can now be seen that the solution here remains of a form identical with that of the known finite case. In effect, the solution for the finite dam is the truncated infinite solution with suitable scaling for $\Phi(K)$ to be equal to unity. It is now also possible from equation (2) to find the previously unknown Laplace–Stieltjes transform of the stationary distribution and to derive from it the various moments of $Z(t)$. These results, closely connected as they are with previous work, help to clarify the stationary distribution considerably.

Returning to equation (1), for the specific case where K is taken to be infinite, it is now seen that the time-dependent solution for the transition probability function $\mathrm{F}(z,t)$ can be found. In order to do this it is necessary to consider the probability $g(z_0,t)$ that, starting with a content z_0 at time τ, the dam becomes empty at time $\tau + t$ for the first time. It is clear that $g(z_0,t)$ is defined only for the values $t = z_0 + nh$, $(n = 0,1,2, \ldots)$, so that we have, in effect, a discrete probability distribution of first passage times. It has been found that:

$$g(z_0, z_0 + nh) = \begin{cases} \exp(-\lambda z_0) & (n = 0) \\ \exp\{-\lambda(z_0 + nh)\} \times \frac{\lambda^n}{n!} z_0 (z_0 + nh)^{n-1} & (n \geqslant 1) \end{cases} \qquad (3)$$

The probability of emptiness at time $t + \tau$, not necessarily for the first time, starting with $Z(\tau) = 0$, has also been obtained as:

$$\mathrm{F}(0, \tau; 0, \tau + t) = \begin{cases} \exp(-\lambda t) & (0 \leqslant t < h) \\ \exp(-\lambda t)\{1 + \sum_{r=1}^{n} \frac{\lambda^r}{r!} (t - rh) t^{r-1}\} & (nh \leqslant t < (n+1)h) \end{cases} \qquad (4)$$

where $n = 1,2, \ldots$, and by using both (3) and (4) it is possible to write the general form of the probability $P_0(z_0, t) = \mathrm{F}(z_0, \tau; 0, \tau + t)$ of emptiness at time $t + \tau$ starting with $Z(\tau) = z_0$, as a convolution:

$$P_0(z_0, t) = \sum_{r=0}^{n} g(z_0, z_0 + rh) \mathrm{F}(0, \tau + z_0 + rh; 0, \tau + t) \qquad (5)$$

where $z_0 + nh \leqslant t < z_0 + (n + 1)h$.

These probabilities finally lead to a general solution for the process $\{Z(t)\}$. The Laplace–Stieltjes transform $\Psi(\theta, t)$ of the distribution function $F(z, t)$ already defined is found to be:

$$\Psi(\theta, t) = \exp\{[\theta + \lambda(\exp(-\theta h) - 1)]t - \theta z_0\} - \theta \int_0^t P_0(z_0, t - u) \exp\{[\theta + \lambda(\exp(-\theta h) - 1)]u\} du \qquad (6)$$

under certain general conditions, which we shall not specify here, its limit as $t \to \infty$ is easily verified to be the transform of the stationary distribution $\Phi(z)$ of equation (2). A similar result in the theory of queues, the analogies of which with the theory of storage are well known, has recently been published by Benes[6].

The work we have briefly outlined will be published in greater detail elsewhere, together with a parallel account of Moran's[3] storage problem with gamma-input. It is also proposed to present a general treatment of stochastic storage processes with inputs having certain types of infinitely divisible distributions.

Comparison of Cæsium Frequency Standards of Different Construction

Comparisons between the National Physical Laboratory standard and an 'Atomichron', by means of standard frequency transmissions[1], indicated an average difference of 4 parts in 10^{10} with a standard deviation of 4 parts in 10^{10}. Comparisons made by means of time signals in the course of a joint programme being carried out by the National Physical Laboratory and the U.S. Naval Observatory gave a larger difference, 9 parts in 10^{10}. This difference was discussed at the meeting of the Consultative Committee for the Definition of the Second at Sèvres in June 1957 and in a paper submitted by Dr. W. Markowitz to the XIIth Assembly of the International Scientific Radio Union at Boulder in August 1957. The desirability of carrying out direct comparisons in the same laboratory between the National Physical Laboratory standard and the 'Atomichrons' was emphasized at both meetings. Such comparisons have recently been made at the National Physical Laboratory, Teddington, in collaboration with the United States Army Signal Engineering Laboratories, Fort Monmouth, as the agency which initiated the project and supplied the 'Atomichrons', and the National Company Inc., of Malden, Massachusetts, as the contractor of the U.S. Army Signal Engineering Laboratories.

The atomic beam tubes of the 'Atomichrons'[2] differ in important respects from the National Physical Laboratory beam tube[3]; and the former are used with a servo mechanism to control the frequency of a quartz oscillator, whereas the latter is used as a resonator in terms of which the quartz clocks are calibrated. Tests, which will be described in detail elsewhere[4], were made to compare the frequencies of the standards as they are normally used, and then to determine the causes of the differences observed.

Two 'Atomichrons', Nos. 111 and 117, were first operated with their servo systems and in addition an experimental tube, No. 857 *X* 1, made by the National Company, was operated with the electronics and servo of No. 111. Their frequencies were compared with the National Physical Laboratory standard and with one of the quartz clocks, *Q*13, which was used merely to provide a continuous link throughout the measurements. The procedure was repeated after a number of realignments of the circuit controls of the 'Atomichrons' carried out by different observers in accordance with a prescribed procedure. The results are given in Table 1. It is of interest to note that the first measurement was made with the equipments as they arrived from the United States before a full realignment was made. The results for *Q*13 show that it can in general be used for interpolation over periods of a few days, although there is a small discontinuity between the values for March 24 and 26. The general drift in frequency is typical for this type of oscillator.

The limits are the standard deviation of a single observation.

The beam tubes were then tested as resonators with the National Physical Laboratory driving source in order to measure the combined effect of the electronics and servo. In this test it was assumed that the National Physical Laboratory electronics, which does not involve a frequency synthesizer in the driving oscillator, produced a distortion-free micro-wave signal. The symmetry of the resonance was also measured because any asymmetry is necessarily accompanied by a shift in the peak of the curve. The asymmetry and resonant frequency were measured as functions of the radio-frequency power applied to the tubes, and in the two cases in which there was a measurable change with power it would be expected that the lowest usable power would give the frequency nearest to the true value. The error with the power used in the conditions of normal operation is given in Table 2, together with the errors due to the other effects investigated. The precision of these measurements was about $\pm 2 \times 10^{-11}$, so that although the effects are small they are significant. The limits of error given in Table 2 include the estimated systematic errors.

Table 2. Beam Tubes tested as Resonators
(Unit 1×10^{-11})

Effect	Frequency error 111	117	857 *X* 1	N.P.L.
Servo and electronics	+8±4	+6±4	+20±4	0
Asymmetry	−3±7	−16±7	0±7	−10±10
Radio-frequency power	+4±2	+9±2	0±2	0±5

The measured errors due to the servo, electronics and asymmetry can be applied as corrections to the mean frequencies of Table 1 provided that the difference between the resonance frequencies determined by the d.c. and a.c. (modulation) methods is negligible compared with the errors shown in Table 2. The final results of the comparisons are then as follows:

111 − N.P.L.	$2{\cdot}2 \pm 1{\cdot}4 \times 10^{-10}$
117 − N.P.L.	$3{\cdot}2 \pm 1{\cdot}4 \times 10^{-10}$
857 *X* 1 − N.P.L.	$1{\cdot}5 \pm 1{\cdot}4 \times 10^{-10}$

The error due to the radio-frequency power could be responsible for some of the residual differences, but as it may be linked with the others and is not fully understood, it has not been applied as a correction.

In a further test, the driving source of 117 was used to excite the National Physical Laboratory beam tube. The frequency obtained was 8×10^{-11}

higher than the value obtained with the National Physical Laboratory source, indicating that some error can be attributed to the electronics alone, apart from the servo and beam tube. Additional realignment tests were made at the conclusion of the investigation, and the results are included in Table 1.

The Annual Pole Tide

The annual variation in latitude[1] causes a disturbance in the gravitational potential with an amplitude:

$$U = a^2\Omega^2 m \sin\theta\cos\theta = 880 \sin\theta\cos\theta \text{ cm.}^2 \text{ sec.}^{-2}$$

where a is the radius and Ω the angular velocity of the Earth, and where m is the angular displacement of the pole along the meridian of a station located at co-latitude θ. For the annual term, Jeffreys[1] obtained $m \approx 0\cdot084'' = 4\cdot07 \times 10^{-7}$ radians, and the numerical value 880 follows from this. In comparison, the equilibrium tide S_a associated with the annual variation of the heliocentric distance has a potential[2]:

$$472(\tfrac{1}{3} - \cos^2\theta)\text{cm.}^2 \text{ sec.}^{-2}$$

The mean square values, $\int_0^{\pi/2} U^2 \sin\theta \, d\theta$, are equal to (321 cm.^{2} sec.$^{-2}$)^2 for the 'pole tide', and (141 cm.^{2} sec.$^{-2}$)^2 for the S_a, so that the pole tide is larger. Yet it appears to have been overlooked. This simply means that there is a larger effect from a movement, north or south, by 10 ft. than from a variation by 2 per cent of the Sun's distance.

The annual oceanic pole tide has an amplitude:

$$(1 + k - h)U/g = 0\cdot62 \sin\theta\cos\theta \text{ cm.}$$

where $k = 0\cdot29$, $h = 0\cdot59$ are the Love numbers. This is negligibly small compared to the observed tide, which has amplitude of the order of 10 cm. and is due largely to meteorological factors[3].

The disturbance in gravity due to the bodily pole tide has an amplitude:

$$\Delta g = 2(1 - \tfrac{3}{2}k + h)U/a = 3\cdot2 \sin\theta\cos\theta \text{ microgal.}$$

which will be difficult to observe. There is barely a possibility[4] of observing the difference in time kept by a pendulum clock (frequency $\sim \sqrt{g}$) and a quartz crystal clock. This time-difference has an amplitude:

$$\tfrac{1}{2}(\Delta g/g)(T/2\pi) = 0\cdot01 \text{ sec. } \sin\theta\cos\theta$$

for $T = 1$ year. The corresponding error in time-keeping for the semi-annual tide is 0·006 sec. at the equator, according to Jeffreys[5].

Thus the annual disturbance in the gravitational potential resulting from the Earth's wobble is small indeed, and worthy of note only because it exceeds the annual solar tide which is included in all text-books on the subject.

Relative Intensities of the Oxygen Lines at 5577 A. and 6300 A. in the Night Sky

A patrol spectrograph on loan from the U.S. International Geophysical Year Committee through the Air Force Cambridge Research Center has been operating at Invercargill since August 13, 1957. This spectrograph scans a 165° strip of sky along the spectral line, the strip of sky in this case lying along the geomagnetic meridian. With exposures of the order of four to five hours on the night sky, using film with Kodak 103*a*–*F*(3) emulsion, the spectrograph has recorded the red and green lines of atomic oxygen (6300 A. and 5577 A. of OI). A preliminary analysis of 220 spectra has been carried out for the period August 13–December 31, 1957.

On some nights the 6300 A. line is considerably more intense than the 5577 A. line and on other nights the reverse is true. On many occasions it was observed that the brightness of these lines varied considerably across the sky. The relative intensity was determined by visual inspection of the film. The spectra were divided into three groups: (1) 6300 A. more intense than 5577 A., (2) 6300 A. and 5577 A. of approximately equal intensity, and (3) 6300 A. less intense than 5577 A. Each spectrum was divided into two regions, corresponding to the northern and southern sky, which were treated separately.

The relative intensity of these lines has been correlated with the magnetic K-indices from Amberley and Macquarie Island, these being the nearest magnetic observatories to the north and south of Invercargill respectively. The K-indices were averaged over the period of exposure of each spectrum.

When the relative intensity is correlated with the Macquarie Island K-index, it is found that for K equal to 0 or 1, the 5577 A. line has a high probability of being more intense than the 6300 A. line. When K equals 4 or greater, there is a high probability of the 6300 A. line being the dominant line. The heavy curves in Fig. 1 show the probability of the 5577 A. line (marked G) and the 6300 A. line (marked R) being the dominant line in the southern sky, plotted as a function of the Macquarie Island K-index. The thin curves give similar information about the spectra of the northern sky. It can be seen that there is a consistent tendency for the red to be the dominant line more often in the southern sky than in the northern sky.

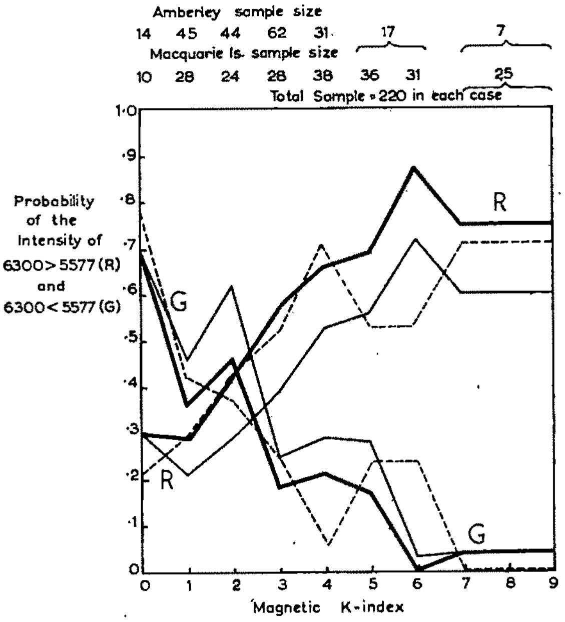

Fig. 1. Relative intensity of the OI lines at 6300 A. and 5577 A. as a function of K-index. The heavy curves are the relative intensities for the southern sky plotted as a function of the K-index at Macquarie Island, the thin curves are the relative intensities for the northern sky as a function of Macquarie Island K-index and the dotted curves the relative intensities for the northern sky plotted as a function of the K-index at Amberley. The sample sizes for Amberley and Macquarie Island are given at the top of the figure

When the northern sky intensities are correlated with the magnetic K-index from Amberley (north of Invercargill), as shown by the dotted lines, then the distribution of probability for the northern sky curve is shifted into a position nearly coincident with the southern sky curve, which is plotted against the Macquarie Island K-index. The agreement between these curves (the heavy and dashed curves) over the range of K from 1 to 4 where the samples are large suggests that the relative intensity is a function of the local K-index.

About 20 per cent of the spectra fall in the group of equal intensity, which has a probability approximately independent of K-index. Of the 220 spectra obtained, auroræ were recognized as being present in about seventy cases, either from the presence of nitrogen bands in the spectra or from direct photography.

A Comparison of Radio Echoes from the Aurora Australis and Aurora Borealis

The problem of the relation of the occurrence of auroræ in the northern and southern hemispheres is one of considerable importance to the theories of auroral formation. Hitherto, the assessment of these occurrences has been handicapped by the difficulties of the collection of simultaneous visual observations in the arctic and antarctic regions, and by the fact that in any event auroræ occur on at least 75 per cent of nights in the zones of maximum activity in which the visual observations tend to be concentrated. So far the evidence for the simultaneity of the occurrences has been largely of a statistical nature[1]. The Royal Society's Expedition to Halley Bay has provided an opportunity for a simultaneous study of the aurora australis and borealis by the radio-echo technique, and a preliminary account of the results is given in this communication.

The continuous radio-echo observations of the aurora australis have been made since May 1957 at Halley Bay, Antarctica (long. 75·5° S., lat. 26·6° W.), using a wave-length of 4 metres. The apparatus has a rotating aerial system and in principle is identical with one which has been in use at Jodrell Bank (long. 53·2° N., lat. 2·3° W.). Full details of the equipment are given in the *I.G.Y. Annals*[2]. Preliminary results on the occurrence of auroral echoes for the period May–October 1957 have been compared with the Jodrell Bank results for the same period.

Echoes from the aurora australis have been detected at Halley Bay on 134 out of 164 days of observation during the period, whereas on only 13 days were echoes from the aurora borealis obtained at Jodrell Bank. Considered on an hourly basis, observations at Halley Bay were made for 93 per cent of the time, and echoes were present for 26 per cent of the observing time, compared with 2 per cent of the time at Jodrell Bank. A study of the echo geometry at both locations shows that the echoes are obtained from the region where the line of sight is normal to the local magnetic field at a height of about 110 km. rather than from along a line of geomagnetic latitude as originally proposed by Bullough and Kaiser[3]. From Halley Bay the locus of specular reflecting points crosses the southern region of maximum visual auroral activity as given by Vestine and Snyder[4], whereas for Jodrell Bank the locus of reflecting points lies about 9° south of the northern zone of maximum auroral frequency. The disparity in rates of occurrence is therefore to be expected and is, in fact, a fortunate circumstance when considering the simultaneity of occurrence, since only the occasional auroræ coinciding with moderate to great magnetic storms are detected at Jodrell Bank.

The relation between these widespread northern auroræ and the Halley Bay results is shown in Fig. 1. The Halley Bay results show a close correlation between the number of hours a day containing echoes (irrespective of duration or amplitude) and the corresponding daily sum of the planetary magnetic K index, K_p. It can be seen that the world-wide

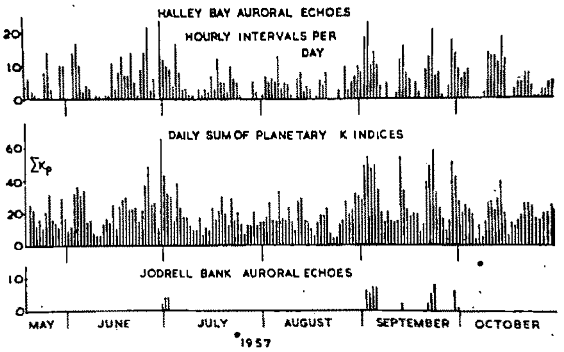

Fig. 1. Number of hourly intervals a day of auroral radio echoes detected at Halley Bay and Jodrell Bank compared with the daily sum of the planetary K index, K_p

magnetic activity maintains a strong control over the occurrence of echoes at Halley Bay over the whole range from quiet to severely disturbed conditions.

On almost all the occasions when ΣK_p exceeded about 40, echoes were obtained from the aurora borealis at Jodrell Bank, and these events coincided with the high peaks in the echo activity at Halley Bay from the aurora australis. It therefore seems reasonable to conclude that the great auroræ of the northern hemisphere are accompanied simultaneously by greatly enhanced activity of the aurora australis. It is hoped to make a more detailed study of the time correlations when the full results from Halley Bay become available.

A Simple Technique for the Calibration of the Wave-length Scale of Spectrophotometers

IT is often essential to test the calibration, setting and working of either old or new spectrophotometers. Generally, this is carried out by the standard plastic, gelatine or glass filters supplied with the instruments. Standard solutions may also be used. We were recently faced with such a problem, but found that no solid standard filters were immediately available or easily obtainable. Further, calibration and standardization with solutions is always associated with numerous difficulties of purity of chemicals and solvents and the actual preparation of standard solutions. It is well known that even chemicals labelled 'chemically pure' are sometimes contaminated. Further, departures from Beer's law and the exact range of wave-length in the so-called monochromatic beam used are also common sources of error. The problem is often complicated by systematic errors such as dichroism, colloidal particles or temperature effects.

An attempt was therefore made to find an easy and reliable method of calibration relatively free from error. This has been achieved by taking advantage of the transmittancy curves of solutions of acid-base indicators such as methyl orange. It is known[1] that the transmittancy curves for the different *p*H values for any particular indicator all intersect at a point known as the isosbestic point, which has a value of 469 mμ for methyl orange. It is clear, therefore, that if an acidic and a basic solution made from equal amounts of the same stock solution of methyl orange are kept in two cells and the difference in their transmittancy observed at different wave-lengths, then ΔT_s would be zero at only one wave-length, namely, 469 mμ. ΔT_s can be determined by simply sliding the two cells containing the acidic and the basic solutions of the indicator, one by one, in the path of the beam. As this method is very similar to a null method, all the disturbing minor factors remain constant and balance out without affecting the accuracy of the calibration.

An incidental advantage in the method is that the procedure involves the determination of a point of intersection; this is normally more precise than determination of a maximum or minimum absorbency. In practical determinations, the equality of absorbency is far easier to establish than determination of the wave-length corresponding to a maximum or minimum. We have calibrated the spectrophotometer by this method and measured the isosbestic point of bromocresol green and have been able to reproduce the value reported in the literature. It is, however, necessary to add here that there must be no impurity in the indicator, the absorbency of which depends on *p*H. Although we have used methyl orange and bromocresol green, many other indicators would also serve the purpose.

Table 1

Indicator	*p*H range	Isosbestic point (mμ)
Methyl orange	2·6–5·0	469[1]
Bromocresol green	3·4–5·2	509[1]
Neutral red	5·6–8·4	480[2]
Thymol blue (acid)	1·2–3·4	485[2]
Thymol blue (alkaline)	7·4–10·2	500[2]
Phenol red	6·2–9·2	481[2]
p-Nitrophenol	5·0–9·0	350[3]

The wave-length values for the isosbestic points of a few indicators are given in Table 1. In addition, the transmittancy curves for bromophenol blue (*p*H range 2·4–5·6), methyl red (*p*H 3·4–7·0), bromocresol purple (*p*H 4·8–7·6), cresol red (*p*H 6·8–9·6) and bromothymol blue (*p*H 5·8–8·4) are given in the literature[2], from which the exact wave-length values for their isosbestic points may be ascertained.

We are not aware of any previous reports of the use of this principle for accurate calibration.

We wish to thank Dr. K. S. G. Doss, director of the Central Electrochemical Research Institute, for his useful suggestions.

Photovoltaic Pile

IN a previous communication[1], a retinal type of photovoltaic cell is described in which many inert 'point' electrodes are placed in a parallel mosaic arrangement in a small volume of photo-active solution. To indicate that each electrode is a photoreceptor, a separate d.c. amplifier is required. An attempt was then made to construct a multiple-point photovoltaic cell in which all the individual electrodes are connected in series, as shown in Fig. 1. One set of electrodes is kept dark with tape while the other is irradiated as in a thermopile. Only one amplifier[1] is of course needed for this cell. As more light- and dark-electrode pairs are added in series, larger photopotentials are eventually generated, but at a much slower rate than with the individual point electrodes in parallel; also, with certain photo-active solutes,

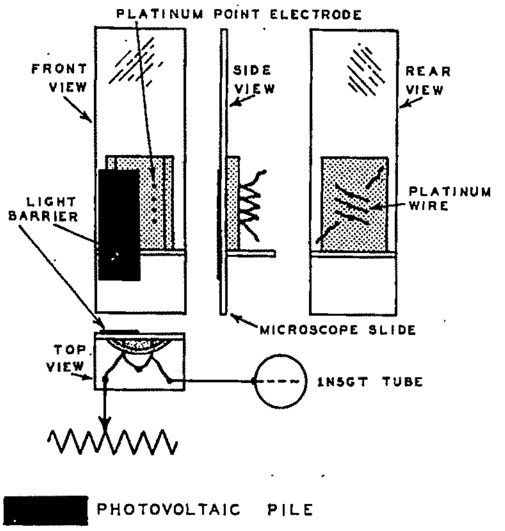

Fig. 1

the transient photo-inductive effect[2] is greatly enhanced, probably because of the presence of an oxygen-coordinated intermediate or other electron 'source' between, say, benzoin and benzil.

In Nature, perhaps the only analogy to this type of photovoltaic cell are the electric fish (electric eel, electric ray with its flat head, and electric catfish) which inhabit the upper shallow waters, but the role of light is questionable in each individual case.

Nature of Betanin, the Pigment of Red Beet

It has been generally supposed that the major red pigment of the root tissue of *Beta vulgaris* is composed of an anthocyanin nucleus coupled in some way with one or more amino-acids[1-4]. The other pigments, both red and yellow, are presumably very similar, with only minor variations[5]. The extreme instability of the compound and the difficulty with which it is obtained in the pure state demonstrate that these suppositions are highly speculative, at best.

In considering the previous investigations of betanin, it became obvious that certain important observations have been overlooked or misinterpreted. The most striking characteristic of betanin is its peculiar absorption spectrum. The partially purified preparations previously investigated have been reported to absorb strongly at wave-lengths shorter than 350 mμ. The pure crystalline pigment recently obtained by Wyler and Dreiding[6] exhibits only slight absorption in the region of 235–400 mμ. We have confirmed these observations by a simplified purification procedure based on an initial adsorption on a 'Magnesol-Hyflo Super Cel' column (1 : 1) followed by elution with water, precipitation as the lead salt, and conversion into the free pigment by the usual procedures[7]. Our purified preparations are characterized also by negligible absorption in the region 235–400 mμ. In this respect betanin differs markedly from any of the polyhydroxy flavylium salts. Its absorption spectrum in the near ultra-violet region definitely shows the absence of aromaticity. This is confirmed by infra-red absorption spectra recently obtained, which show conspicuous absence of aromatic C–H stretching absorption at 3·3 μ. There is a sharply defined peak at 3·0μ which may be due to the presence of an O–H or N–H group in the compound.

Crystallized betanin and purified amorphous preparations contain nitrogen in amounts varying from 5 to 8 per cent[1,4-7]. Only one amorphous preparation practically nitrogen-free was obtained[3], and the absence of nitrogen in this preparation might be explained as a possible decomposition on the ion-exchange resin used[4]. We have not been able to reduce the nitrogen content of betanin by treatment with anion-exchange resins. The nitrogen present in betanin can be assumed to be ring nitrogen and the nitrogenous constituent to be either very weakly basic or possibly acidic[7]. On the basis of this and other evidence which has been overlooked or misinterpreted, we were drawn to the conclusion that betanin contains a pyrrole nucleus. Actually Ainley and Robinson[1] reported that on alkali fusion betanin yields a colourless compound giving a positive Ehrlich test. This observation we have confirmed and extended recently.

The conclusion that betanin contains a pyrrole nucleus is supported by the spectral characteristics and all the known chemical and physical properties of the pigment. The most important evidence lies in the fact that alkali fusion of betanin yields a colourless compound giving a positive Ehrlich's test. We have been able to purify this by precipitation as the mercuric salt, followed by decomposition by hydrogen sulphide, but its identification is not yet complete. Similar breakdown products giving a positive Ehrlich test can be obtained from fusion of the second major red pigment and also from the major yellow pigment. We have also identified carbon dioxide and methylamine as fusion products from all three. Ainley and Robinson (ref. 1, p. 449) reported the evolution of a base with methylamine-like odour under these conditions.

The yellow pigments present are not only similar, but also are probably precursors of the red and purple pigments. We have noticed on several occasions that certain yellow pigments (purified on a 'Magnesol' column) when allowed to stand overnight at room temperature become red-orange in colour. These preparations are then separated on an identical 'Magnesol' column into a yellow and a purple band. This explains the uncertainty of Aronoff and Aronoff[8] as to the exact number of pigments present. We have not determined whether this is due to oxidation, but it is perhaps significant that the same purified yellow pigments react with *ortho*- or *para*-substituted aromatic amines in acid solution at room temperature, yielding pink to purple compounds.

Betanin itself is easily reduced to a yellow pigment by metallic zinc in acid solution. This reduction product is re-oxidized to red-purple by exposure to oxygen at room temperature for a few hours. Dilute hydrogen peroxide hastens the re-oxidation.

Since some of the differences reported in the isolation and characterization of betanin were probably due to genetic and ecological variation in the beet roots investigated[8], we have examined several selected strains of beets grown under the same climatic and soil conditions. These differed mainly in yield of betanin and in the readiness with which the crude betanin could be purified.

We have used absorption in the ultra-violet as a criterion for purity and have found that pigment from the variety Green Top Bunching is most easily freed from impurities absorbing in the ultra-violet region. Indeed, pigment prepared from Green Top Bunching by the method of Pucher, Curtis and Vickery[7] is practically free from ultra-violet absorption.

On the basis of the above considerations it is concluded that betanin is a pyrrole pigment and not a "nitrogenous anthocyanin". This does not preclude the presence of "nitrogenous anthocyanins" in other plant species[9].

The interesting communication of R. G. Peterson and M. A. Joslyn on this subject calls for some comment. In the first place, the term "nitrogenous anthocyanin" is used partly chemically (nitrogenous) and largely botanically (anthocyanin) to denote an obviously related group of water-soluble bluish-red colouring matters, such as those of *Beta*, *Atriplex*, *Celosia*, and certain Cactaceae. The only evidence favouring some form of amino-flavylium salt structure, which was the basis of a working hypothesis, was the colour and some other properties of synthetic amino-flavylium salts containing hydroxyl and methoxyl groups[1]. There was a certain resemblance between the absorption spectra in the visible region of betanin and 4′-amino-3 : 7-dihydroxyflavylium chloride. However, no phenolic degradation products could be obtained from betanidin[2]. We have always recognized that the relation to the flavylium group was unconfirmed and a purely speculative hypothesis. The evidence in favour of a pyrroloid constitution is not much stronger.

The argument from spectra is double-edged and inconclusive in the absence of appropriate models. Thus hydroxyl- and amino-substituents tend to erase fine structure in the visible region and ultra-violet spectra, while it is hard to predict with any confidence the infra-red band positions for likely structures that could explain the colour of these pigments. It is true that $C_{20}H_{23}O_7N_2Cl$[2] could be $C_9H_9N_2Cl$ (dipyrromethene salt) $+C_6H_{10}O_5$ (sugar fragment, perhaps as in barbaloin) $+C_5H_4O_2$ (many possible interpretations), but bougainvillæidin is a member of this group of pigments with about C_{22}/N in the molecule[3].

Although it is possible that there are two (or more) types of nitrogenous anthocyans; and although a pendent C_{20} group cannot be excluded, the more natural view is that the essential content of the chromophore-cum-auxochrome may include only one nitrogen atom. Some years ago my colleague Dr. J. W. Barltrop suggested an attractive possibility for betanin, but this also demanded N_2, and bougainvillæidin seemed to be an obstacle at that time.

The solution of the problem awaits further work, especially some revealing degradation.

Molecular Changes in Exchange Labelling with Tritium

Wilzbach[1] has recently described a convenient method for labelling organic compounds involving their exposure to tritium gas; but both he and others[2,3] found that appreciable amounts of the exchanged radioactivity appeared in traces of highly tritiated contaminants as well as in labile positions. We have applied this method to the labelling of 1 : 6-dihydroxyhexœstrol, an œstrogen analogue[4], and similarly have found that impurities contain the major part of the incorporated non-labile tritium.

These results could be explained by a preferential exchange of tritium for the hydrogen atoms of trace amounts of impurity present in the starting material. Alternatively, highly radioactive by-products might have been formed from chemically pure material by degradation in the course of the exchange reaction.

In order to differentiate between these two possibilities, dihydroxyhexœstrol (10 mgm.) was exposed to tritium gas (200 mc.) for 14 days. The product, after removal of labile tritium, was washed three times with ether; more than 60 per cent of the radioactivity was hereby removed, although dihydroxyhexœstrol itself is virtually insoluble in this solvent. Finally, crystallization of the ether-washed material from aqueous ethanol gave a product which retained its specific radioactivity on further crystallization. On re-exposure of the purified material to tritium gas, comparable amounts of radioactive impurities soluble in ether were again formed. These radioactive contaminants are thus produced by changes in a chemically pure organic compound when it is exposed to tritium gas. Identification of the by-products is now being attempted.

These results further demonstrate the necessity for rigorous purification of radioactive compounds prepared by this useful labelling method.

We are indebted to Mr. W. Lawson, of the Middlesex Hospital Medical School, for a generous gift of dihydroxyhexœstrol.

Chemical Reactions initiated by Ultrasonic Waves

I HAVE been engaged in the study of a number of reactions in solution caused by ultrasonic waves.

Sono-chemical decomposition of organic halides. Under the influence of ultrasonic waves aqueous solutions of chloroform, carbon tetrachloride, dichloro- and diiodo-methane, dichloro- and dibromoethane, and ethyl chloride, bromide and iodide have been found to liberate halogens[1] in both the ionic and the molecular states (tested by silver nitrate solution, potassium iodide and starch indicator). Five of these have been studied in detail and the results are summarized here (compare refs. 2–7).

(1) Aqueous solutions of dichloromethane, chloroform, carbon tetrachloride, dichloroethane and ethyl bromide subjected to ultrasonic waves (1–2 Mc./s., 225 watts electrical input to the transducer) liberate halogens, simultaneously producing polymerized solids. None of them, except chloroform, decomposes in the pure state.

(2) In all five cases only a part of the total halogen is liberated and does not seem to increase much with long exposures. The liberation of halogens increases with dilution.

(3) A considerable bulk effect is observed, probably due to the direct load of the liquid on the transducer.

(4) Organic liquids such as alcohol and acetone retard the reaction, and beyond a certain concentration the reactions stop altogether.

(5) Ultrasonic intensity influences the reaction; at higher power output the reactions are accelerated.

(6) The decompositions are of zero order and in four cases (CH_2Cl_2 not tried) the reactions proceed faster at lower temperatures.

(7) The primary sono-chemical reactions postulated are:

$$\mathrm{H.OH} \rightarrow \mathrm{H} + \mathrm{OH}$$

consuming 118 kcal.

and

$$Alk\text{–}X \rightarrow Alk + X$$

consuming 68 kcal. for C—Cl and 54·5 kcal. for C—Br

where X is a halogen atom.

These reactions are supposed to be followed by hydrolysis and polymerization.

Sono-chemical decomposition of organic sulphides. The bond-strength between carbon and sulphur is 54·5 kcal., which is approximately equal to that between carbon and bromine in organic aliphatic halides. It was believed, therefore, that organic sulphur compounds would decompose in the same way as organic halides, liberating sulphur. The simplest organic sulphide, namely, carbon disulphide, was exposed to ultrasonic waves in the pure state as well as in aqueous solutions. In the pure state there was no detectable liberation of sulphur, whereas in aqueous solution a brown-coloured colloidal sol which was very stable was obtained. Similarly, with aqueous solutions of ethyl disulphide a white-coloured colloidal sol, which was very stable, was obtained. It was analysed qualitatively and the colloidal sulphur particles were observed to be of a different size-range from those from carbon disulphide. The brown sol treated with ammonia gave a brown colour, and with sulphuric acid a pink colour. When the solid obtained by centrifuging was treated with various organic solvents, a black residue was obtained which was suspected to be carbon.

On this basis the following mechanism for the decomposition of carbon disulphide is suggested:

$$\begin{array}{lcl}
CS_2 & \rightarrow & (CS) + S \\
n(CS) & \rightarrow & (CS)_n \\
(CS) & \rightarrow & C + S \\
CS_2 + H_2O & \rightarrow & COS + H_2S \\
COS + H_2O & \rightarrow & CO_2 + H_2S
\end{array}$$

Inorganic reactions initiated by ultrasonic waves. I exposed redistilled water to ultrasonic waves and observed a change in conductivity (after $1\frac{1}{2}$ hr. exposure, from 4×10^{-6} to $1{\cdot}15 \times 10^{-4}$ ohm^{-1}cm.$^{-1}$), but no conclusive reactions due to the presence of hydrogen peroxide in the free state were obtained. A very dilute acidic solution of potassium permanganate was decolorized, but a very dilute acidic solution of potassium dichromate covered with a layer of ether showed no change in colour. When a slightly higher concentration of potassium permanganate was used it gave a sol at shorter periods of exposure, and after long exposure gave a brown precipitate, probably an oxide of manganese. A titanous solution exposed to ultrasonic waves was oxidized to the titanic state, losing its violet colour, but a cerous solution did not turn orange, indicating that it had not been oxidized to the ceric form. A ferrous solution was converted to the ferric state, identified by the usual potassium thiocyanate and potassium ferricyanide tests.

The experimental work reported here was carried out in the Chemical Laboratories of the University of Allahabad.

Chemistry and Clay Mineralogy of a Soil Sample from Antarctica

A SAMPLE of soil, scraped up by Mr. A. S. Helm from Scott Base, McMurdo Sound, has been analysed by this laboratory. The material contained many well-rounded blue-grey stones of basaltic and arenaceous origin, the majority being basaltic. It was apparently derived from the basaltic rocks which outcrop in the area and mixed with material from sedimentary sources in the vicinity. No humus was apparent to the eye but the sample contained a small piece of moss as well as some bacteria (J. D. Stout, personal communication) and is thus justifiably regarded as a soil. Of the material collected, 98·6 per cent was less than 25 mm. in diameter and 64 per cent less than 2 mm. Only 2·6 per cent was less than 0·066 mm. and less than 1 per cent of clay was present.

The high pH value (1 : 2·5 water suspension) is apparently caused by the presence of calcium car-

Table 1. CHEMICAL ANALYSIS (RESULTS ON OVEN-DRY BASIS)

pH	Phosphate soluble in 1 per cent citric acid (mgm. per cent)	C (per cent)	N (per cent)	C/N	Cation-exchange capacity (m.equiv. per cent)	Exchangeable cations (m.equiv. per cent) Ca	Mg	K	Na	CaCO$_3$ (per cent)	Total soluble salts (m.equiv. per cent)
8·5	54	0·31	0·022	14	22·6	4·7	3·6	6·5	7·4	0·13	1·3

bonate in the form of fine shell fragments. The content of phosphate soluble in 1 per cent citric acid is very high and entirely inorganic in nature. Both carbon and nitrogen figures are low and the resulting low carbon/nitrogen ratio suggests that the organic matter has undergone humification processes.

Although this soil contains very little of either clay or organic colloids, the cation-exchange capacity (neutral normal ammonium acetate procedure) is high, and Fig. 1 shows that the fine sand fractions have very high capacities and that moderately high capacities persist into the coarser fractions. These high capacities could result either from the presence of palagonitic material in the sample or to the cation-retaining powers of fractured, unleached mineral surfaces. Fig. 1 shows also that distillation with sodium hydroxide drives off more ammonium ions than does magnesium oxide; this difference, which is most apparent in the coarser fractions, seems similar to the phenomenon described by Barshad[1] which he termed "ammonium fixation".

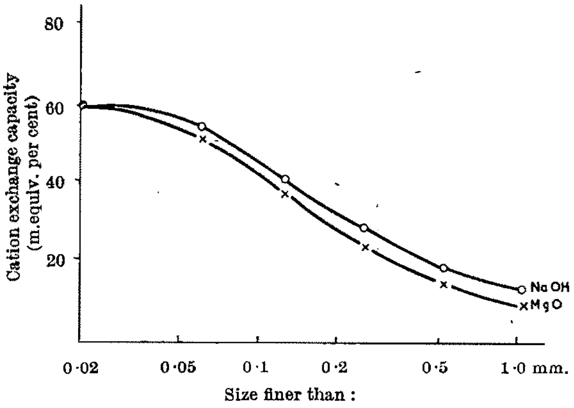

Fig. 1. Cation exchange capacity of various size fractions

The predominant feature of the individual exchangeable cations is the very high content of potassium and sodium. Total analysis showed that this material contained quite normal amounts of potassium and sodium for basic rocks, and the high exchangeable contents suggest a lack of leaching. Although free lime is present, the calcium forms only a small part of the exchangeable cations and this fact, together with the presence of water-soluble salts (mainly sodium bicarbonate and chloride), indicates that the movement of water through this soil has been very small in amount.

Clay of less than 2μ equivalent diameter was separated from the soil using sodium hexametaphosphate as dispersing agent. It was washed free of sodium ions and examined by X-ray diffraction using the dispersed sample, a potassium-saturated sample, and a magnesium-saturated, glycerol-saturated sample.

Dioctahedral mica was the main crystalline mineral present in the clay. Inter-stratified swelling and non-swelling micaceous minerals, quartz, feldspar, and a little kaolin were also found. An electron micrograph showed that some amorphous material was present.

It is unlikely that the dioctahedral mica or the quartz is derived from the basaltic stones which make up most of the material. They may have been derived from the sandstone either in place or where the sandstone forms the basement rock. If they have been derived in place they show that the weathering which has produced the material was preponderantly physical. Mica, quartz and feldspar are present in the sandstone, and have probably reached clay size by the physical process of comminution. The swelling micaceous minerals and the kaolin, which together comprise only a small proportion of the small amount of clay, are the only recognizable catamorphic products, and they may have been formed by processes occurring before the present soil-formation stages. If they were formed elsewhere, they indicate that the amount of clay formed in the present cycle of weathering and soil-formation is zero, and again indicate that physical weathering is preponderant and chemical weathering negligible.

Different Phases of Tectonic Deformation in the Rhinns of Galloway

IN the overthrust Caledonian metamorphics of Swedish Lapland there are traces of at least three main phases of deformation. This has been proved by graphic-statistical studies on the tectonics of a sequence of six small areas[1,2]. Each of the phases is distinguished by certain directions of main transport that are constant for all the areas. There is a fair amount of evidence of several kinds to establish the age-relations of the phases. First, there were transport directions toward east-south-east, then toward the south-south-east, then toward the east (and/or south ?).

The exceptionally well-exposed folded Ordovician and Silurian greywackes and shales of the Rhinns of Galloway were chosen as a test field for the hypothesis that phases of deformation with different transport directions may have affected less metamorphic strips of the Caledonides as well. The Rhinns of Galloway coast affords a classic example of the current idea of the north-western belt of the Southern Uplands of Scotland as a fan structure striking north-east – south-west, with roughly isoclinal folds, the limbs of which generally dip toward the central axis of the structural complex[3].

Tectonic data were collected from Broadsea Bay and southward, at eighteen fairly evenly spaced localities, each representing 200–1,000 m. of the coast. The orientations of 1,600 bedding-planes and 2,100 joints were recorded as exactly as possible. The lines of intersection (β) of the bedding-planes tend to represent fold axes. The β intersection was constructed graphically for each two succeeding bedding-planes. All β intersections were brought into synoptic diagrams, one for a north sub-area (the coast section Broadsea Bay–Morroch Bay), and one for a south sub-area (the south part of the Rhinns, including Portayew in the north). Two other synoptic diagrams were prepared for the normals of all joints recorded in each of the two sub-areas. The axes were plotted on a Schmidt net that is regarded as the lower hemisphere. The general axial plunge is 10–30° toward the north-east. The joints tend to be *ac* joints, that is to say, normal to the fold axes. There are persistent concentrations of nearly horizontal axes about N. 75° E. and N. 47° E. Axes belonging to these groups occur in both sub-areas and at different localities. Both systems frequently are met with at the same locality. For this reason, the systems cannot be due to differences in local tectonic setting. The structures striking N. 47° E. as a rule are almost isoclinal folds that are overturned toward the north-west. The N. 75° E. strikes are associated with some shattering of the beds, and important thrust zones dipping northward. The most impressive of these thrusts outcrops in the northern part of Cairngarroch Bay. Other thrusts are just north of Clanyard Bay. Deformations belonging to this group affect structures of the first group. There is thus evidence of at least two important post-Llandoverian phases of deformation in this part of the Uplands, one phase with transport mainly toward N. 43° W., and another, later, with transport mainly toward S. 15° E. The former phase has determined the main regional strike; the latter has converted the area of greywacke beds, dipping to the south-east, into a fan structure. It would be interesting to discover whether the same deformations can be traced farther to the north-east, along the strike of the Uplands.

Some details of the synoptic diagrams must at present be left without explanation. However, some steeply plunging fold axes of the north sub-area are largely derived from Morroch Bay, where incompetent shales have been squeezed in the core of an anticlinal structure of greywackes and split up into lenticles. These lenticles could have slipped past one another laterally, in adjustment to the squeezing. The folds seem to represent $B \perp B'$ of Sander[4].

It is obvious that with tectonites like these, joints can help to answer several questions.

A more complete account of this investigation is being prepared.

Pancrinogen: a New Zymogen of Proteolytic Enzyme from Beef Pancreas

THREE zymogens of proteolytic enzyme in pancreas (two chymotrypsinogens and trypsinogen) are known at present. In this communication, we report the occurrence of another inactive precursor of proteolytic enzyme in beef pancreas.

Fresh beef pancreas was treated according to the method of Kunitz and Northrop[1], up to the separation of chymotrypsinogens and trypsinogen at 62 per cent saturation with ammonium sulphate (*p*H 4·2). Then the mother liquor was brought to 75 per cent saturation with solid ammonium sulphate. The resulting precipitate was collected by centrifugation and dissolved in one and a half volumes of ice-water (*p*H 4·2). To each 100 ml. of the solution 22·3 gm. of solid ammonium sulphate was added and the precipitate was centrifuged off. The supernatant was dialysed against 0·2 *M* solution of potassium chloride, previously adjusted with acetic acid to *p*H 4·2. The dialysed solution contained the bulk of the new zymogen. As all operations were carried out at *p*H 4·2 and 5° C., the possibility of bacterial activity was eliminated.

The partially purified zymogen did not show any detectable proteolytic activity toward gelatin or casein. At *p*H 8·0, the zymogen was autocatalytically transformed to active enzyme (Fig. 1). The activation of the zymogen was also induced by the addition of a trace amount of pancrin, which was prepared from a commercial porcine pancreatin by Grant's method[2]. Especially purified pancrin from beef pancreas, which was completely free from trypsin and chymotrypsin, also catalysed the activation of the zymogen at 10° C. for 32 hr. or at 37° C. for 1 hr. The latter condition eliminates the possibility of bacterial activity. It required more than 72 hr. for full activation of the zymogen in 0·2 *M* phosphate buffer, *p*H 8·0, at 10° C. without the addition of pancrin, and no activation was observed at *p*H 4·6, even in the presence of added pancrin. The zymogen

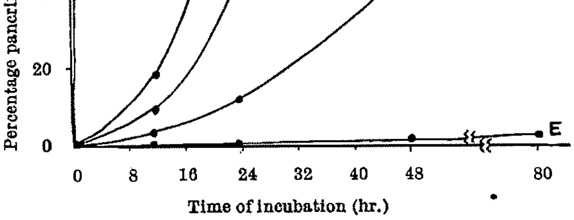

Fig. 1. Activation of pancrinogen: determination of proteolytic activity being carried out by Northrop's method (ref. 3) with 5 per cent gelatin in 0·2 *M* phosphate buffer of *p*H 8·0 at 37° C. for 15 min. Curve *A*, pancrin from beef pancreas in phosphate buffer, *p*H 8·0 at 10° C.; *B*, pancrin from porcine pancreatin, *p*H 8·0, 10° C.; *C*, autocatalytically, *p*H 8·0, 10° C.; *D*, pancrin from beef pancreas, *p*H 8·0, 37° C.; *E*, pancrin from beef pancreas, *p*H 4·6, 10° C.

was not activated by commercial crystalline trypsin during the incubation of 1 hr. at 37° C.

The active enzyme obtained from the zymogen is identical with the 'pancrin' of Grant.

These results indicate the occurrence of a new zymogen of proteolytic enzyme, which we propose to call 'pancrinogen'. Full details of this work and related problems will be published elsewhere.

Isolation of 16β-Hydroxyœstrone from the Urine of Pregnant Women

HAVING been informed that we had succeeded in isolating 16β-hydroxyœstrone from the urine of pregnant women, Dr. T. F. Gallagher of the Sloan-Kettering Institute, New York, most courteously suggested to us that we should publish a preliminary account of our work simultaneously with his own announcement of the detection of the same compound by reverse isotope dilution in the urine of a human subject after the administration of œstradiol-17β-16-^{14}C (succeeding communication). The completion of our own work would have been delayed by many months if Dr. Gallagher had not provided us, before publication, with details of his method[1] for synthesizing 16β-hydroxyœstrone from œstrone *via* the enol diacetate of the latter. It is a pleasure to acknowledge his generous co-operation.

Pooled late-pregnancy urine (200 l.) was hydrolysed enzymically as previously described[2], extracted with ether and the extract washed with an aqueous solution of sodium bicarbonate and with water. The ketonic fraction of this material was obtained by reaction at room temperature in ethanolic acetic acid with Girard's reagent *T*. A concentrate containing the ring *D* α-ketolic œstrogen derivatives was obtained by subjecting this ketonic fraction to chromatography on celite columns using the solvent system 70 per cent (v/v) methanol in water/20 per cent (v/v) *n*-hexane in benzene. This concentrate was then subjected to chromatography on a large number of sheets of paper using the system formamide/chloroform. The material having the same mobility in this system as that of authentic 16β-hydroxyœstrone was eluted and further purified by rechromatography on paper in the same system. By this means 6·2 mgm. of a semi-crystalline product was obtained which was contaminated with a yellow oil.

This material was acetylated. After purification by chromatography on an alumina column and crystallization from methanol, 2·1 mgm. of a product melting at 138–141° C. were obtained. The mixed melting point with authentic 16β-hydroxyœstrone diacetate (melting point 139–141° C.) was 139–141° C., and the infra-red spectra of the two acetates (kindly determined by Dr. R. Norman Jones, National Research Council, Ottawa) were identical.

The isolation of 16β-hydroxyœstrone from the urine of pregnant women and the demonstration by Gallagher *et al.* that it is formed metabolically from administered œstradiol-17β provide support for the view[2–4] that 16α-hydroxyœstrone and 16β-hydroxyœstrone are the intermediates in the metabolic 'hydration' of œstrone to œstriol and 16-*epi*-œstriol respectively.

In the course of the same work we have also isolated 16-oxoœstradiol-17β (as its acetate). So far as could be determined, the latter compound could not have been formed as an artefact from either 16α-hydroxyœstrone or 16β-hydroxyœstrone by the methods employed in its isolation. The view previously expressed[3] that extracts of pregnancy urine contain no 16-oxoœstradiol-17β other than that which is formed artefactually during the isolation process is now seen to have been incorrect, and the criticisms based on this view of the work of Levitz, Spitzer and Twombly[5] are now unreservedly withdrawn.

Full details of this work will be published elsewhere.

16β-Hydroxyœstrone, a Metabolite of Œstradiol in Man

THE *in vivo* metabolism of œstradiol-17β leads to the formation of ring *D* ketols with a hydroxyl group at C_{16}. These compounds are of interest because they may be either intermediates in the further transformation of œstrone or end products formed from the oxidation of ring *D* glycols. 16α-Hydroxyœstrone has been isolated from the urine of pregnant women by Marrian, Watson and Panattoni[1]. This communication reports the identification of the recently synthesized 16β-hydroxyœstrone[2] as a metabolite of œstradiol-17β in man. The product is formally related to the œstrogen metabolite $\Delta^{1,3,5(10)}$-œstratriene-3,16β,17β-triol[3].

Œstradiol-17β-16-^{14}C (approximately 0·5 mgm. containing a total of $1 \cdot 5 \times 10^6$ c.p.m.) was administered intravenously to a woman with cancer of the breast. The urine collected for five days after this dose was treated with β-glucuronidase, extracted with ether, and a crude phenolic plus neutral fraction was obtained after washing with 9 per cent sodium bicarbonate solution. (β-Glucuronidase, known as 'Ketodase', was obtained from the Warner–Chilcott Laboratories, a division of Warner–Lambert Pharmaceutical Company, New York.) A portion of this extract containing 40,000 c.p.m. was subjected to chromatography on papers 4 ft. long in the solvent system toluene/*iso*octane (3 : 1) as the moving phase and methanol/water (4 : 1) as the stationary phase. In this way the total ketol fraction was separated from the less polar œstradiol, œstrone and 2-methoxyœstrone and from the more polar epiœstriol (3, 16β, 17β) and œstriol (3, 16α, 17β). Appropriate standards were chromatographed simultaneously and detected with the ferric chloride – potassium ferricyanide reagent; areas containing radioactive œstrogen metabolites were located with a strip counter. The separated ketol fraction, after elution from the paper, was resubjected to chromatography in the same solvent system or with formamide and chloroform. In both systems a broad band of radioactivity was present in the area of 16α-hydroxyœstrone and 16-ketoœstradiol-17β which moved very close to each other; it was not possible to achieve a clean separation of these two compounds. However, 16β-hydroxyœstrone travelled more slowly and a distinct separation of this compound from the other two ketols was possible. A peak of radioactivity in the ketol area moved with the 16β-hydroxyœstrone standard. This latter area was eluted, mixed with a pure sample of 16β-hydroxyœstrone and resubjected to chromatography in the toluene/*iso*octane : methanol/water system. There was no separation of the radioactivity from the carrier compound. Repetitions of this experiment yielded sufficient material for reverse isotopic dilution by recrystallization to constant specific activity. The product, as it was removed from the papers, contained 57 c.p.m. per mgm., and successive recrystallizations gave values of 32, 22, 26, 22, 21 c.p.m. per mgm. It should be noted that while the final specific activity of the compound was low, the total amount of radioactivity taken for isolation was small and it was necessary to add sufficient inactive material to obtain five successive recrystallizations.

From the amount of radioactivity present in the various areas of the chromatogram, it was estimated that the total ketol fraction contained about 10 per cent of the radioactivity in the urine extract. 16β-Hydroxyœstrone was estimated to be one-third of the ketol fraction or approximately 3 per cent of the urinary radioactivity. In the particular experiment described, epiœstriol (3, 16β, 17β) was estimated to account for approximately 6 per cent and œstriol (3, 16α, 17β) approximately 30 per cent of the total urinary radioactivity. Whether the 16-hydroxy ring *D* ketols are derived from the hydroxylation of œstrone or from oxidation of the corresponding triols will be the subject for future studies.

This investigation was supported in part by a grant from the American Cancer Society and a research grant (*CY*–3207) from the National Cancer Institute, of the National Institutes of Health, U.S. Public Health Service.

Biological Deamidation of Nicotinamide in Vertebrates

An enzyme bringing about the deamidation of nicotinamide was demonstrated for the first time in lactic acid bacteria[1] and later in yeast[2] and *Mycobacteria*[3]. Studies in this laboratory have revealed the presence of nicotinamide-deamidating enzymes in *Neurospora crassa*[4] and the insect larva *Corcyra cephalonica* St.[5] and that the predominant feature of the vitamin metabolism in these organisms is the deamidation of nicotinamide. In the course of a study of the comparative metabolism of the vitamin in a variety of organisms, the liver and the kidney of several vertebrates have been examined for nicotinamide deamidase activity. A cell-free homogenate of the tissue was prepared in ice-cold distilled water and the enzyme activity measured as described earlier[4]. The results are presented in Table 1.

Table 1. Distribution of Nicotinamide Deamidase in Vertebrate Tissues

Nicotinamide deamidase activity is expressed as free nicotinic acid released (μgm.) in 60 min. at 37° C. in a 2-ml. system by cell-free homogenate equivalent to 100 mgm. of fresh tissue

Organism	Nicotinamide deamidase activity	
	Liver	Kidney
Rat	0·3	0·4
Rabbit	15·0	3·8
Guinea pig	5·0	1·6
Sheep	4·5	1·5
Hog	4·8	2·1
Cattle	2·7	1·5
Pigeon	252·0	760·0
Chick	0·7	>219·0*

* Complete deamidation of added nicotinamide in the incubation system.

It is seen that the tissues of the rat, guinea pig, sheep, hog and cattle are not able to deamidate nicotinamide *in vitro*. Rabbit liver exhibits a feeble deamidating activity, the kidney being inactive in this respect. It is interesting, on the other hand, that the tissues of the avian species, the pigeon and the chick, have very high nicotinamide deamidase activity. Surprisingly, however, while both the liver and the kidney of the pigeon are rich in the enzyme, only the kidney of the chick is able to deamidate nicotinamide.

The nicotinamide deamidase activity of *N. crassa*, *Mycobacteria* and *Corcyra* is localized in the soluble intracellular cytoplasmic matter, and can be recovered in the supernatant fraction obtained on high-speed centrifugation of their homogenates. In the case of the pigeon tissues, however, less than 10 per cent of the total activity could be obtained in the supernatant. The intracellular distribution of the nicotinamide-deamidating activity in the pigeon tissues was therefore investigated. Homogenates of pigeon liver and kidney were prepared in ice-cold isotonic sucrose and centrifuged differentially[6] to yield the sub-cellular components, which were then assayed for the enzyme activity. The purity of the individual fractions was not established in this study from the biochemical and cytogenetical viewpoint; nevertheless, it is evident (Table 2) that the particulate material in either tissue contains most of the enzyme.

These results constitute the first demonstration of nicotinamide deamidase in vertebrate tissues. The significance of this deamidation of nicotinamide as a major pathway in the vitamin metabolism in birds, micro-organisms and the insect *Corcyra cephalonica* is not entirely clear. However, these organisms exhibit a common characteristic in being apparently incapable of methylating nicotinamide[4,5,7,8], unlike many other vertebrates. The methylation and the deamidation of nicotinamide are thus probably alternative pathways in the metabolism of the vitamin. If this is so, the deamidation of nicotinamide, being a hydrolytic split, should be more economical from the point of view of bio-energetics than methylation, which requires the provision of energy[8].

Table 2. DISTRIBUTION OF NICOTINAMIDE DEAMIDASE IN THE SUBCELLULAR COMPONENTS OF THE LIVER AND THE KIDNEY OF THE PIGEON.

The incubation system (2 ml.), buffered at *p*H 7·5, contained nicotinamide (2·5 mgm.) and cell fraction equivalent to 50 mgm. of fresh tissue. Incubation at 37° C. for 120 min. in the case of liver and 90 min. in the case of kidney

Fraction	Liver			Kidney		
	Nicotinic acid released (μgm.)	Per cent total activity	Nicotinic acid released per mgm. nitrogen* (μgm.)	Nicotinic acid released (μgm.)	Per cent total activity	Nicotinic acid released per mgm. nitrogen* (μgm.)
Unfractionated homogenate	252·0	100·0	192·3	570·0	100·0	422·3
Nuclei	162·3	64·3	417·6	141·0	24·7	363·4
Mitochondria	83·0	32·9	389·6	334·0	58·6	1421·0
Microsomes	43·0	17·1	201·8	70·5	12·4	298·7
Supernatant	21·4	8·3	36·5	45·0	7·9	78·9

* Nitrogen present in enzyme preparation, and insoluble in trichloroacetic acid, determined by Nesslerization of a sulphuric acid–hydrogen peroxide digest.

The highly selective distribution of nicotinamide deamidase, evident from the fact that most of the vertebrates examined, the avian species excepted, do not possess the enzyme and that in the chick, whereas the liver is completely devoid of the enzyme, the kidney has it in abundance, would point to the specific nature of the enzyme as against its being a peptidase or similar enzyme acting non-specifically.

Chromatographic Detection of Minute Quantities of Thyroxine in Serum

EFFORTS to detect extracted iodized compounds directly on chromatograms have been made by various authors while following the metabolism of thyroid hormones. Nevertheless, because of low sensitivity of the agents currently employed (ninhydrin, diazotized sulphanilic acid) this has proved fruitless. By modifying the original Sandell–Kolthoff reaction for iodine estimation, Bowden *et al.*[1] succeeded in detecting 0·1γ of thyroxine. The detection of thyroxine following chromatography of serum required the use of large amounts of the biological material[2]. Moreover, careful purification of the extract for chromatography was laborious and time-consuming. Efforts made so far[1,3] have likewise failed to bring about the desired results because the colour spots are of short duration.

By means of a minor modification of the procedure of Bowden *et al.* we have succeeded in detecting thyroxine in 1·0 ml. of serum. The chromatogram was sprayed with a solution (1 : 1) of ceric ammonium sulphate (0·2 N) – sodium arsenite (1·0 N) and left approximately 15 min. to dry at room temperature after a preliminary superficial desiccation. It was then passed through a 0·5 per cent solution of fluorescein in acetone, or a 5·0 per cent solution of anthranilic acid in acetone. When the chromatogram had dried in a free current of air, thyroxine was detected by means of ultra-violet light. For a visual localization of thyroxine the chromatogram was gently sprayed with a 1·0 per cent solution of *o*-toluidine in acetone instead of the fluorescein solution. Spots, pale yellow in colour, appeared on a background of dark brown. These spots remain stable for a considerable period of time and the colour contrast increases with time. The sensitivity attained by these processings is of the order of 0·01γ of thyroxine.

Nature of the Carcinogenic Substance in Egg-Yolks

A HIGH incidence of malignant tumours was recently reported in mice fed egg-yolks[1], and the presence of a growth-promoting factor in the yolks has been thought to be responsible for this effect[2]. This substance was found to be soluble in common fat solvents and it is contained in the non-saponifiable and non-phospholipid portion of the yolk[3].

In the course of my investigations concerned with the isolation of the tumour-enhancing factor, I have prepared a lipoid substance accelerating the growth of experimental tumours in animals as well as stimulating the incorporation of labelled methionine-^{35}S into the proteins of Ehrlich ascites carcinoma *in vitro*. Only traces of this material are present in tissues of normal mice and rats when compared with organs of tumour-bearing animals.

The active substance is readily extracted from the unsaponifiable portion of fresh tissues or frozen-dried organs by benzene, acetone or ether. It is not adsorbed on alumina columns, but retained to some extent on anion-exchange resins, from which it can be displaced by means of weak acids. A paper chromatographic procedure has been applied for the isolation of the factor from eluants after ion-exchange chromatography.

The pure material is readily soluble in water and common fat solvents, giving an intensive yellowish fluorescence and characteristic ultra-violet absorption spectra. It is labile to heat (90° C.), destroyed by repeated freezing and thawing, but not by freeze-drying. No detailed chemical analyses could so far be carried out of a very small quantity of active material which could be recovered from tissues of tumour-bearing rats. The properties of this material so far examined suggest its close relation to aromatic hydrocarbons, possibly bile acids. It is definitely different from the phospholipid substance described by Green and Wilson[4].

When the properties of the growth-promoting substance from yolks were reported, it seemed to us worth while to examine the possible identity of this factor with the material derived from tissues of tumour-bearing animals. Application of the procedures used in the isolation of tumour-enhancing factor from animal tissues to the unsaponifiable portion of yolks gave a considerable quantity of a fluorescent substance the chromatographic behaviour and the absorption spectra of which were identical with those given by material from rat tissues. These facts strongly support our concept that the growth-promoting factor in egg-yolk and the tumour-enhancing factor are identical.

It is hoped to determine the chemical nature of this substance shortly, because considerably larger quantities of this material are available in egg-yolk than in rat tissues.

Efficient Trace-labelling of Proteins with Iodine

IN the methods of iodination currently used only the cationic portion of the iodine molecule becomes bound to the ring structure of tyrosine, so that the theoretical efficiency of labelling is 50 per cent. In practice, efficiencies are always lower than this and may be only a few per cent when the ratio of iodine to protein used is less than one atom per molecule. Values greater than 50 per cent can be obtained by adding oxidizing agents to liberate iodine from iodide, but most if not all of these appear to affect adversely the properties of the labelled protein.

Iodine-131 monochloride was therefore prepared and used in dilute aqueous solutions for labelling proteins. Efficiencies were twice those obtained with labelled elementary iodine in similar circumstances. Essentially the same result was achieved by merely adding carrier-free radioactive iodine to inactive carrier iodine monochloride, provided the radioiodine used was free of reducing agent. (Iodine-131 condensed into *N*/50 sodium hydroxide can be obtained for this purpose from the Radiochemical Centre, Amersham, subject to an extra handling charge. Very little appears to be known about the ionic equilibria obtaining in this solution.) The radioiodine may be added to the carrier iodine monochloride, in dilute hydrochloric acid solution, before or after conversion of the iodine monochloride to hypoiodite. This step, which is indicated by the loss of the characteristic yellow colour of iodine monochloride, appears to be a prerequisite for substitution of iodine in the benzene ring of tyrosine. The conversion is best carried out by injecting a glycine buffer of *p*H 8·5 into the iodine-131 monochloride solution just prior to rapid mixing with the protein. The *p*H of the protein solution should not be higher than 9·5 since hypoiodite is unstable above this *p*H. Using this procedure 60–80 per cent of the radioactivity used was bound to proteins provided the molar ratio of iodine monochloride to protein was greater than 2. This applied to plasma albumins and globulins of various species, including some antibodies and pathological human globulins.

Lower efficiencies were obtained using lower molar ratios because of preferential utilization of the iodine monochloride for non-specific oxidations and especially of sulphydryl. The hydroxyl group of tyrosine is not ionized at *p*H 4·5 so that iodination does not occur, while oxidations proceed normally at this *p*H. Protein solutions which had been in contact with excess iodine at *p*H 4·5 and were afterwards passed through an ion exchange column to remove iodine and iodide then reacted with iodine-131 monochloride at *p*H 8–9 giving 90 per cent incorporation of the label at all molar ratios greater than 2, and 50–60 per cent incorporation at molar ratios as low as 0·1. Alternatively the approximate amount of iodine monochloride required for non-specific oxidation in each case was determined in a preliminary tracer experiment at *p*H 8–9 and this amount of inactive iodine monochloride added to a fresh portion of protein. The iodide formed was removed by ion exchange and the oxidized protein then iodinated with iodine-131 monochloride at full efficiency.

These increased efficiencies make labelling with iodine-131 a more economical procedure and one that is less hazardous to the operator since iodine monochloride has a much lower volatility than iodine. In addition, they offer the practical possibility of labelling only a small proportion of all protein molecules present. The biological behaviour of protein molecules labelled in severely competitive conditions in this way is now being studied.

Separation and Determination of Millimicrogram Amounts of Cobalt and Microgram Amounts of Copper in Biological Material

THE chemical determination of metals chemically bound in biological material at concentrations less than 10^{-6} gm./100 gm. raises considerable difficulties. This is due to the fact that not all sensitive methods of determining metals in homogeneous material can be adapted to the treatment of samples containing organic compounds in the presence of an excess of other metals.

When undertaking the investigation of biological material, it is necessary first to separate the mineral components from the substrate by ashing the organic substances present therein, and then to select sufficiently sensitive methods for the determination of each of the various elements after they have been separated from one another. To exemplify the procedure followed, the determination of the cobalt and copper contained in whole blood has been chosen.

Available data point to a concentration of cobalt[1] of the order of 10^{-8} gm. and of copper[2] of 10^{-6} gm. in 100 gm. of whole blood. Since the amount of blood in clinical tests usually does not exceed 10 gm., the cobalt and copper contents in a sample would be of the order of 10^{-9} gm. and 10^{-7} gm. respectively.

We have separated both elements by paper chromatography from other metals (in the first place iron) of the blood, and applied emission spectrography for their quantitative determination. The detailed description of the determination of cobalt and copper is based on the method elaborated for determining cobalt in the blood, as given in an earlier paper[3].

The blood sample, after drying and ashing in an electric oven, is dissolved in acids. The solution of the metals present in whole blood is subjected to paper chromatographic analysis, using concentrated ammonium hydroxide as solvent, and Whatman No. 1 filter paper (14·5 cm. × 20·0 cm.). The solution is laid on along a line 3 cm. from the shorter edge of the sheet. The longer sides of the latter are then sewn together at two points to form a cylinder which is placed within the chromatographic chamber, the end nearer to the layer of the substance investigated being dipped in a solution of concentrated ammonia. In the chromatographic process the ferric ion remains at the starting line, since it is bound to the hydroxyl ion forming ferric hydroxide, which is insoluble in water. The ammonium compounds of the bivalent cobalt and copper ions, which are soluble in water, migrate along the filter paper together with the solvent front. The process is interrupted when the solvent has proceeded about 10–12 cm. above the starting line; the paper cylinder is dried at 80° C. in a position inverse to that in the chromatographic chamber.

Simultaneously, two tests are made with control solutions of salts of cobalt and copper, the presence of which is detected with a solution of α-nitroso-β-naphthol.

The paper strip containing the 'solvent front' is rolled up, placed upon silver foil and ashed carefully in the reducing flame of a Bunsen burner. The foil holding the ashed strip of filter paper containing the total amount of cobalt and copper present in the blood aliquot is now employed as an electrode, the other electrode being a silver rod; the distance between electrodes is 7 mm. The wave-lengths of the spectrum range from 2500 A. to 7000 A. Photographs are taken upon *G*22 photographic plates, with 150 diaphragm breadth and 10 sec. exposure. The plates are developed with a solution of hydroquinone in alcohol for 3 min. at 18° C. The interrupting bath in 5 per cent acetic acid lasted 15 sec. On applying an acid fixer, the plates were rinsed in running water for 30 min. at 18° C. and dried in air of the same temperature.

In order to obtain spectrographic standard curves, a series of measurements was made with known cobalt and copper solutions, containing 1·0–15·0 mμgm. cobalt and 5·0–30·0 μgm. copper simultaneously. The blackening of the 3453·5 A. line for cobalt and that of the 3247·5 A. line for copper was determined microphotometrically on the same plate. Results for cobalt and copper determinations in whole human blood are shown in Table 1, and they do not differ from those published by others using different methods.

Table 1. DETERMINATION OF COBALT AND COPPER IN HUMAN BLOOD

No. of blood sample	Cobalt (mμgm.) per 100 gm. of blood	Average	Copper (μgm.) per 100 gm. of blood	Average

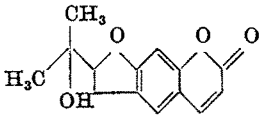
Isolation of Marmesin from the Fruits of *Ammi majus* Linn.

Ammi majus Linn. (Umbelliferae) is a wild plant which grows in Egypt, producing fruits reputed for their use in the treatment of leucodermia. They are mentioned in old Arab literature[1], and their value has recently been established by clinical investigations[2]. In 1947, Fahmy and Schönberg and their associates[3] reported the isolation of three crystalline compounds—ammoidin, ammidin and majudin—from the petroleum ether extract of the fruits. These compounds, or in any event the first two, were shown to be efficacious in the treatment of leucodermia[4–6], and are produced commercially (by The Memphis Chemical Co., Zeitoun, Cairo) for that purpose. Shortly afterwards, Schönberg[5,7] demonstrated that ammoidin and ammidin are actually the furocoumarins xanthotoxin[8] and imperatorin[9] respectively, and majudin was shown to be bergapten[4].

We wish now to report the isolation of another crystalline compound from the fruits of *A. majus*. After exhaustive extraction with benzene to remove fat and the furocoumarins mentioned above, the powdered seeds were extracted with hot ethanol and the extract, concentrated to a small bulk and hydrolysed by refluxing with mineral acid. After processing in the usual manner and repeated crystallization of the product from ethanol, a colourless crystalline compound, $C_{14}H_{14}O_4$, molecular weight 249–253 (Rast), melting point 189–190° C., was obtained in 0·25 per cent yield. The compound, optically active, $[\alpha]_D + 25°$, sublimes unchanged at 140–150° C., 1 mm. mercury and gives a yellowish colour with concentrated sulphuric acid. The compound itself and its solution in alcohol or concentrated sulphuric acid fluoresce strongly in the blue-violet under ultra-violet light. As the compound was suspected of being another furocoumarin of *A. majus* existing naturally as a glycoside, experiments were carried out to test this possibility. (From the related *Ammi visnaga*, the furochromones khellin, visnagin and khellol glucoside were isolated; for references, see ref. 10.) The aglycone was found to be insoluble in cold aqueous alkali, but readily soluble in alcoholic alkali, giving a stable yellow solution from which the original substance is precipitated on acidification. Upon fusion with potassium hydroxide, resorcinol was obtained. The compound contained no methoxyl or aldehydic groups and gave no ferric chloride reaction. The hydroxylic content of the compound, however, was apparently tertiary, since it did not react with diazomethane or with acetic anhydride – pyridine mixture at room temperature or upon warming. Nevertheless, a mono-acetate, $C_{16}H_{16}O_5$, melting point 130–2° C., $[\alpha]_D + 25$ deg., was obtained by refluxing in acetic anhydride solution containing anhydrous sodium acetate. Refluxing with benzoyl chloride gave, instead of a benzoate, an optically inactive compound, melting point 134–135° C., identical with an anhydro-derivative obtained by treatment with phosphorus pentoxide. This was taken as an evidence suggesting that the hydroxyl group is close to the asymmetric centre.

Since all the evidence pointed to the possibility that the aglycone might be marmesin (I) (melting point 189·5–190° C., $[\alpha]_D + 26 \cdot 8$ deg.)—a dihydrofurocoumarin occurring freely in the bark of *Aegle marmelos*, Corrêa (Rutaceae), and first isolated by Chatterjee and Mitra[11]—other derivatives were prepared and were found to support the suggestion.



(I)

Final proof of the identity of the aglycone was sought by carrying out a determination of the mixed melting point with an authentic sample of marmesin (no depression was found) and by comparing the spectra (which were identical). Marmesin is the optical antipode of nodakenetin which occurs as a glucoside in *Peucedanum decursivum*[12]. Further experiments on the product are in progress and a study of its physiological properties is being carried out and will be reported, together with the details of this work, elsewhere.

We wish to thank Dr. A. Chatterjee for a sample of marmesin, The Memphis Chemical Co. for a generous supply of the starting material and the National Research Centre of Egypt for a scholarship (awarded to E. A. A.-M.).

Lutein in a Bacterial Membrane

CAROTENOIDS have been noted as constituents of a number of bacteria[1], possibly associated with protein compounds[2]. In a chemical analysis of the protoplast membrane of *Micrococcus lysodeikticus*[3], the absorption spectrum of a solution of the lipid fraction in petroleum ether, obtained by solvent extraction of the membrane, indicated the presence of lutein. However, the carotenoid was unstable in organic solvents and consequently the quantitative estimation gave a value believed to be low. It has now been found possible to determine the pigment in the membrane without preliminary extraction.

Micrococcus lysodeikticus was grown under the conditions given previously[4]. Protoplast membranes were isolated by differential centrifugation of lysozyme-induced lysates by a method previously described in detail[3]. The absorption spectrum between 300 and 800 mμ of a fresh suspension of membranes in 0·05 *M* sodium chloride solution was measured, using a 'Unicam *SP* 500' quartz spectrophotometer. As shown in Fig. 1*B*, the absorption spectrum of lutein is sharply evident, superimposed on the curve produced by the scattering of light by the suspended membranes. For comparison, the absorption spectrum of the membrane lipid dissolved in petroleum ether is given in Fig. 1*A*. With intact protoplasts, the non-specific scattering masks absorption by pigments.

In order to calculate the specific absorption in the membranes, the optical density – wave-length curve in the absence of specific absorption was calculated by a method based on Heller and Vassy[5]. A log–log plot of optical density against wave-length between 500 mμ and 800 mμ yielded a straight line of slope −2. This line was extrapolated to shorter wave-lengths

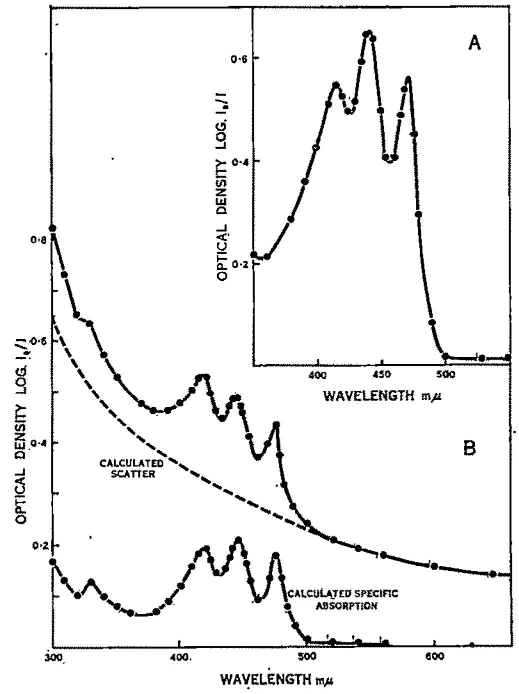

Fig. 1. Absorption spectra of *M. lysodeikticus* protoplast membrane lipid and protoplast membrane suspensions: *A*, Protoplast membrane lipid 1·1 mgm./ml. in petroleum ether; *B*, protoplast membrane suspension 0·68 mgm. dry weight/ml. in 0·05 *M* sodium chloride solution

and used to derive the calculated curve due to scatter in Fig. 1*B*. Thence, by difference, the specific absorption in the membrane was obtained.

The positions of the specific absorption peaks of the membranes are almost identical with those of lutein dissolved in hexane[6] and of the membrane lipid in petroleum ether[3]. The absorption spectrum of the membranes indicates a lutein content in the dry membrane of 0·14 per cent w/w. This is twice the value estimated on the extracted lipid[3]. Even the present estimate is probably too low, since Duysens[7] has shown that the absorption spectrum of absorbing particles, even if properly corrected for scattering, must appear flattened compared with that of the same number of molecules in a homogeneous solution.

Effect of Bile Salts upon the Activity of Antibiotics

IN the course of studies on the effect of bile salts upon the activity of a variety of antibiotics it was observed that the susceptibility to neomycin of a series of recently isolated strains of staphylococci (which are pigmented, coagulase positive, hæmolytic, and ferment mannitol) and of enterococci was increased when the *in vitro* tests were performed in a medium to which 0·5 per cent bile salts (Difco) had been added, as shown by the significant and consistent reduction in the minimum amount of antibiotic required to inhibit the growth of standard inocula of these strains in bile-salts medium as compared with the same medium without adjuvant (Table 1). The same concentration of bile salts also resulted in enhanced activity of penicillin against staphylococci resistant to penicillin, but had little or no effect upon the efficacy of this antibiotic against penicillin-sensitive strains of the same species or strains of enterococci tested. No such consistent potentiation against either resistant or sensitive strains was observed with bacitracin, chloramphenicol, erythromycin, nitrofurantoin, novobiocin, oleandomycin, streptomycin and tetracycline. With polymyxin, ristocetin and vancomycin, however, an opposite effect to that noted above was observed, namely interference, since significantly greater amounts of each of these antibiotics were required to inhibit similar inocula of a number of strains of both Gram-positive species in bile salts medium than was required in plain medium.

Table 1. POTENTIATION OF ANTIBACTERIAL ACTIVITY OF NEOMYCIN AND PENICILLIN AGAINST STAPHYLOCOCCI AND ENTEROCOCCI BY 0·5 PER CENT BILE SALTS

0779	4·0	0·4		

As regards such Gram-negative bacteria as *Escherichia coli*, *Aerobacter aerogenes*, *B. proteus* and *B. pyocyaneus*, with the exception of polymyxin, bile salts had neither an enhancing nor an antagonistic influence upon the antibiotics ordinarily employed against them, namely, chloramphenicol, neomycin, nitrofurantoin, streptomycin and tetracycline. Bile salts did interfere markedly with the action of polymyxin against these micro-organisms since considerably greater concentrations of polymyxin were required to inhibit their growth in the presence of bile salts. Thus, depending upon the antibiotic and the bacterial species against which it is employed, bile salts produce a diversity of effects, in some instances enhancement of antibacterial activity, in others interference, while in still others no effect whatever.

The medium employed in these studies consisted of 'Trypticase' 7·5 gm., 'Phytone' 1·3 gm., sodium chloride 2·15 gm. and potassium phosphate 1·05 gm. per litre of distilled water adjusted to *p*H 7·2, to which sterile 0·5 per cent bile salts (Difco) was added where indicated. Tests were performed by the tube-dilution method in 2-ml. amounts by adding 1 ml. of a 10^{-4} dilution of a culture of the strain under test (which had been maintained at 37° C. for 6 hr.), adjusted to an optical density of 0·05 on a 'Lumetron' colorimeter (650 mμ), to a series of tubes containing varying concentrations of standard antibiotic in 1 ml. of appropriate medium. Readings were taken after incubation for 24 and 48 hr. at 37° C., but since no marked changes in the observed differences between both media occurred between 24 and 48 hr., only the findings noted after incubation for 48 hr. are recorded in Table 1.

Further experiments in an attempt to elucidate the mode of action of bile salts and to determine whether an element or elements contained in the mixture might be responsible are in progress. The addition of 0·5 per cent bile salts has been found to have neither a significant stimulatory nor inhibitory effect upon the rate or intensity of growth of the bacterial species investigated and does not change the *p*H of the medium.

Influence of Temperature and Light on Thyroid Function

Forty-four mature male albino rats weighing 150–180 gm. were divided into four equal groups. Two of these groups were kept at a temperature of 18° C., while the other two groups were maintained at 35° C. One group maintained at each temperature was kept continuously in light of intensity 30 ft.-candles, and the other groups were kept in darkness. After 12 days the animals were killed by decapitation under light ether anæsthesia, and their blood was collected. The levels of thyroid and thyrotrophic hormone in their serum was determined by the use of the stasis tadpole method[1]. The tadpoles were divided into five groups, each of twenty animals. A control group was injected with saline. The other groups of tadpoles were injected on alternate days with five injections of 0·02 ml. of serum obtained from the four groups of rats. Increase in length of the hindlimbs of the tadpole was the criterion of thyroid hormone concentration, while the increase in thyroid epithelial cell height was used as an index of thyrotrophic hormone-level in the serum of rats. The thyroids of the rats were examined histologically. They were fixed in Zenker without acetic acid and stained with Mallory's stain[2]. Analyses of variance and of correlation were performed.

At 18° C. the thyroids of the rats kept in darkness were heavier than those of rats exposed to light. At 35° C. the thyroids of the rats exposed to light were heavier than those of rats kept in darkness. The rats kept at 18° C. had more active thyroids and higher epithelia than those kept at 35° C. These findings are in agreement with those obtained by other investigators, indicating increased activity of the thyroid under the influence of cold and decreased activity at higher temperatures[3].

The rate of metamorphosis and the epithelial cell heights of tadpoles injected with serum obtained from rats confined to darkness at 18° C. were greater than those of rats maintained at the same temperature and exposed to light. At 35° C. this effect was reversed. Exposure to light induced a significant increase in thyroid and thyrotrophic hormones in the blood, whereas darkness decreased their level. These results indicate that there is a significant interaction between the effects of temperature and light on thyroid weights and levels of thyroid and thyrotrophic hormones.

Table 1. Influence of Temperature and Light on Thyroid Function

Treatment	Data obtained from rats		Data obtained from tadpoles	
	Thyroid wt. mgm./100 gm. body weight	Epithelial cell height (μ)	Mean increase of hind limbs above control (mm.)	Mean increase of epithelial cell height above control (μ)
Cold–light	5·77 ± 0·68	10·47 ± 0·04	1·01 ± 0·53	2·49 ± 0·01
Cold–dark	7·97 ± 0·44	11·63 ± 0·01	5·04 ± 0·97	4·62 ± 0·14
Temperature–light	7·45 ± 0·55	9·36 ± 0·14	5·01 ± 1·08	4·12 ± 0·17
Temperature–dark	5·38 ± 0·67	9·53 ± 0·01	1·81 ± 0·57	2·24 ± 0·20

± Standard error.

Although the levels of thyroid and thyroid stimulating hormones were high in the blood of rats kept at 35° C. and exposed to light, yet their thyroids were inactive from the histological point of view. The thyroid-stimulating hormone produced under such conditions is probably a stimulant to thyroid secretion, rather than to cell height.

Some investigators have found that exposure of animals to light stimulated thyroid function, while others state that rats confined to darkness have more active thyroids[4]. In the light of our results, it appears that the environmental temperature can modify or even reverse the effects of light and darkness on thyroid function.

Influence of the Thymus on the Reaction of the Adrenal to Adrenocorticotropic Hormone in the Rat

It has been shown previously that thymectomy is followed by a transitory stimulation of the adrenal in guinea pigs[1]. I have investigated whether this is due to interference of the thymus with the action of adrenocorticotropic hormone.

Eighty-eight male rats of a local inbred strain weighing 130–160 gm. were divided into two groups. Twenty-four rats in the first group were hypophysectomized, using Smith's method. Forty-eight rats in the second group were thymectomized by Segaloff's method and hypophysectomized ten days later. The technique of both operations was that described by Farris and Griffith[2]. From the sixth to the tenth day after the hypophysectomy, twenty-four thymectomized, hypophysectomized animals were injected daily with the thymus extract of Bezssonoff and Comsa[3], at the daily dose of 15, 30, 40, 50, 70 and 100 units[4] (four animals for every dose).

The hypophysectomized animals were kept at a constant temperature of 29 ± 5° C.

On the eleventh day after hypophysectomy, the animals were given a single intraperitoneal injection of adrenocorticotropic hormone (supplied by Messrs. Choay, Paris) as follows: (1) The hypophysectomized and the thymectomized and hypophysectomized animals which had not been treated with thymus extract received 0·4, 0·7, 1·0, 1·5 and 2·0 units (four animals of each group for every dose). (2) The thymectomized and hypophysectomized animals which had received injections of thymus extract were each given 0·4 units of adrenocorticotropic hormone.

The animals were killed with chloroform two hours later, and the vitamin C content of the adrenals was determined individually by the method of Roe and Kuether.

Control determinations were performed on 8 normal male rats of the same strain, age and diet; on 4 thymectomized animals; on 4 hypophysectomized animals; on 4 thymectomized and hypophysectomized animals; and on 4 thymectomized animals injected daily for four days with 100 units of thymus extract.

In the control groups, the following vitamin C content of the adrenal was found (μgm. per mgm. of fresh tissue):

Normal males	3·16 ± 0·11
Thymectomized	1·76 ± 0·20
Hypophysectomized	7·08 ± 0·18
Hypophysectomized and thymectomized	4·20 ± 0·20
Hypophysectomized, thymectomized and injected with thymus extract	4·37 ± 0·18

Thus thymectomy was followed by a significant decrease in the vitamin C content of the adrenals. Hypophysectomy resulted in an increase of the vitamin C content in both normal and thymectomized animals. In these, thymus injections by themselves showed no additional influence on the vitamin C content.

The results with animals which received injections of adrenocorticotropic hormone are recorded in Tables 1 and 2. It can be seen that in thymectomized and hypophysectomized animals, the decrease of the vitamin C content of the adrenals (corresponding to the same doses of adrenocorticotropic hormone) is significantly greater than in simply hypophysectomized animals. The test dose of 0·4 units of adrenocorticotropic hormone produced in the first group a decrease of about one half of this content, whereas it had no detectable influence in the second. This consequence of thymectomy could be suppressed by injecting the thymectomized and hypophysectomized animals with thymus extract.

Thus the thymus is antagonistic to the action of adrenocorticotropic hormone, and its effect is supported by the thymus extract obtained by the method of Bezssonoff and Comsa.

Table 1. VITAMIN C CONTENT OF THE ADRENAL IN RATS 2 HR. AFTER A SINGLE INTRAPERITONEAL INJECTION OF ADRENOCORTICOTROPIC HORMONE

Adrenocorticotropic hormone dose (units)	Vitamin C (μgm./mgm. fresh weight): Hypophysectomized rats	Thymectomized and hypophysectomized rats
0	6·98 ± 0·13	4·20 ± 0·20
0·4	6·90 ± 0·20	1·85 ± 0·14

Effect of the Synthetic Œstrogen Stilbœstrol on Pregnancy in the Rabbit

IN a communication under the above title[1], Sharaf and Hafez state that they employed very large doses of stilbœstrol (single dose, 1 mgm. in the rabbit). It is doubtful whether a dose of such magnitude could be considered to have a specific effect peculiar to œstrogens since only a few micrograms are required to produce characteristic responses. No histological work was apparently carried out to determine whether the ovum was ever fertilized and, if so, how or why the blastocyst perished. I have been working on the reproductive hormones for some time and wish to direct attention to the fact that a good deal of work has already been done in this particular field and to the results so far obtained.

Csapo[2] has demonstrated the delicate hormone balance necessary in the rabbit for the successful implantation of the blastocyst. He found that a few micrograms of œstradiol prevent implantation, an effect which was not due to 'tubal block' or to failure of the histological process of progestational proliferation. He suggested that there might be a direct effect on the blastocyst itself.

Several workers have reported on the effects of administering œstrogen during the later stages of pregnancy in mice, rabbits, rats and guinea pigs and these papers are reviewed by Reynolds[3]. The results are not altogether in agreement, since some experimenters found that injected œstrogens interrupted pregnancy, whereas others found that pregnancy continued apparently normally, despite administration of œstrogen. In the rabbit, however, it has been shown[4] that the course of normal pregnancy is determined by the level of the ovarian hormones—pregnancy being maintained by the progesterone 'block'[5] which renders the myometrium unreactive. Consequently a dose of œstrogen may be large enough to break through this progesterone block and so interrupt pregnancy, whereas any dose smaller than this 'threshold' dose would be without effect on the course of pregnancy.

The œstrogen-level obtaining in the rabbit rises steadily from the middle of pregnancy[4]. If one assumes that pregnancy is disturbed only when the œstrogen-level is raised by a certain percentage, then the threshold dose of œstrogen required to break through the progesterone block would be increased as pregnancy proceeds. This would explain the finding of several workers[3] that as pregnancy advances more injected œstrogen is required to disturb it.

These considerations suggest that the divergence of the experimental results so far reported is due to quantitative differences and to an imbalance in œstrogen dosage. A dose of œstrogen sufficient to break through the progesterone block on the fifteenth day will probably be ineffective a few days later, when a higher dose is required to produce the same proportional disturbance in œstrogen-level. It would be necessary, therefore, to trace the effective dose throughout pregnancy in order to determine whether or not œstrogens, in doses small enough to have a specific action, are capable of interrupting pregnancy.

Surface Tension of the Blood and Atherogenesis

'Triton *WR* 1339' is known to cause a marked rise of the lipæmia and cholesterolæmia when injected into experimental animals[1]. It has been suggested that the mechanism responsible for the enhancement of the cholesterol-level of the blood is an increased synthesis of cholesterol, chiefly in the liver[2], combined with an alteration in the exchange of cholesterol between the blood and the different organs. This results in a high cholesterolæmia, with normal or even lowered cholesterol-levels in the organs[3].

In order to investigate possible mechanisms to explain the rise in lipæmia, we have measured the alterations of surface tension of the blood in rabbits injected with 'Triton'. The surface tension of 5 ml. of citrated blood was measured by the platinum ring method with a du Noüy apparatus. In normal rabbits, the surface tension was found to have a constant value, the average surface tension in 140 rabbits being 57·4 dyne/cm. (standard deviation ±0·83; standard deviation of the mean ±0·07).

After a single injection of 400 mgm. 'Triton' per kgm. body-weight, an immediate fall of surface tension is observed; it is lowest 5 min. after the injection, and reverts gradually to normal values 14–21 days later. Cholesterol-levels reach a maximum after three days and become normal at about the same time as surface tension (Table 1). Smaller doses of 'Triton' have a similar but less pronounced effect on both surface tension and cholesterolæmia.

While the immediate change in surface tension can easily be explained by the influence of 'Triton' itself, the large amount of cholesterol and lipids present in the blood three days after the injection had to be examined as a possible cause of lowered surface tension. For this purpose, rabbits were given a diet consisting of pellets to which 1 per cent cholesterol and 3 per cent peanut-oil was added. Blood samples taken after 4 weeks showed a cholesterolæmia of 257·2 mgm. per cent and a surface tension of 53·9 dynes/cm. After 12 weeks the cholesterolæmia rose to 1,247 mgm. per cent, and surface tension was reduced to 51·0 dynes/cm.

Table 1. AVERAGE VALUES OF SURFACE TENSION OF BLOOD AND CHOLESTEROLÆMIA OF SIX RABBITS BEFORE AND AFTER INJECTION OF 400 MGM. 'TRITON' PER KGM. BODY-WEIGHT

	Surface tension (dyne/cm.)	Cholestorolæmia (mgm. per cent)
Before	57·0	46·5
After 5 min.	45·9	68·0
,, 3 days	47·0	349·8
,, 7 ,,	48·9	277·3
,, 14 ,,	52·2	162·5
,, 21 ,,	57·3	52·8

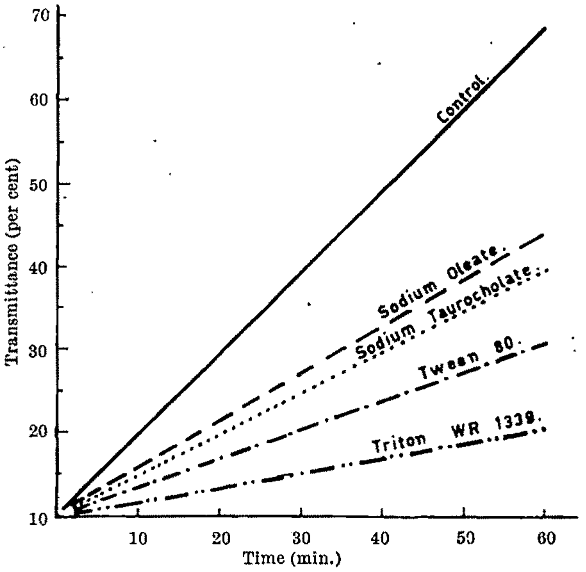

Fig. 1. Influence of surface-active agents on the heparin-clearing process *in vitro*. 1·2 ml. plasma of a rabbit injected intravenously with heparin is added to a mixture of 0·3 ml. of 1 per cent 'Ediol' and 1·5 ml. of 3 per cent albumin. Optical transmittance is measured immediately after mixing the ingredients and every 10 min. thereafter. 0·2 ml. of a solution containing 1·5 mgm./ml. of each surface-active agent to be tested was added, this bringing the final concentration to 0·1 mgm./ml. As a control the same volume of saline is used

After 12 weeks these rabbits were killed and anatomopathological examination of their aortas showed severe lipid deposits in the intima.

Another series of experiments demonstrated the inhibitory effect of various surface-active agents on the heparin-clearing mechanism *in vitro* (Fig. 1). In this blocking of the heparin-clearing mechanism, the enhanced lipæmia following injection of 'Triton' could find its explanation.

It is also of interest to note that plasma of rabbits injected with heparin failed to clear the highly lipæmic sera of rabbits injected with 'Triton', and of those that were fed the 1 per cent cholesterol diet for 12 weeks.

Other workers have found lowered surface tensions in known atherosclerotics and in a number of normal young adults[4]. In our laboratory a preliminary experiment on 10 young adults showed a definite lowering of surface tension of the blood 3 hr. after a meal chiefly consisting of saturated fats.

At this stage of investigation the exact significance of the surface tension of blood cannot be assessed. But the striking correlation between cholesterol and 'Triton' as surface-active agents and clearing inhibitors on one hand, and as atherogenous substances on the other, merits further investigation of the possible relation between lowered surface tension of the blood due to any cause, and atherogenesis.

Water Activity of Mammalian Tissues

SINCE the original report by Sabbatani[1] that the freezing-point depression of various dog tissues is on the average 150 per cent greater than that of blood, there has been continued interest in the possibility that intracellular fluid is hypertonic to extracellular fluid. Collip[2], Leövey and Kerpel-Fronius[3], Gömöri and Molnár[4], and Pichotka *et al.*[5] all confirmed Sabbatani's findings, as did Opie[6] using melting-point depression.
